Frontend

Once again, Frontend lends an ear to the omnipresent number chomping of computers doing their thing. Or not, as seems far too often the case...

SCHOOLBOY HACKS STARS' BT SECRETS

When you reach the exalted status of 'Star', two of the luxuries you expect is a private address and an ex-directory number.

But all this can be blown away in a matter of minutes if an "experienced" hacker such as 15 year old Simon Mackie decides to go after you details.

BROSS BRASSED OFF

Simon, who comes from Marchamley Wood, Shropshire, managed to extract the home addresses of such celebrities as Matt Goss (of Bros fame), Boy George (of Boy George fame), John Major (of Spitting Image fame) and even comedian John Cleese (ironically of BT's Talking Pages advertising fame).

Simon achieved this feat simply by tapping into the BT computer while on a work experience scheme at a Newport based communications firm.

* Bros member Matt Goss was the just one of the many stars and even politicians who's private address was uncovered by a fourth year schoolboy from Shropshire. The youngster's cheeky actions made use of BT's own on-line directory and passwording system.

Mackie was able to convince BT's PhoneBase directory that he was an official BT worker by using the system's own password.

While Simon did not actually manage to get hold of the ex-directory telephone numbers of the stars in question, who also

included Neil Kinnock and the Rev Ian Paisley, he got too close for BT's comfort. The company for which he was working reported his activities to BT, which in turn quickly closed up the comms loophole before someone really important was bothered. ■

Sexist, racist, violent – lowdown on LA lawmen

Comments typed into the Los Angeles Police Department (LAPD) Mobile Digital Terminal (MDT) system by officers on duty have shown some of them up as sexist, racist and extremely violent.

The terminals are used in squad cars to relay messages to and from serving officers. These messages are normally of an operational nature, to do with directions and possible hazards. However, the following examples of communications were tracked down, using the computer technology, by the Christopher Commission which is looking at possible reforms of the LAPD:

"Capture him, beat him, treat him like dirt..."; "U [sic] won't believe this ... that female call again said susip [sic] returned... I'll check it out then I'm going to stick my baton in her", "Sounds like monkey slapping time".

Evidence from these digital records has led to recommendations that LAPD's chief, Daryl Gates, should now retire and that all MDT messages should be closely monitored. ■

* Even in the most fraught of situations, Colombo would never have thought of using sexist or racist language. Some lawmen do, and that's when computers nab them.

IT'S NORWAY TO TREAT A-BOMB

Two Norsk Data ND-5400 computers are at the centre of a possible atomic bomb scandal in Norway.

An unnamed Norsk Data executive and a man described as 'a businessman' have been arrested in connection with the sale of the computers to a Pakistani-owned company, Whyte Energy Services Ltd.

Whyte paid twice the going rate for the dated machines. It is thought that the ND-5400s were intended for use in the Pakistan Ordnance Factory in Wah near Islamabad, which is thought to be a centre for research into atomic weapons.

Norwegian authorities have strict trade sanctions against exports to Pakistan. ■

Fair do

The All Formats Fair is expanding from its traditional London base at the Royal Horticultural Halls.

The dates and venues for the national tour are: Sunday 1 September, University of Leeds Sports Centre, Calverly Street; Saturday 7, Royal Horticultural Halls, Graycoat Street, Westminster; Saturday 14 September, National Motorcycle Museum, Solihull, Birmingham; Sunday 22 September, City Hall, Candrigers, Glasgow; Sunday 6 October, The Brunel Centre, Bristol Old Station. Admission price is £4. For more details call 0926 613047 ■

Dalek-man kidnaps millionaire's wife

Debt-ridden property developer John Warrington turned into a Dalek in order to carry out a £500,000 kidnap bid to solve his financial problems.

Warrington, 43, kidnaped Maggie Smith, wife of millionaire Roger Smith (deputy chairman of Luton Town FC) and, using a cheap electronic voice synthesiser, disguised his voice to sound like a Dalek when phoning in his ransom demands.

He bought the £23 Magic Mike box from Harrods and was able to foil Home Office voice analysis tests, which failed to reveal whether it was a man or a woman making the demands. Fearful identification by his victim, he kept her blindfolded and spoke to her through the device. Her ordeal ended when a passing milkman heard her cries and alerted the police.

Warrington was jailed last week for 15 years after admitting kidnaping, false imprisonment and blackmail. ■

* A £23 investment in some microelectronics could turn you into a Dalek. It could also land you in prison if you use it for the wrong reasons.

Zombie walking bytes

Plan 9 From Outer Space was such an awful movie that Bela Lugosi died in the middle of making it and had to be replaced by a stunt-man. Now Pixel Productions is disinterring both Bela and the film in the form of a computer game.

It may be a sacrilegious act, but nevertheless Pixel is planning to release the game in April 1992 for the ST, Amiga and PC.

The movie, which has drawn such comments as "Mesmerisingly awful", "The worst horror film ever made", and "Staggeringly inept", centres on an alien race, made of beings who look as if they live on Planet Bankmanager, who wish to take over the Earth. They have already tried this eight times without success – hence the name. The latest cunning plan has them reanimating the earthy dead in order to produce an army of zombies to do the dirty invading deed (and to sit through the film).

When released, the game will come with a video featuring lowlights of the turkey – sorry, movie. It will also have more than 50 digitised scenes included in the arcade adventure-style gameplay. ■

* Plan 9 From Outer Space: some think of it as a cult movie. Others feel it should be incinerated. What will the game be like?

You've seen the flight now read the book

Supertech is a new book that details the links between American economic and Information Strategies, and comes to some rather startling conclusions.

Written by the Washington editor of *Barron's National Business and Finance Weekly*, Thomas G Donlan, it has already been hailed as 'an indispensable guide to the way the world is changing in the '90s', '... valuable for everyone who watches TV...', and 'knowledgeable and witty' among

numerous other plaudits.

It sets great store by the perceived battle between Japan and the USA for world dominance in the world of computers.

However, it is not purely the Japanese who are to blame for any possible loss of American computer clout. Domestic funding bodies, such as Defense Advanced Research Projects Agency (DARPA) are also examined. *Supertech* costs £17.99, is published by Letts ISBN 1-55623-371-X and is out now. ■

• *Supertech*, by Thomas G Donlan. Does this book take American techno paranoia to new levels?

SHOOT FROM THE LIP

"The sort of informed and intelligent person who attends the All Formats Fair would not be seen dead at Computer Entertainments Show (CES)." Bruce Eivoris, organiser of the very same All Formats Fair, talking about the September 7 AFF which clashes with CES. Quite possibly a case of he would say that wouldn't he!

"Who's Sega? How do you spell it, Cega?"

A JVC marketing spokesman talking about the company with which JVC are collaborating on a new CD-based console. Her company is actually producing, among other things, the drive for this new machine.

"Are we sure that, in the developing world, there are not computer games with white people being used?" John Bickerstaff of the Independent Commodore Products User Group commenting on PD games, such as the notorious Paki Bash, in which racial minorities are used as the victims.

"The full-blown commercial software should be left to the big boys. Otherwise we'd all be at each other's throats." Ray Burt-Frost of Amiganuts talking about pirated software used in BBSs. (See pages 6&7 for more as Express examines the possible threats to the free flow of Public Domain software.)

Formula 1 fun

• Nigel Mansell and Ayrton Senna both suffered from computer errors at the British Grand Prix. But Mansell went on to win!

Storming Nigel Mansell, who took the chequered flag in the British Grand Prix at Silverstone two weeks ago nearly had his chances wrecked by an in-car computer error.

His Williams-Renault suffered a glitch in its computer-controlled hi-tech gearbox, which meant that he had to drive for most of the final two laps in fifth gear.

Mansell, who has a history of being plagued by faulty cars, so much so that he threatened to quit last year, was not too distracted by the error. It was similar to a problem he suffered in this year's Canadian Grand Prix, when his computer-controlled semi-automatic gearbox stopped working on the final lap, relegating him from first to sixth place.

"Silverstone was just like

Canada all over again," said a relieved Mansell, who is now only 18 points behind world champion Ayrton Senna in the race for this year's championship.

"As soon as I felt that the car was reacting the same, I kept the revs up by putting my foot flat to the floor."

Meanwhile arch-rival in the Formula One racing championship, Brazilian Senna, was also beset by a computer cock up which caused his car to grind to a halt during the slowing down lap. After losing his lead over Mansell early in the race, it transpired his in-car instruments had given an optimistic reading of how much fuel he had left. The car stopped, empty, but the magnanimous Mansell gave him a lift back to the pits. ■

COMPUTER CALAMITIES

Send your tales of magnificent computer malfunctions to Computer Calamities, New Computer Express, 30 Mommouth Street, Bath BA1 2BW and we'll pay a fever for each one printed.

This week, Louis Trevor of Warminster reminds us all that resetting your computer's clock is not the easiest thing in the world. The cock-up sees offitans at Stanford University attempting to get their mainframe to tell the time by sampling the readings from several other universities. One of them happened to be in Maryland. It also happened to be 12 years out of date. ■

FEELING TYPE FAST?
Computers were behind the first new typing test in 20 years. It was set by Barbara Blackburn in the US using a Dvorak rather than QWERTY keyboard, and stands at an incredible 170 words per minute – that's 10,200 words per hour. Blackburn's feat is now officially registered in the Guinness Book of Records.

NIBBLES

Novell driver

DPL has launched a device driver that links Ricoh RS9200 optical drives to PCs, ATs and machines running Novell 386 v3.1, letting users of the Novell network access mass optical storage.

The Ricoh RS9200 II optical drive can store up to 650Mb on a single removable optical cartridge. Other features include auto-loading of cartridges, automatic error control, and the drive can automatically recognise the media surface of an inserted optical disc.

To find out more, contact Data Peripherals on 0785 232206.

CD-ROM release

Optech has released the latest version of *The New Grolier Electronic Encyclopaedia on CD-ROM*. It has been upgraded to include recent events, including the Gulf War.

As well as having text added, the encyclopaedia has more maps and graphics, while sound capabilities have been incorporated for the first time.

The New Grolier Electronic Encyclopaedia is available for both the PC and Mac at a price of £245.

For more information call 0252 714340.

Tape backups

The Parallel Stream II is a tape streamer that connects to a PC's parallel or serial port to back up computer data.

Because it connects to these ports, laptop and notebook computers can also make tape backups - other backup devices usually require interface cards which these smaller machines can't use.

There is a choice of three capacities, ranging from a 60Mb tape model for £995, to a 250Mb model which costs £1195.

Call Jilutech for more info on 081-965 9494.

Air displays

Microprose will demonstrate its range of military simulation software, including *F15 Strike Eagle 2*, at the International Air Tattoo at RAF Fairford, Gloucestershire between the 20th and 21st of July.

The company will be selling its products at the show's official shops as well as in places where the software is being demonstrated.

To find out more, call Microprose on 0666 504326.

£40 million deal gives Japanese control of the Megadrive and SEGA BUYS OUT M

Sega is buying out Virgin Mastertronic in a deal estimated to be worth £40 million.

This will mean that it now has direct control of its European distribution. And it is now poised for a £25 million advertising blitz on Europe - with £4 million earmarked for the UK alone.

Mastertronic chief executive Nick Alexander said: "Nintendo caught us last year, but we'll hold them there to where they are and slug it out toe-to-toe."

Sega president Hayao Nakayama says: "With Virgin's assistance we have become market leaders in Europe, but

• Nick Alexander - "we'll slug it out toe to toe with Nintendo".

the battle for share intensifies year by year and to win in the long term we need to focus all the resources at our disposal."

Virgin Mastertronic presided over sales of the Sega Mega Drive and Master System, in excess of £100 million during the past year, way ahead of the its own estimates.

Virgin Games, the software publishing wing of the Branson computer offshoot, is retained by Virgin Communications with unlimited publishing rights to produce Sega games.

With the European retail market for console and computer games hardware and software expected to grow to more than £1 billion by the end of this year, the Japanese company is keen for 'hands-on' control of supply.

• Sonic the Hedgehog moves fast to nab Virgin Mastertronic.

And with projected sales by Virgin Mastertronic of £250 million for the next 12 months, Sega's hands should be full indeed.

Ashton Tate and Borland merge

In a move which has stunned many industry observers, Borland International has bought Ashton-Tate.

The final deal is expected to be completed by the end of the year, subject to US government, and shareholder approval. However, if the transaction is not completed, under certain, and as yet undisclosed circumstances, either company could have to pay \$13.5 million to the other.

The takeover will mean Borland owns the top two selling PC databases: its own Paradox and Ashton-Tate's dBase series. It is not known how dBase will be supported under the new ownership.

As Borland's chief executive officer, Philippe Kahn said: "Borland and Ashton-Tate are an excellent

strategic fit and will have an exceptional organisation... This transaction will allow us to provide a full range of software products - from databases and spreadsheets to graphics and programming languages".

The merger is certainly good news for Ashton-Tate which reported \$5.6 million losses for the fourth fiscal quarter of 1990.

And for Borland the future is very rosy indeed, as it effectively makes Borland the second largest software company in the world, behind Microsoft. ■

Laserjet printing speeds up

SuperPrint 2.0 is a print driver for the Windows graphics user interface (GUI) that speeds up the printing of text and graphics on Hewlett Packard Laserjet printers.

The program creates the printer's fonts when a page is going to be printed, rather than

let the printer do all the font processing itself. BIT (UK), the distributor, claims that output from all Windows applications can be produced up to five times faster than rival products.

Typefaces included with the program support output from Postscript-compatible files and

Bitstream Charter, bringing the number of available faces to 36. Drivers included with the program also increase the speed of graphical output and enable Windows applications to create TIFF, Targa and BMP bitmap files in colour or black and white.

BIT (UK) is on 0420 838111. ■

Type, set and match

The latest version of **AmigaTEX**, an American typesetting program for the Amiga series, is now available in the UK. And it is being launched at a cheaper price than if it were imported directly from the US.

AmigaTEX 3.1 has a number of new features not found in earlier versions of the program. It can now fully display and print Postscript (PS) fonts and graphics on screen or to any printer. PS fonts can be scaled, slanted and stretched, and imported from a wide range of programs.

The program uses the Amiga's multi-tasking abilities, so it could preview one page while printing another, for example. This facility can be controlled by the Arexx control language. It is also compatible with AmigaDOS 2.0, the new Amiga operating system, as well as with the Text 3.1 and Metafont 2.7 typesetting standards.

Industrial Might and Logic has been appointed as the UK and Eire distributors of AmigaTEX, and is selling it for £140. For more information call 0273 621393. ■

Amiga saves dealers' bacon

Commodore is claiming that its most successful non-Christmas quarter has saved some computer dealers from extinction.

According to UK sales manager, Kelly Sumner, during the period from 1 March to 30 June 46,909 Amigas were sold. His summation of the situation is: "If it wasn't for this, so many dealers might not have survived that quarter". ■

• The Amiga: is it really responsible for saving the bacon of several computer dealers throughout the UK? We decide.

ve and Master System European distribution

MASTERTRONIC

The Japanese are coming - or are they?

In the light of the £40 million deal, Express asked other UK software houses for their opinion on a possible Japanese takeover.

Sega Master System software developer Domark sees a fall in software prices as one possible effect of the deal.

Domark's joint founder Dominic Wheatley said: "There is great protectionism among European countries, but the truth is that all the Japanese bring is enthusiasm and ideas, as has

been seen in the car industry, so there's no cause for paranoia.

"The main issue is perhaps that Sega understands where it is going and what its abilities are and is now putting its money where its mouth is. Sega can fund the operation more than Virgin would have been willing to.

"In so far as the operation being more efficient, with fewer people in the distribution loop, prices might come down."

Electronic Arts, another energetic Sega developer, has

welcomed the deal.

Public relations manager Simon Jeffrey said: "The fact that Sega is investing in Europe is a good sign and its expertise in the market will be good for Europe. I don't really think that it is throwing its money about.

"We'll just be dealing with Sega Europe instead of Virgin Mastertronic, so it won't affect development for us. I wish them luck and that the people they've already got stay on - they've done a good job."

Relief for amnesiacs

Users of the Toshiba T2000SX and compatible portables now have access to a range of new memory cards.

The cards come in 1, 2, 4, and 8MB sizes provide extra data storage. Prices for the cards are: £195, £295, £595 and £1,295 respectively. For more information call 0734 892222. ■

Sega and Nintendo do agree on something after all. Neither of them like the idea of pirates making off with star games such as Sonic the Hedgehog, and Super Mario. So they've made some FAST moves.

Console giants join FAST

Software pirates beware as game console giants Nintendo and Sega join anti-piracy watchdog the Federation Against Software Theft (FAST)

Hot on the heels of the first ever prison sentence for a pirate, as reported in last week's Express, this latest turn of events has delighted FAST chief executive Bob Hay who says concerns over illegal

video game rental and counterfeit games cartridges led to the move.

"It's a significant move as far as the leisure sector is concerned. Funding is always a problem so the additional funding we will gain from this will help us to do much more."

The addition of Sega and Nintendo to the watchdog brings the total number of firms in FAST to more than 140. ■

PC audit software available for free

The Federation Against Software Theft (FAST) is giving away a free PC audit program.

SPAudit enables companies to keep an inventory of the commercial software they use and compare it with the software that they have purchased.

It can check computers for over 650 major business software packages, and can then print out a report detailing the findings of the search. The program can search the hard disks on standalone PCs as well as across multiple servers on local

area networks.

Once software is identified, SPAudit's report can be compared with company records, original disks, documentation, licence agreements and other proofs of purchase to ascertain whether or not it is actually authorised. If software is unauthorised then, in line with UK copyright law, it should be destroyed and replaced with a legal version.

SPAudit is available free by calling Freephone 0800 181502. FAST itself can be reached on 0628 660377. ■

Secure at last

A new consortium has been formed called the Integrated Secure Information Systems (ISIS) to make systems aware of the importance of computer security.

ISIS consists of computer hardware, software and servicing companies who intend to work together to develop secure and cost effective products for users in Europe and Scandinavia. The founding members of the consortium include Grid, the pen-input systems manufacturer, and Hicom, which specialises in developing software to analyse and assess threats to security.

To find out more about ISIS, telephone the consortium on 081-897 6565. ■

Dream of Genie comes true

Nintendo has lost its courtroom battle to get the Game Genie games cracking device banned from sale in the USA.

The loss, which was the first of its kind for the Japanese games giant, has been hailed as: "A moral victory..." by the US distributors of the Genie, Lewis Galoob Toys. Galoob's executive vice-president Steven M Klein said: "This is a great victory for us and the video game industry."

After 18 months of litigation, San Francisco Judge, Fern Smith, found that: "The consumer's use of the Game Genie...for the user's own enjoyment does not create a derivative product". This effectively means the UK produced device does not infringe Nintendo copyright.

The Game Genie, developed by UK budget software house

Codemasters and licenced to Galoob, enables users to alter the play of Nintendo Entertainment System (NES) games to give users infinite lives and fuel in games like Princess Zelda, and Super Mario Brothers.

"Nintendo waged needless litigation," said Klein. "We refused to be intimidated by the anti-competitive actions of a litigious, multi-billion dollar corporation."

Codemasters' co-founder David Darling told Express: "We are very pleased that, at long last, Game Genie is going to go on sale in the United States. It's a shame Nintendo kept it off the market for so long."

However the story may not be over, as Nintendo anticipates that it will appeal Judge Smith's decision once its lawyers have studied the court's verdict. ■

For the first time in its history, Nintendo has lost a case which it desperately wanted to win. Is it a moral victory for the consumer? Is it the end of Nintendo supremacy? Or is it merely a protracted legal flash-in-the-pan?

On-line price cuts

It now costs less for users of the Compuserve on-line information service to send faxes from their computers.

Prices have been reduced by up to 35 per cent. For example, for the first 1,000 characters of a fax sent from the UK to a North American destination the price has dropped to 40p from the previous 54p rate. Similar discounts have been made to the cost of sending a fax to European destinations, and even as far afield as Australia.

Faxes can be sent via Compuserve's mail service which also enables users to access competing mail services such as MCI Mail, AT&T Mail and Telex.

To get further details, contact Compuserve on 0272 255111. ■

The Public Domain is in danger from a few warped people at home

WHY ARE THEY TRYIN

Many people think that the the Public Domain is a techie ghetto. To others it is an environment in which to swap free software. However, to a sick minority, PD stands for Pure Devastation. We ask the people in control what can be done about the current state of the market...

Pornographic, racist and obscene software; piracy, viruses, overpriced disks and uncaring service are all threatening the cosy image of the Public Domain and bulletin boards.

The police are currently clamping down on BBSs (Bulletin Board Systems) which supply

pirated and pornographic software. The Voyager Bulletin Board was recently closed down because it had been persistently dealing in pirated software.

And with each piece of bad press, the general perception of the Public Domain and BBSs deteriorates that bit more.

PORNOGRAPHY

One of the worst problems to dog these services since they first became popular in the mid 80s has been pornographic software. Many bulletin boards and PD libraries have 'adult' sections because, as Gary Nash of Paradise BBS says, "basically it gets the users."

Other sytops and PD libraries are not so open minded about such matters. The sort of material is available to all users, including young children. "Basically, I think it's bad news for bulletin boards as a whole," reckons Dave Gorski of Aspects BBS.

Paul Glover of the ST Club agrees: "Supplying pornographic material is breaking the law, regardless of your views on censorship in general."

However, some BBSs and libraries argue that their adult sections operate on the same level as Page 3 titillation, and that they carefully control who

• These are just two of the images which Express was able to download from domestic BBSs. They are also tame examples of their respective genres - we felt it to be in bad taste to print some of the others which were equally open to access. Just what purpose they serve in the Public Domain is a question which no one seems to answer without referring to the seemingly cynical: "It gets the punters in". Would you download them?

they supply the software to. James Wright of the Independent PC Users Group claims: "We do supply adult software, but only to over 18s and there's no penetration or stuff like that."

Yet at the more extreme end of the scale some libraries will supply that sort of "stuff" along with other obscene material which would sicken most people, including paedophilia, bestiality and masochism.

software via satellite (as reported in Express 138).

All that the Home Office can do if it discovers such boards is inform the authorities in the countries from which the material originates. "Their actual offence is outside our boundaries," said Home Office spokesman Graham Goodwin.

Another stratum of easily available Public Domain software gives you step by step guides to making bombs, picking locks,

killing members of the ethnic minorities.

At the moment it is up to the Home Office and the police to decide how to proceed with each individual case, but Scotland Yard's Computer Crime Squad, headed by Inspector Austin, is currently looking into regulating the kind of software which should be legally allowed to be released into the Public Domain and transmitted on bulletin boards.

Supplying pornographic material is breaking the law regardless of your views on censorship

Paul Glover of the ST Club

The police only have jurisdiction over material originating in this country. They can do nothing to stop people logging on to boards in the United States, for example, and downloading pornographic software. There are even BBSs in the US which transmit hard core pornographic

shoplifting and other illegal activities. There is also a genre of extremely sick racist software, epitomised by Puki Bash. This 'game', which appeared in early 1989, was based on Mastertronic's Sidewinder, but Scottish pirates mutated it so that the aim was to go around

COPYING SOFTWARE

Piracy is another major problem. Express has received catalogues which list thousands of copied programs which PD libraries claim they can supply.

However, FAST (Federation Against Software Theft) is dismissive about the situation:

"We did have a problem with one bulletin board, but that has been cleared up. Hopefully that means bulletin boards are keeping their game clean. It's not a problem at the moment and we can't spend all our time pursuing boards," said FAST's chief co-ordinator, Bob Hay.

The people running software libraries disagree:

"It's a growing problem!" said James Wright of the Independent PC Users Group. "It seems that youngsters nowadays think 'oh, let's just copy a game.'"

SELFISH USERS

Dave Gorski explains that this attitude can cause problems for bulletin boards because people will upload a commercial game under a different name to balance their file ratio - a system designed to keep new software flowing into a board so that users have to upload a program

• Bob Hay of FAST: pirated software distributed through PD libraries and bulletin boards, "is not a problem at this moment."

• Paul Glover of the ST User Group: Bombmaking software is "the sort of thing we would put to one side."

PD OR BBSs: WHICH PROVIDES THE BETTER SERVICE?

Many of the more established PD libraries and sytops feel that their image is being tarnished by some operators who, either through lack of scruples or ineptitude, fail to provide a service which is up to the standards users could reasonably expect.

"Some PD libraries do use unlabelled rubbishy disks," reckons AmigaNuts' Ray Burt-Frost.

He also feels that many libraries fail to put enough software on each disk and is annoyed with PD disks that just contain one solitary program:

"As much as possible should be crammed on to a disk to make things fair."

"For Amiga software, I would recommend the established libraries which have been running for a few years like ours, MBS, Softville and 17-Bit. Frankly, the others I wouldn't touch with a bargepole."

However, Burt-Frost is even more disatisfied with the service offered by BBSs:

"I don't like bulletin boards. Too many people abuse them. In the United States they are run well,

but over here they are used more like dirty phone lines."

James Wright of the Independent PC Users Group feels that another worrying problem with BBSs is piracy:

"As the Public Domain is very open it is very easy to get caught, so most PD libraries are good and try not to distribute pirated stuff."

"With some BBSs all they do is provide commercial software."

Aspect BBS's Dave Gorski grudgingly agrees:

"BBSs do not have a good public image at the moment, not

with the way adult sections are being used."

However, he points out that some PD libraries are taking advantage of their customers in other ways:

"Some are charging far too much for their software. I've seen astronomical prices, up to £5 a disk at times."

All of the people Express spoke to agree with James Wright's summation, though: "It's a very small minority who are ruining it for the rest, but it's a problem that's always going to be there."

and abroad. Express asks what can be done...

NG TO RUIN PD?

COVER FEATURE

HIDDEN FILES REVEAL BOMB MAKING SECRETS

Public Domain software detailing how to make bombs and a device for electrocuting your enemies has filtered into PD libraries and bulletin boards in the UK.

The software, which is credited to an American-based group calling itself Lunatics Labs Unlimited (the number of which is now unobtainable), also includes a file describing how to pick locks, which begins: "So you want to be a criminal?"

Though jokey in style, the information provided in the files is deadly serious. Police scientists in this country have confirmed that the instructions given for mixing chemicals would create some very powerful explosives. The files warn that anyone without a

knowledge of chemistry should not attempt the 'experiments', but the instructions are very clear and simple to follow, so anyone with the right materials could attempt to make the bombs.

However, the police warn that dabblers are more likely to end up blowing themselves to pieces.

UK HIDDEN FILES

Similar bomb making software has been available in the UK before, but this time it is being distributed more insidiously. The information is actually hidden away in the document files of some Amiga utilities software.

The files were brought to the attention of the police by Kevin Larkin of the X-Press PD club in Kent. He discovered them when collecting software for his own library:

"Initially I was a bit puzzled. I thought it was a joke, but I called the police. They sent around two special branch officers who later told me that the information was the genuine article. Whoever did this thing is sick."

Larkin is also critical of other PD libraries which don't check their software thoroughly: "There are a lot of PD libraries which I am sure don't look into their document files. I reckon they should." The PD library from which Larkin obtained the software has since withdrawn it from its catalogue.

Hidden away amongst document files of an innocent looking Amiga utilities PD disk is information on how to make bombs and an electrocution device (above).

after they have downloaded a certain number of files. He said: "Generally the system works, but I've actually seen someone upload *Flight Sim 4* under another name. I can't always check every file, so I have to rely on users to inform me."

However, Kevin Larkin of X-Press is critical of sysops and PD librarians who don't check all their files: "On the stuff I receive I check everything. I reckon all sysops should."

and summed up by Paul Glover of the ST Club: "They're just wasting their energies really."

But now that the virus problem seems to be under control, a new craze has hit bulletin boards: mail bombs. These are programs the users can upload which can cause a whole board to crash, though X-Press refuses to give details of how this can be done to save bulletin boards from any further tragedies.

GLOSSARY: OR, JUST WHAT IS A SYSPOP ANYWAY?

● **BBS**
Bulletin Board System, accessed by computer through a modem via telephone lines. Aside from being a means for users to communicate with each other through the use of mail areas where messages can be left for others to read, they can also be used for downloading software or accessing databases.

● **PUBLIC DOMAIN SOFTWARE**
Software which can be copied for free or for a small fee. It includes everything from games to utilities and some is of a very high standard. Much of this software can be obtained from PD libraries which usually charge a nominal fee for copying and disks costs.

● **SHAREWARE**
Software which is available for a discretionary fee which goes to the author to encourage them to write further programs. It is a system relies very much on trust.

● **SYSPOP**
The person who runs and regulates a bulletin board

● **DOWNLOADING**
Transferring data from one source, usually a larger machine or data-store such as a bulletin board, to a smaller machine, such as your own personal computer. The opposite operation is called Uploading.

● **FAST**
The Federation Against Software Theft is a software industry watchdog funded by the major software houses.

EXPRESS COMMENT

Why is it that, when a useful facility is provided free of charge – or at least for a minimal rate – there is always a group of fools who seem to get a kick from destroying all the good will that has been built up?

The majority of PD libraries and bulletin boards are heavily reproach in terms of both service and facilities provided. Most users of these organisations also have good intentions. So where does the porn, the violence, the viruses and the general misuse come from?

The PD libraries blame the BBSs, the BBSs blame the libraries and everyone blames human nature.

THE VANDALS ARE COMING

If it was a straightforward case of human nature then everyone would do it. By definition, human nature applies to all. So let's kick that answer out as weak, not thought out and avoiding the problem.

Arguments are put forward by software pirates as to why they crack games, or by hackers as to why they break into large systems, or by virus vandals who send logic bombs in to devastate systems normally follow the lines of: "These people make too much money / can afford to lose the data; are too big and don't care for the little people / can afford better security..." None of which apply to the average PD library of BBS. The people who undertake such acts of wanton digital violence do it for kicks and nothing else. And, in doing so, they are in imminent danger of destroying the dream of Public Domain for the rest of us.

The porn and violence questions are slightly different from piracy and viruses. Some people, it seems, actually get a thrill out of these badly digitised pictures images – that's their bag, and it is not up to us to comment on other people's proclivities. It is up to us and the computing community at large, to wonder why such images are available for young children to download. Why is there no regulatory body to keep an eye on the goings on?

DO SOMETHING BEFORE IT'S TOO LATE!

FAST (the Federation Against Software Theft) can do very little about the state of PD. It is funded by the software industry in order to look after its interests. The police and the Home Office either can't or won't do anything about the possible illegal shenanigans which occur.

It is about time that the constituent members of Public Domain came together as a body and did something about the problem. After all, the more the insidious evil creeps into the system, the fewer people are going to want to make use of it. Before too long we could be looking at a ghetto of free file which is used purely by the perverse.

So come on PD libraries and sysops, do yourselves and everyone else a favour. Get together, either in the letters pages of Express, or more productively, in a physical meeting, and work something out before it is too late. The dream of PD must continue.

• If you have any views on this subject, write to Express Mail now! 30 Monmouth Street, Bath, Avon BA1 2BW.

Once boards and libraries see the police clamping down they should clear things like adult sections off

Dave Gorski, sysop of Aspects BBS

FAST is of the same opinion: "Sysops should be vetting everything on their boards and if they are in any doubt about a game they shouldn't use it. Sysops should not bury their heads in the sand," says Bob Hay.

Paul Glover of the ST Club points out another problem with pirated software: "Some people seem to be of the attitude that because you can no longer buy a game, it should be available for free."

VIRESUS IN THE SYSTEM

Viruses are a further problem faced by the bulletin boards and boards and PD libraries, though they are not as rife now as they have been in the past.

PD libraries especially had a bad reputation for spreading viruses and now many of them use virus checkers and give warnings to users to use virus checkers themselves.

But the attitude of the libraries to the sort of people who write viruses is unanimous

NO REGULATIONS

Few of the Public Domain libraries would like to see a regulatory body, however.

"If you've got something to give away free of charge, you don't want to get hassled," explains James Wright of the Independent PC Users Group.

Gorski agrees: "I think the police are doing a good job. Once boards and libraries see the police clamping down, they should clear things like adult sections off."

In general, though, these problems are still only small blots on services which are provided for enthusiasts by enthusiasts and still have a lot of positive things to offer. ■

Don't miss the PD Column's review of the latest software on page 44 and the most comprehensive listing of PD libraries in any UK magazine in Express Online on page 42.

Map out a new future

As the world moves ever closer towards a paperless society, even the humble road map is threatened with extinction.

A computerised map system is now being tested in the US, which would display directions on a monitor screen in a vehicle whilst on the road.

All the driver has to do is type in a destination, then an arrow is displayed on the screen pointing in the direction to travel. If a corner has to be negotiated, the arrow points in the direction from which the corner will be approached and a digitised voice counts down to when the vehicle will reach it.

The \$40 million 'smart car' project is being jointly funded by the US Department of Transportation, the State of Illinois and Motorola, which is also developing the technology for the system.

The project testing is expected to last five years, with more than 5,000 vehicles being equipped with a computer, radio transmitter, CD-ROM player and dashboard display.

One possible hiccup is that a number of American states have laws against the installation of television screens in motor vehicles and they could consider the use of the computerised map illegal. ■

TOMORROW'S CATCHING EDGE

Technology is changing all the time. Find out how it might affect you. Right here, right now

Picture this - images saved direct to disk

Sony has developed a new, and as yet unnamed, technique for transferring colour images directly to 3.5-inch disks, and you don't even need to use a scanner.

Instead of using conventional methods of image capturing such as flatbed or hand scanning which both have to digitise the required picture before transferring the data to disk, the system uses a Mavica camera which stores photographs directly on to floppy disk. Thus the 'middle men' have been removed from the process - no film is needed and the possibility of data loss (which leads to fuzzy, badly rendered final images) is removed.

Once a picture has been taken it is not stored on film, but instead goes on to a conventional 3.5-inch PC or Mac-compatible disk. The image can then be imported straight from the disk into a page make-up, paint, or DTP program.

Because the images are not kept in photographic form, they can also be sent via telecommunications systems. This method uses a Sony DIH-2000P still image transmission system which can send the image to a suitably equipped PC, Apple Macintosh or Sony workstation on the other end of the line.

• Conventional methods of getting images into desktop publishing programs could be overturned if Sony's new, non-scanning system is fully instigated.

At present, while the system produces images of reasonable quality, they are not as good as those used in top quality publications. This, like many things, is expected to improve with time. ■

Check out your caller

Thanks to new technology, many of us could be using video telephones in our homes within two years.

British Telecom (BT) has produced experimental phones in its laboratories that cost up to £2,000 each, but believes this cost will fall to an affordable price with mass production.

This development has been helped by an agreement signed by BT and five European telecommunications groups to develop common technical standards for high-resolution video telephones. While this agreement aims to aid the progression of video telephones into businesses, BT is also developing a simpler version for domestic subscribers.

Video telephones will enable the user to see the person they are talking to and to record both the conversation and the picture in much the same way as an answer machine.

BT is uncertain as to just how many people will be interested in using the new technology in their homes and believes this will depend on the quality of the phones' picture.

Picture quality is linked to how good the line quality is - for a near perfect picture exchanges must be converted to digital switching which uses a fibre optic cabled network.

At present only half of BT's 15,000 exchanges have been converted to digital switching and it may take until the end of the decade for all exchanges to be converted. ■

RAM on the run

A standard for integrated circuit (IC) memory storage cards has finally been devised by the Personal Computer Memory Card International Association (PCMCIA).

The PCMCIA includes such influential computer notables as IBM, Intel, Fujitsu and NEC - all important players in the portable field - so at least this bodes well for industry acceptance of the proposed standard.

Because of their small size, memory cards are taking over from floppy drives in portable computers. But the lack of a worldwide standard has led to companies producing systems

incompatible with each other.

New cards which adopt the standard will be usable with both portable and desktop machines. Portables will be able to read the cards internally, whereas desktop machines will need an add-on to be able to read them, at least until the standard is established.

Because the cards are memory chips, software can be stored and run directly from the card. In effect, this means applications can be run immediately and don't have to access a disk drive, for example, to load other parts of the program. This works in much the same way as cartridges do on games consoles. ■

• Portable computers such as the DIP Pocket PC could soon be equipped with a standard form of memory card storage instead of the many incompatible forms there are now.

A phone for all reasons

Licences have been awarded for a new generation of mobile phones which could result in people using the same phone at home, at work and in the car.

The phones allow the transmission of data as well as voice signals which means the office on the move could at last become a reality as computers and faxes can also use the lines.

At first the small phones that will do the job are expected to cost more than £200, not including subscription charges.

However, Personal Communications Networks (PCN) an operator independent from BT and Mercury, is developing new tariff and billing systems which will cut costs in the long term. And if the system succeeds in reaching its target of 15 million users by the year 2,000, as is intended, the price of phones could fall to £50. The phones are expected to go on sale next year. ■

PAL gets the push

New proposals for how European satellite television should progress towards High Definition Television (HDTV) do not include the PAL (Phase Alternation Line) television standard.

While no definite date has been set for the death of PAL, the new developments certainly point towards the death of PAL.

The proposals, as put forward in a draft directive at a recent meeting of European telecommunications ministers, are intended to provide a path towards HDTV through the D2 mac standard. This standard will be compulsory for new television channels from the beginning of 1992, and from 1993 all TV sets and satellite receivers of more than 22 inches in screen size will have to be capable of

• Forget the old European PAL TV and monitor standard - it's rapidly heading into old news. A new EC draft directive could well be the final death blow.

receiving it too.

As a result, this means that PAL receivers will be able to receive existing channels for at least the next five years, but after that PAL in Europe could be consigned to the crematorium of electronics history. ■

CITIZEN PRINTERS

Silica presents some great offers on the award winning range of high quality dot matrix printers from Citizen. Each Citizen printer is built in the UK to exacting standards, ensuring superb reliability and a very high quality of output. Our confidence in the quality of Citizen printers is such that we are pleased to offer a unique two year guarantee with every printer. Plus, if you purchase your Citizen printer from us, we will give you a Silica Printer Starter Kit (worth £29.95), **FREE OF CHARGE!**

FREE DELIVERY
Next Day - Anywhere in the UK mainland

FREE STARTER KIT
Worth £29.95 - With every Citizen printer from Silica.

FREE COLOUR KIT
Worth £39.95 - With Swift 9 and Swift 24 printers.

2 YEAR WARRANTY
Silica offer a 2 year warranty (including the printer head) with every Citizen printer purchased from Silica.

WINDOWS 3.0
Free Windows 3.0 driver - In the Silica Starter Kit.

FREE HELPLINE
Technical support helpline open during office hours.

MADE IN THE UK
Citizen printers are manufactured to high standards.

144 CPS DRAFT 9 PIN

CITIZEN 120D+

The Citizen 120D+ is one of the UK's best selling printers. It has a stylish appearance and excellent features and performance for such an inexpensive printer. The 120D+ is available with either a serial or parallel interface and is an ideal first printer.

- 9-pin Printhead
- Print Speed 144cps Draft
- 30cps NLD
- Epson & IBM Graphics Emulation
- Pull Tractor & Bottom Feed
- Superior Graphics - 240x216dpi
- FREE Starter Kit

RRP £233.83
STARTER KIT £29.95
TOTAL RRP: £263.78
SAVING: £12.20
SILICA PRICE: £151.58 +VAT = £151.58

144 CPS DRAFT 24 PIN

CITIZEN 124D

The award winning Citizen 124D brings high quality 24-pin dot matrix printing with every computer users reach. It is the ideal choice where high quality printing is required at a budget price.

- 24-pin Impact Printer
- Print Speed 144cps Draft
- 2 LQ Fonts (48cps)
- BK Buffer
- Epson, IBM & NEC PG+ Emulation
- Advanced Paper Parking
- Superior Graphics - 360x360dpi
- FREE Starter Kit

RRP £292.58
STARTER KIT £29.95
TOTAL RRP: £322.53
SAVING: £12.20

SILICA SYSTEMS OFFERS YOU

- **FREE OVERNIGHT COURIER DELIVERY:** On all hardware orders shipped in the UK.
- **TECHNICAL SUPPORT HELPLINE:** Team of PC technical experts at your service.
- **PRICE MATCH:** We normally match competitors on a "Same product - Same price" basis.
- **ESTABLISHED 12 YEARS:** Proven track record in professional computer sales.
- **E3M TURNOVER (with 60 staff):** Solid and reliable with maintained growth.
- **BUSINESS/EDUCATION/GOVERNMENT:** Volume discounts available for large orders.
- **SHOWROOMS:** Demonstration and training facilities at our London & Sidcup branches.
- **THE FULL STOCK RANGE:** All of your PC requirements from one supplier.
- **FREE CATALOGUES:** Will be mailed to you with offers and software/peripheral details.
- **PAYMENT:** By cash, cheque and all major credit cards.

Before you decide when to buy your new printer, we suggest you think very carefully about WHERE you buy it. Consider what it will be like a few months after you have made your purchase, when you may require additional peripherals or software, or some technical help and advice. And, will the company you buy from contact you with details of new products? At Silica Systems, we ensure that you will have nothing to worry about. Silica Systems is one of the UK's leading independent computer dealers and provides a quality service to users at home, in education and in business throughout the nation. Silica have been established for over 12 years, and have an annual turnover of £13 million. With our unrivalled experience and expertise, we can now claim to meet our customers requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now, for our latest Free literature on the Citizen printer range and begin to experience the "Silica Systems Service".

TRACEY

Turn your mouse into a digitiser - for just £7.95!

Do you want to trace photographs and sketches into your DTP or graphics package? You need Tracey! This precision-moulded transparent puck attaches to any standard mouse to give a quick visual guide of what you are tracing. Fixes to either side of the mouse for left or right handed use.

- ★ Removable when not in use
- ★ Ideal for Amiga, ST, PC, Mac and all flat-sided mice
- ★ Only £7.95 including VAT and p&p

"This novel little device makes copying pictures easy" - Amiga Format, Nov. '90
"If the rule that all the simplest ideas are the best is applied, then Tracey gets the prize" - Computer Shopper, Jan '91

Cheque with order. Trade enquiries welcome.

Olé it's LCD

PRODUCT: Flat screen colour LCD display
NAME: Freestyle DU 127
COMPATIBILITY: PC

The Freestyle DU 127 is one of the first colour flat screen monitors to use Thin Film Transistors (TFT), the latest in liquid crystal technology.

It is small by comparison to standard monitors, weighing 2.6kg, measuring 51mm thick, and with a screen size of 264mm. Because of this new technology, the monitor has a heat dissipation of 25 watts, compared to the 90 watts in traditional CRT monitors. It makes use of the PCs power supply rather than needing a wall socket thus reducing cabling and frees up power sockets. The monitor is also suitable for use in areas where there is only a small working space.

Because the TFT technique allows every pixel of colour to be controlled by its own transistor, resolution of up to 640 x 480 pixels is possible. TFT also provides a sharper picture, distinct contrast and faster screen updates than conventional CRT technology, or so the company claims.

Price: £3,200
Availability: Now
Target users: PC users who need a small, clear screen or have limited space.
Contact: Nikita Data Ltd: 081-569 7700

Perceived competition: Other monitor manufacturers such as NEC, Philips and Taxan.

• Able to fit on the corner of a desktop, the Freestyle DU 127 is one of the first colour flat screen monitors to use TFT liquid crystal technology.

PS: I want you

PRODUCT: Heavy duty Postscript laser printer
NAME: Mannesmann Tally MT911PS
COMPATIBILITY: PC, Amiga, ST

Mannesmann Tally has launched a Postscript compatible version of its MT911 heavy duty laser printer.

According to the company, the printer has an estimated expectancy life of 600,000 pages and a print speed of 10 pages per minute. 35 scaleable fonts are resident in the printer's hardware, and other fonts can be downloaded through software, if needed. Emulation is provided for the HP LaserJet II as well as the Postscript standard.

A range of paper handling facilities are included such as a 200 sheet input cassette and up to 20 additional sheets can be loaded into the manual feed.

The printer comes with 2.5Mb RAM as standard and this can be expanded to 4.5Mb. Both parallel and serial interfaces are provided.

Price: £2,200

WHAT'S NEW

Get the lowdown here on the latest additions to the world of modern technology

Flash! Saver of the RAM

PRODUCT: Flash memory card drive
NAME: SCM MCD1 memory card drive
COMPATIBILITY: PC

SCM's Flash Drive is a circuit board that fits into a PC slot. Based on SIMM (Single In-Line Memory Module) RAM modules, it can be accessed in a similar way to a disk drive, providing up to 32Mb of storage memory.

The MCD1 occupies the same space as a standard 3.5-inch floppy disk drive. It comes with a PC-AT bus controller card which can control up to three floppy drives and also installation software. The controller can also provide up to four Flash SIMM modules so it can double as an 8Mb Flash disk as well as controlling the other Flash memory cards.

Availability: Now
Target users: Those who want a heavy duty Postscript compatible laser printer, such as DTP bureaus.
Contact: Mannesmann Tally: 0734 788711

Perceived competition: Other laser printer manufacturers, such as Hewlett Packard and Epson.

Portable pointing

PRODUCT: Thumb-operated pointing device
NAME: Logitech TrackMan Portable
COMPATIBILITY: PC

Logitech has come up with the TrackMan Portable, which looks like a good bet for users of portable computers who find a mouse too awkward to control on the move.

• Just when you thought you would never able to use Windows with your laptop Logitech's TrackMan thumb-operated controller comes along to save the day.

The company assures us that a specially developed Flash Filing System makes the drive faster than a hard disk while also being more reliable.

The company also claims that the Flash Filing System can be made 100 per cent immune from viruses.

Price: From £445
Availability: Now
Target users: Those who need fast access to large amounts of data or program files such as CAD/CAM, graphics and DTP systems.
Contact: DMST Ltd: 0635 247717

Perceived competition: Manufacturers of large capacity hard disks, such as Seagate.

The ball of the device is operated by the user's thumb, while the index finger controls the primary button on top of the device. The second and third buttons are also thumb-operated.

It combines the feel of a trackball with the three buttons of a mouse and is designed to attach to any portable PC-compatible keyboard. It can also be used with desktop machines thanks to its rubber feet which stabilise it on the desktop.

The TrackMan Portable is attached to the keyboard by a spring-loaded, one piece bracket. The controller snaps into place on the mount and is held at a 45 degree angle to the keyboard, which, according to Logitech, corresponds to the hand's natural slant.

To suit both left and right handed people, the button on top of the mouse can be reversed and the cable underneath can be re-routed to the other side of the keyboard.

Logitech's TrackMan Portable comes with the company's MouseWare driver program, a five foot extension cable, the keyboard attaching bracket and 9 to 25 and 9 to 6-pin adapters.

Price: £95
Availability: 2 September
Target users: Corporate and education portable computer users who need to use a graphical interface on the move
Contact: Logitech (UK) Ltd: 0753 37222

Perceived competition: All ball operated pointing devices.

Control yourself!

PRODUCT: Printer controller board
NAME: LaserPix
COMPATIBILITY: PC

• Flash Gordon may well have saved the world on a few occasions, but could he save data like the Flash memory drive?

• LaserJet II images can be improved even further with LaserPix, a card that increases resolution to as much as 2,400 dpi.

Data Cell has released LaserPix, a printer controller board that can produce laser output images on plain paper at resolutions of 1,200 to 2,400 dots per inch (dpi).

LaserPix fits in an AT expansion slot and can accept data from a number of input devices, including scanners, digital cameras and frame grabbers. Output, via an Hewlett Packard (HP) LaserJet I or II, is a half-toned print with 256 grey levels and 75 or 150 lines per inch. Print speed is eight pages per minute (ppm) no matter how big the image is. LaserPix comes with a 16-bit AT bus card, an interface card for a LaserJet printer, six foot video cable and LaserPix software.

Price: Ventura/Pagemaker /DOS £1,250
Windows/Pagemaker 4/Ventura 4 £1,500
Availability: Now
Target users: HP LaserJet I or II users who want improved images.ie: medical imaging, industrial applications etc: through to picture databases and desktop publishing.

Contact: Data Cell: 0734 333666
Perceived competition: Other printer upgrade cards, particularly those for the HP LaserJet ■

Thinking about **NOT** buying the next issue of Amiga Format?

Tut tut!

This picture of King Tut is known by more people in more nations than the pharaoh ever was. It's the symbol of Deluxe Paint, probably the finest piece of graphics software ever written. Deluxe Paint is used by nearly all Amiga games programmers to create the graphics for their games, simply because it's the best.

Now there is a new version of Deluxe Paint out – **Deluxe Paint IV**. It's probably the most important non-games release on the Amiga in the last three years. It takes Deluxe Paint to the ultimate extreme of Amiga graphics, allowing you to create 4,096-colour pictures using HAM mode.

And where can you read the exclusive first review?

In **Amiga Format**, of course!

And what's that on the cover of the issue? Well, knock me down with a feather if it's not a Coverdisk! And it contains an almost-complete copy of the new **Deluxe Paint IV** as a **fully useable demo**. You'll be able to create your own 4,096-colour pictures and see for yourself how good it is!

Also on this extraordinary Coverdisk is a playable demo of **Magic Pockets**, the latest platform extravaganza from the Bitmap Brothers. You've laughed at the idiots who played it on TV's Motormouth: now give it a go for yourself!

AND we bring you the full inside story of how the music is created for games, courtesy of top-name musicians like Betty Boo, Bomb the Bass, John Foxx and those Bitmap experts.

PLUS the widest and best range of reviews anywhere: not just games, but also exciting stuff like the newest drawing program, the new 3D game creation system and the latest in 16-million colour painting.

Don't miss Amiga Format Issue 26, on sale August 8
Exclusive review and Coverdisk demo of Deluxe Paint IV

EXPRESS MAIL

Welcome to letters pages that get you thinking

This week, Haydn Fitz-Williams prints your views on Acorn and the Archimedes, console failures, helps you sort out the Gurus from the wackers and continues the piracy debate. Plus your chance to put a question to top industry figures!

Falling Arcs

I was saddened to see the demise of the Archimedes column. I also realise that at £700+, the Arc will never take off as a home computer. Why doesn't Acorn relaunch the Arc at a sub £400 price and watch people flock to buy it?

The competition at this level is clearly the ST/AMIGA and let's be realistic, the Arc beats both of them out of sight as far as speed, graphics and sound go. The software would pour out by the ton if this happened, so the software-bare problem would also be eliminated.

The Arc could be the machine to buy this Christmas. If, after five years, Acorn finally drop the price to a level people like me could afford. I do hope someone at Acorn listens to my point of view, as there are many like me aspiring to this machine.

Liam Stuart, Argyll, Scotland

WOULD PEOPLE really flock to buy a machine with the limited amount of software that's available for the Archimedes and the BBC A3000? Time and time again, it has been proved that it's the software and not the specification that sells a machine.

If you don't believe it look at the phenomenal success of the IBM PC, a machine which is, at best, dull.

If Acorn were to drop the price of this aspirational machine, do you think that people would buy it in great quantities given that the ST and Amiga have a huge software and peripheral base?

Your words won't go unheeded. A reliable source tells us that all at Acorn wait with baited breath for Thursday each week and what it brings... (Express).

Guru revealed I

Inside every Amiga lies a being, a 'Wacker', who is there to automatically fix any errors which may occur due to another being, the 'guru'.

For many years now, (well, since '85) a war has been waged between the 'Wacker' and the 'Guru'. It is the Wacker's job to wack the system ROMs into place after the bad old Guru has messed them up (hence the 'ROM-wack' on N J Andrews printer, Express 139). In the very, very rare case of the Guru winning this silent battle (I own an Amiga...), the wacker will print 'ROM-wack' via any available serial printer. However, sometimes things can go terribly terrible.

If the Guru in your machine comes into contact with another Guru, erm, things can 'happen'. WHAM-BAM 'Son of Guru'. If this does happen, the ever watchful wacker has only one choice — expunge it via the good old serial port. The numbers that appear on the paper are actually a 'Guru', in the ahem, flesh.

I cannot stress enough how important it is to get rid of the resulting print-out — the numbers that lie on that paper are EVIL!

Special Agent Dale, Belfast

THANKS FOR THAT. Your next mission is to capture the Guru as it appears at the serial port and lead him screaming to the Express office in Monmouth Street where we'll pay a bounty for his capture.

Guru revealed II

I picked up a copy of Express 139 because I was interested to see another preview of DPaint IV, and what do I find when I get to page 147? A nice little mystery, all about ROM-Wack. Well, I will try to throw

some light on the situation.

ROM-Wack is the Amiga's ROM resident debugger, accessible through the serial port using a 9600 baud terminal. ROM-Wack is invoked by clicking the right mouse button when the Guru is up there strutting his red stuff for you.

At a guess I would say that N J Andrews has a serial printer that was on-line at the time. Because his printer was sitting ready to receive at the time, ROM-Wack decided to dump out information. To a programmer this information would be useful in deciding which task caused the problem, where it happened, why it trashed the OS and ultimately how to deal with it. I think this has been helpful.

Dominic G LeGros, Suffolk

AND TO A MERE MORTAL. It would be nice if it printed a diagnostic in a language anyone could understand, explaining what went wrong, and called on some mystical magical routine to put it right. Something simple like: 'Oops, the splodge widget gave your Amiga a headache, but it's fixed now. Press right button to continue'.

Cyber Warrior

Firstly, knowest thou anything about the "Cyber Times"? I subscribed 12 months ago, got one issue and haven't been able to get a word out of them for over six months. Do I smell or something??

Secondly: I was wandering through the video arcade a couple of days ago. I came across a rather attractive laser disk game by Atari Games. It's basically a laser disk Western in which you shoot the bad guys with a light gun. "Great" I thought, "after all, it's not every day you get to main over-acting folk with bad beads.

Eagerly I inserted my quid coin and unholstered my weapon. I took aim, fired and saw my shot fly off in totally the wrong direction. Again I fired, again I missed. A crowd of tourists laughed at my tortured screams as I collapsed into a quivering heap on the ground. Deep hatred welling up inside me, I cast an accusing glance at the gun still lying in my hand and saw embossed on the butt one word that filled my soul with terror — "NINTENDO". SABOTAGE!!!!

The Android, Cwld

WE'VE NOT HEARD ANYTHING of Cyber Times for a few months and if your performance in laser-land is anything to go by you could do with an influx of cyber power to restore your skills with a light gun. If any readers can give us clues to the status of Cyber Times, please pass on the information and we'll make a Welshman happy.

Laugh a minute

Sorry, but I couldn't help laughing when I read Martin Turner of Twickenham's letter 'Atari Jokes' in Express 140.

How can he say "Where's the market in transputers and UNIX workstations?" when nearly everyone is setting up UNIX (and MINIX) systems?

I don't have a home computer, but I program on a Motorola 68K RISC machine (Multi-user, Multi Processor and UNIX based) when I work and regularly read the trade computer magazines, where UNIX is getting put on to everything, due to its "open systems" nature.

Yes, it even out-performs the mighty Amiga DOS! Just look at a Sun or Sony NEWS workstation to appreciate the raw power of this system. Remember — these will become the PCs of the future! So Martin, check out the whole computer market prior to passing comment, not just the 18 per cent based micro computer market!

Kevin Rustill, Beds

MARTIN COULD SAY 'where's the market' because until reading your worthy tome, he was probably convinced that he was right. He may still not be convinced otherwise.

The systems that you describe are indeed becoming more popular and with the advent of powerful affordable desktop machines, UNIX, MINIX et al the existing STOS, MS/DOS and TOS will have new contenders to do battle with. One mustn't discount the existing operating systems because they aren't the latest whizzy full featured multi-tasking wonder. After all, MS/DOS hasn't done so badly for an oldster, has it?

Up to date

Congratulations on keeping NCE within the real world. There are several old machines around and I'm sure that you will have alienated at least three people by curtailing your coverage of them,

ON THE COUCH

This week *Express*' resident analyst, Dr Clare Anthony, reaches deep into the subconscious of JON PALMER of LIVERPOOL. Jon put printer to paper with some red ink (says a great deal about you Jon) and told Dr Clare what machine he owns, his most beloved software, and the machine which would make his life complete. Clare gave him the full 48 hour treatment on the famous sofa. If you would like the same you should write to: Leather Couch Clare, *New Computer Express*, 30 Monmouth St, Bath BA1 2BW - you never know, it could change the way you think about life.

Are we ready Jon? Right, lie down, close your eyes, and try to empathise with your inner-self.

- MACHINE OWNED:
Atari Lynx
- FAVOURITE SOFTWARE:
Slime World
- DESIRED MACHINE:
Compaq 486

You're being a little sneaky here, trying to slip a Lynx passed me. It's not strictly a computer at all, merely a way to create fantastic environments within which to sublimate real desires for physical interaction. *Slime World* is an interesting choice of game. There are numerous tunnels to explore, the ability to jump up and down rapidly, and a weapon which shoots at will. Of course the destruction of what you see as aggressive alien life-forms, combined with your own inability to actually compute, that is to say control and create, with the Lynx, suggests a sado-masochistic streak combined with a basic need for abstraction and introjective tendencies. No problems here until that is we look at your wish-stake. A Compaq 486. Not any PC, but one from a company which is seen as major competition to the 'Daddy' of them all, IBM: Oedipus doesn't cover it. PROGNOSIS:

There is a basic need within you to equate your need for powerlessness with a strong desire to prove that you can have power. Best course of action is to move into estate agency where you can use a LAN server and not be worried by your own lack of power,

but that is their fault for not living in the present.

If you bought a magazine like *Auto Express*, you'd soon moan if they started covering eight year old Skodas on a weekly basis. Stuff the oldies, they should buy a new computer or belt up.

Ron Dearbury, Marlborough

EXPRESS' policy on machine specific columns is simple. If there's enough interesting, useful and practical information coming in on a weekly basis to support a column, we employ a specialist columnist who knows the machine inside out to write about it.

If only small amounts of information come in, we treat each story on its merits and assign it to the appropriate section of the magazine.

Big blue apples

With regard to your story on the agreement between IBM and Apple (*Express* 141), I can't help but think how this will affect the small computer user.

I'm all in favour of progress, but if big companies such as these two giants get together then it will affect things lower down.

Apple will be seeking to advance technology, which is fine, but in doing so they are likely to forget the small users. Sure, their work may filter down through the ranks of computing years from now, but in the short term I wonder if Apple will still place as much emphasis on, for instance, its low-end Classic machine?

And although IBM and Apple haven't merged and still remain separate entities, they'll presumably both strive to protect their interests. What effect will this have on smaller companies trying to be innovative? Will the corporate muscle of the giants stifle innovation for the sake of protecting their (considerable) interests?

And another thing - if PCs start to use the Mac interface as well as Macintoshes themselves, then won't computing be boring?

Bob Candy, Ipswich

IT DOESN'T FOLLOW that the joining together of these two large companies will be to the detriment of the small user. IBM has tried for years to get into the home computing market without the huge success that Apple has seen in this area worldwide.

Hopefully, the mixed marriage of Big Blue and Little Green Apples will be the beginning of a new era in computing designed to be suitable for everyone.

The thought of IBM throwing out Windows and everything else Microsoft, in favour of the deliciously productive Mac System 7 can only warm the

Ask a question and win a fiver!

Yep, this is your chance to put your queries to some of the world's leading computer companies. Over the summer, *Express* will be conducting a series of interviews with some of the biggest names in the biz. And we want your contributions! Here's the list of the top manufacturers and developers we'll be talking to:

- Acorn ● Amstrad ● Apple ● Atari ● Commodore ● IBM
- Intel ● Microsoft ● Motorola ● NEC ● NeXT ● Nintendo
- Panasonic ● Philips ● Sega ● Sharp ● Sony ● Tandy

The theme of the series is 'Towards 2000', so we'll be asking the UK bosses of these firms to tell us where they're bound, where they're at and where they're going. And along the way there's bound to be an opportunity to ask a lot of rigging little questions you've always wanted answered but never found in print.

So now's your chance to find peace of mind and if we like your question you could win some dosh into the bargain! All you have to do is drop a line to 'Industry Interviews', *New Computer Express*, 30 Monmouth St, Bath BA1 2BW and we'll do the rest. But hurry, we want to get this off the ground as soon as possible!

cookies of the productive user!

CD Piracy

I, like everyone else, am sick and tired of the piracy debate, but I feel a something obvious has been overlooked.

Compact discs, while in the short term appear to be difficult to copy, could end up being just as 'easy' as cartridges to break.

Admittedly this would require a bit of doing, but in Asia there are plants that pirate music CDs, so surely this existing machinery could be used to produce similar CD-i reproductions.

And CDs don't cost very much to produce in bulk, so in theory professional printers could be attracted to copying something they could get a bigger return on.

Nimrod Davies, Wrexham

AS THE OPTICAL DISK becomes more prevalent through multimedia, it will no doubt be affected by piracy in the same way that audio CDs are now. It's not as simple as you think though, the data-dropout factor for CD-i, CDTV and other CD ROMs has to be considerably less than in an audio CD. This means using higher specification equipment that is less easy to source and set up than a conventional audio CD replicator.

We contacted two UK data CD producers and they confirmed this is the case. It is possible, but not yet probable.

Console-ation

I know it's easy to be wise after the event, but even I could see that both Commodore's C64GS and Amstrad's GX consoles were doomed for failure. The public isn't that glibble (and if it is I've got a few ideas to make a bit of money then) and won't be sucked into buying old technology no matter what it looks like.

I've got a soft spot for the 64, but it has always been a computer and should stay as one. After

Commodore's failure with the GS, the new repackaging of the 64 as a 'console-with-a-keyboard' will, I feel, suffer a similar fate. I wish they'd let the 64 have a slow and distinguished death, rather than giving it umpteen facelifts and causing it considerable embarrassment. Heaven forbid it to be known as the Zsa Zsa Gabors of the computer world!

Fay Sciffitt, Austria

THE GX4000 and the C64GS were too late. Sega and Nintendo have already divided and conquered the console market with tried and tested products. In a console-less world, who knows, Amstrad and Commodore might have done better.

You mustn't forget that the C64 was a cartridge machine from the start and has always supported ROM based software and is not as you suggest, some old cory, rejuvenated to pander to a passing trend. ■

Write now

Write and tell Haydn Fitz-Williams what you think! Reach him at: *Express* Mail, 30 Monmouth Street, Bath BA1 2BW. Sorry, no personal replies, even with an SAE and remember, ONLY SOME letters win a fiver!

On-line mail

- **AMOS 3-D arrives, and what a corker it is too!**
- **3-D models in minutes! No complex calculations!**
- **How to get the fonts that you want for Prodraw**

3-D MADE EASY

After just over two years of secret development, Europress Software's latest extension to the highly acclaimed AMOS games programming language has well and truly arrived.

★ AMOS 3-D, with a price tag of just under £35, enables you to create games and demos that use realtime 3-D graphics like those seen in such games as StarGlider 2 and Elite.

I've been playing around with AMOS 3-D for just over three weeks now, creating in hours the kind of 3-D effects that would previously have taken weeks. It also takes the pain out of working out all those complicated 3-D calculations.

The AMOS 3-D package comprises two separate modules – a language extension for AMOS BASIC and a powerful 3-D object-modelling program called OM. When used together, these two programs will allow your AMOS programs to enter the next dimension.

OM is the workhorse of AMOS 3-D. It is easy to use, yet powerful enough for even the most demanding 3-D creations. It seems a rather daunting program at first, but a quick read

through the AMOS 3-D manual and tutorials is all that is needed to suss out even its most complex features.

In fact, you'll be amazed how quickly you will be creating some quite complex objects – I was able to create a 3-D model of a jetfighter in little over half an hour. Try doing that with Sculpt!

Your 3-D creations are constructed using a set of system blocks (graphics primitives) which are stored along the top of the OM editor screen within what it calls 'shelves'. These blocks can be copied from the system shelves down into one of two major and five minor editing shelves. Most operations will be carried out within the two major shelves, but the minor shelves are handy for storing half completed objects.

The system blocks are fairly basic, ranging from simple 2-D faces to a 3-D cube. However, these can be modified substantially to suit your own particular modelling needs. First you select the block, then the face and finally either the point or edge you want to manipulate, then you expand or contract it using the mouse. Some quite complex objects can be created.

If the primitives themselves will not suffice, you can go one step further by combining blocks. This is a restriction to the number of blocks you can use within a single object – eight – so it's worth planning out your 3-D objects before you get stuck in.

☎ Europress is on 0625 878888.

AMOS 3-D: THE LANGUAGE

Obviously creating 3-D objects is only half the battle. What you actually want to be able to do is to use those 3-D objects within your own programs.

To make this possible, AMOS 3-D adds no fewer than 30 new commands to the already impressive command set. Designed specially for 3-D work, they cover just about every conceivable aspects of working with 3-D.

Once objects are loaded, they can be moved around within 3-D space using both relative (delta) or absolute values.

The user's viewpoint can also be moved around within 3-D space, allowing you to create some very pleasing visual effects which resemble a camera-panning manoeuvre from a film. And to stop you from getting lost, the viewing angle can be locked onto a particular object, so that you can watch it whizz around in 3-D space while remaining fully in view.

Unfortunately, AMOS 3-D doesn't perform 'in-betweening', this is a process in which you specify a start and end position and expect the program to generate the movement frames in between. Instead, you have to set up a loop that re-draws the objects every so many pixels to create the illusion of

• OM is a very powerful 3-D object modelling program. It looks rather complex at first, but you will soon be amazed at its simplicity and power.

Can you afford *not* to join?

39p THE Amiga PUBLIC DOMAIN CLUB

Yes that's right, you can now get Amiga PD for an amazing 39p per disk (Free if you supply the disk), once you have joined our friendly, fast growing and extremely popular Amiga PD Club. It must surely be the Public Domain buyers dream come true!

Lifetime membership to the club costs only £19.95. Much of this, however, will go straight back into the club to provide you with an even better service. Members will be able to choose as many PD titles as they like from our detailed catalogue disks, listing many of the Classic and Latest titles. We will bring you the very best in Demos, Utilities, Music, Art, Business, Animation, Games, Slides and much more. Just send us the blank disks & return postage and we will despatch your order to you the same day. It just couldn't be easier. As an added bonus, members not wishing to supply their own disks - don't have to. We will send your order on our own high quality disks for just 39p per title. We can't say fairer than that!

Members will also enjoy many other benefits including:

- Many new titles to choose from every month!
- Massive discounts on other Amiga Products!
- All catalogue disks are constantly updated and are available FREE!
- Superb disk magazine, FREE every month. (News, Reviews, Competitions, Letters, Classifieds and much more!)
- A FREE games compilation to welcome all new members! A FREE mystery gift worth £24.99!
- No minimum or maximum order!
- Members can even request titles that we don't have at no extra cost!
- Membership is usually priced at £29.95 a year, so apply now and take full advantage of this extra special offer. Remember, you can have LIFETIME membership for an incredible £19.95! Even your first order could save you ££££!

To become a member, simply fill out the form below and send with a Cheque/Postal Order to:

Name _____ Address _____
Postcode _____ Telephone _____

movement. A bit of a shame really. Objects can also be animated. In a very simple fashion to OM, you can select a point or edge and drag it in or out in real-time from within your own programs, therefore creating the illusion of animation. It's not quite as flexible as I would have liked, but there are ways and means of getting around this limitation.

Despite these minor gripes, AMOS 3-D is as good, if not considerably better than any of us could have ever wished for. The 3-D is very well handled, with the vast majority of the hard slog needed to get things up and running being handled almost exclusively by the computer. If you already own AMOS, you'd be a fool not to splash out on an AMOS 3-D. It is quite simply the most revolutionary programming utility ever!

THE FONTS YOU NEED

I must just say a quick thank you to Don Cox of Middleborough for his recent letter. In reply to my piece a few weeks back concerning the lack of Compugraphic fonts available, Don wrote to inform me of a new utility which is being developed by Mirror Image Productions in Canada.

Its PostScript-to-ProDraw package is a handy utility which will convert PostScript format fonts to ProDraw format. As Don points out, this is particularly useful for such things as headlines. Not only that, but it saves the time taken to download the fonts to your laser printer, therefore allowing for much faster printing times.

Presumably it should also be possible to convert the ProDraw-format fonts to ProPage Compugraphic format, although you'll need yet another utility to do this.

If you have a PostScript printer, Mirror Image also markets a very useful product which enables you to convert PostScript format fonts to standard Amiga bitmap formats. Obviously you lose the resolution of PostScript, but it's a nice way of obtaining a font in exactly the point size you require.

Contact Mirror Image on 0101 416 495 7469.

MORE FONT CHANGES

If you want to be able to convert Compugraphic fonts to Amiga bitmap format, then it's well worth investing in a copy of Gold Disk's Outline Font Pack which contains no fewer than 35 Compugraphic fonts in a variety of different styles and typefaces. Also included is a very handy conversion tool that will convert the fonts to both ProDraw and Amiga bitmap format.

If you're into applications such as multimedia or desktop video, this font pack is worth checking out as it gives you a set of industry standard fonts which can be converted to just about any point size ready for use within just about any package that supports standard Amiga fonts.

For one use the Gold Disk font package extensively. Gold Disk products are available from HB Marketing on 0753 686000.

- Three new software/hardware package reviewed
- Powerful German database is a bargain at £98

BRAVE NEW MARKET?

The 16-Bit Computer Show two weeks ago (judging by the rib cage squeezing number of people there) a terrific success. Over 130 companies set up store on two floors at the Novotel in London and proceeded to flog hardware and software at knock-down prices.

One aspect of the show which puzzles me is the complete lack of American companies. Outfits like Double Click Software and Gröbil in particular are realising that they can sell far more in the European market, than they ever could in the states.

The 16-Bit Show isn't really the place to launch new packages, it's more of a retailers day. However, a couple of brave companies were showcasing new programs. To find out what was the best on offer, read on...

STEREO SAMPLING ONE

Shortly after the debut of its brilliant Pro Series 16-bit sampler last month, AVR has followed this up with another good piece of hardware, namely the Stereo Replay sampling cartridge.

The sampler itself is a standard 8-bit affair with dual analogue to digital (and vice versa) converters. It records from twin phono sockets and works on any ST, STF, STM or Mega.

The editing software makes full use of the stereo converters, enabling you to pan, swap, loop, cross fade and sample pan. The resulting sounds can then be output to a hi-fi in glorious stereo, with the sound image switching between the two speakers.

All the standard sampling effects are included in the software, including digital filters, hall, room, echo, reverb and flange. Up to 10 samples can then be playing from one MIDI keyboard, meaning that a whole orchestra of sounds can be built up quickly.

Stereo Beat is an ancillary program which enables kits of up to 15 different samples to be loaded into memory and then re-mixed using a pattern editor. The tempo of these sequences can be played back in anything from 40 to 239bpm (beats per minute).

Stereo Replay costs £89.95 and is available from Microdeal, PO Box 68, St

CPC

- Classic fantasy game makes a first rate conversion
- Console axed but the Plus machines doing well
- Airborne arcade action bonanza due from US Gold

GX4000 GLOOM

Last week's news about Dixons chopping the GX4000 machine from its branches was pretty grim stuff. Just about the only consolation was the fact that the Commodore C64GS console got the chop too! (Sorry, Commodore fans).

It does mean that, for a while, at least, there should be some real GX4000 bargains out there in Dixonsland, but quite a few of you have been reporting ultra-cheap offers already.

So is this the beginning of the end for the Amstrad console? Rumour has it that Amstrad has about 300,000 of the things so far unsold - the company probably hasn't sold a tenth of that yet. Quite what's going to be happening to all those machines remains to be seen.

On a slightly more cheerful note, the Plus machines seem to be doing rather better - although Amstrad, as ever, won't give out any figures. Apparently the 6128 Plus is continuing to sell well in France, and the healthiness of the CPC market over there is vouched for by British software house Loricries, which reckons that half of its sales

across all formats are on the Amstrad! Mind you, Amstrad France does seem to be a bit more on the ball compared to the UK arm.

ARCADE TEMPTERS

US Gold is continuing to turn out arcade conversions, and coming up shortly will be G.L.O.C, an airborne blast in the *Afterburner* tradition.

Apparently the arcade machine has taken off like hot - sorry! in a big way. And although it's a bit like *Afterburner* in game style, playing it is quite a different experience, thanks to Sega's revolving arcade cabinet. You see, G.L.O.C refers to loss of consciousness due to excessive G-force...

Also coming up from US Gold is the *Bonanza Brothers*, another Sega arcade hit. The *Bonanza Brothers* are a pair of burglars who are faced with their biggest job ever: to clear out several large buildings while facing up to all sorts of hazards and traps. Needless to say, it's up to you to make sure they succeed.

I don't know much about the

● Gremlin has gone for made one graphics again in *Hero Quest*. Not much colour, but excellent detail.

gameplay yet, but it looks like a bit of a cross between *Rick Dangerous* and *Super Mario Brothers*.

HERO QUEST

I know, I know. Role-playing is for spotty little oiks who spend their lives in their bedrooms and who don't have any friends, right?

Wrong. At least, as far as *Hero Quest* is concerned that is. Gremlin's idea seems a bit odd at first - a computer version of a boardgame? Hmm. Amazingly, though, it really does work - and very well, as a matter of fact.

You can take on the role of one of four adventurers: Rogar the Barbarian (he's well 'ard), Durin the Dwarf (short, but a real nasty piece of work), Ladrin the Elf (a bit thin and weedy, but as sharp as they come) or Tolor the Wizard

● You can select to study a map screen, but it won't show you areas you haven't yet visited.

(you don't have to do much when you can just throw spells at people).

The idea is to defeat arch-villain Morcar in any of a series of missions (further expansion packs are on their way, I'm told).

At the start of your adventure you find yourself plonked down in an isometric 3-D world of dark corridors, gloomy chambers and nasty beasts.

As usual with role-playing games, you take your turn then the enemy takes his. To move you throw two imaginary dice (the computer looks after this) and you can then move the number of

**THE GENLOCK PEOPLE
SUPER VHS GENLOCK**

At last, the Rendale Super - 8802 is available. As well as operating in a similar fashion to the standard 8802, the Super - 8802 also boasts the following:

- Super VHS both in and out
- Hardware Controlled Fades.
- Hardware Controlled Wipes.
- Cross Fade between Amiga and Video.
- Integral mode switching control.

RENDALE SUPER - 8802 - £599.99

Existing Rendale Standard 8802 users can also upgrade. Please telephone to arrange a date to send your unit to us. We will require it for around two days.

RENDALE SUPER - VHS UPGRADE - £420.

◀ squares shown. Also in your move you are allowed one 'action' - you can attack an enemy or have a look for treasure (or traps, for that matter).

Hero Quest is a bit like the all-time classic Laser Squad, in that you can only see enemies in your line of sight, so you have to be pretty careful when you come to corners in corridors or when stepping into rooms. Unlike Laser Squad, you can't refer to a map of the playing area. At least, you can't begin with. The map only builds up as you progressively explore the scenario.

HOW TO SUCCEED NARCO POLICE

Dynamic's Narco Police looked like it ought to be good, but managed to defy all my attempts to get into it. It's a kind of strategic Operation Wolf, with loads of tunnel-exploring, charge-setting and drug-busting.

Anyway, if you're getting nowhere fast (like me), so you still determined to plug away (not like me), try these password cheats:

- To get no enemies, type **NOENEMIS** into your Personal Intercom Unit.
- If you want them back again (it can get lonely in those tunnels), type **COMMENZAR**.
- If you run out of ammo, type **MUNICION**.

Where Hero Quest really scores is with its multi-player option. With four heroes available, you can play with up to three other people. You can't have human versus human confrontations as you can in Laser Squad, but you can choose to help or hinder your friends - the competitive element is still there.

For longer-term interest you can save your character at the end of each game, together with any loot and weapons he's collected.

Hero Quest isn't hugely colourful, but it does have plenty of detail and the creatures and heroes are readily identifiable with the ones in the boardgame. It is also very atmospheric, helped by a great soundtrack.

Role-playing games do get plenty of stick (mostly from people like me), but Hero Quest comes pretty close to changing my mind. Now, if you just substituted some rock-hard guys with laser cannons and ex-soldiers for these sword-and-sorcery types, and set the whole thing in an empty space-station instead of gloomy old dungeons, I reckon role-playing would really be brought up to date.

Still, barbarians, dwarves, elves and wizards have their fans too. If you're one of them, buy Hero Quest. It is an excellent game, how much? £10.99 on cassette, £15.99 on disk.

Rod Lawton

Rod Lawton, editor of Amstrad Action, is currently looking for a new member of staff. If you have writing experience, write to him here at Express.

C64

- C64 games console in drastic price slash crisis
- Summer madness hits games market, but no Amiga
- Endless lives for classic games with our hot pokes

THE END OF THE GS?

So, it has happened. Dixons is selling the CG403 for as little as £29.99, complete with the bog-standard four game cartridge as reported in Express last issue.

So, was all the hype and ceremony which preceded the launch of the console a complete waste of time? Will the GS follow in the footsteps of the C16, Plus 4, and C128? No, basically. The GS is indeed losing its foothold in the market place, and one suspects that the £30 sell-off is merely a ploy to rid of unwanted stock. However, we can expect the GS to hang around at least until the end of this year.

Already Ocean and System 3 release most of their major titles on cartridge, and software standards are improving immensely, so the GS will go down as the saviour of the C64... or, at least, it should, in my opinion.

Ironically, Commodore has recently released its newest C64 bundle, called Playful Intelligence. For your £99 yes, you've heard me correctly) you get a C64,

and a four-game cartridge. This beats the C64 and costs less than the GS - why buy just a console when you can buy a proper computer?

Well, that's the obvious sales pitch.

HERE COMES SUMMER

As I mentioned recently, the usual plethora of licensed software is nearly upon us, but don't expect Terminator II just yet - it the film comes out in August in this country, and the game will probably only see the light of day sometime in December.

Here's a brief round up of what else the summer has to offer:

Hudson Hawk: Ocean has also acquired the rights to the new Bruce Willis film Hudson Hawk, and the game's release will no doubt co-incide with the video release. I haven't had chance to see the film, but reports from the States are unanimous; it's rubbish.

Smash TV is due out soon from Ocean, and is based on the popular Williams arcade game. I had a

chance to watch John Rowlands (of APEX fame) playing it in an arcade, and it looks incredible (as does the C64 version).

Two players make their way through a series of different rooms where they must wipe out dozens of enemy warriors. The whole game is viewed like a TV program – hence the name – with a blood-crazy audience watching to enjoy the slaughter.

The arcade version boasts two joysticks for each player (one for movement and one for weaponry), but I'm not quite sure how Ocean has accommodated this.

Bonanza Bros: One of the many games to catch my eye was Bonanza Bros from Sega (currently being converted by US Gold). The game is a split-screen arcade adventure, with two intrepid burglars attempting to recover some swag from a designated building.

There are guards and security systems to hinder their progress, but our heroes are equipped with all manner of weapons and gadgets. The game's real asset is its graphics; colourful, beautifully animated and above all very jolly and very original, especially in the bobbing heads department.

First Samurai: Licences and conversions aside, this is a game to look out for; currently being developed by Vivid Image of Hammerfest and Time Machine fame), it features a Samurai with a huge repertoire of moves traversing a vast landscape. The usual enemies are evident, along with a few surprises (giant snakes for example).

Little is known about it presently, but I would guess that John Twidley is coding the shabang, while Hugh Riley (or even Dokki) is performing the necessary graphic tricks. I'll keep you posted – the game is going to be BIG.

Outrun Europa is due any day now. I don't know much about the conversion, but chances are it has been handled by Probe, who successfully converted Turbo Outrun and SCI onto the C64. It's fast and furious action through the streets of European cities – you know, 1992 and all that.

Incidentally, Outrun Europa was to be the second of the Outrun games, but was pushed aside by US Gold in favour of Turbo Outrun.

MAKE MY DAY

I like receiving lots of mail, as it makes my housemates think I'm popular, so if you have any hints, tips or pokes, or even if you just want a really good whinge about anything C64-related, write to me here at Express, Future Publishing, 30 Monmouth Street, Bath, Avon BA1 2BW. **Andrew Roberts**

CLASSICAL POKES

I have been playing far too many old games over the past few months, owing to the lack of any new and interesting software at this time of year. So, here is a hefty bunch of reset POKEs for some of those classic games.

In each case the POKE is for **Intellec** lives, and the **SYS** command restarts the game:

● **Action Biker**
POKE 19287,47;SYS 13312

● **Attack of the mutant camels**
POKE 11018,165;SYS 4096

● **BMX Simulator**
POKE 13937,0;SYS 4096

● **Chuckie Egg II**
POKE 30895,165;SYS 18698

● **Ghostbusters**
POKE 32425,169;SYS 24576I

● **Ball**
POKE 20669,189;SYS 16939

● **Kane**
POKE 6638,181;SYS 3072

● **Monty On The Run**
POKE 9510,173;SYS 2064

● **Outrun**
POKE 34711,189;SYS 38045

• **Arnold's last blockbuster, Total Recall, translated onto the C64 quite badly. Terminator II: The Judgement Day, reputed to be the most expensive film ever made, has great potential... can Ocean deliver the goods?**

SPECTRUM

- First rate Specky package at a second-hand price
- Secret functions of the missing keypad revealed
- Play against major league players in RBI Baseball

VERITABLE SNIP

If you want to get a new Spectrum or upgrade your aged rubber key model to the comparatively sleek and sexy Plus 2, now could well be the time to buy.

A recent excursion into the local John Menzies revealed a startling discount on the Plus 2 Action Pack (that's the Plus 2, light gun and six

POKES FOR INFINITY

It's that amazing Alan Johns person again with some more of his Multiface pokes. When does this man find the time for mundane necessities like eating and sleeping? Thanks once again to him.

Knightsire	53567.0	Lives
Cerius	65535.0	Lives
Bigfoot	55189.0	Lives
Android 1 & 2		
	52249.24	All 3 give
	52250.32	infinite
	53897.0	lives
Hyperlane	48938.52	Lives

games). The shop was selling it for £79.99, which is practically half the standard Amstrad figure.

With this kind of price tag attached, the pack represents brilliant value for money, undercutting most second-hand prices and is a complete bargain in anyone's estimation. Write in and tell me if you see discounted Speccies anywhere else in the high street and let's save money!

STRIKE

Baseball's always looked like a game of rounders played in silly clothes to me, but Domark is hoping for a generally more positive response when it releases RBI Baseball soon.

It's another one of the company's Tengen can-op conversion jobs which tend to be brilliant, like Escape From the Planet of the Robo Monsters but sometimes throws up a bit of a stinker like Star Runner.

The graphics look like they'll be every bit as impressive as Hardball, that other Specky baseball offering, and the game scores numerous brownie points

with realistic detail, including using all 26 American pro baseball teams.

It should set you back £9.99 when it hits the software shop shelves soon.

CUSTOMER COMPLAINTS

A Mr A Fletcher of Wetherby has written to me about a problem he is having with Garner Designs, one time organiser of the excellent Plus Three Users Group and now publisher of Sinclair & SAM Computing. I've plugged it countless times in the past for its varied and usually excellent Specky-related services which always proved reliable and good value for money.

Mr Fletcher was a member of the old Plus 3 User Group and, 'very happy with the service'. From December last year however he tells me he has, 'had nothing but trouble trying to get disks and PD software from them' and goes on to give lots of examples of cheques being cashed and orders not arriving despite lots of phone calls.

For example, he's been waiting 10 weeks for issue one of the new Sinclair & SAM Computing diskette extra to arrive, despite the fact that his cheque was cashed in early May and he's phoned up twice to enquire about it.

'You used to plug them in your columns', he writes, 'so may I now call on you to try and find out what on earth is going on.'

Well, I'm going to try and find out what's going on. If you've experienced similar problems please write in and if anyone from Garner Designs would like to respond they're more than welcome.

● Pit your skills against 26 American Pro Baseball teams in Domark's RBI Baseball.

SECRET KEYS UNLOCKED

Have you ever lain awake at nights wondering what the Keypad port on your Spectrum 128K is for? Well a knowledgeable bloke by the name of Daniel Wyness knows and wrote in to tell us about it:

A keypad is a small keyboard with some extra keys available for editing programs in 128K BASIC. It plugs into the back of the Plus 2 computers and in the front of Spectrum 128Ks. Unfortunately, they didn't sell very well and are quite rare.

But you don't even need a keypad to take advantage of all the extra features it offers. You can duplicate the functions of the keypad simply by using the keyboard. Here is a list of all the extra features and how to get them whilst editing a program in 128K BASIC:

- Move the cursor as far as the beginning of the next word: Extended mode, then shift and J

PC

- Windows - new versions, new interfaces
- Cracks in the designs of Notebook computers
- Elvira's two in Elvira 2: Cerberus set for October

WINDOWS NT, 3.1 & 4.0

Confirmation has been received that, next, Microsoft will be shipping Windows NT, its 32-bit New Technology operating system with only Windows and DOS programming interfaces - OS/2 is being shunned.

Previously, Microsoft said the New Technology (NT) kernel would be the core component of OS/2 3.0 - a pure 32-bit version of OS/2 that would run code written for DOS, 16-bit and 32-bit Windows, and 16- and 32-bit OS/2 applications programming interfaces (API).

NT mode will include security, 32-bit internals and features that include the other capabilities promised for OS/2 3.0 such as 'asymmetrical multitasking'. Microsoft has plans to provide a future 32-bit Windows API in enhanced mode under DOS. Windows NT's user interface will include the functionality to be found in Windows 3.1 - an upgrade to DOS/Windows that is scheduled to appear later this year.

The company has not yet decided whether Windows NT will be sold

separately or be packaged in the same box as DOS/Windows.

Microsoft is also working on a further refinement that executives sometimes refer to as Windows 4.0, which will add other new features. No details yet, however.

☎ Microsoft can be contacted on 0734 500741.

TULIPS IN AMSTER-LAN

Tulp Computers recently announced that it has signed a worldwide licensing agreement with Microsoft to supply Microsoft LAN Manager and DCA, Microsoft Communications server. Both products will be available from Tulp-authorized dealers from August. Tulp believes this agreement is a crucial move in providing a complete solution to its customers' networking problems.

DOS 5 CORNER: SECONDARY BUFFER CACHE

Buffers. No not the Chelsea Pensioner kind but those handy things that help smooth the performance of your PC.

All very common but not too many people are aware of the Secondary Buffer Cache (SBC) that speeds up your PC. Handy if you don't own a SMART drive caching program or something similar.

When a program requests part of a file stored on disk, DOS 5 provides the program with the information required. If there is a secondary cache, DOS 5 then stores the next portion of the file in the secondary cache.

When the program requests the next portion of the file, DOS 5 supplies the information more quickly from the cache than it could from the hard disk.

SBCs can speed up program loading and the operation of disk-intensive programs such as word-processors and compilers.

So, for those of you who don't own a disk-caching program, in your Config-Sys file, where you may have,

BUFFERS=30

for example, add "s" (the normal SBC figure) to the end of the line to access the

◀ flimsiness of their plastic casings.

Many popular notebooks, including Compaq's LTE 386s/20, Sharp's G220, and AT&T's Safari, suffer from these problems. Some problems are merely annoyances, while others make the machines unusable.

According to American magazine, InfoWorld, a major computer dealer in New York said several Sharp Electronics Corp G220, Texas Instruments Inc Travelmate 2000, and AT&T Safari notebooks have been returned with nonfunctioning displays.

The magazine reported that, "the panels become crushed in the process of overstuffing a briefcase. Outside, the casing is intact; inside, the components are damaged."

InfoWorld's Test Centre also found that the port doors on a TI Travelmate 2000 popped out constantly.

A Los Angeles-based dealer reported problems with the construction of the Sharp machine, including cracked hinges on the display case. But he said it was a common problem, and he'd seen many notebook computers — particularly inexpensive clones sold by tiny firms — returned because of cracked hinges.

Compaq is no stranger to problems with cracked cases. Its LTE and LTE 286 models suffered so badly from cracked cases that one corporate computer buyer said he returned 250 cases on the first 200 machines his company bought.

"The first cracks would appear around the diskette drive, followed by

hinges, joints, thin sections — everywhere. In time, the unit of a frequent traveller would self-destruct. Users were advised to be gentle and use tape to hold their units together."

Compaq Computer Corp has subsequently offered to replace the cases for free, and a spokesman for the company said they had taken care of the problem on its 386s/20 models.

A Compaq official acknowledged that it's difficult to build lightweight notebook-sized computers that can withstand rugged handling:

"The original Compaq portable had a Winchester drive mounted to rubber bumpers," he said. "You don't have the same shock absorbing materials and dampers in notebooks."

All of which begs the question — what price fashion?

ELVIRA'S FRONT BACK!

To be released by Accolade in October, *Elvira II: The Jaws of Cerberus* requires you to rescue the fair maiden (I), held captive in a gigantic film studio, by the gruesome Cerberus, a monstrous three-headed demon.

Taking place on three film sets you will have to make use of certain elements of the studio to succeed.

Visits to the wardrobe and make-up departments are essential, for example.

Elvira II promises more blood curdling graphics (depicting graveyards, catacombs, a mad scientist's lab and a Victorian house) and spooky sound.

- Whatever happened to Quark Express for NeXT?
- Buy eight Macs IISIs and get a Classic for free
- Latest upgrade of Adobe Photoshop announced

RUMOURS...

● Apple subsidiary Claris has said that it is considering developing products for the Windows platform on IBM-compatible PCs.

This is actually quite a positive move from the Macintosh point of view — the more applications which are available on both PC and Mac, the more likely businesses are to start regarding the Macintosh as a computer which employees can use (at the moment there are a horrifying number of companies who will only buy PC compatibles, and refuse to allow their executives buy Macs).

● Mosaic computers, an Apple authorised dealer based in Warwickshire, has announced that it has been appointed by NeXT computers as a NeXT centre for the Midlands.

According to the Shaun Thomson, the company's general manager, "NeXT machines are a natural extension to the Apple range. For professional users who need high power, the NeXT takes over where the Apple Mac leaves off."

Quite what Apple thinks of this remains to be seen, but it is quite likely

that we'll be seeing more and more Apple dealers diversifying as rumours that the company will set up its core of high street retail outlet in the near future become firmer.

While the NeXT can be seen as a logical step for these companies, observers have commented that the machine needs rather more than its current 8,000-odd user base in the UK before software developers will begin to produce serious-level software for the machine.

For example, although Quark is still apparently developing XPress for the NeXT as well as for Windows, the only announcements it has made recently relate to the Windows version — the company has become strangely quiet on when the NeXT version is expected.

PRODUCT NEWS

Ricoh UK, the scanner manufacturer, is sponsoring this year's Rugby World Cup. And to tie in with that, Hayden and Son is offering anyone who purchases a scanner between July 1 and September 15 the chance to win tickets for various of the games.

In addition, the winner of the two Final tickets will also receive a weekend for two at a major London West End hotel. There are also a Ricoh camera and Ricoh Rugby T-shirts for the runner-up prizes.

If you're about the buy a scanner, and you fancy the idea of watching 30 blues running around in the mud, give Heyden and Son a ring on 081-203 5171.

Those of you in the market for vast numbers of Macs (I'd settle for just one, if you're listening, Apple...) might be interested in an offer from Callhaven.

If you buy eight Mac IIsis, they'll give you a Mac Classic 2/40 free. And it gets better: buy five IIsis and you'll get an LC 2/40, or buy just three IIsis and you can

have a free Mac IIsi 2/40.

Your free machine(s) will arrive in the month following the shipment of your order.

Callhaven is on 071-410 9191.

PHOTOSHOP 2.0

Adobe has announced version 2.0 of its colour image-retouching software, Photoshop. Although there are two main contenders in this market - Letraset's ColorStudio is the other - Photoshop is the acknowledged leader, and the upgrade has been eagerly awaited by the graphics community.

The original version took the Macintosh community by storm; suddenly you didn't need to hire a

Quantel Paintbox at £300 plus an hour to produce professional photo-montages; all you needed was £900 or so (and, of course, your trusty Macintosh).

With its numerous filters and effects, Photoshop can be used for everything from photo-montaging to scanned image retouching. Now, version 2.0 includes some new painting tools as well as the feature most requested by current users - the ability to edit images in CMYK (Cyan, Magenta, Yellow, Black) mode. Previously, images had to be edited in RGB (Red, Green Blue) mode and then converted to CMYK for output to film, in order to be printed.

This introduced the problem that an image viewed in RGB mode bears not

Photoshop version 1 already has enough features to keep designers (and the more meticulous photo-fanatics amongst us) happy for months. Version 2 promises to be even better.

much resemblance to one actually printed as CMYK, so the new feature in version 2.0 is a tremendous improvement.

Version 2.0 is fully System 7-compatible, although it only takes advantage of Publish - allowing you to export sections of an image as PICTs or EPSs, and not Subscribe. It also has the neat feature that when you save an image, you can specify that its icon is a tiny representation of the image itself - a great help when you have dozens of files in a folder called, for instance, man1, man2, man3 and so on.

Photoshop 2.0 should be available by the end of July; UK distribution will be through all Adobe dealers, and it should cost around £895.

Ian Wrigley

POSTCARD FROM AMERICA

The Macintosh programmers conference, MacHack, is held in June every year. With System 7 finally shipping, everyone got to hear the inside stories from the development team.

The incident didn't seem quite so firm after word leaked out about Apple and IBM getting together to share technology. The on and off and on again talks centred on Apple's forthcoming object oriented systemware, code-named 'Pink'. The System 7 code-name was 'Blue'. There's been a torrent of speculation about the origin of the two colour nicknames.

The plans for future system software were determined in a meeting of Macintosh programmers in March 1988. New features were divided up into two groups - those that could be built on the existing operating system foundation, and those that could not.

Each feature was written on a coloured index card, blue for the re-model job, and pink for the ground up construction. All the cards

were stuck on a wall, and the programmers signed up to work on the Blue stuff or the Pink stuff.

The project manager was suffering from a touch of historical revisionism. She claimed that the Blue team was christened the 'Blue Meanies' a day before Apple Corps Ltd, London, used Apple Computer. This was the suit concerning the use of the word 'apple' on music-related products. My examination of the newspapers show a month's difference. A case of poetic justice, I think.

One of the best ways to see some of the Meanies is to open the Monitors control panel. Click on the version number, and hold the mouse button down. A little pop-up menu with six names and a face will appear. If you click the Option key, the face will stick out its tongue at you. Keep repeating the Option key and the names will mix themselves with the words "Blue Meanies."

WHOLE WIRED WORLD

Hot off the modem ... Steve Gold reports on a cheaper PC File database package and a cut price clone PC chipset family; Apple's pink OS; a hard disk for the Atari Portfolio and Codehead packages released into the public domain

BUTTONWARE UPDATES PC FILE

Buttonware in the US has released version 6.0 of its popular PC File database package. The \$149-95 package, which made its name when it was shareware, now features a Windows-like interface, better file location and better macro capabilities.

A key feature of v6.0 is that dBase compatibility has been greatly enhanced. According to Buttonware, the package is as good as Ashton-Tate's database software, but costs a fraction of the price.

As with previous versions, 14 optional 'ready to roll' PC-File applications modules, such as accounts payable, business contacts and invoicing are available. Contact: ButtonWare, PO Box 96058, Bellevue, WA 98009, USA. Tel: 0101-206-454-0479. Fax: 0101-206-454-1838.

MACS 'IN THE PINK'?

Apple officials have quietly unveiled their plans for the next generation operating system for the Apple Mac and its compatible range of successors. The working name for the new OS is Pink. Unlike System 7.0, plans call for Pink to be fully object-oriented in its approach to driving the Mac. The OS will be portable and is

AMD'S CLONE PC CHIPSET FAMILY CHEAPER AND FASTER THAN INTEL

Advanced Micro Devices (AMD) has released a new family of 80386SX chips in the US. The flagship in the new chip series is a 25MHz microprocessor - 5MHz faster than the fastest available Intel chip in its class.

AMD chairman W.J. Sanders is calling the clone chips "the

microprocessor for the masses," adding: "We intend to re-introduce normal semiconductor learning-curve pricing for microprocessors used in IBM-compatible personal computers, with price reductions for the Am386SX microprocessor exceeding 20 per cent per year over the next five years."

Sanders also said that a 30 per cent price reduction is scheduled for the next year.

AMD's new chips are said to be substantially cheaper than the official Intel microprocessors. All this points to an impending drop in the price of 80386SX-based PCs - time for the 80286-based PC to quietly fade away?

* Apple's new operating system will be called Pink and will be fully object oriented, but its launch is several years away.

being designed to run on different microprocessors, including Intel X86, Motorola 68XXX and the IBM RS/6000 Risc chipsets.

Interestingly, Apple programmers are already working on the OS, which is being coded in C++ initially. Plans call for the new OS to be developed in close liaison with IBM. Compatibility with Mac System 7.0, OS/2.0 and the proposed Apple/IBM AIX (Unix) operating system is also planned.

But don't hold your breath. The introduction of the new OS is still several years away, and is highly dependent on what new hardware IBM and Apple come up with in the intervening period!

GOODBYE ATARI SLM 804

It's official - the SLM 804 laser printer is now dead. Ron Kovacs' Z-Net on-line newsletter reports that the remaining stock of the laser printer has been sold to DAK Industries, the renowned US mail order bargain bin supplier, which is offering the machines for \$699.

To make the printer more appealing, DAK has adapted the unit to make it PC compatible, though its true features only come into their own when an ST is used. The SLM 804 name tag has gone out of the window as well - the DAK unit is called (wait for it) 'the Silver Express'.

The good news is DAK has agreements with suppliers to ensure supplies of toner and drums for the laser printer for at least five years. Toner packs cost \$49, while drum kits cost \$199.

At these prices, SLM 804 laser printer users in the UK would do well to check out DAK's mail order catalogue. Contact: DAK Industries, 8200 Remmet Avenue, Canoga Park, CA 91304, USA. Tel: 0101-818-888-2695.

ATARI PORTFOLIO HARD DISK

BSE has announced the immediate availability of a hard disk unit for the Atari Portfolio. And, unlike most of the competition, this one is available to buy.

The Flashdrive hard disk connects to the Portfolio via its parallel interface. A 20Mb version costs \$499 - almost half the price that Xotrix is charging for its unit. Contact: BSE, 14701 Canada Place, Tustin, CA 92680, USA. Tel: 0101-714-832-4316

* Flashdrive is the new hard disk unit for the Atari Portfolio - available at half the price of a comparable unit.

CODEHEAD SOFTWARE INTO PD

Codehead Software has released several of its utility packages for the Atari ST range into the public domain. The result is that the software is now spreading around the US on-line systems like wildfire. Codehead is also offering the software by mail order for a nominal fee. The packages available so far in the Codehead freeware range are:

Loadkeys - A support program for Codehead's Codekeys, Macro software. The package allows user has to install macro loading under Codekeys.

Hot Edit - Hotwire menu editor - allows Hotwire to be interfaced with most other software using menu-driven front ends.

Clockset - A new clock setting utility for the ST. Fixes a bug in the official Atari

package that causes lockups in non-battery backed clocks on the ST.

Showmem - A new version of Codehead's memory display utility. This version supports the Atari TT's 'Fast RAM' memory and has a heads-up display of what memory is in use, and what is available, on the Atari ST and TT.

Contact: CodeHead Software, PO Box 74090, Los Angeles, CA 90004, USA. Tel: 0101-213-386-5735 Fax: 0101-213-386-5789

COMMODORE BLOWS IT

Latest information from Commodore's R&D operations in the US is that Release 2.0 of the Amiga's operating system has been 'blown' into ROM. The chips will receive their official unveiling at the AmigaWorld Expo show in Orlando, Florida from 26 to 28 July.

So why did this version of the Amiga's OS take so long to install on a ROM chip? Word from the on-line community is that support for outline fonts has been added to the software. This technology is complex, hence the delay.

FREE SLOTS FOR 286-BASED PCS

Cumulus has released an 80386SX upgrade for 80286-based PCs that simply slips into the empty 80286 socket. This feature, the company claims, means the \$299 board is superior to the current competition, which requires the use of a PC expansion slot.

As supplied, the board comes with-out an 80386SX microprocessor, allowing the user to choose which speed processor to fit into his or her PC. With prices on the 80386SX chipset set to fall in the coming months, this is good news.

The 386SX board, which comes bundled with Microsoft Windows, is available in five versions, depending on the PC it is to be installed in. It is \$25 80387SX maths coprocessor kit is also available. Contact: Cumulus Corporation, 23500 Mercantile Road, Cleveland, OH 44122, United States. Tel: 0101-216-464-2211 Fax: 0101-216-464-1190. ■

COMMODORE'S AMIGA SALES REVEALED

According to Computer Intelligence (Infocep) a latest round of market research, Commodore has sold 1.3 million Amigas so far this year. The figures, which compare the sales of various computers, make for some interesting reading.

WORLD-WIDE UNIT SALES IN MILLIONS

Company	1989	1990	1991
Apple	1.5	1.6	2.1
Commodore	1.9	1.8	1.3
IBM	2.7	3.0	3.4
NEC	1.1	1.3	1.4

Sadly, CIT's figures do not detail sales of the Atari ST, so it's impossible to produce one of those 'ST beating Amiga' headlines for this story. It is, however, good to see the Amiga climbing in popularity.

* 'GAZZA 2' * 'TRACKSUIT MANAGER 90' * 'SUBBUTTE' * 'THE BALL GAME' * 'TREASURE TRAP' * 'ASTERIX' * 'SKIDOO' * 'LEONARDO' * TOP QUALITY JOYSTICK * 10 X 3.5" DS/DD DISKS *
TOTAL RRP OF EXTRAS: OVER £180.00!

EVESHAM MICROS PRICE PROMISE - WE WILL BEAT ANY GENUINE ATARI ST PACKAGE OFFER ON A LIKE-FOR-LIKE BASIS

All our ST prices include, user guide, etc. PLUS 5 disks full of specially selected P.O. software, inc. paint program, wordpro, a games, graphics & sound demos, desk accessories and utilities.

520 STE 'DISCOVERY EXTRA PACK'

This excellent STE starter package from Atari includes the Atari 520 STE with 1MB Drive, 512K RAM, full digital stereo sound, PLUS extra software including:

- Dragon's Breath • Super Cycle • Indiana Jones •
- Anarchy • Neochrome • FIRST BASIC • Atari ST Tour

520 STFM 'DISCOVERY PACK'

Pack includes 520STFM computer, plus:
 STOS Gallery Creator • Curator • Corner Content •
 Bomb Jack • Space Harrier • Nashechne • FIRST BASIC •
 Atari ST Tour • 'Discovering your Atari ST' Book

1040 STE 'FAMILY CURRICULUM PACK'

1040 STE including educational & productivity software. Educational Software modules, split into three age categories, from Early School to GCSE revision. • Productivity Software featuring Wordprocessor, Database and Spreadsheet (RRP over £100) • Paint Hyper Paint, Music Maker and FIRST BASIC

SM121 monochrome 16-in monitor	£ 129.95	Reference 100MB SCSI Hard Disk inc PSU	£ 349.00	VID-ST & VID-CHROMEGA video digitiser pack	£ 99.95
Philips CM833 M.R. inc cable	£ 239.00	Reference 100MB SCSI Hard Disk inc PSU	£ 499.00	VID-RGB colour input splitter for VDI	£ 64.95
Optical Accessibility Adapter for STy	£ 4.95	Golden Image Handy Scanner Package	£ 179.00	Disk Cover - for any STy STFM	£ 4.95

Amiga 500 512K RAM / Clock Upgrade	£ 29.99

AMIGA 500 512K RAM / CLOCK UPGRADE

Direct replacement for the A501 Expansion • Convenient on/Off RAM Switch • Auto-recharging battery-backup clock • Compact unit size • Ultra-quiet design

ONLY £28.99

Available without clock for £24.99

ASO0 1.5MB RAM EXPANSION (requires Kickstart 1.3) ... ONLY £79.00

Kickstart 1.3 upgrade available from us for only £29.95

NEW! MEGABOARD

Connects to your 512K RAM Upgrade to give 1.5Mb!

With the MEGABOARD you can further expand your A500's memory to a total of 2MB without draining your A500's 512K upgrade (must be a 4x RAM-chip type, or not exceeding 1cm in length). Needs Kickstart 1.3 to operate. Installation requires no soldering! **ONLY £59.95**

ST SIMMS RAM EXPANSION SYSTEM

- ✓ Fits Atari STFM and MEGA series machines
- ✓ Uses SIMMS RAM Modules for Effortless Upgradeability
- ✓ Probably the nearest ST RAM Upgrade available!

RAM Upgrade (unpopulated)	£ 44.95
RAM Upgrade With 512K RAM installed - upgrades to 520 for a total of 1MB RAM	£ 74.95
RAM Upgrade With 2MB RAM installed - upgrades to 520/1040/Mega1 to 2.2.5Mb	£ 119.95
RAM Upgrade With 4MB RAM installed - upgrades to 520/1040/Mega ST to 4Mb	£ 199.95

N.B. Due to the large variation in design of the Atari ST, there is a small minority of boards in existence which require a little soldering.

PLUG-IN SOLDERLESS ST RAM UPGRADES

Two versions allow upgrade to 1Mb, or 2/2.5Mb • Simple, fast and effective RAM upgrade path • Suits almost any 520 or 1040 ST model (not STE machines) • Requires no soldering or technical know-how

512K VERSION: UPGRADES ANY 520 ST TO 1MB RAM	£ 49.95
2MB VERSION: UPGRADES ANY 520 or 1040 ST TO 2/2.5MB RAM	£ 99.00

ZY-FI amplified stereo speakers

GOT AN AMIGA, ATARI STE, ARCHIMEDES, SEGA MEGADRIVE, ATARI LYNX OR NINTENDO GAMEBOY? THEN GET THE FULL SOUND POTENTIAL WITH THIS PAIR OF FULL RANGE, AMPLIFIED STEREO SPEAKERS!

ONLY £39.95

3 1/2" EXTERNAL FLOPPY DRIVES

Compatible with the ST or AMIGA

Very quiet • Slimline design • Cooling Vents • Sleek, high quality metal casing • Suits any Amiga or Atari ST • Full IBM Unformatted Capacity • Quality Sony / Citizen Drive Mechanism • Convenient On / Off switch on rear of drive • Long reach connection cable for location either side of computer

AMIGA VERSION ONLY **£54.95**

ATARI ST VERSION ONLY **£54.95**

TRUEMOUSE (ST OR AMIGA)

WE GUARANTEE that this is the smoothest, most responsive and accurate replacement mouse you buy for your Atari ST or Amiga. Excellent performance, amazing low price!

£17.95 SATISFACTION GUARANTEED

PHILIPS 15" TV/MONITOR

With its dedicated monitor unit, this model combines the advantages of a high quality medium resolution colour monitor with the convenience of remote control 'Teletext TV' - an excellent low price / NEW feature! Includes remote glass screen for improved contrast, plus full range 3-way speaker sound system.

£269.00 Including VAT, delivery & cable

CIRCUIT CITY

A PC's advantage is its open-ended flexibility. Keith Pomfret looks at some of the painless ways to upgrade and enhance your machine

While ST and Amiga owners get on with their 'my machine's better than yours (MMBTY)' debate, PC owners can be sure of one thing. Should there ever be a 'my machine's more easily expandable than your's (MMMEETY)', then they will be the hands down winners.

When IBM drew up the rules that were to become the blueprint for the office computer of the decade, it included a bay of expansion slots designed to help the owner add accessories and features at a later date and with the least amount of fuss.

The PC and its clones were the first worldwide mass produced desktop computers to invite the user to open the lid and dig around inside. Most computers come with a disclaimer that says kiss bye-bye to the warranty if you as much as peek at the insides of the machine. Not so the PC. Most desktop PCs and even some laptop PCs have slots for expansion. These expansion slots take a printed circuit board with an edge connector that slots in and is fastened to the computer's chassis with a screw.

THE FIRST AND THE LATEST

The first PCs were 8086/8088 based PC Jrs and latterly PC/XTs. These and the XT clones are modelled on 8-bit architecture and are equipped with 8-bit expansion slots. The later IBM AT and clones are based on the 80286 processor which is a true 16-bit processor. These and the current generation of 386SX, 386DX and 486 machines have slots for 16-bit expansion cards. To confuse matters further, many 16-bit machines also have 8-bit slots to supplement the 16-bit ones.

Identifying which slots your machine has is simple. First, unplug and disconnect your machine from the mains and any peripherals. Next, follow the manufacturer's instructions on how to get to the expansion slots. Some PCs require you to remove the whole of the outer casing, leaving the chassis bare. Others, notably

• This miniature expansion card can be used with a scanner and being only a couple of inches long it should fit in most PCs.

Amstrad, have a removable panel which gives simple access to the expansion.

Once you've removed the necessary covers, there will be a row of slots facing you. An 8-bit slot has a channel for a single edge connector to fit into. A 16-bit slot has a second shorter slot for a further edge connector which is mounted length ways first.

Generally, an 8-bit expansion card will work in a 16-bit slot, only occupying the first edge connector. But a 16-bit card won't work in an 8-bit slot as there are no connections for the second bank of address lines.

SPACE AT A PREMIUM

With all of this compatibility it would be simple to think that expansion would be an uncomplicated, but it's never that easy in computer-land. Not all manufacturers make their expansion bays the same length. The current trend towards smaller and neater desktop PCs puts space at a premium, and some manufacturers have trimmed the length of space available to the expansion cards. Thus if the upgrade you plan requires the use of two full length cards and your PC has three-quarter length slots, you're out of luck.

ADDRESS IDENTITY CRISIS

Another problem that may rear its confused head is that of memory address. If you are fitting two or more expansion cards, there's always a chance that they may have a conflict of address. When you attach an expansion card to the PC, the machine must know where to 'find' it so each card has an address. The problem comes when two cards have the same address. If, say, the data for a sound card gets sent to a video card, it's akin to speaking Swedish to a Belgian - things get confused.

Thankfully, most cards which are likely to have this

• The Workport Faxcard showing the external connections for a telephone line and acoustic interface.

address identity crisis are now made with small switches or jumpers which enable addresses to be modified to avoid such conflicts.

Once you've decided on which card to fit and you have an open machine in front of you, it's simply a matter of working out the orientation of the card and firmly sliding it into its slot. A screw in the outward end of the card attaches it to the chassis and it's ready. Some cards have a blank end and others have ports and controls on their. Care is required when fitting a card with ports or controls as they must be easily accessible from outside the machine. Most PCs offer easy external access but one or two are a little awkward.

With the card fitted and the covers back on, you can reconnect all your peripherals, monitor and mains and you are ready to try the upgrade or expansion out.

NOW GET RUNNING

The kind of card you decide to fit will determine the installation and running procedure and this can vary from a simple system where software 'finds' the card and uses it such as a games port, to a full motherboard on a card-style upgrade that will need configuration and hardware setting.

Most cards will require some sort of software support and if this isn't the kind built into existing software, it will be supplied with the expansion card. If at a later date, you need to further upgrade or remove the expansion card, you just open the machine, unscREW and remove the card and reconfigure any software. ■

HOUSE OF CARDS

A PC can be upgraded by adding an expansion card. This can be anything from a simple serial port to a full blown upgrade PC on a card. Upgrades can be divided into two basic kinds.

There are those which add functionality to a machine by adding extra ports and enhancing the operating system in some way.

This could be in the form of a gamesport, serial or parallel port or a disk controller card. This group also includes the memory expansion cards which can take the lowly 640K PC up to 32Mb of on-board memory.

The second kind of expansion card is that which allows some kind of external peripheral to be added or enhanced. At their simplest, this could mean a video card allowing, say, a VGA monitor to be fitted. More complex cards include driver cards for scanners, digitisers, uninterruptible power supplies and sound cards. Whatever you want to do, there's a card for it.

HOW MUCH AND HOW DIFFICULT IS IT?

Anyone with the ability to follow a few simple instructions and the manual dexterity to use a screwdriver can upgrade a PC.

The cost depends on what you need to do, but simple port cards start at around £15. A multiple serial/parallel/games port could cost

£40, display cards weigh in from £20 for a simple CGA/EGA model to hundreds of pounds for the latest Super VGA models.

Soundcards start at around £50 and rise to £400 for a complete multi-timbral synthesiser. Memory and processor

upgrades can weigh in heaviest with prices running into thousands for multi-megabyte upgrades. Smaller more usual upgrades are likely to cost much less, though, with a chip kit for upgrading a 512K PC to 640K costing only a few pounds through mail order.

TECH TIPS

Do you want your character stripped to the bone? Does your PCW need a serial port in a storm? Need 128 on-screen colours on your Spectrum? Read Keith Pomfret's Tech Tips

HELP PC or not PC?

Being rather ignorant on what personal computers are available and what their capabilities and limitations are, I would be pleased if you could give me some guidance. (My local shop keepers tend more to confuse me than clarify).

I would like the computer to be able to cope with my club's accounts (VAT registered), and also extensive data-handling and word processing.

I would also like my children to use it to further their education and inevitably there would be a requirement for games and simulations to be played on it. I would need a printer that is capable of producing reasonable copies.

Can the above be achieved on a hardware budget of £500-£600 and what computer and printer would you recommend?

PM Fox Stoke-on-Trent

YOUR LONG LIST of questions makes a simple answer difficult. The business applications suggest a PC. However, a computer purely for education would be an Archimedes or a Macintosh. The gaming machine would be the Commodore Amiga and for a printer, your choice within your budget is dot matrix or a cheap bubblejet model. Try UK Home computers on 0793 695034 for the sort of equipment you need within your budget.

HELP Link up

I was wondering if it is possible to connect an old 1541 CMK1 to an Amiga to use under the 64 Emulator. I have heard rumours that it is possible but have never seen anything available to do it. Please help. Also, can you recommend a good, fast modem for the A500 (9.6-19.2k) that offers best features for cost?

M Reynolds, Staffs

IT IS POSSIBLE. There are two ways to do it and an up and coming feature in Circuit City will show you how to do

them both. Look elsewhere in this mag for Tim Howell's definitive review of the Multimodem V32 which is one of the nicest high-speed modems to grace Express's door.

HELP Just the fax

I've got a question for you. I want to know if it's possible to connect my Commodore Amiga 1500 to an Amstrad 9600AT fax machine so that I can use its internal 9,600-baud modem.

I would really like to attach it to a serial port, if possible, because I have my printer connected permanently to the parallel port.

The modem in the 9600AT operates at 9,600/7,200/4,800 and 2,400bps, and has a 36-way parallel interface. Do you think that it would be possible to make a lead to connect the two?

Marcus D East, London

• The Amstrad Fax machine allows you to communicate with a computer.

IT IS INDEED possible to connect your Amiga to the Amstrad fax machine, which does have a port to allow this. Unfortunately, you'll be limited to sending basic text strings as there isn't any "intelligent" software to do anything clever.

TECH Quality cabling

A COUPLE OF weeks ago we ran a plaintive letter from Barbara Yarwood of BY Cables suggesting that we put her company on the list of approved Tech Tip cable-makers.

Shortly after that we telephoned her with a request for a cable and within a matter of days it arrived.

If the Atari STFm to Commodore 1084D cable and an extra Amiga

modulator extension set that Barbara sent for our approval are anything to go by, BY Cables deserves the coveted Express seal of approval.

HELP Which chip?

I have a MAC SE which has an accelerator card boosting its clock speed from about 8MHz to 16MHz. I understand that my computer has a Motorola 68000 chip.

What I want to know is how does this compare with, say, an 8086 PC running at the same speed? My friend reckons that the Motorola 68000 chip is equivalent to the Intel 80286 chip and that the 68020 is the equivalent of the 80386. However, if that is correct then where does that leave the 68030 and 680386 in comparison with the 80486?

Your answers would be gratefully appreciated and, while you're at it, any chance of printing a table comparing the processing power of all the different makes and types of chips? Thanks!

Simon Phillips, Warwickshire

A STANDARD 8086 PC XT clocks at around 4.77MHz. Even the quicker updated machines don't often beat the 10MHz barrier, so your 16MHz accelerated Mac outruns them easily in terms of processor speed.

An important point to note though is that speed isn't everything. The functionality of the friendly front end of your Mac would be considered by some to be worth more than the speed increase

of a faster processor in a PC.

Your friends' analogies are valid in that they roughly sum up the positions of the various chips in their individual hierarchies, but the advantages and disadvantages of the Motorola and Intel chip sets mean that there's a little bit more to it than: "My 68040 is faster than your 486".

The power functionality table is something that we're looking into and if we get enough requests for this sort of data, we'll print *The Computer Bora's: My Chip's Got More Bits, MIPS, FLOPS and Megawidgets Than Yours Has, So There* guide.

TECH Pinned down

I enclose a pin diagram for the RGB socket on the back of the Hitachi CPT1646 colour 16-inch television/inclusion in the Tech Tips library. It is a remote controlled television with a RGB input on the back. A small white switch at the rear toggles between the two modes. These are the pin functions:

- 1 - Red input - Nominal Level 0.7pp 750Hms
- 2 - Green input - ditto
- 3 - Blue input - ditto
- 4 - Sync input (-ve)
- 5 - Earth
- 6 - Sound input - Nominal level 500mV/22k for 0.5W output

The diagram is viewed from the rear of the receiver. Don't say I never give you anything.

By the way, what did Stuart Campbell mean when he said in Express 139 "stand by for loads more trash Simon"?

Simon Richards, Twickenham

• The pin configuration for the Hitachi 1646.

THANKS FOR THAT. I wouldn't dream of accusing you of parsimony and I haven't a clue what Stuart meant. And even if he told me I'm sure it would lose something in the translation from his Caledonian burr to Express South Western Standard English via my lovely Lancastrian accent. Ahn reel sorry ma'am, I left me clogs in the weaving shed, and all that.

* The ST comes with one keyboard, but adding a second one shouldn't prove difficult.

HELP It ain't heavy

For years I owned a BBC Model B and it has a Dot Matrix Brother 2109C printer with it.

Now that I've bought an ST can I still use the printer with it?

Is there a cable I can connect to the 25-pin socket at the back of the Brother; the BBC computer uses the other socket.

If there is such a thing, where can I get it and how much will it cost me?

It seems such a pity to have to buy a new printer just because the Brother is not compatible.

Ted Wed, Hampshire

YES YOU CAN for there is such a thing. It's called a parallel cable and you can get it from Simpson Electronics on 0332 760353 who will tell you the price.

Alternatively, you could buy the necessary bits from Tandy and make your own.

HELP Soft option

My son bought a bundle of software at an auction and, although there is about £1000 worth of software on original disks, it doesn't say which computer it's for.

How can I find out which machine I need to buy.

Bill Porter, Peterboro

Simply take the disks down to your friendly computer shop and ask them to try them in a few computers until you find the one that they're from. ■

Write to Keith Pomfret,
Tech Tips, New Computer Express,
30 Monmouth Street, Bath BA1 2BW.

TIP Take your pick of the tips

THE TECH TIP Mailbag generally consists of cries for help and a trickle of tips. This week, however, we received a weighty 1000-plus words from John R Hudson of Huddersfield crammed with more tips than a snooker cue factory. Normally, long letters are consigned to the bin or ruthlessly hacked, but this time we've made an exception and broken John's letter down into digestible chunks.

CHEAP AND CHEERFUL

There are numerous examples of cheap and/or 8-bit software outperforming standard PC and even mainframe software.

Stop Press, for example, can flow text around graphics and *DR Draw and Graph* come with scaleable fonts, though none of these has the power in other departments to justify being chosen in preference to some of the more modest PC software.

GIANT SLAYER

The *Mini-Office II* graphics module outperformed Lotus 1-2-3 up till release 2.2. Incidentally, *Mini-Office II* holds its graphics data in ASCII delimited format so it can accept data from databases and spreadsheets that can export in ASCII format.

The data table (20 rows by two columns on the Amstrad CPC version) needs the numeric values in the left hand column and the text values in the right hand column and, if saved in ASCII delimited format, will load directly into *Mini-Office II*. Three such tables can be loaded in the CPC version as long as the text values are identical so that results can be compared.

* *Mini Office 2*, the lightweight multiple application package available across the formats. It offers spreadsheet, word processing, database, graphics and comms.

LISTOMANIA

Perhaps a more serious contender is *dBASE II*, the substring feature (S) of which enables you to find a sequence anywhere in a text field. So, for example, if I want to list all the books I have with 'CPIM' or 'MSDOS' in the title, I only need to enter 'CPIM' or 'MSDOS' as the substring and it will list them regardless of where the sequences 'CPIM' and 'MSDOS' occur in the titles. If I have some titles with 'MSDOS' and some with 'MS-DOS', I can ask it to find 'MS' and 'DOS' in the title.

Amazingly, this feature was left out of *dBASE III* and, as far as I am aware, has not been restored in *dBASE IV*. It is also, I am told, unavailable on any mainframe database programs. You can specify a sub-string, but you must also specify where in the field it can be found.

Of course *dBASE II* was superseded because it was slow and had limited facilities; having used it on a 12MHz AT, I can confirm that its 'slowness' is solely related to processor and disk access speeds. Give it a 25MHz processor and a 28ms access hard disk and I would expect it to outpace virtually every other database. As for its limited facilities, well I've yet to write an application that needs more files open than *dBASE II* allows, though I admit I haven't written anything that needed it.

TYPING POWER

I also have a type-in program for analysing company performance, developed from a program written by Stephen Wells for PCs several years ago. Run under *Supercalc 2*, it takes account of all the 'industry standards' used for analysing company performance. Apart from lacking the graphics output, it outperforms all the fancy packages I have seen for PCs.

EXPRESS AN IDEA

I got the idea for this letter from the news item on page 6 of Express issue 139. *Ami Pro 2* now has a feature called 'Power Fields' by which it can perform a task automatically ... request the input of a name, look up the address from another file and place the name and address on the page*.

I have been doing something very similar for five years with *Newword 2* on my Amstrad CPC. If I merge one report, for example, it first asks which of five standard formats I want to use and then the name of the relevant person. It finds the chosen format, merges the data relevant to that format from a data file and then looks for a text file pointed at by the data file and merges that, re-formatting it if necessary to fit the chosen format, and ends by leaving a space for my signature.

NEWWORD 2, AMI PRO NIL

Unlike *Ami Pro*, I have to use *Newword's* preview option to see what it will look like but, from the description, 'Power Fields' looks rather less powerful - in spite of the name - than *Newword's* ability to open up to eight text or data files simultaneously at printout.

Ami Pro 2 can now support documents of virtually any size 'limited only by available disc space'. *Newword 2* has always been able to do this, though in practice no one would try and work on such a long document. However, having split up a document into sections, I can then print a section consisting of any number of sections (merging data directly or conditionally as required as long as the limit of eight files being opened simultaneously is not exceeded) scattered across any number of disks in correct page sequence until I reach page 65534. I can change disks at the end of any section though I need to make sure that all the files on that disk are closed before the change is made.

Obviously, this feature was introduced to cope with the small capacity disk drives found on 8-bit machines and means, for example, that PCW owners with hard disks partitioned into virtual drives can print documents spread across more than one drive. I calculate that a 65534-page document would need 200-300MB storage. *Newword's* eight years old and in eight years' time PCs should have 200-300MB drives. Should we conclude that *Windows* software is about 16 years behind 8-bit software?

SHOOTING SCRIPT

Finally, I am highly amused by the interest in 'script' languages available for the Mac and PC. Several are hardly any different in concept, structure and sometimes even commands from *Supercalc XQT* files (which were 'superseded' by Lotus macros), *Newword* mailmerge commands and even the *dBASE* programming language.

Perhaps choosing a name like 'Power Fields' shows why Lotus is so good at marketing. Now, if Sorcim or *NewStar* or Wayne Ratcliffe had thought to call their programming languages 'scripts', perhaps things would have been different!

May I say that I appreciate your contributions, especially Circuit City, and your approach to computing in the various contributions you make to the journals I read. Please keep up the good work!

* Lotus 1-2-3. Not as good as *Mini Office 2*? Bigger doesn't always mean best according to this reader.

SHAREWARE BROWSING

This week Mary Branscombe gets down to **BASICS** and shows you how to cut costs by making the most of the latest shareware around

Not all PC programming languages and tools are expensive and there's an increasing amount of shareware around.

If you use Power BASIC (which used to be Turbo BASIC before the author bought it back from Borland), there's a toolkit of tools and routines called the Power BASIC Support Set that includes a bar code printer, a file compression routine based on Huffman encoding, an EGA screen utility, a routine to download characters to a Hewlett-Packard Laserjet printer and more than there's room to mention.

If you prefer Microsoft's QuickBASIC, the Assembly Language Toolbox includes keyboard routines and support for high-resolution graphics. This one should be good, as it's written by Christy Gemmill, who also wrote the QuickBASIC Bible for Microsoft Press.

For Turbo C and Turbo C++ programmers, TCU is a library of routines for pop-up and pulldown menus, alert

boxes to tell users what is going on and a form entry system. If your program needs to get a lot of information from the user, you can design a form for the answers which will be stored as a C Utilities File that can be loaded with your application.

The Technojocks Object Toolkit for Turbo Pascal 5.5 and 6.0 has been rewritten to give you object-oriented programming tools, including screen writing routines and mouse support. If you want windows and menus as well, there's a Windows and Menus Toolbox with 67 functions and procedures.

You may have seen a book on Fortran programming called *Numerical Recipes: The Art of Scientific Computing*, which includes a number of programs for performing scientific and engineering calculations. Numerical Recipes in Pascal

gives you the source code for the same programs in Pascal.

If you're programming under DOS, you may find the Interrupt List useful — it's an on-line list of all the interrupts, from INT000 to INTFFF with a listing of the BIOS data area as well.

Shareware programs like these will be available from most shareware libraries. If you don't have a favourite already, you could try Advantage (0242 224340) or The Public Domain and Shareware Library (0892 663298).

ANY QUESTIONS?

We're here to sort your programs out! If you've got a problem with your program or you've found a better way of doing something on any of the machines covered in *New Computer Express*, drop me a line: Mary Branscombe, *New Computer Express*, 30 Monmouth Street, Bath, Avon BA1 2BW

• **Power BASIC menus make it easy to use, but for real power you need a toolkit.**

SPECTRUM BASIC AND GFA BASIC — SPOT THE DIFFERENCE

I programmed my Sinclair Spectrum for a good few years before moving on to an Atari ST (and the Spectrum is still lurking under my bed for when nostalgia strikes). I'd become quite used to Sinclair BASIC and I thought that GFA BASIC would be quite similar, but there are some things that seem to be quite different. In particular, I'm having problems with strings stored in arrays.

Alan Smith, Basingstoke

Spectrum BASIC

```

AS(9,12) 1 2 3 4 5 6 7 8 9 10 11 12
AS(0)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(1)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(2)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(3)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(4)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(5)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(6)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(7)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(8)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
AS(9)   _ _ _ _ _ _ _ _ _ _ _ _ _ _
  
```

• **Creating an array in Spectrum BASIC you have to specify how many elements there are in the array and how large the elements are going to be.**

To set up an array in Spectrum BASIC, you use the DIM command to set the size of the array, using a string variable like AS to make it a string array. You have to specify how many elements there are in the array and how large the elements are going to be. So to create an array with ten elements that are each 12 characters long, the command would be: DIM AS(9,12)

That gives you ten subscripts of AS, from zero to nine, each twelve characters long. The same command in GFA BASIC would do something rather different, because with GFA BASIC it doesn't matter about the length of the strings in the array as long as they aren't longer than 32K. Specifying an array with two parameters actually gives you a two-dimensional array, so DIM AS(9,12) gives you an array with 130 subscripts — that would contain AS(0,0), AS(0,1), AS(0,2) and so on all the way up to AS(9,12).

If you're not sure how a two-dimensional array works, think of it like a set of pigeonholes with addresses specified like co-ordinates on a graph. To get the simple one-dimensional array of 10 elements in GFA BASIC, all you need is DIM AS(9).

Something else that works differently is getting at the contents of the array. In Spectrum BASIC, AS(4,6) would give you the contents of the fourth element of the array, starting at the sixth character. In GFA, this would give you the contents of element AS(4,6) in the two-dimensional array. To get at part of an element, you can use MID\$(AS(4),6)

GFA BASIC

```

AS(9,12)
0 1 2 3 4 5 6 7 8 9
1
2
3
4
5
6
7
8
9
10
11
12
  
```

• **In GFA BASIC the strings can be any length under 32K.**

which gives you what you want. To get the whole string, it's just AS(4).

GFA BASIC is also available for the Amiga and the PC (as well as a new version for creating Windows 3 applications in the pipeline) and all the versions are syntax compatible, so once you've got the hang of it you'll be able to move to a new machine and take your programs with you.

POTENTIAL PD - For Atari ST. Public domain and self swap. SAE to: Potential PD, 200 Coddington, Berwickshire TD14 5NS.

PRESTIGE AMIGA GAMES (UK) - Amiga Games for sale or exchange. Large PD Library. Send SAE for full list to K Harvey, 67 Waverly Road, South Brentford, Essex SS7 4AX.

PRIVATE COLLECTOR - Atari ST Public Domain. Over 3000 titles. Send blank disk (or 50p) and SAE for list to: N Riddle, 72 Lancelot Avenue, Stroud, Kent.

PRIVATE SHAREWARE - Send blank disk and stamp for catalogue. Free swap. Write to: Frank, Combe Rise, Luppitt, Devon, EX14 0RT. RM only. Telephone 0404 891806.

PROPHCY PD - Atari ST Public Domain. Send SAE and disk or cheque for £4.50 to Prophcy PD, 390 Coulston Road, Old Coulsdon, Surrey. CFS 1LF. We have very competitive prices.

PUBLIC DOMINATOR PD ARTS - (PO Box 80), 575629. Send SAE to: HEMMI 3172. Tel: 0279 756992.

R

R&G PD - For cheap Amiga PD send SAE for list and 80p to: R&G PD, 23 Melmout Road, Strabane, County Tyrone, Northern Ireland or send a disk for list and game. Also willing to swap.

RICHARDS PD LIBRARY - Support for Amiga PD. A massive range of demos, utilities, sample, AMOS, Z80, etc. All disks £1.50. Some £2.50. All disks dispatched as soon as we receive the order. 74 Cross Deep, Tickenham, Middx, TW1 4RB.

S&T PD for the ST. Large selection of PD from £1. Send £1 of a disk and 20p for a list. All prices include postage and packaging. Send cheque or PO to Simon Eye, S&T PD, 6 Crediton Road, London, NW10 3JQ.

SANT JOHN'S SCHOOL LIBRARY PD - Atari/ST PD software for sale or support. Write to St John's School Library PD, c/o Mark Ash, 54 Beaconsfield Road, Stroud, Gloucestershire, GL8 3BB or telephone 0795 426653 after 4pm.

SPOTLIGHT ON

PC-MBC FANZINE

This is a fanzine totally dedicated to the PC and how to use it. Written with a sense of humour and enthusiasm by editor Alex McLean, it tries to help its readers and is constantly on the look out for their feedback and contributions.

Only two issues have been produced so far, so it is not a widespread publication; however, there is no reason why it shouldn't become more well known. Alex certainly has big ambitions for it.

Topics covered in issue two include a look at the PC magazines on

the market, readers letters and several contributions by Graham Cluley, the author of a shareware adventure game which is available through the fanzine. The rest of the fanzine is made up of tips on how to use the PC, jokes, adverts and other bits and pieces.

PC-MBC costs 60p per issue, or 30p if you write and enclose a SAE. Getting it written to you would also cost 60p.

To get hold of a copy write to: PC-MBC FanZine, 8 St John Street, Coleford, Glos, GL16 8AR.

If you're very lucky, you may even get a free humbug - we did!

SCOTBASE PDL ASSOCIATION - Affordable Shareware for PC users. Blank disk and SAE for catalogue and details to: Rose, 63 Springrock Road, Glasgow G32 0QD.

SCOTSOFT INTERNATIONAL - For the ST. Send three first class stamps for disk catalogue to 47 Auchingane, The Tryst, Edinburgh, EH10 7HK. Disks supplied are branded.

SENAC - 14 Oaklea Close, Old Row Road, St Leonards-on-Sea, East Sussex TN37 7HL. Tel: 0424 753070.

SHAREWARE LINK - 3,000 items of Shareware for PC, plus support, membership, plus discounts. SAE and blank disk for details to C Smith, 10 Penwood Close, Westbury, Wilts, BA13 3JL. Tel: 0373 865263.

SHIELDSOFT PD - For the Amiga. Only 75p per disk. SAE for details to 13 Church Road, Rhy, Clwyd LL15 3NB. Three month update. Personal service. Helpline for BASIC programmers.

SKYFALL PD - For the Acorn Archimedes. The world's largest PD for the Archimedes. Spring 1991 catalogue now out. Send an AS SAE to £1 for our demo disk to Skyfall, PO Box 2220, Birmingham B43 9RZ.

SOFTVILLE PD - Unit 5, Stratford Park, Ectra Avenue, Waterlooville, West 70X. Tel: 0705 266509.

SOLENT SOFTWARE - 83 Rufus Gardens, Totton, Hants SO4 31A. Tel: 0703 868882.

THE SOURCE PD - For the Atari ST. Compacted demos disks. £1.50 each. Write to: The Source PD, 2 Shearwater Lane, Norton, Stockton, Cleveland TS20 1SH.

SPHINX SOFTWARE - Erw Fynjod, Carmel, Llanelli SA14 75B.

ST CLUB - 9 Sutton Place, 49 Storey Street, Nottingham NG1 1JL. Tel: 0502 410041.

ST PD COMPLICATION DISKS - Send SAE for details of £2.50 per disk stating disk (numbers 1 to 5). Write to: A Burns, 61 Conston Road, Ganthorpe, Nottingham NG16 6FL.

THE ST ADVENTURER'S PD LIBRARY - up to all ST users. Adventure, more adventure and even more adventure. Catalogue just 50p. Write to John R Bambley, 32 Merrivale Road, Stratford, ST17 9EB.

STAR PD - Software for the Atari ST/STE. Hundreds of disks available. Send blank disk and SAE for free PD and disk based catalogue to Star PD, 1 Solva Road, Cluse, Swansea, SA6 7NH.

STATE 808 PDL - For ST art, demos (good selection) and general. Very cheap! Just send an SAE and disk to: State 808, 34 Old Lamark Road, Chislehurst, M8 4HW.

STEVE'S AMIGA PD - Catalogue disk. See demo, play games, usable virus killer and a PD catalogue. Send £1 plus 94p SAE to Mr S Finch, 1 The Croft, Weylwyn Garden City, Hertfordshire, AL7 4DY.

STOS/AMOS PD - Sandra Sharkey, 25 Park Road, Wigan, Lancs W66 7AA. Tel: 0942 495261.

STUPID FLOWER PD - New library for ST users. Includes: 1000+ titles for free catalogue, 300+ 3.5" Road, Mastbury, Gloucestershire BA9 8N or call 0458 35027 and ask for Matt.

THE SURREY PD CLUB - Atari ST PD for only £1 per disk. Write to: The Surrey PD Club, 25 Windmill Way, Regate, Surrey RH2 0BS.

SWPD - PD software for the ST. Send SAE for catalogue. Atari ST only. SWPD, 50 Coombe Lane, Torquay, Devon TQ2 8EA.

SYSTEM PUBLIC DOMAIN - Archimedes. For 4 meg of the best graphics - 800x200 APS, utils, Drawfiles, sprites, games, music and samples send five formatted disks, an SAE and £1 to Highover, Udimore, Nr York. Tel: 0983 7831 685. Cheques/postal orders to Mr J Thomas.

TOTAL PD - for the ST. Send SAE for free catalogue to Total PD, 77 Swanmer Hill, Brighton, East Sussex, BN1 7HQ. We buy and sell swap PD.

TOWER TOP PD - The Corporation, 4 Cardigan Close, Bletchley, Milton Keynes MK3 7DL.

TRIENOT PD - Exchange your unwanted PD disks with us free. Send SAE for details and list to Trient, 19 Dunery Gardens, Newbury/Berkshire, Co Avon BT17 9HZ.

TRIPLE X - We are the only PD library dedicated to ST. Addi Software and 20p disk. Write for your free catalogue, also other software available: Triple X, Babak Khan, 3 Lansdowne, Carlton Drive, Putey, London SW15 2BY.

TRUST PD - 16 The Park, Southampton, Hants, RG2 9JF. Tel: 0905 53821.

TYPECAST PDL - Catalogue issue two to 30p. DTP, W, art and clip art for Atari ST/STE. No games. Send disk and SAE for catalogue to 31 Herfield Crescent, West Wickham, Kent BR4 9DQ.

V

VENUS SHAREWARE - IBM Shareware: Amnator road, technical, engineering, education, Windows utilities and more. Telephone 0252 837860 for your free catalogue.

W

WARPRIVE - The best in Amiga PD. Send for free catalogue. Disks 89p, 40p 50p per order. 110 Barton Avenue, Bury, Deccaster DA4 8BB.

WEST COUNTRY PD - ST Public Domain and Shareware. Large library. Send stamped addressed envelope and blank disk or £1 for catalogue to PO Box 2, Lynton, North Devon, EX33 6BS.

WEST LONDON PD - 8 Bexley Road, Hillingdon, Middlesex UB10 3DU. Tel: 0955 51321.

WHITE HEAD PD - Atari ST PD from £1.40 per disk. Send two second class stamps for latest list to Hakan Akbar, White Head PD, 15 Cavendish Mansions, Clapton Square, London E5.

WIZARD PD - 178 Waverley Road, Reading, Berks RG2 2PT.

WOLEYSOFT - Humberkesswote Cottage, Ramels, Dunstable, Perthshire, Scotland FK15 0BA.

XT SHAREWARE for sale or swap from £1 for 5.25 inch and £1.20 for 3.5 inch disks. SAE for list to Kowalek, 24 West Chilton, Farnley, Co Durham DL17 0HH.

EXPRESS DISCLAIMER:

Inclusion in this listing does not mean that Express endorses or recommends any individual library.

Any Amiga owners out there interested in design, might be want to procure the demo version of *3D Master*. This 3D design program is available commercially at the very reasonable price of £35. PD pundits, however, can get a demonstration of this wonderful utility, by contacting Senlac software in St. Leonards, Essex.

The program is a powerful three dimensional sculpt package. The demo, on the other hand, gives examples and allows a bit of tinkering. Still, you can always check it out and see if you like it. 3D is in vogue at the moment, what with all the fuss about virtual reality and all. This program is for those of a more artistic bent however and its aesthetic values far outweigh its practical abilities.

The demo is nice to look at and very entertaining, but Senlac has a wide range of other software, so it might be worthwhile browsing.

THE PD COLUMN

What's new in the Public Domain? Frank O'Connor has designs on a 3D demo, spills blood and guts in the streets and writes to his Auntie on a WP

PEDESTRIAN MAYHEM AND MURDER

Amiga PD games are thick on the ground. Most tend to be conversions of ancient arcade games and so it's nice to see something vaguely original every now and then. Amiganuts are the chaps responsible for the rather unsavoury *Scumtaters*. The game is a vertically scrolling shoot-'em-up, featuring some very dodgy moral values.

The game has you driving a police car through city streets. Hampering your progress are an assortment of bad guys, as well as some rather unfortunate and entirely innocent bystanders. The bad guys come in two main flavours: missile-firing vehicles and bazooka-carrying pedestrians. The pedestrians can be killed simply by driving over them. They emit blood-curdling screams when you do this, so it's a good idea to throw ethics to the wind and kill everything.

You are armed with an unlimited

• *Unethically sound but full of wonderful noises Scumtaters is a gory arcade-like game which is best played with a shoot-to-kill everything policy.*

supply of rather pokey missiles, very useful for taking out other vehicles. The graphics, while being less than spectacular, are colourful and often ridiculously gory. The sound is especially nice, with lots of sampled noise and a different effect for every action. It was programmed using the shoot-'em-up construction kit and is a good example of what can be achieved using this utility.

ANYONE FOR TENNIS?

ST owners are in for a bit of a treat this week. Wimbledon has come and gone, but if you're still in the mood for a spot of tennis, then *ScotsIt* in Edinburgh has just the thing for you. *Tennis on the ST* is absolutely spanky! The thought of all that sunshine, fresh strawberries and ball-bashing action is enough to set you're little heart aglow.

• *The 3D Master demo will appeal those with an artistic bent, although it is more aesthetically pleasing than practical.*

AMIGANUTS UNITED

1036: Amibase Professional II (v.1.2). The new additions to this database make it a must have. It includes a nice picture addition facility. (1Mb).....£3.50
876: Quizmaster, think you know it all? Well now you can prove it. With save and re-load facility. For 1 to 4 players. Great fun, excellent value.....£3.00
877: 1 Across 2 Down. A fully fledged crossword program. (Data disk No: 1 is supplied free!). For only £5.00. Data disks 2, 3 and 4 are now ready at £2.00 each.
1038: Super Amidash. Do you remember that good old Commodore 64 game Boulderdash? Well here is your chance to have that fun again 1Mb£3.00
1068: MOD Processor v1.92. Make picture and/or music progs, adjust pic height/width. This version will load the new 8 channel octamed music and is excellent.....£3.50
1075: Intenuem. The easiest way to run all your programs. By Nicholas Lewis.....£3.00
1077: Clear. A very good, (but mind-bogglingly hard), game from PH Software.....£3.00
1083: Copper Writer/Screen Designer. By Frank Toot. (For programmers only).....£3.00
1088: Weird in Edgways. This is a good puzzle game. By Chris Banks 1Mb£3.00
1100: School Timetable Creator. (Print your timetable). By Keith Grant. 1Mb£3.00
1102: The Sprite Designer. A good way to draw/save sprites. By Frank Toot.....£3.00
1106: The Block Designer. Use with disk 1083 and design 16 x 16 pixel squares.....£3.00

NO MORE WAITING! SUBSCRIBE TO THE AMIGA CODERS CLUB NOW!

If you would like to get hold of the Amiga Coders Club disks as soon as they are published, why not send £33.00 and ask to go on the A.C.C. mailing list now! We will send you each issue as soon as it is ready.

(Applies to issue 14 onwards.)

(If ordering from outside EEC countries, add an extra £6.00 for years postage)

PLEASE NOTE THAT ISSUES RELEASED PRIOR TO ACC 14 MUST BE PURCHASED SEPARATELY

LOOK

THE EXCELLENT (1Mb) EIGHT OR FOUR CHANNEL MIDI COMPATIBLE OCTAMED V1

AMIGANUTS hold the worldwide copyright to this program and it will not be available through any other stockist.

You can purchase this great program for only £10.00 within Europe. (£15.00 for non-European). The price includes return post and packing. Payment in pounds sterling only, if ordering from overseas, send a bankers order/eurocheque etc. (Credit card orders will not be accepted). No need to order the PD Med anymore, the latest version is within this package!

Into coding? - Want to learn? The Amiga Coders Club is for you! ACC 1-4 is the first four compressed issues of an excellent series for coders, even if you are new to the Amiga. If you want to learn Assembly, using DevPac, (or our own new ACC special assembler disk), this is the club for you! ACC 1-4 (compressed) £15.00. The Amiga Coders Club disks are packed with source, hints, tips, advice from many of the well known coders that are on the Amiga scene today. Issue numbers 5-14 are now available. Please note, (excluding the compressed introductory disk (ACC 1-4), and no. 12, the price for each issue of the ACC disks is only £3.00. ACC 12 is our birthday issue, it is a 2 disk set, and therefore the price is £6.00. Amiga Coders Club Special! Here is a low priced assembler package for all you coders out there in Amigaland. (See the review in this months Amiga Format) £5.00.

The game uses the perspective favoured by most tennis sims, that is a sort of 3D top down view. The standard tennis moves are available starting obviously with the serve as well as backswinging and smash.

The control method can be varied between joystick and mouse and a brilliant two player option is available. To control your player, starting with serve, you hit the button to launch the ball skyward. As it falls, you fire again to choose the perfect moment to smash the ball down the court.

HERE ARE THOSE VITAL CONTACT ADDRESSES:

Scotssoft International,
47 Auchingane,
The Tryst,
Edinburgh EH10 7HX

Seniac Software,
Unit 6,
West Hill Arcade,
St Leonards on Sea,
East Sussex
Tel. 0424 445438

Amiganuts,
169 Dale Valley Road,
Holly Brook,
Southampton SO1 6QX

What follows is a mad scramble around the court in an attempt to return the service. The control method is perhaps the best thing about this game, in that it's much more forgiving than most tennis games. No longer do you require pixel-perfect reactions to hit a simple shot. Just get in front of the ball and whack it.

The graphics don't exactly reach out and grab you by the throat, but they do present a fairly accurate rendition of a tennis court. The sound, as you would expect from an ST is dead simple, but it does the job well enough.

It's spooky that a Public Domain title should emerge as being just about the best tennis simulation on the ST. Simulation is perhaps a loose description as *Tennis* feels very much like an arcade game, but it doesn't fare too badly for all that. A must for your collection and one of the nearest programs you'll ever see.

STRANGE PONGS FROM YOUR AMIGA

Another nice little game from Amiganuts comes on a packed disk full of animation and games. The game in question is *Powerpong*. Uh, oh, don't tell us it's *Pong* on the Amiga...well, yes and no. It is *Pong*, but with knobs on. *Pong* was the first real video arcade game and it was a very simple concept indeed.

Simply bat a ball from one side of the screen to the other. The object being

• *Pong with knobs on* - tarted up graphics and good sounds makes the *Powerpong* update an engrossing game.

to knock the ball past your opponent on the other side. This version features roughly the same gameplay, but with tarted up graphics and some neat sampled sound.

The arena is made up of bar-relief tiles and depending on which level you select, there are pinball-like obstacles in your way. If the ball should strike one of these obstacles, the darn thing shoots off at a very high speed and at an unpredictable angle.

If it all gets too easy, you can set the speed of the ball as well as the ability of your computer generated opponent. The game concept is so simple and addictive, that you soon become engrossed in an attempt to beat the computer (especially on hard level). The graphics are workmanlike rather than wondrous, but the sound is not far short of spectacular. It sounds dull admittedly, but you'll soon be proved wrong.

WORD UP!

Word processing is about the only serious application that everybody can find some use for. Whether it be a letter to your Granny, a thankyou note for a present or a fully-fledged novel, everyone can make use of a word processor.

Lucky then, that Scotssoft has two of the better commercial WPs on its list of new PD utilities. The first and most recent is *ST Writer*. This rather comprehensive utility was on sale many moons ago and at full price. It's age and redundancy in the light of newer competition, have meant that it's been released on the PD scene. Lucky us!

ST Writer is very good, reasonably fast and contains almost all of the accepted and required word processing features. The user interface is friendly and simple and requires only a little in the way of experimentation to master the basics. For free, you can't complain, but the fussier bargain hunters might do better to check out *1st Word*.

1st Word is the older of the two, but arguably the better. The differences are admittedly slight, but *1st Word* is just that bit smoother and friendlier. It all comes down to which one you get on with best. *1st Word* has a useful and comprehensive spellchecker, while *ST Writer* has a nicer print-handling ability.

You pays your money and you takes your choice, or in this case, you pay very little money and get both. ■

AMIGANUTS UNITED

169 DALE VALLEY ROAD, HOLLYBROOK, SOUTHAMPTON, SO1 6QX.

Tel enquiries: 0703 785680, Mail Order only

Listed below are some newer additions to our public domain & shareware selection

- 1103: A very special 4 disk animation from the famous Tobias Richter. 5Mb.....£6.00

Golden Moments

A look back into the history of computing with Express. If it happened we reported it first.

ONE YEAR AGO

● Timothy Leary, famous for his acid antics, hosted the first cyberspace show. People were given the opportunity to don eyeglasses and data suits and blow their minds with trips through, like er, virtual reality, man.

● A PC utility was released which enabled users to give files longer, more meaningful names, instead of the usual rubbish that MS-DOS supports. The memorable name of this utility? XNP.

● Worries were expressed by the Data Protection Registrar concerning the possibility of merging databases to form an unofficial nationwide pool of information on UK citizens, identifiable by their national insurance numbers. Quite apart from fears that, with this information coming from so many sources, it would be very difficult to check its accuracy, it seems that anyone with the time and money is able to compile a Big Brother-style system.

TWO YEARS AGO

● Stories of hard disk failure finally became too much for Amstrad. In an effort to retain its good reputation, the company was forced to replace the hard disk units in all 286 and 386 PCs in circulation. Alan Sugar said that although the failure rate was nothing like that suggested by the press, it was nevertheless unacceptable to the company. He ended with a note of optimism, predicting that Amstrad would capture 30 to 40 per cent of the high end PC market by 1990...

● A computer game was taken off the shelves of WH Smith when it was discovered that it contained foul language. US Gold's *Skweek* featured a cutesy character which spoke by means of speech bubbles. Hackers cracked the code and inserted their own messages. Somehow they then managed to feed the hacked copies into the mainstream retail channels.

The Insider...

A fly on the wall's view of the strange doings and even stranger rumours going down within the computer industry

The Insider was wired and dined copiously this week by unnamed individuals desperate not to get mentioned in this column. Tough. The 16-Bit Computer Show was also a hotbed of intrigue. Read on for more. By the way, if you have any juicy gossip, send it to: The Event Horizon, New Computer Express, 30 Monmouth St, Bath BA1 2BW.

Anonymity is assured, as is a fiver for anything useful.

USE ME, BEAT ME, PAY ME!

What's this we hear about certain letters on CIX from certain unhappy programmers who still have not been paid by certain software houses for certain Vietnam-based games.

No names as yet because we have had no confirmation or denial from the probably really, really innocent software house in question, but you never know for sure do you?

QUIT THINKING

So farewell then Peter Staddon of Atari. Atari's marketing manager has decided to up sticks and move to pastures new, he's moved down the road from Atariville to take up a job with computer supplies firm RMT. According to Bob Gladnow, Atari's head man in the UK, the decision to leave was a "...surprise and a disappointment". The Insider wishes Peter well in his new role and hopes who will be next to take up the hot seat.

CLOSE TO YOUR CHEST

While wandering through the Express office this week in order to pick up the odd cheque and guffaw at the pathetic doings of the droids, the Insider was stunned to hear an Express hack regaling the other grazy jounos with the following quotation from a software house: HACK: "He said that he couldn't

tell us anything because, and I quote, 'We're being clummy old bastards again aren't we?'" The Insider was shocked by the fact that an Express newshound had the audacity to bother a softwarehouse representative during lunch!

HOW NOT TO WIN FRIENDS AND INFLUENCE PEOPLE

During our mega-public domain round-up this week several, 'background' sources were contacted in order to gather some background on the situation. A number of comments which the journalist responsible for the story could not use because of lack of space should be aired. On porn, one nasty little man said: "Face it, most people are perverts, they just don't want to admit to it. And stuff like *Playboy* doesn't come up with the goods. Some people want to see donkeys, some women like them." Really?

Future
PUBLISHING

STAFF WRITER AMSTRAD ACTION

£ Salary negotiable - BATH

- Launched in 1985
- Now over 200 staff
- Market leader in computer titles
- Exciting launch plans
- Britain's fastest-growing publisher
- 15 national newsstand magazines - Amstrad Action • New Computer Express Amiga Format • ST Format • Amiga Power Amiga Shopper • PC Plus • PC Answers 8000 Plus • Your Sinclair • Commodore Format • Sega Power Classic CD Needlecraft Mountain Biking UK

Are YOU three people rolled into one? Amstrad Action, Britain's best-selling magazine for the Amstrad CPC, Plus and GX4000, needs a new Staff Writer to work at its offices in Bath. The successful applicant will be:

- A talented and creative writer. Have you got that spark of genius that sets you apart from the rest? You can prove it to us by sending a sample game review of 500 words with your application.
- An Amstrad nut. Do you know - have you played - just about every Amstrad game in existence? Can you hold your own in BASIC? Do you know a PL1 from a hole in the ground?
- An excellent administrator. On a busy magazine there's mail to be sorted, calls to take, letters to write, faxes to send - it's a job in itself.

Send your CV and a sample game review to:
Lauren Evans, Human Resource Manager,
at the address below.

A brilliant offer for readers of New Computer Express!

Devpac ST 2

FROM HISOFT ONLY £44.95

Devpac ST version 2 is widely regarded as the most powerful assembly language development system for the Atari ST. It incorporates a debugger, stand-alone assembler and a fast linker.

IT INCLUDES:

- **GenST** Assembler is a high-performance, full-featured, two-pass Motorola standard macro assembler at up to 75,000 lines per minute. It has multiple modules and sections, repeat loops and macro calls that may be nested as deeply as memory allows.
- **MonST** Debugger is an advanced symbolic monitor, debugger and disassembler. Now in addition it can offer multiple window display, full expression evaluator, up to 22 significant characters in symbols, viewing of source files and conditional breakpoints.
- **Example Files** of a wide variety including a full GEM type windowing application and an example desk accessory.

The package comes complete with an extensive ring-bound manual plus notes on the various operating system levels and debugging strategies.

DEFINITION OF SOUND

Datasound is a new sampling/sequencing package that looks expensive but comes cheap. Dave Golder delves beneath its glitzy presentation

PRODUCT: Datasound 8-bit sampler/sequencer package
COMPATIBILITY: Atari ST/STE
FROM: Pandaal Marketing
CONTACT: 0234 855666

The first thing that strikes you when you load Pandaal's latest sampling and sequencer package, Datasound, is that on screen it looks magnificent. But, as the old adage goes, you should never judge a book by its cover, and with packages such as these, features and sound quality count more than aesthetics. So does it come up with the goods?

Costing just £29.95, Datasound is a very low cost 8-bit stereo sampling and sequencing package for the Atari ST and STE. It enables you to create samples of music, sound effects or dialogue captured from electronic sound sources such as a hi-fi system, radio or even a Walkman. The samples can then be edited and treated to a number of effects, such as stutter and echo. The sequencing software then enables you to use up to 18 of your samples to create a musical track.

WHAT'S IN THE BOX?

The package comprises the sampling and sequencing software, the sampling cartridge and a manual. Conspicuous by its absence is any kind of lead.

CREATING A SEQUENCE

You can use the sequencing software to create a musical track using up to 18 different samples. These samples can only run concurrently, so you can't build up complex multi-layered pieces of music, but some fairly impressive results are still obtainable if you start off with some decent samples in the first place.

To create a sequence first call up the sequencer display panel (above) by clicking on the SEQUENCER icon on the main viewing area. Then you have to assign one sample to each of the keys on the numeric keypad cluster to the right of your ST keyboard (there are 18 of them - count them! - which is why you are limited to 18 samples per sequence). This is done by selecting the required sample, selecting the PROG icon then pressing the desired key on the numeric keypad.

You then record the sequence by selecting the REC icon and pressing the key on the numeric keypad which corresponds to the sample you want. By repeating this several times you build up a sequence.

The software is also MIDI compatible and allows a

Granted, you might want to sample from a number of sources, but one lead which plugs into the cartridge with a, say, a phono connection at the other end would have been very useful, as that would have been perfect for a large number of hi-fi systems, and it would be a fairly inexpensive move to buy a Walkman jack if you had to.

Once you find a lead, setting up is quick and simple. You just plug the sound source into the cartridge, plug the cartridge into the ST ROM cart port (to the left of the machine), switch on and load the software.

The impressive-looking frontend belies a fairly limited range of features

Making a sample simply involves turning on the sound source (ie pressing the play button usually) and clicking on the RECORD icon. The window at the top of the screen gives a graphic representation of a sample stored in the memory. Below this is the Scope display which represents the source signal; a strong, constant moving wave is necessary to make a good sample and you can adjust the volume on the sound source to achieve this.

As mentioned previously, the main display and working area looks magnificent, with lots of colour and a plethora of friendly-looking icons. However, this belies a

• The sequencer enables you to create musical tracks using up to 18 different samples using the soft keypad.

MIDI keyboard to be used with the sequencer; you can play the sample using the keyboard as opposed to the ST keypad.

The resulting sequence will hardly be a piece of musical genius, but Datasound is useful for creating, say, percussion tracks which can then be used as just one element in a greater musical scheme, whether that be in another composition program, or to accompany you when you play live on stage.

• For a cheap sampler Datasound certainly has some extremely impressive graphics, but in terms of features it provides little more than the bare minimum.

fairly limited range of features. These include such things as loop, flip, cut, copy, paste, splice, fade in/out, echo, amplify, soften and pitch bend - all fairly basic sample editing techniques that most sampling packages will include.

One very useful feature, though, which is not only unusual for a music package, but also for most serious software, is the ability to format a disk while still inside the program. A minor point, but very useful if you suddenly find you need to save a sample and you don't have any suitable disks to hand.

An annoying feature is the fact that you can only sample at six certain speeds: 6, 7, 12, 15, 20 and 25KHz. While this fine most of the time, it does create difficulties if you want to import samples created in other programs recorded at a different speed.

SOUNDS ROUGH

The sound quality is also a bit rough when compared with some of the more expensive sampling packages on the market. More experienced computer musicians might find this annoying, but it is still adequate enough for dabblers in the ST music field.

Indeed, at the price Datasound does seem ideal as an introductory package for people new to the digital sampling and sound editing.

It's a shame, then that the manual rather lets things down in this respect. Although very clearly laid out and detailed, it seems to assume that the user is *au fait* with sampling and sequencing terminology. The tutorial session is extremely brief and, for a novice computer user, very confusing. A longer tutorial and a glossary of terms would have helped matters immensely.

Overall, Datasound's capabilities are not as stunning as its frontend, but at the price it offers a great sampling and sample editor packages for someone taking their first steps into the world of music on the ST.

It is really up to the consumer whether or not they want to spend the extra £15 or so these packages usually cost for a better range of features and slightly superior sound quality. ■

PROS AND CONS

PROS

- ▲ Very impressive main area display
- ▲ Easy to set up
- ▲ MIDI compatible
- ▲ Allows you to format a disk while still running the program

CONS

- ▼ Limited range of features
- ▼ Sound quality is not very good
- ▼ Unfriendly manual is unsuitable for beginners
- ▼ The fixed choice of six sample rates is restrictive

Cost £29.95

Games Week

Stuart 'Scorer' Campbell sticks up his points card and gives those games a real rating - from the atrocious unplayable to the amazingly adventurous

STAR RATINGS

- ★★★★★ = Wild At Heart
- ★★★★ = Blue Velvet
- ★★★ = Elephant Man
- ★★ = Eraserhead
- ★ = Dune

RANT NUMBER 1

You might notice that from this week, we're no longer printing the 'real' 16-bit and 8-bit top 10 charts. Despite being the only charts to have any worthwhile meaning at all, we've been forced to dump them and stick with separated full-price and budget charts.

The reason for this is that those lovely ELSPA people have seemingly decreed that Gallup, the company which puts the charts together, are no longer to be permitted to compile a chart of games based purely on sales, without regard to price. This makes me angry. In an all-prices chart, you can see which full-price games are so good that they're managing to outsell the cheapies, as

well as still being able to tell for yourself which are the best-sellers in the two individual areas.

Separated charts have no relevance other than to themselves and serve no purpose for anyone other than software house PR departments. Speaking for myself, I'm getting just a little fed-up with this self-appointed governing body's dictatorial attitude, but perhaps I'm over-reacting.

What do you think, do you want to see real charts or glorified advertisements? Write and tell me at 'Give 'Em A Uniform And They Think They're Hitler', NCE, 30 Monmouth St, Bath, Avon BA1 2BW.

RUN RUN RUN

What, again? US Gold's original sequel to Sega's mammoth coin-op success *Out Run* was mooted as far back as 1987, and indeed some magazines even put it on their cover at the time. It never saw the light of day, though, as the official arcade follow-up *Turbo Out Run* stole its thunder, and Europa disappeared into the history books.

• The Amiga version of *Out Run Europa* - apparently the graphics are better than this...

Now, however, USG has decided that the time is ripe for a third *Out Run* computer game, and both the 16-bit and 8-bit versions are well under development.

It isn't the same game from those years ago, but a completely new re-working of the theme, which puts the player in charge of a whole series of vehicles from a jet-ski to a motorbike and a Porsche. From the Amiga and C64 work-in-progress versions I've seen it's looking good, so watch out for it in a couple of months' time.

PACMANIA

This week sees the release of *Pacmania* on the Sega Master System, the first Sega game from UK firm Tecmagik. It's a conversion of the Namco arcade game and includes all the original

• Cultures merge as Pac-Man visits Legoland in *Pacmania*

• The second level will seem strangely familiar to veteran Pac-fans

features, as well as some extra secret bonus features that weren't in the coin-op.

The game gives the Master System a real workout, but it holds up to the challenge with arcade-true graphics, smooth scrolling mazes, and generally everything you could possibly want from a Pac-Man game. The playability seems to be balanced at just the right level, and despite a rather hefty-sounding £29.99 price tag, this is a must buy for Master System arcade fans.

HERE IT COMES AGAIN

This week RACING GAMES Fans of just about every game genre are well catered for by the burgeoning re-release industry, but there's one area where there's surprisingly little to be found. I feel a need for speed coming on...

Out Run (Kix) • £7.99 for 16-bits • £3.99 for 8-bits

Given a bit of extra relevance by the forthcoming (and long-awaited) release of *Out Run Europa*, this Kix release is a strange kettle of contradictions.

Out Run was one of the biggest arcade successes of all time, and also one of the biggest computer-conversion disasters of all time. All the 8-bit versions were atrocious, and the ST version left

HATSTAND CORNER

It seems that there's hardly a movie released these days without having a computer game licence attached to it, but not many people know that the recent Oscar-winning *Driving Miss Daisy* was actually the subject of much wheeling and dealing for the acquisition of the micro rights.

Negotiations were close to completion until the movie company saw an early demo from the unnamed software house, consisting mostly of a second-rate Chase H.Q. clone, and promptly pulled out of the deal.

Malicious gossip has it that the game later re-appeared as Millennium's dire *Moonshiner Racers*, but I wouldn't know anything about that.

FRENETIC

Core Design • Amiga, ST • £20.99 ★ ★

After the huge critical success of *Chuck Rock*, Core seems to have chosen to consolidate its position for a while, with a couple of distinctly run-of-the-mill-stytle arcade games.

First came *Warzone*, which was a very competent, but uninspired *Ikar Warriors* clone, and now *Frenetic* has appeared, borrowing heavily from a long line of vertically-scrolling shoot-'em-ups which includes *Electronic Zoo's*

Battle Squadron and Image Works' *Xenon II*.

Sadly though, despite all its inspirations, *Frenetic* fails to add up to the sum of its parts. While the graphics are all very pretty, the scrolling fast and smooth, and the sound loud and violent, the gameplay never really grabs, and what you're left with is a curiously empty-feeling blaster which lacks the all-important character needed to make you want to play it more than twice.

It's got all the right ingredients, lots of tough baddies and all the usual power-ups and end-of-level bosses, but like Frankenstein's monster, it just hasn't got that vital spark of life. I didn't like this game, I didn't hate it, I just couldn't work up the interest to have any kind of feelings about it at all. Indifference on a disk. ■

• The first bad guy you meet, and my, isn't he a big one? Luckily, before any enemies appear the game chucks a few free power-ups at you, so you should be able to make short work of even the toughest aliens on this level.

• The first end-of-level boss looks mean, but he's just a big pussy-cat. He never comes right into the corners of the screen, so simply hide there until one of his quarters moves, shoot it until it blows up, then blast ship. Easy.

BEG, BORROW AND BURN

• Looks like a rainy day in Shook Up.

BEG

STACK UP • Zepplin • Amiga • £7.99
I reviewed the Speccy version of this sweet little Columns-style puzzle game a couple of weeks ago, but the Amiga version is now available, featuring even smoother gameplay, cute little graphics and a completely adorable Oriental background tune to whistle along to. **A must have Tetris fans.**

BORROW

MAUPITI ISLAND • Lankhor • Amiga • £25.99

This charming and different adventure was a huge hit on the continent, but this translated version might be just a touch too slight for UK gamers. What's there is rather lovely, it's just that there isn't very much of it. Try for yourself, but don't expect it to last for weeks.

• It's only a short cruise to Maupiti Island.

• The Cardinal of the Kremlin must die.

BURN

THE CARDINAL OF THE KREMLIN • Accolade • Amiga • £25.99

This quite engrossing strategy game based on the Tom Clancy book is actually pretty respectable. Until, that is, you stumble across the ludicrous and banal arcade game dropped right into the middle of it. A potentially good game, completely ruined by stupid design.

• Cruising on (yet another) open road in Crazy Cars.

LOGICAL

Rainbow Arts

- 96 - NEW EXODUS
- 97 - THE PEACEPIPE
- 98 - FINAL SURPRISE
- 99 - WHITE MIAMI
- 100 - THE FINAL CUT (CONSTRUCTION KIT)

much to be desired also, but all racked up enormous sales around the Christmas 1988 period. Some time later, the Amiga version finally appeared and while it wasn't perhaps surprising that it was the best of the lot, it nonetheless gave many people a bit of a shock by actually being very good.

The graphics were crisp and elegant, sound and presentation were dramatic and slick (in that order), and for once the gameplay held together too. It's still one of the prettiest racing experiences around, but for Amiga owners only.

• Heck of a wide road for a beach track, isn't it?

Super Hang-on Hit Squad • £7.99 for 16-bits • £2.99 for 8-bits
Sega's lightning-fast coin-op was always

going to be a tough conversion job, but cut programming hero ZZKJ took up the challenge and produced some of the most remarkable arcade feels seen on the home micros to this day. From the Spectrum to the Amiga, *Super Hang-On* looks, feels and plays like the real thing, with superb adjustable controls and speed that keeps your heart in your mouth from the start to the end of every winding, dipping and rolling course.

The graphics aren't much to shout about, but this is a thrilling, gripping game which can still show a thing or two to any of today's road racers. Whichever machine you own, this is a completely essential addition to your software collection. If you haven't got it, do something about it. Now.

• Override the 'good game' crisis with Super Hang-On!

Crazy Cars Hit Squad • £7.99 for 16-bits • £2.99 for 8-bits
This game was originally released by Titus and was the first in a series of stripped-landscape-into-the-screen-scrolling driving games which earned them a richly-deserved bad reputation

which was to dog them for quite some time afterwards.

The only thing crazy about the cars of the title was the way they leapt unfeasibly into the air when they collided with one of the other cars which occasionally popped up on the otherwise featureless roads. Oh, and the way they glided sideways like a rather jumpy hovercraft when turning left or right. Abysmal on all formats, the Spectrum version is arguably the worst, due to the complete absence of any level of challenge whatsoever, but the others are just as unplayable, and in relative terms the 16-bits (ST especially) probably have the worst graphics. This is a real 2CV of a game, except without the cult quality. Avoid like an angry crocodile with the plague. And toothache.

HELP MA BOAB!

What's that say? You just can't kill that end of level baddie? Can't find the secret room? Just state the name of the game and your system, and send to: **HELP MA BOAB!** Games Week, *New Computer Express*, 30 Monmouth Street, Bath, Avon BA1 2BW ■

• Yes, now you too can play with Logical's construction kit!...

...and create horrible screens like this to torture yourself with. You sick person.

PRODUCT: MultiModemV32
M1932EK
MACHINE: Amiga, ST, PC
FROM: Multidata
Communications
CONTACT: 0793 782450

Modem enable computers to hook up to other modem-equipped machines, whether they are only next door or on the other side of the world. They open up many possibilities, ranging from transferring files between modems to hooking up to bulletin boards.

As times goes by, modems get faster. Transferring at speeds of 9600 baud (bits per second), the Multimodem V32 certainly has. It is equipped with various compression standards to increase data throughput at lower baud rates.

The MultiModem is a small, light and attractive external modem. It sits on the desktop, with Light Emitting Diodes (LEDs) informing the user of what it is doing and how fast it is running. Documentation for it is thorough and well set out. It comes with two manuals: one which covers what the modem can do and how to use it; the other details advanced features.

GETTING ON-LINE

Setting up the modem is straightforward. It is connected by a serial cable to the host machine. Its separate power supply can be placed anywhere. From there all that needs to be done, at least in hardware terms, is connecting the built-in phone lead to a standard BT phone socket.

The next hurdle is terminal software as none is included. However, a wide range of quality programs are available in both the Public Domain and commercially. These vary in sophistication, but even the most basic programs are adequate.

AMIGA AND ST COMMS SOFTWARE

AMIGA:

NComm v1.9 - a good quality, well-featured PD comms program

JRComm - also a very good program

Access - a commonly available PD program, but not as good as NComm or JRComm

Ruby Term - commercial, for Viewdata systems

ATARI ST:

Vanterm - very good PD program

Unitem - also good PD

Mini Office 2 - a comms package which is not as good as PD Otherwise, there are no really good commercial programs available.

In the past, modems have been called the ultimate expansion devices for computers. Tim Howell takes Multitech's MultiModem V32 to its limits to see if it lives up to the modem reputation

This automatic modem is controlled by the Hayes command set, which is a common standard. 'Intelligent' features include the ability to both automatically dial numbers and answer calls (from other modems). It can store the user's settings and commonly used numbers in memory, automatically changing to suit the baud rate and parity of an incoming call.

9600 baud modems are becoming more common and less expensive, but are still not widespread. Not only that, there are actually a number of different 9600 baud standards, such as the HST protocol from US Robotics and Miracom. The most common one, and the one that is supported by the MultiModem, is V32. However, it seems that many Amiga-dedicated BBSs use the HST standard more. Some HST modems can cope with V32 as well, but it may be a bit limiting for Amiga owners who don't have both standards.

As times goes by, modems get faster. Transferring at speeds of 9600 baud, the Multimodem V32 certainly has

The MultiModem can also work at speeds of 300, 1200, 2400 and 4800 baud. Of these speeds, only the baud rates from 1200 upwards are really useful. 1200 baud is probably the most common speed, but most BBSs are equipped with at least 2400 baud modems.

Throughput is helped by its V42 error correction and MNP 5 data compression features. V42 includes both LAP-M and MNP classes 2-4 as error correction options. Error correction works by checking the data sent by the host (ie BBS) machine with that is received at the other end. This is done through hardware and not software, such as transfer protocols like XModem and ZModem, which can work with any modem. Only modems equipped with V42 and MNP error correction can use those protocols.

Data compression is provided by the MNP 5 proto-

• The flashing LEDs on the front of Multitech's MultiModem V32 may boggle your senses, but will the modem's speed have the same effect?

col, which can increase throughput up to a ratio of 2:1, or 19200 baud. Data compression is really only effective on files which haven't already been compressed by other methods. This means that simple text files would be transferred faster, but executable files, or ones that have been compressed prior to being transferred are negligibly improved, if improved at all.

The modem is capable of both pulse and tone dialing; the former is necessary in places where BT hasn't upgraded to digital System X exchanges.

There is a small delay when issuing a command to the modem and having the command carried out, but this is not really a problem. The LEDs on the front panel of the modem keep you informed of what it's doing.

Switches on the front control its baud rate and whether it's originating or answering a call. Having a switch to control the baud rate on a high-end modem like this is a bit unusual, as it's often done through the software. However, rather than fiddling around with software, it is convenient to just switch between speeds.

Apart from these standard features, the MultiModem has a number of extras. One of these is a password feature. Another feature, which could be useful, say, if the modem is being used to run a BBS, is that it can be remotely configured. This means that the owner of the modem can call it up just like any other person, but they can change the settings of it or whatever they want to do.

DROPPING THE CARRIER

The MultiModem is a good, solid piece of equipment. For the average user it may be a bit too advanced to take complete advantage of, not to mention a bit expensive. However, if you want a modem, that's reliable and easy to use, then take a look at this. ■

SO, WHAT'S THE VERDICT?

FOR

- ▲ Many features
- ▲ BAPT approved
- ▲ Reliable

AGAINST

- ▼ No software included
- ▼ Possibly too advanced for inexperienced users
- ▼ The telephone bill!

PRICE £999

SPECIFICATIONS

Baud rates: CCITT 300, 1200, 1200/75, 2400, 4800, 9600

DESKTOP DYNAMICS

A new Atari ST desktop package promises more choice for the user and keener competition for established products. Nial Grimes reports

PRODUCT: DC Desktop
FROM: Softville Computer Supplies
CONTACT: 0705 266509

PRODUCT: NeoDesk 3
FROM: Electric Distribution
CONTACT: 0480 496666
COMPATIBILITY: Atari ST

We all know what a user friendly machine the ST is, but the GEM desktop can be trying at the best of times. Fortunately, we are not stuck with Atari's in-built offering and there is a host of utilities to improve GEM's usability. These range from enhancements to full blown replacements.

DC DESKTOP VS NEODESK 3

For a long time the only package to offer significant improvements to the desktop was NeoDesk. Now, from US company Double Click Software, comes the DC Desktop; both claim to be the ultimate desktop replacement, but which should you choose for your system?

Although both packages are, in a broad sense, 'desktop replacements' they approach the problem in different ways. NeoDesk completely kicks out the GEM desktop in favour of its own environment while DC Desktop takes a more modular approach, leaving all GEM options intact but offering enhancement through a collection of utilities accessible from the function keys.

Both approaches have their advantages. DC Desktop can run on a very small amount of memory because only the utilities you will use need be loaded.

Even if you decide to use a utility that is not in memory, pressing its assigned function key will give you the option to load it. NeoDesk offers its own custom menu, avoiding the need to constantly reach for the function keys.

INSTALLATION

DC Desk comes packaged with a very professional looking 96 page manual but this, unfortunately, does not extend beyond the looks. The installation section of the NeoDesk manual suffers from the same problem, taking a whole page to describe how to install the program when 'Copy the NEODESK3 folder on to your boota newly formatted disk' would have done. It has to be said however, that on the whole the NeoDesk 3 manual is very good, containing full, clear explanations of all functions together with an introduction to GEM for those not familiar with the desktop.

Before you can run either package you need to register your copy by entering your name and address, which is then written into the program to foil software piracy. This seems to be standard practice for American software and is far better than copy protecting professional software.

I SEE NO BORING ICONS

One of the most immediately apparent advantages of a replacement desktop is the custom icons. A disk drive, rather than looking like a filing cabinet, now looks like a disk drive! You are not limited in either package to the icons supplied and can design your own icons to suit each individual program/device; these can, resolution permitting, be in colour.

DC Icon Editor (DC Ioe), can remain memory resident or can be loaded when needed. Icons designed

• DC Desktop (left) differs in its visual layout to NeoDesk 3 (right) and both dispense with GEM.

are stored in a file called DCDSKTOP.ICE and each disk can have its own icon file for the programs contained on that particular disk. The NeoDesk icon editor is loaded when selected from the GEM menu bar and most desktop operations can still be carried out while the icon editor is loaded.

NeoDesk completely kicks out the GEM desktop in favour of its own environment while DC Desktop takes a more modular approach

In terms of features, neither icon editor has a clear advantage, but the NeoDesk Icon Editor is a little more powerful. Both icon editors do a good job and, considering how infrequently you will use them, are surprisingly well featured.

As handy as folders are to keep your disks in order, finding a file nested eight folders deep is no fun. It is for this reason that both programs allow you to drop icons on the desktop itself. Double clicking on the file will act

• DC Desktop's Icon Editor enables you to construct your own icons, which can add real style to your desktop.

YOU CAN'T GET QUICKER THAN A QUICK ST BLITTER

DC Desktop and NeoDesk certainly cheer up the desktop, but all the custom icons and extra colours take their toll on the speed of your ST if it is not fitted with a blitter chip. Fortunately, there is a cheap solution in the form of Quick ST.

Quick ST replaces GEM's archaic C graphics handling routines with its own routines, written in fast, efficient 68000 assembly language. The degree of speed that Quick ST will deliver depends on your configuration; if no blitter is present the increase is staggering. Running Quick

ST on a blitter ST, the increase on graphics operations is barely noticeable although text output is speeded up.

Most programs are compatible with Quick ST but should problems occur you have the option to disable one or all of the enhancements. Commercially available software blitters solve some compatibility problems, but in most cases cost as much as a real blitter.

Being shareware you can try Quick ST out with your collection of software before parting with the cash or opting for

an alternative. Be warned, using Quick ST will seriously increase your productivity.

Contact: Shareware, try PD Libraries.

Price: About £3 (\$20 to register)

FOR

▲ Transforms blitter-less STs

▲ Price

▲ Try before you buy

AGAINST

▼ Incompatible with some software

▼ Uses valuable memory

▼ Not as fast as real blitter

• Quick ST in action. Text output gets a big boost on blitter-fitted STs.

DESKTOP PACKAGES

GUIs FOR THE ATARI ST

LIFE, THE UNIVERSAL ITEM SELECTOR AND EVERYTHING

• *UIS 3's versatile format menu puts you in charge of a far more flexible way to denude your disks of data.*

For one of the most frequently used parts of GEM, the file selector can hardly be described as a model of flexibility. The *Universal Item Selector (UIS)*, now in its third incarnation offers a replacement to the GEM Item/File Selector. Copying the program into your AUTO folder and calling the file selector will bring UIS up.

At the most basic level UIS can be used in exactly the same way as its GEM counterpart, ie to select a file. Using the inbuilt menu, UIS can be configured to

display anything from 12 to 128 files. In addition to all the standard file selector functions, *UIS* has the ability to format disks, create folders, copy files and almost any operation you would usually carry out from the GEM desktop. All this is available from within your favourite GEM application! It is a shame that *UIS* has to be labelled a 'replacement file selector' as it offers so much more. In fact, if you use your ST for anything other than games, *UIS* is essential.

Contact: The ST Club. Tel: (0602) 410241.

FOR

- ▲ Almost all desktop operations supported.
 - ▲ Good manual.
 - ▲ Very few incompatibility problems AGAINST
 - ▼ No 'copy disk' option.
 - ▼ Some advanced features can be a bit obscure.
- COST: £19.95 inc. P&P

exactly as if you had clicked on it from its original folder. NeoDesk handles this superbly, just drag the icon from the window and put it where you would like it. DC, on the other hand, requires you to press the F2 key to access the DC Icon Installer and locate the file using the file selector; clicking OK will return you to the desktop where you will find the newly installed icon.

In addition to the usual icons found on the desktop, DC Desktop and NeoDesk add three extra icons. One is the recoverable trash can. This works in the same way on both systems. Dragging a file to the recoverable trash can will delete the file from the directory, but it is not fully deleted until the trash can is emptied. This feature is only really usable on a hard disk system.

The second new icon operates in a slightly different way on each system; NeoDesk offers a 'Clipboard' which operates in exactly the same way as a RAMdisk that expands and shrinks to the size of the files contained in it. The clipboard does not have a drive letter and is not a real RAM disk - it is only accessible from NeoDesk and, as such, cannot be used by other programs. DC Desktop offers a 'Cabinet' which is similar in concept to dropping icons on the desktop. Copying files to the cabinet does not copy the actual file but instead copies the location and icon of the file. This is handy if you reach the 24-icon limit on the desktop and would like more programs directly accessible.

In addition to the recoverable trash and the clipboard/cabinet, both systems offer a printer icon; files can be dragged to the printer icon and will be spooled, printing while you continue to use the desktop.

AND THE REST

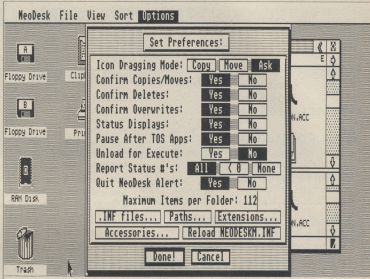

One of the main deficiencies of DC Desktop is keeping the old GEM desktop in place. This automatically limits you to the standard four-window maximum and offers no enhanced formatting, copying or Macro options.

• *NeoDesk 3's preferences menu enables you to specify a welter of alert messages, modes and more, but all this flexibility suffers somewhat at the hands of a rather user-unfriendly starting out page in the manual, as is also the case with Double Click Software's DC Desktop.*

But once up and running, NeoDesk 3 offers a very intuitive environment which has a similar 'feel' to that of the ST's standard GEM, but offers many more useful features.

NeoDesk lets you have up to seven open windows and uses its own custom-designed windows, which include select all, text/icon toggle, split window display and much more.

The GEM desktop's inflexible formatting and copying routines have been completely re-written to allow copying and formatting of non-standard disks. Intelligent file copying routines mean that only one disk swap is needed to copy a hundred 1K files on a single disk system, for example. Another advantage of NeoDesk is its Macro handling; selecting 'Start Macro' from the menu bar will record all operations until 'End Macro' is selected. You can then give the macro a name and keyboard shortcut. Pressing the assigned key automatically carries out the recorded tasks.

MAKE YOUR MIND UP TIME

Choosing between DC Desktop and NeoDesk 3 really depends on how much you use the desktop. DC Desktop certainly cheers up the desktop for a very reasonable price. However, one can't help wondering how a new user is going to cope with the rather complex and detailed manual.

NeoDesk 3 is very intuitive, and has exactly the same 'feel' as the GEM desktop but offers so many more features. New users will have no problems with the manual or operation. DC Desktop is undoubtedly a useful piece of software but until DC Desktop 2 arrives, NeoDesk 3 retains its title of the 'Ultimate Desktop Replacement'. ■

MULTI-TASKING ST ON THE HORIZON?

The version of GEM built into the ST has limited multi-tasking abilities in the form of desk accessories and, although desk accessories are available to perform almost any task, wouldn't it be nice to be able to load your text editor from within your desktop publisher for example?

This may not be as far from reality as it seems; German company Maxon is about to release *MultiGEM* into the hands of the power hungry German ST community. An advert running in most popular German magazines shows *MultiGEM* multi-tasking its way through *Catulus*, *Tempus Word*, *Dynadec*, *Hyperchart*, *First Word Plus* and *Draughts!* Watch out for the exclusive review in *Express* soon.

DC DESKTOP - THE VERDICT

FOR

- ▲ Excellent icon designer
- ▲ Price - less than most games
- ▲ Re-definable keyboard shortcuts
- ▲ Modular design means easy expansion and low memory usage.

AGAINST

- ▼ No advantages over normal desktop on copy and format operations
- ▼ Utilities are only accessible through function keys
- ▼ No 'Size to fit' - icons must still be scrolled left and right a la GEM desktop

COST £19.95 + £1 P&P

NEODESK 3 - THE VERDICT

FOR

- ▲ Completely menu driven with keyboard shortcuts
- ▲ Macro support - invaluable for repetitive copy operations
- ▲ Clipboard
- ▲ Intelligent file copying
- ▲ Recoverable trash
- ▲ Very intuitive

AGAINST

- ▼ Memory hungry but will unload itself when you run a program
- ▼ Text 'Show' not greatly improved

COST £39.95 inc. P&P

The new Arcade Action Games Pack is THE software compendium for Amiga owners, featuring ten top titles with a variety of different types of games for you to enjoy. Each title is packaged in its own plastic case, with a colour sleeve and full instructions. The Arcade Action Pack is FREE! when you buy your Amiga 500 from Silica.

FREE! WORTH **£219.78**

FREE! PHOTON PAINT 2.0 GRAPHICS PACKAGE

Every Amiga 500 from Silica Systems comes with a FREE Photon Paint 2.0 (RRP £89.95), one of the most advanced art packages available for the Amiga. With it, you will be able to harness the extraordinary graphics power of the Amiga and produce inspirational pictures in minutes. With 4096 colours, your pictures will reach life-like appearance. These can be animated in real-time using a vast range of graphical effects, including blending colours and dithering, stencils, shadowing, surface mapping and contour mapping.

WORTH **£89.95**

FREE! 16 NIGHTS HOLIDAY HOTEL ACCOMMODATION

Every Amiga from Silica comes with a FREE 72 page, full colour brochure with accommodation vouchers. These vouchers entitle 2 people to stay up to 16 nights in one hotel (or any number of hotels to a total of 16 nights) with accommodation FREE (you could take up to six nights for four people, or other options). Choose from the 250 hotels featured in the catalogue. All you have to pay for are your meals (prices are listed in the brochure). Reduced rates in top London hotels and hotels in France are also featured.

SILICA SYSTEMS OFFER YOU

- **FREE OVERNIGHT COURIER DELIVERY:** On all hardware orders shipped in the UK.
- **TECHNICAL SUPPORT HELPLINE:** Team of Amiga technical experts at your service.
- **PRICE MATCH:** We normally match competitors on a "Same product - Same price" basis.
- **ESTABLISHED 12 YEARS:** Proven track record in professional computer sales.
- **BUSINESS + EDUCATION + GOVERNMENT:** Volume discounts available for large orders.
- **SHOWROOMS:** Demonstration and training facilities at our London & Sidcup branches.
- **THE FULL STOCK RANGE:** All of your Amiga requirements from one supplier.
- **FREE CATALOGUES:** Will be mailed to you with offers and software/peripheral details.
- **PAYMENT:** By cash, cheque and all major credit cards.

Before you decide when to buy your new Amiga computer, we suggest you think very carefully about WHERE you buy it. Consider that it will be like a few months after buying your Amiga, when you may require additional peripherals or software, or help and advice with your new purchase. And, will the company you buy from contact you with details of new products? At Silica Systems, we ensure that you will have nothing to worry about. We have been established for over 12 years and, with our unrivalled experience and expertise, we can now claim to meet our customers' requirements with an understanding which is second to none. But don't just take our word for it. Complete and return the coupon now for our latest Free literature and begin to experience the "Silica Systems Service".

HOW TO BE A HOT SHOT!

• More joy than a joystick – the Trojan Light Phazer Gun

A joystick's OK, but to get engrossed in a serious shoot-'em-up it's better to have something that you can point and aim with. Express is giving away more than £1,000 worth of light guns to give you the edge on the aliens.

And it's not limited to one machine.

Forget about your joystick – get your hands on a laser gun and get ahead in your game playing. We're giving away 25 Trojan Light Phazers for free

The Trojan Light Phazer is available for the Amiga, ST, C64, Amstrad CPC 464/6128 and Sinclair Spectrum so there's something for everyone.

The Phazer is shaped like a Star Wars pistol and is held in much the same way. A combination of clever software and a light sensitive sensor in the Phazer mean that if your aim is true, you'll score

The Trojan Light Phazer is a challenge of skill for all ages. You can unleash your imagination on the software provided in each pack. Prove that you're a great

shot by answering these few questions and you could be shooting sooner than you think.

So all you have to do is answer the five questions in the box below and complete the following lie-breaker in less than 12 witty words: "Express lights up my life because....."

Send your entries on the back of a postcard or envelope to: Is that a gun in your pocket? Compo, New Computer Express, 29 Monmouth Street, Bath, Avon BA1 2DL. ■

THE QUESTIONS YOU'VE ALL BEEN WAITING FOR...

- Which company sells the Light Phazer in the UK?
 - Ministry of Defence
 - Trojan
 - Welsh Tourist Board
 - National Lampoon Inc
- If a Laser uses light, what does a Maser use?
 - Mud pies
 - Multiples
 - Memory
 - Microwaves
- Which travels fastest?
 - An Inter City 125
 - A National Express Coach

- Light
 - Sound
- Which classic LP sleeve featured light being refracted through a prism on a black background?
 - Tubular Bells (Mike Oldfield)
 - Pyramid (Alan Parsons)
 - Autobahn (Kraftwerk)
 - Dark Side Of The Moon (Pink Floyd)
 - Which film popularised the laser wand as a weapon?
 - The Bible
 - A Clockwork Orange
 - Star Wars
 - 1984

'Your guarantee of value'

30 Monmouth Street, Bath BA1 2DW
This magazine comes from Future Publishing, a company founded just six years ago, but which now sells more computer magazines than any other publisher in Britain. We offer:

Better advice. Our titles are packed with tips, suggestions and explanatory features, written by the best in the business.

Stronger reviews. We have a cast-iron policy of editorial independence, and our reviews give clear buying recommendations.

Clearer design. You need solid information fast. So our designers highlight key elements by using charts, diagrams, summary boxes, annotated photographs, etc.

More reader interaction. We draw strongly on readers' contributions, resulting in the liveliest letters pages and the best reader tips. Buying one of our magazines is like joining a nationwide user group.

Better value for money. More pages, better quality: magazines you can trust.

Home of Britain's finest computer magazines.

Where you can stick it.

Viruses, disk swapping, clicking drives, disks which won't back up. Is there no end to the whingeing of the Amiga user?

At Power, we want to tell you just where you can stick your disks and worries. In fact we will show you. The slot in this picture belongs to our PC880B, the first intelligent disk drive. Insert a disk.

Now you can back up at lightning speeds using the inbuilt Blitz Amiga hardware, with free software, (even if the disk is Atari or PC) and if your computer has a virus the PC880B will stop it being written to the bootblock of any of your drives, though you can still save files as normal.

When you do not want these features, switch them off and the PC880B will sit quietly, without clicking, pretending to be simply an extra drive.

The PC880B, the only drive to introduce Blitz Amiga, the power anti-click device and to combat viruses, is only available direct from Power, priced at just **£65**.

We have noticed how pricey unintelligent drives are. Perhaps, its your turn to tell people where to stick it.
