BRITAIN'S LARGEST SELLING MICRO MAGAZINE

CHALLENGE FROM THE ORIENT
Hitachi takes on the IBM PC

NEW MODEL

LOWER COST

Cromemco System One

MicroCentre introduce Cromemco's new System One computer, available with an integral 5 megabyte Winchester hard disk, at a new low price.

The System One supports the full range of Cromemco interface cards, including high resolution colour graphics, and software packages. The choice of operating systems includes CDOS, CP/M and CROMIX—Cromemco's answer to Unix.

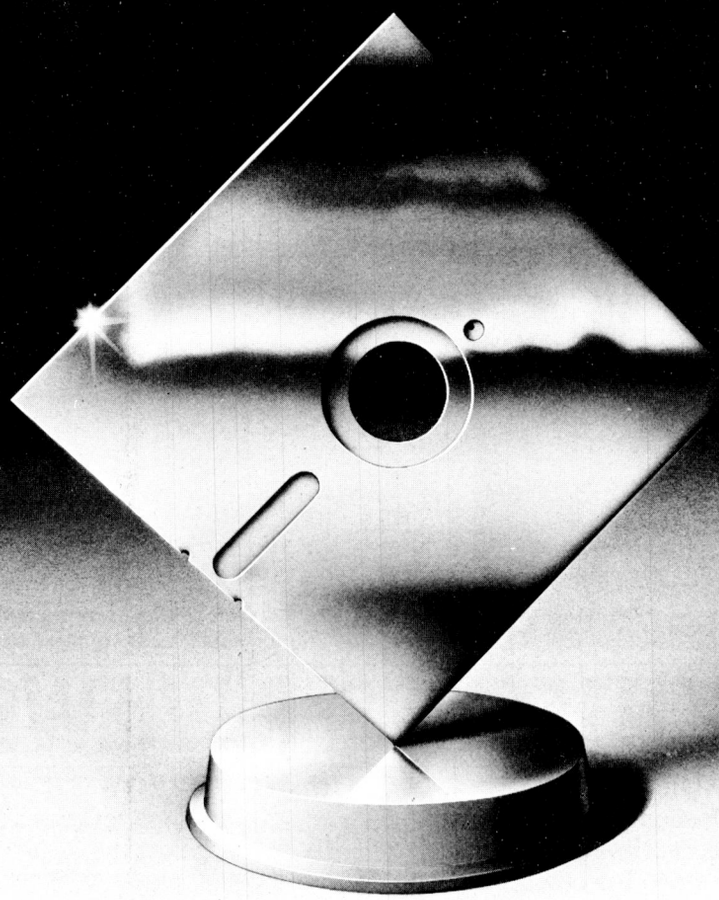

Call MicroCentre for Cromemco

IF THERE WAS A PULITZER PRIZE FOR PROGRAMS

CAXTON WOULD WIN IT

Does a simple-to-use filing system appeal to you? Then Cardbox is the answer. But don't let the simplicity of operation fool you. Cardbox is a powerful data retrieval and information management tool for all your filing needs. Draw up your index cards as you want them, enter your information in the way you want to see it and index all the key words you think you'll need. Then use Cardbox's powerful search and select commands to pick out just the records you need. Each search can comprise up to 99 separate criteria which should satisfy even the most pernickety person. Whether you're a newcomer or an old hand at computing you'll find Cardbox a joy to use because it works very hard to keep things simple for you.

Cardbox is available under CP/M and MSDOS. It costs **£155** + VAT. Mail order customers please add £2 P&P.

Is resource allocation one of your problems? Gut instinct and rule of thumb are not good enough in an increasingly competitive world. With today's drive to improve productivity Optimiser will help you decide the best allocation of materials, machines, manpower or money. Based on proven techniques, Optimiser places the power of linear programming at the fingertips of you, the decision maker. With a low cost microcomputer and Optimiser you can now establish the optimum mix of your scarce resources, without the need to resort to complex mathematics.

Optimiser is available for the 48K Apple II and a wide range of CP/M systems.

Optimiser costs **£325** + VAT. Mail order customers please add £2 P&P.

Are you frustrated by the 'keyboard barrier'? Would 'error-prone and slow' fairly describe your keyboard skills?

Touch 'N' Go will change all this. It is a carefully designed keyboard skills course developed over the last 20 years and now implemented on CP/M and MSDOS microcomputers. The course develops your accuracy and speed on both the QWERTY keyboard and the numeric keypad. With a little concentrated effort, you can achieve mastery in just 24 hours. By the end of the course you should reach 40 words per minute, an alphabetic accuracy of 95 per cent and a numeric accuracy of 100 per cent.

Why use two fingers when you have ten?

Touch 'N' Go costs **£25** + VAT. Mail order customers please add £1 P&P.

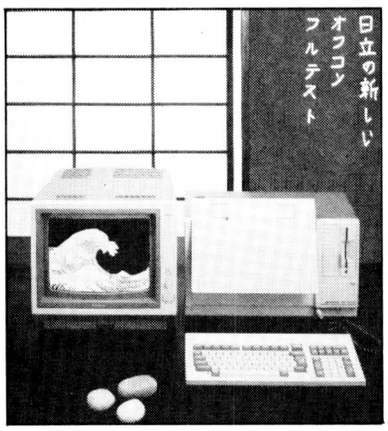

Please state disk format when ordering

CONTENTS

Vol 6 No 6 June 1983

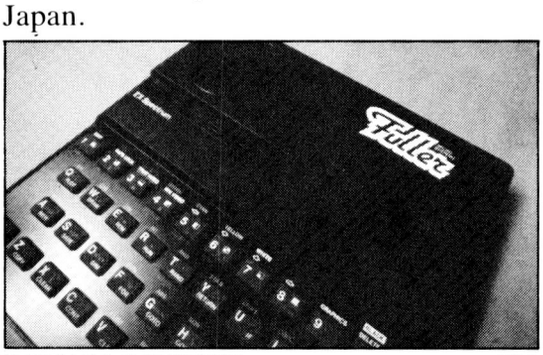

Cover photograph by Ian Dobbie (screen graphics were done on an Apple II with graphics tablet using software by Nigel Cross).

BENCHTESTS & REVIEWS

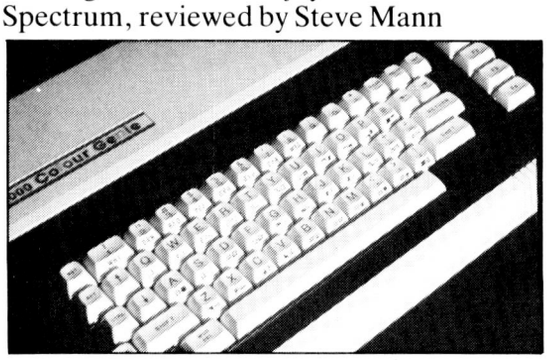

EXPANDING THE APPLE 116
Mike Liardet continues his Which Spreadsheet? series with a look at enhancements to Visicalc on the Apple.

COLOUR GENIE 120
Maggie Burton averts a keen gaze towards the new offering from Lowe Electronics in Japan.

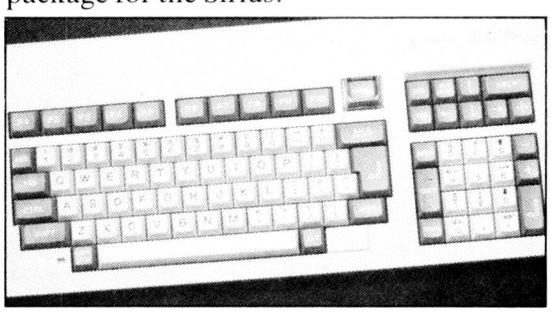

OCCAM OCCULT 136
Dick Pountain unveils the magical art of this futuristic new language.

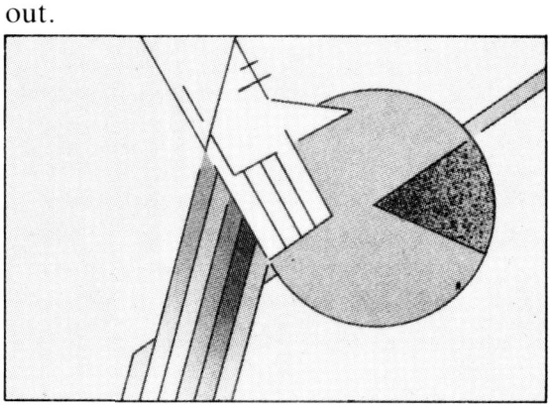

SPECTRUM PLUS 144
M/C code compilers, a graphics toolkit, a sound generator and a joystick for the Spectrum, reviewed by Steve Mann

TOMORROW'S OFFICE 154
Kathy Lang reviews a data management package for the Sirius.

HITACHI MB16001 160
Is it worth buying an IBM look-alike PC? Read Steve Withers' Benchtest and find out.

FINANCIAL DIRECTOR 184
Ian Griffiths seizes the gauntlet and tries out this 'user-friendly' accounting package.

CROSSWORD MAGIC 198
If your friends like doing crosswords then this little package will make you popular. Maggie Burton checks it out.

Founder Angelo Zgorelec **Editor** Jane Bird **Assistant Editor** Maggie Burton **Home Computing Editor** Steve Mann **Programs Editor** Surya **Sub Editor** Ginny Conran **Consultant Editors** Peter Rodwell, David Tebbutt, Dick Pountain **Editorial Secretary** Tracy Dear **Art Editor** Phoebe Creswell-Evans **Design Assistants** Richard Gadsby, Safu-Maria Gilbert **Typesetters** Jane Hamnell, Anne Ashby **Publishing Manager** Fiona Collier **Group Advertisement Manager** John Cade **Advertisement Manager** Patrick Dolan **Assistant Advertisement Managers** Peter Goldstein, Herbert Wright **Sales Executives** Jan Martin, Gill Harrison, Gayle Thomson, Michael Clarke, Caroline Shepherd, Joe Harrower **Micromart** Gaye Collins **Advertisement Assistant** Priscilla Senior **Group Production Manager** Robert Buggs **Advertisement Production** Tony Keefe **Production Assistant** Lezley Hannibal

FEATURES

FAIRE FADES 131
Colourful account of this historic (and decaying?) ritual from Peter Rodwell.

HEARING IS BELIEVING 142
Author as above; this time putting the case for compact disks in data storage.

SHRINK RAPT 148
In Part 2 of our Lisp feature David Johnson-Davies examines the classic psychoanalysis program, Eliza.

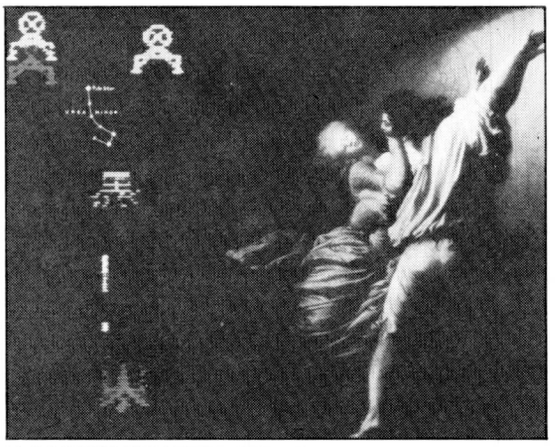

CROSS FIGURES 178
Essential brain fodder for all compulsive philomaths and numbers freaks. Philip Lewis extols.

LESSON IN LOGO 195
Does Logo spell doom for Basic? Dick Olney goes to Exeter to hear what the experts think.

ACCOUNTANCY AID 196
Alan Secker maps the path in a quest for the ideal accounting package.

REGULARS

NEWSPRINT 102
Guy pontificates on what's new in the light of the Hanover Fair.

BANKS' STATEMENT 112
Micro machismo gets Martin thinking these home computers might not be such a good idea after all...

COMPUTER ANSWERS 114
Agony panel Len Warner & Co corrects your errors and disentangles your short circuits.

SCREENPLAY 128
Steve Mann widens the net and brings games for two machines, the Jupiter Ace and the Oric-1, under scrutiny.

NUMBERS 143
This month Mike Mudge issues a challenge in U-sequences.

SUBSET 166
Assembler subroutines at your disposal from Alan Tootill.

TJ's WORKSHOP 171
This month's motley collection of readers' traumas, and tips to overcome them.

COMMUNICATIONS 180
Provocative and controversial forum of debate in the micro world.

YANKEE DOODLES 188
Macro début of Sol Libes' column of news and gossip from Stateside.

MICRO CHESS 192
Tony Harrington describes how academic Don Beal developed a chess computer.

DIRECT ACCESS 203
Includes Packages, ACC News, Computer Town Centres, Networks, Diary Data.

SUBSCRIPTIONS 208
Lots of inspiration for you to put the money in an envelope and wing it hitherwards.

PROGRAMS 220
This month's jamboree bag packed with goodies from our new programs editor Surya.

LEISURE LINES 238
Can you solve these puzzles before the bath water turns cold?

BACK ISSUES 242
Just see what you've missed.

BLUDNERS 344
PCW's assiduous readers keep the editor apprised of last month's boobs.

CHIP CHAT 344
Scurrilous, uncalled-for and venemous attacks – anyone in the micro world runs risk of coming under fire!

WHEN IT COMES TO MICROCOMPUTER SOFTWARE WE WROTE THE BOOK

How do you stay up-to-the-minute with the rapidly changing world of microcomputer software? Get the Lifeboat Catalogue.

The latest innovations The new Lifeboat Catalogue is packed with the latest state-of-the-art software. And if we publish a new program after the latest catalogue has gone to press, we enclose a flash bulletin in your copy.

The greatest selection Because Lifeboat is the world's largest publisher of microcomputer software, our catalogue offers you the greatest selection of programs for business, professional and personal use. Our more than 200 programs range from the integrated accounting and professional practice systems to office tools for book-keepers and secretaries to sophisticated tools for programmers. Included are business systems, word processors, programming languages, database management systems, application tools and advanced system utilities.

We specialise in software that runs on most small business computers. Our more than 60 media formats, including floppy disks, data cartridges, magnetic tape and disk cartridges, support well over 100 different types of computer.

Get full service We give the crucial dimension of after-sales service and full support to everything we sell.

That includes:

- An update service for software and documentation.
- Telephone, telex and mail-order services in the London office and at overseas offices in the United States, France, Switzerland, West Germany and Japan.
- Subscriptions to Lifelines,™ the monthly magazine that offers comparative reviews, tips, techniques, identified bugs and updates that keep you abreast of change.

Get it now Lifeboat now serves tens of thousands of satisfied customers with our breadth of up-to-date, fully tested, fully supported and competitively priced software.

You may not need all we offer, but we offer just what you need. After all, we wrote the book.

DP80 PRINTER

10" Tractor/Friction Feed, 9 × 9 matrix, 80 CPS, 80 column, Bidirectional, logic seeking, Hi-res bit image, graphics, super-script & subscript, Italics & Underlining. £310 (£7 carr)

SOFTY II

Softy is an intelligent EPROM Programmer & Emulator. Has memory map. T.V. Display. RS232 & Centronics Input/Output.
Copies. Emulates & Programs EPROMS. RS232/Centronics routines standard. Power supply included. **£169**

JUPITER ACE

Microcomputer that uses FORTH **£78**

ULTIMUM:

WATFORD's own most versatile MICRO EXPANSION SYSTEM. Ideal for interfacing with APPLE, ATOM, DRAGON, PET, RESEARCH MACHINE, SPECTRUM, SUPER-BOARD, UK101 VIDEO GENIE, ZX81, etc.

Low cost, high spec. As published in Practical Electronics starting from November 1982 issue. Send SAE for details.

BBC MICRO & UPGRADE KITS

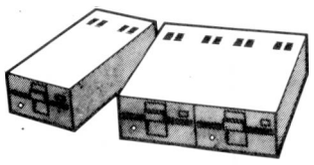

Upgrade your BBC Micro with our Upgrade Kits and save yourself £sss . . .

LONDON MICRO SYSTEMS
Southampton House, 192-206 York Road,
Battersea SW11

WHEN A MICROPROCESSOR COSTS £3, WHY MAKE DO WITH ONE?

Clever as a microprocessor is, it has its limitations. It can't do everything at once.

If you have to rely on one chip to do all the work of accessing disks, refreshing memory, communicating with the printers, keyboard and screen, you're going to be very short of time to run a program.

That's why we design our Series 1 micros with separate processors for separate functions. You get faster operation and more intelligent features. You can use it as a terminal, or as a stand-alone microcomputer. It's designed for flexibility; you can add to or update your capability at any time by adding extra boards, increasing the number of functions at will. For example, a MC68000 + minimum 256K RAM with UNIX will soon be an optional add-in extra.

Altogether the Series 1 multi-processor system gives you a Z80A + 64K RAM for display and keyboard functions, plus a second Z80A with up to 256K RAM and CP/M as standard. A third Z80A dedicated to high resolution graphics is optional.

Internal disk storage comes in a wide range of alternatives, with combinations of 800K floppy and 5, 10 or 21M winchester drives. You can also add on external disk drives with 5.25 or 8 inch floppy disks or 5.25 winchesters.

Three serial RS232/V24 ports and a Centronics-type parallel port provide interfacing. A IEEE–488 interface is standard on winchester equipped models and optional on other versions.

A 100 key detachable keyboard with over 40 programmable function keys is standard. The display screen has status/message line, software controlled brightness and choice of 80 or 132 columns. Alternative character sets can be added and the display memory will recall up to 168 lines.

Graphics are handled by a separate processor system and are displayed as an overlay to the normal screen. 1024 by 300 point resolution is achieved with Tektronix 4010 software compatibility.

Every Cifer micro comes with another unique extra. The technical excellence and the expertise which have kept Cifer at the forefront of computer technology for over ten years.

All of which helps to make Series 1 your most intelligent choice.

CASH BOOK ACCOUNTS PROGRAM FOR BBC 32K, TORCH, SPECTRUM 48K

NEW.....£59.95

One of the most innovative business programs on the market. Replaces a manual cash book system, e.g. Simplex and 'All-in-One'. Written by practising Chartered Accountants, this practical program is simple to use and will replace your manual cash and bank records. By giving you access to vital management information as and when you want it, it will enable you to keep more positive financial control of your business.

The software is extremely well and lucidly documented, and Gemini provide a full technical back-up and product up-date policy. Take a look at the information this program will provide:-

* Summary of VAT information for VAT returns * Cumulative receipts and payments report analysed over the standard profit and loss and balance sheet headings * Option for departmental analysis of sales and purchases * Audit trail printout of all transactions. * Journal routine for entering transfers between accounts and year end adjustment for debtors, creditors etc. * Trial balance at any interval * Interfaces to 'Final Accounts' program to produce balance sheet and trading and profit/loss account etc. * Spectrum version may be used with Sinclair OR 80 column printer.

FINAL ACCOUNTS PROGRAM FOR BBC 32K, TORCH, SPECTRUM 48K.....£59.95

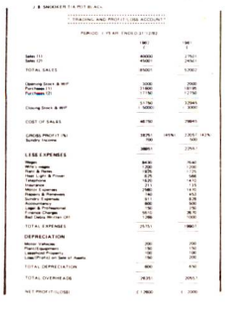

NEW

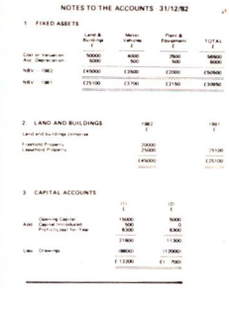

Requires Cash Book module. This program will take your cash book data to the logical conclusion of balance sheet, trading and profit/loss account and notes to the accounts i.e. fixed assets, land and buildings and capital accounts. Final accounts (BBC version) links to 'Beebplot' for graphic data presentation.

Format: Torch disk, BBC disk/cassette, Spectrum cassette.

Special Offer – Cash Book and Final Accounts together – £95

"Gemini's range of software is in the vanguard of the releases for 'serious' micro users..."
(WHICH MICRO AND SOFTWARE REVIEW)

INVOICES AND STATEMENTS...£19.95

Compatible with most micros. See table. Ideal for the small business. A complete suite of programs together with generated customer file for producing crisp and efficient business invoices and monthly statements on your line printer. All calculations include VAT automatically, and the program allows your own messages on the form produced. This program gives you superb presentation and saves time on one of the most tedious tasks in the office.

COMMERCIAL ACCOUNTS...£19.95

Compatible with most micros. See table. A gem of a program, all for cassette, with the following features:- Daily Journal. Credit Sales. Cash Sales. Credit Purchases. Purchases – other. Sales Ledger. Purchase Ledger. Bank Account. Year to date summary. A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view, with an immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and, of course, running balance.

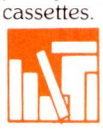

MAILING LIST...£19.95

Compatible with most micros. See table. A superb dedicated database to allow for manipulations of names and addresses and other data. Gemini's unique 'searchkey' system gives you a further ten 'user-defined parameters' to make your own selections. Features include the facility to find a name or detail when only part of the detail is known, it will print labels in a variety of user specified formats.

DATABASE...£19.95

Compatible with most micros. See table. The program that everyone needs, the most valuable and versatile in your collection. Facilities include sort search, list print if required. Can be used in place of any card index application; once purchased you can write your own dedicated database to suit your particular needs with a limitless number of entries on separate cassettes.

STOCK CONTROL...£19.95

Compatible with most micros. See table. Dedicated software with all that's necessary to keep control of stock. This program will take the tedium out of stock control and save time and money. Routines include stock set up, user reference number, minimum stock level, financial summary, line print records, quick stock summary, add stock, delete/change record and more.

HOME ACCOUNTS...£19.95

Compatible with most micros. See table. Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account, mortgage, H.P., etc. This program also allows you to plot graphically by Histograms your monthly outgoings.

WORD PROCESSOR...£19.95

Compatible with most micros. See table. This program features routines found in much larger and more expensive packages with a typical word length of 5-6 letters it allows for around 1000 words in memory at one time. Ideal for the user who requires a simple program to write letters on his computer. Features include, block delete, block insert, search and replace, edit text, display text and more.

"Simple to use ....."
"Ideally suited to the way most offices run....."

Without any programming knowledge at all, you may:-

- Set up a computerised spreadsheet, with chosen row and column names.
- Specify formulae relating any row or column to any other.
- Enter your source data and have the results calculated.
- Save the results on tape (or disk – BBC) for later reloading and manipulation.
- Print the tabulated results in an elegant report format.
- Experienced users may access saved files and write their own reporting or graphics presentation programs for the results.

Some typical applications:-

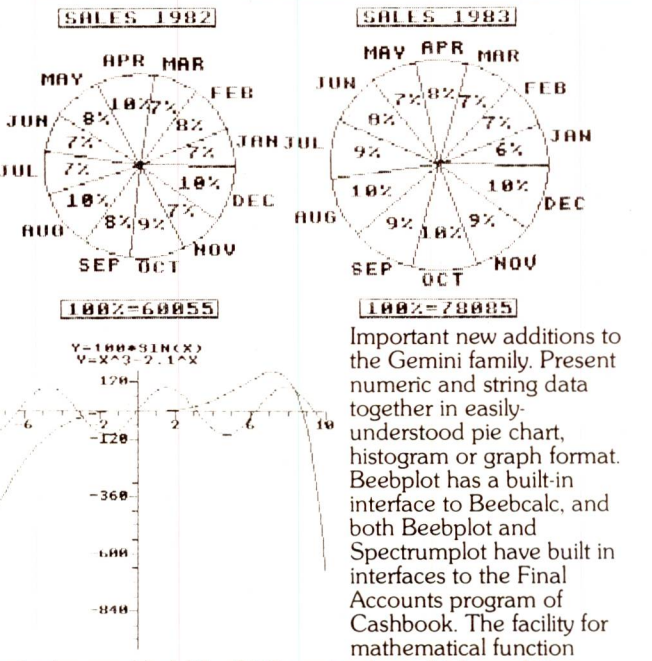

- Small business accounting applications, e.g. profit and loss statements and cashflow projections, break-even analyses etc.
- Investment project appraisal – anything from double glazing to oil rigs!
- Comparing rent/lease/buy options.
- Processing the results of scientific experiments or field studies.
- Engineering calculation models.
- In fact, anything that involves repeated re-calculation of results presented in tabular or spreadsheet format.

BEEBPLOT & SPECTRUMPLOT £19.95

NEW

Important new additions to the Gemini family. Present numeric and string data together in easily-understood pie chart, histogram or graph format. Beebplot has a built-in interface to Beebcalc, and both Beebplot and Spectrumplot have built in interfaces to the Final Accounts program of Cashbook. The facility for mathematical function plotting is also provided. The BBC version has a high resolution screen dump for the Epson or CP-80 printers, and the Spectrum version dumps to the Sinclair printer via the 'copy' key. A very useful program that will give superb results either from direct input of data from the keyboard or via simple access to other software data files. A must for business and education.

At Granada Business Centres we help you, to help yourself.

If you're looking for a way to help your business develop, you'll find something special at Granada Business Centres.

Something you won't get anywhere else. Our kind of service.

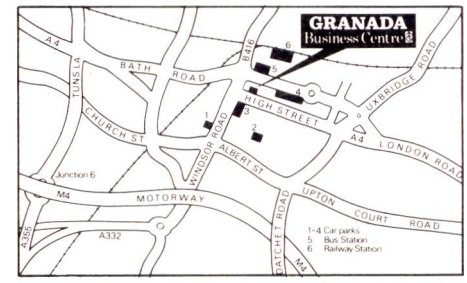

By starting Granada Business Centres (the first one's in Slough by the way) we have combined the support and strength of the Granada group of companies with top professionals in the computer business.

Granada Business Centres – the trading outlet of Granada Microcomputer Services Ltd.

We can provide microcomputer systems from IBM, Altos, Osborne and Epson, and software from a wide range of leading suppliers for accounting, word processing, planning, modelling and data base management operations.

We offer training courses both in the Business Centres and on clients' premises with maintenance by our own staff on a similar basis.

And Granada service doesn't end there.

Every customer has a "hot line," so if there's any problem a local phone call puts you straight through to our support consultants and engineers.

They'll be happy to answer all your queries and make sure your system's running properly with the minimum of delay.

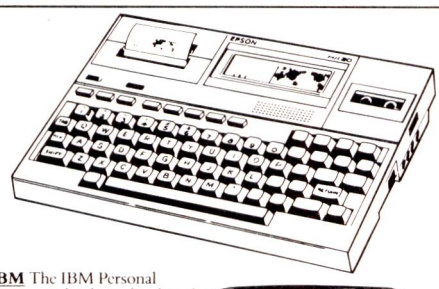

So why not come to one of our seminars or ask for a demonstration.

It could be your first step towards a more efficient business.

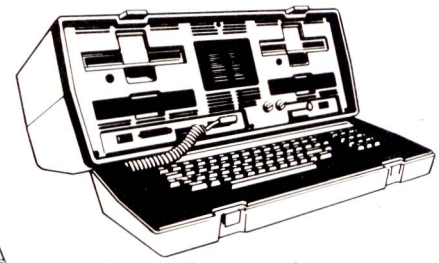

GRANADA
Business Centre

We'll show you the way.

Granada Business Centre, 119 High Street, Slough, Berkshire, Telephone Slough (0753) 820966.
Authorised IBM Personal Computer dealer.

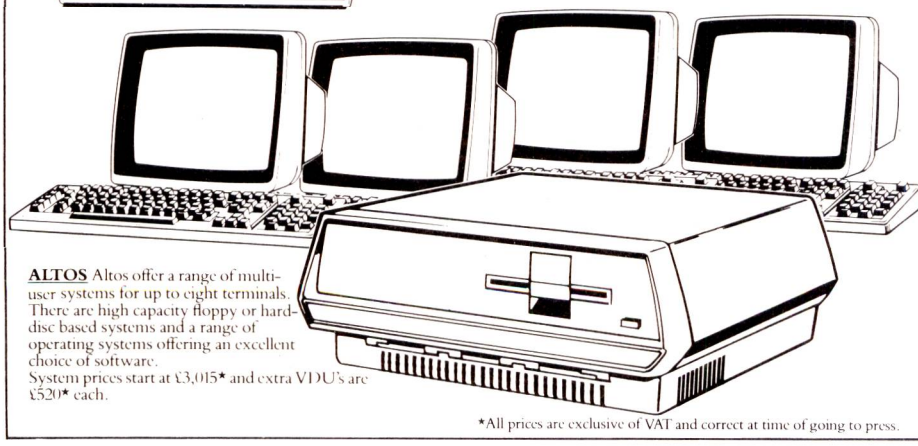

EPSON A truly portable hand held computer the Epson HX/20 has a built in LCD display, a full size keyboard and rechargeable batteries.
True management systems, wherever you may roam, from £402*

IBM The IBM Personal Computer has been developed for today's business needs with an eye on tomorrow.
It offers colour or monochrome, high resolution graphics and you can use it as a stand-alone system or connected to your IBM mainframe.
There is a wide range of options to suit your needs and your budget.
From £2,115*

OSBORNE The Osborne is famous as a portable computer but it is just as good value if you don't want to carry it around with you. Complete with VDU, twin disc drives and free software for word processing and financial planning the Osborne costs just £1,375*

ALTOS Altos offer a range of multi-user systems for up to eight terminals. There are high capacity floppy or hard-disc based systems and a range of operating systems offering an excellent choice of software.
System prices start at £3,015* and extra VDU's are £520* each.

*All prices are exclusive of VAT and correct at time of going to press.

System Saver™

The most important peripheral for your Apple II and IIe.

For Line Surge Suppression

The SYSTEM SAVER provides essential protection to hardware and data from dangerous power surges and spikes.

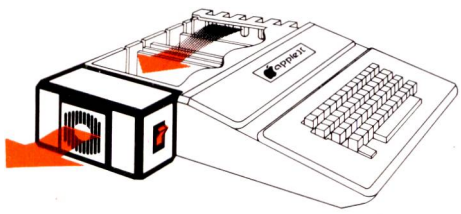

By connecting the Apple II power input through the SYSTEM SAVER, power is controlled in two ways: 1) Dangerous voltage spikes are clipped off at a safe 130 Volts RMS/175 Volts dc level. 2) High frequency noise is smoothed out before reaching the Apple II. A PI type filter attenuates common mode noise signals by a minimum of 30 dB from 600 khz to 20 mhz, with a maximum attenuation of 50 dB.

For Cooling

As soon as you add 80 columns or more memory to your Apple II you need SYSTEM SAVER.

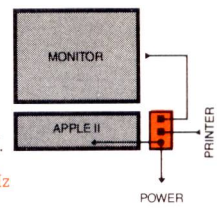

Today's advanced peripheral cards generate more heat. In addition, the cards block any natural air flow through the Apple II creating high temperature conditions that substantially reduce the life of the cards and the computer itself.

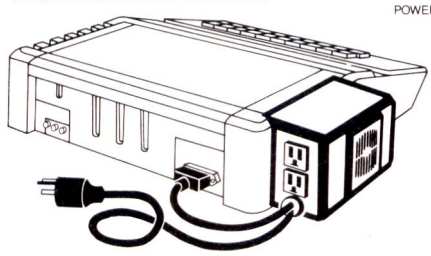

SYSTEM SAVER provides correct cooling. An efficient, quiet fan draws fresh air across the mother board, over the power supply and out the side ventilation slots.

For Operating Efficiency

SYSTEM SAVER contains two switched power outlets. As shown in the diagram, the SYSTEM SAVER efficiently organizes your system so that one convenient, front mounted power switch controls SYSTEM SAVER, Apple II, monitor and printer.

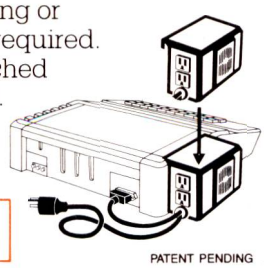

Available in 220/240 Volt. 50 Hz

The heavy duty switch has a pilot light to alert when system is on.You'll never use the Apple power switch again!

Easy Installation

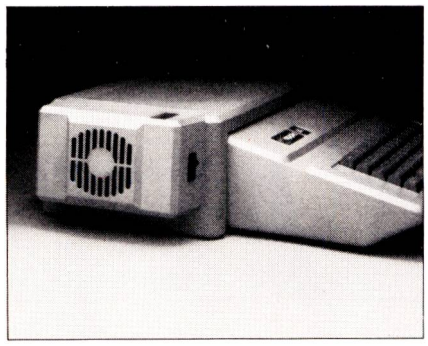

Just clips on.
No mounting or hardware required.
Color matched to Apple II.

UL LISTED

PATENT PENDING

Compatible with Apple Stand

All these features have made System Saver the top selling Apple II and IIe peripheral in America. Now available at your local dealer. If yours doesn't stock System Saver yet, have him contact our distributor, Softsel Computer Products 01 844-2040.

KENSINGTON MICROWARE

SMORGASBOARD™

The only board your IBM Personal Computer may ever need.

SMORGASBOARD from Kensington Microware is a multi-function board for your IBM Personal Computer that greatly increases the capabilities of your PC while only using one expansion slot. SMORGASBOARD is completely hardware and software compatible with the PC. SMORGASBOARD combines the following 8 functions to enhance your IBM PC.

256K RAM MEMORY EXPANSION from 64K to 256K bytes in 64K byte increments. Additional memory enhances many software packages, including financial spreadsheets such as 1-2-3, VisiCalc and MultiPlan.

SERIAL PORT connects modems, letter quality printers and other serial devices. The serial port may be configured as COM1 or COM2. IBM PC communications software is fully supported.

PARALLEL PRINTER PORT Centronics compatible parallel printer interface, is identical to IBM's Parallel Printer Adapter and may operate as LPT1, LPT2 or LPT3. This interface is plug compatible with standard printer cable. It can also be configured as a bidirectional SASI interface.

CLOCK/CALENDAR so you no longer have to input the time and date each time you reboot your PC. SMORGASBOARD's chronograph always keeps your system's clock/calendar up to date.

GAME PADDLES/JOYSTICK INTERFACE for attaching up to four game paddles or two joysticks to the PC.

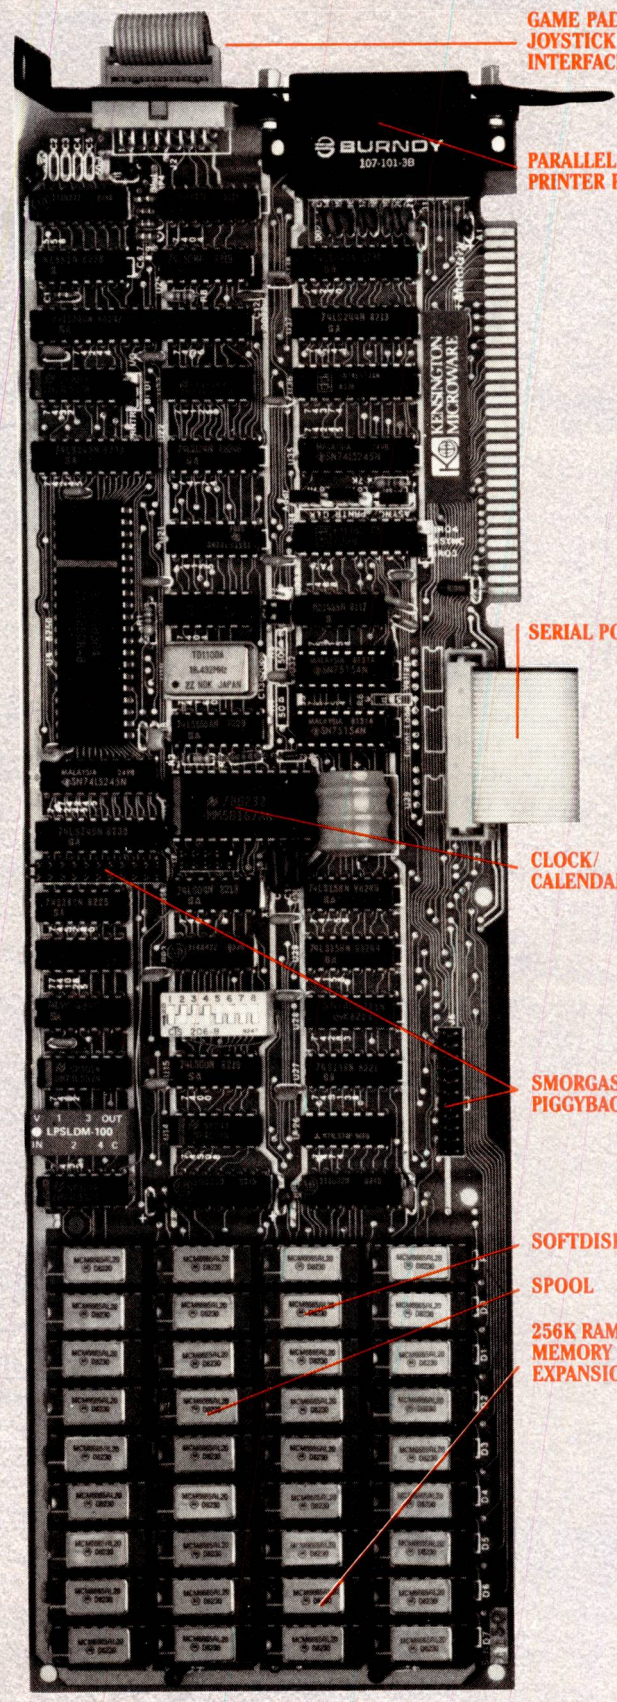

SPOOL software package uses part of the system's memory as a print buffer. You no longer have to wait for your printer.

SOFTDISK program allocates a portion of the system's memory as a super fast electronic disk drive. Store important information there for speedy access.

SMORGASBOARD PIGGYBACK offers even more expandability. With it another 256K bytes RAM and a 2nd Serial Port become available.

INCREDIBLE LOW PRICE: £299 with 64K installed; £399 with 128K; £499 with 192K and £599 with 256K. SMORGASBOARD comes with a one year warranty and is documented in English, French and German.

SEE IBM DEALERS EVERYWHERE. If yours doesn't stock SMORGASBOARD yet, have him contact Kensington Microware or one of our distributors—Ferrari Software 01 751-5791 or Softsel Computer Products 01 844-2040.

80x25 Video for nascom

£125
(£143.75 inc. VAT)

Nascom owners can now have a professional 80x25 Video display by using the Gemini G812 Intelligent Video Card with on-board Z80A. This card does not occupy system memory space and provides over 50 user controllable functions including prog character set, fully compatible with Gemini G805 and G815/809 Disk Systems. Software supplied on Gemini system disks. Built and tested.

The **Microvector 256A** is a high performance graphics display interface on an 80-BUS and NASBUS compatible card. Various graphic primitives such as vector and character generation are executed in hardware by a Thompson EF9356 Graphic Display Processor. Plotting rates are typically 1 million pixels per second giving full animation capability. Various vector and character types can be selected. Characters can be scaled to give 256 different sizes.

COMPSOFT'S DMS – winner of the 1982 RICA Awards, 'Software Product of the Year'.

Now Compsoft announce Delta – the **very** powerful, **very** friendly database* that the world has been waiting for.

* For micro computers with CP/M, MP/M or MSDOS operating systems. Including IBM PC.

Compsoft Training Centre

If part of your microcomputer's job is to store information, you need Compsoft's software.

Compsoft DMS is already Britains No. 1 record keeping program. And with 4000 users to our credit, we can honestly say we know more about information storage & retrieval than anyone else. We listen to your comments & requests and now we've produced a world first – the Delta – a true transactional database.

If you'd like to know more, we have general brochures, full technical specifications & free guides to DMS handling a multitude of business situations from order processing, invoicing & stock recording, through to library, personnel & hospital record management.

Find out more about the database revolution. Either telephone the office or clip the coupon now.

Compsofts Delta – taking microcomputers into the third dimension.

The printer that thinks it's a computer!

FACT With internal microprocessor, 8K buffer store and total compatibility, the Ricoh Flowriter range has proved itself the most intelligent and reliable range of printers on the world market.
FACT Ricoh Flowriters can assume the characteristics of **any** popular 'intelligent' printer and plug into **any** hardware configuration.
FACT Ricoh Flowriters perform **all** your processing and printing needs while leaving the host computer free for other work.
FACT Ricoh Flowriters do all this, give you exceptional print quality, yet **cost the same as ordinary daisy wheel printers!**

FEATURES ■ Internal microprocessor
- 8K buffer under full program control
- Includes RS232, Centronics and IEEE 488 interfaces
- 60cps print on the RP1600, 37cps on the RP1300
- Qume, Diablo and NEC Spinwriter wp commands-compatible
- Auto-bidirectional and logic seeking high-speed printing
- Graphics capability down to 1/120"
- Built-in proportional spacing tables
- Automatic margin justification, even on proportional spacing
- 128-character printwheels, wide choice of fonts
- Wide range of accessories – sheetfeeds, tractor feeds, ribbons, printwheels
- Detachable keyboard option for using Flowriter as an intelligent typewriter or KSR terminal

For intelligent printing that frees the host computer **and** gives you exceptional print quality and speed, find out more about the Ricoh Flowriter – the printer that **knows** it's a computer, yet costs the same as those that aren't!

The RP1300 Flowriter

The RP1600 Flowriter

Dealer Enquiries welcome.

The Ricoh FLOWRITER

Three out of every four computers going into schools are BBC Micros. Is there a lesson to be learned by every user?

As part of the current government subsidised scheme aimed at introducing micros to schools, the Department of Industry undertook a survey of machines available and made recommendations to education authorities all over the country.

The BBC Micro met their priorities exactly: it is economical yet fast and powerful, and it can justify the investment involved, through its capability to grow with the needs of the user and with the rapid changes in technology.

Teachers and education authorities agreed, and today it represents over three-quarters of all micros being ordered for schools across the country under the DOI scheme.

The BBC's choice too.

In choosing a machine to put their name to for their massive Computer Literacy Project, the BBC had the same set of priorities as the DOI. The BBC Micro is now an integral part of that project, which includes books, software, courses and a number of major television series, one of which, "Making the Most of the Micro" is now being broadcast.

All this for only £399.

The BBC Micro is light and compact. It generates high resolution colour graphics, and is capable of synthesising music and speech using its own internal speaker. The keyboard uses a conventional layout and typewriter feel.

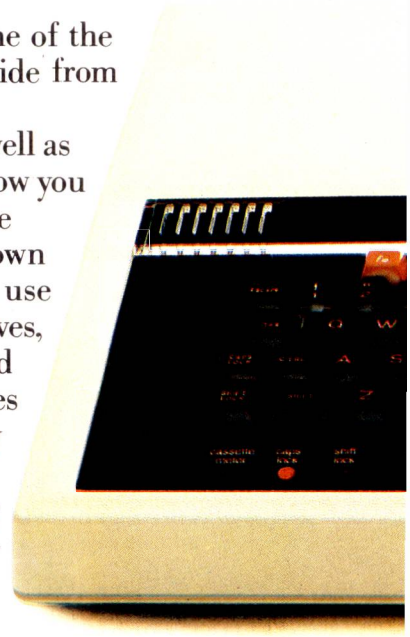

The most sophisticated version (called Model B) is available for only £399. (There is also a basic model available, the Model A, at £299.)

Designed to grow.

Last year the magazine "Which Micro?" said that the most attractive and exciting feature of the BBC Microcomputer was its 'enormous potential for expansion'.

This is indeed one of the features that sets it aside from the competition.

For example, as well as interface sockets to allow you to connect to a cassette recorder, and to your own television, you can also use video monitors, disc drives, printers (dot matrix and daisy wheel) and paddles for games or laboratory use.

You can also plug in ROM cartridges containing games with specialist application programs.

The Tube. A unique feature.

The Tube, which is unique to the BBC Micro, provides for the addition of a second processor via a high speed data channel. The possibilities are enormous. For example, the addition of a second

3MHz 6502 processor with 64K of RAM doubles processing speed. While a Z80 with 64K of RAM opens the door to a fully CP/M* compatible operating system, with all the benefits for business applications.

Linking up with other computers.

The BBC Micro also offers a facility of immense potential value to schools, colleges and businesses. It's called Econet®– a system which uses telephone cable to link with other BBC Micros. A number of machines can then share the use of expensive disc drive and printer facilities.

Make full use of Prestel & Teletext.

With special adaptors you will not only be able to turn your TV set into a Prestel terminal and Teletext receiver, but you can also take data and programs direct from these services. (The programs, which are known as telesoftware, are already being broadcast by BBC's Ceefax service.) This is another first for the BBC Micro.

BASIC plus.

A sophisticated version of BASIC has been chosen for the BBC Micro, which incorporates features normally found only in more advanced high level languages. However, there is also a facility allowing access through a simple command to another language – for example, PASCAL, FORTH and LISP.

*Trademark of Digital Research.

A full range of software.

Applications software for the BBC Micro already cover a very wide field. Packages covering games, education and business applications are available on cassette. All developed to the same high standards set by the hardware.

The best possible back-up.

Your BBC Micro comes with the backing of the BBC and an extensive dealer and service network.

Each approved dealer is able to offer advice and carry out expansion work and repairs.

BBC Microcomputer – Model A and Model B.
2MHz 6502A Processor.
32K ROM; 16K RAM Model A, 32K RAM Model B.
Full QWERTY keyboard with 10 user-definable function keys.
Mixed high resolution graphics and upper and lower case text.
300 baud and 1200 baud interface for standard cassette recorders.
Three-voice music synthesis with full envelope control feeding internal loudspeaker.
Interface sockets (Model B only) – RS423, for analog inputs centronics and user port.
6502, Z80, 16032 second processors.
Single and Dual Disc Drives with 100 and 800 K-bytes storage.
Teletext unit.
Speech synthesis.
Networking facility – via Acorn Econet®

How to buy your BBC Micro.

If you are a credit card holder and would like to buy a BBC Micro B, or if you would like the address of your nearest stockist, just phone 01-200 0200.

Alternatively, you can buy a Model B directly by sending off the order form below to: BBC Microcomputers, c/o Vector Marketing, Denington Estate, Wellingborough, Northants, NN8 2RL.

All orders are despatched by fully insured courier and come complete with easy to follow 500 page User Guide and Welcome cassette.

☎ 01-200 0200 credit card holders.

The BBC Microcomputer System.

Designed, produced and distributed by Acorn Computers Limited.

If only he'd bought
a Commodore computer.

1981 was a record year for the businesses of Great Britain. More than eight thousand went under. And not just small ones, either.

So what can you do to keep your business in the swim? There's no great secret of success, but for a start, you'll need to look for ways to make better use of your resources. To cut down on your overheads. To keep your cash flowing.

It's often a struggle. Even with the best will in the world, it's so easy to get bogged down in bureaucracy. Paralysed by paperwork.

In cases like this, Commodore really comes into its own.

Being one of the biggest micro-computer companies in the world, we've probably done more for businesses than anyone else in our field. Making them more efficient. And more profitable.

Our range of computers, our vast selection of specialised programs and our countrywide network of dealers are unrivalled.

Now we've developed a new generation of computers to put us even further ahead. The Commodore 700 series.

THE 700 SERIES. A NEW GENERATION OF BUSINESS SYSTEMS.

The 700 series' revolutionary design includes a keyboard that is separate from the display unit. A display screen that pivots and tilts, integral disk drive and keys that are sculptured for ease of use.

The computer handles a complete range of functions including financial modelling, stock control, payroll, accounting, information management, and word processing.

There are two further things worth remembering about the 700 series.

It has a staggering memory capability. A RAM of 128k up to 896k. (For the layman, that's a massive amount of memory.)

And an equally staggering price. (The 700 series starts at £995.*)

Commodore almost certainly have a program to fit your needs. If not, a software package can be specially designed for your business.

All this means that, for relatively little outlay, the 700 series can halp make your business a lot more efficient and profitable.

In other words, instead of sinking, you could be swimming all the way to the bank.

The 700 Series.

*EXC VAT DETAILS CORRECT AT TIME OF GOING TO PRESS.

For full information on the Commodore 700 series, and the address of your nearest Commodore dealer, please telephone or complete the coupon and send to:
The Commodore Information Centre,
675 Ajax Avenue, Slough, Berks SL1 4BG.
Telephone: Slough (0753) 79292.

Changing business for the better.

We felt it was time we stopped telling you about ourselves and said a few words about the massive commitment which over 100 software organisations have made to the ACT Sirius 1.
On these pages are just a few of more than 400 packages now available for the Sirius 1, Britain's best-selling 16-bit personal computer.

The packages range from traditional accounts programs to sophisticated computer-aided design systems and there is a whole host of software for specific industries and professions.

If you're looking for a computer solution to match your business requirements, then 'phone one of the numbers above, before you look any further. They're all convinced that the ACT Sirius 1 is the best machine of its kind in the country – and they have the software that will make it work for you. And if you don't see what you want, just clip the coupon for details of more than 400 products designed for the ACT Sirius 1.

Please send me

ACT sirius 1

ACT (Sirius) Ltd. FREEPOST, Birmingham B63 1BR, or call **021-501 2284**

PULSAR business software is the creation of ACT – the company behind the Sirius 1 and recognised leader in 16-bit personal computing.

The new PULSAR range, developed by ACT at a cost in excess of £1 million, takes full advantage of the power and expandability of 16-bit computers.

It is inherently faster and more powerful than traditional 8-bit software.

And it is a true 16-bit range, designed and developed by ACT's own software engineers.

PULSAR offers more of all the key requirements in business software:

MORE PORTABILITY

Written thoughout in machine-independent portable languages to protect your software investment.

LONGER PEDIGREE

ACT has more than 17 years experience in developing business software. Thousands of companies throughout the world use ACT packages.

GREATER INTEGRATION

All the PULSAR packages are designed to share information, avoiding duplication of files and eliminating re-entering of data.

MORE USER-FRIENDLY

ACT's unique UFO (user-friendly origination) routines allow even the inexperienced user to quickly and easily configure a PULSAR system to precise requirements.

BETTER TRAINING

Two training centres, in London and Birmingham are open to all PULSAR users.

MORE SUPPORT

A "hot line" telephone support scheme to instantly resolve any operating queries.

PULSAR SOFTWARE CENTERS

Only PULSAR is available through the unique network of PULSAR Software Centers. These are hand-picked computer dealers who handle a range of personal computers but who specialise purely in PULSAR to meet all business needs.

THE PULSAR RANGE

Sales Ledger	£195	Informer Database	£295
Purchase Ledger	£195	Micromodeller	£595

16 BIT BUSINESS SOFTWARE

MICRO NETWORKS NEW BABY – FROM NISSEI SANGYO/HITACHI

SAMURAI S16-BIT MEGA MICRO

'Simply' more power, more reliability,

more performance, more flexibility, more quality, more speed, more storage, more compatibility . . .

S16-Bit Mega Micro

TECHNICAL DATA

Processor: 16-Bit 8086, cycle time 215 Nano Seconds. **Architecture:** DMA Bus based, true 16-Bit. **Speed:** DMA @ 6MB/sec; Disc transfer @ 3MB/sec. **Memory (RAM):** 128KB standard, expandable to 640KB. **Screen:** High resolution green; anti-glare optical filter. Colourgraphics optional extra. **Discs:** Two 8" DS/DD giving 2.36 MB usable. IBM compatible. **Interfaces:** 2 RS 232 communications interfaces. Plus: Centronic printer interface. **Operating Systems:** MS-DOS CP/M-86. 8-bit software emulator. **Languages for 16-bit:** Basic, Cobol, Pascal, Fortran, PL/1, BCPL compilers and interpreters available. **Customising:** with logo, namestyle and house colours, can be arranged. **"So simple to operate" – and don't forget, the S16-bit Mega Micro is built to military standards with laboratory-level quality control for complete dependability.**

NISSEI SANGYO **MICRO NETWORKS** **S16 MEGA MICRO**

The symbols that guarantee your business computing success. **The S16-bit Mega Micro** is a product from Nissei Sangyo, a subsidiary of Hitachi. (In a word, reliability). Micro Networks Limited is a fast growing company backed by a powerful financial consortium, dedicated to the marketing of proven high quality Computer equipment, at the right prices!

NATIONWIDE MAINTENANCE – the most comprehensive after sales service on the market. Our qualified engineers give a 24 hour working day calling service.

WARRANTY – Free for a 12 month period.

GUARANTEED – of course, but also a guaranteed no quibble replacement.

TRAINING – comprehensive training schemes available.

SUPPORT – from our fully trained dealer network.

***SOFTWARE** Universal availbility of business software. All MS-DOS and CP/M-86 software will run on the S16, which means a comprehensive library of business/ technical applications packages are available to you.*

. . . so much more – £2,395 for so little!

What are your business computer requirements?

Business Systems? Specialist Systems? Are you a first time buyer? Single user? Looking for a replacement for obsolete equipment? Or, do you want a main frame link-up system?
The S16-bit Mega Micro is the ***powerful, reliable answer*** and can be tailored to your exact needs now, with flexible, expandable options in the future.

A CHALLENGING INVITATION!

Compare the **S16-bit Mega Micro** with other 16-bit micros, including the PCW Benchtest winner 1982 (the Olivetti M20). We know what the results will be, new Benchtests prove it!

Before you make a decision to buy a micro computer – and maybe make a costly error –

☎ 01-602 7405

for more information about the **S16-bit Mega Micro.** One of our qualified Sales Executives will give you friendly, helpful advice and if required, arrange a non obligatory demonstration. Call into our London offices – or, fill in the coupon for immediate response.

To: **MICRO NETWORKS LIMITED**
382 Kensington High Street, London W14 8NL

Verbatim Ltd. Mint House, 6 Stanley Park Road, Wallington, Surrey SM6 0HA. Tel: 01-773 1115 Telex: 892757

PCW 47

How to mak work like a

First, neatly cut out the "370" label.

Now, when nobody's looking, nonchalantly tape it to your terminal, just under the "IBM," as if it really belonged there.

Then wait for your chance and quickly slip a dBASE II™ disk into your main drive.

That's it.

Your IBM Personal Computer is now ready to run a relational database system, the kind that IBM has on their mainframes. And you're ready with more data handling power than you would have dreamt possible before dBASE II.

You'll wonder how you managed without it.

You'll find that dBASE II, because it's a relational database management system (DBMS), starts where file handling programs leave off. dBASE II handles multiple databases and simplifies everything from accounting to department staffing to monitoring rainfall on the Upper Volta.

With a word or two, you CREATE databases, APPEND new data instantly, UPDATE, MODIFY, and REPLACE fields, records and entire databases. Organize months worth of data in minutes with the built-in REPORT. Do subfield and multi-field searches, then DISPLAY some or all of the data for any condition you want to apply.

And you've just begun to tap the power of dBASE II.

Easy to look at, easy to use.

Input screens and output forms couldn't be easier—just "paint" your format on the screen and what you see is what you'll get.

You can do automatic calculations on fields, records and databases, accurate to 10 digits.

And you can use dBASE II interactively for answers right now. Or save your instructions, then repeat everything with two words: DO Manhours, DO Project X, DO whatever has to be done.

Use dBASE II to help make your choice:

Instead of just poring over a manual, you can check out dBASE II by running it on your own system free for 30 days.

e your micro mainframe.

Visit your dealer and run through a hands-on demonstration. Then buy a package and use it on your IBM PC, Sirius or CP/M computer. If you don't like it, return it and you'll get your money back, no questions asked.

But if you do that, you'll have to remove that label. Because nothing short of a mainframe works like dBASE II.

For the name of your nearest dealer, contact one of our distributors: **Encotel Systems 01-686 9687.** Ferrari Software 01-751 5791. Interam 01-675 5325. Pete & Pam (0706) 227011. Although the NewBrain is conceived as a total system, the unexpanded Processor itself has a great deal to offer. It is available in two forms: Model AD, shown below, with a built-in line display; and Model A, without the line display. Both models can operate with a monitor or a television set.

MEMORY

- 24K bytes of ROM;
- 32 bytes of RAM, at least 28K of which is available to the user.

THE SCREEN DISPLAY

- 40 or 80 characters to the line – without affecting the 28K bytes of RAM at your disposal;
- 24 or 30 lines to the screen;
- well-formed characters, with true descenders;
- a full European character set;
- normal or reverse video, high resolution graphics on screen of controllable size, 256, 320, 512 or 640 horizontal resolution by 250 vertical lines;
- a facility to set up a "page" of up to 255 lines, with the screen acting as a "window" to display it;
- ability to maintain several such pages simultaneously, and to switch rapidly between them;
- text may be used on graphics screen as well as on parts of the video screen not used by graphics.

CHARACTER SET

- 512 characters, including the full ASCII set, all European accented characters, Greek and graphics symbols.

GRAPHICS

- 20 powerful graphics commands;
- all text characters usable on the graphics screen;
- variable-sized graphics screen, with the rest of the screen available for text – for versatility and to save memory.

SOFTWARE

Enhanced ANSI BASIC; screen editor (32 commands); mathematics package (10 significant figures); graphics commands.

- a very friendly screen editor – a delight to use and readily adapted to text processing;
- arithmetic to 10 significant figures;
- very controllable output formatting of numbers – invaluable for accounting, statistics, and scientific applications;
- a powerful, much enhanced BASIC;
- a very flexible operating system, which allows any data stream to be opened to any device.

INTERFACES

- two tape cassette ports built into the processor unit;
- a built-in printer interface;
- a built-in communications interface (V24/RS232);
- a video monitor interface;
- a TV interface;
- an expansion interface for NewBrain system expansion modules.

KEYBOARD

- standard typewriter pitch, action, layout and size, with editing control and graphics keys.

*CP/M IS A REGISTERED TRADE MARK OF DIGITAL RESEARCH INC.

You can get everything in the box on the

If you understand the facts and figures on the left you'll soon realise that NewBrain has to be one of the most powerful micros around.

However, if you find the box on the left a little hard to follow, don't worry.

We've got over 120 dealers nationwide who've got all the answers at their fingertips.

Either way you'll discover that NewBrain is the kind of micro that will stop the competition getting a look in.

At £269 it starts off with twice as much memory as most of its competitors and can expand to over thirty times that amount. So there's no chance of being left behind in the micro race.

It comes with a very powerful language (enhanced ANSI BASIC) and it'll take CP/M;* so it'll work on the same system as similar big business micros, giving you the capacity to use an almost limitless variety of tried and tested software.

But most of all NewBrain is a machine that can expand.

It's designed to take disks, printers and memory expansion modules (up to 2M bytes) plus anything else you'd expect a professional business micro to handle.

So, whether you understand the box on the left or not, pay a visit to someone in the know on the right.

They'll answer all your questions and give you a full demonstration.

NewBrain

Grundy Business Systems Ltd., Grundy House, Somerset Road, Teddington.

OSBORNE®
COMPUTER CORPORATION

£ for £, lb for lb nothing comes close!

The remarkable Osborne 1. The first portable personal business computer. And, the first to include a comprehensive range of software in the asking price. Around £800 worth of software. In fact, everything you need to work faster and better with words, numbers and ideas.

Not bad when you consider the Osborne 1 is only £1,375 + VAT.

Inclusive Software

★ SUPERCALC® for electronic spreadsheets

★ WORDSTAR® for word processing with MAILMERGE®

★ CP/M®, the control program that gives you access to the world's biggest library of software options

★ CBASIC® and MBASIC® for programming

TODAY OSBORNE offers you an added bonus. Between now and May 31st, save over £200 on the price of DBase II® – the best selling Data Base System from Ashton-Tate.

With DBase II® your Osborne 1 has the power of a mainframe to help you tackle a wide range of information handling tasks.

Address lists, Sales ledgers, Time sheets, Inventory control and so on. But this offer lasts only until May 31st, 1983.

So take the attached DBase II® voucher into your local participating Osborne dealer now, and take away the world's best selling portable computer!

By the way if you are fortunate enough to already own the Osborne 1, you can still benefit from the DBase II® offer.

For your nearest participating dealer see the list shown, or contact Osborne for further information.

The Osborne Computer Corporation (UK) Ltd
38 Tanners Drive, Blakelands North, Milton Keynes, MK14 5LL, Bucks.

MST CONSULTANTS, DEPT PCW, NEWTON ROAD, BOVEY TRACEY, DEVON TQ13 9BB

You were impressed by the unique portable Epson Computer that fits into your briefcase.

Now take a look at the one that sits on your desk.

The QX-10. A fully integrated Desktop Microcomputer System. A new member of the Epson family.

But there's more to the functional and stylish lines of this remarkable machine (just to prove that beauty isn't only skin deep).

The lightweight CPU, monitor and Keyboard units are very easy to use – even for a first time operator. You could say that our system takes all the hard work out of using software, and once used...you probably will.

What's more, when it comes to cost you'll find there's more power for your money.

Just look at these qualities.

192k upgradable to 256k RAM, Z80A CPU, RS-232C and parallel interfaces. CP/M and multifont BASIC comes as standard.

The QX-10 offers an incredible graphics capability. The 80 columns x 25 line display has 640 x 400 resolution and full bit image control for greater definition, 16 : 1 zoom and special effects.

Not to mention a unique split screen facility enabling different typestyles and graphics to be shown together. A major first for educational applications.

For even more power – simply slot in up to 5 optional interface cards for cassette, bar code reader, joysticks, sound generator, plus a Universal Interface card for developing your own interfaces. Clock, calendar and full battery back-up complete the system.

As with all the other respected Epson products, you are assured of high quality. (We even manufacture the slim line disc drives ourselves.)

So, at last there's a desktop microcomputer system that really works together. To really work for you.

See it soon. We know you'll be impressed.

QX-10

THE HUMAN COMPATIBLE BUSINESS MICRO

EPSON

Extraordinary product. Exceptional quality.

Epson (UK) Limited, Freepost, Wembley, Middlesex HA9 6BR. Freefone: 2730. Telex: 8814169

☐ I would like a demonstration of the QX-10.

☐ Please send me details and the name of my local stockist.

When it's time to stop playing games and get down to business...

Unfortunately, many of today's desk top computers are designed with too much emphasis on home use. That's fine, if you want to balance your checkbook, play "space war" or draw pictures. But when you have serious business requirements for a computer, you want one designed specifically for business.

The RAIR Business Computer is just that. A computer designed specifically for business applications, incorporating a host of features—optimised for the business environment. 8- and 16-bit microprocessors allow users to run available 8-bit—plus newer 16-bit—applications software simultaneously. And an integral high-capacity Winchester disk drive—plus provision for additional hard disk support—provides sufficient on-line storage for virtually any business application.

Advanced communications software allows the RAIR Business Computer to connect to mainframe systems and networks. And expanded RAM memory supports simultaneous access from up to four user workstations, each including an ergonomically designed, detached keyboard, high-resolution colour display, and optional workstation printer.

So if you're serious about a computer for business, call RAIR for details about our Business Computer. We're not playing games.

RAIR Limited
6-9 Upper St. Martins Lane
London WC2H 9EQ
Phone (01) 836 6921, Telex 298452

SYSTEM SPECIFICATION
Microprocessors: Concurrent 16-bit 8088 plus 8-bit 8085
RAM Memory: 256 kbytes expandable to 1024 kbytes
Integral Disk Storage: 19-Mbyte Winchester drive plus 1-Mbyte floppy drive
Storage Options: Up to 4 add-on Winchester drives plus streaming tape backup
Communications: 4 workstation ports (RS-422-compatible), plus 2 synchronous/asynchronous programmable RS-232 ports

WORKSTATIONS (up to 4)
Keyboard: Ergonomic, low-profile, 83 keys, 10 programmable function keys, 10-key numeric keypad (with cursor/editing functions)
Color Display: High-resolution, 80 characters x 25 lines, upper and lower case, 8 programmable foreground/background colors.
Printer: Bidirectional, 160 characters-per-second, friction and tractor feed

SOFTWARE
Operating System: User-friendly, multi-tasking, CP/M, MP/M, PC-DOS compatible
Languages: BASIC, COBOL, Pascal
Applications: Spreadsheet, Database, Text Processing Communications

CP/M and MP/M are trademarks of Digital Research
PC-DOS is a trademark of IBM

the RAIR Business Computer.

WINCHESTER TESTER

7 complete test routines–£2180

Never before has a piece of Winchester test equipment been available for this price – and the same unit will test and exercise: ● 5¼" and 8" floppy disc drives ● Serial and parallel printers ● VDUs ● Any other peripheral.

WADI– Winchester Auxiliary Disc Interface is available as an add-on unit to existing OASIS 820 peripheral testers for only £1,195, or complete with the host unit at £2,180.

Software modules, or PALMS, rather than hardware modifications are used to configure OASIS to the peripheral under test so that with a selection of PALMS a service engineer can carry all he needs to test 5 or 6 different peripherals in one light briefcase sized package.

OASIS AND WADI THE COMPLETE TEST SOLUTION

EPSON HX-20 PORTABLE COMPUTER

Diminutive fully featured business computer that is small and light enough to slip into a briefcase. Specification includes integrated LCD screen, printer and optional microcassette; 16K RAM expandable to 32K and its own rechargable power supply. Ideal for people on the move – data can be subsequently 'down loaded' on to a larger machine when you return to base. **402.00 ex. VAT**

CROMEMCO C-10 PERSONAL COMPUTER

A full feature personal business computer system including software – for the price of a VDU. Also the entry point into the renowned Cromemco range. **1350.00 ex. VAT**

C-10 SP Personal Computer Superpak inc. Z80A Processor, 64K Memory, Single 5¼" 390K Byte Floppy Disk, 24 × 80 Screen, CKBA Keyboard. CP/M Compatible Operating System, plus Word Processing, Financial Planning & 32K BASIC Software. 1350.00
Additional 5¼" Floppy Disk Drive 510.00

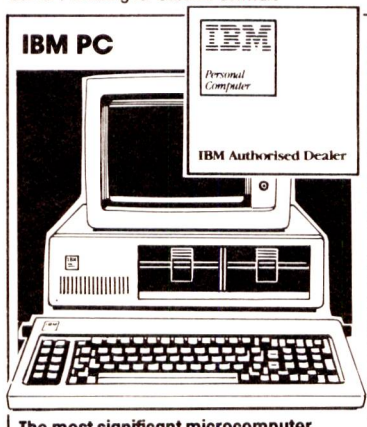

OSBORNE

Truly portable personal small computer system housed in a 'snap together' case complete with business programs, so you can start work almost anywhere. **1495 ex. VAT Double Density Version**

Osborne Portable Computer inc. Standard Software – Wordstar, Mailmerge, Supercalc, MBASIC, CBASIC, CP/M: Double Density Version 1495.00
Double Density Upgrade inc. Fitting 175.00
Screen Pack 80 Column Upgrade 225.00
Screen Pack and Double Density Upgrade inc. Fitting 350.00
Osborne to Epson Cable 24.00
Special Offer on DBASE II
See CP/M listing for Osborne Software

IBM PC

The most significant microcomputer introduction for years and already one of our best sellers. It's tremendous versatility means that it can be employed by for example, the small businessman as a stand alone desk top system, or the large corporate user as an intelligent terminal for a main frame. At The Byteshop, we can offer you the widest portfolio of IBM software and programmes plus add on's and add in's.

IBM PC Dual 320K Byte Disk Drives 64K Byte RAM UK Keyboard and Screen 2477.00
IBM PC Dual 320K Byte Disk Drives 128K Byte RAM UK Keyboard and Screen 2820.00

Comart CP1100 Communicator Micro Computer: 6MHz 8086 Processor, 128K Byte Memory with Parity, Dual 5¼" Floppy Disk Drives each storing 390K Bytes. Dual Serial and Parallel Printer Ports. 10 Slot S100 Bus inc CP/M86 & MS-DOS 2295.00
Comart CP1202 As CP1100 except Dual 790K Byte Diskette Drives with 256K Byte Memory 2745.00
Comart CP1522 As CP1202 except 1 × 790K Byte Diskette Drive and 1 × 5" Winchester Disk having 19M Bytes of Formatted Data with 256K Byte Memory 4545.00

UPGRADE KITS

Wide range of 8 to 16 Bit and floppy to hard disk upgrade kits available for Communicator Systems

BYTESHOP FOR THE PROFESSIONAL

There are so many micro computers on the market that choosing the right one is far from easy. And it isn't made any easier when you find them cheek by jowl with cameras, hi-fi and a host of other electrical equipment. What you need is someone that is single minded. And that means us. Byteshops are totally dedicated to microcomputers. So, not surprisingly, we can offer you a wider range because we sell nothing else. Our prices are keener too. So are our staff. Each one is an expert who can make sure you get the computer that's exactly right for you – whether it's a home micro or a £20,000 business system.

What's more we'll freely advise you on expanding or upgrading your system as your knowledge grows or your requirements change. While our Microserve Centres offer full service and maintenance on site and at our shops. And our product support specialists are your assurance of our total commitment to after sales service. After all, we are the UK's longest established microcomputer specialists. Come and see us soon.

COMART SUBSYSTEMS

Comart CB200 Cartridge Tape Back-Up Subsystem for Hard Disk 2495.00
Comart HD520 5" × 20M Byte Hard Disk Subsystem (requires HDCONT or can be added to a CP520 or CP 1520).....2395
Comart HDCONT Winchester Disk Controller for 2, 20M Byte Drives.....195.00
Comart FD800 8" Floppy Single Disk Drive Subsystem; Single Sided, Single Density IBM 3740 Compatible (requires C-IFDC) 995.00

COMART MULTI USER CONFIGURATIONS

Comart CP520/M CP520 Communicator System with 256K Byte Memory and 6 Serial Interfaces. Includes CP/M and MP/M11.....4995.00
Comart CP1525M CP1520 Communicator with a total of 512K Byte Memory and 10 Serial Interfaces. Includes CP/M86 and MP/M86.....5995.00

S100 BOARDS

Comart CRAM64 64K Byte Dynamic RAM with Bank Select.....200.00
Comart CMPU Multi-Processing Add-In Card with Z80A Slave Processor, 64K Byte Dynamic RAM 2X Serial & 1X Parallel Interface ...495.00
Comart CRAM256 256K Byte Dynamic RAM with Parity. 8 and 16 Bit Data. IEEE696 Compatible. Also supports 8 Bit Bank Switching.....550.00
Comart C-CPU86 8086 Processor Card, with Dual Serial and Parallel Ports. Monitor in 8K EPROM and 4K RAM 300.00
Comart C-IFDC Intelligent Diskette Drive Controller with Z80A Processor 295.00
Comart C-CPU Z80A system Processor Board incl. 2 Serial/1 Parallel Port 200.00
Comart 4S10 4 Channel Synch/Asynch Interface Board.....250.00
Cromemco IOP I/O Processor Board with Z80A, EPROM, RAM and C-BUS 'Off Card' Interface 425.00
Cromemco QUADART 4 Channel ASYNCH/SYNCH Interface Board (Requires IOP) .510.00
Cromemco Single Card Computer Z80A, SCC, EPROM, RAM, Serial & Parallel Ports....425.00

SYSTEM SPOTLIGHT

COMART CP 520MP
MULTI-PROCESSING—MULTI-USER SYSTEM PACKAGE

The CP520MP is the new top specification multi-user/multi processing introduction to the renowned, expandable Comart Communicator series. This true multi-processing system allows one Communicator to be shared by up to five users, each having their own dedicated Z80A Processor and 64K Bytes of memory with no problems of system or processor degradation. Each individual work station can run CPM Software in a true multi-user environment. Two work stations for example, could be allocated to word processing, one to financial modelling, one to order processing or accounts, with the fifth station updating data bases whilst sharing printer facilities and data from 20 Megabytes of common disk storage. The system includes Z80A slave processor cards, 64K Byte memory per user, 1 × 5" 790K Byte Diskette Drive plus 1 × 20 Mega Byte Winchester Hard Disk and additional interfaces and multi-processing system software. Our special system package also includes 5 × WY100 display terminals and an Anadex 9501A Dot Matrix Printer. Upgrade kits are available for single user stand alone Communicator Systems to be upgraded to full Multi Processing facilities.

11,950 ex. VAT
(CP 520MP £6995 ex. VAT)

SPECIFICATION: Comart CP520MP featuring CP520 Multi Processing Communicator System c/w 1 x Z80A main and 5 x Z80A slaves, 64K Byte main memory + 5 x 64K Bytes, 1 x 790K Byte Diskette Drive + 1 x 5" 20 Mega Byte Winchester Disk Drive, 12 Serial & 6 Parallel Interfaces. Inc. CP/M & Multi processing system software, £6995. Our Special Package includes CP520MP with 5 x WY100 Display Terminals and an Anadex 9501A Dot Matrix Printer

*No refunds on opened software.
*Orders from Government Depts., Colleges & BFPO addresses welcome for orders above £25.
*Leasing & HP facilities available – apply for written details.
*Detailed prices available on request.

BYTESHOP FOR THE ENTHUSIAST

You wouldn't go to a lawyer for medical advice, or take your tax problems to a doctor. It's just as illogical to talk computers to anyone but a computer expert.

Every Byteshop is a specialist computer store. In it you will find nothing but computers and computer people. There is nothing else to distract you. Every Byteshop can show you the very latest personal computer systems and provide solutions to both specific and specialist requirements. Word processing, production control, accounts, financial planning and data bases are just a few of the most popular applications.

We can also offer everything allied to micro-computers, such as stationery, diskettes, boards, ribbons for your printer, books, tapes and print wheels.

Just as important, you will have the undivided attention of a computer expert. Our staff have been trained on all our machines and peripherals and can give you sound advice and assistance, with complete impartiality.

Even if you have to travel a few extra miles it will certainly pay to come to the experts.

OCTET-121 ADD-ONS

If you've got an OCTET KSR or MSR typewriter interface*, now look at the ADD-ONS available.

OCTET-TI

- Stand-alone cassette interface unit and standard cassette recorder.
- RS232 connection for WRITE and READ operations.
- INFINITE memory storage capacity (C15=112,000 chars.)
- Switch selectable baud rates.
- Will connect to the OCTET-MSR typewriter interface and other RS232 devices.
- Tape counter used to identify start and end of data blocks.
- Extremely easy to use.

OCTET-CD

Standard cassette deck used in conjunction with the OCTET-TI. Supports most standard cassette tapes which are available from Duplex Communications Ltd. Facilitates data block counter and 5 pin DIN socket for data read and write. High speed, high density, storage eg standard C15 tape will store approximately 112,000 chars.

OCTET-TF

Tractor feed unit simple clip-on device with standard tractors which are variable for most continuous paper widths. Requires no workshop modifications.

OCTET-EI

- IEEE to RS232 converter for PET microcomputer.
- Connects to OCTET-KSR and MSR interfaces.
- OCTET-EI interface dimension 4"×7"×2½".
- Unidirectional unit with facility to daisy chain a disk drive/printer.
- Selectable Baud rates. (Standard 1200 Baud).
- Crystal controlled for stable transmission.
- GENERAL PURPOSE DEVICE; can be used between PET and any RS232 device.

OCTET-AI

- RS232 plug-in PCB.
- Facilitates Apple I and II for RS232 serial connection.
- Simple installation.
- Selective baud rates.
- Allows connection to OCTET-KSR and MSR typewriter interfaces and other RS232 devices.
- Full handshaking capability on buffer-full conditions.

OCTET-PO—Telex tape punch station

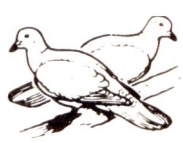

- Stand alone table top unit.
- Attractive, modern design: quiet operation.
- Punching speeds up to 75 char/s.
- Plug compatible with OCTET/MSR typewriter interface.

OCTET-PR

As OCTET-PO but facilitates punching and reading of telex tapes.

The Duplex Suss-Box and Adaptor enables the user to make the correct connection between a computer and its peripherals. This is achieved by 'linking' the commonly used signals of RS232C through a 'matrix-block' and connector pins. If the user wishes to connect their computer to the OCTET — MSR or KSR typewriter/printer then please refer to DUPLEX'S SUSS-BOOK for guidance

Full details from sole suppliers: **Duplex Communications Ltd and Duplex Communications (South) Ltd**

DUPLEX Communications

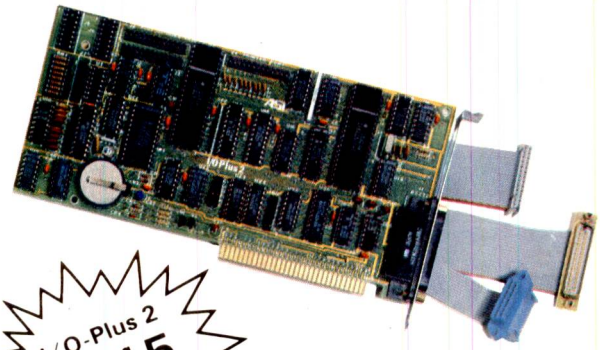

Dealer Enquiries Welcome

South—52 High Street, Stock, Essex CM4 9BW. Tel 0277 841011

*The OCTET-KSR and MSR typewriter interfaces are sold exclusively by BRITISH OLIVETTI and their distributors. Please contact your local agent for further details.

I/O-Plus 2 £115

MegaPlus 64k £249

Now you can buy a QUAD function IBM PC board without having to buy more memory.

MegaPlus™ and I/O-Plus-2™ are the ultimate add-on products you will need to expand your **IBM PC** and **XT**. Which board you decide on will depend on where you are heading. To take full advantage of your **IBM PC** and **XT** beyond 256k, you will want to expand with the MegaPlus™. It's features include two asynchronous ports, clock/calendar, printer port, and up to 512k of memory expansion. But what if you already have all the memory you need? The I/O Plus-2™ gives you all the features of MegaPlus™ to operate your printers, plotters and modems, set your time and date automatically with the clock/calendar, without adding memory. Also a special game adapter is available, but more about that later. Both boards include SuperDrive™ disk emulation and SuperSpool™ print buffer software.

MEGA WITH MEMORY

The MegaPlus™ has three functions standard: Parity checked and fully socketed memory up to 256k in 64k increments; clock/calendar with battery back-up for automatic loading of time and date when the computer is turned on; and an asynchronous communication port (RS232C serial) which can be used as COM1 or COM2, (DTE for a printer, or DCE for a modem). Optional is a 100% IBM compatible parallel printer port, and a second asynchronous port for another £30 each. The MegaPak™ option plugs onto your MegaPlus™ "piggyback" style to give you 512k of additional memory. Now you can create disk drives in memory up to 360k, set aside plenty of space for print spooling, and still have memory for your biggest programmes.

I/O-PLUS 2 WITHOUT MEMORY

The I/O-Plus 2™ comes standard with a clip-on battery powered clock/calendar, and asynchronous communication port (RS232C serial). Optional is a second asynchronous port (DTE for a printer, or DCE for a modem), a parallel printer adapter, and the best game paddle adapter on the market. What's so special about our game adapter? Not only is it an IBM standard game port, but it can also use low cost, widely available Apple compatible paddles and joysticks. If you already have sufficient memory the I/O-Plus 2™ gives you all the input and output ports you might need for less than the cost of most single function boards.

FREE SOFTWARE

SuperDrive™ disk emulation software creates "disk drives" in memory which access your programmes at the speed of RAM memory. SuperSpooler™ print buffer software allows the memory to accept data as fast as the computer can send it and frees your computer for more productive work. Some manufacturers sell hardware print buffers that do only this for hundreds of pounds. SuperSpooler™ eliminates the need for these slot robbing products. Both of these powerful pieces of software can be used with any expansion memory for your **IBM PC** or **XT**.

CHEAP SOFTWARE TOO

What good is great hardware without some great software to use it with? We offer some terrific prices on some of the popular programmes you will want to use your board with. How about the cream of the spreadsheet programs, SUPERCALC, for just £129, or SUPERWRITER for £199. If you are looking for data base management you can get dBASE II by Ashton-Tate for £369.

WHY BUY IT FROM US?

Because we provide the service and support most companies just talk about. Each board is fully tested and burned in prior to shipment. We realize how integral this board is to the use of your computer. What good is a warranty if it takes weeks for repairs to be made? We offer 48 hour turnaround or a replacement board on all warranty repairs. Do you hear anyone else making this promise? If you still are not convinced, and want to compare prices, remember we don't charge extra for credit cards, shipping, or COD fees. We think the ultimate testimony to our good service and high quality is that one of our largest customers is none other than IBM! If you still want to buy elsewhere, ask any competitor if they will face the acid test.

THE ACID TEST

Qubie' (say que-bee-A) gives you a 30 day satisfaction guarantee on all board purchases. If you are not completely satisfied we will refund the entire cost of your purchase. If you can get one of our competitors to give you the same guarantee, buy any other board you think compares and return the one you don't like. We're not worried because we know which one you will keep. We also offer a one year parts and labor warranty. An additional one year extended warranty is available for £35.

TO ORDER BY MAIL SEND:

—your name and delivery address
—board type, size, and options requested
—daytime phone number
—UK Residents add 15% for VAT
—Company check or credit card number with expiration date (personal checks take 10 days to clear)

VISA' master charge

Sinclair ZX Spect

The growing range of Spectrum Software

You'll know already that the Spectrum has generated an enormous range of peripherals and independent software. Our own range is growing very fast and is shown in the Sinclair Software Catalogue – *free* with every ZX Spectrum.

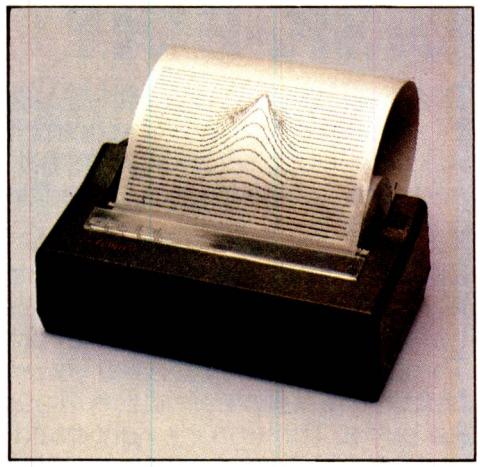

rum-news!

16K now £99·95

Previously £125.

48K now £129·95

Previously £175.

ZX Printer now £39.95

Previously £59.95

How to order your ZX Spectrum
Access, Barclaycard or Trustcard holders – call 01-200 0200 24 hours a day, every day. By FREEPOST – use the coupon below. Please allow up to 28 days for delivery. 14-day money-back option.

sinclair
ZX Spectrum

Sinclair Research Ltd., Stanhope Road, Camberley, Surrey, GU15 3PS.
Tel: 0276 685311. Reg. no: 1135105.

At last, a 16K colour computer with graphics for under £100!

Why have we done it?

Partly because the sheer volume of Spectrums sold (over 300,000 so far) has brought down unit production costs.

And partly, of course, because we hope you'll buy a Sinclair computer – and not some competitor's promise! We've all heard about colour computers breaking the £100 barrier. Here's the computer that's done it. A colour computer with advanced graphics that's fully supported, and widely available.

Right now, you can order a Sinclair Spectrum at these prices direct from Sinclair on the order form below. And to make it even easier to handle high-level computing at the lowest possible price, we've cut the cost of the printer, too. At £39.95, it's almost unbelievable!

At prices like these, there's really no reason to wait.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR. **Order**

Qty	Item	Code	Item Price £	Total £

SuperSoft®

FOR CP/M, CP/M-86, MS DOS, AND IBM PC DOS

SYSTEM MAINTENANCE

DISK-EDIT

Disk-Edit provides you with ALL the raw information on your disk in both HEX and ASCII. You can scroll through that information and alter it using a set of text editing commands.

Disk-Edit loads a segment of a disk or file into its internal memory buffer. It displays a window into that buffer on your screen. Through the left-hand pane you see the hexadecimal representation of each byte in the buffer. Through the right-hand pane you see the ASCII representation of those same bytes.

Once you are in the Disk-Edit window, you have a full range of text editing commands at your control, including forward space, back space, next line, previous line, view next screen, view previous screen, beginning of file, end of file, string searching, write to disk, and several others.

DIAGNOSTICS II

Diagnostics II is the finest set of system maintenance routines available for microcomputers. It thoroughly checks all five areas of your computer system, pinpointing hardware problems to help keep your computer in perfect working order.

The areas of your computer which are tested include: Memory, Printer, Terminal, Disk, and CPU.

The output of the tests can be logged to disk for later review.

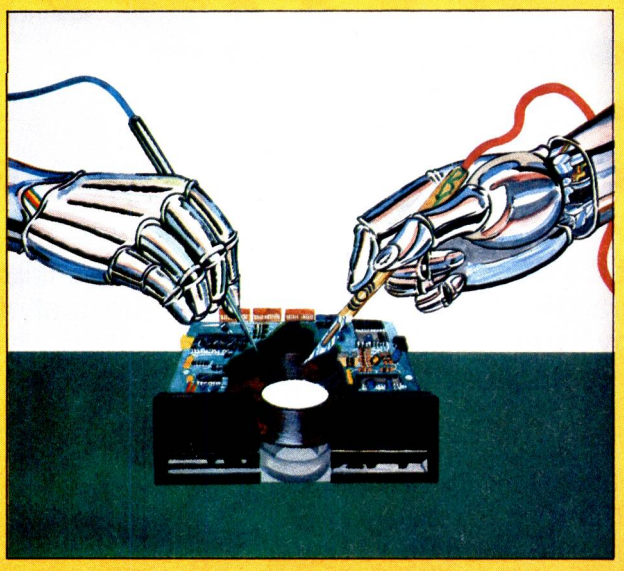

DISK DOCTOR

Disk Doctor automatically recovers otherwise unrecoverable information from "crashed" diskettes. It also un-erases files.

It consists of five wards, each performing a specific recovery operation.

Ward A:	Verifies diskettes and locks out bad sectors.
Ward B:	Places copyable information from a "crashed" file in a good file.
Ward C:	Copies diskettes without stopping for bad sectors.
Ward D:	Un-erases files.
Ward E:	Displays a directory of recoverable erased files.

Disk Doctor was not designed for use with double sided or hard disks.

SERVICE AND EXPERTISE

Every Xitan dealer is backed by Xitan's service and expertise, so that you can buy with confidence.

Established dealers interested in becoming registered Xitan Software Dealers are invited to write or phone for full details.

N.B. Although most products are available off the shelf, not all dealers carry the complete range, and some may specialize in turnkey systems rather than retailing individual products. Also, some dealers may carry other software not supplied by Xitan.

While every effort has been made to ensure the accuracy of the inform provided, Xitan are unable to accept any responsibility for errors.

Xitan Systems Ltd. are continually adding new software to their range: check the listing every month to keep up with exciting new developments.

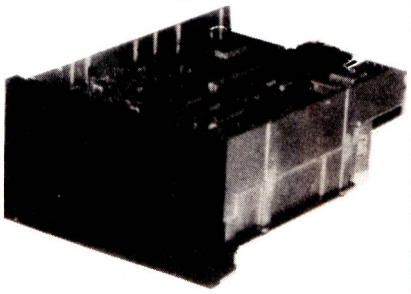

XITAN SYSTEMS

LARGE RANGE

Xitan are main U.K. distributors for Digital Research Inc., MicroPro Inc., Microsoft, Ashton-Tate, Sorcim and IUS, and suppliers of a large range of software from other leading software houses such as Byrom and Ecosoft. Most software can be supplied in a comprehensive range of formats.

Looking After our Dealers - so You Know Where to Look

TOSHIBA DOUBLE SIDED/DOUBLE DENSITY 5¼" DISK DRIVES

These are high quality, very reliable, industry standard disk drives. These can be used as single sided/single density, double sided/double density or double sided/double density depending on the host computer disk interface. Compatible with most micro-computers e.g. VIDEO GENOE, ATOM, TRS 80, BBC COMPUTER, SUPER BRAIN, NASCOM etc. etc. If used as double sided/double density then the storage capacity is 500 K BYTES/DRIVE (unformatted), track density is 48 TPI and can daisy chain up to 4 drives. 90 day warranty.

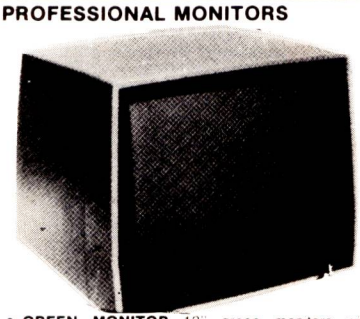

One disk drive only ..... **£179 + VAT = £205.85**
Two disk drives ..... **£349 + VAT = £401.35**
Single boxed with power supply **£214 + VAT = £246.10**
Dual boxed with power supply **£389 + VAT = £447.35**
2 Drive Cable ..... **£15 + VAT = £17.25**
DS/DD 48 TPI diskettes ..... **£2.50 + VAT = £2.88**

Double sided/double density Double Tracks 5¼" Disk Drives

This is the latest addition to our range of disk drives. The capacity is 1 MAGA BYTES (unformatted) per drive, the track density is 96TPI. Track to track access time is 3 msec. These are compatible with Shugart SA460 (ANSI standard interface). Compatible with BBC COMPUTER, ATOM, NASCOM and lots of other computers.

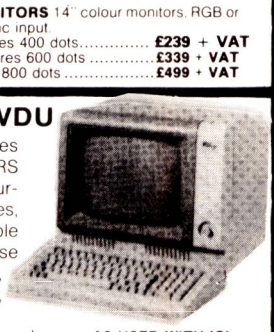

One disk drive only ..... **£239 + VAT = £279.85**
Two disk drives ..... **£469 + VAT = £539.35**
Single boxed with power supply ..... **£274 + VAT = £315.10**
Dual boxed with power supply ..... **£509 + VAT = £585.35**
DS/DD 96TPI diskettes ..... **£3.95 + VAT = £4.54 each**
Two drive cable ..... **£15 + VAT = £17.25**

PROFESSIONAL MONITORS

- **GREEN MONITOR** 12" green monitors with composite and sync input. Suitable for most computers
  Hitachi MM1216 ..... **£89 + VAT = £102.35**

The box is not always black...

At Rair we're continually enhancing and upgrading our Black Box microcomputer range to meet the ever-changing, ever-growing needs of our customers.

That's why you'll often find our systems turning up under different names, different colours – not always black.

Our current Black Box range includes 8- and 16-bit microprocessors, that can be configured from simple single-user floppy disk systems right up to powerful multi-user systems with Winchester hard disks and tape backup.

So next time you're choosing a microcomputer for a new application, remember to call us first.

With Rair, you can have any colour you like, including black.

OKI rules, OK!

Quality, reliability and unbeatable price performance are the hallmarks of the Oki Microline family. The only truly complete range of low-cost printers.

Exciting recent additions to the family are the Microline 92 and Microline 93 (80 and 132 column respectively). These feature NLQ print, 160 cps print speed and high resolution graphics.

With these additions the family covers the broadest possible range of capabilities. From the small but very efficient 80-column, 80 cps Microline 80, to the top-of-the-range Microline 84. This sophisticated and professional machine offers speeds up to 200 cps, NLQ print and pin-addressable graphics.

All Microlines are made to Oki's exacting quality specifications, and all are backed by X-Data's high-level technical support capability.

Whatever your print needs, there will be an Oki printer to fit your bill. And at astonishingly low cost.

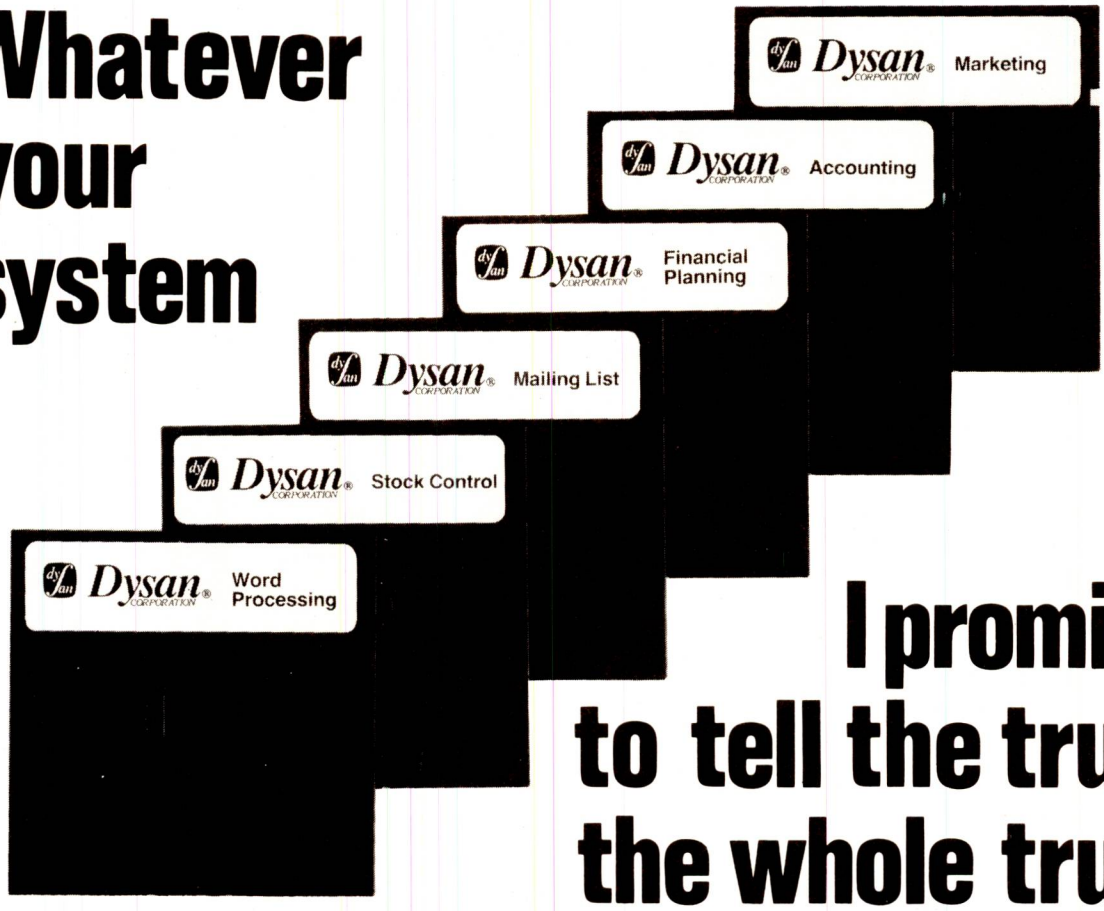

X-DATA

The authorised OKI distributor

HAL

Our spreadsheet sys
But let's start with

Today, computers, micros and more importantly business planning systems are no longer considered luxuries.

They allow you to make better decisions by providing better information on budgeting, cash flow, project profitability, Acquisition Appraisal, Lease vs Purchase analysis and much more.

You stay one step ahead of your business and your business stays one step ahead of the competitors.

But which system should you buy? Surely no one system can meet the needs of all businesses?

Fortunately Comshare is not like most companies. We see the need for different systems to suit different people.

NEW USERS START HERE

PlannerCalc at £85.00* is now accepted as the first choice for people new to financial planning.

Designed for 8-bit micros, it boasts the kind of features that you'd expect to pay twice as much for. (Buy PlannerCalc's nearest rival and you'll have to.)

Unlike all other 'calc' products it allows you to enter calculations in a language you understand. Plain English.

For example:

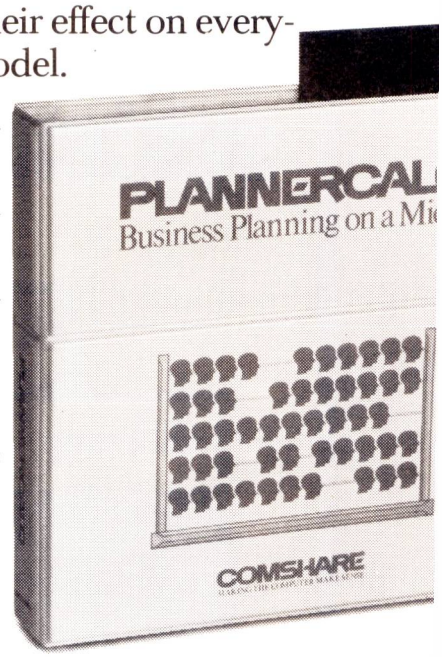

LINE 1 SALES=100, 150, 175, 210
LINE 2 EXPENSES=GROW 70 BY 15% FOR 4
LINE 3 NET=SALES−EXPENSES
LINE 4 CSALES=CUM SALES
COLUMN 5 YEAR=SUM OF COL 1 THRU COL 4

So it's much easier to use.

It uses the popular "spreadsheet" approach with a window that can be rolled in all directions.

Which means you can enter new figures and rules and immediately see their effect on everything else in the model.

It comes with the best manual on the market and it's suitable for most micros with a ™CP/M 2.2 operating system, 64K of memory, giving at least 900 cells, minimum screen width of 80 characters and 2 floppy disc drives.

MUCH MORE POWER, NOT MUCH MORE MONEY

MasterPlanner is the most powerful spreadsheet system currently available with its increased matrix size, 2000-3000 cells on most 64K micros. (But at £245* it certainly isn't the most expensive.)

Consolidation of models, allows you to create separate plans for each department and then combine them into an overall company

tems start at £85.00. why you need one.

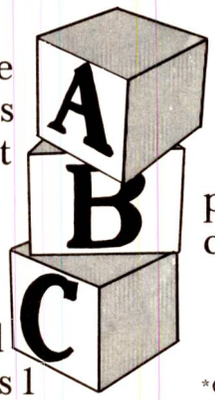

plan. Data transfer to word processing and other systems lets you incorporate figures in reports and output to a data base. It also has extensive formatting facilities which means you can produce reports that wouldn't look out of place in the board room.

It can store up to 25 standard reports to run when you need them. It's got full WHAT IF? analysis and direct editing of both spreadsheet and logic display.

JUST AS EASY TO USE

All this increased power doesn't mean you'll need a degree in advanced computing to understand MasterPlanner.

It works on exactly the same system as PlannerCalc and models written on PlannerCalc run without modification on MasterPlanner.

16 BIT VERSION

A new version of MasterPlanner has been specifically designed for the 16 bit micros like the Sirius 1 under ™CP/M-86 or the IBM personal using either CP/M-86 or ™MS DOS 1.1. With a vast matrix size of over 7000 cells on 128K and even more with larger memory, you'll at last be able to make the most of your micro.

ULTIMATE POWER

Fastplan is the top Comshare micro planning system.

It's file-based, allowing development of large scale models; with a staggering 18,000 cell matrix; full financial functions plus backwards iteration, file input and output; and much more. Yet, because it can be menu driven it is easy to use. For the full story, tick the Fastplan box when you return the coupon.

OVER 10 YEARS EXPERIENCE

When you invest in MasterPlanner or PlannerCalc you're not just getting the best software money can buy.

You're also getting the kind of back up and after-sales service that only a company of Comshare's track-record can guarantee.

If you'd like to know more about any product, call in at your local dealer or fill in the coupon and send it to us. *Plus VAT and post & package.

THE THINKING BUSINESSMANS' COMPUTER

Now with WINCHESTER

A complete computer system, with a 5.4 megabyte Winchester Drive for only **£2,500***

The new Galaxy 3 has been built to comply with the most widely accepted industry standards, so the business user can make effective use of the largest range of hardware and software options. It uses the world's best selling micro processor, the Z80A, and is based on industry standard 80BUS Boards. Interfaces include both parallel printer interfaces and RS232, enabling the user to immediately connect a wide range of compatible hardware, even to the extent of building up his own networking system.

The Galaxy 3 has CP/M as its standard operating system which gives users access to the widest range of applications software and programming languages currently available for any machine.

Features include:

- **Twin Z80 processors**
- **5.4 mb Winchester**
- **64K dynamic RAM**
- **800 disk based storage**
- **80 x 25 screen format**
- **Dual printer interfaces**
- **Modular design**
- **Networking system available**
- **Green or amber monitor**
- **10 & 20 meg versions also available.**

***Price is exclusive of VAT.**

● Central processor unit with 64K RAM ● 5.4 megabyte Winchester drive ● 800K byte floppy disk drive ● Full Qwerty/numeric keyboard with function keys ● 12" green or amber monitor

There is a network of Gemini dealers throughout the country, able to offer you complete support for the Galaxy, including compatible hardware and a full range of business software. 24 hour on-site maintenance is also available. 'Phone us now for further details and the address of your nearest dealer.

Gemini Microcomputers

18 Woodside Road, Amersham, Bucks HP6 5EQ. Tel: (02403) 28321.

When the British make something, it's really something.

SPECIAL INTRODUCTORY OFFER

Order your HAYWOOD Word Processor within 4 weeks for a FREE in depth three day 'hands on' training course for your secretary.

Maximum Word Processing. Minimum cost.

Meet the Haywood 9000 COMPOSITE Microcomputer. Unbeatable and real value-for-money.

It's CP/M* based, which means the very highest Word Processing standards and a capability for more than 1000 other established business programs.

Your choice of four different models – Twin floppy disks, 5Mb, 15Mb or 20Mb Winchester hard disks – so that it can grow with you.

We've given it a non-reflective screen and you have a choice of either green or amber characters, setting new standards in clarity.

Our professional keyboard has the look and touch of a normal office typewriter so, whoever operates it, will feel instantly 'at home'.

All this plus many other advanced features, in a machine designed and built in Britain to standards still envied by the rest of the world.

The COMPOSITE for an unbeatably low price. From

£1795 exc. VAT

We'll be very pleased to send you the full details. They're really something.

THE EPSON QX-10 FROM TRANSAM

- Multi-font Basic, supports 16 character Fonts on screen
- 192k Ram expandable to 256k supplied as standard
- Clock and calendar with battery back-up
- New slimline disc drives
- Unique split screen facility
- Unique price

£1735 plus VAT

A FULLY INTEGRATED DESKTOP MICROCOMPUTER SYSTEM.

The QX-10. A fully Integrated Desktop Microcomputer system that takes the hard work out of using software. An incredible new member of the Epson family, emphasising cost effective computing on your desk. The QX-10 gives you a lot more for your money.

Lightweight, Z80A CPU, VDU and Keyboard units in modern functional design.

Very easy to use – specially for the first time operator.

More Power for your money. 192k upgradable to 256k RAM. Incredible graphics capability with zoom facility, RS-232C and parallel interfaces and multi-font BASIC as standard. Compare that with systems costing twice the price.

Add-on power. Simply slot in up to 5 optional interface cards for the following facilities:–

Cassette	Omninet
Bar code reader	Universal interface card
Joysticks	for developing your own
Sound generator	interfaces

80 col. x 25 lines screen with full bit image control, 640 x 400 resolution for greater definition. 16:1 zoom and special effects as well as unique split screen facility allowing different typestyles and graphics to be shown together for educational applications.

TCL SOFTWARE – the software division of Transam, offer complete CP/M software support for the QX-10 and a professional software service to guide you through all the available options.

Combining the resources of Transams experience with CP/M Based systems and software with Epson innovation and reliability means we can offer you your best buy in 1983.

The QX-10 personally packaged by Transam.

THE HUMAN COMPATIBLE MICRO

We also stock the new range of Epson RX and FX printers.

Please send me further information on the QX-10 and software products by return.

ENGLAND EXPECTS!

Nelson's message worked wonders in 1805. But communications today — are they a patch on Nelson's?

Most computers can't even talk to each other.

SEMAPHORE changes all that. Now micro can talk to micro, micro to mini/mainframe, mini/mainframe to mini/mainframe. No fuss, no changes to hardware or system software. 2 way error-free transfers over ordinary telephone lines, for the businessman's sales figures, the engineer's designs, or the personal computer buff's games.

SEMAPHORE available for CP/M*, CP/M-86*, MSDOS* systems (SUPERBRAIN*, SIRIUS*, COMMODORE*, APPLE*, DEC* PCs, IBM* PC, ICL* PC, CIFER*, TELEVIDEO*, RAIR*....), mini/mainframes (PDP* 11, VAX*, ECLIPSE*, PRIME*, IBM 30XX, IBM 43XX....)

SEMAPHORE is the signal success of 1983. Don't turn your blind eye to it!
Prices start at £125 for the CP/M version.

COMMUNICATIONS FOR MICRO, MINI & MAINFRAME

also for dumb terminals and any other RS232C device.

Everything for the Acorn and BBC microcomputer user.

ACORN USER EXHIBITION

Cunard International Hotel

Hammersmith,
25-28 August 1983

The Acorn User Exhibition at the Cunard, Hammersmith will house the largest display of Acorn products ever assembled under one roof. It will be four days of non-stop entertainment and education for parents and children alike.

The new Electron, the second processors for the BBC micro, the BBC Buggy, all the new software and hardware will be on show. There'll be competitions, prizes, Acorn experts to answer your technical questions, demonstrations and lots and lots of bargains.

If you are an Acorn owner, or just thinking about being one, you can't afford to miss it.

Opening hours: August 25th-27th, 10am-7pm; August 28th, 10am-4pm.

Admission charges: Adults £2 per ticket, Children £1 per ticket.

We have arranged for nearly every exhibitor to redeem the cost of your ticket when you buy something from their stand.

Group rates: 10% discount for parties of 10 or more.

Buses: Frequent services from central London.

Tubes: Hammersmith Broadway – Metropolitan, District and Piccadilly lines.

Car Parking: Several car parks in the immediate area.

For details of exhibition stands and advance ticket sales contact Computer Marketplace Ltd, 20 Orange Street, London WC2H 7ED. Tel: 01-930 1612.

ADVANCE BOOKING COUPON Miss the queue – buy your tickets in advance.

Sparrow 10 Computer

20 MEGABYTE REMOVABLE STORAGE SUB-SYSTEM

new technology !

compatible with IBM PC, SIRIUS, APPLE etc

Sparrow 10: all the advantages of Winchesters ...

The Sparrow 10 removable cartridge disc drive is a new mass storage system based upon Bernoulli technology.

The Sparrow 10 exhibits all the desirable features of hard discs based upon Winchester technology – high capacity, low access times, high reliability and fast data transfer rates.

And more ...

Fixed Winchesters pose back up problems, notably because of the difference in capacity of the back up media (magnetic tapes or diskettes). With the high capacity removable cartridges of the Sparrow 10 this poses no problem at all.

And more ...

The low cost cartridges can be transported and distributed without special precautions.

And more ...

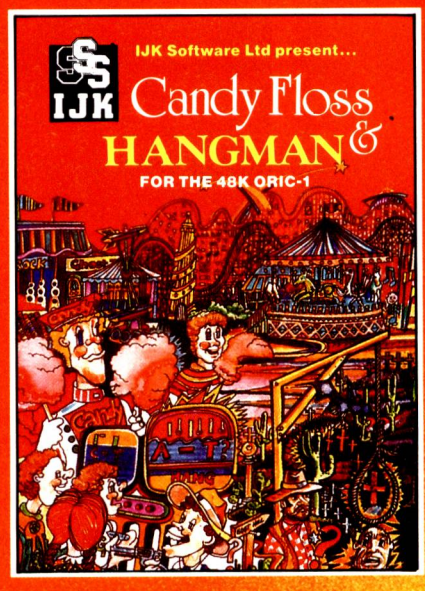

The system comprising two 10 MB (formatted) disc drives, is housed in an attractive desk top cabinet. It includes an LSI controller, host adapter card, all cabling and software to run under most popular operating systems.

For more information or demonstration contact

CHARTMAN is here!

BONSAI BRINGS YOU THE LEADING BUSINESS GRAPHICS SOFTWARE for the IBM Personal Computer.

CHARTMAN brings out the messages buried in piles of data by turning columns of numbers into quickly and easily understood graphics. CHARTMAN will produce top quality horizontal and vertical Bar Charts, 2- and 3- dimensional Pie Charts, linear and logarithmic Line Charts, text pages and signs. You can display them on screen, print them on a graphics printer, and plot them onto paper or acetate transparencies.

CHARTMAN is a really easy-to-use, menu-driven program that allows you to produce presentation quality graphics immediately with little or no training. You either enter data through simple fill-in-the-blanks screen layouts, or interchange rows or columns with programs like Visicalc, MicroPlan ver 4, TK!Solver, and many others that support DIF.

CHARTMAN was designed specifically for the IBM Personal Computer to utilise its powerful features. Once charts have been created, they can be stored, then retrieved and edited later. CHARTMAN even has a slide presentation feature where charts can be saved as slides for a manually stepped or automatically timed "slide show" on the screen.

CHARTMAN I: displays everything on the screen in monochrome high resolution, prints charts on the IBM Personal Computer printer or Epson MX80 and 100 printers (all need the Epson Graftrax option), and can plot on HP7470 2-pen and HP7220 8-pen plotters. **£295**

CHARTMAN II: in addition to all the features of CHARTMAN I, CHARTMAN II can display charts in colour on RGB monitors, can print colour charts on IDS Prism colour printers, and can plot on IBM XY750 plotters. **£395**

Give Bonsai a ring, or cut the coupon, to order your copy of CHARTMAN, to receive further information, or to arrange a demonstration of CHARTMAN on the IBM Personal Computer at our London showrooms.

Saunderson speaking .

The time has come to write a column again. I'm dealing with accounting systems because they provide the most complex of installations. Now, before you shop, ask whether your own manual systems are good but overworked or whether you are looking for a computer system with which to set up a new accounting procedure. If the former, you should have few problems changing to a computer system. If the latter, be prepared for hard work putting your house in order before computerising. The old adage of GIGO – garbage in, garbage out – applies nowhere more than in ill-thought out implementations of accounting systems.

We sell five different such systems. All have full audit trail and back up facilities. The first system we ever used had no audit trail facilities, thus without good manual records one had no idea of data input – so it is sad to see a major manufacturer has approved this software. Needless to say, we no longer use it!

The first question we ask potential users refers to the size of data; how many accounts, transactions, stock lines etc. You should check this out yourself before going to a dealer. The second question deals with facilities. All our systems provide aged debtors reports, statements, ledger listings and journals, but some additional features make life easier and save their cost quickly. For example, do you want a full profit and loss and balance sheet printed out every month or is a summarised Trial Balance sufficient? If the latter, *Paxton, Sales, Purchase and Nominal Ledgers* are £600. If on the other hand you require full multi-user facilities with cheque printing and an itemised P & L and Balance Sheet with Budgets and last year's Comparatives then the same set of Ledgers will cost you £1400 in *MPSL's BOS system* on the *Sirius* or £1800 for the *Peachtree Business Management System* on the *Altos*.

We don't ask the size of files or facilities required to get more money out of you but simply so we can recommend the best system for your needs. If you are running many transactions you should seriously consider a hard disk system. It has much greater file capacity and its speed of operation makes floppy disk changing a thing of the past.

Next time I'll ramble on about Database systems. Before that KGB are exhibiting at COMPUTER FAIR, Earls Court, 16th-19th June so drop in and see us.

Sandy Saunderson

Sandy Saunderson is Managing Director of KGB Micros Limited, the fast growing commercial microcomputer company based in Slough. He has extensive knowledge of the microcomputer industry and if you would like to speak to him, either on general computer matters or particularly about his own products at KGB, give him a call on Slough (0753) 38581/38319 or drop him a line at KGB Micros Limited, 14 Windsor Road, Slough SL1 2EJ.

MAKES LIGHT WORK OF KEEPING UP-TO-DATE

WEEKLY MICRO BULLETIN

Look at any one of the micro publications around today and look long enough, and you'll find news of relevance to the area of the micro market in which you compete.

But, consider this, do you really have the time to plough through the mass of micro publications that now exist? Amongst the hundreds of ad's, surveys and irrelevant information, how long will it take to find the *real* news – the news which will affect the way your business is run and influence its competitive stance. Overall, can you be sure that the news you read is not over a month old?

The only way to be one step ahead is to order the Weekly Micro Bulletin from VNU, one of the world's largest publishing groups. Edited, printed and delivered in just 24 hours, the Weekly Micro Bulletin is the first on your desk with the news.

To find out how you can be first to know what's happening in the micro industry call Jane Waight on 01-439 6943 or return this coupon.

To: Jane Waight, The Micro Bulletin, VNU Business Publications BV, FREEPOST 38, London W1E 6QZ. Yes, I'm interested in finding out more about The Micro Bulletin.

JUST ARRIVED

68000 BASED HIGH RESOLUTION GRAPHICS BOARD

- Uses superfast 68000 CPU
- Uses the new revolutionary 7220 graphic chip
- Incredible 1024 x 1024 resolution in one plane
- GKS (graphic kernel system) supported
- Usable either as stand alone or with another computer (8255 interface chip)
- 32K RAM/ROM (8K for system commands)
  128K RAM for graphic, 16K for user program
  . . . . . £699 + £10 P & P + VAT = £815.35

NEW FROM

EPSON *Models FX80 and RX80*

Model FX80 super fast dot matrix printer

- 80, 137 column
- 160 CPS print speed (100 CPS for RX80)
- 96 character ASC11 + up to 256 down-loadable user defined characters
- Proportional spacing
- Sub-script, Super-script
- Dot addressable graphics
- Tractor and friction feed (Tractor only for RX80)

FX80 . . . . . £398 + £10 P & P + VAT = £469.20
RX80 . . . . . £298 + £10 P & P + VAT = £354.20

WORLD'S FIRST INTELLIGENT ASCII KEYBOARD

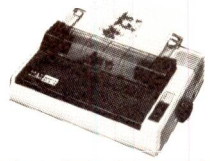

Mikrokey III

- True micropressor — based (uses 6809 CPU, 2K RAM and EPROM)
- III (including 19 function keys and separate numeric and cursor pads) keys
- All function keys are freely programmable via "PROG" key
- Auto repeat on all keys (user selectable frequency)
- Alpha lock, shift lock, MSB, 2 key rollover
- LED display of HEX values
- Serial (selectable baud rates) or Parallel operation (please indicate choice)
- Housed in beautiful low profile two tone beige case (W528 mm, D 198 mm, H 57 mm)
- Comes complete with cable and connector

£295 + £5 P&P + VAT = £345

STAR DP510

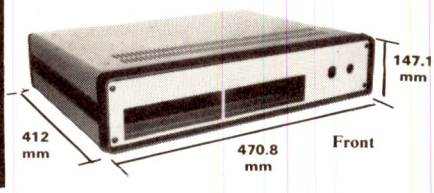

The best price/performance printer only
£298 + £10 p&P +VAT = £354.20
(RRP £349 + VAT!)

Star DP150 — 80 column

An astronomical array of features at a down-to-earth price.

- 100 CPS bi-directional logic seeking
- 9 × 9 matrix — true descenders
- 2.3 K buffer as standard
- Friction, tractor, roll holder
- Hi-Res and block graphics
- Subscripts (H_2SO_4) and superscripts
- Italic printing
- Centronics as standard (optional serial interface)
- Auto underline
- Vertical & horizontal tabs
- Left and right margin set
- Skip over perforation
- Backspace
- Self test
- International characters
- Serial interface £75 + VAT

LOW PROFILE PROFESSIONAL METAL CASE FOR COMPUTER SYSTEMS

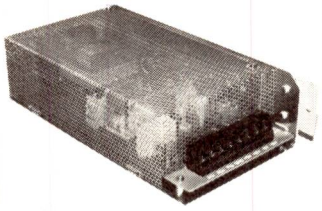

houses Micronix 80HD, ⅔ height 5¼" floppies (½ height floppies optional), a switch mode power supply for the complete system. The panels have cutouts for floppies, connectors and a fan (as illustrated). Thoughtfully constructed for easy accessibility. Cover and base grey/beige. Frame dark brown.
Case for ⅔ height floppies £90 + £10 P & P + VAT = £115

Program coding is now as easy as 1,2,3...

It's not writing programs that takes the time, it's coding them – every comma, bracket and filename has to be exactly right, just one of those obscure symbols adrift is enough to crash the biggest, toughest program in town!

How much easier it would be to say "Search that file" and "Display Fred's record" instead of having to write a dozen or more lines of faultless BASIC whenever you want to find something. Well, now you can.

The menu shown above is one of the central screen displays in **THE LAST ONE**. By combining any of the options shown it is possible to create simple or complex programs with no more than a few, carefully selected, keystrokes. **THE LAST ONE** does the rest, only asking you to answer its questions from time to time so that it can be sure that the program it is writing does exactly what you want. And all this in (more or less) plain English.

Now you can design, write, amend (and sell!) perfect customised programs without ever typing a line of code. A godsend for the business micro user, a phenomenally powerful tool for the professional programmer, a delight to all; **THE LAST ONE** allows anyone to write computer programs.

Finished programs can handle up to 15 files simultaneously (9 on the Commodore machines), they can include *any* feature found in *any* application program you've ever seen, and they run first time – every time. Following a year of extensive field trials, **THE LAST ONE** has grown from a simple (though advanced) program generator into the one of the most powerful micro tools available. It is in use in thousands of installations around the world including banks, airlines and scientific and educational establishments as well as being available on countless small business machines.

THE LAST ONE runs on the APPLE II, the COMMODORE 4032 and 8032/96, the TRS-80 Model II (TRSDOS or CP/M), most CP/M, CPM-86 and MS-DOS machines including the IBM PC and the SIRIUS.

Whatever you use your computer for, you owe it to yourself to find out what **THE LAST ONE** can do for you – to see it in action. To order or to find out more, write to:

D.J.'AI' Systems Ltd, Station Road, Ilminster, Somerset, TA19 9BQ

Telephone: Ilminster (04605) 4117

THE LAST ONE™

Nominated 'SOFTWARE PRODUCT OF THE YEAR 1982', and selected as finalist in Recognition of Information Technology Achievement Awards (RITA).

YOU GOT THE HARD PART RIGHT. NOW FOR THE SOFT PART.

You were smart to pick IBM's Personal Computer from all the rest. You have the right hardware.

Now you have the right software, too. EasyFamily™ software from IUS is written specifically for the IBM PC. Take EasyFiler,™ for example.

EasyFiler is a stand-alone database manager which includes a text editor. Because of the text editor and a built-in report generator, you can custom design your filing and database needs. There's no need to purchase expensive, separate options, since EasyFiler includes everything you need in one package, for one price. With EasyFiler you enter, change, sort, and retrieve the exact information you want.

EasyFiler is MS/DOS based, and thus can be stored on a hard disk of up to 40 megabytes. That's not only a great increase in storage capacity, but it also allows for much faster information retrieval. EasyFiler will hold up to 10,000 individual records, with space for 1000 characters per record.

EasyFiler has a number of features which will help you increase the power and performance of your IBM PC. It is compatible with BASIC, which means you can transfer information to or from an IBM BASIC file. EasyFiler also includes a built-in calculator, which enables you to compute data during the entry of information or during report generation. Through "Soundex," another built-in feature, you can retrieve information even if you don't know the exact spelling of a word.

EasyFiler works with other EasyFamily programs. All IUS programs have similar instructions and make full use of the IBM PC keyboard. Integration of information from one IUS program to another is easily accomplished. For instance, you can use EasyFiler with text written on EasyWriter II,™ the advanced word-processing program that gives you stand-alone wordprocessing at a PC price. Whether you're a computer expert or a novice, EasyFamily software makes your work simpler, faster and more productive. We think that's what makes it easy for you.

UP TO 652K DISK STORAGE ON AN APPLE II!

THE ELITE SERIES OF DISK DRIVES FROM RANA SYSTEMS

More juice on Apple's inferiority.

Rana has an advanced write protect feature which makes it impossible to lose your information. A simple touch on the front panel's membrane switch gives you failsafe control. Apple of course only has a notch or tab, which gives you only minimal protection.

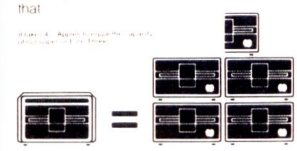

With the superior Elite controller card, you can control up to four floppy disks using only one slot. With Apple's you can only use two. Of course, you can still plug into Apple's controller card, but down the line you'll want to switch to Rana's and save yourself a slot.

Elite also gives you more byte

Even our most economical model, the Elite One, gives you 14% more storage than Apple's. 163K versus Apple's 143K. With our Elite Two offering 326K and our top-of-the-line Elite Three offering a 356% storage increase at 652K. That's almost comparable to hard disk performance, all because of our high density single and double sided disks and heads.

We put our heads together to give you a superior disk drive.

We designed the Elite Three to give you near hard disk capacity with all the advantages of a minifloppy system. The double sided head operates on 80 tracks per side, giving you a capacity of 652K bytes. It would take 4½ Apples to give you that.

The Elite Two offers an impressive 326K bytes and 40 tracks on each side. This drive is making a real hit with users who need extra storage, but don't require top-of-the-line capacity.

ELITE One	**£269**
ELITE One & Controller	**£349**
ELITE Two (2 x 40 Track)	**£419**
ELITE Two & Controller	**£489**
ELITE Three (2 x 80 Track)	**£559**
ELITE Three & Controller	**£629**
RANA Controller card for 4 Drives	**£85**

RANDOM ACCESS IN A PRINTING BUFFER?

YES!

PipeLine

Random Access Printing Buffer

- Random Access printing—stores paragraphs or pictures for printing in any order—any number of times.
- FIFO Printing—conventional first-in, first-out "dumb buffer" operation.
- Bypass Printing—Lets you interrupt a long print to do a short, urgent print.
- Compression of data for efficient utilization of memory space.
- Simple erase feature to clear buffer.
- Automatic duplication capability. Prints copies without using your computer.
- Easily expandable by you, from 8K Bytes to 128K Bytes.
- Stand-alone unit—does not use up your computer's power or expansion slot space.

When ordering please state printers model

How much would you pay to make your Apple II Plus run 3½ times faster?

SAVES TIME

Imagine the time, energy, and frustration you could save by boosting your Apple's speed from 1 Mhz to 3.58 Mhz. That's 3½ times faster than normal, making the Apple II Plus arguably the fastest Micro on the market.

How is it possible? It's all down to ACCELERATOR II. This new plug-in board from Pete & Pam Computers contains a 6502C Processor and 64K of memory. The board runs all native Apple II software, including programs written in Applesoft, Integer, Machine Code, Pascal, Apple Fortran 77 and Forth.

Amongst the many thousands who could benefit from ACCELERATOR II are users of Visicalc, DB Master, Micro Modeller, Multiplan Tabs, and Systematics.

SUPER FAST

In November 1982, PCW published a bumper round up of all the Benchmark Timings since PCW began. The Olivetti M20 came out top of the 'league' with an average Benchmark timing of 11.5. Running the same Benchmark test programs, the Apple II Plus with Accelerator II averages a timing of 8.58 – that's an incredible 25% faster than the Olivetti M20.

We have reproduced some of PCW's findings, incorporating Benchmark Timings for the Apple II Plus with Accelerator II.

Machine	BM1	BM2	BM3	BM4	BM5	BM6	BM7	BM8	Average
Apple II Plus with Accelerator II	0.3	2.4	4.5	5.0	5.5	8.2	12.9	2.98	8.6
Olivetti M20	1.3	4.0	8.1	8.5	9.6	17.4	26.7	1.6	11.5
IBM Personal Computer	1.5	5.2	12.1	12.6	13.6	23.5	37.4	3.5	17.6
Osborne 01	1.4	4.4	11.7	11.6	12.3	21.9	34.9	6.1	19.9
Intertec Superbrain	1.6	5.2	14.0	13.9	14.8	26.3	43.2	5.6	21.9
Apple III	1.7	7.2	13.5	14.5	16.0	27.0	42.5	7.5	24.7
ACT Sirius 1	2.0	7.4	17.0	17.5	19.8	35.4	55.9	4.3	24.8
Xerox 820	1.7	5.5	15.5	15.1	16.2	28.9	46.1	8.0	26.1
Apple II	1.3	8.5	16.0	17.8	19.1	28.6	44.8	10.7	30.4
Commodore CBM 8032	1.7	10.0	18.4	20.3	21.9	32.4	51.0	11.9	34.3

So don't wait – start to save time now. Contact your local dealer, or call us on (0706) 212321, or, in London on 01 769 1022.
A faster, easier computing life is on its way.

Professional Software for Apple II

Payroll An inexpensive yet accurate, reliable and easily operated program. Designed for the company with tens rather than hundreds or thousands of employees, Hilderbay Payroll offers all the features of packages costing many times more: handles all tax codes, salaries and N.I. contributions, hourly, weekly and monthly payslips, summary of payments etc. Will also work backwards (compute gross pay and deductions from net pay). **£60.00** + **VAT**

Bookkeeper A simple to use bookkeeping program can keep several books independently. Up to 20 analysis headings can be chosen. VAT will be computed where applicable and full analysis can be printed whenever required. "There is nothing else like it on the market. I couldn't do without it". (Windfall Magazine Review, April 1983 p76-77) **£49.00** + **VAT**

Statutory Sick Pay From April 6 all employers must calculate and pay SSP to their sick employees. Rather than keep pages of information and work to 60 pages of the complicated DHSS Guide you can simply operate the Hilderbay SSP system. A free-standing program that will run on Apple II, SSP will work out employee eligibility, linking, all possible exclusions from SSP, tell you the information required and supply all figures required by you and by law. Easily operated by non-computer, non-payroll personnel. **£70.00** + **VAT**

COMING SOON

The Hilderbay Invoicer We are currently completing and testing an invoice program. Invoicer creates, uses, and maintains a price list, a mailing list, and a customer file and creates sales information in a form suitable for later analysis by bookkeeper. Our sales invoices are produced on a prototype of invoicer.

Remember – we at Hilderbay pride ourselves in the development of high quality professional software that is fully functional and with full support. Not fancy packaging, fancy prices or fancy names.

Contact us now for further information on these products and our full range of professional Spectrum software.

WORKING WITH MICROS

Forget the technology – there is only one valid reason for the businessman to buy a micro:

to improve company profitability

This two-day course will teach you what a micro is and how to select and install successful micro-system. (It may even persuade you that your current manual systems are best).

Why should you attend this course?

- ★ **Keith London Associates is totally indendent of any supplier of computer hardware or software**
- ★ **the course is run by two international lecturers**
- ★ **the following popular micros are available for demonstration and hands-on use on the basis of one micro per two delegates:**

★ Sirius ★ Osborne
★ Apple ★ Acorn

together with software for accounting, stock recording, word processing and financial modelling

Uxbridge, Middlesex UB8 2RT. Tel: (0895) 59781 (10 lines). Telex: 267336.

Enterprise–a 16 bit from only £2300.

Technical highlights and features
Processor 16 bit microNova
Disk capacity 716KB – 30·7MB formatted
Keyboard Typewriter style plus numeric, cursor control and special function keys
Display 80 x 25 green phosphor 12" screen
Printer 150 cps high quality dot matrix
Communications RJE/80, 3270, HASP, RS-232. Two integral programmable ports
Operating systems Enterprise/OS, MP/OS, BOS/5, M/BOS
Languages Basic, Cobol, Fortran, Pascal, MacroAssembler
Expansion Numerous interfaces, peripherals, etc.

Data General pioneered small computers. With over 14 years' experience, over 120,000 installations worldwide, and a range of compatible systems from the micro to the super-mini – we understand the needs of the business user.

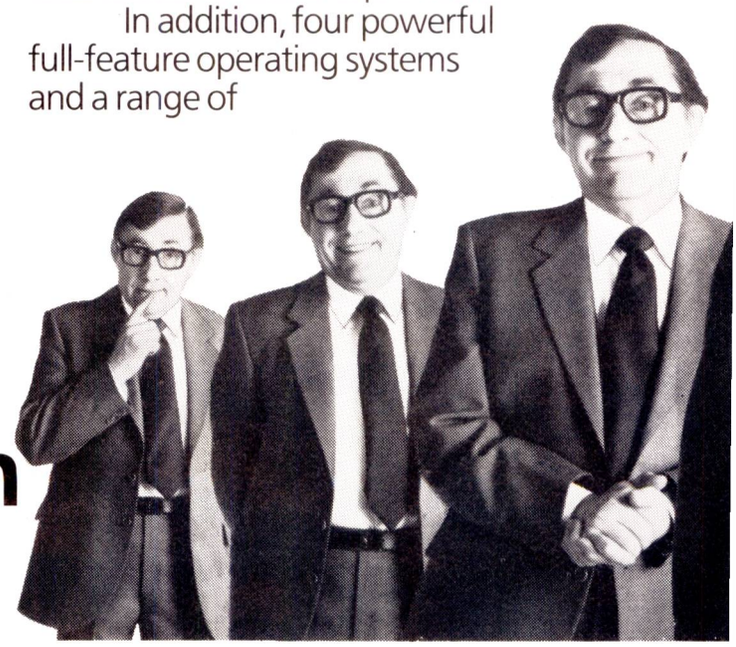

Our 16 bit Enterprise business computer has been designed as a fully compatible extension to our range. Its ease of use, range of software, level of support and competitive price make it **the** answer for small businesses and for departments of larger organisations.

More software. Better software

A broad range of application software packages is available to meet most requirements: accounting, word processing, financial modelling, and many others including specific 'industry' packages ensure that the Enterprise can solve **your** problems.

The software is flexible, easy to use and clear documentation is provided.

In addition, four powerful full-feature operating systems and a range of

Data General Enterprise helps small businessmen grow.

business computer

software utilities ensure that the Enterprise is both fast and efficient, and programs may be developed using any of the well-known high level languages. Communication software enables the Enterprise to talk to other computers – both Data General and many others.
Data General software is, of course, compatible throughout our range of systems.

Quality support

Support is always on tap from our network of carefully selected local dealers. Expert advice, installation, training and continued assistance are there when you need them from experienced computer professionals – all backed by one of the industry's largest and most experienced manufacturers.

Field service where you need it

Every Enterprise comes with a Data General On Site Warranty. Over 250 service staff and 15 UK service centres mean fast response.

We respond to your service call within one working day under warranty or service contract.

The computer answer

All in all, the Enterprise adds up to a great deal – more than most competitors can offer. When you look at the price you know it's a great deal. For much less than you could pay for 'just another micro'.

Data General Enterprise helps small businessmen grow.

To Enterprise Marketing, Data General Ltd., Hounslow House, 724-734 London Road, Hounslow, Middlesex TW3 1PD.

COMPUTERS

Apple pipped?

Apples are the most popular micros in the world for business use, and the question on everybody's lips is: can Apple continue to sell well, now that IBM micros are available.

Two sides of this question need to be considered: first, how well is IBM selling, and second, how well are the new Apple IIe and Lisa machines standing up to the challenge?

In this country, the news is surprisingly good from the Apple IIe's point of view. Internal statistics from Apple UK show that since the IIe was launched, 6000 systems have been sold (up to end March).

March, of course, is a strange month in the computer business, since it is the time when all the local authorities find that they have a couple of thousand pounds left in this or that budget, and it must be spent before the financial year ends (or else they won't be allowed to spend it next year. This daft system is designed to encourage them to save money?).

So the sale of 3000 systems in March isn't quite as surprising as it sounds, even though Apple normally sells around the 1200 machines per month mark.

The question of how many Lisa (Let's Invent Some Acronym) machines will be sold is an academic joke until about this time next year. Rumour says that Apple can build 8000 systems worldwide this year, and has already sold all these.

My own information on the readiness of Lisa for the market indicates very clearly that it isn't going to be bug-free this year. It may be bug-free enough for the really enthusiastic user to tolerate by September.

On the other hand, the IBM sales are just going crazy. Stores in which Apples were previously the biggest selling line are now selling twice to four times as many IBMs as they ever sold Apples.

And while Apple will warn you, quite correctly, that there is always a big surge at the beginning of a computer's life (as lots of people buy a few to try out), you need not kid yourself into believing that this surge is going to fade in the case of IBM's micro.

Apple is not feeling the pinch here, but that is for two reasons: first, it makes its UK machines in Ireland, and second, IBM is not sold nearly as aggressively here as it is in America.

In America, the statistics (courtesy of Portia Isaacson's Future Computing seminar company) show that IBM is selling comfortably twice as much as everything else put together. Dealers are being supplied with 70 per cent of what they want on an allocation system.

In Britain, Commodore comes first, still, with ACT's Sirius catching up fast. Apple has a greater number of machines already sold than Sirius, but the turnover per month is shifting from both Commodore and Apple to ACT.

But Commodore has fallen in love with the VIC and the 64, and seems unbothered by the business micro business. So it is really up to Apple and our own embryonic Future Computing to offer IBM any serious competition. And from Apple's point of view, nice though the IIe is, it still isn't what it ought to be, nor is it the price it ought to be.

Digital Equipment, the only other company which could have impeded the IBM tidal wave, appears to have abandoned the project in all but name.

Its Rainbow, announced this time last year, would have been a wonderful machine this time last year because it had the same 8088 chip as used by Sirius and IBM, but with the Z80 in addition. At the time, there was lots of Z80 software, and no 8088 software.

This is no longer true.

Despite having totally thrown away its advantage, DEC remains arrogant and secretive about the machine, proprietorial about its software (you can buy Rainbow software only from DEC and use it only with DEC-supplied blank disks) and unsupportive to the micro trade, with whom it openly plans to compete by selling direct to corporate buyers.

At the time of writing, I still haven't been able to see a Rainbow. And its big brother, the Professional, with a £1000 extra on its price tag, is just an inhouse joke to keep the faithful happy.

Anybody who can recall the nice things I have said about the DEC micros in this column — please forgive me, and pretend it never happened.

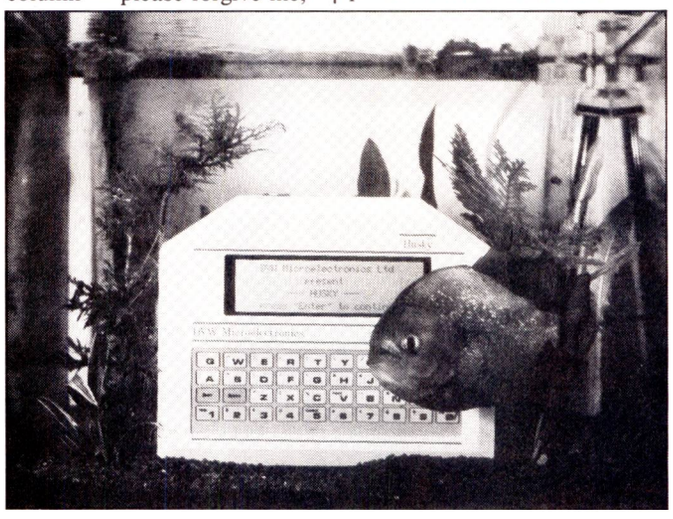

Lipsmackin'. . .

As an aside to my analysis of Apple's future problems, it is fascinating to see that that company has appointed a real expert to take over the corporate direction.

In place of 'Mike' Markkula (the marketing and financial man who helped set up Apple with the two inventors, Jobs and Wozniak, and who is now retiring), Apple has managed to hire the president of Pepsico's soft drinks division, a man called John Sculley.

Money (according to an interview in the *Wall Street Journal*) was apparently not the prime consideration in attracting Mr Sculley to this job.

From the *WSJ* report, it's a bit hard to deduce what the attraction actually was. His praise for Apple is limited to the rather extraordinary observation that: 'I see the computer business where the

Husky 'will be demonstrating its indestructible computing power', says my latest-received press announcement, 'to a deadly Amazonian piranha, immersed in a tank of water at UCSL Microsystems' stand at Hanover.'

Both computer and deadly fish will share the tank. It's nice to show this computer again, because with 144 bytes of internal memory, it remains the only truly portable system capable of being used on an aeroplane. Anything less, and you run out of memory quite quickly.

It is made by DVW Microelectronics, on 0203 668181.

soft-drink business was 10 years ago — it's a high-growth business, and competitors are still being formed.'

He added, with a lack of enthusiasm that takes the breath away: 'Once I left the security of Pepsico and went to the other side of the country to an industry I didn't know, I knew if I wasn't successful I'd have a tough time coming back.'

This is by way of explaining why Apple has promised to pay:

1) A million dollars sign-on fee.
2) A million dollars a year in salary and bonuses.
3) A million dollars if they ask him to leave.
4) Financial help in buying a two million dollar house in Woodside, in Silicon Valley.
5) 350,000 shares of Apple stock.

Money, as Mr Sculley says, isn't everything. There's the satisfaction of knowing that you can escape, plus the thrill of not knowing what you're doing. Nothing can replace that.

An open letter to Chris Curry, boss of Acorn

Dear Chris,
What on earth is going on?

Your company is (at last) producing BBC Micros at a good rate — not quite fast enough to please everybody, but enough to have sold nearly 90,000 machines, and most of those since Christmas. It is about to undertake the incredibly difficult jump from the UK to America, and is also planning to launch a 32-bit add-on, plus a cheap Electron version.

They are nice machines.

But when we journalists got so excited about the BBC Micro, there were lots of other things that made the whole package sound nice. And where are they today?

One can buy disks, of course. Sometimes, with a lot of luck, one can buy Acorn disks. There aren't too many of those, which is a bit annoying since we all expected to have them freely available in May. May last year, that is.

And other people's disks are just a wee bit useless, since the Disk Filing System (DFS) chip which you plug into the computer is simply not to be had for love or money. Why not?

Could it have something to do with the fact that a business friend of mine, with six BBC Micros, finds that he has six separate versions of the DFS chip?

Lucky old me, I naturally got priority on a DFS and drive, so that I could write about it. I'd feel the honour a bit more if I could diagnose the faults on the system. And this might be easier if I had the disk operating system manual — the one I have been promised six times since I got the disk last year — but that has somehow still not quite got posted.

As a writer who gets an honorary micro, I suppose I shouldn't expect to get priority on scarce documentation — however, my friends and acquaintances who pay money don't seem to have any better luck.

You may remember one of them wrote a very detailed letter to your company, listing the number of times he had ordered various things, had had his money banked, and had received not so much as an acknowledgement.

You may also remember that he sent me a copy of this letter, and mentioned to your company that he had done so. And you may remember that the fur flew, or so I was told, and important executives got straight on to him and promised to sort it all out inside the week.

Would it surprise you to hear that he still has received nothing from Acorn (six weeks later)?

I know *something* is happening, because when I rang to try finding out why, I was told that, under a new policy, I can only ask questions through your press agents. Quite what help this is to me or my various frustrated friends, I can't think.

Chris, I am really worried. I think you know that I wouldn't be writing an open letter unless I was concerned. What is going on? Is it just that your American project has over-stretched your young company? Or is it really the disorganised rabble that your enemies are starting to say it is?

Guy Kewney

Sharper Sord

It would be comforting to be able to dismiss as a joke Sord's threat to launch at least two 32-bit micros this year, Unfortunately, the company has the reputation of producing systems on time, and these will almost certainly appear.

A 32-bit system from Sord will almost certainly be a lot more expensive than an 8-bit system, but it will probably be pretty cheap by current standards.

Sord boss Takayoshi Shiina was tantalisingly vague about it all. He would not say which chips would be inside the system, and he wouldn't quote prices.

But he did say that the first 32-bit machine would be out 'soon' and hinted at June, and said that its performance would be 'about half the power of a VAX 11-780' — a very powerful 32-bit mini from Digital Equipment.

And the price, he said, would be about a tenth. That would put it at around £5500.

Since the Plexus micros/minis cost around £12,000 and get about 60 per cent of a VAX performance, this threat had better be ignored by most micro makers who want to live in peace.

In Britain, Acorn is promising its 32-bit system in summer. In America, Inner Vision showed a system using the Zilog eight-bit Z80 plus the National Semiconductor 16032 (a 32-bit chip) — and it was built on an S100 card, available now. So the Sord prediction is roughly in line with what we know to be going on in the world.

Sord also announced a local area network, of course.

Business brain

Grundy has signed a contract with Peachtree: Peachtree has implemented virtually their entire CP/M-based software product range on the Newbrain.

The Newbrain, which is a desk-top/hand-held (as opposed to pocket hand-held) Z80 based micro, was once planned to be the BBC micro — and it was held up for more than a year. Now, with the release of the Peachtree CP/M software, it has caught up with its original schedule.

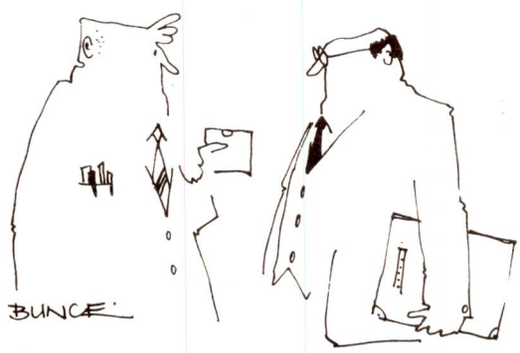

Not too many of the new CP/M systems will appear in the shops before August, because although the company is now making 6000 machines a month (and a fair proportion of those with disks) there are some prior orders to fill with initial factory output.

However the price for a basic, one-disk CP/M system with display and printer will be under £700 — that is with 200 kbytes of disk storage. It is a keen price. A bigger system – two disks, at 800 kbytes each – will fetch £1200.

The company has also signed a deal with Software Sciences, (a Thorn EMI subsidiary) to handle maintenance. And there are plans to produce a desk-top 'system' in a box — from which you can still unplug your Newbrain, and take it home to play games.

A middle year

One can start off by saying firmly that nobody who goes to see the new computers at the

That's the trouble with BBC stuff — five minutes of original program and all the rest is repeats.

annual Hanover Fair will have to sleep in the gutter. No matter how many people turn up at the airport on the day, somehow they always find a front bedroom somewhere in the city, or near it, or within twenty miles of it, or even on the East German border, where you can spend the night.

But you certainly can't get a hotel room without booking a couple of years in advance.

That probably explains, more than anything else, why people who really want to know what the future will bring fail to go to Hanover each year.

Certainly it is *the* place to go for finding out what people are planning. And a lot of good ideas are first seen there, which can save a prospective buyer a lot of heartbreak – not because you can hold off from buying something else which is now obsolete, but because you can clearly see just how far away the new reality will be.

This year's Hanover Fair was described by one wise old observer as 'a middle year' – by which he meant not a 'middling' year, but one in between two real years.

Last year, there was a lot of good stuff. Next year, much of the stuff on view this year will be really available.

There follows a roundup of the best computer ideas from Hanover, interspersed with the best jokes (not intentional) from manufacturers who have fallen for their own line in optimistic flannel.

Sometimes, the information was a bit hard to get hold of. And the only publicity information is normally in German, a language designed for filenames – they don't put spaces between words, so 'input file for January 28' could be a nice (long), legitimate filename – but not for easy buzz-word transfer. Sorry.

All prices are quoted in DM, and the rate assumed is DM3.60 to the pound sterling. You work it out; you've got Basic running, I've just got Wordstar.

Big talk on the Apple

Smalltalk is the language on which the Apple Lisa is built – so if you think you've never heard of Smalltalk but have heard of Lisa, then you don't need further explanations.

Lisa, as we all know, is the unattainable perfection which Apple just can't quite let us all have this year. So the arrival of Smalltalk on the Apple II is (apparently) a wonderful event.

It was demonstrated at Hanover on the Apple look-alike Basis 108 machine, and announced by C J Macie (an American in Germany) as being available for the Apple II and IIe, the Basis 108, the IBM PC, and the Sirius/Victor 9000.

Now for the pinch of salt: you need a minimum of 256k of memory, and the maximum (which I warmly suggest you don't try to manage without) is a megabyte (not disk, note: internal memory).

Not many Apple IIs that I have met have an easy way of attaching that much memory. Most get very stuffy about carrying 64k.

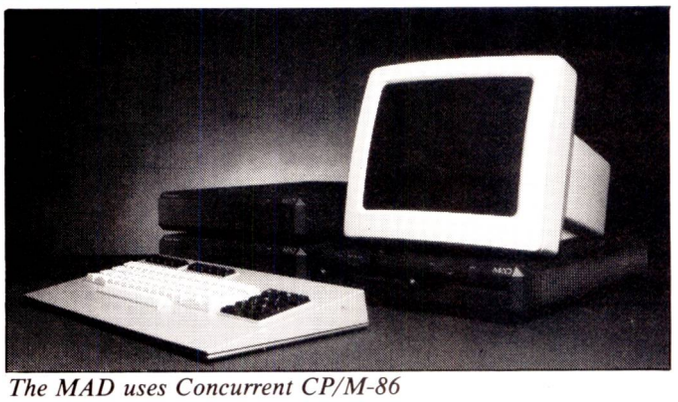

You also need a mouse (of course) plus a winchester hard disk for bulk data storage, plus a diskette to get new stuff in and out.

Once you have all that, the new wonderful Smalltalk world can be yours for an additional DM1450, and if you want to generate your own integrated assembly language programs, you need a development system which costs an extra DM500.

All those warnings given, rush your enquiry to Macie at Beckershoffstr 21, D-4020 Mettmann.

Incidentally, the Basis appeared in its big-brother versions, the 208 and the 216, with enormous 8086, Z8000 and 68000 micro chips driving it.

Basis machines are both Apple and CP/M compatible. The company is at 4400 Munster, Postfach 1603, tel (0251) 77169 or 617045.

The MAD uses Concurrent CP/M-86

Mad optimism

MAD computer launched the MAD computer at Hanover. So did Corona launch the Corona. In both cases, the real message was simple: *not* 'here is a computer' but 'we're about to take Europe seriously' which means that people will start trying to get the machine into their shops.

The MAD computer has impressed people who have seen it (it is vaguely IBM-like) because of the unrestrained claims that founder John Nafeh has made for his design.

The most significant thing about the machine is that it uses Concurrent CP/M-86 for the main operating system, besides the IBM-like MS-DOS. The concurrent idea has yet to be tested in general use, but is wonderful enough in theory: you can run as many programs as you have space for, all 'at the same time' without having to stop each one, close files and log off before moving to the next. In other words, while working on Supercalc, you can check somebody's phone number under Cardbox, and register another widget sale under TABS (or whatever).

Nafeh is curiously wordy and uninformative about the rest of the system. His promotional document talks airily about how he has 'designed the processor to run with totally new proprietary software which is now being developed for us, based on developments in Artificial Intelligence', which means that the software is not available and does not work. He says that this 'revolutionary software will transform the entire understanding of small computers and their programs', which means that nobody yet knows how to use it. And he adds that 'we're talking about major changes that are as near as 18 months away', which means that none of the people working on the software have yet been able to give a realistic estimate of when they're likely to finish.

Never mind: perhaps he really means it, and one day it will be wonderful. By the end of the year, he says, he will be producing 25,000 systems a year. I deduce, therefore, that until the end of the year, he will be producing rather fewer.

However, my scepticism is not solely derived from the vagueness of the promotional literature.

It is based on the fact that the 'advanced 16-bit processor' referred to in the glossy literature is apparently going to be the Intel 80186, which is indeed a very advanced chip, and an expanded and glorified version of the 8086, which is the 'big brother' of IBM's (and Sirius') 8088.

It is a lovely chip, compared with the 8088, but nothing I have heard about it included the fact that people would be able to buy thousands before the end of the year. And as for having fully debugged software to run on a system using it –

Prices slashed

Rumours of price cuts at the lower end of the home computer market have now become a reality.

W H Smith recently announced a large drop in the retail price of both versions of the Sinclair Spectrum and the ZX81. The 16k Spectrum is cut from £125 to £99.95 and, as the 16k Oric is yet to appear, the Spectrum now becomes the first sub-£100 colour computer. The 48k Spectrum is down in price from £175 to £129.95.

In addition, the price of the ZX81 has been cut from just under £50 to £39.95. It is thought that other major retail outlets will follow suit, and Sinclair itself was expected to announce price cuts on 2 May, after this issue went to press.

Also announced was a drop in price of the Colour Genie. Previously this had sold at £224.28 – this will now retail at £199 (including VAT).

Steve Mann

well, I'll believe that when I see it.

You can ask for details from 3350 Scott Blvd, Building 13, Santa Clara, CA 95051, tel (408) 980 0840.

Pocket Apple

Looking just like any other pocket calculator of the Sharp portable computer variety was a pocket Apple called the PA-2 Kiwi.

It was shown by the very well-known user group's, Assmann System, subsidiary complete with a parallel disk interface – and a disk.

It can also be connected to a real Apple at any stage for transfer of information.

The price for the machine itself, with a piffling 8k of memory (expandable to 32 max) is an equally modest DM800. The single disk, including interfacing, costs more than that at DM1000 – but it was a very nice slimline drive.

The display is not one that you will ever use for graphics, because it shows a single line of 16 characters on an LCD screen.

But since the machine includes its own clock (program readable) and an interface either to monochrome or colour tv, the queue for samples alone could be a long one.

Assmann supplies not Applesoft, but Kiwisoft Basic (very similar to my hasty appraisal) plus Pascal, Pilot and Lisp languages.

They can be contacted at the following address: Assmann Informatik 2000 Gmbh, Industriestr 5, D-6380 Bad Hamburg 1, tel (06172) 106-1, telex 0415158.

Something to declare

On the subject of portable computers, my own frequent travels through American customs with an Osborne have taught me the following useful lesson: 'when they ask you to open it up, they don't want to see the inside. They want to see the *Made in USA* plaque next to the on-off switch.

No, I don't know anybody making such stick-on labels for other systems. Sorry.

Link or lock-out

American firm Quadram showed a colour display controller for the IBM micro. It differs from most in allowing 16 simultaneous colours, and there are versions which considerably expand the detail at which the machine can manipulate pixels.

Rumours of an Apple-link card which will let IBM users run Apple software are exciting, but the company wouldn't confirm it, and there are obvious legal hurdles to clear. Apple tends to take imitators to court, and even if it doesn't always win, it is stupid to count on this in advance.

Quadram is on (404) 923 6666.

IBM black box

A Japanese firm which is pinning its faith on the same humorous iAPX186 Intel chip is Kyocera, a firm which was strangely offended by my admission that I'd never heard of them.

One would think this was natural, since they say that they sell to other people, who put their own badges on the boxes of the Kyocera imitation IBM machines.

The company makes everything from ceramics to chips to circuit boards, and decided the logical thing was to turn these bits and pieces into a computer.

So it showed a super-IBM black box. Its keyboard has a mouse-hole (mice are things for controlling the cursor position on a screen) and the processor has a set of slots which let you plug other, rather cheaper, processors into the back and run them as parts of a network.

Price, they said, was their business. But they assured me that there would be no point in starting the venture if they couldn't do it for a lot less than IBM, even after their customers had put their own badges on and taken their own profit margin.

The company also makes artificial hips, knees, and teeth. Don't write to Japan: they have offices in America and Germany. The German phone number is (07153) 611, and the American phone number is (619) 279 8310.

Corona's arrival at Hanover was more auspicious, since that company is actually shipping IBM compatible equipment. And while I was watching, people from Peachtree came up with diskettes of IBM software, and shoved them into the Corona disk slots, and they ran.

Compaq, the best-publicised of the look-alikes, is very acid about Corona's claims to be compatible, because Corona has improved on IBM's graphics.

The claim that Corona people make is that they are MS-DOS compatible, which means that when they send a list of instructions to MS-DOS, that program will make their system do exactly what the

Birthday party

Sometimes it's hard to believe it, but *PCW* is five years old this year. As Europe's first microcomputing magazine, we got off the ground in February 1978 as a bi-monthly magazine catering for what was then a very obscure hobby indeed. Now we outsell all the other upstart mags by a long margin and there's no sign of the market's expansion rate slowing down.

To celebrate our fifth birthday, we decided we ought to hold some sort of a booze-up. The Reptile House at London Zoo was the unanimous favourite as a venue until we realised that quite a few of us probably wouldn't be let out again. So we held it in the cosmic gloom of the London Planetarium instead with Isaac Newton and Albert Einstein (or, rather, effigies of them) staring disconsolately at all sorts of micro industry persons making idiots of themselves.

And we took advantage of the occasion to present a cheque for £5000 to the winner of the great *PCW* Manhunt Competition, Mr Stan Higgins, who surprised us all by ringing up with the correct answer when the ink was hardly dry on his copy of *PCW*!

Peter Rodwell

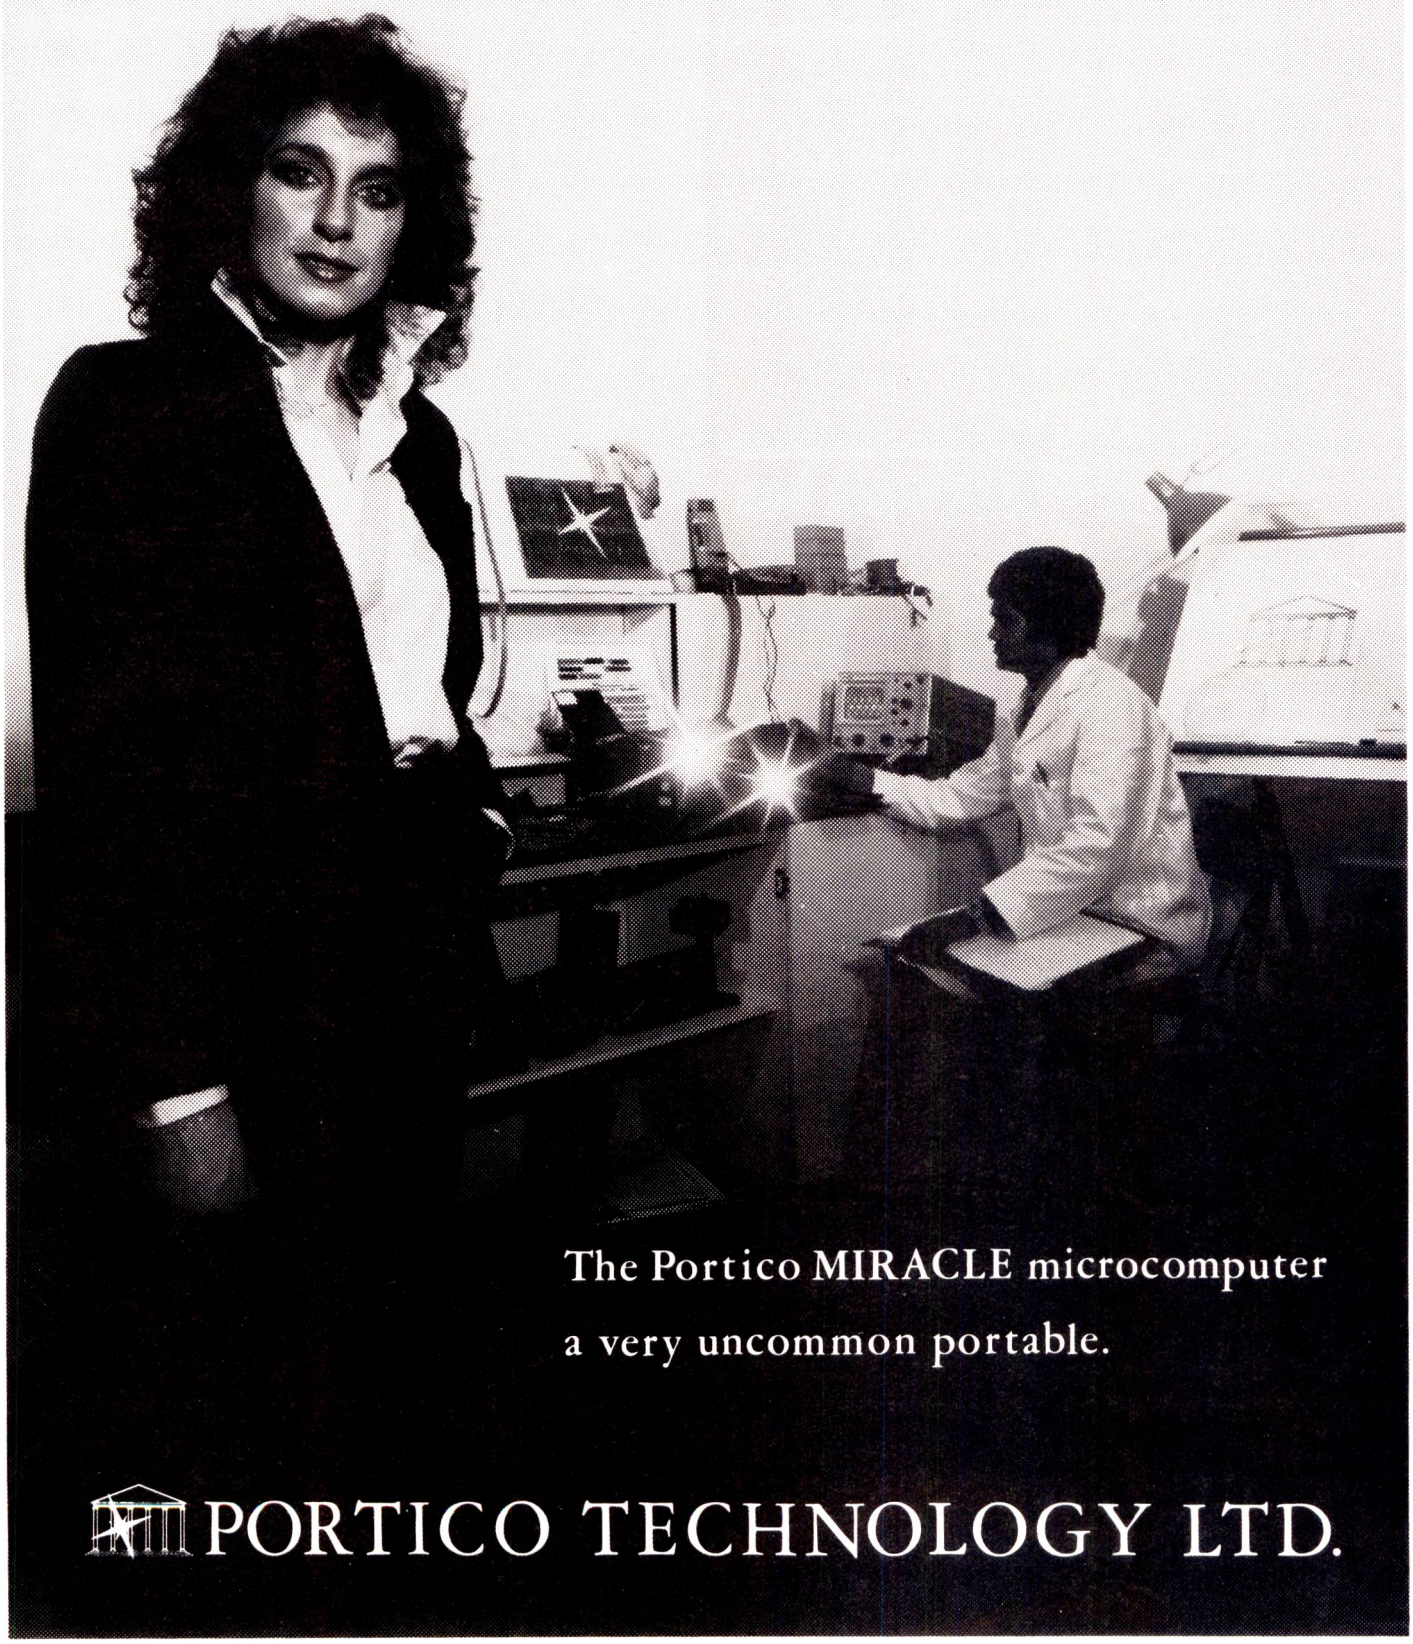

The PCW 'Gang of Four' – its Editors, past and present. Left to right they are Meyer Solomon – our first Editor – David Tebbutt, Jane Bird – our new Editor – and Peter Rodwell.

Outgoing Editor Rodwell hands over the Manhunt prize of £5000 to winner Stan Higgins.

"We're creating Miracles"

The Portico MIRACLE microcomputer
a very uncommon portable.

PORTICO TECHNOLOGY LTD.

IBM system would do. But just because they're MS-DOS compatible it doesn't mean that the IBM PC will understand all the Corona's graphics instructions.

Anything which is not bit-for-bit the same is going to (very often) need careful and time-consuming re-writing.

The portable version of the Corona is a great deal cheaper than the portable Compaq. This, said the marketing folk I talked to, is why the Corona power supply will be set up either for European, or for American, voltages. The cooling fan, for instance, just won't work in both countries. You have to take the old one out, and put in a new one (not an end-user skill at all).

In desk-top computer systems, such thinking is silly. In portable systems, it is plain potty. 'Here is your computer, and it fits under an airline seat. Just don't take it too far.' Exactly what we've all been looking for.

Computer phone

Toshiba has apparently cracked the problem of making a phone look modern without making it useless to a computer. Most modern phones won't work with an acoustic modem. Toshiba's won't either, but it hardly matters because the phone is just one more peripheral of their latest micro.

The Computer-Phone obviously has a long way to go before it appears on our desks, however. No details of the micro, its data processing abilities, or its prices, were available.

Not so sharpish

Sharp showed a lovely system with a cheap colour plotter (not printer, plotter).

Actually, Sharp showed several brilliant new machines, and then disappointed visitors by admitting that it 'knew nothing about their specifications, when they would be available, or their price'.

That is obviously a slight exaggeration. What the company means, of course, is that it will first try to see what the market will stand, and what the likely effect will be on existing machines, before letting these nice machines into Europe.

The M2700, just a keyboard with a tape cassette built in (no display – you have to get a colour tv) had the plotter included in an overall DM1600 price tag. 'It will appear in the autumn, perhaps September, perhaps October,' they said on the stand.

Without the plotter or the cassette drive, the price would be DM900. They did say that it would 'not yet' run CP/M, but wouldn't actually say that it would 'one day' run it.

The incredibly good display on the X1 model (it had a 'Galaxians' look-alike game with fruit and vegetables, all with little grimacing faces, instead of the swooping aliens) can be 'mixed' with the output of a video recorder.

This product was so secret that they wouldn't even admit that the video player was a video player, in case they were tricked into making an admission.

Joking aside

Wonderful joke from Jack Tramiel, boss of Commodore: 'We are the number one micro computer company, our products today include the 500 and 700 range with an add-on processor providing the Intel 8088, MS-DOS, Concurrent CP/M-86, and we are now shipping our new portable version of the Commodore 64.'

All that was presumably to make sure his audience realised it was a slightly late April 1st joke. Then came the punch-line: 'We like Lisa, but it's just a tiny bit too pricey. So we will produce a machine with all the features of Lisa, for $2000 to $3000, by the end of the year.'

Somebody had the temerity to doubt this, and expressed it by asking whether the software would be ready on time. Software is what makes Lisa-type machines possible, and it is also what makes them impossible, because it is so complex.

There are good reasons to think that the thing might be late. One: at Hanover last year, a hapless Commodore employee promised us that the 700 machine with concurrent CP/M and MS-DOS (see above) would be available last September. Two: despite what Tramiel said (see above) you still can't get an ordinary 700 in any shop I know of. Three: Apple has been working on Lisa software for four years, and still hasn't got it right, Four: Commodore lost its best designers late last year, and any super-Commodore replacement under a deal with Zilog can only be six months old. It is just barely possible that the hardware might be in prototype form by now.

And even the portable 64 is something which has been around in photographic form since January, without progressing beyond that to the form of a product which I can take home and test, never mind one which you can go to a shop and buy. And if ever a system was debugged in advance, it must be the portable 64.

So: put your money where your mouth is, Jack and tell us where the software is.

'We're showing the software to our major customers,' said Jack loftily, 'not the press.' Heavens, I wonder why.

The typewriter in this picture is a computer. It is the Olympia ESW 103 KSR, and KSR stands for Keyboard Send Receive —which means it can be used as a terminal to a remote computer.

To demonstrate it, Olympia linked the machine to British Telecom's Dialcom service, now called British Telecom Gold. It worked. At £1,098 plus the cost of the acoustic modem, it ought too.

Olympia is on 01-262 6788.

Pricey portable

After the Commodore joke, the Siemens joke fell a bit flat. It takes a certain amount of nerve to offer an 'IBM compatible microsystem', and not know whether MS-DOS is available ('Later this year, we hope,' said the executive in charge of the display piously), and it takes even more nerve to admit that when it comes to disks, the company 'plans' to have it able to read IBM disks. And when you have a portable version weighing 12kg it is probably sensible to put two handles on it, not just one. But the punchline, that this 'compatible' system will cost DM12,000 (the same as the IBM itself) does lack a certain sparkle compared with the idea of a $2000 Lisa machine by Christmas. (Oh, ho ho ho ho, hee hee hee!)

Ask a silly question...

IBM's own joke was a little esoteric. It is the prime contractor to provide the hardware for Germany's Prestel (Bildschirmtext) service, and it announced, on the second day of Hanover, that it would not be able to deliver the hardware on time. It would not be working until the second quarter of 1984.

But, said IBM earnestly, despite the early delay, after that the project would gradually catch up with the original schedule, and in the end would be completed on time, 'and as more and more you come to the end of the project in Germany, the delay will become more and more less,' added the paid optimist.

Then he turned his innocent high-wattage IQ eyes on me

and asked with palpable puzzlement: 'Tell me, why is it that all English journalists here ask about the Bildschirmtext contract?'

I can't think. Perhaps to take their minds off the Christmas $2000 Lisa (Ha ha, oh, ho'ho ho! Ooh, hee hee hee!) from Commodore.

What's in a name?

Anderson Jacobson launched a Canadian portable which runs IBM software, and is called the Hyperion, in Britain. Because the company is known as AJ to its agents, they decided not to call it the Hyperion, but the Ajile.

Yes, I think so too. Never mind. Within a week, Hyperion's makers, Bytec, had launched the product themselves in Britain, under the Hyperion name, through Gulfstream.

So I had a nice, quiet little giggle at Hanover, where I found the machine sitting on the AJ stand. It was called the 'Agile' (with a G). I totally failed to explain to the AJ man why I was laughing.

Executive perks

Osborne didn't launch the new portable computer — the Executive — at Hanover before I left but, although it was eventually announced there, plans to get it into the European market are way, way behind plans to launch it into America.

The Executive has much more memory than the Osborne I, and uses the newer, more friendly CP/M Plus operating system. It has a bigger screen, and all the other things that people didn't like about the first model have been improved (except the capacity of the disks which remain at 180 kbytes each) — so a lot of people will be pleased.

But it isn't yet clear whether the extra board that gives it an 8088 processor (as shown by IBM in the PC) and MS-DOS will be a plug-on, or an add-on, or a separate box. That will be the Executive II.

Neither machine will be freely available in the shops before October in Britain. Theoretically, Americans will get these a long time ahead of us, but in practice they will be in pretty short supply there, for a few months, too.

Price in dollars is $2600. More details next issue.

Acorn antic

We recently received a BBC micro in the *PCW* office, on order from Acorn. When it arrived, it was minus a cassette lead. Well, perhaps you have to order it separately, I thought. But no, no sign of a cassette-connecting lead on the order list. So I rang Acorn. 'Does the lead have to be ordered separately?' I asked. 'No,' I was told. 'We've discontinued them.'
Surya

Transition to IBM XT

IBM users contemplating a move up to the IBM XT when it arrives in the UK should proceed carefully — difficulties exist between the machines which could make the transition less than smooth.

To all intents and purposes the new XT machine is virtually the same as the IBM PC. It has the same keyboard and the same CPU, for example. The major differences are the integral 10 Mbyte hard disk drive, 128k standard main memory and a new 360k floppy drive from Control Data.

Looking inside the machine, though, there are some things to be wary of.

The XT comes with eight expansion slots in total — although three of these will already contain the floppy and hard disk controllers and a synchronous communications board — although it is not clear which three of the slots are shorter than those on the PC. Also, the slots are bunched much closer together. The result of all this is that some cards obtained from independent hardware manufacturers for use on the PC will not be transferable to the XT. And, even if they are transferable the closer positioning of the expansion slots means that the plastic casing may well have to be modified (with a hacksaw or file) to allow the connectors on the non-XT board to extend out of the back of the machine.

On the other hand, the fact that a board fits correctly, doesn't guarantee that it's going to function correctly. In addition to the slot changes, IBM has introduced a new 40k ROM on the XT. This does things like checking how much memory is available. A few PC users may come adrift at this point. Some independently produced RAM cards are not supplied with small rocker switches that can be set to indicate to the system how much memory is on board. So the ROM may not be able to read the RAM. (Incidentally, the new XT ROM will not be available as a separate item for installation in the PC.)

The story going around here, is that these boards will most likely be unusable with the XT. Another thing the new ROM will do is check to see if the XT expansion unit is connected to the machine. This new product consists of a second 10 Mbyte hard disk. A similar expansion unit has been designed for the PC as well and this offers essentially the same facilities. The PC version costs $3390 while the XT version costs $2695. (The extra cost of the PC version may be due to the extra circuitry that has had to go into the unit.)

In terms of using the XT to run software developed on the PC, there should be less of a problem unless the code depends on the ROM memory to a large degree. In this case, programming may have to be adapted to link neatly with the new XT ROM.

Since the XT is the first IBM machine to feature PC-DOS (MS-DOS) Version 2, the inevitable differences between operating system versions will also have to be dealt with by users.
from Robin Webster in Chicago

Inner conflict

Our own Acorn got two nasty surprises out of the West Coast Faire: first, somebody has beaten them at their own game of producing a 32-bit machine, and second, they are going to have to get heavy with somebody who is using the Acorn name.

Acorn's claim to immortality always rested on the BBC Micro's ability to withstand the future – to be upgraded, year by year, into the latest design.

This year, of course, the latest designs are starting to show the most powerful processor chips, and these have enormous 32-bit data words. That means, where you and I use eight-bit bytes to store things in, and can have up to 255 different characters to choose from in each byte, they have 32-bit words, and can store 2 to the power 32, less one, different characters.

Inner Vision got into this market in a very similar way to Acorn's proposed 32-bit add-on for the BBC micro. But instead of designing their own complete system as the foundation of the big one, they just produced a board which any S100 system user can plug in.

The board has a Zilog Z80 with CP/M on it, and next to the nice, familiar chip is the enormous National Semiconductor 16032.

Software? Not much, but quite a bit of help for those who want to write their own. The Z80 can be used to write programs for the 16032, and files are stored (for the time being, at least) using CP/M.

Inner Vision sells its dual processor card for $2150, with software costing $600 or so, including documentation. There is a 15 per cent cash discount. Details on (408) 244 8474.

Wizardry

Anybody with two tape cassettes can 'borrow' software for the VIC. Not too many people can copy their friends' plug-in ROM cartridges – which is why the Video Wizard bothered the software industry so much at the Faire.

It is sold as a 'development system package' for video games. It simply plugs into your VIC, providing you with the documentation and the hardware needed to develop and test plug-in programs – not just for the VIC, but also for the Atari 400 and 800, the Commodore 64, and also the Atari 2600 and 5200 (whatever they are) – for just $400.

And having developed your game, it then lets you load the software into a permanent memory chip, and plug it into

the target video games machine.

Anybody who thinks that this is all it will do is crazy: obviously it is mainly going to be used not to develop but to copy existing cartridges.

Full details from Gloucester Computer in Massachusetts on (617) 283 7719.

Obedient Waldo

Waldo is a plug-in card for the Apple that listens to what you say, and then does things like switch on the TV, ring bells, improvise music, turn lights on, etc. With a little luck, the light it turns on will be the one you ask it to. If not, then with luck you will understand what it says in reply.

It costs $600, with a voice unit costing an extra $200, and software controlling up to 256 remote devices costing $70.

Don't ask me if I believe it. I heard it talk, and I believe that it will ring a bell at five o'clock if you set it to do so – but as for how good it will be at listening to your voice, I refuse to say.

Contact Artra Inc in Arlington, Virginia on (703) 527 0455, and ask them.

Pinball construction

Star software product of the show was certainly the pinball construction kit from Budgeco.

This is already available in Britain through standard games dealers, and to understand how good it is, you need first to have played proper pinball, and then to have played Budgeco's original pinball game on the Apple.

You are given a screen, where on one side there is a blank square, and on the other there is a neat collection of shapes that look suspiciously like pin table furniture – flippers, bumpers, jet bumpers, rollovers, spinners, drop gates, and so on.

With a joystick, you move a little 'hand' icon around the store section, picking up parts and moving them over to the screen. If you like, you can fill the table with bumpers – you can have as many as you like.

Then you can draw pictures, in different colours, and shrink them down to appear on different parts of your pin table as logos. You can set the strength of the springs, the flippers, and the tilt of the table until you have it just right. And finally, you can set the scores.

After all that, playing pinball seems almost an anti-climax.

Chess Tournament

The 4th European Microcomputer Chess Tournament will be held from 28 September to 2 October this year. Entries are invited from amateur chess programmers and from manufacturers of dedicated chess machines or cassette-based programs.

The tournament will be an integral part of the *PCW* Show at the Barbican Centre. Further information from Tony Harrington, *PCW* Magazine.

A prayer answered

Your computer probably needs a computer to help it – especially when sending messages down the phone. Visionary Electronics has built the computer's computer, and now I shall explain why.

There is a silly problem in connecting your computer to the phone: when you do it, you need software running in order to send the coded signals down the wire.

This sounds so obvious it seems silly to mention it: the trouble is that when your computer is running communications software, it can't run a database program.

So, you call up your micro from afar and – with its clever software – it answers the phone, and can transmit information back to you.

But when it becomes apparent that there are 4000 possible names on the database, and you need the database manager to search, you then have the irritating problem of having to unload the communications program to make the search. At that point you lose control of the machine.

Visionary 100 is a little (fairly cheap, around $300) box which does all the communications work and, with a little more evolution, will actually let you use your own computer when you are somewhere else. Details are available on (415) 751 8811.

Many companies use a language called APL (A Programming Language — no kidding) as a management tool — allowing staff (usually accountants) to write their own programs for the big company mainframe.

Eddie Bleasdale, the man leaning on the disk unit of the Bleasdale BDC600 computer, reckons that by supplying these people with his Unix-based supermicro, he will give direct control of computing to departments who use a lot of company mainframe time, or a lot of remote time-sharing services.

The price of this super-micro — well over £10,000 minimum — does mean that few other people will be in the market to buy one, however.

The version of APL that he runs is the Dyalog APL, which is Unix-based.

Details from Dyadic Systems, the suppliers of the language, on (0252) 547222, or from Bleasdale on 01-828 6661.

No free chips

There are those who will say that the Beebug (BBC Micro users' group) people have been bought off. I won't say that, but only because I know Beebug has not been bought off. Appearances are against them.

The group started a battle with Acorn, saying that the initial versions of the machine were faulty, and that Acorn should provide the replacement part (a memory chip) free to its customers. Acorn insisted on charging £10 for the new chip, unless you 'need it' for things like disks.

Acorn has now come to an agreement with Beebug. This agreement does not, unfortunately, mean that Acorn is no longer charging £10 to replace the chip.

Instead, it means that Acorn supplies the chips to Beebug, which supplies it to members at £5.87 including VAT. The advantages to both parties are obvious: Beebug gets a nice stick with which to recruit from the nearly 100,000 users out there, adding to the 16,000 members it already has, while Acorn relieves itself of the work of distributing the things.

Honestly, I suppose I must admit that I never expected anything different from this battle. There were over 50,000 BBC Micros with the prototype chip in it and, at £10 each, that was half a million pounds to collect. Not the sort of thing Acorn could really be expected to write off on the altar of good public relations.

But I find the slightly self-congratulatory tone of the announcements from Beebug and Acorn just a bit sour.

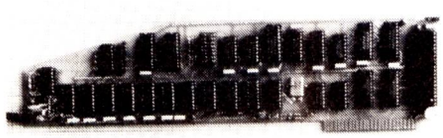

Parting company

North Star, makers of Horizon and Advantage, revealed that for six months or so they have been a subsidiary of a large American conglomerate called TRW.

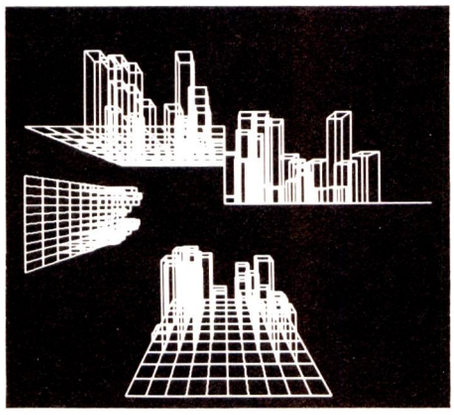

They also revealed that the deal with UK importer Comart was 'over by mutual agreement' and that they were

512 x 512 GRAPHICS

Digisolve offer you a way to increase your graphics speed and resolution. Using a high speed graphics processor, our cards draw lines and characters FAST. The graphics processor works in parallel to the host machine, and gives you the power of using a co processor specifically designed for graphics. With drawing rates of up to 1,500,000 pixels per second, lines appear instantly to speed up your plotting.
With the resolution, we offer new possibilities for software and systems. No longer is it necessary to consider one of the new 16 bit personal computers because of their better graphics. Digisolve offer a card designed for the Apple II to give 512 × 512 monochrome graphics. With the development of an 80 × 57 line Visicalc and Applewriter pre-boot, serious business users are no longer finding 80 column cards good enough. We also offer a colour unit designed to connect to any computer to give the same resolution but with 64 colours.
Digisolve are committed to the development of graphic systems and character display equipment and have a rapidly growing software base to help you use better graphics.

APPLE II CARD

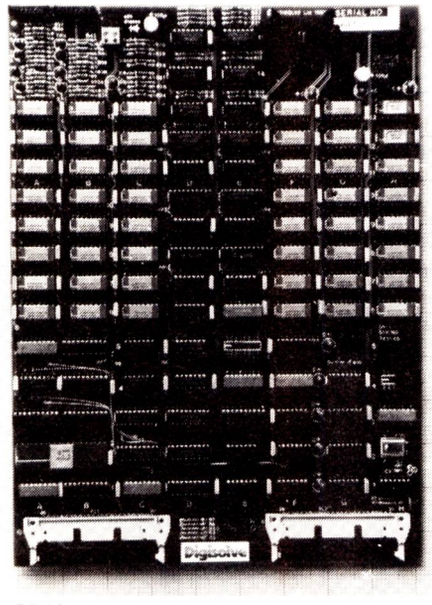

APPLE II

Digisolve's Apple II High Resolution Vector Graphic Processor Card quadruples the screen resolution and saves using up your Apple's memory space. The enhanced Applesoft support disc supplied with our card provides the powerful graphics functions and simplifies the conversion of existing software.

* Draws vectors at up to 1,500,000 pixels per second
* 512 × 512 pixels resolution
* Graphics and characters mixed, allows proportional spacing and up to 85 characters by 57 lines of text
* 64K bytes of on board memory will store two pictures for animation or have one text and one graphics page
* 4 different line types for clarity
* Blocks of variable sizes may be drawn to speed up area filling
* Read modify write mode for drawing cursors
* Screen read mode for dumping drawings to a printer
* £399 + VAT + P&P

SOFTWARE: Visicalc and Applewriter pre-boot. Architectural Design & Modelling. Kitchen Design. Draughting. Report Presentation.

Turtle Graphics, TASC & Apple Soft software support.

VGP64

VGP 64

Digisolve offer you high resolution colour graphics too. Designed to plug into any computer with a bus host adapter. The VGP 64 gives you 512 × 512 pixels in 64 colours. With its own vector processor and 384 K bytes of memory your computer can become a sophisticated graphics system.

* 64 colours that may be expanded with a pallette or extension video RAM card
* 512 × 512 pixels resolution with fast vector processor
* 384 K bytes of video RAM on board
* 2 pictures may be stored simultaneously in full colour for animation
* In monochrome 12 pictures may be stored and selected for display under software control individually or for animation
* Available as a boxed unit complete with power supply, or in board form to OEM customers
* Will plug into Apple, Commadore, IBM, Sage, S100 systems, PDP11 or any computer with a bus
* Available in several versions: 8 colour £799 64 colour £899

VDU BOARD

COMING Digisolve offer you the cheapest way to make a scrolling VDU with our intelligent 80 × 24 VDU card. With over 50 control functions the card works at up to 19.2 K baud.

* 80 Characters × 24 lines of text
* Characters are properly formed with descenders
* Block graphics option
* Fully scrolling at 19.2 K baud
* Keyboard and RS232 data input

COMING SOON: Terminal emulations including TEK 4010 in monochrome and colour. Character displays 80 × 24 and A4 size

Digisolve

APPLE II is the Trade Mark of Apple Computers Inc.

negotiating with potential new distributors.

And, like everybody else, they launched a local area net called NorthNet. To the slight embarrassment of fellow TRW subsidiary Datapoint, the NorthNet system doesn't use 'token passing' but 'contention management' — and if you don't understand that, don't panic. All these networks are hopelessly premature anyway.

Olivetti add-on

Olivetti isn't sure that it's all that important, but the M20, just as an aside, now runs standard operating software.

That is: it runs CP/M-86 and MS-DOS on an add-on processor.

You had to be pretty keen-eyed to spot this. The announcement spent a paragraph talking about how the machine was 'oriented towards professional applications'.

Then it said it was 'suitable for use in many other applications'.

Then the text dwelled lavishly on the Zilog Z8001 processor, the disks, the screen, the graphics, and the keyboard.

Next, the fact that the screen could be adjusted took up a fair amount of print. Windows were mentioned.

After that, we were told that the M20 'is able to work with other computers as a terminal' and that, in turn, 'other peripherals could be attached' to it. These included, we were informed, printers.

Finally, on the bottom of the page, the announcement said that the M20's operating system, — PCOS, Professional Computer Operating System — 'is exclusive to Olivetti, and fully exploits the system's potential.'

There was another page. It began with a nice, fat paragraph on Basic 8000, assembler and Pascal languages. It mentioned all the OLI brand software.

And then just fleetingly, before passing on to the last paragraph which told of a possible local area network *(Oh, no! Not another one! — Ed)* there was the shy little announcment:

'In its bi-processor version, incorporating an Intel 8086 processor, the M-20 is also able to operate in the popular CP/M-86 and MS-DOS environments for which a host of application programs are available on the market.'

For the price of this add-on, I was referred by the press office on the stand to the sales staff. They suggested that I get the price list from the press office. I suggested that I had work to do, and left. I suppose they see their sensible move as some kind of admission of failure. . .

END

CTUK! NEWS

Computer Town UK! is a rapidly expanding network of computer literacy centres where members of the public are given free access to all sorts of computer equipment. This is courtesy of those willing to offer time/resources. You can find a Computer Town anywhere – they're often in libraries or schools. The aim is to make micros enjoyable and non-threatening, so axe-grinding of any sort is banned. Guidelines are available for those interested in starting up their own 'Towns. Write to: CTUK!, PCW, 62 Oxford Street, London W1A 2HG. Remember to enclose an A4 SAE for your reply. Please don't ring PCW for information as CTUK! is entirely a spare time activity.

The Gremlins have been out in force on *PCW* over the past couple of months. The place where their assault has been most noticeable is this page, CTUK! News. Perhaps they don't like the idea of mixing it with Newsprint and this is their way of showing it... Never mind. We're sorry you didn't get to hear about the nation's computer literacy project for a couple of months and promise to do our best to keep things running smoothly in future.

The great thing about having missed a couple of months is that we're now in the happy position of having plenty to report on, some of it recent, other parts – due to our little disasters – not so recent.

New Computer Towns:

Lowestoft:

Contact: J G Batch, Central Library, Clapham Road, Lowestoft. Tel: 0502 514162.

This 'Town actually began in October 1982 and we've only just heard about it. It meets every Monday evening from 7-9.30pm in Lowestoft Library. It's run by library employees with the support of Suffolk County Library.

They have lots of games running on all sorts of micros and are writing some of their own 'serious' software. The 'Town also acts as a contact point for those wishing to buy hardware.

Watford:

Contact: John Byfield, Moonrakers, The Rutts, Bushey Heath, Herts WD2 1LH. Tel: 01-950 1041 (home).

CT Watford began in January 1983 in the Central Library, Watford. Meetings are held between 7-8.30pm every other Friday. This 'Town desperately needs volunteers with knowledge and/or equipment who are willing to help out.

Rayners Lane:

CTUK! Club.

Contact: Derek Knight or Bob Carter. Tel: 01-866 9185.

Meets alternate Saturday afternoons from 2.30-4.30pm. Began in early February. Volunteers needed!

Other News:

Join CTUSA! and get a newsletter telling you all about their activities and ideas. Subscriptions: $15pa – under 16s; $25pa – adults. PO Box E, Menlo Park, CA 94025, USA. A visit to their offices during a trip to the West Coast Faire revealed a great deal of interesting ideas on teaching the public about computing. CTUSA! publishes a range of leaflets and booklets to advise people who are running 'Towns and, although these are geared to the American population and its attitudes, they are full of interesting information. CTUSA! is far bigger than CTUK!, comprising an office devoted to the project and over 200 'Towns nationwide (and some in Europe).

Newcastle-upon-Tyne Polytechnic's Handicapped Persons' Research Unit is looking for information on the use of micros to help the disabled. Information gathered will be used towards a microfair to be held in Newcastle in summer 1983. If anyone can help in any way, perhaps they'd contact Peter Curran, Exhibition Assistant, 1 Coach Lane Campus, Coach Lane, Newcastle-upon-Tyne NE7 7XA.

As for more recent news, we seem to have a spreading of CTUK! worldwide. One Computer Town has started in South Africa and a library in Johannesburg wrote in for guidelines. Computer Town SA, under the guidance of Nigel Sullivan-Tailyour, held its first meeting on January 20th.

And still in the great continent of Africa, one Colonel Williams wrote to us requesting information about the project. Anyone who may have ideas and/or information they might like to pass on to him should write to: Colonel O I Williams, Headquarters, Training and Doctrine Command, Nigerian Army, Military Cantonment, PMB81, Minna, Nigeria.

Things on the home front have, though, been rather quiet as far as contact with us is concerned – is it because we're in disgrace?

Lastly, just in case you hadn't noticed, all correspondence should go to 62 Oxford Street. Maggie and David have both moved house.

Bigger and better

PCW Show time is once again approaching fast. This year, of course, the Show's all set to be even bigger and better than last year.

The Barbican Centre, for the second year running, is to be the venue. Dates are 28 September – 2 October.

In the coming months, up until the time of the Show, we'll be issuing monthly updates on exhibitors and other bits and pieces of interest. Regular visitors will remember the chess feature of old and the Scrabble championship from last year. These will both appear again and the Scrabble contest will be larger to cater for more visitors.

More on Europe's biggest Microcomputing Show next month – watch this space!

BANKS' STATEMENT

Are we opting out of the real world into an illusory one? Martin Banks continues his invective against those inviolable invaders from space.

MICRO MACHISMO

Regular readers will be aware by now that I have a considerable suspicion of all video and computer games. I am also aware that such suspicion puts me into the minority.

I did, however, participate in a 'computer games' incident recently that intrigued me. To me it makes an interesting story, so I will bore you with it. After that, we can argue the toss about what it all means... you know, WHAT IT ALL MEANS...

Right, the story.

An acquaintance of mine popped round a couple of months ago to borrow a bottle of scotch or something. What he came for is now irrelevant, for while we sat chatting, he spotted it — a home computer sitting on my desk.

'Ere, wossat?' said my acquaintance (actually he doesn't talk a bit like that but it heightens the dramatic effect, don't you think?). 'That, my good man, is a home computer,' said I (ditto the last brackets).

Being as naturally inquisitive as the next man, he decided to investigate, and soon discovered the ROM cartridge plugged into it carried some mention of a game not totally dissimilar to Space Invaders. 'Cor, lesshavago,' quoth he, and reluctantly I plugged in the joy sticks.

He then proceeded to tell me all about his days at college where he had been, at one time at least, the *de facto* Space Invaders champion of the students' union bar. At the same time he was waggling the joystick and decimating the display, flying saucers and all.

Soon enough he had cleared the first screenful while still on his second rocket launcher or whatever the damned things are called: there was one more to go. His score continued to mount until it was several orders of magnitude greater than anything I had ever achieved in the half dozen times I'd played the game.

Suddenly, disaster struck. From nowhere, a treacherous Invader dropped a couple of sneaky bombs and the war was over. Not only did the televised Fatherland lay pillaged and in waste, but one ego sat before the screen vaguely crumpled and defeated. 'I used to be able to clear two screens every time,' the ego's owner confessed.

Suddenly, disaster struck. From nowhere, a treacherous Invader dropped a couple of sneaky bombs and the war was over...

As it happened I was soon to be the source of redemption for that bruised and battered ego, for my neighbour insisted that it was now my go: that we were in some way in competition. So I took my turn against the invading hordes and, like many a battle commander before me, got completely wiped out.

Now this prompted quite a significant reaction in my acquaintance. His spirits immediately perked up because I had failed to clear the screen even once. (I must admit here that up until this point I had not even realised it was possible to clear the screen and continue the game, so badly do I play it.) Ego was at once restored, machismo came forth. Beating me at Space Invaders had somehow elevated him to some point where he perceived himself as definably 'better' than me.

What made it all the more interesting to me was the fact that he was surprised, nay, almost horrified, that I didn't care about either the game or who won. The impression I gained was that I, in some strange way, was less of a... dare I say it?... man than he for not being good at Space Invaders and, even worse, not being interested in being good at Space Invaders.

Now my acquaintance is a good bit younger than me; he must be to have been able to play Space Invaders at college, so attitudes have changed about what is a good way to demonstrate one's machismo. In my young day it was silly things like drinking competitions and riding round town seven-up in an MGB; all very conventional and middle-class.

The personal computer and the games program seem to be changing all this, for — silly as they might have been (and in practice, as harmless as they were) — those older pastimes were at least real. We actually participated in them, ran the risk of being sick for a week or falling off the side of the car as it careered round a corner. With computer games it would appear that individuals are being removed from contact with reality. It becomes important to show that one is 'better' at unreality than someone else in order to prove that one exists and has a part to play in life.

So much has been written in the past by pundits, experts, genuine thinkers and the like about what the computer/micro-electronic/information technology revolution can offer dear old humanity (even I have made the odd mention of it in the past). Much has been made of how the bad aspects should be watched and controlled, or how the use of machines by unscrupulous individuals and governments could come to dominate the actions, even the thoughts of people. Much has also been made of how the computers can be used to advance knowledge, education and creativity to the point where a kind of Utopia could be made a practical reality.

Now, my own thoughts and aspirations tend to side with the latter school of thought. I cannot help but feel that the personal computer in all its many potential guises (most of which would probably not be seen as a 'computer' at all) is like manna from heaven. Almost as if there *is* a God somewhere that is saying 'OK, you guys have managed to cock up everything else I've tried, let's see what you can do with this gizmo; let's see if you can make this one work to your betterment.'

Even I accept that, in reality, this is a fond dream. I do not accept, however, that the hopes and aspirations that lie behind the dream should not be pursued; that all the goals are unattainable. That some are attainable can be seen now in music, where the 'computer' in the form of the synthesiser *et al* has opened up the possibility for individuals to display and develop their creativity without recourse to ten years or more of hard labour learning an instrument.

...so attitudes have changed about what is a good way to demonstrate one's machismo.

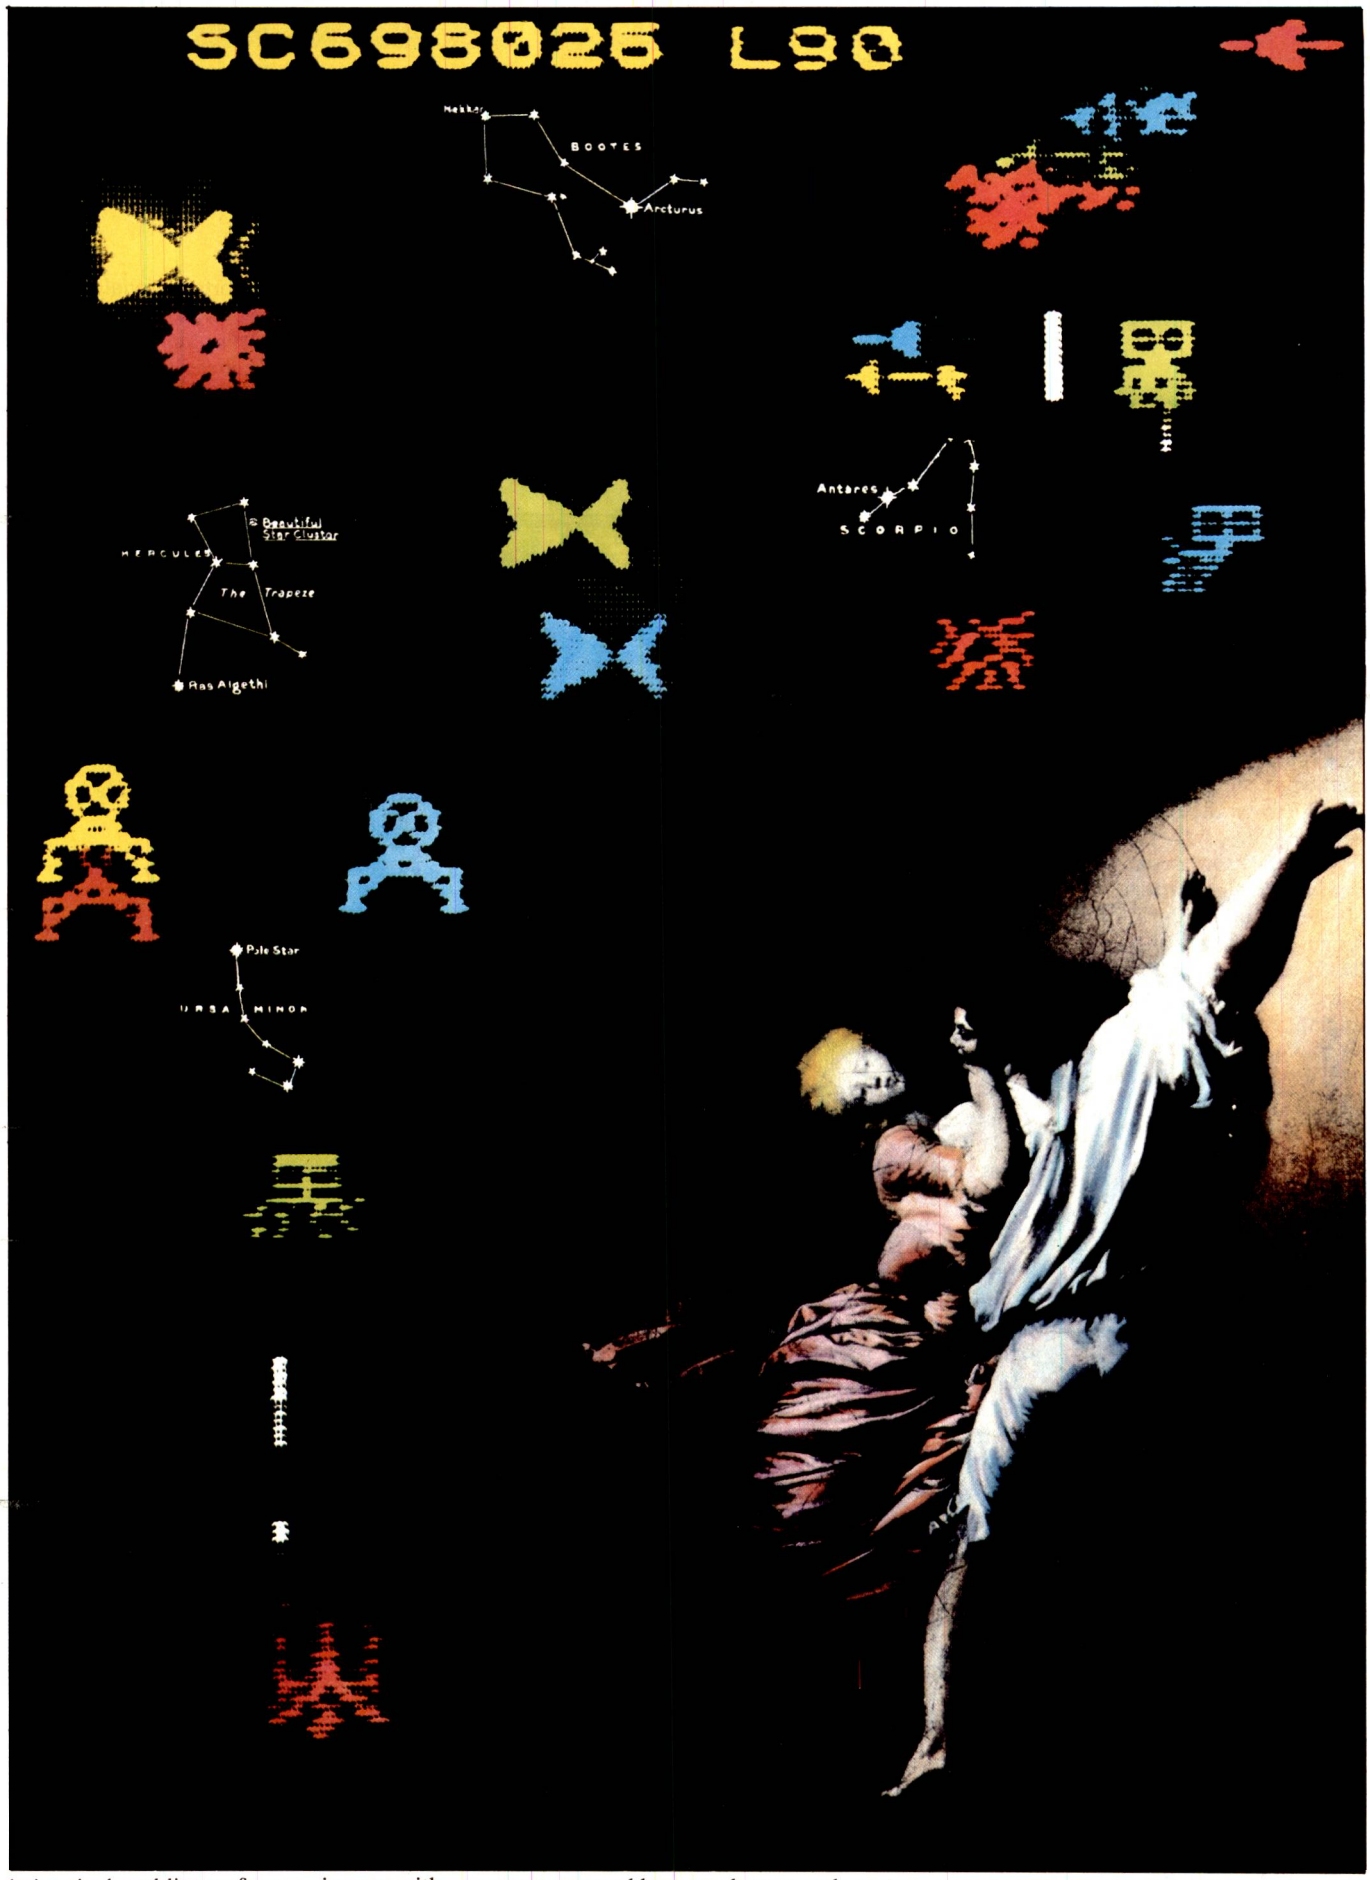

As a musician myself (and a poor one) I personally feel that coming to terms with an instrument is the best way, but I am not so much of a purist as to condemn those whose urge to create *now* demands that they take whatever route is available to circumvent the drudgery. That, to me, is an excellent use of the computer as a tool, a justifiable means to to an end.

However, I cannot feel the same way about games. In fact, I feel that they achieve — maybe even deliberately achieve — the exact opposite.

Here comes the splendidly elitist point in the argument, for I cannot help but feel that the games programs help to push individuals down to some level of 'lowest common denominator' of intellectual activity or aspiration. It is elitist if only because, as was pointed out to me by an admittedly bitter teacher a couple of years ago, 'waffling on about what good the computer can do for individuals is rubbish. In reality the vast majority are ineducable.'

Bitterness is often an over-reaction to reality, but the essence of the reality exists... many people can probably be defined as ineducable; a lowest common denominator approach to dealing with them is probably sensible; the computer game is probably the best way of giving them something to do, something to 'be' in a way that is harmless.

The demonstration of a machismo in

being the best blitzer of screen images with other screen images is probably better than exercising it by beating up one's fellow human beings in the flesh.

I can't help feeling that it shouldn't be so, that even the games approach can be used to better advantage, and that the personal computer can add more to human endeavour than it seems to be taking away at present. If that sounds elitist and/or evangelical, so be it.

Otherwise, it is going to be a rotten world we will live in, though most of us will never see it. I'm not sure I will want to. All I'll want is to be locked in my little cell with some nutrient tablets, a computer with speech synthesis and recognition, and a program called Eliza. At least that way I'll get a decent conversation.

END

Improvements for Atari

I own a Vic-20, and I am thinking of selling it to buy either an Atari 400 or 800. I was put off because the mathematical operations are slower than the Vic-20, and it can't handle string arrays of more than one dimension. Could this be improved in future if Atari develops a new Basic cartridge?
Fai Yuen Chan, Congleton, Cheshire

The speed of Atari Basic's mathematical operations is dependent on the floating point routines, which are stored in a ROM separate from the Basic cartridge. Newell Industries have produced a custom floating point ROM called 'Fastchip', which is a direct replacement for the original ROM. This can give up to 3½ times the speed of the Atari floating point routines.

This new ROM can be obtained from Silicon Chip, 302 High Street, Slough (0753) 70639, price £29.95.

String arrays can be implemented in Atari Basic by using substrings. They are a peculiarity of Microsoft Basic, and are not in the proposed ANSI Standard Basic, so don't worry too much about not having them. As far as I know, Atari hasn't any plans for developing a new Basic. However, Microsoft Basic is available on disk for the Atari and should be available on a cartridge later this year.
Terry Cleevely

Alternative keyboards for Atari

Is there an alternative keyboard available for the Atari 400? It has a flat membrane keyboard which I don't like. Any details would be greatly appreciated.
J Cole, Broadstairs, Kent.

There are several full-stroke keyboads available for the Atari 400. One is the B-Key 400 from Inhome Software. This can be obtained from Silicon Chip, 302 High Street, Slough, for £79.95. It can be fitted in a matter of minutes. Another replacement keyboard comes from Blaby Video & Computer Games, Crossways House, Lutterworth Road, Blaby, Leicester (0533) 773641.
Terry Cleevely

Microshell for Z80

The Unix operating system has many useful features, and I am beginning to regret having got an 8-bit, CP/M based system. Is there any way of running Unix on a Z80 machine?
G Dearden, Manchester

Unix, and the various Unix derived operating systems such as Xenix, are essentially 16-bit systems, and take up more memory than can readily be provided from the 64k directly addressable by an 8-bit CPU. However, it is possible to obtain some of the advantages of Unix while running under CP/M.

The Microshell program from New Generation Systems Inc — distributed in the UK by Asro Information Systems — provides many of the more useful Unix features, particularly that of redirecting input and output. Thus it becomes easy, for example, to put the DIRectory listing to a file, so that it can be sorted or otherwise manipulated. In the same way, the output from a program in Mbasic can be sent to a printer, without having to change all the PRINT statements to LPRINT!

The TYP command in Microshell is similar to CP/M's TYPE, except that the display pauses every 23 lines until a key is pressed.

Perhaps the stongest feature is the Unix style Shell, which allows commands to be read from a file in a more powerful and faster manner than SUBMIT and XSUB.

The last aspect of Microshell I will highlight is its ability to search for the required file under program control on all the active drives, rather than just on the logged-in drive.
P L McIlmoyle

Commodore 64 clarification

I am the proud owner of a Commodore 64 and would like to ask a few questions about it: When will Simon's Basic be available and what commands does it provide? Are Commodore planning mini disk drives for the 64? What users' clubs/magazines are there for owners? Will there be any manuals additional to the user guide supplied with the machine?
Christopher Tipper, Charterhouse, Surrey

At the time of writing, Simon's Basic was scheduled to be available on cartridge at the end of April. It includes commands to simplify operation of the video and sound facilities, eg, PLOT, LINE, CIRCLE, ENVELOPE, PLAY. There are extra maths commands: MOD, DIV, FRAC, binary to hex conversion. String handling is improved, with find substring position, and insert string within string facilities. Finally, some attempt has been made to introduce commands to enable structured programming in Basic, eg, IF...THEN...ELSE, REPEAT...UNTIL, LOOP...EXIT and procedures. There is much more, but this gives you an idea.

Commodore are not at present planning to bring out any so-called microdrives for the 64. The cheapest Commodore disk drive available is the 1541. The 64 will support CBM/PET disk drives when the IEEE cartridge is made available.

The only UK user club is ICPUG, which as well as providing a national newsletter, software library and discounts, also supports regional group meetings throughout the UK. Contact the Membership Sec at 30 Brancaster Rd, Newbury Park, Ilford for details. There are no magazines dedicated solely to the 64 at present.

Commodore are producing a *Programmer's Reference Guide to the 64* which tells you all that the initial user guide doesn't! It is an excellent guide which indicates how to use all the 64 facilities, such as high res plotting, and altering the use of RAM space. There is also a book, *Commodore 64 Computing* by Ian Sinclair, published by Granada at £5.95.
Brian Grainger, Independent Commodore PET Users' Group

First choice...

I am thinking of making the Acorn Electron my first computer, because I have some computer experience and I am very interested in computer graphics. Can you clear up a few points for me? Are the graphics on the Electron as good as on the Atom? Is it possible to program it to draw a 3-D object, to rotate the object and 'zoom' in or out? Could a 3-D map of, say, a valley, be drawn so one could 'fly' through it?
O R Malik, Ealing

The Electron is essentially a lower-cost entry to the BBC Micro, providing the computing and display facilities, but with the other built-in hardware features of the Beebon available for the Electron as bolt on goodies at extra cost. Look carefully at the BBC Micro specification. If you plan to add many of those features, it may be cheaper to start with the Beebon. You may also save yourself a long wait, since both the Electron and some proposed BBC add-ons seem rather slow coming to market. On your questions: Yes, and there are several modes to choose from, each with its own advantages. Yes, but this will be very slow unless only

a small portion of the picture is being moved. High quality pictorial graphics can only be achieved using enormous computer power, or by photographing separate frames as stills and showing them as a movie, or both. Realistic surface shading needs very fine luminance and colour resolution. Yes again, but this requires considerable experience in graphics programming, and definitely lots of assembly language skill. If you wish to use the Beeb highest resolution (640x256), then you may run out of memory fairly rapidly unless you are using a second processor.
Sheridan Williams and Len Warner

More directory space

I have a problem with files on my TRS-80 Model 1 disk system, which has 2x40 track and 2x80 track drives running under NEWDOS 80 V2. I have a time sheet system which creates a file for each client on the 80 track drives. I have some 110 files on the disks, which now have zero FDES but about 108 grans left. Is it possible to reserve more directory space, as this would appear to be the problem?
T R Martin, FCA, Fulham
You are quite right; the trouble is due to having filled up the available directory space before running out of disk space. This is a common problem when using a lot of small files.

A similar problem occurs with CP/M systems, where I often run out of directory space on 8-inch double density disks well before reaching the maximum capacity of some 650 bytes.

It is not easy to solve this problem, as a specific track is reserved on each TRS-80 disk for the directory: this has a maximum capacity of 48 files on a 35 track disk, 55 on a 40 track and 110 files on an 80 track. While I believe it is possible to circumvent this by locating the directory elsewhere on the disk, the result is a very great slowing of disk access speed. This might just be acceptable for loading a program, but it would be out of the question for running a program which accesses files often.

You do not mention whether you are using sequential or random files in your application. A relatively simple solution is to use random files, with each file holding data for two or more clients. You would then use the FIELD function to split the file up into its separate parts, once it has been loaded from disk.

CP/M users have the advantage of being able to join and split files at operating system level using PIP.
P L McIlmoyle

Printer parameters

I also have a problem using the new DMP400 printer, which I would like to force to produce 80 columns instead of the normal 132. This is for program listings, so I cannot alter the program output.
T R Martin, FCA, Fulham
Your printer problem is also a fairly common one, so I will give a general answer to help as many readers as possible. There are two approaches; both depending on the printer having the necessary features. Read your printer handbook to see if either is supported.

One way is to set a switch selectable option to force an automatic new line after 80 columns. The switch is usually inside the printer, so changing back and forth is inconvenient.

The other method depends on your printer responding to various control codes sent to it before the text to be printed. Find the 'escape sequence' of codes which will set the line to 80 columns. Since the printer will keep this setting until you choose another, you can run a small Basic program to PRINT CHR$(), the codes needed, before you print your 80 column file.
P L McIlmoyle

Young entrepreneur

I am 15 and write programs as a hobby, but I would like to sell them on cassette to earn a little money for add-ons. Where would I stand on VAT? How can I market my tapes, and can I use programs I have had published in magazines?
(Name and address withheld by request)
There are very many people already marketing programs they have written; you only have to look through the small ads in *PCW* to see. The competition is fierce and unless you have around £500 to invest in a larger ad to start such a venture you are unlikely to catch the eye of the mass of users. Don't let that put you off though. Test the ground first to assess demand. Start with a small ad in a magazine that specialises in your particular micro. Make sure that you can cope with a rush of, say, 100 orders in the first instance, and don't bank the money until you are ready to despatch. Keep clear and detailed accounts. You will not have to register for VAT, so no need to worry about that yet.

You normally keep the copyright to any material published unless you sign away that copyright, so you can earn £25-£50 per printed page for your program published in a magazine, and still be able to sell tapes of later versions.

Another possibility is using an existing software house, who will market your program and pay a royalty on each copy sold.

Finally, there is Micronet 800, the Prestel personal computer users' group. Unfortunately, they ask for the copyright, but if your program is very good you can haggle — they may want it anyway.

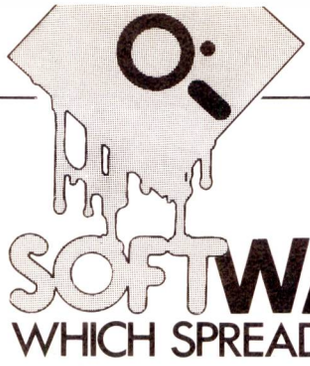

Please make sure that your programs have been tested and debugged thoroughly — use several very critical friends, offer to give them £1 for every error or sensible criticism they find. If you are not willing to do that, then I suggest that you are not confident enough in your program to market it. Remember that people are entitled to their money back if it does not do what is claimed of it.
Sheridan Williams

Disk dilemma

Trouble with 'back-up' on my CBM 8032 has corrupted part of my primary disk. Some files shown in the directory give a 'file not found' error, preventing disk back-up. Could you give a routine to read the file names from the directory into an array, so that I can use it in a file copy program which skips the corrupted files on the primary disk.
A J Willis, Beaconsfield
People who are getting deeply involved with the PET/CBM micro should invest in *Programming the PET/CBM* by Raeto West, published by Level at £14.95 (or £15.90 post paid from MoI, St Albans 52801). Chapter six deals at length with disks, and on page 218 you will find a routine to read and print the disk directory, which I am sure you will be able to modify to store the directory contents instead.
Len Warner

'Sooner or later, Clive, someone is going to find out.'

WHICH SPREADSHEET?

EXPANDING THE APPLE

Visicalc on the Apple is usually limited by the 40-column display and 25k of free RAM. Mike Liardet investigates Vergecourt's answer to the problem.

Since late 1979, either 400,000, 250,000 or 200,000 (depending on the source) people have reached into their pockets, pulled out either $200, £150 or £125 (depending when and where they were buying) and walked away with a copy of the famous Visicalc program. Just to save you reaching for your spreadsheets, I can tell you, taking the most conservative figures, that adds up to a total value of sales around £25 million. Not bad going for a product written by two MIT graduates with a third floor apartment for an office.

Since those early days, the two MIT graduates, Dan Bricklin and Bob Frankston, have grown into a company (Software Arts) of 50-plus employees, and Visicalc is now available on more than ten different machines, from PETs to IBM PCs. There are also a score of imitators — some have been covered already in this series — and a host of Visicalc add-ons and 'improvements' produced by independent manufacturers.

In this article we will look at a series of improvement products produced by a UK company named Vergecourt. Basically, a fairly high percentage of those 200,000-plus purchasers bought the Apple II version of Visicalc — this being the original version. Accordingly, all Vergecourt's (spreadsheet) products are aimed solely at that considerable number of Visicalc users on Apple. And it has reputedly sold 'into four figures' of Visicalc enhancements in the 18 months since its first product was launched.

Its top of the range product, with the tortuous title of 'Super Expander 80.2', provides you with the facility to create and manipulate very much larger spreadsheets than are possible with Visicalc alone. It also interfaces Visicalc to a selection of 80-column display cards and provides several additional command facilities: enhanced formatting, validation, fast data entry and so on.

Of course, if you want to use these facilities you can't just buy the software — you must also dip into your pockets for some relatively pricey hardware. You will need Vergecourt's Ramex 128k RAM card at £295, and (optionally — you can stick with 40 columns if you want) an 80-column card costing typically £150-£200. If you really want to build up a huge spreadsheet model you can also buy another 128k RAM card which would permit your speadsheets to consume up to 25k — over ten times as much as can be handled by Visicalc without expansion RAM.

A roofrack for the Apple

Suppose you use a small van for general fetching and carrying but you find, occasionally, that it just is not big enough. A nice cheap option is to buy a roofrack. This would enable you to deal with the occasional extra load, without the expense of trade-ins and higher running costs. Of course, if you regularly and grossly overload then you will be heading for big trouble, since although the roofrack can stand the strain the small van undoubtedly cannot.

Well, of course, the sort of enhancement product being considered here is rather like the situation with the van and the roofrack. Yes, it can be extremely useful, enabling us to create very much larger spreadsheet models than was previously possible, but we are still stuck with the Apple II's processor speed and disk capacity, etc. If it takes, say, 30 seconds to calculate a 24k spreadsheet model, then it's going to be at least five minutes on an equivalent 250k model. If an Apple disk can hold only 130k of data then we need two whole disks to save one full 250k model.

So, the moral of all this is, spreadsheet memory expansion facilities, used intelligently, can be of great value: you don't need to trade in your existing machine. You don't need to retrain for some other package. You don't need to convert all your existing models, etc. If you do ever push these facilities right to the limit then, unlike the roofrack, it won't blow up your machine, but will just become progressively more sluggish and tedious.

Visicalc alone

Before looking seriously at Vergecourt's offering, let's consider what we can do with Visicalc alone. Visicalc owners can safely skip these sections.

The Visicalc package is supplied as a floppy disk, in a stout simulated leather ring-binder, containing nearly 200 pages of documentation, quick reference card and a few other odds and ends. The disk is specially prepared so that it cannot be copied by the standard disk-copying facilities, so if you want a backup copy (and I would advise everyone to have one), you must either send off the registration card with payment for one, or else buy one of the many advertised programs capable of copying Visicalc (and other similarly 'copy-protected' programs). Whichever way you obtain your backup copy, the copyright still applies with the possibility (if you should so much as lend it to your pal down the road) of '. . . damages up to $50,000 . . . up to one year's imprisonment . . .', to quote from the front of the manual. It's enough to scare you off buying it!

As I have already mentioned, Visicalc is available on a variety of machines, but here we are just considering the Apple II. With the Apple, all that's needed is a single floppy disk drive, but of course an extra drive and printer would be advisable for most users. With this set-up you can create spreadsheet models consuming up to 25k of RAM. If you add a 16k RAM card (available from many suppliers including Vergecourt — it costs £75), then without any modification or extra software utilities the 25k limit is extended to 34k. Why is there only a 9k increase from a 16k card? Well, there are various technical difficulties that prevent full usage of all RAM on the card.

Once you have Visicalc working with the 34k limit, then you have as good a spreadsheet system as is generally available today on any 8-bit micro. That is to say: if Visicalc was a brand new release today, I would still give it a good review. It surpasses many of its imitators, with no major signs of ageing.

In addition, a major advantage Visicalc holds over the other spreadsheet systems is the enormous variety of add-on facilities that have sprung up around it. Thus, if you want training you can go on a course or buy special training disks and documentation. If you are mathematically inept and have a fairly standard requirement, then there may be a 'template system' which will set up the Visicalc model for you, etc. Of course, the Vergecourt products are part of this list of add-ons.

Using Visicalc alone

The Apple version of Visicalc is a complete turnkey system. To get started, put the disk in the drive, switch on and you are fairly instantly treated to the world-famous display. Part of the screen is displayed in inverse characters (ie, white background): a status line at the top, followed by a

prompt line and then, skipping a blank line, we have the inverted 'L'-shape for the border of the spreadsheet itself. At switch-on the spread-sheet area is completely blank, except for the cursor at the top left-hand cell. On screen at any moment 20 lines four spreadsheet cells wide can be displayed. Of course, as the Apple screen is only 40 characters wide, that is all there is room for (until you upgrade with Vergecourt), but like most of its imitators, Visicalc permits cell widths to be changed. So if you are working with small numbers you can fit more cells in the width available, but you are still stuck with a maximum total of 40 characters across.

The Visicalc manual has two major sections: a tutorial arranged as four lessons and an extensive reference section. In my opinion, the manual is so good that I can't imagine how the Visicalc training vendors ever sell anything. The four lessons are designed to take you from complete novice through to fumbling expert after just a few hours' practice. The reference section should answer every last conceivable query you may have about the system and once you are fully conversant with it there is a handy reference card to act as an *aide-memoire*.

Actually, setting up formulae, entering text and numeric data is pretty much as I have previously described for its imitators. There is an excellent split-screen facility, so that two distant areas of spreadsheet can be simultaneously on display, and all disk operations are integrated as part of the system. Unlike many other software packages, particularly those written for CP/M systems, Visicalc allows you to initialise new disks, load, save and delete, leave the disk-drive door open and everything else without getting involved with the Apple's operating system.

Of course, Visicalc has an extensive range of maths facilities including trig, logical, row-sum, not to mention 11-digit precision arithmetic. The only facility I am inclined to criticise is the printing. Every time you do a printout you have to remember a cryptic sequence of characters to initialise your printer and then find the bottom right-hand corner of the area you wish to print. Visicalc does not automatically break reports into sections if they should happen to exceed the maximum width allowed by your printer stationery (and most spreadsheet reports do exceed the maximum), so by careful column counting or hit-and-miss experimentation you have to organise the correct breaks yourself.

Finally, I ran Visicalc through the standard Benchmarks. Like most spreadsheet systems on 8-bit micros it is relatively easy to run out of memory, long before the actual theoretical spreadsheet area (254 x 63 with Visicalc) is filled up. This seems to be a fairly universal problem with 64k RAM 8-bit processor micros. The only way round it is to get rid of the whole lot and go for a 16-bit micro or, less traumatically, consider the delights of memory expansion facilities . . .

Enter Vergecourt!

My review material, kindly loaned by Vergecourt, comprised one 128k RAM board, and 'Enhancer' disk with documentation and a Super Expander 80 disk with documentation. As my copy deadline loomed, Vergecourt released a new Super Expander 80.2 software system containing all the features of '80' but with the ability to handle two, not one, 128k RAM cards, as well as super-fast disk saves and three new commands for Visicalc itself. Paul Jenkins of Vergecourt rushed around to demonstrate its 'new baby' to enable me to report on it here. The evaluation work, however, was based on the version '80'.

Just to clarify what I found to be a fairly confusing plethora of product names, here are the Vergecourt offerings relating to this article:

16k and 128k RAM cards. Visicalc itself can handle the 16k RAM card. With the 128k RAM card, additional Vergecourt software must be purchased for it to be of any use with Visicalc. (It does come with free Enhancer software facilities providing disk emulation and extra program space, both useful for the Apple applications programmer but irrelevant to Visicalc.)

Super Expander software. This simply enables Visicalc to use the 128k RAM card, increasing maximum spreadsheet size from 25k to 136k — ie, by more than five times. Since the huge spreadsheet models can take up to two or three minutes to save on disk, Vergecourt has thoughtfully provided additional commands to do quick loads and saves — around 20 seconds or so.

Super Expander 80 software. Everything in the above system plus ability to utilise a variety of 80-column cards, plus yet more disk facilities.

Super Expander 80.2 software. As above, but can handle two 128k RAM cards plus three new Visicalc commands (unrelated to storage space): validation facilities, extra formatting (eg, negative numbers in parentheses, prefix currency characters), and an applications-turnkey facility.

One final thing. The products are also available for the latest version Apple IIe and work with most versions of Visicalc under the DOS 3.3 operating system.

Getting started

Having fumbled for a few seconds attempting to open the elegant packaging for the 128k RAM card, I had to reach for my sunglasses when I succeeded. Vergecourt has departed from the usual boring green printed circuit board and adopted a stunning ketchup red. Coupled with the dazzling gold labels signalling the usage of new generation 64k-bit RAM chips, the overall effect is of a fairly striking piece of hardware. It's a pity that you can't see it when you are using it (and enough to tempt you to buy one of those transparent lids now available for demonstration Apples!).

The board is slightly larger than most Apple peripheral boards — about the same height but slightly longer than a punched-card, if you can remember back that far! It comes complete with 16 64k-bit RAM chips, providing a full complement of 128k of RAM, and six LED status lights (of little consequence to the Visicalc user but nice to watch flashing on and off, I suppose). Unlike some other Apple RAM boards there is no extra 'strap' attached to the board, and thus no need to remove a chip from the Apple main board to plug the strap in. This makes installation extremely simple — just a matter of switching off and plugging the card into a vacant slot. The most tricky part of the whole operation is fathoming out which slot can be used. After much manual scouring, I eventually determined that in my case anywhere would do — Vergecourt software can automatically find the location of the card, so in most instances it does not matter where you put it as long as it's in the Apple somewhere!

To get Visicalc running and using the new card involves a 'two-stage boot'. Switch on with Vergecourt's Expander 80 disk in place then, after a short delay, replace it with your normal Visicalc disk. Before this disk can be read you must indicate which type of 80-column display card you are using. I found this a little puzzling in two ways. First the question is asked on a neatly formatted display already using your 80-column card — if it can get this right before it asks the question, why ask at all? Secondly, you have to type in a number, but it does not tell you on the screen which number is for which card, so you have to consult the manual. Anyway, as soon as you hit the right number, the disk drive starts whirring and after a pause (just a little too long) with a totally blank screen, the familiar Visicalc screen appears. (Vergecourt has pre-empted this criticism with the 80.2 — a 'Please Wait' message is shown.)

I said 'familiar' above, but of course there are a couple of major differences. The top right-hand corner displays the immense figure 136, indicating 136k of free memory for our spreadsheet models and, of course, we have twice as much on display because the system can now make full use of the 80-column card.

Eating (RAM) chips

Having got this far I was anxious to 'eat up' as much as possible of the 136k of available RAM. Although the hardware/software does have other facilities, I would identify this as being the major reason for using a Vergecourt system. Quickly keying in the main Benchmark test, I discovered that the 13-column test-model could be replicated right down to the last (254th) row and still leave a lot of memory to spare. This compares with 34k Visicalc (ie, normal Visicalc but with a 16k RAM card installed) which completely exhausts all storage after 82 rows. In fact, Vergecourt's enhancement provides both; nominally four times as much storage (4 x 34k = 136k) and also, in practice, four times the maximum model size.

Manual trouble

It goes without saying that there is very little for the expert Visicalcer to learn about the enhanced system since the basic operation of Visicalc is unchanged by the Vergecourt software (except for the enhancements — see below). This is just as well, because the Vergecourt manuals are fairly heavy going.

I found their content muddled in places and some of the explanations a little confusing. Actually using the product is incredibly simple, but you wouldn't think so to look at

EXPANDING THE APPLE

the manual! Another source of annoyance stemmed from the fact that two manuals are provided (one for Visicalc users and one for everyone else). Both are identical on the outside with no title at all! I, of course, kept picking up the wrong one. The internal presentation of each manual was mediocre (with a few pages stapled in place) but difficult to flick through, and with the give-away serrated edges at the bottom: presumably a daisywheel printout onto continuous stationery. Given the obvious effort that Vergecourt has made with its product presentation, glossy advertising literature, etc, I felt surprised that it had let these fairly short manuals 'slip through the net'.

Visicalc enhancements

As I have already explained, Vergecourt provides a choice of software relating to Visicalc and the 128k RAM card. The principal facilities available relate to interfacing Visicalc to the 128k card and to a variety of 80-column cards, but there are also other facilities 'thrown in', appearing as extra command options in the Visicalc system itself.

Most pertinent to working with large spreadsheet models are problems with saving and loading to disk. It's all very well being able to create 136k spreadsheet models, but how do you get them onto slow and low-capacity Apple disks? Vergecourt has attempted to solve this one in two ways: a special fast 'binary-save' and the opportunity to save in two or more halves. Since saving in two halves involves using two disks, with the consequent risk of mis-pairing with other paired disks, Vergecourt suggests you save each half on both sides of one disk. This is risky, particularly with disks only rated as single-sided (ie, disks most commonly used with Apple).

Vergecourt has also, with its new 80.2 software, embedded a whole range of new facilities in Visicalc. These facilities are irrelevant to anyone solely concerned with memory expansion and 80-column displays, but should be of interest to anyone wanting to generate a Visicalc 'turnkey' or 'templated' application. It has provided variable column widths, protected fields, hidden fields, fast data entry, choice of numeric formats and a few other goodies besides. Vergecourt also claims that, with the 80-column screen and extra-large cells, Visicalc can be used as a word processor. My only comment on this is to quote Visicalc author Bob Frankston's remark on this very topic: using Visicalc as a word-processor is 'like the drunk who has lost his key . . .' (he looks under the street light even though he lost it up the street).

In conclusion

If you are already using Apple Visicalc, and are frustrated by the 34k maximum model size, then the Vergecourt hardware+software solution has a lot to offer. If you also happen to have 80-column display facilities, then the opportunity to make use of them with Visicalc is also very attractive. However, you should not expect to fill up all this extra memory without degradation in performance: recalculation times are roughly proportional to the size of the model and loading and saving onto the limited Apple disks will not be as straightforward as previously.

Vergecourt's latest software release will permit even larger, 255k, spreadsheets on the Apple, but attempting any serious work on the Apple with spreadsheets of this size would exhaust my tolerance for one. According to Vergecourt, it does have satisfied customers in this department, so maybe I am just not as tolerant as some! Also packaged in with this release are some novel facilities — which will undoubtedly be of interest to anyone wishing to create spreadsheet systems for naive users in an applications environment. There is no need to be put off by the 255k tag, since it's all there with 136k as well.

My only real grouse about the products is the standard of the manuals, which fall far short of Visicalc's excellence. Fortunately there is no great need to use them after the early stages, so this deficiency is not as serious as it could be.

Finally, how does the Vergecourt+ Apple system compare with the newer 16-bit micros, eg, IBM and Sirius, expandable (if your wallet can stand it!) up to 800k of RAM? Well, it works out a fair bit cheaper but it does stand to be slightly less convenient and, if used to the ultimate extreme, pushes Visicalc and the Apple to limits for which they were not designed. On the other hand, the newer 16-bit micros do have greater disk-capacity and a slight edge on processor speed, both advantageous when working with large spreadsheets, but they are also more expensive. END

Checklist

Documentation: Disappointing. Two small manuals, one for Visicalc users and the other for applications programmers. Mitigated by the fact that there is little need to use them after the system has been installed.
User-friendliness: Very good. The enhancements are totally integrated into Visicalc, so a trained Visicalc user would need only about two minutes to familiarise himself.
Facilities: (Depending on which Vergecourt software you select) 136k or 255k maximum model size, interface to 80-column cards, fast disk load and save, partial load and save, extra formatting, protected fields, hidden fields, validation, variable column widths, fast data entry. All this in addition to the existing Visicalc features.

Benchmarks and other measurements

Both 136k Visicalc and 34k Visicalc were tested. Where different the 34k Visicalc figures are appended in parentheses. (For more information on these tests see *PCW* February 1983.)
Measurements: Up to 255 rows and 63 columns. Each column can be up to 77 (37) characters wide. Numeric precision is 11 digits.
Benchmark 1: (a) 320 (82) rows; (b) 176 (43) seconds, ie, approx 2 rows per second in both cases; (c) as for (b); (d) 1.35 (10) rows per second, 2.5 (6) columns per second.
Benchmark 2: No real limit (148) rows of text.
Benchmark 3: No real limit (254) rows of numbers.
Price: 128k RAM card for £295+VAT, expansion software from £40 to £80+VAT.
Further information: Vergecourt Ltd, 17 Nobel Square, Basildon, Essex. Tel (0268) 728484.

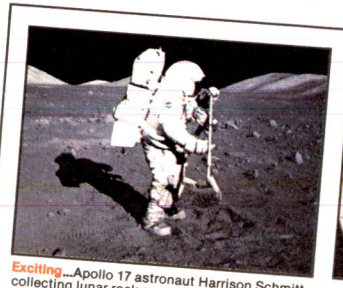

'Poor Arnold — what he needs is an expansion interface for his brain!'

TODAY'S BOOKS... TOMORROW'S WORLDS

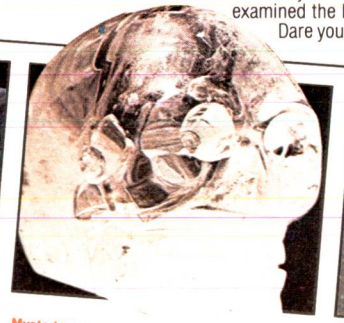

Encounters is the book club that looks beyond the ordinary, probing the unexplained, offering the latest books about all things magical, mystical, scientific and futuristic. Top authors in science fiction and science fact...books which explore unsolved riddles and the supernatural...shed new light on the paranormal...present fascinating theories about man's future in the cosmos.

Save £££s on today's most intriguing books... As an Encounters member you'll receive — at convenient intervals of approximately three months — a free magazine reviewing the latest titles, including many on general subjects to interest others in your family. Hundreds of full-length, hardback books each year to choose from, at between 25% and 50% below publishers' prices. From that huge choice, all we ask is that you take at least one book each quarter during your membership. Which titles you choose is entirely up to you — and you'll save money on every book you buy. For example, some recent bestsellers enjoyed by members at big savings include Isaac Asimov's *Foundation's Edge*, Arthur C. Clarke's *2010, Odyssey Two, History of Manned Space Flight, The Science in Science Fiction.*

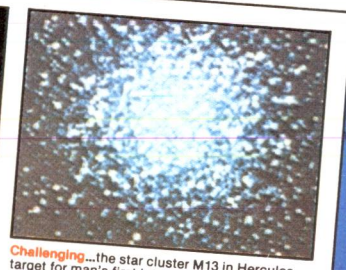

Don't miss this great introductory offer.
Choose any three books from the big selection shown here for just 99p each, plus £1.75 towards post and packing*. Depending on which books you choose, your Introductory parcel could be worth as much as £38 at publishers' prices. Send no money at this stage — decide only when you've examined the books for TEN DAYS in your own home...
Dare you come face to face with the unexplained?

Exciting...Apollo 17 astronaut Harrison Schmitt collecting lunar rock samples. Mankind has come a long way, but there is still so much to explore...

Mysterious...the crystal 'Skull of Doom', said to be 3,600 years old and "the embodiment of all evil". The past holds as many unsolved questions as the future...

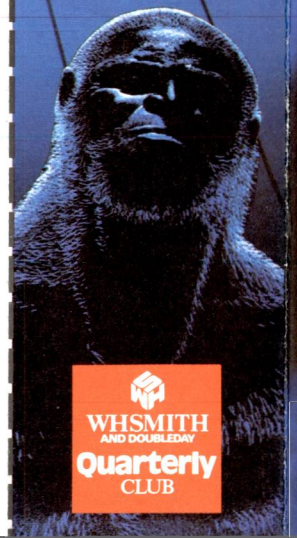

Challenging...the star cluster M13 in Hercules, target for man's first international message to the stars. It will arrive in 24,000 years' time...Is there anybody out there...?

A two-minute operation turns your BBC Micro into the heart of a word processor.

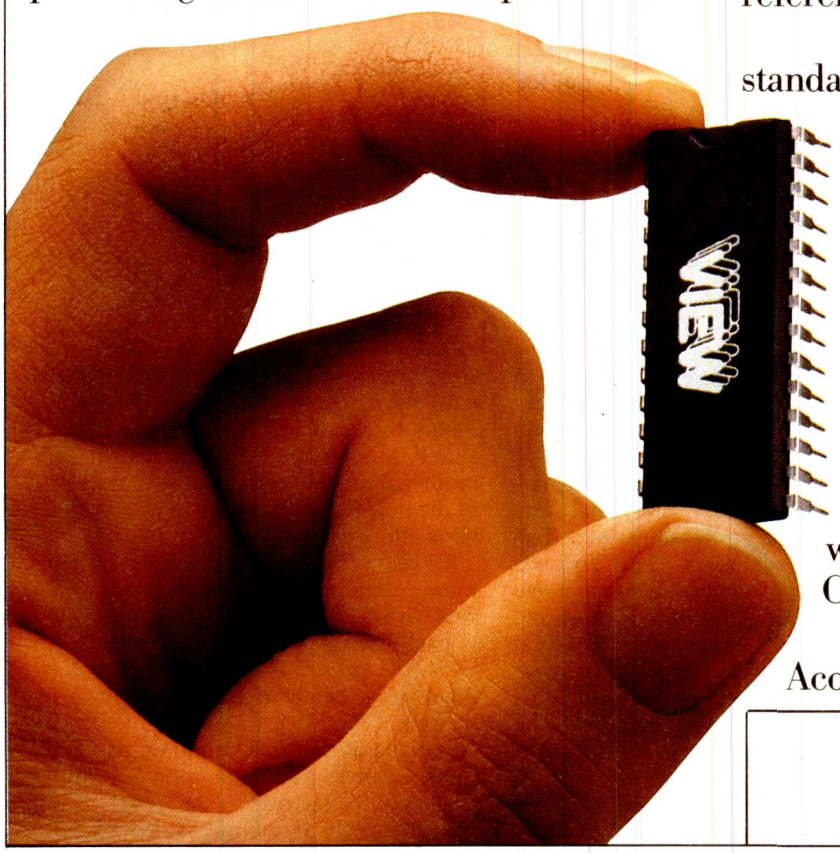

VIEW is a software program from Acornsoft (the software division of Acorn Computers Ltd., who designed and built the BBC Micro) that enables you to use your BBC Micro, together with a printer, as a fully operational word processor.

View is supplied as a Rom chip that can easily be fitted to your BBC Micro by your local dealer, in a painless two-minute operation.

Then, once installed, you only have to switch on and View is operating immediately. (You can easily switch back to normal computing with a single command.)

Also included in the View package are two special books: 'Into View,' that takes you by easy stages through all the word processing commands and explains the many ways in which View can help you, and the 'View Guide,' which provides a quick reference to all View facilities.

You'll find that View is, by any standards, a thoroughly professional system, yet still surprisingly simple for the beginner to master.

The 'Spark-Jet Printer' shown in the photograph is the ideal choice of printer for your word processing application. Extremely quiet, it offers high resolution graphics from monitor or T.V. screen and is available now from dealers.

If you'd like more information, write to Acornsoft, 4a Market Hill, Cambridge CB2 3NJ.

Or, for details of your local Acornsoft dealer, phone 01-200 0200.

BENCHTEST

COLOUR GENIE

Maggie Burton finds out whether this is the Genie we've all been wishing for.

Nobody seems to know much about EACA International Ltd, except that it is in Hong Kong. Before the entry, some years ago now, of the Genie I into the micro market, the company was almost unknown.

The Genie III, launched in summer last year, is a large 64k business box with two disk drives. The Genie I and its brother (sister if you're a feminist), the Genie II, are both TRS-80 compatible. Programs are written for TRS-80 model III and/or Video Genie all the time – rarely explicitly for one or the other. So you might logically expect the Colour Genie to be TRS-80 colour compatible. Well, we'll explode that possible misconception first of all. It's a very different machine indeed, in spite of some inevitable similarities.

The Colour Genie (note the English spelling – this is used all the way through the manual, pleasantly enough) was announced late last summer. Delays followed (they are mandatory, it seems, if you are to produce a home computer at all). The machine was made available to dealers late in November 1982 under the auspices of Lowe Electronics, the sole distributor for this country.

12-key numeric joysticks

The machine is available throughout the world, except the USA. Perhaps that would account for the use of English English (inasmuch as the Chinese produce English documentation) rather than American in the manual.

Lowe itself is a company with a comparatively long history. Amateur radio equipment is another of its specialities; micros being a relatively new venture. An attempt to secure distribution for the VIC-20 failed because Lowe wanted the sole distributorship and would settle for nothing less. Instead, it took on the Colour Genie.

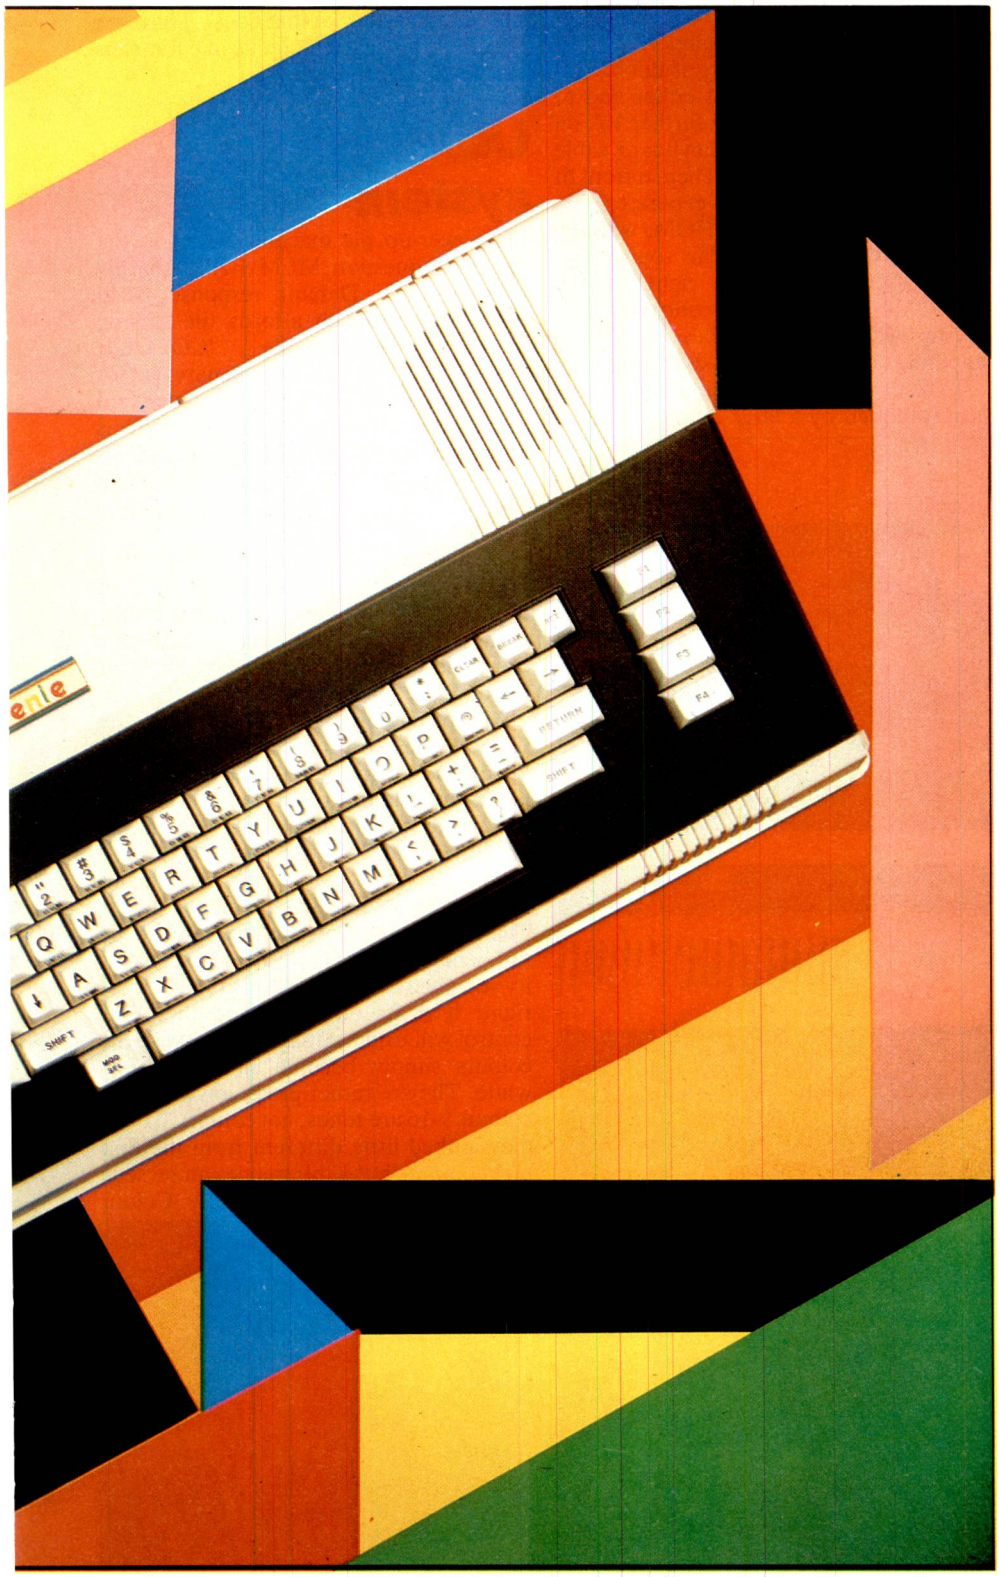

The initial impression of this beast is one of a machine which was built to withstand a lot of knocking around. Should robustness rate highly on your list of points to consider when buying a machine, the Genie will almost certainly rise in your estimation.

The Genie (or EG2000 to give it another name) is cream in colour with a coffee coloured band running across it to distinguish the keyboard (I sound like a furniture designer now). It's thickset and rather angular to look at.

It's very heavy – about eight pounds – simply because the PSU is internal. The machine is, incidentally, unearthed (like many of its competitors). The TV lead is also fixed. This is sensible in a home machine. It makes it quicker to set up and put away and there are no leads (apart from the cassette) to get lost. To overcome the resultant heat problem, the PSU itself is surrounded by a huge heat-sink and the bottom of the machine consists more of ventilation slots than plastic. What looked (from the outside) like an internal speaker at first glance actually turned out to be no more than a round ventilation hole at the back on the right, behind the keyboard. The Genie outputs sound through the TV loudspeaker or another amplifier and speakers. In spite of all the holes, the machine still gets pretty warm after an hour or so.

It's also very big (as compared to other home machines), as its dimensions will show. It's 43.2cm wide, 28cm from front to back, and 8.4cm high at the highest point (the back). The casing is cuboidal although the height tapers a little towards the front.

Looking at the back, from left to right are the cassette port, expansion bus (into which ROM cartridges can plug), TV lead, audio (hi fi) output, video (RGB

monitor) port, power switch (which is a rocker switch and made harder to turn off than on) and mains lead. Looking from the front again on the right side are, from front to back, a parallel expansion (for joystick controller or centronics printer), light pen port and serial port (a DIN socket) for modems and serial printers.

The 63 key keyboard is pretty conventional in its layout. Lower case (using the shift key à la MZ-80K) and 64 of the 128 graphics characters are directly obtainable through it. It also provides four function keys preprogrammed with some oft-used Basic commands. Shifting these keys provides four more possibilities. The Genie thinks it has eight function keys. These are to be found on the right of the main keyboard. To the left of the main keyboard is a little light which happily glows away when the power is on. Next to the space bar is a key labelled 'MOD SEL'. This toggles you between alphanumerics and graphics. How annoying to hit it by accident and find yourself suddenly typing gibberish! Two shift keys are situated one on either side of the 'Z' row, the left one with a shift lock on its outside. This is a 'hard' lock which makes a sweet little click when you press it. Very pleasant to fiddle about with while puzzling over huge calculations.

Then, apart from the control key, you have four arrows. These seem logical to look at but they're not. The left arrow is a destructive backspace (ie, back/delete), the right arrow jumps from one TAB position to the next, the up arrow is the exponentiation key and produces a '[' when pressed and the down arrow is a carriage return/line feed. A repeat key on the outside left negates the need for auto repeat, so auto repeat is omitted. This key interestingly repeats the last key pressed until it is released. Therefore, you don't need to hold down two keys at once.

Lastly, on the numeric row of the keyboard, just about every abortive probability is catered for. Endless loop crashes may be exited by pressing the two keys marked 'reset' at the same time. They are on the right and left at the outside, so you have to be deliberate about using them. This seems overcautious if you consider that these keys do not affect whatever program material is currently in RAM. The break key stops the program at whatever point it's reached and leaves it there. Programs can then be resumed by typing 'cont'. Finally, the 'clear' key clears the screen and homes the cursor.

All the keys are large and 'heavy'. Like VIC-20 keys they have the appropriate graphics characters silk-screened on their fronts. Typing extracts some noisy clattering and faint spring sounds. All the keys except the space bar have a pleasant 'gooey feeling' – when you press one it feels a bit like prodding a warm blancmange. Nevertheless, the keys respond to a fairly light touch and bounce back with a healthy bite. I liked touch typing on it – in spite of my recurrent thoughts of milk-and-gelantine desserts. The space bar, though, should be on a different keyboard. It's dead and clattery. On one of the two machines I tried out, it often stuck and sometimes didn't work until pressed more than once.

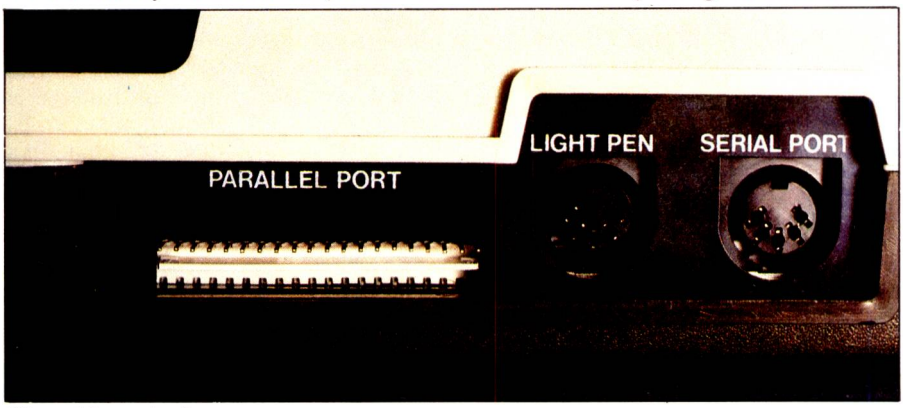

Moving on, the machine is opened by undoing three screws in little wells underneath at the front. These screws are even provided with little washers which I've never seen before on screws for a home micro. Once these are undone and put somewhere where they won't get eaten by the dog, you can lift the top from the machine, unplug the keyboard connector from its socket at the back of the machine and look at the whole PCB. Putting the damned thing back together isn't half as easy – you have to position the top of the casing just right so it snaps shut when you put it down.

At first sight the PCB is logically designed, but there's something just a little bit wrong. Basically, it could have been fitted into half the space it actually occupies. At the same time it reflects the solidity of the whole machine. A small separate board containing the interpreter EPROMs and two spare sockets is fastened to the main board by way of two little metal columns. Bunches of wires are clipped – not taped – together and all loose single wires are securely fastened to the PCB out of harm's way. All the ports which, on many other machines, give you a big hole through which to look inside the machine are provided with little plastic hoods to hide the circuitry.

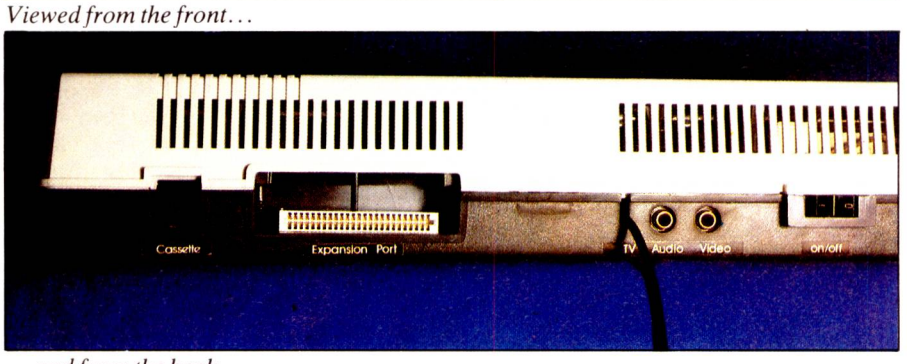

With the front of the machine facing

you the components are mostly towards the back of the PCB; the front under the keyboard being occupied by an expanse of odd little gates. On the right next to the PSU is a strange little board held on one end by two plastic clips. Without taking delicate things to bits it is impossible to read the names on the chips to see what they do here. Next to this is the UHF modulator with the computer end of the TV lead firmly soldered to it (a laudable measure, as before said). To the immediate right of that is the standard 16k of RAM (all in the same part of the board) with two banks of pins at either end to facilitate the inclusion of a further 16k on a little extra board. The keyboard cable connects just behind this. Then in front of the RAM is the character generator chip and on its right are the EPROMs with the Z80 in front of them. The sound chip (AY3 8910) is on the right of the EPROMs and the CRT controller chip mysteriously turns up miles away from anything on the right towards the front.

In front of the PSU is a transistor which is surrounded by a large aluminium heat sink. Don't ask what that does – I have no idea, but the heat sink looks like it means business.

Viewed from the front...

...and from the back

Using the system

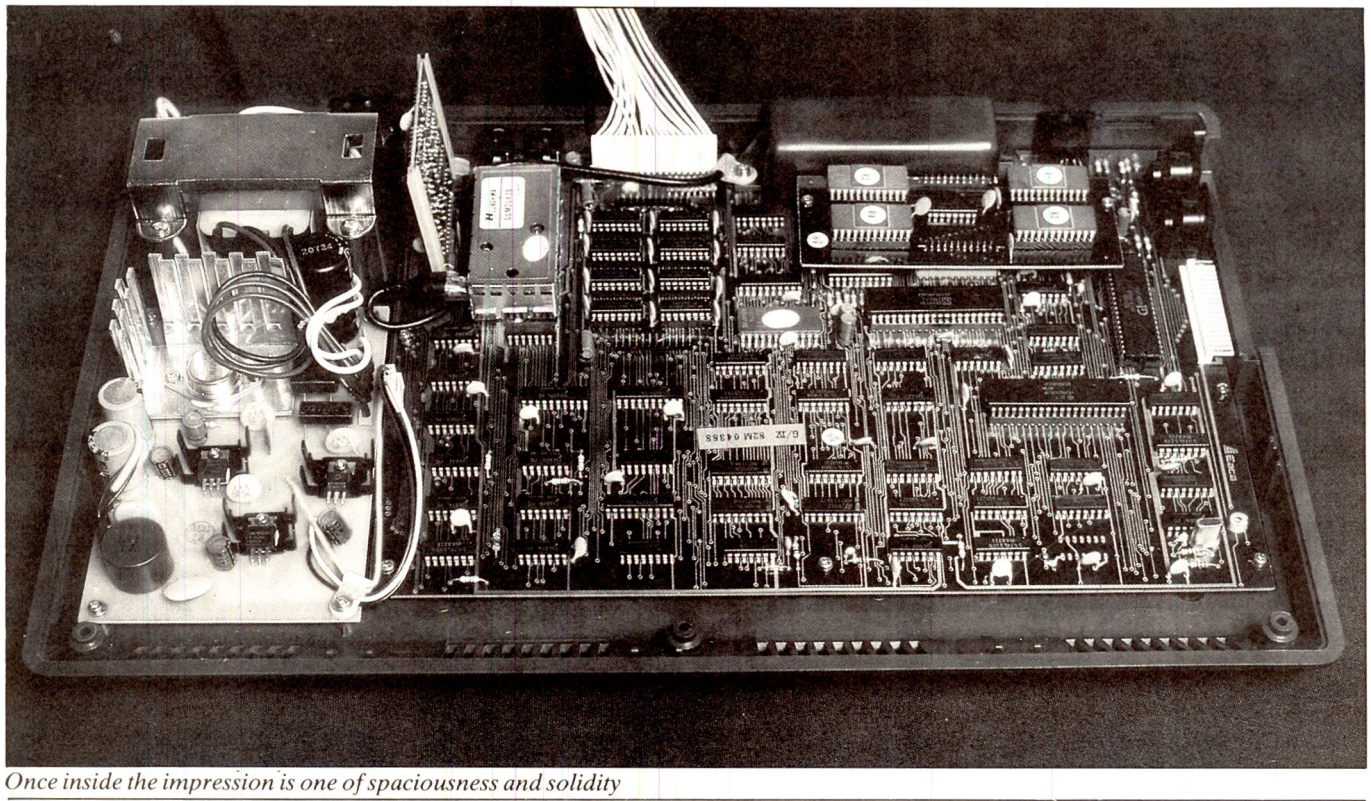

On power-up the machine asks you the enigmatic question 'MEM SIZE?' (hardly user-friendly). Default response is to press return, which affords the slightly more comprehensible 'COLOUR BASIC. READY' and a square cursor which flashes at a noticeably uneven and rather too rapid rate. (The cursor is programmable by POKEing two addresses with one each of several values. You can thus alter the flash rate and cursor size.)

Should you specify a number instead of pressing return, you then reserve an area of memory for whatever reason you may wish to reserve it. This number should be the highest memory location available for use by Basic – in decimal.

My programming ventures with the Genie began with some confusion. While the manual clearly stated that the machine has eight colours, other sources insisted the number is in fact 16. Even in the present manual (errors of this type are forgivable in a draft copy), it is maintained that the machine has eight colours. The truth is between the two. To get the full benefit of the Genie's colour capability you need to have the thing tuned in just right; it drifts off often and the AFC control will usually hold it. Otherwise the colours simply become shades of off-white. They're rather pastel anyway. The colours 9-16 are tones, not colours. To me they looked little different from the first eight colours but a difference can be seen if the TV is functioning correctly. Colour

The conventional 63 key keyboard

Once inside the impression is one of spaciousness and solidity

is controlled by the COLOUR command. At the same time, you are told in the manual that using the control key with one of the first eight colour numbers will change the subsequent display to that colour. On both the machines I tried, this failed to work consistently. The power-up colour is green. Colours range from white through orange and a slightly puce pink (red) to bluish hues and finally an almost invisible slate grey. These are text colours. The background colour is any colour you like as long as it's black (except in high resolution graphics where changes are possible)!

This seems as good a time as any to mention the fact that some TVs are not only dodgy with this machine but utterly incompatible. One of these was my Hitachi portable. On this television it was impossible to fix the high resolution graphics display, although the low resolution one was fine. Other TVs which produce bad displays are, according to a Genie dealer, Pye and Philips. ITT, Grundig and Sony Trinitron all work well with the machine although they need very careful tuning. One machine I tried out worked perfectly well for a day or so and then began producing huge amounts of snow on the screen at regular intervals accompanied by a short, hissing crackle. Tuning did not help, nor did turning the machine off for a couple of hours. Something in the circuitry was interfering with the video control.

Microsoft Basic

The Colour Genie uses Microsoft Basic. That means one has to suffer the almost insufferable – the Microsoft editor. So while looking mournfully at little arrow keys I patiently tried it out to see if it was, after all, quicker to use than the cursor-key method.

Frankly, after a few complicated editing tasks I gave up altogether. Having to remember what 12 different keys do, and the formats by which one asks them to perform their often unnecessary functions, is too much. I retyped lines instead of editing them after that. It's far quicker.

Microsoft Basic is not, by today's standards, a structured or even very powerful language. Inasmuch as Basic is itself powerful, so Microsoft Basic has power. But it's old fashioned. You don't see such things as PROC or DO LOOPs, which make programming easier and more readable. The Colour Genie leaves out DEF FN as well, which is a disadvantage. Making whoopee with graphics and colour is also, is some respects, difficult as compared to other home machines. You have no flash facility and no inverse video (unless you want to program the whole character set to do it yourself and then it will only appear in squares rather than the whole screen). You can't change the background – no luminance, no double height or super/subscripted characters. Everything you want to do with this machine has to be done from scratch. To the more experienced user, it's a challenge. To the beginner, it's a maze which could be permanently offputting.

All the conventional areas in the Basic language are provided for in a Microsoft standard way. Arrays, strings (LEFT$, RIGHT$, ASC, VAL, STR$...), functions (SIN, CON, TAN, INT, RND...), loops (GOTO, GOSUB, FOR...NEXT (with STEP as well)...) and conditions with IF...THEN and AND/OR all pass the critical eye with little to report. The Genie, though, has some funny little idiosyncrasies which merit description.

If you have your wits about you when writing a program it is useful to be able instantly to classify variables before you start. DEFSTR, DEFINT, DEFDBL and DEFSNG allow you to do that. By typing in one of these commands and either a letter or range of letters, you can make all the variable names beginning with one of the specified letters strings, integers (this is a bit like a more comprehensive INT), double or single precision. There is no way, apart from looking back on your code or keeping a note on paper, of telling which variables defined under these commands do what. DEFSTR B, for example, does not give 'B' variables a dollar extension to say they are strings. While this is handy, it seems no more than a rather cosmetic measure.

Cassette handling is fairly good. Loading, though sensitive, is reliable. Using the Genie's own dedicated recorder adds to this reliability. Saving is a different story. I tried unsuccessfully to save a program on a couple of occasions, only to find, by using the VERIFY command, that it wasn't on the tape. The command SYSTEM puts you into the monitor for the writing and loading of machine code. The monitor is very poorly explained in the manual. Incidentally, the cassette lead has a blue remote lead attached. Nowhere in the manual is the use of this explained, and one machine I looked at had this lead cut off. Considering both machines were sent to me as packed for sale to a customer, this is rather odd. The machine with the blue lead still attached was the earlier one, so the deduction here is that the remote lead is no longer in use on later Genies.

The well-used ON ERROR GOTO phrase is oddly complimented by the addition of ERROR. ERROR followed by the specified error code (there are 22, each producing its own mnemonic when it crops up) will actually produce a reaction from the computer as if that error had occurred. That is, if you haven't had enough of errors already, you can make your machine bomb out whenever you feel like it. Perhaps in some applications

GET MORE FROM YOUR 64. WITH VIZAWRITE 64.

ONLY £69 plus VAT

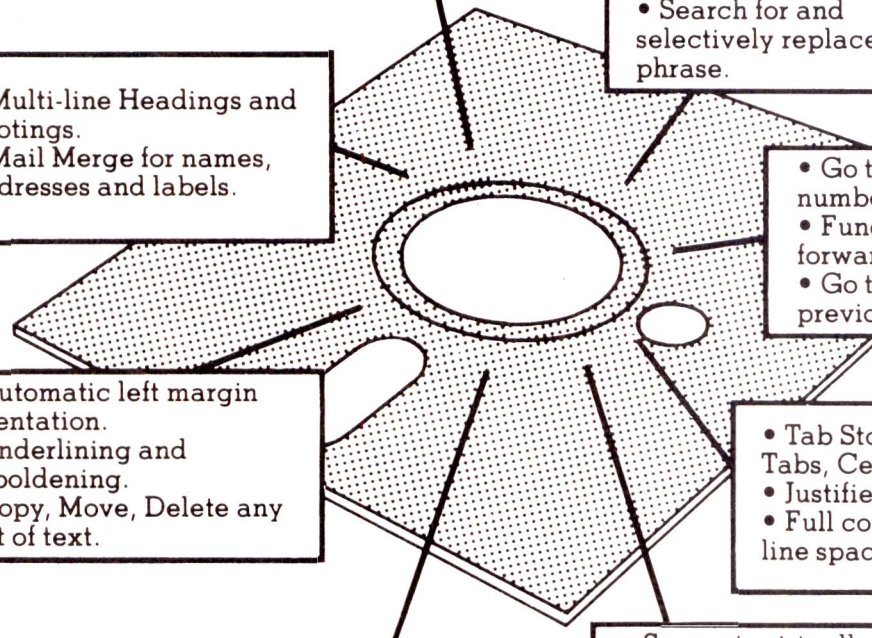

THE PERSONAL WORD PROCESSOR

Vizawrite 64 is a high performance, low-cost word processor designed especially for the Commodore 64 computer. Vizawrite 64 takes full advantage of the colour, graphics and memory capabilities of the computer to bring you the power and style of a dedicated word processor.

Serious word processor users expect their word processor to format their text as they type, Vizawrite 64 does this instantly. Tabs, indentation, centering are all clearly visible and easily altered, so you know exactly the format of your text all the time.

Vizawrite 64 is a disk-based word processing program — it is available NOW from your local Commodore dealer or direct from Viza Software. It costs just £69.00 plus VAT (£79.35).

VIZAWRITE 64 — SPECIFICATIONS

- Page based — formats text instantly, as you type.
- Format line to control margins and Tab stops.
- Full range of graphic word processing symbols.
- Full scrolling.
- Merge other documents into current document.
- Search for and selectively replace a phrase.
- Multi-line Headings and Footings.
- Mail Merge for names, addresses and labels.
- Go to selected page number.
- Function keys to page forwards, backwards.
- Go to next screen, previous screen.
- Automatic left margin indentation.
- Underlining and emboldening.
- Copy, Move, Delete any part of text.
- Tab Stops, Decimal Tabs, Centering.
- Justified printing.
- Full control over pitch, line spacing.
- Merge other texts directly into document — including Wordcraft, Wordpro, Silicon Office.
- Selectable colour modes.
- Supports virtually any printer — VIC, EPSON, QUME, DIABLO, SPINWRITER.
- No interface required for parallel printers.

A 30,000 word dictionary for spell checking your documents

programs it's helpful to be able to control the generation of error messages, but the use of ERROR on its own will not prevent the machine from crashing – quite the reverse, in fact.

Function keys

The function keys I mentioned earlier are great fun. FKEY1="PRINT @" makes the key display PRINT @ whenever it is pressed. It's also possible to add a carriage return to things like RUN just by omitting the second set of quotes. You can make the keys display words and numbers as well as keywords. It is not possible, though, to include a program 'phrase' like PRINT "HELLO". These simply return a syntax error.

The arithmetic functions provided, as before said, are what one would expect on a Basic machine – with the exclusion of DEF FN. The Genie, though, also provides two INT commands – CINT and INT. Both of these do exactly the same thing – return the largest integer contained within an argument. CDBL and CSNG return the double or single precision version of an argument and FIX knocks off all the digits after the decimal point (isn't that what INT and CINT do?). The Genie also omits a PI function.

Graphics and colour

The graphics, as I said before, are not easy and are initially confusing to use. The Genie has two screens in video RAM at any one time. There's the LGR page and the FGR page. These mnemonics are also Basic commands to switch you from one to the other from within a program. In direct mode you can toggle between the two using control and 'MOD SEL' together to go from low to high, and the reset keys to go back again. Commands can be executed on the FGR page without being displayed. The FGR command is necessary to change the display from high to low resolution.

The LGR page is the one with '16' colours, user defined characters, PRINT @ and the like. The FGR page provides PLOT, PAINT, SHAPE, BGRD and four colour (including black) with which to draw. The resolution is 160x96.

Drawing shapes is quite simple on this page. The CIRCLE command (with centre point and radius length specified) will draw a circle of any size on the screen. PAINT will fill a closed shape in the specified colour until it reaches a border of specified colour. You have to be a little bit careful when using this because if the virtual cursor meets a gap in the edge of the shape it is painting, it will 'bleed' through it and try to fill the whole screen. CPOINT allows you to read the colour of any point on the screen.

FILL, BGRD and NBGRD all change the background colour. The low res page does not allow this. BGRD will change the background to a bright pink. It is returned to black by typing NBGRD.

COLOUR GENIE

FILL will colour the screen with any one of the four high resolution graphics colours – green, blue, orange or black.

PLOT ... TO and NPLOT are quite a powerful and easily memorable combination of line drawing commands. PLOT and PLOT ... TO put points or draw lines on the screen. NPLOT 'undraws' them.

Some quite complicated shapes can be drawn on the FGR page using those commands and shape tables. I must confess to a certain ignorance of the power of these things – entirely because they are never explained properly in manuals. The basic principle is simple although the practice involves knowing which addresses to poke with what numbers. While the rationale is plain, such terms as 'upper nibble' are not explained – yes, I know that's half a byte – but what about someone who's never touched a computer before?

Anyway, once you've POKEd your numbers into your shape table (the numbers tell the machine what direction it must plot in, and in what colour), you can translate them into screen data using SHAPE x,y, which will, all being well, put the shape you want to draw in the right place on the screen. NSHAPE blanks out the shape – these two commands used together can create some nice effects of things appearing and disappearing with no trouble. XSHAPE changes the colour of a shape to its opposite – ie, blue will change to red and green to pink. SCALE is used to alter the size of a shape. SCALE1 is normal size. SCALE2 is twice as big, and so on.

On the LGR page the construction of complex shapes is somewhat easier than fiddling about with shape tables. User defined graphics can be produced, and these work by enabling the user to redefine characters 128-255 which are normally preprogrammed graphics accessed by using PRINT CHR$.

Here's where it's very easy to get confused. The Genie has four character sets – which are all mostly rearrangements of the default one. These consist of four types: alpha – normal alphanumerics; prog – programmable graphics characters, spec – the alternate set to be found on the keyboard and graph – a group of graphics characters used, according to the manual, 'in non-English alphabets'. CHAR is a system command which allows you to switch from one set to another. CHAR1 leaves you with 128 graphics characters to program. CHAR4 gives you none because it's all composed of alpha, graph and spec characters. It's quite fun to print out the whole character set, type in different CHAR commands and watch bits of the set vanish or reappear. CHAR1 is the best for user defined graphics – if you want to define more than 64 characters.

The Genie provides no BIN command. An ASCII code is assigned to a character using CHR$ (they are also printed out this way). The manual kindly includes a program to make the rather complicated task of defining a character a little easier. Basically it involves binary and octal to decimal conversions and simpler methods have been devised. The character matrix is a standard 8x8. When you consider that there are 960 character squares (40x24) on the low res screen it becomes apparent that very fine shape definition is possible.

The PRINT @ command is, incidentally, rather unusual. Instead of the usual PRINT@ x,y this function works by accepting an individual number from 0 to 959 for a character position. This is quite simple to work out but confusing compared to the co-ordinates system. 0 is the top left corner, 39 is the top left, 80 is immediately below that, 120 immediately below 8; and so on. This ended posing a bit of a disadvantage, as I shall outline later. PRINT TAB and PRINT USING are also available.

Sound generation

The programmable sound generator AY38910, is in use in quite a few computers and sound boxes these days. The Genie controls it with two Basic commands, SOUND and PLAY. PLAY is the musical one. The parameters are channel number (there are three channels), octave (there are eight), note (from one to 12) and amplitude (from one to 15). Using this command you can make some interesting sound effects as demonstration software indicated. But under this control there is no facility for specifying note duration. Therefore a note will continue until it is replaced by another or a command given to make it stop. This I found rather an important omission.

SOUND is a command operating on a lower level than PLAY. The chip has 16 registers and SOUND sends values to different registers depending on the sound wanted. It is possible to generate sound envelopes using this command. Gunshots, lasers, explosions and electric piano notes can be produced quite easily with this command. Since sound comes from the TV loudspeaker instead of a little cheap one inside the computer, the quality is pretty high.

Add-ons

The expansion capabilities of the Genie are fair. Disk drives will be launched soon, probably with a 'GenieDOS' rather than something like CP/M. A space is already reserved in memory for disk I/O. Two printers are currently available for the machine – the EG3085 which is the same machine as the new Apple printer, but £60 cheaper, and the EG603, which is substantially cheaper than the 3085 (which is actually more expensive than the Genie itself ...). Both are dot matrix; the 3085 printing at 120cps and the 603 at 80cps. You have to buy a cable (at £39.50) to run either printer from the Genie, and this enables you to run any Centronics compatible printer. A light pen will be

USED EXTENSIVELY THROUGHOUT THE ELECTRONICS INDUSTRY AND NOW AVAILABLE FOR THE FIRST TIME TO THE AMBITIOUS CONSTRUCTOR, THE R50 DIY COMPUTER FROM RADE SYSTEMS. HERE'S WHAT YOU GET...

ONLY £215 PRICE INCLUDES VAT, PACKING + POSTAGE

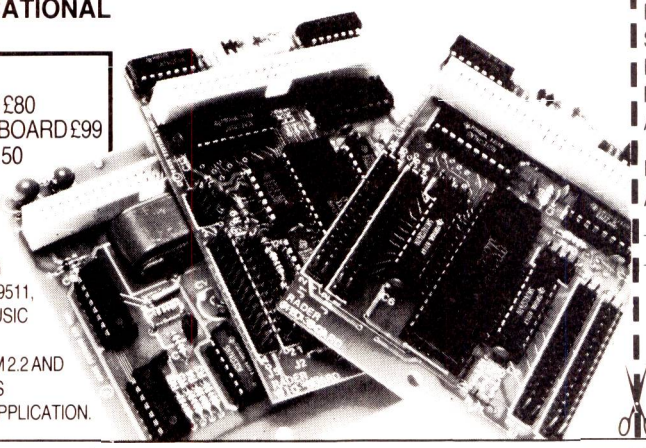

● Z80A BASED PROCESSOR ● FULL 64K OF DYNAMIC RAM ● DUAL SERIAL PORTS ● PARALLEL PRINTER PORT ● UNLIMITED EXPANSION VIA TWO EXPANSION CONNECTORS ● FULL 4MHZ CPU ● FULL CPM SUPPORT VIA ADD-ON FLOPPY OR HARD DISC OPTION BOARDS ● USER MANUAL

You can make it.

DOZENS OF APPLICATIONS INCLUDE: ● AUTOMATION DEVICES ● CONTROL APPLICATIONS ● COMMUNICATIONS EQUIPMENT ● BUSINESS MACHINES ● WORD PROCESSORS ● GRAPHICS DISPLAYS ● SCIENTIFIC AND EDUCATIONAL

OPTION BOARDS INCLUDE:
● FLOPPY DISK CONTROLLER £80
● SPRITE COLOUR GRAPHICS BOARD £99
● R50 TECHNICAL MANUAL £6.50
PRICES INCLUDE P+P

ALSO AVAILABLE PIO, SIO, IEEE 488 PORT, REAL TIME CLOCK, PROTOTYPING BOARD, MATHS PROCESSOR USES AMD9511, A TO D CONVERTOR, STEREO SOUND MUSIC BOARD, 192K RAM BOARD, CASSETTE INTERFACE, HARD DISC INTERFACE, CPM 2.2 AND TURBODOS AVAILABLE. INTERFACE KITS FOR ALL LEADING MICROS, PRICES ON APPLICATION.

DEALER ENQUIRIES WELCOME

NEW

Possibly **the best value CP/M applications program for sale in the world.** ***Probably*** **the best way to improve productivity with your micro.** ***Guaranteed*** **to be the most efficient way to learn to type or to improve your typing.—IANKEY**

Be honest: agree you'll benefit from IANKEY. You, your family, your staff, your students, your friends. (There's a money-back guarantee of that.)

But you will enjoy proving us right! It's **new.** It's the IANKEY keyboard skills package. It's from one of Britain's newest and most exciting serious software publishers. IANSYST.

ONLY ~~£29~~ £25 INTRODUCTORY OFFER
We could charge £250 to sell IANKEY to schools and colleges, but because we want people like you all over the world to benefit IANKEY is an incredible £29—for more program than WordStar! So schools and colleges pay only £29 too. Oh well! We'll cry all the way to the bank.

Compare it with the competition at any price: Caxton's *Touch 'N' Go*, Anthony Ashpitel's *Typing Master*, Microsoft or WDS's *Typing Tutor*, *Hyper-Typer*, even old favourites like *Sight and Sound*. Feature for feature IANKEY earns a walkover.

MONEY BACK NO RISK PURCHASE
Please specify computer and disk format

Thoroughly researched
At Iansyst we have studied at length how people best learn to type. We have used this knowledge to design IANKEY and its individual lessons.

You do not need a manual to use IANKEY — instructions appear on the screen when you need them.

You get instant feedback on how well you are doing. No waiting for results.

You get proper words to type right from the beginning. No meaningless drills like "ASDF JKL;".

The exercises you type are informative. You should find them interesting. Not just a series of improving proverbs which you know anyway! Nor meaningless random words.

Screen Displays
The computer display is packed with information. It flashes the letters on a keyboard. You learn without needing to search on the keys themselves.

Those are just a few of its many features.

Recommended retail price is ~~£29~~ £25 until 31/5/83
plus P&P £2, VAT £4.05 = £31.05
VISA/MASTERCARD accepted or cash with order.

Iansyst Software (C.A.), Omnibus Building, 41 North Road, London N7 9DP. Dealer enquiries welcome.

available sooner or later, but the demand for them does not seem too high at present. It could be some time.

The joystick controller is a lot of fun. It connects via the Centronics port which is, incidentally, not a standard connector but a row of those frighteningly fragile pins which might or might not snap depending on how careful you are. It is a fiddly thing to plug in and can come loose quite easily, much to my annoyance when I became frenetic over a space game. The cable connecting it to the computer is a little too short as well. Like the Genie, it is robust and solid. The two joysticks connect to the main console through coiled telephone-type cables. They can be clipped into it for extra stability.

The joysticks come with 12-key numeric keypads which have Spectrumesque rubber keys. The sticks themselves are metal with a hard round rubber gear-knob type thing on the top. Responsiveness is superb and movement is extremely smooth and easy. It was a joy (!) to play games using them, although they are perhaps a little pricey at £49.49. My big criticism of them is that they are not compatible with the Genie's PRINT @ function. Joystick position is read using four system variables – JOY1X, JOY1Y, JOY2X and JOY2Y. JOY2Y, for instance, contains the y co-ordinate of the second joystick. To find out the joystick cursor position for either joystick you need to know both x and y co-ordinates. This makes it impossible to put both joystick co-ordinates into variables and then use these variables to print something at that position on the screen because, as you know, the Genie gives each screen point an individual position. Compatibility between these two functions would make joystick use a lot easier. KEYPAD1 or @ returns the value of whatever key on the keypad is being pressed.

The Genie is not, as it stands, expandable much out of its class. Spare sockets are provided for new ROMs which could lead to some interesting possibilities in future but no RAM expansion is available beyond 32k. No 80 column option is available, either, which makes word processing a bit of a problem. It is possible that one or both of these may appear in future.

COLOUR GENIE

Software

Software seems to range from absolutely terrible to excellent. Algray and Molimerx have always been names which spring to mind when TRS-80/Video Genie software is mentioned. Algray's programs for the colour Genie are, from what I've seen, rather spectacular, if poorly debugged, machine code offerings. Skramble is one I'd definitely recommend. Molimerx's games, if the one I tried out is anything to go by, are not so good – although judging by the company's past record the rest may be better.

The Genie's software library is quite big. It includes games, like the ones I've already mentioned, adventures, programming tools (eg, monitors, etc) and utilities such as file handling.

In addition the Colour Genie User Group will shortly be providing a regular (probably monthly) magazine for its members. At the time of writing, Chewing Gum issue one was just about to go to press and includes news, programs and tips and a spot on software – including complaints about the ones to avoid. The user group is in the process of building up a big software library. Lowe Soft, Lowe's inhouse software distributor, will be commissioning and distributing software – some of it for educational purposes.

Documentation

The manuals for this machine are, frankly, awful. Machines which have been in the shops since before Christmas (yes, there are a few) will be supplied with the most incomprehensible draft manual you can imagine. A proper manual is now available but this is also pretty unhelpful. Neither pretend to teach you how to program (it's just as well) but they do both claim to be sources of reference.

Nor do either of them fulfil that purpose properly. Not all keywords are explained; only the graphics ASCII codes are listed in the new manual (not the alphanumerics); there is no contents page and no proper, itemised index of Basic commands. The English is also a bit difficult to understand at times. This is almost certainly due to the fact that EACA probably wrote the original in Chinese and translated it directly into English. The grammar is, at times, quite amusing. Nevertheless, the new manual does provide some useful little programs and what it does explain is quite clear once you've read it over two or three times. A technical manual is on its way which will provide much more information for the programmer who really means business. Regrettably, I was unable to get my hands on one.

Prices

16k Colour Genie £199
RAM expansion £38.50
EG3085 printer £410.55
EG603 printer £270.25
Printer cable £39.50
Disk drives N/A
Light pen N/A
(All prices include VAT)

Conclusions

To summarise, I'm puzzled. The extraordinary attention paid to hardware detail in this machine is tempered by some serious doubts and disadvantages. One of a few dealers with whom I spoke about the machine explained that he would no longer be stocking the machine until he was satisfied of its reliability. He claimed to have sent about 75 per cent of machines back to Lowe. This person may be very fussy, in which case he'd have problems finding any home machine which met his standards. He may also be right. Neither machine I tested exhibited any crippling fault apart from that of screen interference as mentioned earlier in the Benchtest.

All the same, the Genie is a machine with a lot of potential in the hands of an expert. For a beginner, its value as a purchase depends heavily on two things: software and documentation; I can't stress this enough. A book is planned for the Genie from Ian Sinclair – *Mastering the Colour Genie*. This should go to press very soon (if it hasn't by the time you read this). The software library should expand and the user group with its well thought out magazine will certainly provide support. Lowe itself is able to provide rapid and reliable maintenance where needed.

Lowe is aiming this machine at the 'games plus' buyer – ie, the knowledgeable enthusiast – and this is where it will go. I can't see it being a machine which will be a first time buy, mostly because it is quite complicated to use. It's a more subtle creature than the zapping, blasting, brightly coloured boxes of tricks people want to buy these days but, judging by the software I've seen on it, great things are possible.

END

Technical Specifications

CPU:	Z80
RAM:	16k (expandable internally to 32k)
ROM:	16k
Keyboard:	63 key typewriter quality. 4 programmable function keys. Graphics/lower case directly available. Qwerty layout.
Display:	UHF TV 40x24. High resoluion graphics 160x96. RGB monitor option.
I/O ports:	Cassette, serial, parallel, audio, light pen, ROM cartridge, expansion bus.
Expansion:	Disks/light pen coming. Printer available. ROM cartridges also available.

SCREENPLAY

Steve Mann looks at games for the Oric-1 and Jupiter Ace

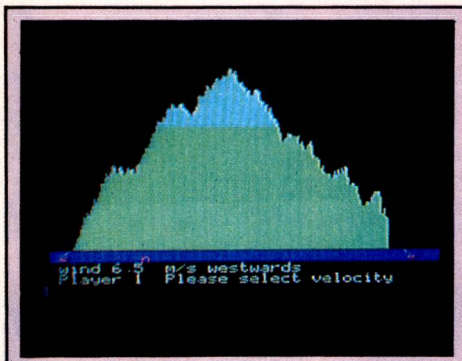

This month's Screenplay sets a precedent by looking at games for two different computers, both of which have appeared in the shops in the last few months.

A major problem with any new machine is the dearth of available software. The Jupiter Ace has been around since before Christmas and it is only recently that the first few games cassettes have appeared. In the case of the Oric, response has been a bit quicker, and no doubt in the months to come software support for this machine will reach the VIC or Spectrum level.

The other indication that these are new models is the somewhat simplistic nature of the early games. This is similar to the situation soon after the Spectrum's arrival when software companies hastily revamped their ZX81 material to cash in on the new market.

The Ace, or course, is the first home computer to feature Forth instead of Basic and, as such, one would expect it to be the ideal machine for playing arcade-style games. In fact, the limitations of the keyboard tend to negate any gain in speed achieved by the use of Forth — indeed, I found using the Ace uncannily reminiscent of those long tussles with the ZX81, even down to the loading difficulties experienced with some cassettes.

The Oric-1 has met with its fair share of brickbats, but this is more to do with the hurried way it was launched in unfinished form rather than any intrinsic faults in the computer itself. The Oric I used for this Screenplay was one of the early review models — as yet I have been unable to get my hands on a version containing final ROM chips, so I cannot say whether any derogatory comments I have made here will apply to the final production models.

ORIC MULTIGAMES

Supplier: Tansoft
Price: £7.95 (16/48k Oric)

The first thing I noticed on trying to load this cassette was the fact that the label information is wrong — although one side of the tape is marked 'F' for 'fast', you need to append 'S' to the program name in the CLOAD instruction. Once I realised this, the tape loaded with no problems.

Multigames is a fairly standard compilation of simple computer games; they are all the sort of programs beginners are encouraged to type in for themselves as a means of learning about programming.

'Fruit Machine' is the first game on the tape, and is exactly what you'd expect — a very simple one-armed bandit. The graphics are somewhat on the small side, but are easily discernible, and there is a primitive HOLD feature which unfortunately allows you to hold only one reel at a time — so if you've got two matching symbols you can't hold them in the hope of getting three of a kind. You start off with £100 and each spin of the reel costs you a quid. The machine seems to 'pay out' as rarely as the real thing. I can't see much point in fruit machine simulations on micros — the only thing that makes the real thing fun is the chance of winning some cash; take away the money element and you're not left with very much.

'Projectiles' is 'Duckshoot' in disguise — instead of lobbing your artillery shell over a moon and down on the unsuspecting waterfowl, you have to shoot over a mountain range in the middle of an island. You have one gun, the computer has another and you take turns in feeding in shell velocity and the angle of the gun barrel. After a successful shot the screen clears and a new island is drawn. Nice graphics on this one, but the game itself is very boring.

'Colour Match' starts with a mistake on the title page — someone hasn't quite got the hang of the strange Oric attributes, and instead of the title in double-height characters you are greeted with a long black strip and no text.

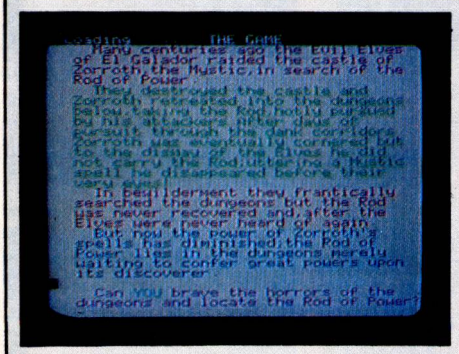

The game itself is 'Mastermind' — you have to guess the sequence of colours generated by the computer.

'Quest' is, as you'd expect, a mini-adventure. You start in a cave in the woods and have to go in search of pirate's treasure. It's amusing enough, although hardly intellectually taxing, and the small vocabulary results in instructions being carried out quickly.

The last program on the tape is 'Reversi' which the whole world knows as 'Othello' but which everyone has to call 'Reversi' to stop Mine of Information slapping a writ on them. Disappointing graphics here — it would have been nicer to have had user-defined graphics for board and pieces. It's also slow —the Oric takes over two minutes to respond to a move.

All in all, then, there's nothing outstanding here. This is the sort of thing that would make a good 'Welcome' tape to be included in the box with the computer — but I can't really see the point of marketing it as a commercial piece of software. It seems overpriced at £7.95.

DUNGEONS OF INTRIGUE

Supplier: ASL Software
Price: £5.50 (48k Oric)

This game was supplied to me on a cassette with Stock Exchange (see below). This is not the format that will be used when it is marketed commercially, and I hope that there will then be two different versions, one for each baud rate. The version as supplied was for the fast, 2400 baud format, and unfortunately I had great difficulty in persuading it to load. It seems a common quirk of the Oric that at the faster rate it manages to lose the dollar sign from string variable names, resulting in a syntax error. I finally managed to get the game to load, but then had to go through the listing to correct many of the program lines before it would run. I thought I'd caught all the mistakes and started playing the game, but in fact I'd overlooked at least one and eventually I was forced the give up. I thing this is going to be a common problem with Oric software; because of the discrepancy between the two baud rates, you either have to take a chance on your program loading at the faster speed or wait an eternity for the program to load at slow rate, which is very reliable. In fact, the faster speed seems to be perfectly okay if programs are loaded back from the recorder on which they were saved — ideally the manufacturers should give you the option

to use 'Slow' when you first load a game, then enable you to make your own 'Fast' copies.

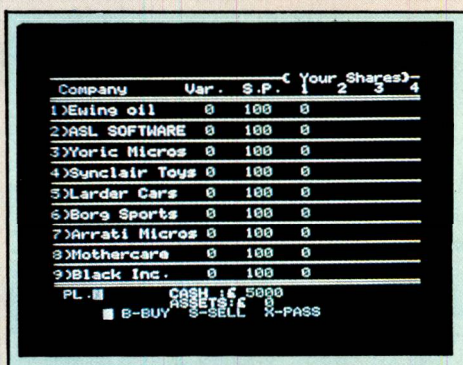

Anyway, back to the Dungeons . . . First of all, the instructions load and stay on screen as the game proper is loading. This scenario is as follows — the Evil Elves of El Galador raided the castle of Zorroth the Mystic, in search of the Rod of Power. Zorroth fled into the castle dungeons, where he was cornered by the Elves. To escape, he uttered a spell and promptly disappeared. Thus, the Rod of Power is missing, and your task is to find it . . .

At the start of the game you are given a random set of attributes, covering strength, wisdom, intelligence, constitution, dexterity and charisma. From these attributes you decide on your role — fighter, magician, priest or dwarf. You are then given a certain number of gold coins with which to buy objects that will be useful in your quest — dagger, sword, javelin, club, elixir of strength, oil flask or your lantern, holy water, shield, leather armour and axe.

I'd got as far as deciding that I should be a magician (after all, I was given 19 for intelligence and wisdom and 14 for charisma) and I'd selected the elixir, the dagger, the holy water and the oil before I was forced to give up in frustration at yet another 'type mismatch' error report.

It's a pity — I think I'd have really enjoyed this game; the overall presentation was good, the instructions were clear and straightforward and it looks as though it would be a lot of fun to play. I'm sure that by the time you read this the production version will be on the market and the loading problems overcome — if this is the case I'd recommend that you take a look at Dungeons of Intrigue.

STOCK EXCHANGE

Supplier: ASL Software
Price: £4.50 (16/48k Oric)

This game came to me on the other side of Dungeons of Intrigue, but is being sold as a separate piece of software with an 'Etch-a-Sketch' program on the other side. The same difficulties in loading were experienced as with Dungeons, but after changing some program lines I eventually got it up and running.

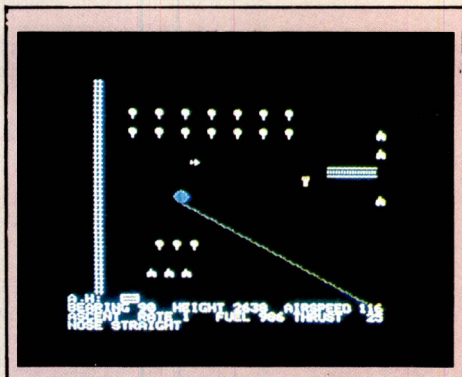

The aim of the game is to make a killing on the stock market. You start with £5000 and have the option of buying or selling shares in a range of companies like Ewing Oil, Yoric Micros, Synclair Toys, Borg Sports, ASL Software and Mothercare.

I started off by sinking all my cash into Yoric and ASL — and 'sinking' is the right word, because share prices in these companies promptly plummeted. I then spread what was left of my funds around a bit more evenly, and gradually began to recoup my losses.

For each turn you have the option of buying, selling or leaving things as they are; shares held, market fluctuation and cash in hand are all updated automatically. Every so often you will get a bonus in the shape of interest or dividends.

One thing that began to annoy me was the fact that fluctuation in share prices seemed to be much too random — it was very hard to discern any market trends. I enjoyed playing 'Stock Exchange' but it didn't hold my attention for too long. It's the sort of game that is fun to play once or twice, but I can't see it proving addictive. Any number from one to four can play.

FLIGHT

Supplier: Tansoft
Price: £7.95 (16/48k Oric)

This is a very simplified flight simulation for the Oric-1 — but it's so simple it hardly merits the name 'simulation'; it's more a game than a program to help you understand the controls of an aircraft. This time there were no loading problems: using the CLOAD "name",S format may take a long time but it sure is reliable.

The program starts with the Oric playing 'Those Magnificent Men in Their Flying Machines' and a series of on screen warnings telling you to extinguish your cigarette and fasten your seatbelt. You take control of the aircraft while it is in mid-flight and your only task is to get it down on the runway in one piece. Your controls are as follows: 1 turns your craft in an anticlockwise direction; 2 keeps you moving straight ahead; 3 turns clockwise; left cursor decreases thrust; right cursor increases thrust; up cursor pulls the plane's nose up; down cursor sends you into a dive.

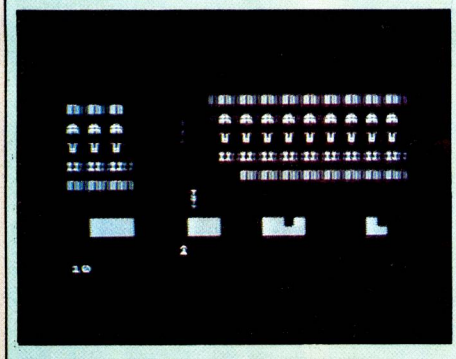

Your position, speed and thrust are shown digitally and are updated every second. To land successfully you have to come in at a speed of less than 90 mph, at a gentle angle and at an alignment of 90 or 270 degrees (due east or west along the runway).

You are shown a simple diagrammatic representation of the surrounding countryside, the runway and a radio beacon, and the Oric gives a fair rendition of the aircraft engine noise, which increases in pitch as thrust is applied. Unfortunately, on my Oric at least, the sound totally destroys the picture, making it judder alarmingly and playing havoc with the concentration. I found this extremely irritating and it caused me to abandon the game sooner than I probably would have done if the display remained steady.

However, even making allowances for this, I don't think Flight would have held my attention for too long. In comparison to Psion's excellent flight simulation for the Spectrum, this is sadly lacking in features. I must admit that I failed to make a successful landing — generally I lost patience with the display and deliberately flew into the ground at a high rate of knots while the Oric riposted 'I don't think this plane is well' or 'How good is the autopilot?'

One nice touch is the replay facility. This allows you, after you've crashed, to follow your doomed craft's tragic dive into the ground. As the plane crashes, you see the pilot floating down underneath his parachute while the Oric plays 'Colonel Bogey'.

ACE INVADERS

Supplier: Hi-Tech
Price: £6.50 (unexpanded Ace)

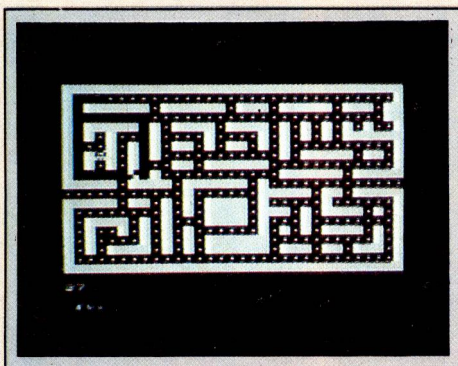

This is getting boring — again I had difficulty in getting this program to load, but in this case it was because of wrong instructions. The program loads in two parts and you have to type in four separate instructions for successful loading. The Ace distinguishes between upper and lower case and, whereas the instructions tell you to type 'LOAD GRAPHICS' this should really have been 'LOAD graphics'. The same thing applied to 'LOAD RUN'. Once I had realised this, it all worked okay.

Ace Invaders is — yes, you guessed — a version of Space Invaders. The limitations of the Ace graphics are painfully apparent and the keyboard is a nightmare for playing games — comparable only with the ZX81. In fact, I found using the Ace very similar to using the '81: the graphics are the same chunky blocks and the whole look and feel of the two machines are almost identical.

You have control of a laser at the bottom of the screen, and the invaders move down in columns from the top of the screen to the bottom. Your laser base is moved by pressing the 'z' and 'x' keys, and you hit the 'm' key to fire.

You have the usual defences to hide behind; these can be destroyed by hits from your laser or from the invaders. There are 60 invaders in all, but you have only one life (with most versions you have three, or sometimes even five). At the slower speed hitting the invaders poses little difficulty, but the keyboard design makes it imperative for you to hit each key dead-centre. An optional fast version (type 'FAST RUN') speeds things up considerably but, even so, it's hardly arcade action. Given the fact that this game is for the unexpanded Ace, and making allowances for the keyboard, this is a fair implementation. It compares well with Space Invaders for the unexpanded ZX81, but overall it feels like a step backwards — using a low-memory, black and white machine with a silly keyboard seems very strange after the advent of all the all-singing, all-dancing, full-colour, full-sound 48k computers now available. I suppose this is just snobbery: the Ace is a very nice machine for learning Forth and is certainly good value for money. I have been sent a couple of arcade-style games for the 16k Ace. Unfortunately I have not, as yet, managed to get my hands on a 16k expansion — when I do I will be looking at these games, and I am sure they will be considerably more impressive than Ace Invaders.

Presentation:
Use of graphics:

Value for money:

MICRO MAZE

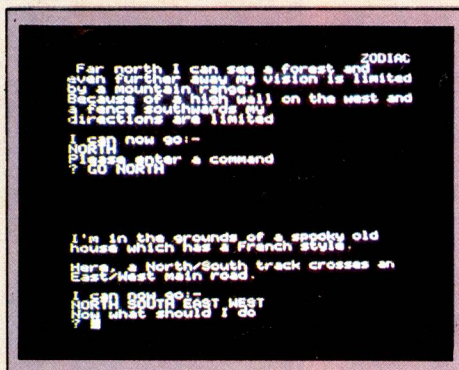

Supplier: Hi-Tech
Price: £6.50 (unexpanded Ace)

Again the instructions are confused between upper and lower case, but once this is sorted out loading is straightforward.

Micro Maze is a simple Pacman-style game. You roam the maze, eating as many radioactive dots as you can, and keeping an eye open for the pursuing monsters. If you manage to clear one maze of all the dots, the screen clears and you move onto a higher level — with the monsters getting quicker, and much more likely to catch you. That's all there is to it — there are four levels of skill and you automatically move onto the next level as you clear the screen. You also have a choice of three mazes, which are selected by typing either '0 0 BLOAD screen2' or '0 0 BLOAD screen3'.

I found this game surprisingly enjoyable. Its best friends would hardly call it sophisticated, and the graphics are somewhat on the simple side but, given these limitations, it is surprisingly addictive. Certainly worth a look if you own an unexpanded Jupiter Ace.

ZODIAC

Supplier: Tansoft
Price: £9.99 (48k Oric)

Zodiac is a full-length adventure for the 48k Oric. This time there were no loading problems — using slow format the program loaded successfully, but took half an hour to do so . . .

This is a well put-together adventure that features a very large vocabulary and which uses the large amount of available memory to very good effect.

It's a standard text adventure — you start in a small hut and have to wander through the various locations retrieving treasure. There are six valuable objects to be retrieved and it will take you a long time to complete the whole game — Tansoft reckons five hours for a seasoned adventurer and 50 or more for the novice. I fall very definitely into the 'novice' category as far as adventures are concerned; I lack the powers of concentration and patience needed for this sphere of computer gaming.

It's difficult to review adventure-type games without giving too much away: there is a good range of different locations, a large vocabulary of acceptable words, and plenty of detailed description. For example, if you find yourself in a room the Oric will tell you that it has high ceilings, a sturdy mantelpiece, and exquisite panelling which denotes that the house owner is a man of good taste and high financial standing. You are not restricted to simple verb/noun instructions — you can add descriptive adjectives which will have an effect on the way the computer carries out your orders.

Music is added at the relevant points of the adventure — at one location you come across a radio that is playing the theme tune from the Archers — but again I found that this detracted from my enjoyment as the sound did terrible things to the screen display. I assume that production Orics are now free from this most annoying feature; I live in hope that Oric will send me replacement ROMs so that I don't have to keep making this point in every review I do.

Sound bugs aside, this is a very nice piece of software. I am not an adventure addict, but I think that this is a game I would return to.

FAIRE FADES

The ubiquitous Peter Rodwell crossed the Atlantic for the great Californian non-event of the year; otherwise known as the West Coast Faire.

Hot air

'You should be writing an obituary, not a report,' said one exhibitor, surveying the crowds slowly ambling around San Francisco's gaunt Civic Auditorium, venue for the 8th West Coast Computer Faire. 'All the fun has gone out of it.'

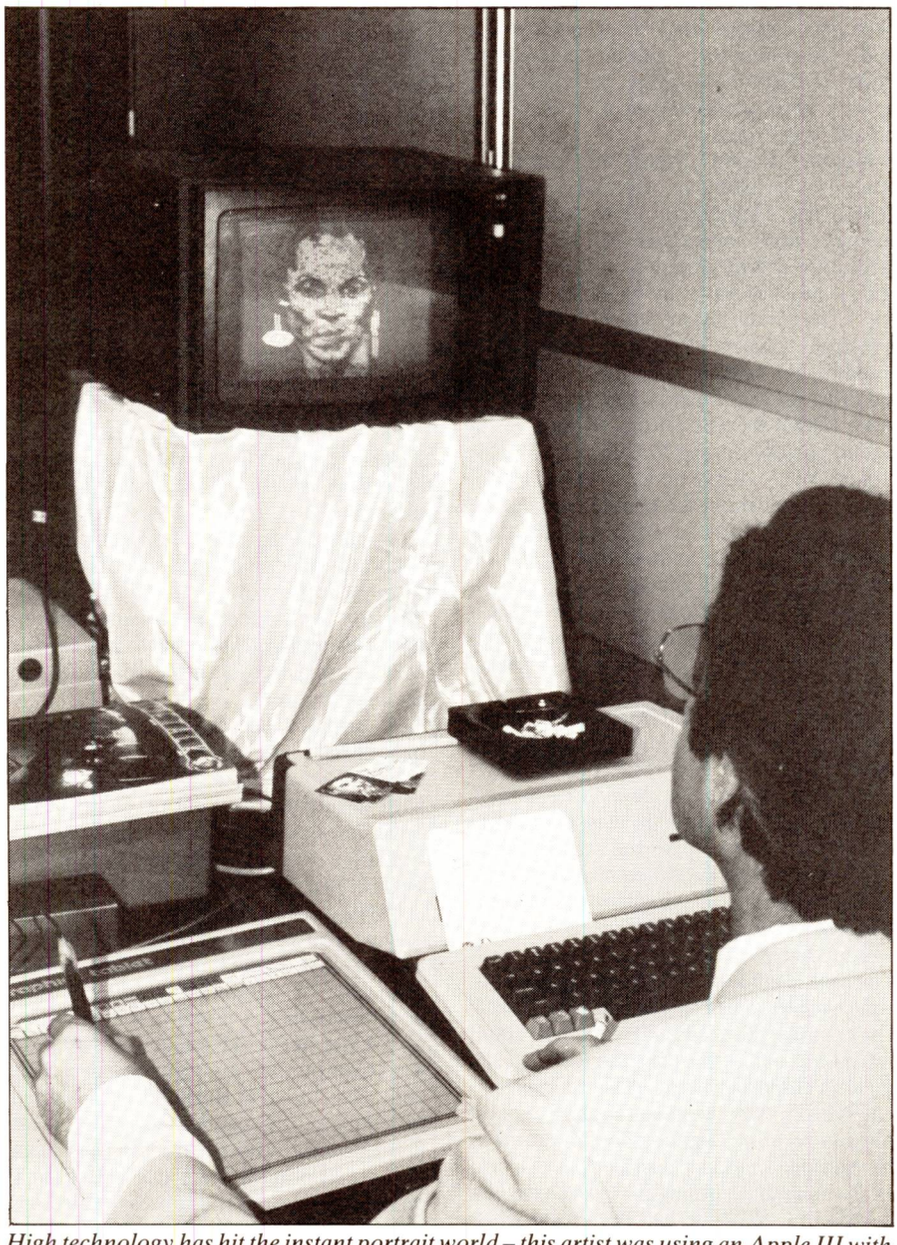

And indeed he was right. There was no shortage of exhibitors (400-plus) or visitors (46,900 — a little more than last year's *PCW* Show) and could be counted a success numberwise. But there was something missing. There was nothing *new*, nothing that made you stop in your efforts to squeeze past vast Californian stomachs and gasp with astonishment or think, 'Gosh! This is where it's all really happening!' In short it was — dare I say it — rather boring.

In case you think that I'm so jaded by international jet-setting that not even a trip to California can get the adrenalin flowing, let me explain. I have in the last year attended shows in Britain (several), Amsterdam, Madrid and Tokyo and, with the exception of Amsterdam (Comdex, a terrible show), found something of interest, novelty, originality and/or amusement. Tokyo gave a fascinating insight into the Japanese home market and provided a preview of what we can expect to see pouring over here in the near future. Madrid had little in the way of innovation but made up for this with all the enthusiasm and vigour of what must be one of the fastest-growing micro markets in Europe. The British shows proved that we are the masters of software innovation and can still teach the Americans and Japanese some pretty strong lessons about designing and making hardware, too. Travelling to California to visit the major micro show in the very heart of the industry, one expects even greater things. After all, this is where the industry started and where a lot of the innovating — in hardware if not in software — still happens these days. Perhaps I was expecting too much — although I don't think so — but I certainly left a rain-sodden San Francisco at the end of the Faire with a feeling of disappointment.

IBM PC monopoly

Oh, there were new products, all right, dozens of them, but new in being fresh on the market place rather than fresh in concept. And there were some enormous pointers to the way the American and European markets are diverging, mainly thanks to IBM.

Everywhere you looked at the WCF you found yourself staring at an IBM PC. Or at an add-on for the PC. You don't even have to talk of the 'IBM PC' in the States now — it's simply the 'PC', and at times you feel that there might as well not be any other micros around. The popularity of the IBM in the States actually poses a problem for us in some ways. It was obvious at the Faire that any software producer will now turn out his product for the PC first and for other machines later, if at all. But because Californians are, mostly, hardly aware of the existence of the rest of the USA, let alone the rest of the world, they seem to assume that the dominance of the IBM extends to cover the entire globe in exactly the same manner in which it now seems to dominate the States. In America, the starting price of the IBM is so low that the machine appeals to the middle of the home market right up to the upper half of the business world and, of course, it has been on sale for the last 18 months or so. As we all know, in Europe, things are very different: the machine has only just gone on sale and is grossly over-priced, putting it firmly at the top end of the business market. That the Americans don't appreciate this was made obvious by the number of software houses at the Faire who seemed keen to sell their IBM games on the European market and by

High technology has hit the instant portrait world – this artist was using an Apple III with graphics tablet, colour monitor and colour printer to churn out portraits.

FAIRE FADES

the 20 or more American books which have appeared here since IBM's Eurolaunch, on subjects like *Games Programming on the IBM PC* or *Programming Your IBM For Fun and Profit*. There will even be an IBM PC Faire in San Francisco this year (26-28 August), apparently organised by the WCF organisers.

Some diversions

But enough of this negative talk. There were, in fact, a few things of interest at the Faire even if they weren't revolutionary advances in computer science. My personal 'best in show' award went to the Vectrix Corporation for its spectacular colour graphics add-on subsystem powered by its own 68000 and producing some really spectacular displays. It can, apparently, be used with virtually any microcomputer and can easily be controlled from whatever high-level language you like. Regrettably, a pretty impressive collection of Californian beer guts insisted on jostling my camera and prevented my getting a sensible photo of the demo display, so you'll have to wait until we Benchtest it — it will be on sale here soon.

Nearby, a small stand was attracting attention by showing a small computer called the Humdinger. The Americans seemed very impressed by its lowish resolution colour graphics, its 4k of RAM and — most of all — by its $129.95 price tag. I, too, was impressed, although as a Spectrum owner slightly less so, as I couldn't but wonder why they hadn't put the price up very slightly and given it a lot more RAM, thereby putting themselves in a good position to give Sinclair a run for his money. But — name apart — there's nothing to sneer at about the Humdinger and the large range of add-ons which include disks and CP/M as well as memory expansion and extra I/O ports should make it a popular machine. Don't know if we'll ever see it here, though; the girl on the stand appeared not to have heard of Europe when I asked.

Quite a few of the big industry names were there, including Commodore, Apple, IBM (of course) and Osborne. The last name was said to be launching a new machine and although it was eventually announced, it wasn't on the stand. Adam Osborne was, though, when he could shake off the entourage of sycophants who seem to follow him permanently these days; word was out that he'd been the victim of a boardroom battle but he was still smiling. One big name noticably missing was Digital Research. The company booked (and paid for) a stand but pulled out at the last moment, to the obvious embarrassment of Faire supremo Jim Warren, who went so far as to explain this and re-print Digital's booking form in the catalogue, adding nastily, '. . . we sincerely hope that nothing is seriously wrong at DRI . . .' Well, he had been using Digital's booking as a selling point and its non-appearance must have caused him a few awkward moments.

The Apple stand was interesting. A few people gave the IIe an interested glance or two and nobody seemed to have time for the III. No, they all wanted to see Lisa and there she was, out of reach at the centre of a 20-deep crowd, showing off her fancy dis plays to the accompaniment of a dreadful stand-up comedian. I never did manage to get close enough to see whether they'd corrected the now-famous spelling mistakes. . .

Commodore's stand had little of interest other than a 700 with real, working disk drives (as opposed to the cardboard mock-ups they've been using in some of their ads and brochures — what, you hadn't noticed?). Likewise, IBM had the new XT model but not much else to rave about. Texas Instruments had a large stand, too, and was showing off its new home machine, the TI-99/2, an under $100 micro with 4.2k of RAM (expandable to 36.2k), TI Basic in ROM and a black and white display. The display gives 24 lines of 28 characters and there's a promised range of peripherals which include a printer/plotter, a 'Wafertape' mass storage device and an RS232 interface. I also picked up a brochure on — but don't remember seeing — the TI Compact Computer 40, aimed obviously at the Epson HX-20 with a built-in 31-character LED display (single line), 6k RAM expandable by 16k, 32k of ROM and the same peripherals as the '99/2. It can also take software in the form of ROM cartridges and its suggested retail price is $249.95.

Portability

It took the full three days of the Faire to visit every stand, look at whatever was on show, and, where necessary, talk to the

Cruising down El Camino

It's a standing joke in the *PCW* office that West Coast Faire reports always start off with 'As I was cruising down El Camino Real...', a reference to the road which snakes down from San Francisco through Silicon Valley. As it happens, I did eventually cruise along it, in pouring rain, searching for the Palo Alto Hyatt (which turned out to be booked solid with Apple sales reps – I ended up in a sordid motel next door). But I started my expedition by heading in exactly the opposite direction, across the Oakland Bridge to the University of California's Berkeley campus to visit the Instructional Technology Unit.

The Unit is an offshoot of the Humanities Computing Service and aims to spread technology awareness among members of the Humanities Department and to provide access to microcomputers. Currently, the Unit is pretty small but has big plans: a classroom full of micros, networked together, is what director Ann Hernandez aims for, to allow teacher and students to work using computers as tools, rather than to learn *about* computers.

A primary use is, of course, word processing and work is under way teaching students to write their papers with Wordstar. But more exotic tasks have been tackled, including the invention of a way of computer typesetting ancient Icelandic characters.

While on the campus, I took a nose around the computer building, the interior walls of which are decorated with examples of computer graphics printouts, including a floor-to-ceiling blow-up of the RISC (Reduced Instruction Set Computer) microprocessor. This chip, developed at Berkeley, is designed to eliminate microcode. Currently, most microprocessors (and the CPUs of most other computers, too) use the binary machine code instructions as addresses to look up a much lower-level code, held in ROM on the chip; it is this microcode which opens and shuts the various networks of logic gates on the chip to carry out the actual instructions. The RISC chip cuts out microcode and instead requires special high-level language compilers which effectively produce the microcode directly. The result is said to be a speed increase of three to five times over conventional microcoded processors.

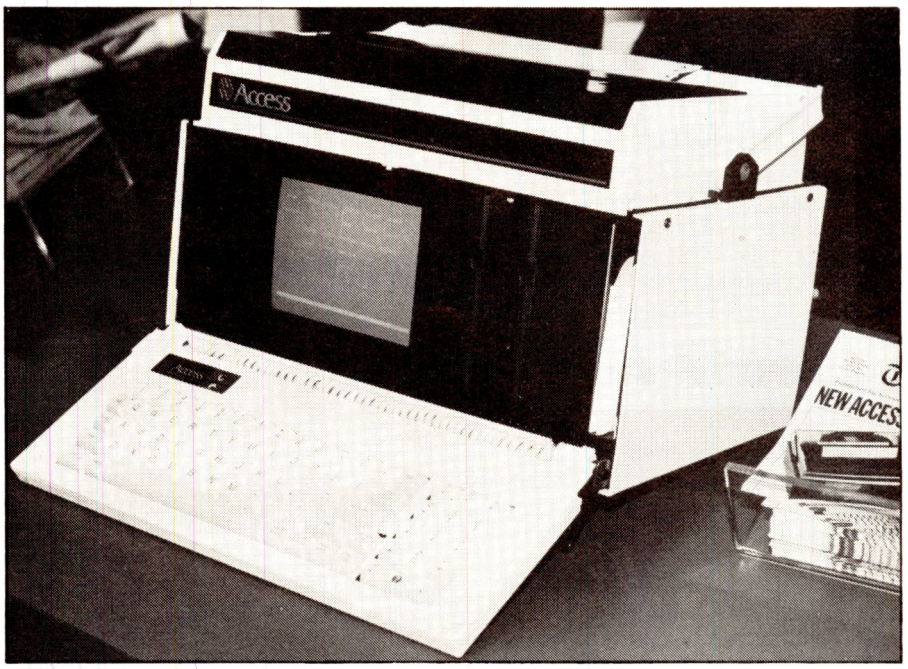

Berkeley's Professor Brian Barsky is one of the leading experts in computer graphics, and I called in to see him. Quickly masking his obvious annoyance at this unscheduled visit, he demonstrated an example of the sort of work being carried on there. A tiny room housed four research students, four terminals and a colour graphics display, all (except the students) connected to a VAX with some fancy graphics hardware hung onto it. One of Prof Barsky's achievements has been the development of a special branch of maths for use in the representation of three-dimensional objects. To describe an object, a series of points about its boundary are defined; linking these up gives a 'faceted' representation and Barsky has introduced a system for 'smoothing out' the facets, incorporating a 'tension factor' which allows you to vary the amount of smoothing, from very angular to completely smooth. He demonstrated this with a very impressive display of several objects, including an irregular one, each with varying tension factors; as always, they had a strange, unearthly look to them which, it later occurred to me, was because they were 'too perfect' – real-world artefacts have slight imperfections, but introducing this to a computer graphics system would, I imagine, be far from trivial. The Berkeley graphics work is very, very impressive and I can't wait for hardware prices to fall to the point where we can achieve this sort of thing on personal computers. I left promising that next time I was there I'd make an appointment and go into the subject in greater depth – and I will.

relevant people. Before long, the two big trends in current hardware became apparent. Everywhere there were IBM lookalikes, portable computers and, in quite a few cases, portable IBM lookalikes from those riding both bandwagons. I must confess that I have long suspected that the success of the Osborne owes more to its price and bundle of software than to its portability; despite the very large number sold, I have never actually seen anyone using a portable machine in anything other than the sort of environment — office or home — where mains power is available and where a proper business machine would serve them far better. I am prepared to admit that some people need — and might even use — a truly portable computer, but I see no evidence that the success of the portable is due to its portability. Surely, though, I must be quite wrong for everybody is producing portables, often costing much more than the Osborne and offering less software, although, to be fair, they are usually better made and have larger screens. Given that the portable is selling well and that the IBM is moving in telephone number quantities in the States, it's hardly surprising that IBM-compatible portables should be the machine to make. Most seem similarly priced to the IBM and offer slightly more, particularly in the way of I/O ports. The nicest looking at the Faire was the Canadian-made Hyperion, now available in the UK from Gulfstream Technology and in the guise of The Ajile from Anderson Jacobson.

There were also several 8-bit portables, of which the best, in terms of portability and aesthetics, remains the Otrona Attaché, seen in prototype form in this country in 1981. When I eventually managed to speak to somebody on the Otrona stand, I was disappointed to learn that the company is not at present very interested in European sales as it can sell all the machines it can make in the States. A pity, because as it costs almost twice as much as an Osborne, its success over here would neatly disprove my theory. (I don't count its success in the States — they've all got more money than we have and they seem to enjoy carrying portable computers back and forth between office and home.)

Mice mania

The other big craze at the Faire was for mice. Since the announcement of Lisa, with its graphics screen and mouse, everyone has decided that they must have a mouse and, of course, making mice for the IBM PC is particularly popular. I tried a mouse and was puzzled; it worked just fine but I couldn't quite see why it has become so prevalent. It's supposed to make it easier for laypersons to select from a menu or generally move around the screen. Positioning the mouse takes a little practice and you then have to press a little mouse-mounted button to tell the computer that you've arrived at your chosen location. I'm puzzled because I think a touch-sensitive screen or light pen would be far more sensible for several reasons: you make your moving and selecting in one go; there are no

One of the host of new portables around was this one, the Access, which comes complete with a dot matrix printer welded onto its top, making it even less portable (because of its weight and power requirements) than most.

A roomful of Victors and Sirius is undergoing soak testing and generating an amazing amount of heat at the same time...

Down in the valley

'You are now on the world's most beautiful freeway' said the sign on Interstate 280, leading south from San Francisco; well, it was quite spectacular but I can think of at least three which are more beautiful. It lead, eventually, to Scotts Valley, well south of Silicon Valley, where Victor – manufacturer of the Sirius – inhabits several stylish buildings in the middle of a deeply-forested and very attractive piece of California.

The production facility at Victor is surprisingly small, but it is really only an assembly operation. All the PCBs and the keyboard unit are manufactured by outside contractors and the various parts are simply slotted together at Victor. Perhaps the most impressive part of the operation is the testing room, where every machine is soak tested for 24 hours in the case of floppy-based machines and 48 hours for hard disk machines. The room is crammed with computers – all in various stages of testing – and is *hot* – the air conditioning simply can't cope with the heat generated by 200 or more computers, it seems. Regrettably, the software guru I principally wanted to talk to had been called away urgently and a tight schedule prevented my waiting around to see him. I did get to talk to the hardware vice-president, though, and was pleased to learn that the 8087 maths co-processor board and the clock-calendar board are ready and should be here soon. There is still no apparent progress on a colour display for the Sirius, though; it seems that there isn't a reasonably-priced tube which can handle such high resolution graphics in colour and Victor would rather go this route than immediately offer either a lower-resolution display at a reasonable price or a high-as-monochrome resolution display at an extortionate price...

FAIRE FADES

moving parts to wear out; the software is far simpler; and you don't need to keep an area clear on your desk top. The situation is especially silly when you consider that many modern display controller chips contain built-in light pen interfaces anyway.

Colourful display

In many areas of microcomputing, the hardware has kept well ahead of the software, simply because it takes time for programmers to learn their way around new chips and systems. One area in which the hardware is definitely lagging is in really high resolution colour displays at affordable prices. Thus, while there were many spectacular games at the show, the Tempest machine in my hotel outshone all the micros in the quality of its graphics and it looks as though we'll have to wait another couple of years or more for the price of RAM chips and the 16-bit processors to address them to fall sufficiently to make their use in home machines economically worthwhile. Meanwhile, it's quite possible to produce some pretty impressive stuff on Apples (especially the IIe), Tandy Color Computers, Ataris, Commodores and, again, IBMs, as was amply demonstrated at the Faire. More than amply, in fact, for the games market Stateside is booming just as it is here and the sounds of electronic zapping, crashing and exploding filled the air. Most of the games were ones we have already seen here (apart from a few on the IBM) but it was nice to see the British Thorn EMI games for the Atari machines on show and attracting big crowds.

Light relief

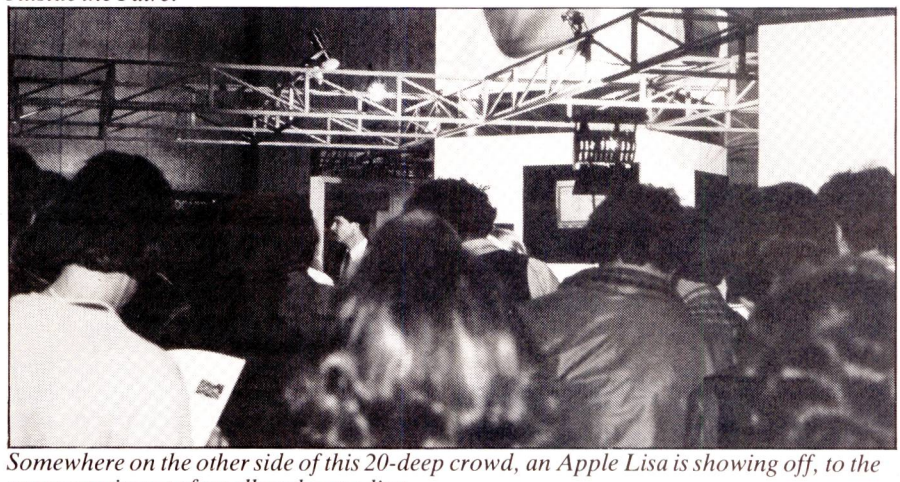

If the Faire was lacking in novelty and originality productwise, it still provided occasional flashes of entertainment in the form of the people there. There were of course the usual promotional gimmicks: I spotted a caveman, a penguin, several robots, an ET and a gorilla (or he might have been a bear — it was difficult to tell). And of course the Great American Computer Nerd was out in force, bedecked in long hair, lumberjack shirt and small, flaccid rucksack. The GACN could be found everywhere, but seemed particularly prevalent around stands like the one promoting the use of micros to advance world peace, or near what the Americans called catering facilities: booths selling foul-looking Mexican-style things to eat and the usual repulsive, diuretic fluid they call coffee. Even Earl's Court or the worst excesses of British Rail produce better food than the villains who have the Civic Auditorium catering concession; the Faire organisers collaborated by providing no alternatives for us pampered press people, either. In fact the press 'facilities' were the worst I've ever seen: a stark room with hard chairs and a few trestle tables for press releases. Smoking was banned in the press room, too — a measure which would provoke an immediate walk-out at any European show!

Conclusion

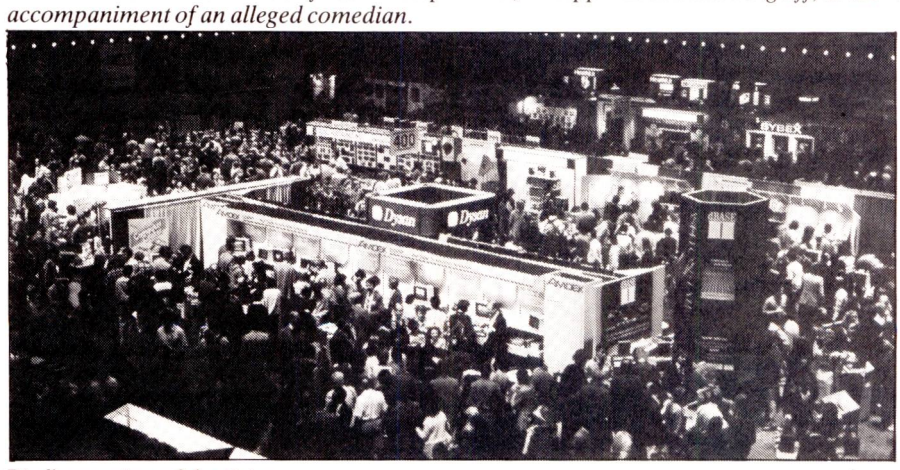

In summary, then, was it an event worth flying the Atlantic to see? My answer would have to be a qualified 'No'. Had I gone to California just to see the Faire in the expectation of great things, I would have been even more disappointed. Fortunately, the presence of Silicon Valley just down the road meant I could make up for the Faire by visiting one or two interesting places (see the box elsewhere in this report) and generally mooch around some computer shops to see how things are done there. If this year's Faire is a guide, there would seem to be little point in going to next year's event. And it appears I'm not the only one to be disillusioned with the Faire: organiser Jim Warren is said to be negotiating for the sale of the whole thing and may even have sold it by the time you read this, in which case some sort of an era will definitely have come to an end. Personally, I feel that the rest of the industry has changed but the Faire has tried to stay the same, and that the traditional gap between the USA and Britain in computing developments has narrowed almost to insignificance. In fact, one comforting aspect of the Faire was that it showed — and talking to people there reinforced this — that in some areas we're calling the tune from this side of the Atlantic and they may even start taking us seriously soon.

You really know it when you're in Silicon Valley – this car licence plate was spotted just outside the Faire.

Somewhere on the other side of this 20-deep crowd, an Apple Lisa is showing off, to the accompaniment of an alleged comedian.

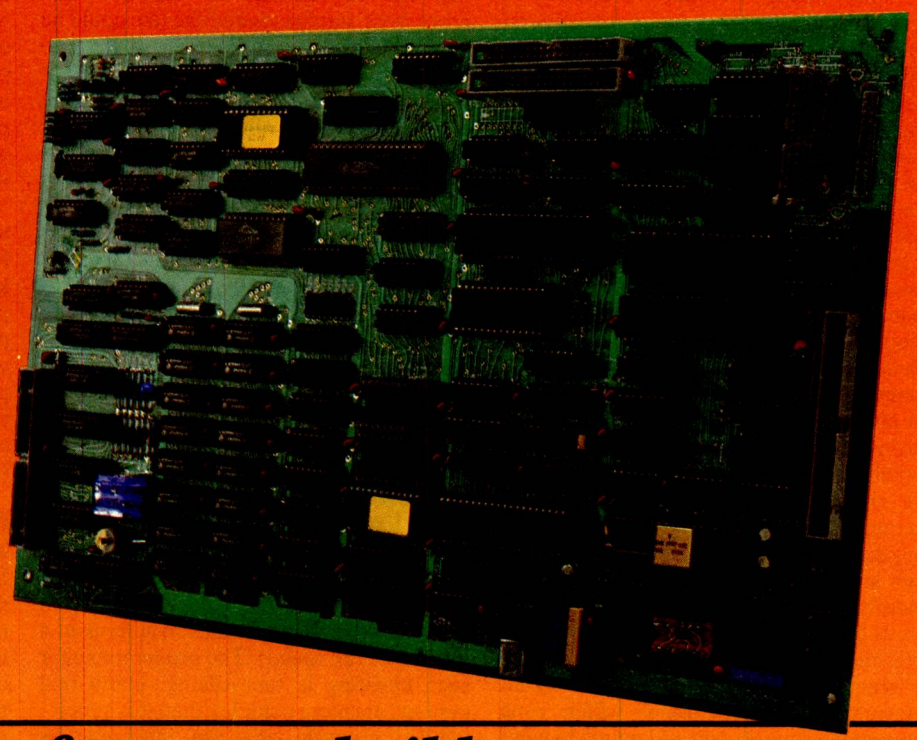

Bird's eye view of the Faire

NEW!

Introducing the Micronix 80HD

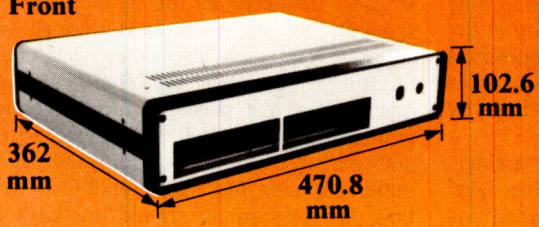

a complete microcomputer on a single board with 'SASI' hard disk interface

- Z80A 4MHz CPU
- 64K or 128K RAM on Board
- On Board 24 x 80 VDU
- 4K System Monitor Sockets for further 8K EPROM
- 4K Character Generator Up to 64 Custom characters
- Teletext Graphics
- CRT Controller
- Floppy Disk Controller for 5¼" or 8" Drives inc. High Density 77 track 5¼" Floppies
- Industry Standard Hard Disk Interface (SASI)
- 2 Channel RS232c
- 2 Port Parallel
- On Board Real Time Clock/ Calendar with Battery back-up
- External I/O BUS
- ASCII Keyboard Port
- Disk operating system (optional): CP/M 2.2, CP/M 3.

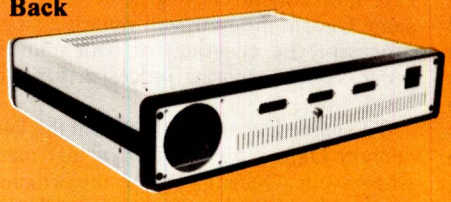

also available – for system builders

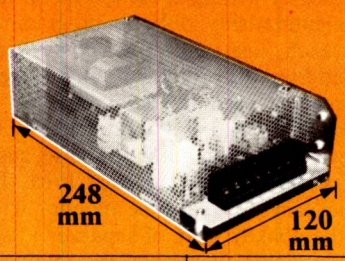

Front

Low profile metal enclosure to house MICRONIX 80HD board, two half height 5¼" floppies (⅔ height floppies optional), a switch mode power supply for the complete system. The panels have cutouts for floppies, connectors and a fan (as illustrated). Thoughtfully constructed for easy accessibility. Cover and base grey/beige. Frame dark brown.

Back

Switch mode slimline power supply model FEM 7030SS for a complete computer system enough power for MICRONIX 80HD, two mini floppies and CRT. Meets safety standards.
Input: 220/240V 50Hz.
Output: +5V @ 7A; +12V @ 3A
—5V @ 1A; —12V @ 1A
88 Watts

OCCAM OCCULT

PROGRAMMING IN PARALLEL WITH OCCAM

Dick Pountain unravels the fifth generation systems programming language, eponymously named Occam.

I take it as evident that most *PCW* readers are smart enough to walk and chew gum simultaneously. Most microcomputers, however, are not. In the real world lots of things tend to happen at the same time, to the point that we take such behaviour for granted and seldom question it. When you make breakfast, it's quite natural to have the toast under the grill at the same time that the eggs are boiling and the tea is mashing in the pot.

In other words, concurrency is not an issue in the real world; it's the way that the space/time continuum which we inhabit operates. It becomes an issue, however, when we try to model this world using a computer because the CPU of a computer (at any rate of a microcomputer) can only do one thing at once. At the machine level it can only execute one instruction at a time in the order which the program counter dictates. When machine instructions are bundled together to form the statements of a high-level language such as Basic, this underlying linearity remains. The statements of a Basic program are executed one after the other and the working of a Basic program can always be understood by an imaginary 'finger of time' which runs through the source code and points to what is happening now (when you are debugging a program this is often your own finger in a listing).

Why concurrency?

Why should we want the computer to do more than one thing at once since it does things so fast anyway? Anyone who has tried programming games in Basic can give one reason immediately; while your program is updating the screen it can't be doing anything else. So, if you require constant inputs from the user, all you can do is program a loop in which the input and updating are done one after the other but repeatedly; the result is not very fast or smooth.

This demonstrates an important reason for desiring concurrent processing in a computer; in a 'real-time' system such as might be used to track Exocet missiles or to control a nuclear power station (our game is just a simulation of such a system), the computer must simultaneously receive inputs, process information and control outputs. The computer cannot ask the inputs to 'hold on a minute till I've finshed what I'm doing' since Exocets are notoriously bad mannered in this respect.

Another reason, more applicable to business and domestic uses of micros, is that the convenience of use of word-processors, databases and the like could be enormously improved if it were possible to run more than one application simultaneously. You could, for instance, order a search of a large database for a piece of text to insert into a document, and carry on typing while the search took place in 'background' without having to wait for its completion. Some word-processor packages already have the ability to print in background while you continue to type.

So how is concurrency achieved? Either by having more than one processor or by cheating on a single processor. By cheating I mean that a program is written so that the tasks which are to run simultaneously each get a share of the processor's time; the processor executes one instruction from each process in turn. It's cheating because instructions are still executed sequentially, though the overall result is the appearance of concurrency (and, of course each task executes more slowly than it would have on its own; if there are three, each will run at a third of its full speed). The proper name for such cheating is time-slicing; many real systems are more complex than this simple-minded scenario and use interrupts as well.

The approach of using more than one processor is used in big defence mainframe systems and in a more modest way in the Atari, the TI99 and the Commodore 64 which achieve their concurrent graphics processing ('player/missile' or 'sprites') by using 'smart' video chips.

To use the cheating method on a single processor by writing at the assembler level is a nightmarishly difficult programming task; each task must be conceptually isolated from the others and must leave all the registers used by other tasks in the correct state. One way of simplifying this job is to use a concurrent operating sysem such as the new Concurrent CP/M. This will have in it a real-time monitor which does the donkey work of separating tasks, allowing them to communicate by flags to achieve synchronisation and to transfer data between themselves through FIFO (first-in-first-out) queues. This still presupposes writing at the assembler level. Mark Holmes' article on the *BBC Micros Event Queue* in *PCW* (April 1983) gives some idea of how this sort of programming works.

A quick note on terminology; concurrent, parallel and multi-tasking are all words with rather different shades of meaning which tend to be used interchangeably to describe the sort of programming with which we are dealing. Concurrent implies only the notion of simultaneity, parallel processing more usually refers to hardware architectures than to software (Inmos people use it because they are concerned with both), and multi-tasking is mainly reserved for describing operating systems.

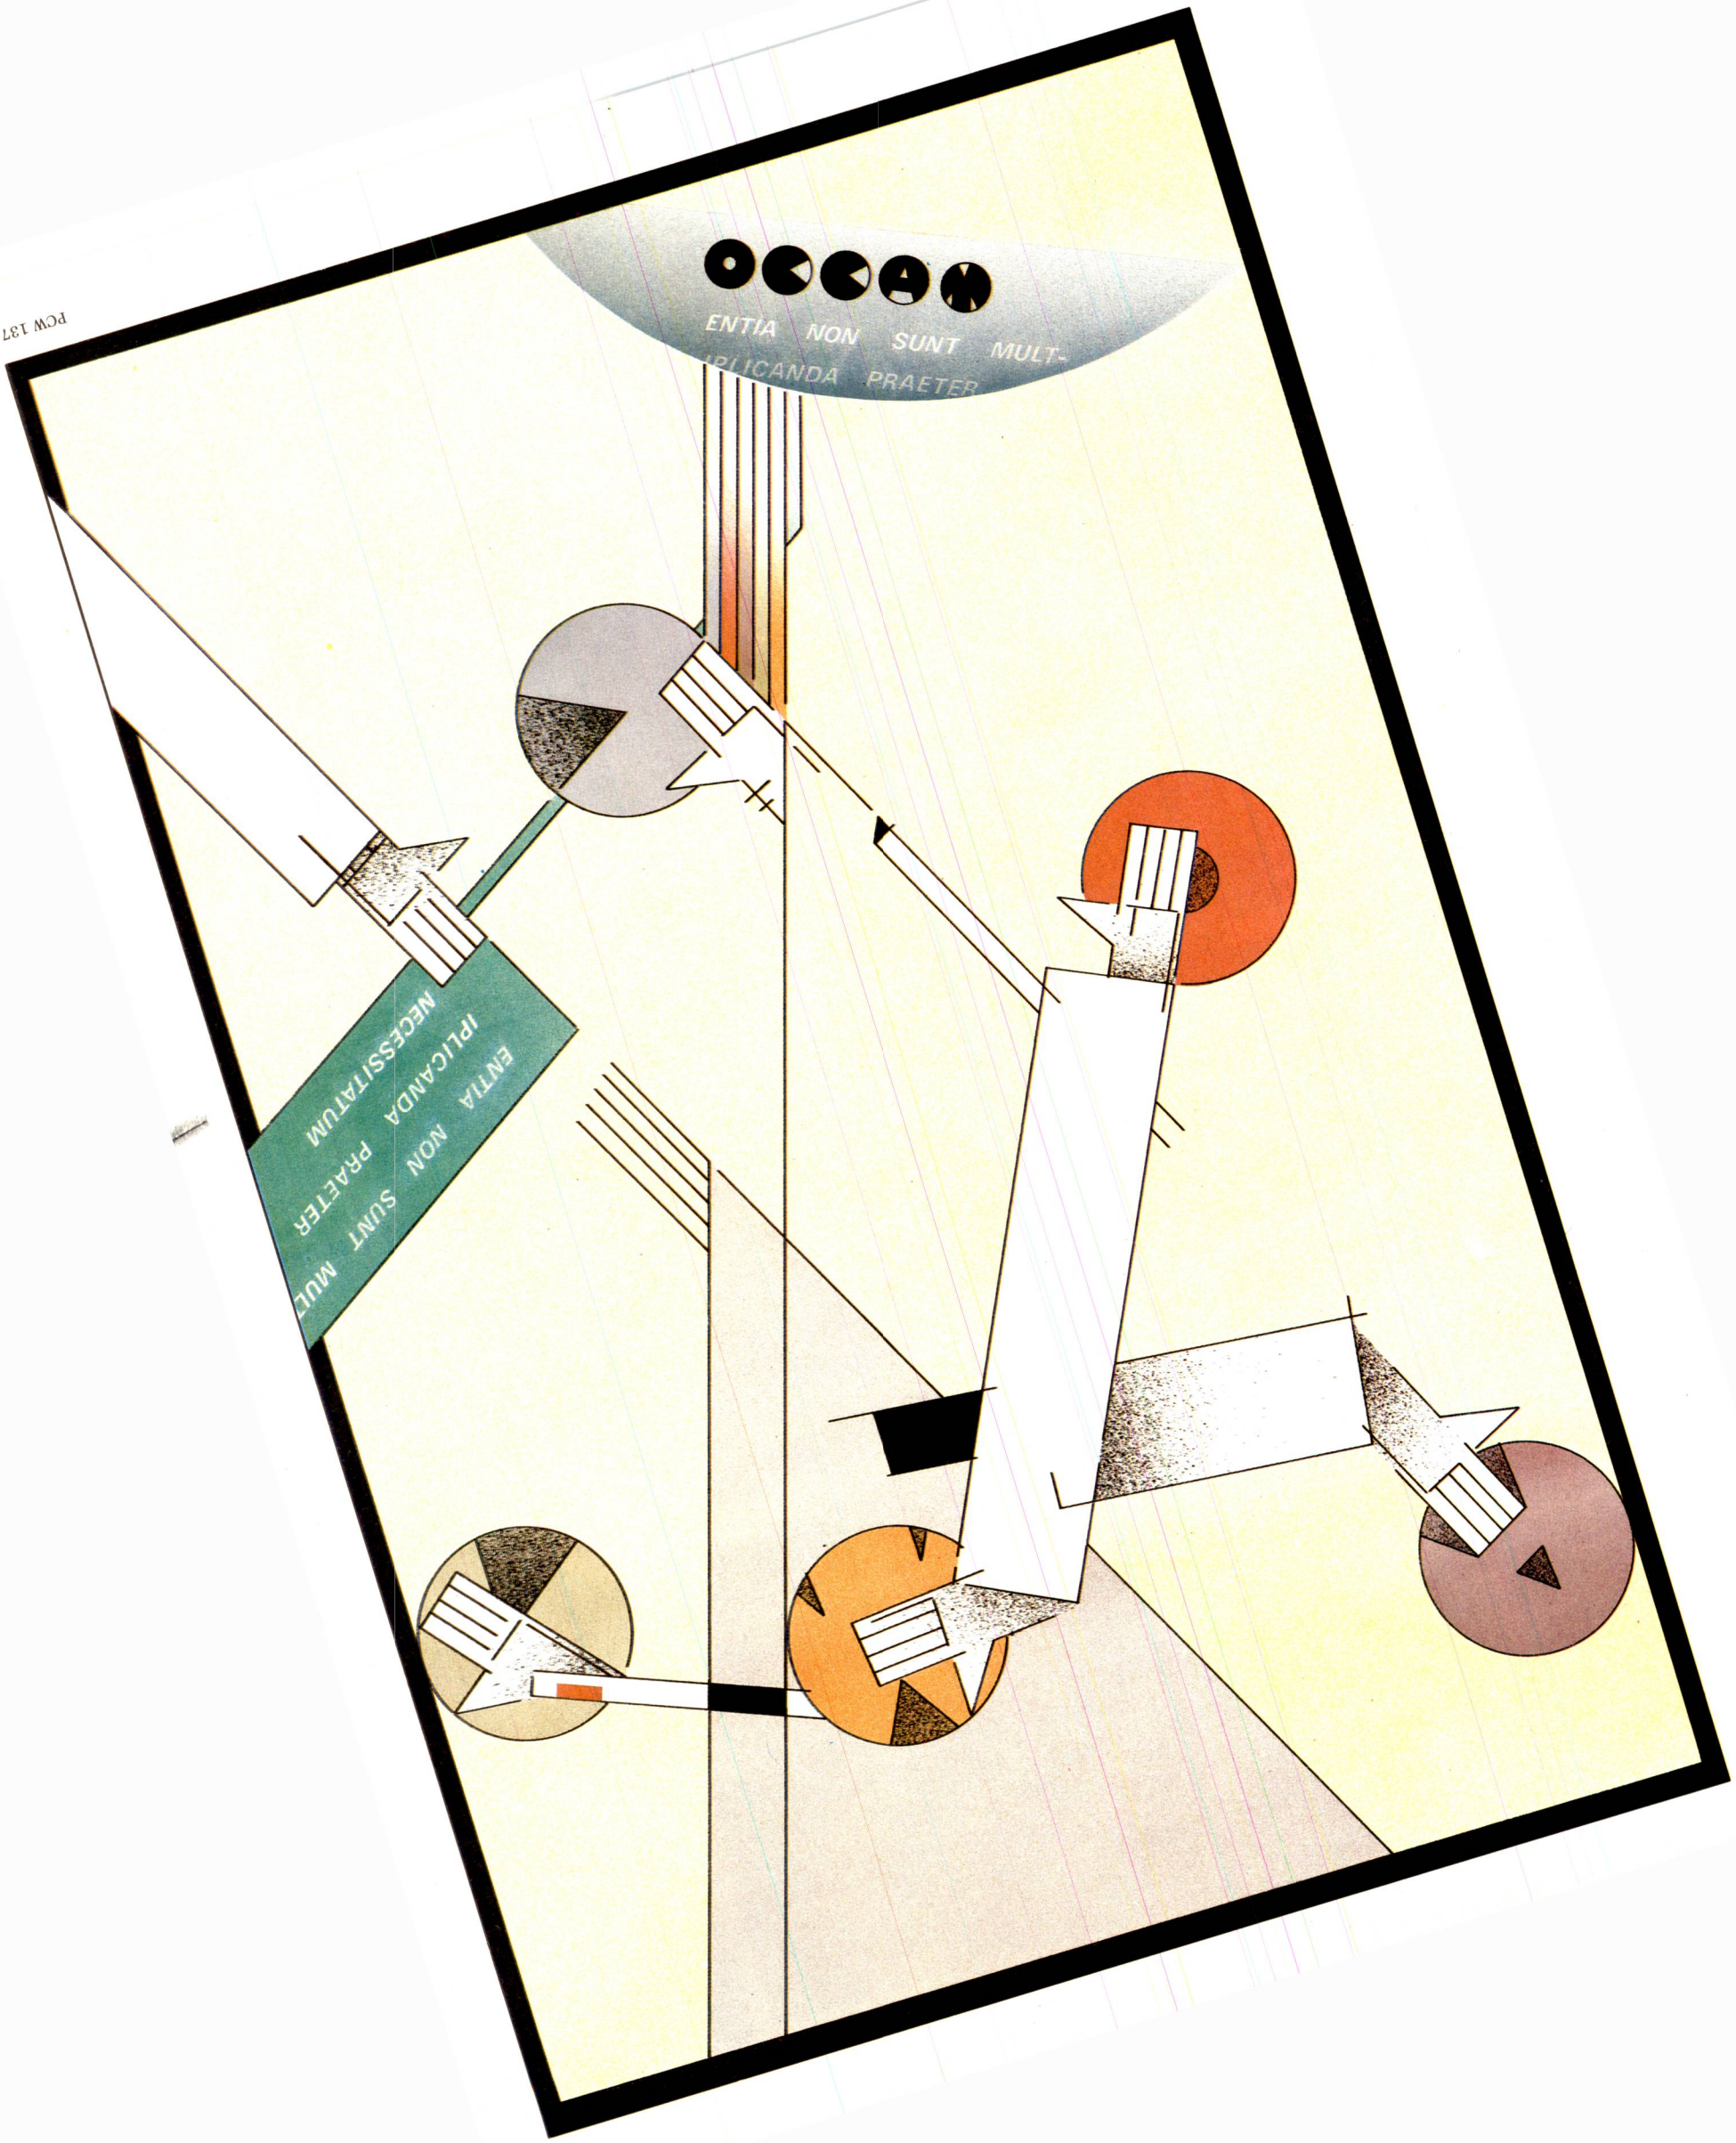

To achieve concurrent programming in a high-level language, the facilities have to be built into the language. The most well known example is Ada, which has a program construct called the 'task' for this purpose. Tasks communicate by shared variables and by flags (often called semaphores). Some Pascals have a similar construct called a 'process'. A task or process is a piece of program which can be executed in parallel with other such pieces.

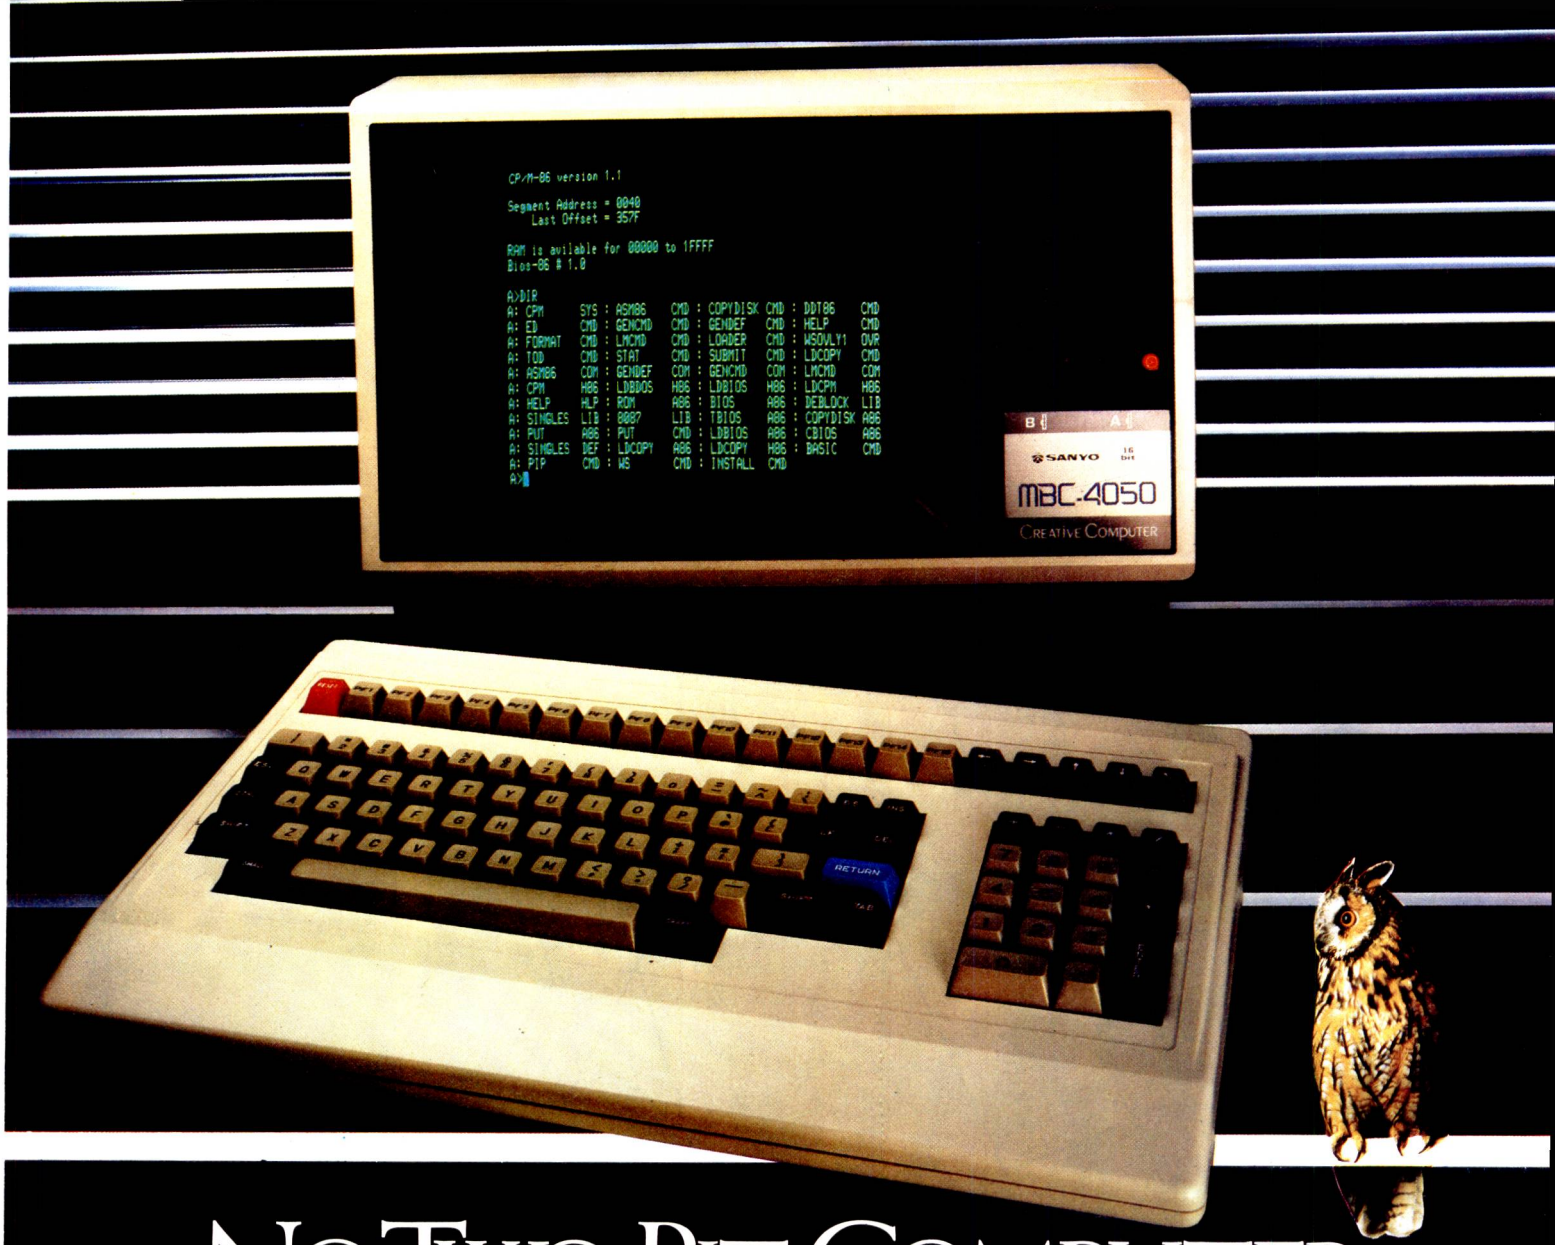

Occam's razor

Inmos, Britain's great white hope in the semiconductor industry, is working on a new computer called the 'transputer' which is due to be unveiled later this year. Few details of the machine are available beyond the fact that it will be used in networks and makes use of the concept of parallel processing.

Occam is a new systems programming language developed by Inmos' programmers specially for the transputer, though it's equally applicable to other machines. Occam is possibly the first language dedicated to the concept of parallel programming; the parallel constructs are part and parcel of its structure rather than optional extras. The intention of Occam is that the programmer should not have to care how concurrency is achieved as the same Occam program will run on a single processor (by cheating) or with multiple processors (a separate processor for each task).

The name Occam is taken from the 14th century Oxford philosopher of that name who gave us Occam's Razor; the principle that entities should not be multiplied further than necessary, which means that of competing equally likely explanations, take the simplest. One of the most cogent critics of Ada, the US Defence Department's adopted language, has been Dr Tony Hoare, who has been intimately involved in the design of Occam. Ada is a huge language with everything including the kitchen sink. Much of its size comes from the need for absolute security in defence related programming; Ada takes the Pascal

NO TWO-BIT COMPUTER.

You're looking at the new true 16-bit MBC4050 microcomputer from Sanyo. Just one of a new range of machines designed to make your life easier.

With features like the 8086CPU, 120 KBytes RAM expandable up to 384 KBytes, twin 5¼" slim type double sided double density double track 640 KBytes per drive mini floppy disk drives giving more than 1.2 MBytes storage capacity, the CP/M-86 operating system, interfaces for centronics – compatible printers and RS-232C communications port, you can see that the MBC4050 is something of a star performer.

As with all Sanyo products, the attention to detail will make the MBC4050 an even more attractive proposition. Thoughtful features like a built-in palm rest on the detachable keyboard, coiled cable and tilt display option for flexibility and ease of operation, and the versatility of 15 programmable function keys.

For further information regarding the many new bits in the Sanyo Computers range for 1983, contact our distributors, Logitek, at Logitek House, Bradley Lane, Standish, Greater Manchester or telephone them on 0275 426644.

Alternatively, clip the coupon below and return it to Sanyo. We'll send you information on any of our business machines, all designed to mind your business more efficiently.

Please provide me with further information on the Sanyo 1983 Business Machines Range. I am particularly interested in (please tick):–

☐ Microcomputers ☐ Calculators ☐ Telephone Answering Machines

☐ Electronic Cash Registers ☐ Dictating and Transcribing Machines

OCCAM OCCULT

style of protecting programmers from themselves to new heights, with minutely detailed restrictions on the scope and type of every object and a large number of objects. Occam on the other hand is very spare and elegant, having only 22 reserved words and five basic constructs from which all else is derived. Hence the name.

How Occam works

The sort of security required for real time systems is concerned with the isolation and synchronisation of concurrent processes; processes must not interfere with each other's data, they must not collide when competing for resources,and they must be ready at the right times if they are to communicate. Occam achieves these goals in a characteristically elegant way by completely separating the functions of storage and communication. The two fundamental data structures in Occam are the variable and the channel; variables store data and channels transfer data between processes. From a physical point of view these two may be identical as each consists of a one word memory location but they are logically distinct. (I tried Occam on the Sirius which has 16-bit words but this feature is implementation dependent; many Occam systems will be 32-bit.) Some channels will, however, be ports to the outside world, fixed in the particular Occam implementation, while others will be locations for exchange of data within the computer and can be declared as needed like variables.

The unit of Occam programming is the 'process'. A process performs a sequence of actions and then terminates. Note the time element creeping in here; in a Basic program you never think about a program terminating because it's so obvious that it must.

There are three fundamental types of process:- input, output and assignment.

I'll illustrate with a channel called 'keyboard' and 'screen' and a variable called 'store'.

Input transfers a value from a channel to a variable and is written:-

```
keyboard ? store
```

Output transfers a value from a variable to a channel and is written:-

```
screen ! store
```

Assignment puts the value of an expression into a variable as in most languages:-

```
store := store + 1
```

When a value is transferred down a channel, it is in fact only a copy of the value; the variable which performs the output retains its same value. This is one of the ways Occam (and many other modern languages) minimises the possibility of unwanted side-effects in a program; the only way to change the value of a variable is to consciously assign or input to it.

Constructors

All Occam programs are built from these processes using a set of 'constructors' to string them together. Complete programs also need some declarations, similar to Pascal or C. Some wirthy (sic) citizens may have pricked up their ears at the word 'value' used above. Yes, it's true, Occam is untyped, a value being merely one word regardless of its meaning. Occam is intended for system programming and is lower level than Pascal in this respect, more like Forth. For instance, it only has integer arithmetic (16-bit in the Sirius version). A simple Occam program would look like this:-

```
CHAN comm1,comm2:
VAR temp:
SEQ
  comm1 ? temp
  temp := temp + 100
  comm2 ! temp
```

Notice the declaration of the channels and variable used. In Occam these are both always local declarations; the channels and variable are set up only when this process executes, and are deallocated immediately afterwards. Notice also the word SEQ; this is one of Ocam's constructors, and it declares that what follows will be executed SEQuentially as in an ordinary Basic program. The indentation is not optional but highly significant as it indicates the scope of the SEQ construct. Occam has a smart editor which, in addition to checking syntax, handles this indentation for you automatically. This program inputs on channel comm1, adds 100 to the input value and outputs it to comm2, doing this once only. (The assignment is actually redundant as I could just say comm2 ! temp + 100.)

Communication on a channel is one-way only between any pair of concurrent processes, and it's synchronous. Communication can only occur when both the input and output processes are ready; if either reaches its input/output stage before the other is ready, then it will wait. This waiting is automatic and transparent to the programmer; no flags or semaphores to worry about.

The program above could be made into a named process by declaring it so:-

```
PROC add100 (CHAN comm1,comm2)
=   VAR temp:
    SEQ
      comm1 ? temp
      comm2 ! temp + 100:
```

A semicolon is now needed at the end because this is a declaration; that and indentation are the only delimiters used in Occam. This process can now be used inside another so:-

```
add100(keyboard,screen)
```

The actual channels to be used are passed in place of the formal parameters comm1 and comm2.

Things start to get more interesting when we come to the other Occam constructors PAR,ALT,IF and WHILE. PAR states that the following processes should be executed in parallel, ie, simultaneously. WHILE is the way of producing looping until a condition is met.

```
PROC add100 (CHAN comm1,comm2)
=   VAR temp:
    WHILE temp <> 0
      SEQ
        comm1 ? temp
        comm2 ! temp + 100:
```

This process will now repeatedly read from comm1 until a value of 0 is input. To repeat indefinitely, which is often what is wanted, I could have said WHILE TRUE. From now on — for brevity — let's omit channel declarations and assume that they have been made earlier in the program.

An example of parallel processes is:-

```
PAR
  WHILE TRUE
    VAR x:
    SEQ
      comm1 ? x
      comm2 ! x

WHILE TRUE
  VAR y:
  SEQ
    comm3 ? y
    comm4 ! y
```

The first SEQ process continuously monitors the input from comm1 while, at the same time, the second SEQ monitors comm3. Both then output to another channel. The two processes do not communicate with one another but if comm3 were to be replaced by comm2 then they would. Note that the order in which the two SEQ processes are written is totally irrelevant here; they execute together.

The ALT, for ALTernative, construct is absolutely central to Occam. It says that — of the list of processes which comprise its body — execute the first one which is ready:-

```
WHILE TRUE
  VAR x:
  ALT
    comm1 ? ANY
      SEQ
        x := x + 1
    comm2 ? ANY
      SEQ
        x := x + 100
```

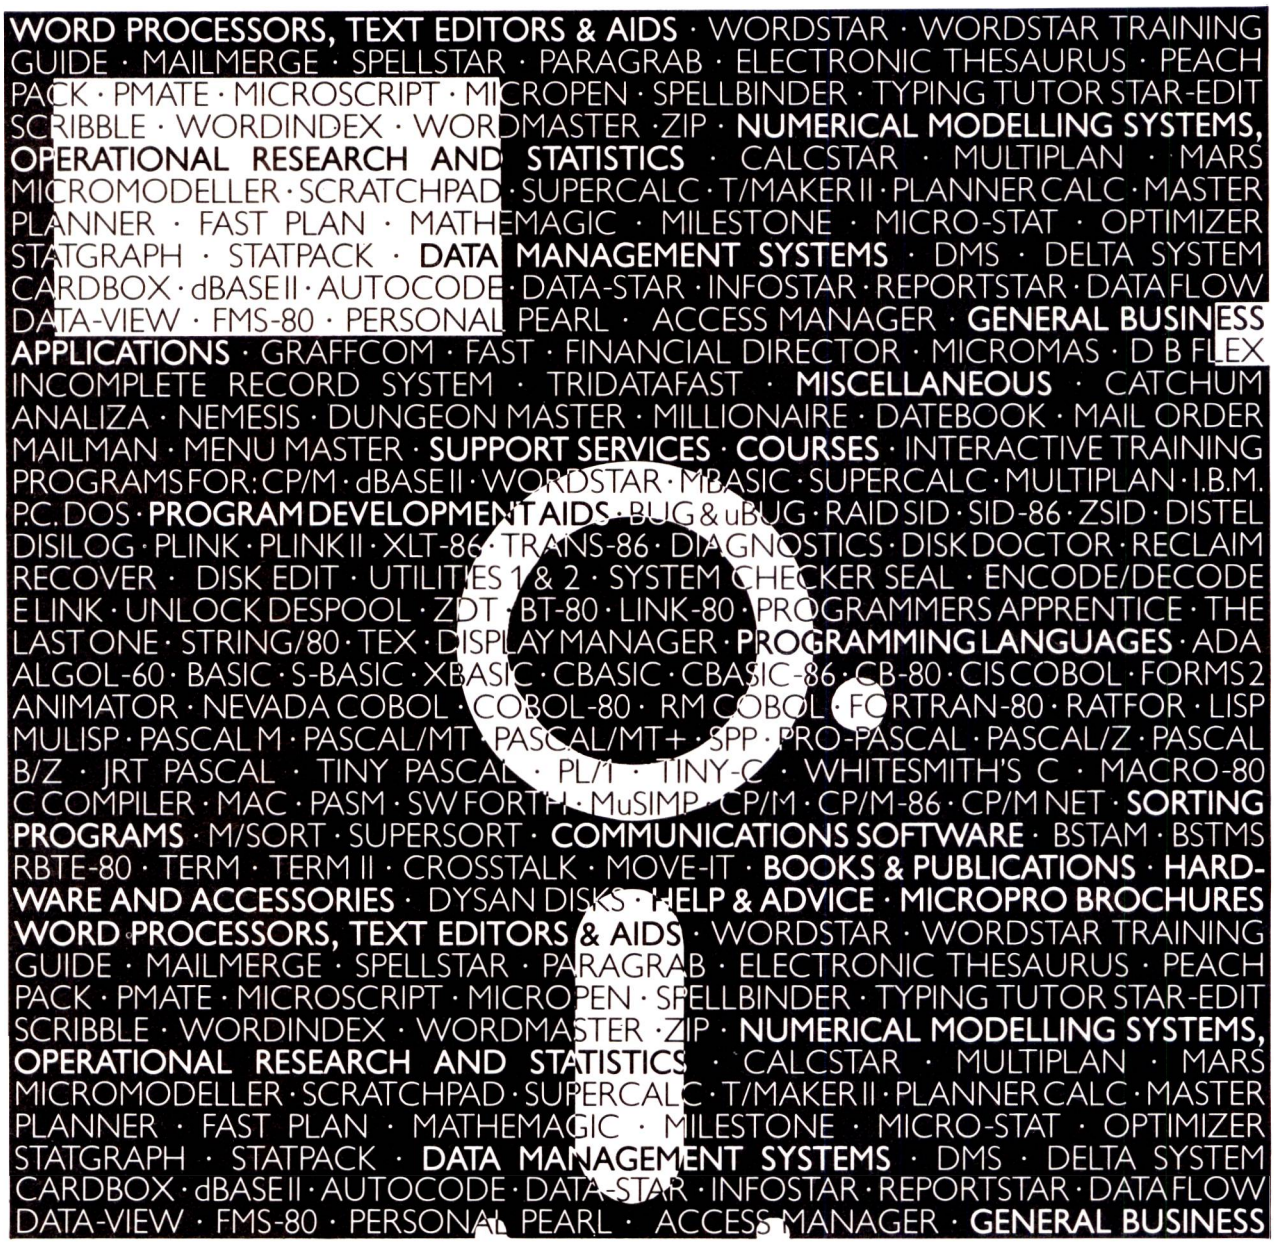

This will add either 1 or 100 to x depending upon which of comm1 and comm2 produces its input first; the input processes which ALT selects from are called 'guards'. Should both guards come ready simultaneously, then Occam will

```
CHAN values[n+1]:
PAR
  PAR i = [0 FOR n]
    WHILE TRUE
      VAR x, Estimate:
      SEQ
        values[i] ? x
        values[i] ? Estimate
        values[i+1] ! x
        values[i+1] ! (Estimate+(x/Estimate))/2
  WHILE TRUE
    VAR x:
    SEQ
      Sq.root ? x              -- input initial value
      values[0] ! x
      values[0] ! x/2          -- form initial estimate
  WHILE TRUE
    VAR root:
    SEQ
      values[n] ? ANY
      values[n] ? root         -- receive final estimate
      Sq.root.result ! root
```

choose one arbitrarily to execute. ANY is a dummy variable which throws away the input value; only its presence or absence matters as a signal. This is the stuff of which real-time control systems are made. The power of ALT is increased by the option to put a condition in front of the input process in a guard:-

```
ALT
  x < 0 & comm1 ? ANY
```

Each guarded process can only execute if its guard is TRUE which means it must be both ready with a message and the condition must be TRUE.

Real time processes

Real-time can be introduced by using the WAIT process instead of an input process as a guard. NOW is a system variable which contains the time of the system clock. AFTER is an operator which compares times; time1 AFTER time2 is either TRUE or FALSE.. So one can write:-

```
VAR alarm:
SEQ
  alarm := NOW + 100

ALT
  comm1 ? ANY
    SEQ
      — some action
  WAIT NOW AFTER alarm
    SEQ
      — ring a bell
```

The action performed depends on whether a message is received on comm1 before the WAIT comes TRUE after 100 time units.

The IF construct is very simple, with no THEN or ELSE. Each following process begins with a condition and IF executes the first (in program sequence not time) one which is TRUE. If none is TRUE the process has no action:-

```
IF
  x=0
    screen ! y
  x=1
    printer ! y
```

Using these simple but elegant constructs it's possible to write virtually any program, but it will tend to be very long. A cunning device called the 'replicator' allows much better economy of expression. A replicator may be used with any of the constructors mentioned above to — well — replicate the process a stated number of times. The equivalent of a FOR. . .NEXT is created by:-

```
SEQ i=[1 FOR 20]
  screen ! i
```

This will output the numbers 1 to 20 to the screen. Used with PAR, it is possible to create an array of parallel processes:-

```
CHAN k[n+1]:
PAR i=[0 FOR n]
  WHILE TRUE
    VAR x:
    SEQ
      k[i] ? x
      k[i+1] ! x
```

This process creates a queue with room for n elements by passing the input value along to the next highest numbered channel in the array. A good example of the Occam style of programming, presented in the manual, uses such an array of processes as a pipeline to perform square-root evaluation by Newtons approximation on a list of numbers; calculation takes place in parallel, the next number on the list being input and the approximation cycle begun before the previous one has finished. This results in an overall improvement in throughput compared to the normal iterative solution even when using a single processor by time-slicing. For the benefit of those with the patience to unravel its workings, I reproduce the listing in Fig 1.

A replicator with ALT allows input from an array of channels to be concisely programmed:-

```
WHILE TRUE
  VAR x:
  ALT i=[1 FOR 100]
    chan[i] ? x
    out ! x
```

Input from the array of channels is funnelled into a single output channel; a sort of demultiplexer.

Data structures

You have just seen another type of Occam data object: the array. Arrays of channels or variables can be constructed by adding the upper bound in square brackets when declaring them, eg, VAR varieties[57]:. If the word *BYTE* is included, a byte rather than word array results, eg, VAR alphabet [BYTE 26].

String handling in Occam is performed by treating them as byte arrays, which will be familiar enough to Forth programmers. Constants and tables of constants can be set up with DEF, eg, DEF interval = 100: or DEF squares =TABLE[1,4,9,16]. (Hex values are introduced with a £, eg, £1c).

The inbuilt I/O facilities in Occam are minimal, as in C or Forth, so, to print a string to the screen, you need a routine like:-

```
DEF string = "what the hell"
SEQ i=[1 FOR string[BYTE 0]]
  screen ! string[i]
```

Note that the first byte of string contains its length. In practice, a routine to do this (called str.to.screen) and many other utilities — such as file I/O — are supplied in a library. PROC str.to.screen would be used in a program as:-

```
str.to.screen("what the hell")
```

Processes named with PROC can accept as parameters either variables, channels, values, or arrays of any of these. The size of an array need not be declared in the formal parameter list of a process so that arrays of variable size can be passed. For instance, the formal parameter list of str.to.screen is:-

```
PROC str.to.screen(VALUE string[] =
```

The compiler

The version of Occam on which this brief survey is based is a 'preview' product called 'proto-occam' which is meant only as a sample of the full language. It runs under the UCSD p-system on Apple, Sirius, IBM PC, VAX and LSI-11/23.

Occam is a compiled language but the compiler is rather out of the ordinary. It is a single pass compiler with an embedded intelligent screen editor, and in use it's almost like an interpreter. The source program is written using the simple but effective screen editor which automatically indents by the correct two spaces every time you use a constructor like SEQ. Issuing the 'check' command performs the lexical analysis stage of compilation and reports syntax errors by placing the cursor at the site of the error. This can be performed after you enter each line, if so desired. Only when your program has checked ok, are you allowed to issue the 'generate' command which completes the code generation pass after which the object file (p-code in this case) can be written out to disk.

The main features lacking in the Evaluation version are any facility for separate compilation and linking of modules, and the ability to directly address memory locations. The latter is necessary if you wish to create new 'real-world', as opposed to internal, channels by, for instance, accessing an RS232 port. The sample version comes with just two such channels implemented, namely screen and keyboard; printed listings are only available by using the p-system utilities. Incidentally the Occam Evaluation Kit is reviewed in full in issue 1 of *Soft (That's enough of your plugs, Pountain — Ed).*

Occam is a very easy language to learn and use; its syntax is so simple and consistent that it can be learned in half an hour by anyone who is familiar with Pascal. It is cleverly designed to allow constructs of great power to be produced from a relatively small number of primitive entities. Many of the latest ideas on structured and applicative programming have been incorporated but not so many that they render it difficult or frustrating to use as a 'dirty' systems programming language. Its security features stem in an elegant and natural way from its control structures without the need for binding the programmer hand-and-foot with restrictive afterthoughts. If it has any serious shortcomings then I certainly do not have enough experience to have discovered them (I've no doubt that the *PCW* mail-box will feel the strain if there are any!). As an educational tool to introduce the concepts of parallel processing it is superb, and it seems small enough to be effectively implemented on the latest generation of microcomputers; the p-system evaluation version is rather slow but native code versions would presumably be a lot faster. Don't lost sight of the fact though that there is no such thing as a free lunch; parallel processing on a single processor can rarely result in much overall speed gain. Multiple processors are what Occam is really all about.

Whether or not it is already too late for Occam remains to be seen; the US Defence Department's endorsement of Ada is a formidable obstacle but if there is any place left for aesthetics in computing, then it deserves to succeed. If you believe, as I do, the Bauhaus dictum that 'form follows function', then it is perhaps not such a bad criterion.

END

CHECKOUT

HEARING IS BELIEVING

Peter Rodwell checks out a new piece of audio hardware — the Compact Disc — which will be beneficial to the computer industry.

What, you may well ask, is a chunk of audio hardware doing being reviewed by *PCW*? It has, after all, nothing at all to do with computers.

Well, that's a fair comment in a way but the latest revolution to hit the audio industry in fact owes its existence to the computer industry and may well become a vital computer peripheral in the near future. And, in any case, the whole thing is such a neat piece of technology that it ought to interest any technofreak simply because it's such a good idea.

For decades, people have been spending an awful lot of money trying to reproduce recorded sound as faithfully as possible in the comfort and privacy of their own homes. The last great revolution was the development of the LP record and shortly after that the widespread introduction of stereo sound. Both brought immense improvements over the previously popular medium, the 78rpm record, in terms of frequency response, dynamic range and reduced noise. Corresponding developments to other parts of the audio chain – microphones, tape recorders, amplifiers and loudspeakers, for example – have brought reasonably good sound into the ordinary home.

But good though these methods are, they still haven't given us really good sound – there's always some degree of distortion and background noise introduced at the various stages in the process.

A new technology has now emerged which does allow the capture, storage and reproduction of sound without such massive risks of degradation. By digitising the sound as near to its source as possible and then storing it in digitised form, it's possible to reproduce it with no audible difference to the original; the method which has been developed to do this is the Compact Disc (CD hereinafter).

How it works

Sound is transmitted through space in the form of variations in air pressure; these cause our eardrums to vibrate in sympathy and we perceive this as a sound of one sort or another. Variations in pitch and other qualities which allow us to recognise the difference between, say, the sound of a violin and that of a randy tomcat are caused by variations in the pattern of these pressure waves.

The diaphragm in a microphone acts like our eardrum – it vibrates in sympathy with the pressure waves which make up sound, but it converts these to an electrical signal, the voltage of which varies as the sound varies. The signal produced by a microphone is quite weak but if we strengthen it sufficiently with an amplifier, we can reverse the process by feeding it to a loudspeaker, which converts the signal back into pressure waves. Unfortunately, the three components in the system – microphone, amplifier and loudspeaker – never produce an *exact* copy of the input signal and the result emerging from the loudspeaker will always be distorted to some degree. In the recording/playback processes used to produce an LP, there are many more stages than this and therefore many more stages in which distortion can occur.

The digital techniques used in the CD system allow a far more faithful level of sound reproduction. To digitise sound, the analogue signal is 'sampled' as soon as possible after it has been obtained. To get an accurate digital representation of an analogue signal, you need to sample it at a rate of at least twice its frequency. The audible frequency range is from 20 to 20,000Hz so the CD system uses a sampling frequency of 44.1 kHz which is more than adequate, and each measurement results in a 16-bit binary number.

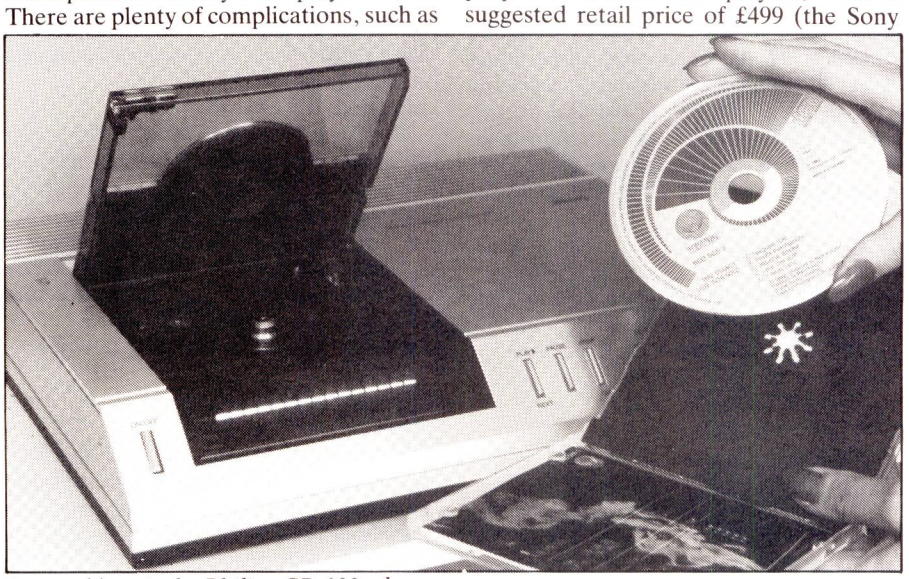

The digitised signal is stored and distributed on a 12cm diameter disc quite unlike the LP record. One side of it is covered by a label while the other, the playing side, has a silvery sheen. Although you can't see it, what you're looking at is in fact a spiral track of pits in a thin aluminium disc, contained in a protective, transparent plastic covering. The disk is read by a small laser in the player and the pits cause the reflected laser beam to effectively flash on and off in sympathy with the pits' binary pattern. A photo detector captures this and a digital to analogue converter turns the signal into audio.

This is of course a grossly simplified description of the way a CD player works. There are plenty of complications, such as keeping the laser aligned with the track, and – the CD's strongest point – error correction, which not only maintains the fidelity of the resulting sound but helps reduce background noise such as scratches or minor imperfections on the disk. Small scratches or fingerprints on the transparent coating do not affect the sound quality at all, for the laser is focused on the aluminium surface behind them and doesn't even 'see' them. Short scratches which are deep enough to affect the laser beam can be dealt with by the error correcting circuitry, but of course there is a limit to what can be compensated for by electronics and a really bad scratch will give problems. Generally, though, the CD discs themselves are far more robust than LPs and, because they are not in contact with anything like a stylus, have an almost indefinite lifespan. Because it is so robust, the same disc will be usable in other types of CD player: car stereos and portable players are expected to appear in due course.

In use

I first came across a CD player in a department store in Tokyo and was astounded at the sound quality it produced. In fact, it was only the presence of Epson UK marketing manager Rob Stead which stopped me from buying one on the spot – we had previously agreed to prevent each other (forcibly if necessary) from spending any money while we explored the Tokyo equivalent of Tottenham Court Road.

To check on whether that first impression was accurate, I borrowed a Philips CD 100 player, the bottom of that company's proposed line of CD players, with a suggested retail price of £499 (the Sony

Pictured here is the Philips CD 100 player.

player in Tokyo was selling at about £330!).

Yes, my first impression had been right: the sound quality from these players is staggering, with a depth and realism which immediately make the LP obsolete. In fact so enthusiastic was I that I rushed out and bought another couple of discs (they're about £10 each, rather cheaper than a high-quality conventional LP and providing considerably better sound) on the grounds that I'm sure to end up buying a player one day.

Like all the other CD players now being sold, the Philips model plugs straight into your existing amplifier. All you are in effect doing is adding a second turntable – there's no need to junk your hi-fi system and buy a new one.

The selection of discs available now is quite good, although a little thinly distributed around record shops, and most European record companies will be producing recordings on CD format as well as LPs from now on. The exception is EMI, which isn't convinced that the CD will catch on, but EMI wasn't convinced that the LP would catch on either, and had to scramble hard to catch up with the rest of the world when the truth finally dawned.

I am convinced that the CD system will destroy the LP just as the LP did to the 78. If you think that £500 for a newfangled record deck on which you can't play your existing LPs is too much, well, my guess is that while there might be some cost-cutting in the Tottenham Court Road, the price will probably stay pretty much the same in figures, and the effect of inflation will be to make it cheaper in real terms – rather in the way that colour TV prices have behaved. The revolution won't happen overnight, either, but I would be prepared to bet that within five to seven years, we'll see a CD player in as many homes as now have colour TV sets. Which brings me on to the real reason for sneaking a piece of audio equipment into the pages of *PCW*.

When (not if) CD players reach the same level of penetration that conventional audio equipment now has, we will suddenly have a unique and fairly inexpensive medium on which to publish computer software and electronic data of all sorts. Conventional optical disc wisdom says that the laser video disc, currently enjoying a mini sales boom in the US but apparently a disaster here, will be *the* way of distributing computer-readable information. A video disc can hold, typically, 2 gigabytes of data, compared to the CD format which I estimate can store about 30 megabytes or so – it's difficult to tell because information isn't held on them in as straightforward a way as on a computer disk. But although read-write video disks are already in the laboratory stage and expected to hit the High Streets one day, it will be the CD which gains widespread acceptance first and which gains the widest-spread acceptance.

Because it is so much more robust than a computer disk, a Compact Disc offers a very rugged, low cost-per-bit medium for distributing software and large databases of information such as encyclopaedias, books, knowledge bases for expert systems, etc. All that is needed is an output from the player which allows a computer to tap into the digital signal stream before it gets converted to analogue form. The Philips player has no such outlet but this is hardly surprising: the CD market has only just begun in Europe (it's booming in Japan, apparently) and it will take time to gain acceptance and become familiar on the audio scene. Only then can we computerists get our hands on it, but if I were a software house or an electronic publisher, I'd be looking hard at CDs right now.

In the meantime, if Santa Claus is a *PCW* reader, you know what I want for Christmas, squire!

NUMBERS COUNT

U-SEQUENCES

Mike Mudge muses mathematically.

An increasing sequence of positive integers consists of a list of such integers, separated by commas; it is read in the conventional way from left to right and each number is to be smaller than that which follows it.

This work is concerned with certain non-terminating (or infinite) sequences which will be written $\{u_r\}$ as 'short-hand' for u_1, u_2, u_3, ... The first two positive integers u_1 and u_2 will be given and the sequence is to be continued by including only those integers which can be expressed in just one way as the sum of two distinct earlier members of the sequence. Such a sequence is named a U-sequence after Stanislav M Ulam. Details will be given for the fundamental U-sequence defined by $u_1 = 1$ and $u_2 = 2$ although obvious generalisations are possible.

$\{u_r\}$ =
1,2,3,4,6,8,11,13,16,18,26,28,36,38,47,48,53 ...

$u_{100} = 690$, $u_{500} = 5685$, $u_{1000} = 12294$

Questions

Note: These are based upon the work of Bernardo Recamán, American Mathematical Monthly Vol 80 1973.

(i) When is the sum of two consecutive terms of a U-sequence also a member of that sequence?

For the fundamental sequence

$u_1 + u_2 = 1 + 2 = 3 = u^3$

$u^{19} + u^{20} = 62 + 69 = 131 = u_{31}$

(ii) Which positive integers are not the sum of two terms of a given U-sequence?

For the fundamental sequence these include 23,25,33,35,43,45,67,92,94,96.

(iii) Which pairs of consecutive integers are to be found in a given U-sequence?

For the fundamental sequence these include (1,2), (2,3), (3,4), & (47,48).

(iv) Are there arbitrarily large gaps between consecutive terms of a given U-sequence?

Problem

Submit a program which investigates some of the above questions for the U-sequence generated by a prescribed pair of positive integers u_1 and u_2.

In particular, verify the results of P Muller, MSc thesis, University of Buffalo 1966 that up to u_{20000} for the fundamental U-sequence the only four pairs of consecutive terms are those given in (iii) above but that over 60 per cent of consecutive terms differ by precisely 2. All submissions should include program listings, hardware descriptions, run times and output; they will be judged for accuracy, originality and efficiency (not necessarily in that order). A prize of £10 will be awarded to the 'best' entry received.

Entries, to arrive by 1 August to: Mr M R Mudge BSc FIMA FBCS, Room 560/A, Department of Mathematics, The University of Aston in Birmingham, Gosta Green, Birmingham B4 7ET.

Note: Submissions will only be returned if suitable stamped addressed envelopes are included.

Lucky numbers winner

Major errors of presentation prompted a considerable initial response from as far afield as Luxembourg, Derby, and Chichester.

All programs eventually submitted were written in Basic; hardware including PET, TRS-80, BBC and Spectrum: the latter having been run for four days ...

Various algorithms were designed for the construction of the desired sequence of lucky numbers, counting twin luckies and expressing even integers as the sum of two such lucky numbers.

The 'best' entry has been chosen as that of K P Leary of 2 Grove Vale, Chiselhurst, Kent BR7 5DS, whose presentation deserves particular commendation both for its content and its appearance, attributed jointly to Tandy Scripsit software and an Anadex WP6000 printer in correspondence mode.

A suitable prize will shortly be on its way to Chiselhurst.

The prize-winning investigation provides further empirical evidence for the Goldbach-type conjecture relating to lucky numbers, also for distribution theorems analogous to those for primes relating both to luckies and twin luckies. At the time of writing, however, analytic proofs of these results seem as remote as they ever were.

SPECTRUM PLUS

Looking to enhance your Spectrum's capabilities? Steve Mann (with a little help from David Tebbut) could have the answer...

As a committed devotee of the easy life, I thought it was about time to take a look at some programming aids for the Spectrum. The only thing that links these somewhat disparate items of hardware and software is the fact that their use will make Basic programming easier/more productive/more fun...

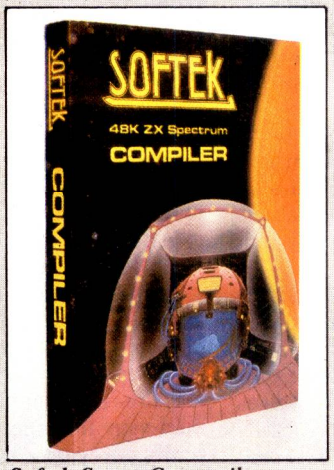

QUICK COMPILATION

The Spectrum user who is keen to try his hand at writing games will soon run into a major problem — Basic is just too slow for satisfactory 'blob-chaser' graphics. One answer, of course, is to program in Forth or machine code; Abersoft has produced an excellent implementation of Forth for the Spectrum (a full review of which will be published in due course), and there are numerous assembler/monitor packages available for machine code programming.

But the beginner is often understandably wary of machine code — to someone who has only recently learnt to program in Basic the collection of mnemonics and hex digits can be somewhat offputting, to say the least. One possible solution is to invest in a compiler — simply load this from tape, key in your lines of Basic, press a couple of keys and presto! your Basic is miraculously transformed into a machine code program that runs many times faster. Or so the theory goes... In practice, however, things are rarely that simple. The advertisements for various Spectrum compilers confidently claim 'Up to 250 times faster! Compiles 95 per cent of Spectrum Basic', etc, etc, and these claims are true enough. But '250 times faster' is under optimum conditions — speed increase in general use is more of the order of 10-100 times faster, and the important point to consider as regards '95 per cent of Spectrum Basic' is the missing five per cent: this includes floating-point arithmetic, string handling and all but the simplest of arrays.

Within these limitations, though, there's no doubt that a compiler is a useful tool that will certainly speed up your programs to a considerable degree — if you accept the fact that you will have to be very careful when writing your Basic to keep within the set limits.

I've had a look at three Spectrum compilers — from Softek, Wye Valley Software and Personal Software Services. Both Softek and PSS promise enhancements to deal with floating-point arithmetic and strings and I will take a more detailed look at Basic compilers when these are available. In the meantime, what do you get for your money?

Softek Super C compiler.

The Softek Super C compiler, although the most expensive, has one major advantage — it is part of a complete system which enables you to define functions keys and which allows you to compile complete programs at a single keypress. However, its methods of dealing with inputs and string arrays are not as straightforward as those of its competitors and it restricts the user to 26 variable names, all in upper case.

Super C does not handle either numeric or string inputs, but these can be simulated: for string inputs you have to set up a keyboard scanning routine which puts the ASCII codes of characters into high memory — these characters are then retrieved by the use of PRINT CHR$ PEEK. To deal with numeric inputs, an area of memory is allocated as a buffer to store the ASCII codes for the numerals. A checking routine is necessary to make sure that the codes are between 48 and 57 (the digits 0-9), and you also need a counter so that you will

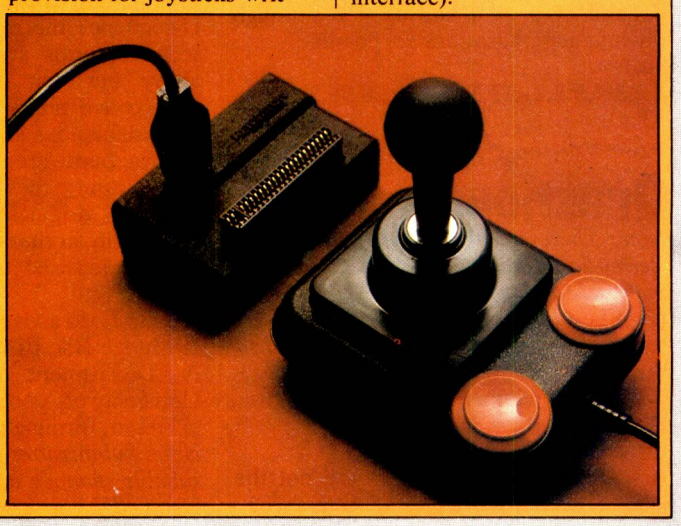

STICKING TO GAMES

A problem when playing games on a micro is the use of the keyboard to control movement, firing, etc. This is particularly noticeable in the case of the Spectrum, with its 'dead flesh' keys. So a joystick is an essential purchase. Clive unaccountably neglected to provide a joystick port on his machine, but this oversight has now been rectified by numerous manufacturers. Certainly not the cheapest on the market is Kempston's 'Competition-Pro' model, but it's robust enough to stand up to a good deal of hard and fast action.

A nice feature is the provision of two large firing buttons, making the stick suitable for both right and left handers.

There's not an awful lot you can say about joysticks — the action on this one seemed a little stiff and awkward at first but after a few games its use became second nature. It's sturdily constructed, has a comfortable grip and gives full eight-way directional action. A bonus is the fact that the connecting lead is five feet long — all too often this lead is far too short, resulting in the games-player having to sit uncomfortably close to the screen.

The Competition-Pro comes complete with a detachable interface box that plugs into the expansion port at the rear of the Spectrum. The joystick lead itself has a standard 'D' connector so, if the interface box is left off, the stick can be plugged into the Fuller Box. This is useful, as an important factor to consider is the number of software houses that have provision for joysticks written into their games. A large proportion of these are writing games for the Kempston stick; others are producing software for the Fuller Box. With the Kempston stick you have a choice — when used with the interface the stick is controlled with IN 31; when hooked up to the Fuller unit this changes to IN 127. Competition-Pro joystick — Kempston MicroElectronics, 180a Bedford Road, Kempston, Bedford MK42 8BL. £25 (includes interface).

Photography by Ian McKinnel

know how many digits are involved — this is important because you will need to multiply each number by the correct power of 10 to turn it into the full integer that you require. Thus, if the characters 5 and 7 have been entered, you multiply 5 by 10 and add it to 7 to give the correct number.

Super C runs on the 48k Spectrum only, and is very wasteful of memory. The compiler itself takes up the space between 32767 and 54000, and compiled code sits in the Basic program area between the system variables and the compiler. The area above 54000, therefore, is usable only for storage of data and graphics. There are other limitations — FOR...NEXT loops must step exactly to the defined limits: FOR A = 1 TO 11 STEP 2 will work fine, but FOR A = 1 TO 11 STEP 3 will go into an infinite loop. GOTOs and GOSUBs must jump to a line number that exists — unlike normal Spectrum usage the program won't continue from the next line. All equations are calculated in strict left-to-right order, with brackets ignored. The RESTORE command is also limited — RESTORE refers back to the start of DATA items; it is not allowed to have a program line like RESTORE 100. PAUSE 0 will usually halt programs until a key is pressed; this does not work on Super C. IF...THEN statements must end with GOTO or GOSUB.

Numeric and string arrays are dealt with in a very cumbersome manner: the method suggested for numeric arrays is to set aside a known and restricted block of memory in the area from 54000 upwards. You then, in effect, create a variable area there by POKEing the values of the array into successive memory locations. Thus an array of 10 elements could be set up in locations 54000 to 54009 with the first element in 54000, the second in 54001, etc. This is equivalent to A(1), A(2) and so on.

String arrays are similar, but are set up by using ASCII codes for the characters. In both case the array elements are retrieved by using PEEK.

A plus point for Super C is the fact that, once compiled with RANDOMIZE 49152, programs are executed with the normal Basic RUN command — there is no need to

SOUND SOLUTION

A major drawback for the Spectrum user is the machine's weedy sound facilities — the BEEP command is limited and the volume pathetic. The rival Oric's sound capabilities put the Spectrum to shame. A host of hardware add-ons have been produced by various firms to boost the Spectrum's feeble BEEPs; these include devices that route the sound through the TV set and small plug-in amplifiers that double as transistor radios.

Fuller Micro Systems has now come up with what must be the state of the art in Spectrum sound systems.

Of modular design, at its simplest it consists of a straightforward BEEP amplifier. The 'Fuller Box' adds a programmable sound generator, and there is also the 'Fuller Orator' speech synthesis unit. The 'Master Unit' brings all these together in a single box.

The sound generator is based around the 8912 sound chip (as used in the Oric). It has 16 internal registers and is easily programmed via the Basic OUT command. This chip gives enormous flexibility — you have control of three tone channels and a noise channel which can be used on its own or mingled with either or all of the tone channels. There are also 10 'envelope' modes, enabling the shape of the note to be altered — so you can make your Spectrum sound like a guitar, a piano or a machine gun.

Using this unit, very respectable music can be produced, utilising chords and harmony. The impressive demo cassette gives a sample minuet as an idea of what can be achieved with a little effort — but you are really limited only by your imagination. The easiest way to program the sound generator is via a set of DATA statements — each register is accessed by two OUT program lines: OUT 63, n and OUT 95,n. As yet I have investigated only simple tunes and sound effects, but I look forward to many hours of experimentation.

The Fuller Orator also utilises OUT as its means of generating sound — this time OUT 159,n will produce speech. Unlike many cheap speech units that rely on a built-in vocabulary, the Orator uses phonemes and allphones to build up its own words. You have to get used to thinking phonetically rather than relying on spelling, but it is infinitely flexible and the results are excellent. The voice is uncannily reminiscent of TV's Metal Mickey — indeed my first thought on receiving it was to program it to say 'Hello, my little fruitbat!'. A bit of practice and frequent consultation of the table of allophones provided will soon have your Spectrum talking to you.

In addition to speech and sound, the Fuller Master Unit has a joystick port (IN 127) which accepts many cheap Atari/Commodore-type joysticks, and a much-improved cassette interface that allows you to save programs without having to remove one of the leads. The whole unit is encased in a black plastic box that matches the Spectrum design and simply slots into the edge connector at the rear of the computer. Other accessories can be added on to the connector at the rear of the unit.

All in all, this is a superbly designed and finished piece of equipment. It enhances the Spectrum's sound capabilities to a surprising degree and is very reasonably priced.

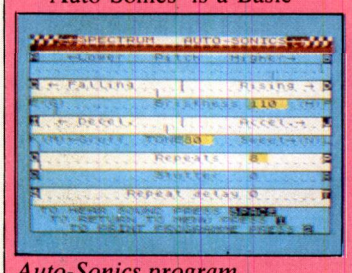

Sound amplifier box	£6.95
Fuller Box	£29.95
Orator + Box	£39.95
Orator upgrade (to fit in Box)	100£24.95
Master Unit	£54.95

(Available from Fuller Micro Systems, The ZX Centre, Sweeting Street, Liverpool 2.

For those who don't wish/can't afford to expand their Spectrum's sound but simply want to make the best of the existing facilities, a piece of software from Buttercraft should be just the job.

'Auto-Sonics' is a Basic program that, simply and with the minimun of fuss, allows a whole range of sounds to be incorporated in Basic programs.

Auto-Sonics program.

On loading the cassette a menu of 26 pre-defined sounds appears. These encompass telephone, siren, machine gun, helicopter, space game noises, outboard motor, frog, train, etc — some of the descriptions could charitably be termed 'loose', others are more accurate, but they are all easily modified. First choose the sound you want to work on, then press '1'. The display changes to a set of 'slider controls' which can easily be manipulated until the desired effect is achieved. When this is done, simply press '2' — you are now faced with a program line that will exactly reproduce the desired effect when incorporated in a program. Ingenious and well designed — and the effects when put through an amplifier like the Fuller Bos are excellent.

Auto-Sonics — Buttercraft Software, 14 Western Avenue, Riddlesden, Keighley, Yorks. £4.95.

SPECTRUM PLUS

work out the starting address for use with USR. Also very handy are the Super C REMs — REM B checks for the BREAK key being pressed; REM M allows you to insert a machine code routine into the Basic you are compiling; and REM N gives a total NEW, with program and compiler being wiped from memory. NEW itself clears the program only and leaves the compiler intact.

The PSS compiler is called M-Coder, and the cassette has versions for both 16k and 48k Spectrums. This review will concentrate on the 48k model and addresses mentioned are for this version.

After loading the correct version for your machine, the Basic to be compiled is typed in or loaded from tape, making sure that the last line to be compiled includes a STOP command. When the program has been entered it should be run to check for errors. Once the Basic is bug-free, RAND USR 60000 will start compilation. Each line is displayed as it is compiled and any errors are met with a flashing cursor and a return to Basic. Successful compilation is indicated by an 'OK' message.

Wye Valley Software compiler.

M-Coder uses memory more sensibly than does Softek's compiler — the compiler itself sits at the top of memory and RAMTOP is set initially to 40000. CLEAR n will move RAMTOP, enabling programs to be located anywhere between 24000 and 59000. Thus RAMTOP may initially be set high to enter a routine, then lowered and another entered — so several programs may be 'stacked' in memory.

M-Coder has several features to recommend it. One of the most useful is the trace facility — you have the option of disabling the BREAK key except for 'scroll?' and INPUT (this gives the fastest running code), enabling BREAK (longer code and execution takes twice as long) or setting the trace facility, which results in the line number being executed being displayed at the top of the screen — very useful for debugging. These options are selected by REM #0, REM #1, and REM #2 respectively.

Variable names may consist of upper and lower case letters plus numbers — so you could have variables A, a, A1 and a1. Numeric inputs are handled in normal Spectrum fashion, and in general there are less restrictions on the user with M-Coder than with Super C. Arbitrary expressions are accepted quite happily, with the proviso that they are enclosed in brackets in LET statements. GOTOs and GOSUBs will jump to the next line number if the one stipulated does not exist, and PAUSE 0 has its normal effect of stopping program

EASY GRAPHICS

One of the first tools a Spectrum programmer is going to need is a good user-defined graphics designer. There are many such programs on the market — a particularly interesting one is Bridge Software's Spectrographics system. This is a complete graphics toolkit that aids in the design of hi and lo res screens, enables the user to print characters at up to eight times their normal size and gives easy single-key commands for a variety of graphics applications.

The system is menu-driven, with the menu onscreen at all times in the 'prompt area' in the bottom two lines. For a sample of the routine's capabilities, see the accompanying photograph; as a guide to using Spectrographics the list of commands accepted will give a good idea. In each case the capital letter is the key you need to press to access the desired command.

clRs: clears the whole screen to the current paper command.

lOad: three options — load previously saved user-defined characters; load title plus display; load display only.

Colour: the colour menu consists of seven options, giving control of foreground and background colours, flash, bright, border, screen (this colours the whole screen according to settings of Paper, Ink, Flash and Bright), and local (colours selected area of screen without affecting the rest).

Save: saves current display on tape.

ChArs: allows definition of graphics characters. Up to eight characters may be defined at once, enabling definition of large shapes.

teXt: prints block of characters on screen of height varying from normal to eight times normal size.

Write: Spectrum is used like a typewriter for entering text.

Lo-res: This allows you to draw on screen using a special cursor block set up on keys G, Y, U, I, K, M, N, B.

Hi-res: As lo-res, but using high resolution graphics. Includes routines to design boxes, triangles, circles and fill them in with solid colour.

Title: sets up title for display — this is printed on bottom two lines, leaving whole screen for the Basic screen.

Print: causes current screen to be printed on ZX printer.

Grid: Alternate character squares on the screen are set Bright — useful for maps or complicated drawing. When G is pressed for a second time, grid is erased without disturbing picture.

With the help of this package, you should be able to design your own displays and characters with the minimum of effort. It's very easy to use and the documentation is clear and concise.

Spectrographics — Bridge Software, 36 Fernwood, Marple Bridge, Stockport, Cheshire. £7.50.

Just before the final deadline for this piece I received a pre-production copy of Micro's new graphics design package. The version I have seen is a demonstration only and included no documentation. Obviously designed with the games-player in mind, the package concentrates on fast-moving graphics and gives routines for rotating shapes.

Microl's Use and Learn package was an extremely good tuition package that was aimed at helping the beginner make the most of the Spectrum's capabilities. This is to the same high standard and is well worth keeping an eye open for. Microl — 12 Pheasant Close Purley, Surrey.

Special effects using Bridge Software's Spectrographics.

execution until a key is pressed. However, M-Coder cannot handle a STEP in a FOR/NEXT loop. A major advantage is M-Coder's ability to handle arrays, albeit in limited form — an array of numbers can be set up with the familiar DIM Z(x) command. All elements are initially set to zero. The array handles numbers only and it must be called Z; however it is certainly easier to handle than the convoluted array simulation of Super C.

The third in our trio of Spectrum compilers comes from Wye Valley Software. The version I have seen is a pre-production copy, and the only documentation supplied consisted of a few handwritten pieces of paper. But, for ease of use, I would rate this one the best. Compilation procedures are the same as for the other two and, as with M-Coder, the compiler is suitable for both sizes of machine — here I will concentrate on the 48k version.

After typing in your program and entering RAND USR 60000 you are met with a very clear screen display. 'START ADDRESS' gives, funnily enough, the start address of the program being compiled (one byte above RAMTOP, which is set initially to 40000). 'END ADDRESS' is updated during compilation and gives the last address of the compiled code. 'ARRAY END ADDRESS' appears only when the program makes use of the array — like M-Coder the Wye Valley compiler has provision for one numeric array: this time it must be called 'A' and can be up to 255 elements in length. Successful compilation is heralded by 'NO ERRORS', while if at any stage 'ERROR' appears on the screen the compiler has found a line it can't handle — in which case the offending line is printed out with '?' after the mistake.

To run a compiled program, simply note the start address, then type 'RAND USR start address'. Programs may be stacked by moving RAMTOP.

The range of command handled is very similar to that of M-Coder. Calculations must be enclosed in brackets, STEPs are dealt with in normal Basic manner, and GOTO/GOSUB/RESTORE follow usual Basic style. Numeric inputs are totally straightforward and have the advantage of optionally appearing in the top portion of the screen.

Where the Wye Valley compiler really scores, though, is in its range of additional command. These are accessed via REM statements and are summarised as follows:

REM A,e — sets colour attributes to value e.
REM B — checks to see if BREAK is pressed.
REM F — sets whole screen to current attribute without clearing display.
REM L,e — scrolls line e left one pixel.
REM R, e — scrolls line e right one pixel
REM N — outputs random noise in the form of an explosion.
REM S,e,x,y — 'mini'sprite' graphics. Puts character with ASCII code e at plot coordinates x,y.

These special functions give the Wye Valley compiler the edge over its competitors and, at £7.99, it is only slightly over half as expensive as Softek's Super C. It would certainly be a good investment for the Spectrum owner who wants some of the benefits of machine code without having to learn its idiosyncrasies.

Super C — Softek, 329 Croxted Road, London SE24. £14.95.
M-Coder — Personal Software Services, 452 Stoney Stanton Road, Coventry CV6 5DG. £8.95.
Wye Valley — Martin Lewis, Tarton House, Kinnersley, Hereford. £7.99.

THE SYSTEMATIC APPROACH

As I mentioned in the review of compilers, Super C is part of a whole set of Spectrum utilities from Softek, marketed under the name 'SofSys'. This system has several interesting features and merits closer examination.

At the heart of SofSys is Softime — the master key program. This comes on a cassette containing four versions — one for the 16k Spectrum and three for the 48k model. These three are

GOTO page 237

TESTING TIME

Are you a machine code freak or would you like to become one? If the answer to either question is 'yes' then you might be interested in this package. It was originally produced to help Francis Ainley write machine code programs for the Sinclair machines. After a while he realised that it could be just what the world was waiting for, so his company has published it along with a useful character generator program which is supplied 'free' on the same cassette.

There's no doubt that experienced machine code hackers will find this a useful addition to their range of software tools if they haven't already got the means of entering, amending and testing machine code programs. For someone who doesn't know machine code from the back end of a bus, it would be useful only if they plan to master this obscure form of programming. For those teetering on the brink, I say 'have a go'. If you're anything like me, you'll find it the most time-consuming but satisfying way of writing computer programs.

Right, what does the MCTT (Machine Code Test Tool) do for you? First, it introduces you to some very basic principles of machine code programming through its worked examples. Francis tells me he had far more problems writing the 32-page booklet than he did with writing the program and I can believe it because he has managed to pack a lot of information into this very slim volume. The program itself allows you to enter information, move chunks of memory around, isolate and run bits of program and examine memory and CPU registers. It also has a handy hexadecimal/decimal conversion routine which you can use on the fly, so to speak.

Taking the manual in sequence, you first encounter the hex/dec routines. After a clear explanation of hexadecimal notation you are introduced to a couple of examples which show you how the routines work. Simply enter something like D00200 to obtain the reply 'D00200=H00C8' or, going the other way, H1000 produces 'H1000-D04096'. The booklet then goes on to explain how a computer works, covering basic principles such as memory, the program counter, registers and instructions. It does not attempt to teach you machine code programming. For that you will need an appropriate tutorial book.

From this point on you are introduced to the various commands in MCTT by way of specific examples. The examples show you how to load and add registers, how to compare and branch, how to call subroutines and return and how to load memory from a register — all you really need to know in order to get cracking with machine code programming, in fact. The MCTT commands thus introduced are Alter (A), Breakpoint (B), Go (G) and Register Display (R). Not surprisingly, Alter allows you to change memory contents, Breakpoint lets you stop program execution at a particular point so you can see what happened, Go starts program execution at a particular point and Register Display shows the current state of the various registers.

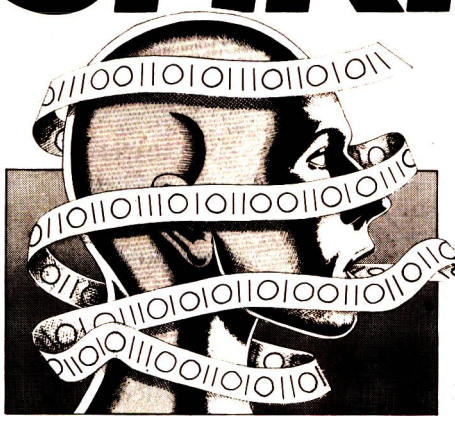

The only other commands are Move (M), which lets you shift blocks of memory around; Page Memory (P), which shows you any contiguous 30 bytes of memory; Nullify Last Breakpoint (N), which 'undoes' the last breakpoint and Stop (S) which returns you to Basic.

Everything worked well and during the test, I didn't crash it once. The commands are easy to use and the booklet is very clear. It does contain a couple of small errors but, unless you're a complete nerd, they are pretty obvious and shouldn't hold you up.

I figured that a price between five and ten pounds would be appropriate. I then learned that it had been pitched at £9.95. I suppose that when you consider the 'free' character generator, this represents fair value for money. MCTT runs on both 16k and 48k Spectrums and is obtainable from Oxford Computer Publishing Ltd or larger branches of W H Smith.

David Tebbutt

SHRINK RAPT

PSYCHOANALYSIS USING LISP

There's nothing to worry about when Eliza is there to share your problems. David Johnson-Davies lies back and reveals all . .

The following article describes a complete Lisp program that illustrates, in an entertaining way, how a computer can be made to appear intelligent by the application of a few simple rules. The program, called Eliza, plays the role of psychoanalyst to a human patient, and gives rise to the following type of dialogue (the human's input is in bold):

How do you do. Please tell me your problem
My relations are all alike
In what way?
They're always getting at me about something or other
What incident are you thinking of?
Well, my mother made me come here
Who else in your family made you come here?
No one
Tell me more about your mother
She treats me like a child
What exactly do you mean?
etc

The Lisp program presented here is a simplified version of the original Eliza which was developed by Joseph Weizenbaum in 1966, and which has since become well known as an example of computer 'intelligence'. The program's name derives from the character in Bernard Shaw's Pygmalion conversation. This version will run on a fairly small Lisp system and should act as an amusing demonstration of Artificial Intelligence. Although not intended as a serious clinical tool, the program nevertheless demonstrates a possible application of computers in medicine; indeed, patients appear to prefer to communicate with a computer than with a human doctor when they are being asked simple diagnostic questions.

The Eliza program works by 'pattern matching', using Lisp lists to represent the sentences being manipulated. First the program looks for certain keywords in the sentence that the user types in; it then tries to match certain patterns of sentences which contain that keyword. The main function used by Eliza to perform this pattern-matching is called MATCH. The first argument to MATCH is a 'pattern' which is compared with the sentence that has been typed in. The second argument is the 'data'; ie, the actual sentence.

The simplest facility MATCH provides is to test two sentences to see if they are the same; for example:

(MATCH '(ONE TWO) '(ONE TWO))
= T
(MATCH '(ONE TWO)
'(ONE THREE))= NIL

However, the real power of MATCH is its ability to cope with more sophisticated rules for matching, and these are implemented by means of special symbols, such as '★', '=', '?' and '@', which can occur in the pattern list:

★ matches any sequence of words, and

= Q matches any sequence of words and assigns the matching list to Q (or any other symbol).

Thus: (MATCH '(ONE ★ TWO) '(ONE THREE FOUR TWO)) = T
(MATCH '(ONE = R) '(ONE TWO THREE)) = T and R = (TWO THREE)

? matches any single word.

Thus: (MATCH '(ONE ?) '(ONE TWO))
= T

(...) Q (where (...) represents a list) matches any of the alternatives in the list (...) and assigns the matching word to Q.

@ Q evaluates Q and replaces it by its value.

Thus: (SETQ LI '(ALPHA BETA GAMMA))
(MATCH 'ONE @ LI Q) '(ONE BETA)) = T and Q = (BETA).

The full definition of MATCH is shown in Fig 1. It is a function of two arguments, P the pattern, and D the data. Its operation is as follows: First, a null pattern always matches null data. Otherwise, set the local variable CP to the first item in the pattern and test for other possibilities. If there is no

```

Fig 6

more data (NULL D), only match it if the pattern is '★', or '=' followed by a variable. If the first item of the pattern is '@', replace it by the next item's value. If the first item of the pattern is the same as the first item of the data, or a '?', they match, so call MATCH recursively for the ramainder of the pattern and data. If the pattern begins with '★' it matches anything. Finally, if the pattern begins with '=' it matches anything, and assigns the matching words to the following variable.

The MATCH function can be used in a wide variety of applications relying on the manipulation of sentences, such as 'intelligent' interfaces to problem-solving programs, or adventure-type games.

Next, Fig 2 shows the function that reads the user's input; GETSEN. It reads in a sequence of words, up to a RETURN, and makes then into a list. For example:

(GETSEN)
THIS IS A SENTENCE
will return (THIS IS A SENTENCE).

This function uses APPEND which, if not already present, can be defined as shown in Fig 3.

Next, Fig 4 shows a function PRL which will print a list of words with all brackets removed, inserting a new line if the sentence will not fit neatly on the screen. Thus:

(PRL '(THIS (IS) ((A)) SENTENCE))
prints THIS IS A SENTENCE

In addition, the following special symbols may be used in PRL:

= Q prints the value of Q
£ Q prints the value of Q, and sets Q to NIL.

Thus, (SETQ Q '(NEW LONGER))
(PRL '(THIS IS A £ Q SENTENCE))
prints THIS IS A NEW LONGER SENTENCE and sets Q to NIL.

This last facility is used to make Eliza hark back to an earlier topic by printing a sentence containing a keyword that has already been matched. The keyword is set to NIL to record that it has been used.

Database format

The Eliza program is driven by a database of keywords, and patterns. The keywords are recognised by the Eliza program in the sentence that the user types in. For each keyword in the database the following information is stored:

1. A replacement for the word if it needs to be exchanged.
2. A value giving the significance of that word.
3. A list of patterns to be tried against the sentence containing that word, together with the corresponding replies.

The format for each database entry is:
(replacement value ((pattern) (match) (pattern) (match))
Thus, the entry for AM in the database is:

```
(SETQ AM
   '(ARE O
      ((★ ARE YOU = R))
            (DO YOU BELIEVE YOU
ARE = R))
      ((★) (I DON'T UNDERSTAND
THAT)))
```

This specifies that each occurrence of AM in the sentence typed in should be replaced by ARE, and that the value of AM is O. Finally, if AM is selected as the highest-value word in the sentence, an attempt will be made to match the two pattern strings. Thus if the sentence were:

AM I GOING MAD
this would first be converted into
ARE YOU GOING MAD
(because each occurrence of I is also converted into YOU), and this would then match the first pattern:
(★ ARE YOU = R)
giving the value (GOING MAD) to R, and the reply:
DO YOU BELIEVE YOU ARE GOING MAD
would be given. The second pattern (★) will match any input sentence and result in the catch-all reply 'I DON'T UNDERSTAND THAT'.

Thus, the Eliza program is to perform the following steps:

1. Look up all the words in the sentence typed in by the user. Keep a record of the word with the highest value, and the corresponding list of patterns for that word.
2. Replace all those words for which a substitute is supplied.
3. Try the patterns one by one on the input sentence and return the match string for the first one that matches.

The first operation is performed by the function LOOKUP, shown in Fig 5. It looks up each word in the input sentence, and, if found in the database, it calls another function, FIND.
FIND, shown in Fig 6, takes the database entry of a word and tests its value against MAX, which contains the value of the best word so far found. If greater than MAX, RMAX is set to the list of patterns and matches for that word.

If no match is found, the function FLANNEL is called which gives a non-commital reply, or harks back to a subject mentioned at an earlier time; see Fig 7. Calling FLANNEL more than five times terminates the interview with the message 'SORRY YOUR TIME IS UP'! The global variables/FAMILY, /MEMORY, /

```

            '(SORRY YOUR TIME IS UP!.))))))
```

Fig 7

DESIRE, /WISH, /VICE, etc are set to a non-NIL value if the user has mentioned a particular subject.
Finally, the main routine that runs the ELIZA program is called ELIZA and is shown in Fig 8.

The Eliza database

Finally, the most important part of the Eliza system is the database, which determines the replies it will give in different situations. The following definitions illustrate one possible set of words and patterns that can be used for the Eliza program; the possibilities are unlimited, and with some ingenuity there is probably much scope for improvement.

First a function DEF is defined, such that: (DEF A B) is equivalent to (SETQ A 'B):

```
(DEFUN DEF X (SET (CARX) (CADR X)))
```

Entries in the database have three formats:

1. (DEF A B) gives B as the word to replace every occurrence of A.
2. (DEF A (B N (P1 M1) (P2 M2)...)) gives for word A the replacement word B, value N, and the patterns and matches P1 M1, P2 M2, etc. B can be omitted if no replacement is required.
3. (SETQ A AA) makes A behave in exactly the same way as word AA.

The database is shown in Fig 9, and the keyword definitions are not in any particular order.

Postscripts

There are several possible ways of improving the realism of Eliza's responses. One serious drawback is that the program will usually give the same reply if given the same sentence twice. In Weisenbaum's original program this was avoided by marking each pattern every time it was used; a marked pattern would only be used again if no other possible match was found. A second simplification present in this version of Eliza is that once the highest-valued keyword has been chosen, only patterns supplied under that keyword are matched against the input sentence. If none of these match, all attempts are abandoned and a call to FLANNEL is made; a better approach might be to try another keyword.

Finally, a more adventurous project might be to make Eliza learn from its encounters with humans, so that the database of keywords would be expanded as more people used it.

For the best hardware, the best software.

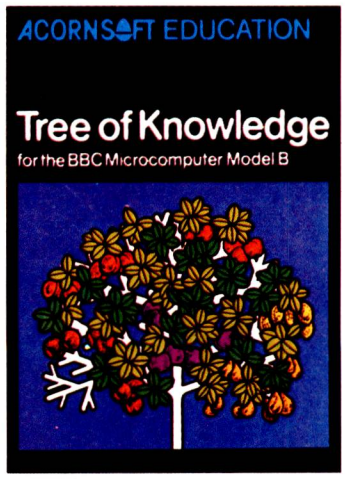

The BBC Microcomputer system is generally regarded to be the best micro in its price range you can lay your hands on. So, if you're thinking of buying one or already own one, you'll want to know about the software that's been specially designed for it.

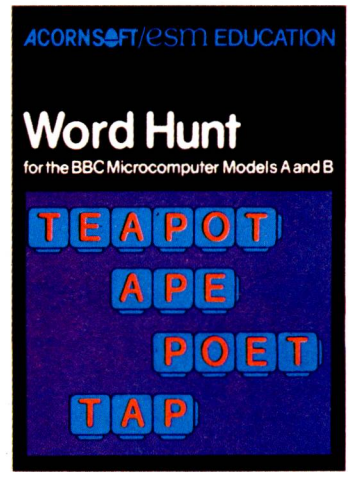

Not surprisingly, it's made by Acornsoft, the software division of Acorn Computers Ltd., who designed and built the BBC Microcomputer. So naturally you can expect the highest quality software with the built-in ingenuity to fully exploit the BBC Micro's potential.

Further education for everyone.

Tree of Knowledge (£9.95) is an interactive program for children of all ages teaching categorisation. It illustrates some of the more practical aspects of computing in that the pupil first educates the computer, building up a database by answering the computer's questions, and the database is then used to play games of deduction and logic.

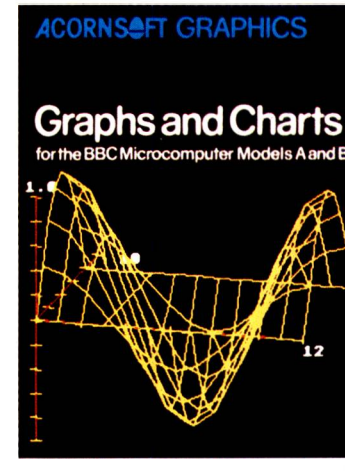

Word Hunt (£11.90) is a set of four programs, each containing a list of nine words. The object of the exercise is to select one word and then try to create as many smaller words as possible from the selected word.

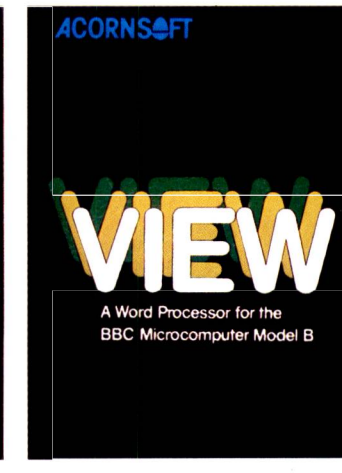

Increase your business acumen.

Graphs and Charts (price £17.45) which includes the book 'Graphs and Charts on the BBC Microcomputer' contains a set of programs to present data graphically in a wide range of applications. The graphs include automatic scaling, labelling of axes and use of colours.

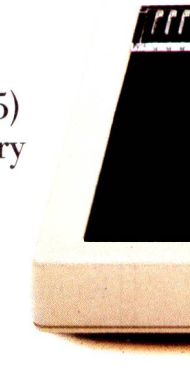

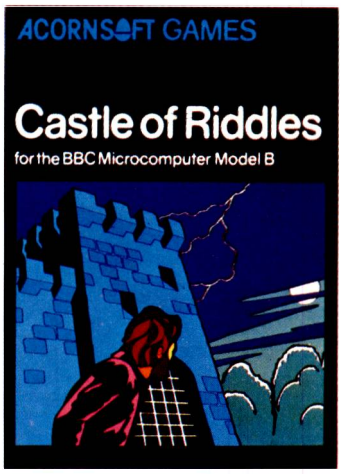

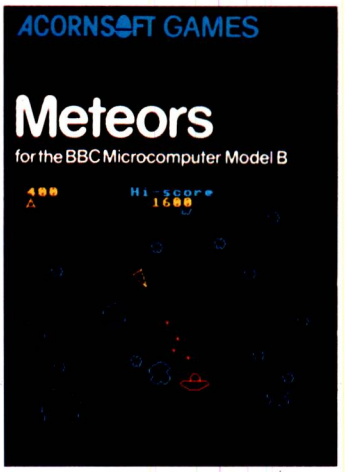

And VIEW (price £59.80) a program that enables your machine, together with a printer, to operate as a fully operational word processor. For convenience the program is in ROM so that it can become a permanent feature of your machine. (It can easily be fitted by your local dealer). You'll find out more by going to your dealer or by sending for the free catalogue.

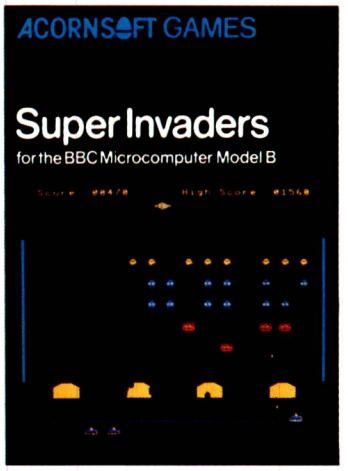

Mind-boggling games.

Castle of Riddles (price £9.95) is a magical adventure, with wizardry and hocus pocus of all kinds; booby traps and fiendish riddles to be unravelled along the tortuous route to the Magic Ring of Power. Your reward is to keep the

treasure you find along the way.

Meteors (price £9.95) is a game where you have to manoeuvre your laser-ship through a hail of meteors, smashing them with your laser bolts as they hurtle towards you on all sides. Complete with sound effects and table of Hi-Scores.

Super Invaders (price £9.95) is a fight against invading aliens. The only way to resist and avoid subsequent annihilation is to destroy the aliens before they land. You have three mobile launchers whose hyper-velocity missiles will instantly vaporise their target on impact. This game includes high-score, and is fully compatible with either keyboard or joysticks.

Understanding computers.

Peeko-Computer (price £9.95) simulates the operation of a simplified microcomputer in order to teach the fundamentals of machine-code programming. It comes complete with a 16 page instruction manual including exercises and examples, and the cassette features five demonstration Peeko-Computer programs.

How to get Acornsoft programs.

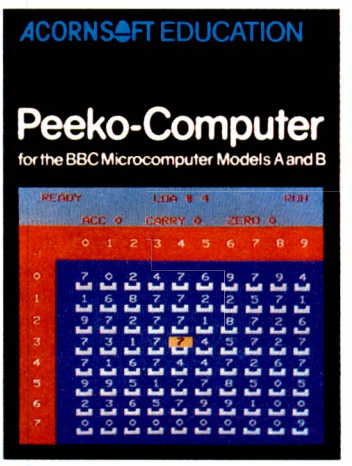

If you're a credit card holder and would like to buy cassettes of the programs shown in this advertisement, or if you would like to know the address of your nearest stockist, just phone 01-200 0200.

Alternatively, you can buy the cassettes directly by sending off the order form below to: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Also use this form if you would like to receive the current free Acornsoft catalogue.

Please allow 28 days for delivery.

☎ Credit Card Holders. Telephone 01-200 0200.

To: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me the following:–

PROGRAM	PRICE	QUANTITY	TOTAL	(Code Acornsoft use only)

SOFTWARE
DATABASE BENCHTEST

Kathy Lang examines a complex, new data management package which makes excellent use of the Sirius' special features under MS-DOS.

TOMORROW'S OFFICE ON THE SIRIUS TODAY?

Tomorrow's Office is a data management package especially supplied for the Sirius: it uses the capabilities of the screen to show an attractive face to the user, and it uses the function keys to make the package easier to use. The approach is clear from the beginning — a picture of the 'Welcome' screen is shown as Fig 1. The functions it provides cover pretty well the full range I've come to expect in fully-fledged micro data management packages for Z80 and 8086/8-base machines. The package runs under MS-DOS. It allows the user to set up a master file for a particular application, and a related transaction file, with the same key but with perhaps many transactions for each master record. For many applications, only a master file would be required. But for some people, the master/transaction approach could be very useful; for instance, a doctor could keep the overall information about patients, such as date of birth, NHS number, address, etc on the master file, and then keep one transaction record for each separate illness suffered by the patient. Throughout, you can usually assume that similar facilities are provided for master and for transaction records, though there are some limitations; for instance, you can't create a transaction record for which no master record exists.

Tomorrow's Office is used initially through the menus provided, which lead to sub-menus of individual commands such as Record Insert, Record View, etc, but as the user becomes more experienced he or she can invoke these commands directly using two-letter codes. For a particular application, 'tailored' menus can be provided, and sets of commands can be stored in a file for subsequent execution. The main menu is shown as Fig 2 and the expansion of this, giving a full list of the commands in each section, is shown as Fig 3.

Constraints

The limitations on file and record sizes are shown in Fig 4. The master record size is quite small — it should be sufficient for most applications which consist entirely of coded information plus text with limited length such as name and addresses, but would be inadequate for applications with a major element of unstructured text — even designers of library catalogues would have to watch out. However, where the information could sensibly be segmented into a master/transaction format, the ability to associate many transactions with a single master record has the effect of giving a virtually unlimited capacity for expansion. The other major limitation to note is the emphasis on key-field retrieval — I'll say more about that later.

Tomorrow's Office is a large package; it needs one complete Sirius single-sided disk for the main parts of the program and for the control files associated with applications. Two more disks are used for other, less frequently-used programs, and the user is prompted to change disks whenever necessary. (The total file space occupied by the package is a little over 1.5 megabytes.) The manual recommends having one 'master' disk for each application, to avoid any danger of running out of space for control files. The presence on the master disk of control files means that as well as making back-up copies of the data files each time they are changed, you must also make copies of the control files. The disk format is special to the package; a Tomorrow's Office disk can only be used for Tomorrow's Office files. This factor, combined with the profligacy of the system in other areas with regard to disks, could mean an unusually large investment in disks. It could also be awkward if you are switching between the package and, say, Wordstar — though a regular user of Tomorrow's Office has to become inured to frequent disk changing.

File creation and indexing

To create a data file, you must first set up a master format of the data. This is kept in a separate file. The process of setting up a format is a combination of 'paint-a-screen' and response to prompts. For each field in the record, you position the cursor at the position where you want the field title to begin, press the ESCape key, and then reply to the prompts in the bottom part of the screen about content of title, type and length of field, and so on. (You can choose to define start of field position by row and column numbers instead, if you really want to.) Fields may not span more than one line, but the associated title can be on the line above, to permit titles for maximum-length fields. Fields can be defined as depending on the values of other fields, to be replaced by the result of the calculation at input or amendment of the record, but the exact definition of the calculations is given

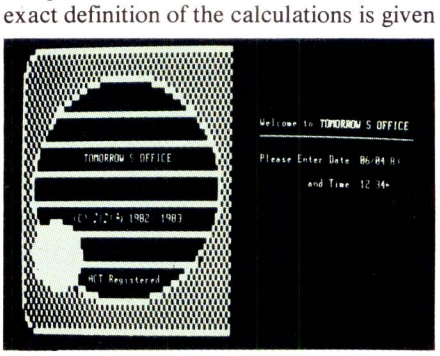

Fig 1

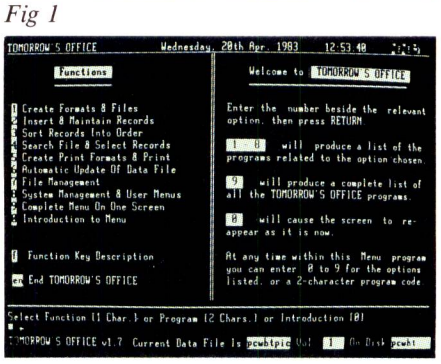

Fig 2

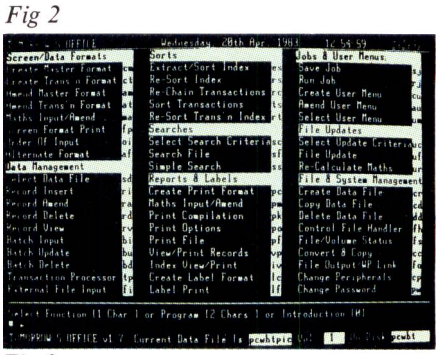

Fig 3

separately — see my section on 'Calculation'. Where a transaction file is associated with the master file, you must allow sufficient space below the master format to display the transaction format simultaneously. Once created, you can ask for a print of the format in a form which gives lengths of fields and other useful information — the printout for my Benchtest records is shown in Fig 5.

I have mixed feelings about the use of 'question-and-answer' for defining a format — personally, I think it's easier to have a completely 'paint-a-screen' approach, with 'help' information on the bottom of the screen, so that you can see immediately the effect of what you're doing. But the formatting was quite easy and flexible to use, so it's not a serious disadvantage. One feature I particularly liked was the ease with which one could say 'I'd like another field just like this one' in a particular position (marked with ESC as usual), and then change just the title of the new field, rather than having to define separately several fields with identical formats.

Each file must have a single alphanumeric key field, which may be defined as containing unique values or permit duplicates. If the key field must be unique, Tomorrow's Office will reject records with keys which duplicate an existing key. This main key is used for all access for file maintenance — insertion, amendment, deletion. Indexes may be created based upon the values of other fields; these indexes can then be used to display or print records in a particular order. You can also select records according to specified criteria without re-ordering them in any particular way — see under 'Selection'. But the accent in the package is clearly on accessing individual records quickly by using the key field.

In addition to the master format, each file may also have up to 15 alternate formats. These are created in a similar way, but can be used only to display individual records, not amend or delete them. So if you wanted to keep some information confidential, but permit general access to other information so that, for instance, clerical staff could update public information such as addresses, you would have to divide the record into a master and a transaction part, with one transaction per master, and permit general access only to the transaction part.

Max no. data files on one disk	15
Max file size	30,000 master records, 60,000 transactions. Not limited to one disk.
Max no. records	As file size.
Max size record	484 characters — master file only used. 240 characters master, 244 transaction where both used.
Max no. fields	60 — master file only used 60 each, 90 total if master & transaction used.
Max field size	78 characters 11 digits including sign — 5 decimal places
Max no. index files	15 per master data file
Max length sort fields	128 characters in max 3 fields
Calculation limits	10 operations per field, 100 per record
Field types	character, numeric, date(day/month/year-8chars)

Fig 5 File Format Printout

Data input and amendment

Records are added through the Record Insert function. The function prompts for the key value (which for keys longer than eight characters may be abbreviated to eight), and then displays a formatted screen on which the information will be shown. The package prompts for the value of each field in turn; the value is typed in at the bottom of the screen, validated or transformed by calculation if appropriate, and then displayed in the appropriate field in the screen display. Thus you do not get the facility of moving the cursor around in the display area to enter or amend information. If you decide that an earlier field is incorrect, you must 'cycle' through each field in turn, typing one character and pressing RETURN, until the prompt area displays the name of the field you wish to amend. A similar process is used for Record Amendment, with a few refinements. The method of entering data away from the screen display format means that correcting data involves re-entering the whole field — you can't just change what's wrong. But you can append information to existing character fields. You can also decide 'on the fly' to have a field take the same value as the corresponding field in the previous record.

Record retrieval by exact key match is reasonably fast — just under three seconds on my 1000-record Benchtest file. The commands for insertion, deletion, amendment and viewing of individual records, retrieved by main key, although separate commands, can also be invoked from each other without having to return to the main menu. So you can retrieve a record for inspection, decide that unexpectedly it has an error, 'toggle' to Record Amendment, and correct the error. The choice process is quite carefully designed; you continue in Record Insert or View or whatever mode you started in until function key 7, the universal exit key, is pressed. You then have the choice of carrying out any of the other operations or returning to the one you first thought of. Fig 6 shows the display at the point where you are invited to choose your next record 'housekeeping' function. You will see that the options include 'print'; you can also take a direct 'snapshot' of the screen while the data is being displayed by pressing function key 4.

In addition to the interactive entry of data, there is a batch input and deletion facility, which allows you to create a set of records separately from the main file and then add them in a batch. This approach makes faults less likely; firstly, because you can then have an 'audit trail' printing of the records before insertion, and also, because the master file is only open for writing (the state in which it is most likely to suffer from corruption caused by power-line glitches, humans removing disks, etc) for the minimum amount of time. Some batch updating of individual records (as distinct from updating the file by adding records) is also provided. This includes a feature to add a complete new transaction record automatically for every master record — for instance, in an application where it is necessary to record regular payments from clients, as in television rental, hire purchase or the collection of insurance premiums.

Screen display

In addition to the retrieval of records by exact matching of the key field, you can display records in two other ways. Tomorrow's Office allows the creation of up to 15 alternate formats for a file in order to permit different screen formats. They can only be

So much more to value

used via the Select File function, which has two drawbacks. Firstly, data can be viewed with the alternate formats but not amended. Secondly, and probably much more of a nuisance, before using an alternate format you must set up a Selection Criteria file to choose which record to display, even if you want to show every record in the file. This is not a lengthy process, but it is irritating to have to do it — and since the alternate format is the only way one can get field totals displayed on the screen, one might want to use alternate format on the whole file quite often in some applications.

The other display format provided is a simple list of all or a selection of records, with only limited formatting options. The most common application of this would be to list some fields in each of a set of records, in order to get the records shown together on the screen — indeed this is the only way that you can display several records on the screen at the same time. The approach is to ask the user to specify which fields are to be listed, using which index, and then list each record in turn, until the ESC key is pressed. Listing continues when the ESC key is pressed again. You have the option of displaying the list on the screen, or of sending it to the printer. But you can't scroll through the list on the screen until you get to the desired point, and then use function key 4 to take a 'snapshot', as you can with Record View, etc; you must decide in advance if you want to have printed information about a particular group of records. Nor can you opt to start at a particular point in the file — scrolling just begins at the beginning.

Printed reports

Tomorrow's Office provides, in addition to the 'screen snapshot' key and the functions for printing individual records or simple lists of records, two functions specifically for printing formatted reports. One caters specifically for label printing, while the other provides a more general report format. Within a report, extra fields may be used to calculate results depending on a series of arithmetic operations; you may also request up to three sub-total fields and grand totals. (All these calculations are subject to the limitations I've noted later in the section on 'Calculation'.) Each sub-total field may have different 'break and reset' tests, actions and effects on printing. Any heading or field may be underlined if desired. Here I thought the menu/option approach came into its own, and I found this section easier to use than is often the case — apart from the usual difficulties with specifying the printing positions by absolute line and column numbers. Report formats are stored so that they can be re-used repeatedly; they can also be amended to form the basis of new formats.

Selection

Two kinds of selection are provided: a simple search which is typed in and executed entirely interactively, and a more sophisticated search in which a set of criteria is stored in a file and subsequently used to access a subset of the data. The simple search allows you to specify up to four criteria; you can allow selection on any of the criteria, or you can say that several must be present — for instance, with three criteria, you can ask for at least two (if any) to be present for the record to be selected. The comparisons allowed include less than, greater than, equal to, and a 'wild code' search in any field in the file. For character data, you can choose to have the case of the letters ignored when making comparisons.

Stored criteria may be linked by AND, OR or NOT; the tests are carried out sequentially, and you can't use brackets to alter the order of evaluation, so there are some circumstances in which you might need to carry out successive selections to get the desired result. Comparisons allowed are much more extensive than in the simple search, and include all those permitted there plus testing for characters being contained in, starting or ending a character field, not equal to, and a limited 'wild code' facility. Searches may be carried out on the whole data file (ordered by primary key or by an index), or on subsets created by previous runs of the selection function. Once created, sets of search criteria can be edited, or they can be used as the basis of new selections.

Sorting

Records in Tomorrow's Office files are never physically sorted; instead, you request the creation of an index, a term which the package uses to mean both a list of pointers to records *ordered* in some other way than by primary key, and a set of pointers to a *subset* of the whole file of records. (Indeed, the option for sorting is actually called Extract and Sort.) Ordering of records may be by up to three complete fields — you can't concatenate fields to increase the depth of sorting, nor can you utilise your knowledge of the data to ask for sorting on only part of the field. Sorting is very quick (see Fig 8 for the Benchtest), but it needs to be, for several reasons. In particular, the indexes are not kept up-to-date when data is amended, so the file must be re-indexed each time changes are made which could affect the ordering or subsetting.

In addition, because of the limitations on Index View/Print, which I mentioned under Screen Display, you could well need to create a subset-index quite frequently, if you wanted to print subset information in a condensed format, without going to the bother of generating a full report.

Calculation

Calculations can be carried out on fields within individual records, or on aggregations of records. Fields can take a calculated value when inserted or amended (this must be defined in the master format), or on update; in either of these circumstances the calculated value is placed in the appropriate field in the file. This makes it possible to increase all current prices by ten per cent or work out and store the total value of an invoice from the value of the individual items and the VAT rate. Calculations can also be carried out when reports are printed. Arithmetic operations provided are the usual add, subtract, multiply, divide and some commercially useful functions such as per cent. You can operate on constants, field values, or a worked area — two are provided principally to cope with the lack of brackets to alter the natural sequence of evaluation. These facilities work very like a calculator with two memories, no brackets or scientific functions, and no ability to carry out operations conditionally. In addition, field values can be totalled and displayed on the screen as part of the automatic update feature, and totals and sub-totals provided during the printing of reports.

Multiple files

Tomorrow's Office has good facilities for handling records of the master/slave type, providing for one master record and any

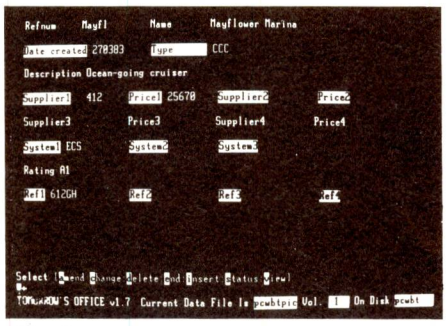

Fig 6

BM1	Time to add 1 new field to each of 1000 records	40 mins
BM2	Time to add 50 records interactively	1 sec/record
BM3	Time to add 50 records 'in a batch'	NT
BM4	Time to access 50 records from 1000 sequentially on 25-character field: with simple search	5 mins*
	with stored search criteria	3 mins* + set-up time
BM5	Time to access 50 records from 1000 by index on 25-character field	BM6 + 1 sec + scrolling
BM6	Time to index 1000 records on 25-character field	5 mins 23 secs
BM7	Time to sort 1000 records on 5-character field	4 mins 45 secs
BM8	Time to calculate on 1 field per record and store result in record	8 mins
BM9	Time to total 3 fields over 1000 records	5 mins 20 secs

Notes: * includes scrolling NT Not Tested

Fig 8 Benchmark Times

TOMORROW'S OFFICE

number of linked transaction records. No generalised multiple-file capabilities exist at the moment, although I understand that such a development is being considered.

Tailoring

Tomorrow's Office provides two sets of facilities to 'tune' the system to a particular application. Firstly, you can set up command files which string together a series of keyboard commands for subsequent execution. These command files are set up by means of a 'learn' mode, in which the command sequence is typed in from the keyboard. Secondly, user menus can be set up so that people get a particular view of Tomorrow's Office according to their own needs; these menus can include direct access to the package's commands, or access only to tailored command files, or a combination of the two. No extra facilities are provided to allow for conditional execution in command files; the only conditional facilities pertain to the selection of records for processing by the Select File function. So if you wanted to process a record in one way if it had certain characteristics, and in a different way if it did not, you would have to set up two subset-indexes, one for each group of records, and process each subset separately. This would involve two complete reads of the data file, and therefore would tend to be slower than selecting and processing in one go.

Security and reliability

Tomorrow's Office has some plus and some minus points in this area. The ability to store an audit trail and add data in a batch could provide good safeguards against several types of failure; but the need to copy files on two disks after every change to the system makes it even more likely that people will fail to take the elementary precautions to keep their information safe. As to failures in the package itself, the only bug I encountered involved receiving a program error message rather than a meaningful error report when I tried to sort, using a full disk to store the index files. . . (But I did get returned to the menu afterwards.) For a package of the complexity and extent of Tomorrow's Office, one non-serious error in a Benchtest is (relatively) pretty good. (One ought to be able to assume that none would be the norm, but it isn't — I very rarely suffer disasters, but I often encounter more bugs than one.)

Housekeeping

Almost all housekeeping is done within Tomorrow's Office, with the exception of disk functions such as formatting, which are carried out under a specially modified version of MS-DOS in order for the package to stay in control. The only thing I couldn't do with the copy of MS-DOS provided was to copy an index file (created during sorting) from a work disk to the main program disk. It didn't matter too much, as I was always prompted for the loading of the work disk whenever the index was needed, but it was irritating enough for me to get out our own MS-DOS and copy the file outside Tomorrow's Office.

Links with outside

Tomorrow's Office can read sequential files containing ASCII characters in a predefined format (with each field followed by a Carriage Return character), into a Tomorrow's Office format set up with Create Format. I had no problems in creating such a file from Basic, for the Benchtests. To tell Tomorrow's Office how to assign fields in the 'stranger' file, the package gives you a list of the numbers of all the fields in the target Tomorrow's Office file, and asks for the corresponding field numbers in the source data file. Unfortunately, there is no default; even if you have the same number of fields in the same sequence in each file, you still have to enter as many field numbers as there are fields in the target file. However, it's not an operation you carry out very often, and the actual conversion worked correctly first time — and that certainly doesn't happen with every package I review.

Tomorrow's Office data files can be written out in a similar, though more flexible, format with any field terminator including Carriage Return. It is thus possible to create a data file for use with Wordstar Mail-Merge. (Tomorrow's Office, despite its name, doesn't have any word processing facilities beyond report tables.) However, I couldn't find a way to have any kind of record terminator, so you couldn't write, say, a file with comma-delimited field and CR-delimited records, such as some people might need. Again, the ability to get out at all is invaluable, and it would be a simple job to transform the output to other formats by a user-written program if required.

User image: software

Full marks to Tomorrow's Office for helpful use of the combination of menus and commands — very much the kind of approach which is likely to help the most people for the most time. The overall design of the menus, commands and 'bottom-line' prompting was clear and consistent, so you could get to grips with the package very quickly. That's very important in a package with so many facilities. The function keys were used well, too — a plus point, but with reservation. They did, however, give me my first big disappointment. I thought it an excellent idea to be able to use a function key to 'dump' the contents of the screen to the printer whenever the package is awaiting input from the keyboard, but unfortunately 'awaiting input' didn't include 'awaiting ESC when display is halted for the user to inspect the screen'. That was a real shame, as that was just when I most wanted the screen dump.

That combination — good points with occasional disappointments — became very much the pattern of my interaction with Tomorrow's Office. Much of the prompting is very good. For instance, whenever you want to use a subset of the data or look at it in a particular order, the package lists the available selections and indexes for you to choose, and the names have descriptions to go with them, so you can remember easily what each one contains. And the 'current file' remains the current data file even between runs of the program — Tomorrow's Office remembers which file you were using before you last switched off the system. On the other hand, the frequent need to swap disks is a real irritant; in most packages the program disk is on one disk drive and the data disk on the other. This should be quite easy to achieve on the Sirius, which under MS-DOS gives 620k of file space per drive. Tomorrow's Office uses three program disks, one or more data disks (files can be copied, eg, when modifying the file structure, only from one disk to another), and a separate disk for batch input files. Disk changing was made even more traumatic for me by the package's use of the Sirius bell, which drove me crazy. Every time you are asked to change disks, the bell is rung, not once but *five* times! And this at a time when you are likely to be sitting watching the terminal anyway, knowing that the current set of interactions is not complete. Yet, at other times when the bell would be helpful — for instance, after the indexing program has been run, taking about five minutes for my 1000 records (a long enough time for me normally to go away and do something else), — the program is silent, and simply displays a message.

GO TO page 183

Summary

Package Type	Data management: single file or master file with associated transaction file.
Facilities	Selection, ordering by indexes (not kept up-to-date automatically), calculation in and across records, updating on primary key, good reporting, import and export of files.
Ease of Use	Very good, with a few small exceptions.
Error Messages	Clear and immediate.
Documentation	Clear and thorough — but no index to Reference Manual; good Training Guide.
Costs	£695 including software updates during the lifetime of the package and 'hot-line' telephone support.
Supplier	Stage One Software, Poole, Dorset. Tel (0202) 735656

Business Computers you can afford.

At last here's a range of true business computers at realistic prices. Sanyo desk top micros give you a choice of 8-bit, 64K RAM or 16-bit 128K RAM, expandable up to 512K. Sanyo's reputation for quality products, thoroughly pre-tested for reliability, is backed up by Logitek's experience and service.

Logitek has a strong reputation for reliable products and a high level of customer support. 100 Logitek dealers are backed up by a national maintenance service, and in-house support on operating systems and applications software.

Logitek are the top distributor for Altos micros, and Peachtree software and the new Landmark multi-processor micro complete the range with full compatibility of operating systems and applications software.

Here are real business computers at an affordable price – get one on your desk now.

- Choice of 8-bit or 16-bit
- 320-640 Kbytes on floppy disc
- Expandable up to 1.2 Mb
- True 8086 16-bit processor
- Peachtree accounting software
- CP/M, CP/M-86, MS-DOS operating systems
- Price from £1195 to £2450

HITACHI MB16001

The MB16001 — to be launched here in July — boasts complete compatibility with non-graphic software for the IBM. With this advantage its sales success seems guaranteed. Steve Withers benchtested the machine in the Antipodes and reports back to us on his findings.

8088 based systems are rapidly becoming as commonplace as Z80 micros, and, in the same way that one CP/M machine tends to be much like another, these larger computers running MS-DOS have much in common. They naturally share many pieces of software, offer similar expansion options, and many of them are manufactured by companies with established reputations in either the computer or consumer electronics fields.

Hitachi has been in the 'IBM-compatible' business for some time, and the MB16001 follows this tradition, having a high degree of hardware and software compatibility with the long-awaited IBM Personal Computer.

Hardware

Cosmetically, the MB16001 is not the most attractive computer, but it does have its good points. The main unit is 30cm high, 49cm wide, 25cm deep and has a bulky appearance. The shortest dimension is the depth, so it is not possible to place the display on top in order to save desk space. The document holder on the front of the unit is a good idea, as it saves the user having to keep looking down to the desk in order to read a manuscript or other source document, but its usefulness obviously depends on the position of the computer on the desk, and I think it spoils the lines of the system. The only controls on the main unit are the power switch and the volume knob for the

Photography by Ian Dobbie

A useful document holder is attached to the main unit.

The keyboard is not as pleasant to use as it is to look at.

Colour only in the UK.

sound generator, so it is possible to save space by standing the machine on end beneath the desk with the disk drives at the top. The keyboard and monitor share the main unit's pleasant brown and off-white colour scheme and overall styling, but I think they are much better looking.

On the subject of appearance, something I really like about the MB16001 was the way all the connectors (apart from the one for the keyboard) are recessed into the case, with a snap-on cover keeping everything tidy. Any connectors on accessory cards come out in this area, and the compartment also houses the batteries which back up the system clock.

Software and hardware switches control various system options and parameters, such as the number and type of disks in the system. The software settings are held in battery-backed RAM, and the physical switches inside the machine only take effect when the batteries (three size AA cells) are flat or are removed. Normally the DIP switches would be set before delivery or after extra cards are installed, so a typical user would never be concerned with them.

There are two main circuit boards, each a little larger than an A4 page, mounted behind and parallel with the document holder. I was unable to take a good look at either of them without dismantling the machine further than I cared to, but one seems to be the computer itself (with edge connectors for expansion boards) while I suspect the other is the display generator. For servicing, two screws at the back secure the cover of the expansion area, while another two hold the rest of the shell in place. The snags are that the accessory cards must be removed (this involves undoing various screws and brackets) before either of the main boards can be extracted, and there are a large number of connectors between the various modules. Hitachi does not seem to have gone out of its way to make life easy for service engineers as, in addition to these problems, very few chips are socketed. Perhaps the company feels its product is so reliable that there is no need to worry about such things.

The MB16001 will plug straight into a 240 volt mains supply. It will function at 50Hz and conform to British electrical standards. A quiet-running fan helps to keep the power supply and other components cool.

The 5¼ inch double-sided slimline drives are fitted, with a capacity of 320k each, giving a very useful amount of storage in a small space. They don't make much noise, but they do sound smooth — the heads load with a 'click', instead of a 'clunk'. In order to reduce the risk of accidental damage to a diskette, an interlock is fitted which stops the clamping mechanism putting any pressure on a disk which is not fully inserted in the drive. The disk controller, which can handle up to four drives, occupies one of the expansion slots on the main board.

Unfortunately, the keyboard is not as pleasant to use as it is to look at. Although feedback is provided by an inbuilt electronic clicker as well as an increase in key resistance, I had an unusual amount of trouble with missed keystrokes. While this was partially due to my over-compensation for the lightness of the key action, the MB16001 just does not have the 'feel' of a good typewriter keyboard. The main part of the keyboard is conventionally arranged, with the addition of 'ALT' (for quick entry of Basic keywords) at the bottom right. It has been customised for the UK with the inclusion of both '£' and '$' signs. Along the top of the board is a row of 10 function keys, plus a 'CANCEL' key (which generates Control-C and is protected from accidental depression by a clear plastic surround). Cursor, insert, and delete keys are grouped together, and beneath them is a number pad which can also provide extended cursor control (another example of the MB16001's compatibility with the IBM). Other keys in this area are 'HELP' and 'MODE' (neither of which are recognised by the standard software), 'COPY' (to dump text and/or graphics to the printer), and 'GRAPH' (a super-shift key to obtain graphics characters).

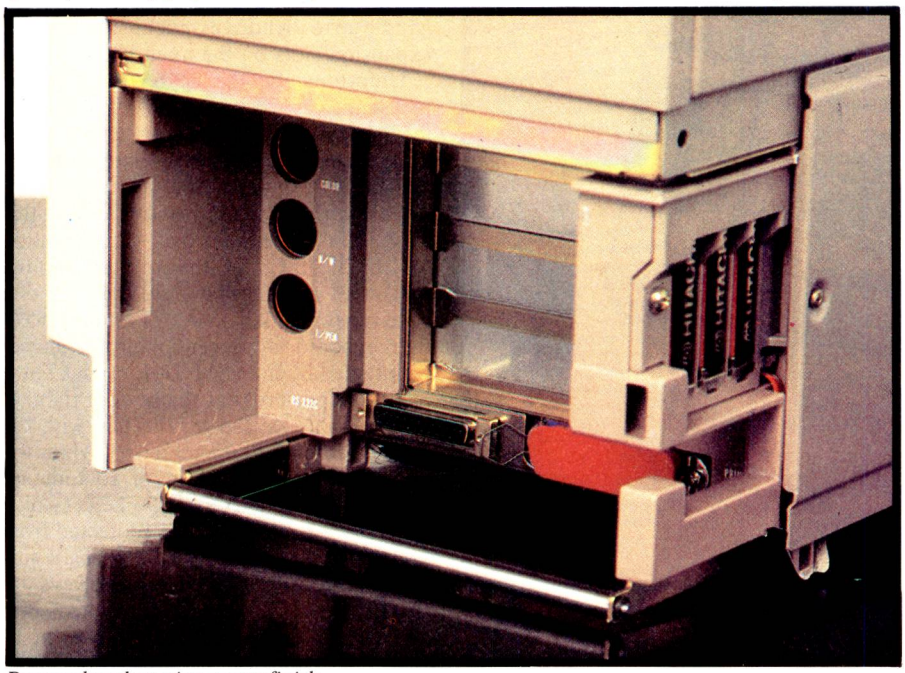

The reset button is mounted on the rear edge of the keyboard, with adequate protection in the form of a raised legend. A generous length of coiled cable and a DIN plug connects keyboard and computer; the computer's socket being below and slightly to the left of the second disk drive. The length of the cable makes it feasible to work with the keyboard on your lap, but when working on a desk two small legs unfold to

Hi-tech controls.

give a conventional slope to the keys.

Turning to the display, the monitor itself seems slightly deeper than normal, but I think the designer expected a whole desk to be devoted to the machine, so saving a few centimetres here and there would not have made much difference. There are three controls: power, brightness and contrast. The last two are normally flush with the facia panel, but they pop out when pressed. The angle of the screen can be altered by releasing a catch on the pedestal, but the range of adjustment is not very great. A monochrome monitor may be used if colour is not required but monochrome will not be available from Hitachi in the UK. This marketing approach differentiates the MB16001 from the IBM Personal Computer — for the latter a colour monitor is an optional extra at a price (£550 for the terminal and £216 for the adaptor).

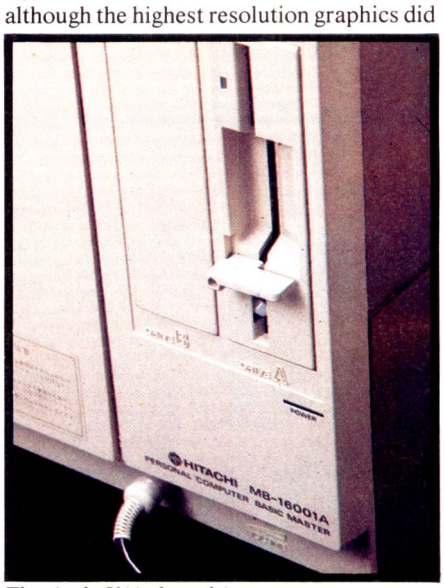

Recessed sockets give a neat finish.

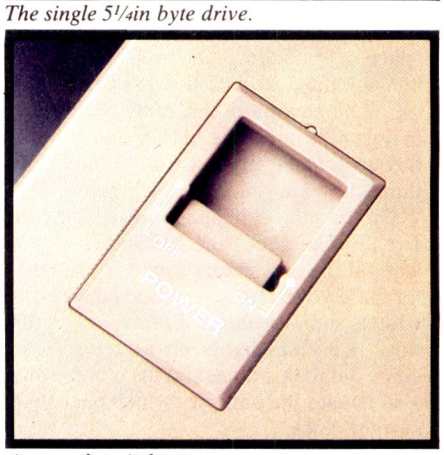

The text and graphics displays are independent of each other, and either or both may be shown on the physical screen. This could be useful when debugging a graphics program, as the program can be listed and edited without disturbing the graphics — the text simply scrolls over the top. Interlacing is an optional feature of the text display (I found it made the text more legible at greater than normal viewing distances) and it is necessarily used for the highest resolution graphics. The character set has a number of graphic symbols including some which would allow the drawing of boxes for data entry forms.

Both text and graphics come in the usual eight colours, and a bright version of each (brightening black does not make much difference!) brings the total to 15. The programmer may choose from four graphics resolutions (320x200, 320x400, 640x200, or 640x400), with any eight of the 15 colours appearing at once, seen at the highest resolution. All 15 colours can be used for text, with either 40 or 80 characters per line. Multiple pages of display memory add to the MB16001's potential: four pages of low-res graphics may be used, reducing to one in the full 640x400 resolution; and either 16 pages of 80 column text or 32 of 40 columns are available.

The quality of the display in all modes is equal to anything I have seen elsewhere, although the highest resolution graphics did

seem to flicker very slightly. This is also the case with the black and white high-res graphics on the Panasonic JB3000. Indeed, apart from appearance, these two computers have much in common with each other and with the IBM PC but, when making comparisons, remember that the MB16001 includes Centronics-style parallel *and* RS-232 serial interfaces as standard, as well as colour graphics and the light pen interface. If memory size is important to you, note also that the display memory (all 192k or it!) consumes no user RAM: 64k is dedicated to each of the red, green and blue colour guns respectively. Apart from the requirements of MS-DOS, all of the standard 128k. is there for you to do what you will.

Software

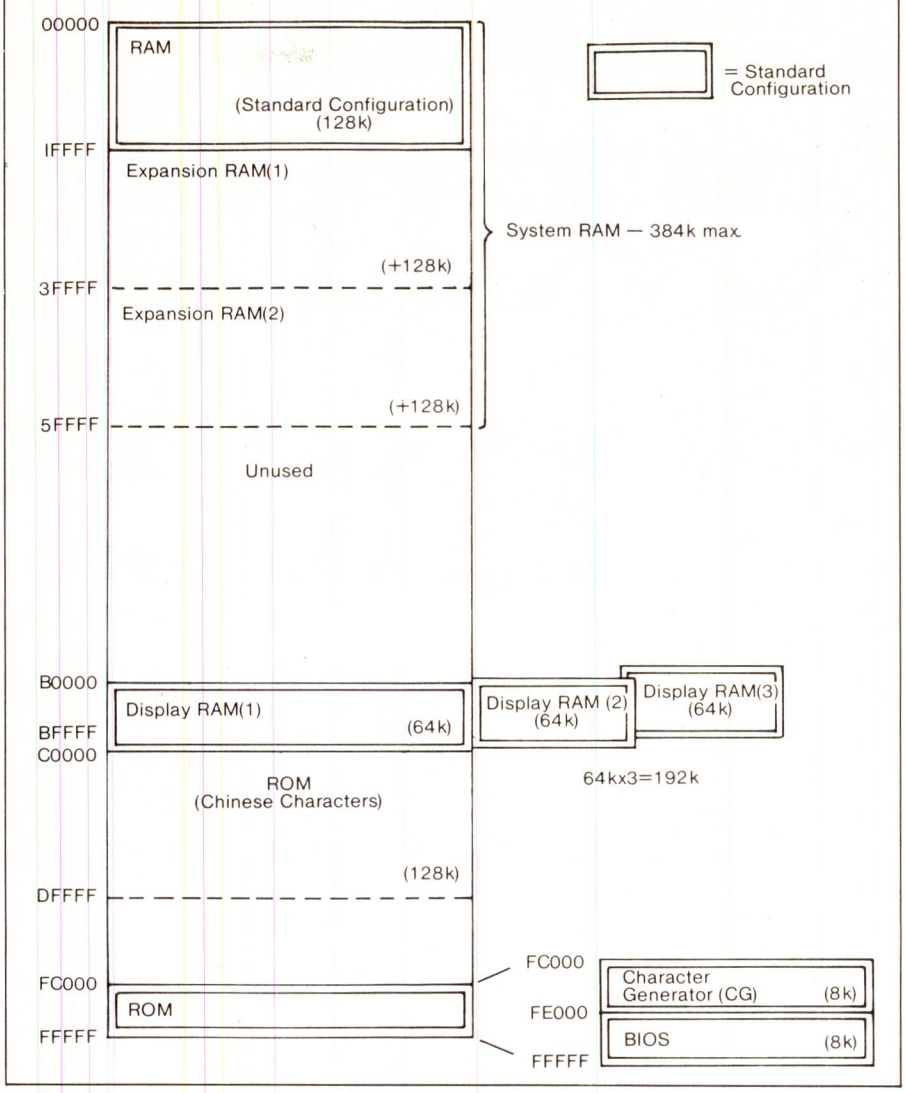

MS-DOS and Microsoft Basic are both included in the price of the MB16001. Enough has been written about MS-DOS in these pages, so I will only cover the unusual features. To start with (literally), the boot-up routine has been modified so that it reads the time and date from the system clock, and only asks the user for this information if the clock is unreadable, typically because the batteries have run down.

The other main addition is a utility which sets the various system parameters stored in non-volatile memory. The options given by this program hint at expansion items that may appear in the future. It allows the selection of:
memory size from 64 to 1170k;
up to four 5¼ or 8 inch disk drives;
default settings for up to four RS-232 interfaces;
the default display modes; and
a RAM disk.

'A RAM disk?' you ask: yes, the operating system includes this feature — a simulated disk drive in main memory which is very much faster than a floppy. The idea is that you copy frequently used data or program files into the RAM disk and use them from there, copying back onto a real disk at the end of a session if necessary. This is potentially most useful for programs with overlays or for database-type applications, both of which repeatedly access disk files. If you use the MB16001's RAM disk, it occupies the top section of user RAM. In an unexpanded system, this means 64k for the RAM disk and 64k for the user, but with extra memory, any multiple of 64k can be allocated to the RAM disk. When used, it is treated like any other disk — eg, in a system with two floppies it is drive C.

The Basic interpreter is a superset of Basic-86, the extensions providing control over hardware features like the multi-page display, graphics, lightpen, function keys, RS-232 ports and sound generator. Interrupts generated by i/o devices like the RS-232 port or lightpen may be handled within a Basic program. A simple screen-based editor is included and, all in all, it is very similar to the advanced Basics found on other 8088-based micros, so software portability should not be a problem.

Memory Map

Graphics features such as copying a portion of the screen into an array and back again, filling an arbitrary shape with colour, drawing circles and rectangles, and turtle-like graphics are all provided, and in many cases co-ordinates may be given relative to the last point plotted, instead of the normal absolute form.

When working in colour, the programmer may specify colours directly, or he or she may use up to 16 palettes, assigning a single colour to each. All palettes may be used for text, but only palettes 8 to 15 apply to the graphics display. The advantage of the palette concept is that changing the colour assigned to a palette instantly changes the colour of anything drawn with that palette. One use for this feature would be to set a palette to the current background colour, draw a shape, and then change the palette's colour so that the shape (however complex) would appear at once instead of being built up gradually. Of course, drawing the shape would still take time, but the effect could be neater. I am sure that imaginative programmers will find other uses for this feature. Palette changes are simplified by the PALETTE USING statement which 'loads' all 16 palettes with a set of colour codes that has been stored in consecutive elements of an integer array.

Benchmark timings

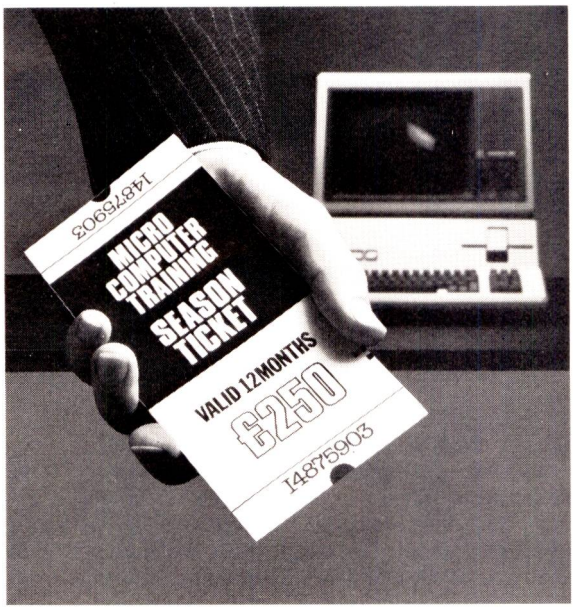

BM1	1.5
BM2	5.0
BM3	10.5
BM4	10.5
BM5	12.5
BM6	23.5
BM7	36.0
BM8	3.5

All timings in seconds. For a full explanation of Benchmark timings, see PCW November 1982.

The MB16001 boasts complete compatibility with non-graphic software for the IBM, while graphics programs will need some changes to allow for the Hitachi's higher resolution. I found little to contradict this claim, except that the two Basics use different tokens. Also, the MB16001 cannot run the IBM's Basic interpreter as much of the latter is stored in ROM. This means that programs must be saved as ASCII files and not in the usual tokenised form if they are to be transported between the two machines.

The Benchmark times for the MB16001 are very respectable, and would put the

This'll do even more nicely!

If you've just got yourself a new microcomputer like an Apple, IBM, Sirius or Digital the cost of training can come as an unpleasant surprise.
That's why Planning Consultancy have introduced a unique new scheme. The Training Season Ticket. It costs £250 (+VAT), is valid for 12 months and entitles the holder to as much training as you like – across any or all of our courses.
There are over 40 courses to choose from – from the simplest of introductions to sophisticated courses for computer professionals. Our Training Season Ticket is ideal for Accountants, Senior Managers, D P Professionals, Corporate Planners and Secretaries. All training takes place at our Pall Mall Training Centre in London.
There is no limit to the number of season tickets you can buy – they're all just £250 a head. And when you consider that many training courses now cost over £100 per day you'll see what a bargain we're offering. Call us – or send in the application form today. Any training you want – just hand over the card!

Unlimited micro training for just £250.

Technical specifications

Processor	8088
Memory	128k RAM, 8k BIOS ROM, 8k character generator ROM, 192k screen RAM
Screen	14in colour monitor. 24 rows of 40 or 80 characters, graphics resolution to 640x400, 15 colours. Monochrome optional.
Keyboard	97 typamatic keys, including function, numeric, and special keys.
Disks	Two slimline double-sided, double-density 5¼in drives.
Interfaces	Centronics parallel, RS-232 serial.
Operating system	MS-DOS
Languages	Microsoft Basic (others as options)
Dimensions	30cm x 49cm x 25cm

machine in equal fifth place in the 'league table' published in *PCW* November 1982 (remember that BM8 now performs 1000 iterations). Since we do not use a set of graphics Benchmarks (we had enough trouble with the disk tests), an assessment of a machine's speed in this area is necessarily subjective, and questions of resolution and number of colours cloud the issue. The MB16001 does seem to perform well in this area: at 640x200 resolution, drawing and filling in the largest possible right-angled triangle took four seconds.

Also supplied with the review system were Wordstar (configured for the IBM) and Zork I (likewise). The Wordstar customisation makes good use of the special keys on the MB16001, while the 'standard' control keys still work. I must admit to spending a lot of time playing Zork — it's a very engrossing adventure-type game with many puzzles to test the imagination.

Hitachi is optimistic that there will be a range of business software for the machine. The only applications packages available from the company itself are Wordstar, Spellstar and a first generation spreadsheet product, BM-Calc, written by Hitachi. 'But some 20 packages were demonstrated running on the machine when we exhibited it at the Which Computer? Show last year,' said a Hitachi spokesman. Apparently the company has been approached by 85 software houses and 900 dealers all wanting to get involved in the machine.

Documentation

The documentation supplied with the review system was an advanced draft in the form of a 3.5cm wad of unbound A4 paper.

English language documentation for MB16001 operations, MS-DOS and GWBasic has been produced by Hitachi in Japan. It will be presented in ring binder format but was not available at press time.

The locally revised manual I used is distinctly better than much of the documentation supplied with Japanese equipment, but it is a shame that one of the demonstration programs listed still plays the 'Rising Sun' anthem. There are many such sample programs illustrating different features of the language, as well as sections which describe the use of files, graphics, and machine code routines, as well as the everyday parts of the language. Apart from the page numbering, the fact that the manual separates statement and function keywords makes reference tricky (am I the only person who thinks a single alphabetical sequence would be better?).

Expansion

The MB16001's user memory may be expanded to either 256 or 384k. This limit is not justified in any way (there are enough slots for more memory cards), but I would hazard a guess that either power consumption or heat dissipation is the reason. Be warned that adding memory won't let you run bigger Basic programs — the Basic-86 interpreter uses a single 64k segment for program and variable storage — although compiled programs can span segments.

An external twin disk unit may also be connected to the standard controller, doubling the total capacity of the system. If this is inadequate, a pair of 8 inch drives can be added instead, although they require their own controller. In this case the total capacity is 2.64Mb (2x1Mb plus 2x320k). Even greater storage will be provided by a hard disk unit, but details of this were not available at the time of writing.

The manuals also mention a lightpen, as well as additional Centronics, and RS-232 interfaces. All these items should be in stock by the time the MB16001 is launched.

The expansion connectors have the same pin configuration as the IBM PC, but there is of course no guarantee that any particular card intended for the IBM will work perfectly (or even at all) in the MB16001.

Prices

The price for a standard system (as tested, but excluding Wordstar and Zork) has yet to be decided. Informed guesses put it between £2000 and £3000 but probably close to the top of this range. Prices for the add-ons are not yet known but, when they do appear, check whether installation is extra because the manuals warn that fitting them yourself will invalidate the warranty.

Conclusions

One thing is certain, the MB16001 — with features that are optional extras on competing machines — gives you a lot for your money. It has a standard operating system and a version of Basic that is as compatible with similar systems as an extended Basic ever can be. Compatibility (even if it is not absolute) with the IBM is a good selling point, as it increases the range of readily available software and hardware.

On price, competition with IBM will be close. An IBM Personal Computer with 128k RAM and colour monitor costs £3127 + VAT.

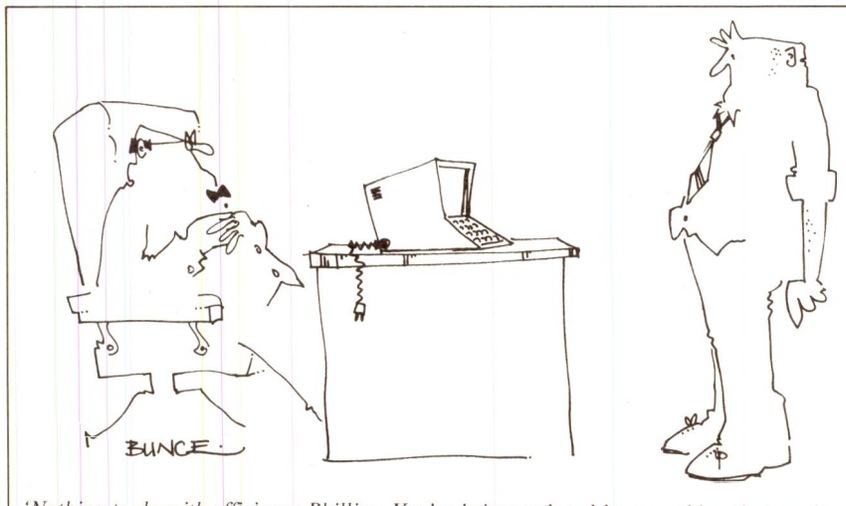

It is obviously a 'serious' business or professional computer, and it will be getting the software it deserves. If the system doesn't live up to its name I will be astounded.

Editorial note

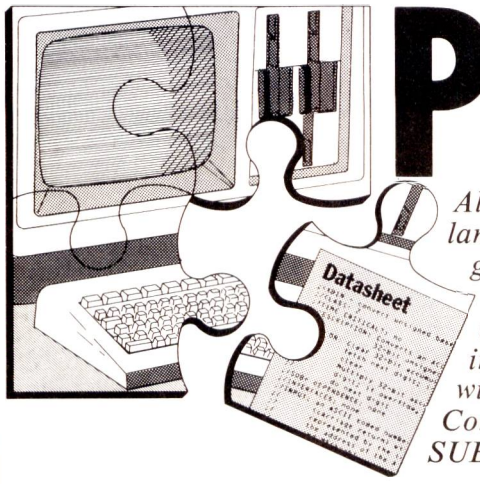

Steve Withers benchtested this machine in Australia which is the standard testing ground where Japanese manufacturers dry-run their products.

The UK version, scheduled for launch this July, is the same as the Australian version apart from some marketing details. Hitachi's Australian dealer, in its infinite wisdom, dubbed the machine The Hitachi Success. The UK company has thought better of this and here we have The MB16000 Series!

CP/M-86 is expected in Australia but is not planned for the UK. END

'Nothing to do with efficiency Phillips. You're being replaced by something that won't smoke, spill coffee or throw up in the office.'

PCW SUBSET

Alan Tootill and David Barrow present more useful assembler language subroutines. This is your chance to help build a library of general-purpose routines, documented to the standards we have developed together in this series. You can contribute a Datasheet, improve or develop one already printed or translate the implementation of a good idea from one processor to another. PCW *will pay for those contributions that achieve Datasheet status. Contributions (for any of the popular processors) should be sent to SUB SET,* PCW, *62 Oxford Street, London W1A 2HG.*

ROOT EXTRACTION

John Kerr of Glasgow has been thinking about, and working on, Steven Weller's fast square root programs (August 82) and the very attractive algorithm they used, with the object of seeing if this might be adapted to other roots. He has discovered that the algorithm can indeed be adapted for any root.

Here is John's account of the square root algorithm, showing how it is adapted for cube roots. You might like to try your hand at producing code from this, before we print John's 16-bit and 32-bit unsigned integer cube root routines for the Z80 next month.

In Mr Weller's algorithm for square root extraction, the input number is shifted left, two bits at a time, into a working accumulator. At some arbitrary stage in the process, the 'virtual input' is that part of the input which has been shifted in and operated upon; call it 'x'. The results of processing, so far, are a partial result 's' for the square root, and a partial remainder 'r' in the working accumulator:
virtual input = x,
partial result = s,
partial remainder = r,
these quantities being related by the equation: $s^2 + r = x$.

After the next round of processing, the virtual input has been augmented by the two-bit number 'y' (the next two bits of the real input). The next, least significant, bit of the result has been found; call it 'd', so the new partial result is 2s+d. The remainder has also changed:
virtual input = 4x + y,
partial result = 2s + d,
partial remainder = q.

So the previous equation now becomes: $(2s+d)^2 + y$. Combine the two equations to eliminate 'x', remembering that as 'd' is a single bit (zero or one), d^2 reduces to d. The result is:
$q = 4r+y$ when d=0, indicating that nothing has been subtracted from the working accumulator; or else,
$q = 4r+y - (4s+1)$ when d=1, ie, the result bit is set.

This shows that the required subtrahend is 4s+1; that is, the *previous* partial result shifted two places left, then incremented.

The same analysis can be applied to a hypothetical algorithm for extracting cube roots. It yields the subtrahend value which should be used, if the method is to be sound. Starting again at some arbitrary point during execution, we have:
virtual input = x,
partial result = c,
partial remainder = r,
this time related by the equation: $c^3 + r = x$.

Now the next *three* bits of the input number are shifted into the working accumulator, giving a new virtual input of 8x+y. After processing, a new result bit 'd' and a new partial remainder have been calculated:
virtual input = 1 + y,
partial result = 2c + d,
partial remainder = q,
and the relevant equation is: $(2c+d)^3 + q = 8x + y$. As before, the two equations are combined to eliminate the unknown 'x', and the result examined assuming d=0, then d+1. The first case (subtraction failed) gives: $q = 8r + y$. The second gives: $q = 8r + y - (12c^2 + 6c + 1)$.

This does not augur well for the direct method of cubic root extraction; the required subtrahend is an ugly quadratic function of the 'result-so-far', which looks like it will require recalculation, squaring and all, after each round of processing. Luckily, it doesn't; and after a little more algebra, the following algorithm, devoid of full-length multiplication, is obtained.

Clear accumulators for result (Res), subtrahend (Sub) & remainder (Rem). For each group of three input bits:
Shift three bits left into Rem (primary accumulator);
If Rem > Sub,
Then let Rem = Rem - Sub - 1;
  Res = 2*Res + 1;
  Sub=4*Sub + 18*Res.
Else let Res = 2*Res;
  Sub = 4*Sub - 6*Res.
Next group.

6809 TOKENISED TEXT

People are beginning to ask why Sub Set includes nothing for the 6809 processor used by the Dragon 32 and Tandy colour computers. In fact, somewhat ahead of this market, we had some 6809 code in the Sub Sets for June and September 1981 and that is all we have received — until now. We are prepared to pass on your 6809 Datasheets, untested for the time being, until we can determine the extent of your interest.

Michael Kerry of Seaford is the first of what might be a new wave of 6809 coders and our first Datasheet this month is his translation of Bruce Tanner's Z80 text expansion routine TOKN (November 82).

In this application, non-ASCII single byte tokens are used to represent common phrases or combinations of letters. Michael uses tokens in the range FFH to 80H, reversing the sequence used by Bruce. To adapt the example given by Bruce, a first token for the letters TH is defined as hexadecimal 54 48 00 (the zero byte terminating the definition); a second for THE as FF 45 00; a third for THEATRE as FE 41 54 52 45 00. The token FF in the definition of THE represents the letters TH and the token FE in the definition of THEATRE represents THE.

'Tokenised' text, ending in a zero byte, consists of ASCII characters and tokens. Using the three tokens defined, the text 'THIS THEATRE IS THE THIRD OF THREE THEATRES' would be tokenised with the hexadecimal bytes:
FF 49 53 20 FD 20 49 53
20 FE 20 FF 49 52 44 20
4F 46 20 FF 52 45 45 20
FD 53 00
'Tokenised' text has had a fascination for me since the time I used Bentley's Second Phase Code to save money on cables in overseas trading. 'Balance — are working; will telegraph later' is a phrase that sticks in my mind from many years ago. Why not think about the most useful phrases or combinations of letters for your text compression needs and send them in?

DATASHEET

```
;= TOKN - Expand tokenised text to ASCII
;/ CLASS:  2 (Does not save CC & A but position independent & re-entrant
;/ TIME CRITICAL?:  No
;/ DESCRIPTION:  Outputs ASCII text, expanding tokens into full text.
;/ ACTION:  Outputs all ASCII characters.  Recursively expands tokens.
;/ SUBr DEPENDENCE:  Subroutine OUTPUT to output the character
;/                     in the A register.
;/ INTERFACES:  1) Memory area holding text and tokens.  Tokens
;/                  are in the range hex FF thru 80 (-1 to -128).
;/              2) Memory area holding un-numbered token definitions,
;/                  each terminated by a null.  The first definition
;/                  corresponds to token hex FF.  Recursive definitions
```

```
;/                  are permitted.
;/ INPUT:  X points to the tokenised text.
;/         Y points to the definitions.
;/ OUTPUT:  Expanded text is output via subroutine OUTPUT.
;/ REGs USED:  CC, A, X, Y
;/ STACK USE:  (2+n) bytes, plus (4+n) bytes per level of recursion
;/                 when n is the amount used by OUTPUT.
;/ LENGTH:  29
;/ PROCESSOR:  6809

       BRA    TOKN   ;continue.                        20 E7
TKNX:  RTS            ;exit.                           39
```

FOWIAD

Both John Hardman of Welling and D Swain of Muswell Hill have sent the same improvement to the FOWIAD routine which appeared in February's Sub Set. This improvement shaves one byte and two T-states off the original, so that it can now be fitted into one of the Z80 restart locations:

```
        EX    (SP),HL
FOWIAD: EX    DE,HL
        EX    (SP),HL
        ADD   HL,DE
        EX    DE,HL
        EX    (SP),HL
        EX    DE,HL
        RET
```

But look closely at the above code. Two different sequences of instructions have been used, both having the effect of an 'EX (SP),DE', using HL as an intermediary. Both sequences are three bytes in length but there is an enormous difference in execution time when EX (SP),HL takes 19 T-states and EX DE,HL only 4 T-states. By using the quicker sequence both times, the execution time of FOWIAD drops from 90 to 75 T-states.

That is just what Peter J H Fox of Luton did in the improved version he sent in (see Fig 1 below).

EX (SP),HL is a 1-byte, 19 T-state, Z80 instruction. EX (SP),IX or IY takes 2 bytes and 23 T-states. 'EX (SP),DE' can be achieved in 3 bytes and 27 T-states. Is there any call for 'EX (SP),BC' or even 'EX (SP),AF'? And how would you do it?

```
FOWIAD: EX    DE,HL    ;disp. to DE, original DE to HL.    EB
        EX    (SP),HL  ;original DE to stack, RET to HL.   E3
        EX    DE,HL    ;RET to DE, disp. to HL.            EB
        ADD   HL,DE    ;output in HL.                      19
        EX    DE,HL    ;output to DE,RET to HL.            EB
        EX    (SP),HL  ;RET to stack, original DE to HL.   E3
        EX    DE,HL    ;original DE to DE,output to HL.    EB
        RET            ;return                             C9
```

Fig 1

THOSE INTRIGUING 8085 INSTRUCTIONS

Peter Caunt of Knaresborough has written to tell of the mixed success he has had on testing the 9 unspecified instructions discovered by Jonathan Marten (February 1983).

His findings agree with Jonathan's on three of the instructions (see Fig 2 below).

However, Peter found code 10 (hexadecimal) to be a 'SRA HL', a 16-bit arithmetic shift retaining the sign in bit 15, and not the 16-bit rotation which Jonathan's machine thought it was. The 2-byte instructions, 28 bb and 38 bb which add immediate a single data byte value to HL and SP respectively were completely ignored by Peter's machine. Bit 5 of the flag register (supposedly a 'correct sign' flag, K) resisted all Peter's attempts to set it.

This raises an important point about unspecified instructions. The fact that they are unspecified does mean that they cannot be guaranteed to work at all or, even if they do, produce identical results on different chips.

Peter also tested the only other unused 8085 instruction, not mentioned in February. 08 works on his Alphatronic as 'SUB HL,BC' and sets flags accordingly.

What about the 8080? All the above mentioned codes and also 20H and 30H are unused by the 8080 processor — or are they? Perhaps some DAI-hard reader could furnish us with the answer.

18	'RL	DE' (ie, a 17-bit rotate left)
D9	'LD	(DE),HL'
ED	'LD	HL,(DE)'

Fig 2

HIP-HIP-ARRAY

How do you store a two-dimensional array of matrix in linearly addressed memory — column by column? — or row by row? Whichever way it is, MATRAN from John Hardman will let you reconfigure it.

DATASHEET

```
;= MATRAN - Matrix Transposition
;/ CLASS:  1
;/ TIME CRITICAL?:  No
;/ DESCRIPTION:          In RAM move of a two dimensional array
;/                       or matrix effecting a change from
;/                       sequential row storage at source to
;/                       sequential column storage at destination,
;/                       or vice versa.
;/ ACTION:  For each column of Source
;/              Save Source pointer
;/              For each row of Source
;/          Move element from Source to Destination
;/          Increment Destination pointer
;/          Add No. of columns to Source pointer
;/          Restore Source pointer
;/          Increment Source pointer
;/ SUBr DEPENDENCE:  None
;/ INTERFACES:  Destination area of RAM equal to Source area of RAM
;/ INPUT:  HL is pointer to start of Source matrix
;/         IX is pointer to start of Destination
;/         B is no.  of rows in Source matrix (1 to 255)
;/         C is no. of columns in Source matrix (1 to 255)
;/ OUTPUT:  Transpose of Source matrix at Destination
;/          All registers returned unaltered
;/ REGs USED:  B C HL IX
;/ STACK USE:  12
;/ LENGTH:  35
;/ TIME STATES:  (rows * 60 + 67) * cols + 129
;/ PROCESSOR:  Z80

MATRAN: PUSH  HL      ;save registers                  E5
        PUSH  IX      ;                                DD E5
        PUSH  BC      ;                                C5
        PUSH  DE      ;                                D5

```

John says that he has tried to adapt the routine to put the transposed matrix back into the same area of memory as the source matrix but has been unsuccessful.

Now, although I cannot myself see a need for turning the rows and columns of a two-dimensional array of matrix about in the same area (doesn't mean to say that there isn't one), it seems that a nifty little algorithm would be required to do it without using any other workspace. Such an algorithm could just be useful in other, more important, contexts or might give an insight on how to deal with similar but more complex problems.

DYNAMIC STORAGE

Quote of the month from John Kerr, referring to one of his less successful coding efforts: 'due to an extraneous 'RET', it uses the peculiar technique of storing an intermediate result in the program counter. . .'

We all use that technique, John.

END

THE TIGER

The Right Product at the Right Price

The TIGER is the most unique and powerful microcomputer in its price range, exceeding the capabilities of any other micro in its class.

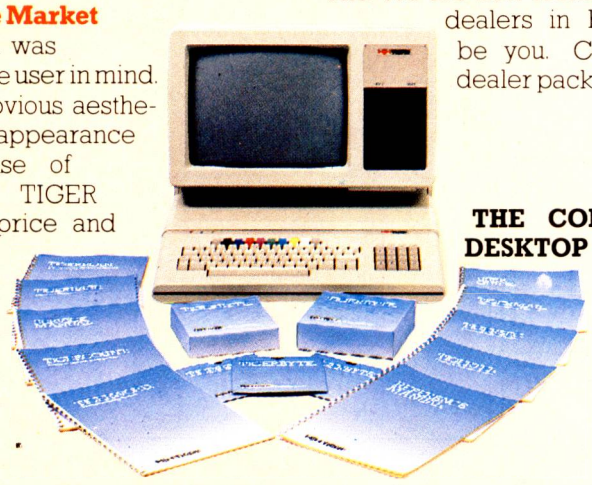

Designed for ease of use, convenience and to a price, TIGER will perform for a one person office, small to medium size business operations, and with its versatility and flexibility, the TIGER is ideal also for the large corporate user.

Comprehensive Software, Documentation and Support

Look at the TIGER specification. Impressive? Yes! But, all these features count for nothing unless you have reliable software, good documentation and the right level of professional support. TIGERBYTE® software includes Peachtree – one of the world's biggest and most experienced software specialists. In addition to these basic accounting and office productivity programs, TIGERBYTE® provides proven communications and graphics software. With excellent documentation and nationwide service back-up, HH provide the dealer with total product and support.

Designed for the Market

The TIGER was designed with the user in mind. Apart from its obvious aesthetically pleasing appearance and excellent use of ergonomics, the TIGER performs. The price and performance meets the needs of the smaller business but, because of its built-in modem and immediate access to Prestel, the TIGER is a powerful communications tool. Comprehensive interfacing ports mean TIGER can support advanced data communications to other terminals, minicomputers, and large corporate mainframes. With outstanding colour graphics, the TIGER is a compelling selling proposition.

HH® – The Company

The TIGER comes from a well-established British company renowned for its high quality electronics and marketing skills. We have an impressive list of clients worldwide supported by over 600 dealers in 48 countries. We'll be here tomorrow.

The Future Today and Tomorrow

The TIGER'S design is based on a combination of some of the most advanced microprocessors available, providing significantly better performance than any other micro in its price class, so it won't be obsolete tomorrow.

Invest in the Future Today

Innovation, quality and service. That's HH. We are now looking for the best 100 dealers in Britain. That could be you. Contact HH now for a dealer pack.

THE COMPLETE TIGER DESKTOP SYSTEM – £2,795

End-user enquiries welcomed

COMPARE THESE SPECIFICATIONS

Unique Three Processor System
Tiger's advanced pipe-lined architecture is based on the 7220, 6809 and Z80A microprocessors.

Memory: 7220: 96K RAM
Z80A: 64K RAM
Expansion bus allows virtually unlimited extra RAM, I/O devices or disk controller connection.
16K ROM provision if used without disks.
Standard 2K ROM.
6809: 2K RAM
Expansion bus allows extra RAM, I/O devices or disk controller connection.
16K ROM
256 x 4 bits parameter RAM with battery.

Disk Capacity: Two 5¼" double sided, double density, drives giving total 2.0MB.

Operating System: CP/M™ Industry Standard.

Colour Graphics: 14" High resolution colour display. Dedicated 7220 processor with 96K RAM generates –
- High resolution colour 512x512 Pixels, with High Speed vector, arc and figure drawing. Features hardware Pan and Zoom, also animation.
- Text mode resolution 640x256, 80 characters x 24 lines.
- Prestel mode 40 characters x 24 lines.

Display writing speed 1 million pixels per second.

Features Built-in
- **Modem** – with auto-dial, auto-answer facility
- **Cassette Port**
- **Security Switch**
  ID Codes.
- **Reset Switch**
- **Light Pen Port**
- **Video Drive (TTL Level)**
- **Disk Port**
- **IEEE-488 Port**
- **Printer Port**
- **RS232**
- **Network Data Link**
- **Internal Loudspeaker**
- **Keyboard** – Expanded QWERTY, non reflective keycaps, numerical pad and cursor controls. Ten coloured definable function keys. Special ergonomic design.
- **Disk Expansion** – Disk controller card. Connectors for additional two 5¼" drives and two 8" drives.
- **UHF Pal Encoder Module – option**

COMPSOFT'S DELTA

Your invitation to test drive the worlds most ingenious database on the IBM PC

Delta sets new standards in database software. New standards in power and flexibility, speed and reliability. And above all, an innovative and elegant combination of all the very best in database functions. Delta's unique specification allows you to provide ingenious solutions to those trickier applications. Quickly, reliably, and with more style and flair than ever before.

The invitation . . . We'd like you to evaluate Delta fully. If you have, or will have, IBM PCs in your organisation, we offer two unique opportunities to test Delta for yourself.

Firstly come along to one of our DP/ Management Services Department Seminars. These lively courses offer plenty of practical 'hands-on' work with Delta. They are designed to cover the needs of those people responsible for the functionality/installation of microcomputers in medium to large companies. Each course lasts one day, and is free of charge. Our next available dates are the 26th April, 5th May, 3rd June. Maximum group size is 12 and bookings are usually very heavy. Please ring Wendy Berry for details of any additional supplementary dates.

Alternatively . . . If you can't manage to get to one of our seminars, we can offer a 'test drive' in your own organisation. On the basis of a written request, we will send you a copy of Delta, with full manual, on loan.
(This offer is limited to the first one hundred applicants.)

What to expect . . . After your Delta test drive, we guarantee that other database packages will look a little tired, sad and clumsy in comparison. We've got a lot of faith in Delta – it's designed by professionals, for professionals. And it's a program you owe to your IBM PC.

Delta holds up to 90 fields per record, up to 2000 characters on the main record, includes full multi-level sorts and searches, calculation functions, a full report generator, letter-writer and label processor and links into user-written programs. Up to eight sub-files can be attached to the main file, for interactive processing. And at no point do you ever need to waste time generating your own code.

COMPSOFT TRAINING CENTRE

Our monthly pot-pourri of hardware and software tips for the popular micros. If you have a favourite tip to pass on, send it to 'TJ's Workshop', PCW, 62 Oxford Street, London W1A 2HG. Please keep your contributions as concise as possible. We will pay £5-£30 for any tips we publish. PCW can accept no responsibility for any damage caused by using these tips, and readers should be advised that any hardware modifications may render the maker's guarantee invalid.

VARIABLE SEARCH

Thinking that most people who do any programming of a reasonable length sometimes lose variables, I hope this routine will be of some help. It searches through the variables section in the memory of any ZX Spectrum, and will print out the names and types of every variable used in the program. If you know what variables should have been used, then coming across an odd one should point out a bug. If you need a list of variables to aid conversion to a different machine, this will provide them. Running short of memory? Pruning a few variables will save some. The uses are numerous.

The whole routine fits into 185 bytes of machine code. Running the program shown stores it in a REM statement; POKE 23756,0 will prevent it from deletion. The rest of the program can be removed by typing in the line numbers — do not use NEW. Then PRINT; :RANDOMIZE USR 23760 will list all the variables that have been set up on the screen.

For example:

n FOR NEXT	FOR NEXT loop variable;
a()	Numeric array;
time	Ordinary numeric variable;
x$	String variable;
c$()	String array.

If there are too many to fit on one screen, the computer will ask 'scroll?' in its usual annoying fashion. The REM statement will MERGE into any program that leaves enough memory, so you can use it with existing programs that you want to modify or send off to a magazine.

Bill Longley

ATOM BINARY COUNT

This routine provides the Atom with a binary printout facility.

The program should be typed in and then run. The machine code should then be saved on tape as shown in the program. The basic program can now be erased by typing NEW.

To use the facility the SHUT command is used —eg, typing 'SHUT 198' will cause the binary number 11000110 to be printed out.

It is also useful to find which bits in a byte are set or un-set. Typing 'SHUT? B001' will tell you which bits of Port B of the PIA are set.

The routine only prints out the first eight binary bits of a number so, for example, typing 'SHUT 301' would give 00101101 and is equivalent to 'SHUT 45'.

MORE NOTES ON THE SUPERBOARD

While the contribution to TJ's Workshop from David Eastlake on music for the UK101 (September 1982) was useful in principle, the idea can be significantly improved. Firstly, POKEing 61440 with either 64 or 0 will disable the cassette; using 81 and 17 instead will have the desired effect of switching RTS on and off without corrupting the cassette interface. Secondly, Basic isn't fast enough to give a reasonable range of notes, and rapidly changing notes are virtually impossible. Thus, when I decided to produce music on my Superboard, I wrote a machine code routine to produce the sound, a full assembled listing of which is given. As printed it is located at the end of memory on an 8k machine, and should be protected by answering 7979 to MEMORY SIZE. To use the routine, first set the USR vector with POKE11,51:POKE12,31 then execute the instruction X3+USR(D*256+F/8) where F is the required frequency of the note (in Hz) and D is the duration (in 32nds of a second). For example, to have half a second of a note at 600 Hz, use X+USR(16*256+600/8) or more simple X+USR(4171). F can be in the range 56 to 2040 and D can be in the range 0 to 127 (D can be larger, up to 255, if you make the argument of USR the appropriate negative value corresponding to a positive value greater than 32767). If D=0 then the programe will produce just one cycle of the note.

Here is a small Basic program that produces a variety of different sounds using the routine, many of which I'm sure you can imagine uses for in your latest Invaders program.

Those musically inclined can no doubt squeeze tunes out of their computers with a bit of extra software — how about a quick burst of the Death March when you finally get eaten/squashed/blasted for example?

On the hardware side, I didn't find it necessary to use anything as advanced as an amplifier. I simply inserted a spare 74LS04 from U68, then took the signal from pin 6 of J2. This, when connected with ground across an 8 Ω 0.5W speaker produced a sound of perfectly adequate volume.

David Harrison

SPECTRUM INS & OUTS

Chapter 23 of the Sinclair manual mentions the use of the 'IN' command as a substitute for 'INKEY$'.

What it does not mention is that if the 'IN' command is used it enables several keys to be pressed at once. This can be very useful as it allows, for instance, multiple-player games.

The chapter gives a list of some of the most useful addresses for half-rows, but entire rows can also be used. The addresses for these can be found with a little patience using the following program:

```
10 FOR n=1 TO 10000
20 PRINT AT 10,10;n;AT 12,10;IN n
30 IF INKEY$='n' THEN NEXT n
40 GOTO 20
```

Pressing any key apart from 'n' will show whether the current 'IN' address detects that row. Pressing 'n' will increase the address by one.

The 'OUT' command, which is also dealt with in chapter 23 of the manual, can be used to produce flashing border effects useful for arcade games.

This is done by using the following routine:

```
10 FOR n=1 TO 100:OUT 200,RND * 255:NEXT n
```

Christian Livingstone and Piers Ludlow

NEWBRAIN CLOCK

Here's a tip for Newbrain owners, to put a digital clock onscreen. The clock is interrupt-driven, so by intercepting the interrupt it should be possible to have a clock onscreen while allowing normal operation of the machine — although the display would have to be effected using machine code. The program is entered as one line.

```
10 PUT 7,22,10,10 : a = PEEK(105)*256*256+ PEEK(106)*256+PEEK (107): h=INT(a/180000): a=a-180000*h: m=INT(a/3000): a=a-3000*m: a=INT(a/50): PRINT h[2.0];":";m[2.0]; ":";s[2.0]: GOTO 10.
```

A few notes on the above — PUT 7 turns the cursor off.

PUT 22 sends the cursor to the x,y address of the next two bytes (10,10 in this case). Loctions 105-107 are a 24-bit clock which counts the number of video frame blankings since the machine was switched on, and h, m and s are hours, minutes and seconds. The figures in square brackets after h, m and s control print format.

Stephen Burt

Sage for those who demand more and more and more....

If your application is too demanding for small-fry microcomputers, if it looks as though only a mainframe will do – think SAGE and save money.

If your BOS accounting system is too much for your IBM Series I or DEC PDP 11/34, think SAGE and get more power at less cost.

SAGE is simply the most powerful microcomputer – nearly 2½ times as fast as a PDP 11/34 minicomputer running Microcobol bench tests. *Its 32 bit Motorola 68000 processor runs at 8 MHz and executes 2 million instructions per second. It can address up to 16 million bytes of memory. It runs four operating systems – BOS, Mirage, P System and CP/M 68 – with the Unix-like IDRIS due shortly. You can program in Pascal, Basic, Cobol, Forth, Fortran 77, APL, OCCAM, Expert, Modulla II and "C".

C/WP Computers, Britain's leading microcomputer dealer, now offers SAGE systems with full technical support. C/WP can supply you with terminals, printers, Winchester disks, tape drives, graphics devices, network multiplexors and communications equipment for your SAGE. All SAGE systems are covered by a free 12 months, on-site 24-hour callout maintenance service. Free delivery in the UK within 20 days of order.

SAGE II, 128k RAM, two 640k floppy drives, one terminal (two may be fitted) £3,990

SAGE IV, 1024k RAM, one 640k floppy drive, 10 Mbyte Winchester drive, six terminals £9,365

For full details and price list write or telephone C/WP Computers, 01 630 7444

*Tested by MicroProducts Software Ltd using SAGE II

BEEB DEBUGGING AID

This error-handling routine is for the BBC Micro, and is intended as an aid to debugging (and encourage the user's idleness!). When control is transferred to this routine, it will report the error, then list the line that gave rise to it. The routine has high line numbers for convenient *SPOOL –*EXEC use, and, since it fills the keyboard buffer using call 138, is suitable only for machines with O.S 1.0 or above. The routine first places the string 'L' into the keyboard buffer (32320,32330), then converts the two bytes at zero page locations 8 and 9 which, it turns out, contain the value for the function 'ERL', into a string of ASCII numerals which are placed sequentially in the buffer (32340 to 32370). Finally, the code for carriage return is appended (32380), causing the command to be performed.

BBC BAD PROGRAM FIX

I noted with interest the tip by David Julien Waring (January) on recovery of programs which came up with the message 'bad program'.

The BBC Computer is however, very prone to corruption of the first block, and in this event it can be very annoying as the program cannot be loaded at all. To overcome this I have devised the following method to load the program, list it, and insert the missing first block again to enable it to run.

Position the tape at the commencement of the faulty program and then take it out of the recorder. Place a new tape in the recorder and then type in a program of two lines, 10 and 20, each containing the maximum number of single characters (236). 'X' is convenient.

Save this program, naming it with the name of the program you are trying to recover, then rewind the tape. Reload the program, but press 'STOP' on the cassette player the instant the first block has loaded — this must be judged by ear alone. Replace the tape with the original program tape, press 'PLAY' and allow the program to continue loading. This will not quite fool the computer, however, and on completion of loading 'Bad program' message will appear. This can then be recovered with the following modified version of Mr Julien Waring's fix. No line numbers!

A=&E00 : REPEAT X=A?3 : IF A?X=13 A=A+X : UNTIL 0 ELSE UNTIL 1 : REPEAT Z=Z+1 : UNTIL ?(A+Z)=13 : ?(A+3)=Z

Press 'RETURN' and wait for the prompt to reappear, when with luck the program should be listable. Of course the first few lines will only be 'Xs', but at least it is now capable of repair.

James R W Rye

LYNX SCREEN

One annoying fact of using personal computers on televisions is that the computer's display tends to slide off the edge of some TVs. However, if you are fortunate enough to own a Lynx, armed with the fact that it employs a 6845 VDU controller, you can move the computer display around to suit.

To change the horizontal 'hold':
Enter OUT 134,3 — then OUT 135,x (where x is a value around 65 — to choice).

To change the vertical hold:
Enter OUT 134,4 — then OUT 135,y (where y is a value around 72 — to choice).

Fiddling with the values of x and y should produce a very pleasing 'centred' screen!

These changes will withstand NEW — but not a system reset.

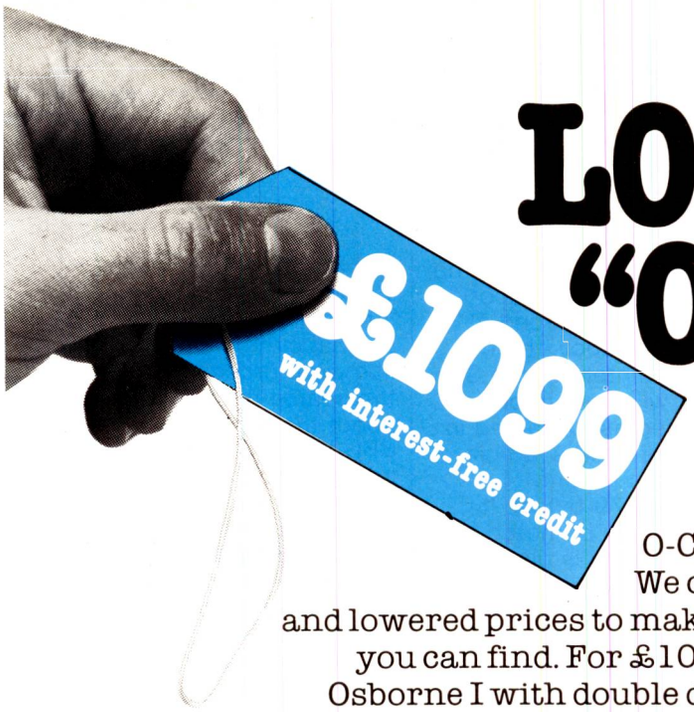

Simon Brookes

EASY KEYING

The following simple technique enormously improves the feel of the ZX81 keypad, making it easier to use and giving a degree of positive feedback to each key depression.

Selecting a key, feel for a circular recess beneath the plastic face; this recess contains the key contacts and is 1cm in diameter. Taking a ballpoint pen, carefully trace a circle on the plastic face following the inside edge of the recess and pressing just hard enough to score the plastic lightly. This causes the encircled section to rise into a small bubble on the key; you will now be able to feel the upper key contact which closes on the lower key contact with a detectable click. Repeat this procedure for all the keys. If you prefer not to mark the keypad then use a ballpoint with water soluble ink and clean it afterwards.

Simon McQuillen

LOOK WHAT "O" DID FOR OSBORNE

O-Computers has done wonders for Osborne I. We call it Super Osborne. We added refinements and lowered prices to make it the best value-for-money microcomputer you can find. For £1099 + VAT (limited offer) we'll sell you an Osborne I with double density disks (RRP about £1500) and all of Osborne's free software. Add the beautiful new Silver Reed EX44 portable daisy-wheel printer (RRP £485) with cable for £399 and a 12 inch amber screen monitor (£110 + VAT) and built-in 80 column adaptor (£175 + VAT).

WE GAVE IT 80 COLUMNS

Yes, our Super Osborne allows you to see lines of 80 characters on the screen. You can say goodbye to all that juggling with sideways scrolling that ordinary Osborne users do. Our design engineers have developed a circuit which fits inside the Osborne and provides video to British standards. You can plug any British monitor into your Super Osborne fitted with this adaptor and get a rock steady message 80 columns wide.

WE GAVE IT A WINCHESTER

And while we were about our redesign, we added to the 80 column circuitry some further cleverness to allow the Super Osborne to use a CONTOUR Winchester disk. That means that when the time comes you can plug in a CONTOUR and suddenly the world is yours with up to 21 million characters of storage. A 3 million character CONTOUR, baby of the range, costs £995 + VAT; 6 million characters cost £1195, 12 million £1595,

WE OFFER YOU INTEREST-FREE CREDIT

Suddenly Super Osborne is within your reach through our extraordinary interest-free credit offer. Order an Osborne system now – large or small – then, subject to a simple credit check and payment of a first instalment and the total VAT, the machine is yours. Pay the rest of the cash price in eleven equal instalments while you use the Osborne in your office. Enjoy the luxury of the CONTOUR Winchester disk's massive storage capacity. Come Friday, copy the files you need onto Osborne's new double density floppies, unplug the CONTOUR and carry your Osborne Electronic Office home for a weekend's work.

O-COMPUTERS
A member of the C/WP Group
108 Rochester Row, London SW1
Telephone: 01-828 9000

Take advantage now of interest-free credit to buy yourself a Super Osborne. Use it for work and charge the whole amount against your tax.

PCW 175

SHARP STRINGS

As Maurice Hawes mentioned in 'Making the Most of the MZ-80K' (*PCW* March), Sharp SP-5025 does not allow string inequality comparisons. The Basic program below POKEs into place a machine code routine of my own which overcomes this drawback.

The program as presented is written for a completely unmodified Basic SP-5025, with the main part of the routine being placed at 3DDCH (15836 decimal) onwards. If this space is occupied by a Toolkit then the routine may be placed elsewhere by altering the variable 'START' accordingly. If it is placed at 4806H or above then other pointers within SP-5025 will have to be changed as explained in Maurice Hawes' article (the main routine occupies 79 bytes). It should also be noted that a subroutine is placed within the Basic so that it *overwrites* part of the original SP-5025 string comparison routine (from 2283H to 22A4H). Before doing this overwriting make sure that any Toolkit you might be using doesn't already require this area for its own purposes (there is no clash in this respect with the Knight's Commander Toolkit). If you do move the Basic text start address to make room for the above routine you might also have to put this address into locations 1208H (low byte) and 1209H (high byte) in order to prevent the routine being wiped out on cold-starting Basic.

The routine treats 'A' as less than 'B' as less than 'C'. . . and so on. Strings are compared letter by letter as far as possible. If all letters compared are the same then the longer string is considered to be greater. Lower case letters are taken to be equal to their upper case equivalents. The routine may be altered to make all lower case letters greater than all upper case letters if required. To do this POKE 8866,201.

TAB TRICK

'Another key useful in special circumstances — like word processing', is the sparse information about the TAB key in the BBC User Guide. It is useful already, for normal circumstances.

Casual, mildly inquisitive prodding of the key by the user has probably demonstrated that the cursor is advanced one space per prod but does not backspace when the DELETE key is pressed All very well and good but not much use. I found, however, that if the TAB key is used instead of the space bar the spacers are not incorporated into the program.

Take the following program beloved by the furtive Saturday morning key bashers assembled around the microcomputer counter:-

```
10 FOR I=0 TO 10
20 PRINT: "HELLO"
30 NEXT I
40 END
```

If the program is typed in using the space bar and the program length is found by the command PRINT TOP — PAGE we get 47. If the same program is now retyped using the TAB key to insert spaces the program length has shrunk to 25. When the program is listed all the spaces have disappeared. To list the program with spaces use one of the LIST0 options (see page 290 of the User Guide).

Philip Clayton

ORIC TIPS

Something all the Oric reviews that I have seen so far seem to have missed is that by pressing ESC then to escape character (these are given on page 147 of the manual) colours, flashing and double height characters can be displayed directly from the keyboard. It certainly beats fiddling with

```
PRINT CHR$(27);"escape character"
```

for experimenting with graphics.

There is also a way of overcoming the seemingly famous TAB bug. Instead of using PRINT TAB(n);A$ use POKE 617,n:PRINT A$. Location 617 holds the horizontal cursor position, which can be changed at will during program execution. If loction 617 is POKEd in immediate mode it alters nothing as the system's READY message resets the cursor to the far left.

If the GET and KEY$ commands for testing the keyboard seem a bit awkward, as they rely on the auto-repeat facility or the repeated pressing of a key, you may find location 520 of use. The value of PEEK(520) is different for each key, but it remains constant while a key is held down. Unfortunately the value of PEEK(520) is not the same as the ASCII code for the key held down, but it is easy enough to find out what it is by typing something like this:

```
X=0: REPEAT: PRINT PEEK(520): UNTIL X=1
```

and then pressing a few keys.

Andrew J Edgington

IT'S NOT ALL GREEK TO CONTEXT

Microcomputers have become part of our culture. Yet most of them expect users to communicate in cyber hieroglyphs. C/WP CONTEXT is a new type of microcomputer designed to be easier to communicate with. In fact, it's two computers in one. Computer number 1 (a Z80A with 64k RAM, if you want a little jargon) does the hard slog on your programmes – any standard CP/M programmes. Computer number 2 (a 6502 with 32k RAM) concerns itself only with talking to you – in words or pictures – on the clear 12 inch screen. You'll be delighted by the sharp speedy graphics, and the steady readable characters. And you can mix words and pictures as much as you wish. But that's not all. CONTEXT'S screen handling computer allows you to overlay one character over another, add in accents, or underlining, or bold characters, and to make your own symbols Russian, Greek, mathematical, what you will. It's certainly not all Greek to CONTEXT. And you'll enjoy the price too – computers, screen, twin disc drives, Wordstar, software all for £1495.

C/WP CONTEXT

THE REALLY VERY FRIENDLY COMPUTER

CROSS-FIGURES

Philip Lewis describes how he stumbled into the world of creative cross figures nine years ago. Since then his enthusiasm has remained unabated. Here he eagerly imparts his knowledge to those mathematical freaks among us.

It was summer 1974, and I had just arrived in Malta. Browsing in the hotel's bookshop, I picked up a faded and dusty paperback called 'Cross-Figure Puzzles'. What on earth. . .? I opened the book and was transported into a miniature new world. Unfortunately, this little world was and still is sparsely populated. Colonists are very welcome and there are golden opportunities for explorers!

But before you rush to join the queue, let me tell you what cross-figures are all about. First of all, they are not to be confused with (what I call) cross-*numbers*. These you may have met in school text-books or puzzle magazines. As with (normal) crosswords, the clues in cross-numbers are *independent*. Here's a sample 3x3 cross-number to show you what I mean:

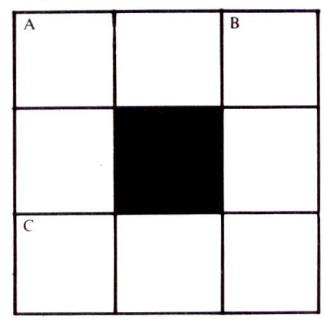

Across
A 2^9
C 592 + 609 - 465
Down
A 27x21
B 299808÷1388

In this sort of 'puzzle', you can start where you like, because the clues are independent. Cross-numbers are useful in the classroom because they look more interesting than lines of 'sums' and also because the answers are largely self-checking; for example, if your answer to A-across is wrong, then it probably won't fit with your answers to A-down and B-down. You will doubtless agree with me that cross-numbers can have little appeal to adults, except for dedicated calculator-punchers.

Now let's get on to cross-*figures*. Have you ever seen a crossword with clues like 'This is what a 5-across might give you if you asked him for a 10-down'. So you look up the clue for 5-across but only when the weather is 1-down.' And so on. Exasperating! How do you begin? The clues are *interdependent*. You have to find a way in.

Cross-figures present much the same sort of problem in the mathematical field. As the clues are interdependent, where does one start? Here's a sample 3x3 cross-figure to practise on:

Across
A C-across x 3
C Multiple of 3
Down
A A-across + 6
B C-across x 5

(Don't get confused by the letter-labelled clues. After all, if you have number-labelled clues for crosswords, it makes sense to have letter-labelled clues for cross-figures. The letters are not variables but simply labels.)

Now let's take a look at those four clues:

C-across is a multiple of 3. That's no great help. We shall need to know more about A-down or B-down first.

A-down is A-across plus 6. Here we obviously need to pin down A-across first.

A-across is three times C-across. Yes, that we could use. Cross-figures do not have 'leading zeros' any more than crosswords have 'leading blanks', so C-across must be between 100 and 333, while A-across must be between 300 and 999. This means that we could pencil in '1 2 3' in the bottom left box and '3-9' in the top left box.

But let's not be hasty. The last clue tells us that B-down is five times C-across. And we have of course spotted that B-down and C-across share their final digit. What digit, multiplied by five, produces the same final digit? 5 is the only one. Or is it? How about 0? Yes, we mustn't forget 0! So we pencil in '05' in the right box. The door is now open.

As A-across is three times C-across, which we know ends in 0 or 5, the last digit of A-across must also be 0 or 5. But 0 is impossible, because B-down cannot have a leading zero. That makes B-down 5?5. And as C-across must have a factor of 5 (5 'goes into' all numbers ending in 5), B-down (= five times C-across) has a factor of 5x5, or 25. So B-down can only be 525 or 575, because if a number has a factor of 25, the last two digits must be 00 or 25 or 50 or 75. Dividing by 5, we get C-across as 105 or 115. Ah, hah! 105 is a multiple of 3, being 3x35, and 115 is not divisible by 3. So. . . C-across is 105, and B-down must be 525. We're nearly there! A-across must be 3x105=315, and hence A-down is 315+6=321. Victory!

Incidentally, this particular cross-figure has been solved by several children in the 9-12 age group.

One day I completed a puzzle and noticed with surprise that I had not used one of the clues. That particular clue was clearly redundant.

Now, information redundance — or, rather, its absence — is an essential aspect of mathematical elegance. To illustrate this idea at its simplest level, no one grappling with a problem like 'Find the value of X when X+2=5' needs the additional information that 2x=6!

So, with this in mind, I kept a sharp lookout as I worked my way through the book and managed to eliminate a clue in several other puzzles. That whetted my appetite, and when I got to the end of the book I went back and tackled all the puzzles again with new analytical ideas. This time I succeeded in cutting out two or three clues from most of the puzzles, and on a third attempt I found at least five clues could be trimmed from the 25 to 35 clues provided.

This was all very well, but the big problem remained: how to determine the maximum number of clues which could be squeezed out of each puzzle so as to leave it in a state of perfect mathematical elegance without compromising its unique solution. It seemed that I was stuck on an exponential slope of difficulty, where the elimination of every clue made it progressively

more difficult to eliminate a further one.

In the summer of 1976 I acquired a pocket calculator and tackled the whole business again — this time with the application of elementary Information Theory. By the October of that year I had reached an average elimination level (for standard 9x9s) of 31 per cent of the given clues — not far short of the absolute maximum, I thought. (Wrong again!).

With this method I eventually reached an elimination level — mainly in the 40- 50 per cent range.

That brings us to the main purpose of this article. I had been wondering for some time whether cross-figures could be programmed, so that autumn I joined a course to study assembly code with only 200 addresses. As soon as I had acquired all the code words and run a few simple programs, I tackled the problem of programming a 4x4 cross-figure, without even knowing whether 200 addresses would be enough for the job. That turned out to mean two months' hard work, wih the final instructions just squeezing in under the 200-address limit. The cards were fed into our old IBM 1440 and out came the correct solution. My first cross-figure program was born. . .

And that was as far as I could go. I programmed another 4x4, but the language was inadequate for larger cross-figures. So the following autumn I took up Fortran and Cobol. Within a few weeks I had run successful programs for 4x4s in both languages, although it became painfully clear that using Cobol for that purpose was rather like taking a sledge-hammer to a nut! To my surprise (given that Fortran was developed for mathematical problems) Cobol was the more efficient in run-in time, even if not in terms of program-writing time!

So far so good. . . It was but a short step to writing successful programs for 9x9s. Or so I thought. . . Computers laugh at number-crunching problems involving something like 10^8 possible configurations (3x3s) and cope quite well with magnitudes of the order of 10^{12} to 10^{14} (4x4s), but even the bravest computer quails when confronted with huge numbers like 10^{60} (9x9s). My first 9x9 program drafts looked good and may well have been logically sound, but all they produced when fed into the computer was deep silence. (I had not yet cottoned on to the idea of intermediate printouts.) After appealing for help I worked out that my otherwise adequate program was due to run for 100,000 years before it got to the printout stage. . . This was a bitter blow, as the old IBM 1440 I was using obviously wasn't going to last that long!

After more hard work over a period of months and a lot of trouble with nesting limitations, I managed to reduce the prospective run time for a 9x9 program to a mere month or so. The chance of testing such a program remained nil. Then I gained access to an ICL 2903 and I hopefully rewrote my programs with some new angles. A test run, printing intermediate results, suggested a total run time of 8 to 15 hours.

Some time later I started working with programmable calculators, and devised a 3x3 (my first stab at actually compiling a cross-figure) in Basic which just fitted into the available memory. I had no time, however, to do cross-figure programs in Basic: there were more urgent matters to be considered, like four-dimentional rotating cubes, Fibonacci-type modules series, the relationship betwen infinitesimals and Cantorian transfinites in the light of probability theory.

In the last half of 1982, there were breakthroughs on several fronts. Time-absorbing subroutines were eliminated and I started measuring run time in minutes instead of hours. I am now satisfied that any further improvements *I* could make in cross-figure programming technique would be strictly marginal — unless there is a whole new strategy waiting to be discovered.

The end of the story? Not quite. During all these years, I have found very few people who had ever tackled a cross-figure. Nevertheless, I am convinced that (somewhere out there) thousands of potential enthusiasts are ready and waiting for the chance to use their computers and their brains on something more demanding and amusing than destorying alien spaceships or sorting customers into alphabetical order.

Cross-figure puzzles provide entertainment and instruction for one and all in many different ways. Is there anyone without a pathological hatred of figures who can resist the temptation to try his hand at solving a 3x3? Why, it's literally child's play!

For programming beginners, writing a successful program for a 3x3 is a quite attainable initial target. Achieve it, by whatever methods, and you have won your initiation into the Society of Cross-Figure Programmers!

Do you find 3x3s too easy? Then, there are many different sorts of 4x4s on which you can develop your skills in both 'manual solutions' and 'programmed solutions'.

I also hope that professional mathematicians and experienced programmers will see in cross-figures a fertile field for investigation: Ultimate Elegance proofs; Information Theory applications; and much more.

The 3x3 at the beginning of this article makes a tasty little *hors d'oeuvre* for hungry programmers. When you've got that one under your belt, try the puzzles printed below.

You will find that cross-figures can be programmed in several ways. I think I have tried most of the possible approaches under my general strategy, but you may come up with a new approach or even win fame and fortune by developing a completely new strategy!

For the sake of standardisation and comparability, I suggest the following 'ground rules':

1) Lower and upper limits of grid numbers may be determined by inspection of the grid. A three-digit number, for example, obviously lies betwen 100 and 999.

2) In order to remove subtraction, division and root operators, clues may be 'switched around' before being put into the program. In algebraic terms,

$a = b - c$ becomes $b = a + c$

$a = b / c$ becomes $b = ac$

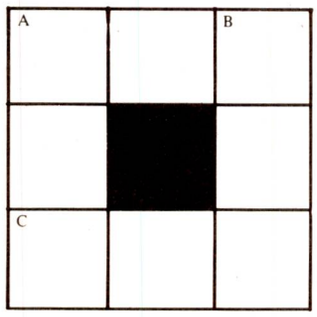

$a = \sqrt{b}$ becomes $b = a^2$

3) The clues, taken as a whole, may be analysed in order to determine which of the grid numbers are 'primary' and which are 'derivative', in terms of ascending order. In the clue 'A-down is seven times C-across', for example, C-across is primary and A-down is derivative.

4) Apart from the above, *no mathematical calculations or deductions are to be made outside the actual program.*

5) The program must not only find a solution but also show that there is only *one* solution or (horrors!) show that the compiler has made a mistake and there is more than one solution.

Do any of these cross-figure puzzles have redundant clues? If so, what are they?

Across

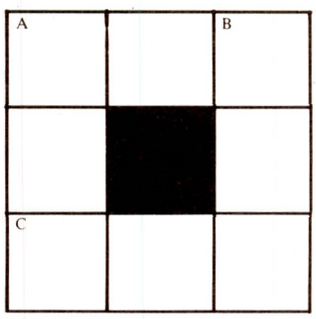

A B-down minus A-down

C Seven times A-down

Down

A Prime number

B Square number

Across

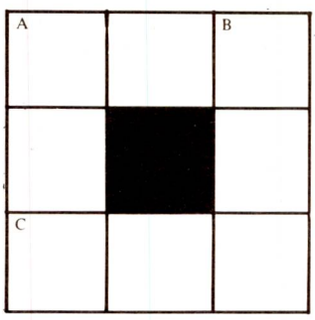

A Three consecutive digits in ascending order

C Three consecutive digits in descending order

Down

A Square of prime number

B Three identical digits

Across

A square of first two digits of B-down

C Square of last two digits of A-down

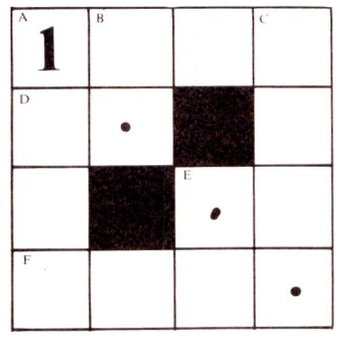

Down

A Sum of digits is 12

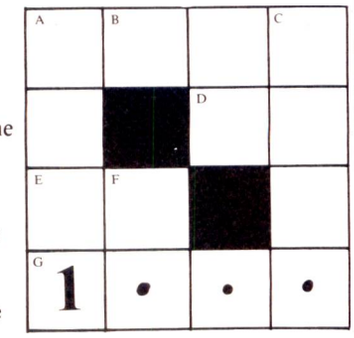

B Prime number

CROSS-FIGURES

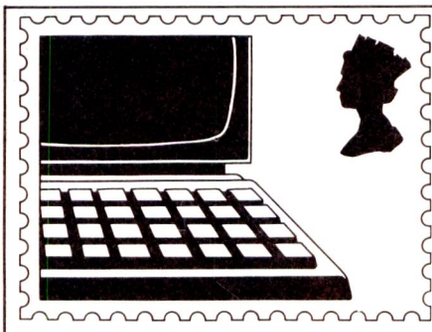

Across
A (Four) Digits total 19
F Square of E-across
Down
A D-across x B-down
C Twice A-across
E See below (*if* you must!)
First theatre in England opened in year 1. . . (see dotted squares). Puzzle can be solved without the extra clue: use a calculator!
E-down is multiple of 11.

Across
A G-across x 3
D Square number
E Prime number
G Bismarck appointed Prime Minister of Prussia.
Down
A Digits total 18
B One more than E-across
C E-across x B-down
F G-across ÷ D-across
Six of the eight numbers in the puzzle have a common factor.
Of the nine clues, how many are redundant?

PS Solutions will be printed in the July issue.

COMMUNICATIONS

PCW welcomes correspondence from its readers but we must warn that it tends to be one way! Please be as brief as possible and add 'not for publication' if your letter is to be kept private. Please note that we are unable to give advice about the purchase of computers or other hardware/software—these questions must be addressed to Len Warner (see 'Computer Answers' page). Address letters to: 'Communications,' Personal Computer World, 62 Oxford Street, London W1A 2HG.

Babbage rules OK

As my original article was concerned with Charles Babbage only, I feel that I must reply to L E Weavers appraisal of Ada Lovelace (March 1983 Communications).

The role of Ada Lovelace in the development of the Analytical Engine has until recently been over emphasised. In 1840, Babbage travelled to Turin to present a series of seminars on his Analytical Engine to a group of Italian scientists. It was his intention that one of them would publish an account of the machine. This role was performed by a young military engineer, L F Menabrea, who published his account in 1842.

The account was subsequently translated from French into English by Ada Lovelace (she became interested in the Analytical Engine in 1841). Under the consultation and guidance of Babbage, extensive notes were added to the translation. The translation and notes formed the most important paper in the history of computing predating the modern era.

It was in direct consequence of this, that Ada Lovelace's role in the development of the Analytical Engine has been over estimated. The programs she discusses were developed by Babbage (by as much as 5 years beforehand), and taken to Turin.

Ada Lovelace did, however, perform her role as a publicist extremely well indeed, but her influence on the development was not as much as had been supposed.

It is worth noting that the naming of the (new!) computer language by the United States Department of Defence was performed before the true role of Ada Lovelace was uncovered.

For those interested, there is a major reprint series currently in progress of major works in the history of computing, published by the Charles Babbage Institute in the United States. One of these is *Babbage's Calculating Engines*, a collection of Charles Babbage's works assembled by his son, Major General H P Babbage, which was published originally in a limited edition in 1889.

Queries concerning the series should be directed to the publishers – Tomash Publishers, PO BOX 49613, Los Angeles, California 90049.

N Holder, Coventry

Satellite tracking

I refer to the letter written by Mr John Evans in your feature 'Communications' in the April issue of *PCW*, wherein he complains that most micros leave out the inverse trigonometric functions Arc sine and Arc cos. Moreover, in order to remedy this apparent deficiency, he has kindly supplied a very crude iterative subroutine which calculates Arc sine.

I am surprised that he has not delved more deeply into advanced mathematics books since in them he would find the necessary formulae for Arc sine and Arc cos.

The following formulae show the necessary relationships:-

ARC SINE(X) = ATN(X/SQR(ABS(1 − X⌒2)))
ARC COS(X) = ATN(SQR(ABS(1 − X⌒2))/X)

The complete solution for Arc tan (and hence for Arc cos and Arc sine) can be performed with the following program:

```
1000 REM SUBROUTINE FOR ARC TAN
1010 IF X1 > 0 THEN THETA = 180 × ATN(Y1/X1)/3. 14159
1020 IF X1 < 0 AND Y1 > 0 THEN THETA = 180 × ATN(Y1/X1)/3. 14159 + 180
1030 IF X1 < 0 AND Y1 < 0 THEN THETA = 180 × ATN(Y1/X1)/3. 14159 − 180
1040 IF ABS(X1) < 0.000001 AND ABS(Y1) < 0.000001 THEN THETA = 0
1050 IF ABS(X1) < 0.000001 AND Y1 > 0 THEN THETA = 90
1060 IF ABS(X1) < 0.000001 AND Y1 < 0 THEN THETA = −90
1070 RETURN
```

where in this subroutine X1 = SQR(1 − X⌒2) and Y1 = X for Arc sine and X1 = X and Y1 = SQR(ABS(1 − X⌒2) for Arc cos

Thus programs for finding Arc cos and Arc sine are as follows (using the above subroutine):-

If N is the sine of THETA then:-

```
10 Y1 = N:X1 = SQR(ABS(1 − N⌒2))
20 GOSUB 1000
30 PRINT THETA
```

If M is the cosine of THETA then:-

```
10 Y1 = SQR (ABS(1 − M⌒2)):X1 = M
30 PRINT THETA
```

The main problems with Mr Evans procedures are that they take too long to perform and that there is no differentiation between, say, sine (45 deg) and sine (125 deg)

Ian Pardington, Twickenham, Middlesex

Tough contender

Having just read your report on the 'LSI-M4' in the April edition of *PCW* by Jane Bird, I was rather disturbed to find that you did not like the packaging of the system. I use the company's 'LSI-M3' a lot

and find that the keyboard is just right, if used in the correct environment, eg, on a desk. Incidentally, the break key is also user definable!

I personally am quite pleased about the 'excessively thick and strong case' as on one Sunday morning I was busily programming away when I heard a creaking from above.

On looking to see where the noise was coming from, I was just in time to see the shelf above me holding about three quarters of a ton of paper breaking away from the ceiling! I pushed myself away from the table only to see the M3 being covered by the falling paper; the keyboard shot across the room; the M3 went *beep*. I thought all was lost.

After some ten to fifteen minutes of removing the paper from where I thought the machine should have been, I saw my first glimpses of the M3 – it was still running!

On revealing the M3 further, locating and plugging in the keyboard, I did a couple of routine checks. Everything was in order. That was last November; this letter was written on the M3 using Wordstar which is very easy to use with the aid of all the function keys.

M I Cohen, Northolt, Middlesex

We used ours as a stepladder – Ed.

Camputer's advertising error

I am writing to draw your attention to a very misleading claim being made by Camputers Limited in their advertising of the Lynx microcomputer.

I recently bought a Lynx from a shop in the Spectrum chain. One of the main reasons for my choice of machine was the RS232 serial port as standard. This serial port is described in the Lynx sales brochure, and indeed mentioned in Camputer's full page advertisement in the May issue of *PCW*. The Lynx manual also outlines the use of LPRINT and LLIST when using an RS232 printer. Unfortunately, the Lynx does not have an RS232 port. There is a socket on the back of the machine marked 'serial', but it will not drive a serial printer, or any other RS232 peripheral.

After a telephone call to Camputers, I gather there is no intention of rectifying this omission. I have therefore returned my machine and obtained a refund, and hope that anyone else who has been misled in this way will do likewise.

Christopher Nelms, Godalming, Surrey

Camputers regrets its misleading advertising, and will be using the phrase 'serial port' in future. The company is supplying a special lead and software support for RS232 with commands listed in the newsletter. – Ed.

Oric-1 ostracised

I have just read your review of the Oric-1 and find that mine has exactly the same bugs as yours had.

My sad tale began last October, when I sent in my order for the Oric-1 48k. I expected to receive it around Christmas, in time to code up my 'A' level project, but I received a letter saying I could have my money back or wait a while longer. With a promise of a Forth language (which I still have not had), I decided to wait. My account was debited just before Christmas. They had stated in a letter that my account would not be debited until a computer was ready for dispatch. I waited until the middle of January and nothing came, so I wrote to them explaining about my project and asking if I could have my money back.

Instead I received my first Oric-1 which seems to have been a cross between your first two review models. At first, because of the small book I received, I wondered if I was trying to use it incorrectly. I rang several times and eventually I was put through to Cambridge. They told me the computer was faulty, and to send it to the service department. I sent it back with a letter asking them to replace it, or refund my money within a week. After two weeks with no reply, I wrote to Ascot saying that if nothing was done, I would take legal action.

I received my current computer on 11 February, and was thrilled to have a computer that seemed to work properly. Then, I found the faults mentioned in your review. In addition, the screen jumped around when a sound command was used.

So, now I know about the faults, and I assume the computer has an EPROM instead of the ROM which I thought it had.

Edward Kent, Burton on Trent, Staffs

PS I have lost faith in this company, not due to the product, but the atrocious service I received.

The agony and the ecstasy

As an avid reader and subscriber to your esteemed journal, I feel entitled to offer helpful criticism. Your indexing method is positively lousy! This is most surprising since you and your contributors frequently and correctly rebuke computer manufacturers for their poor documentation. Furthermore, your clever little 'Goto' instructions in the middle of articles often direct me to the wrong page. I suggest that you replace the entire editorial board by a reliable (probably Japanese) microchip.

Why all the fuss? Because I have just spent 2 hours trying to trace that wonderful article by Bob Huckle on 'How to make Epson, Wordstar and Osborne sing and dance'. Don't exhaust yourself looking it up, it's in the January 1983 issue on page 145. Perhaps you could drag him out of hibernation (if you haven't lost his address) and ask him to teach us how to use some of the graphic facilities on the Epson. Yes, I know the excellent Epson manual shows you how to do this using Basic, but I want to generate and use some Greek characters (alpha, beta, etc) in my Wordstar documents.

As a scientist (of sorts) I frequently use these characters and have tried to produce them by superimposing standard characters. Thus, an upper and lower case 'p' gives a passable beta – thus ß. I can make a poor imitation 'micron' by subscripting a slash before the letter 'u' – and thus '/u'. However, I cannot make an alpha nor sigma. This could be the start of a new series of articles on useful graphics in place of infantile computer games. Perhaps one of your intelligent readers has already cracked the problem?

D C Weinkove, Stockport

PS Many months ago I submitted an amusing (I laughed) article on computers. Since then, I won my wonderful Osborne in a competition in the magazine *Which Micro* (bless them). I now wish to change the jokes and send the nonsense elsewhere. OK? Yes, I know you have lost the contribution! *Anyone got any ideas? – Ed*

Revenge is sweet

I am writing to warn readers of the hazards involved when trying to sell software through professional software companies.

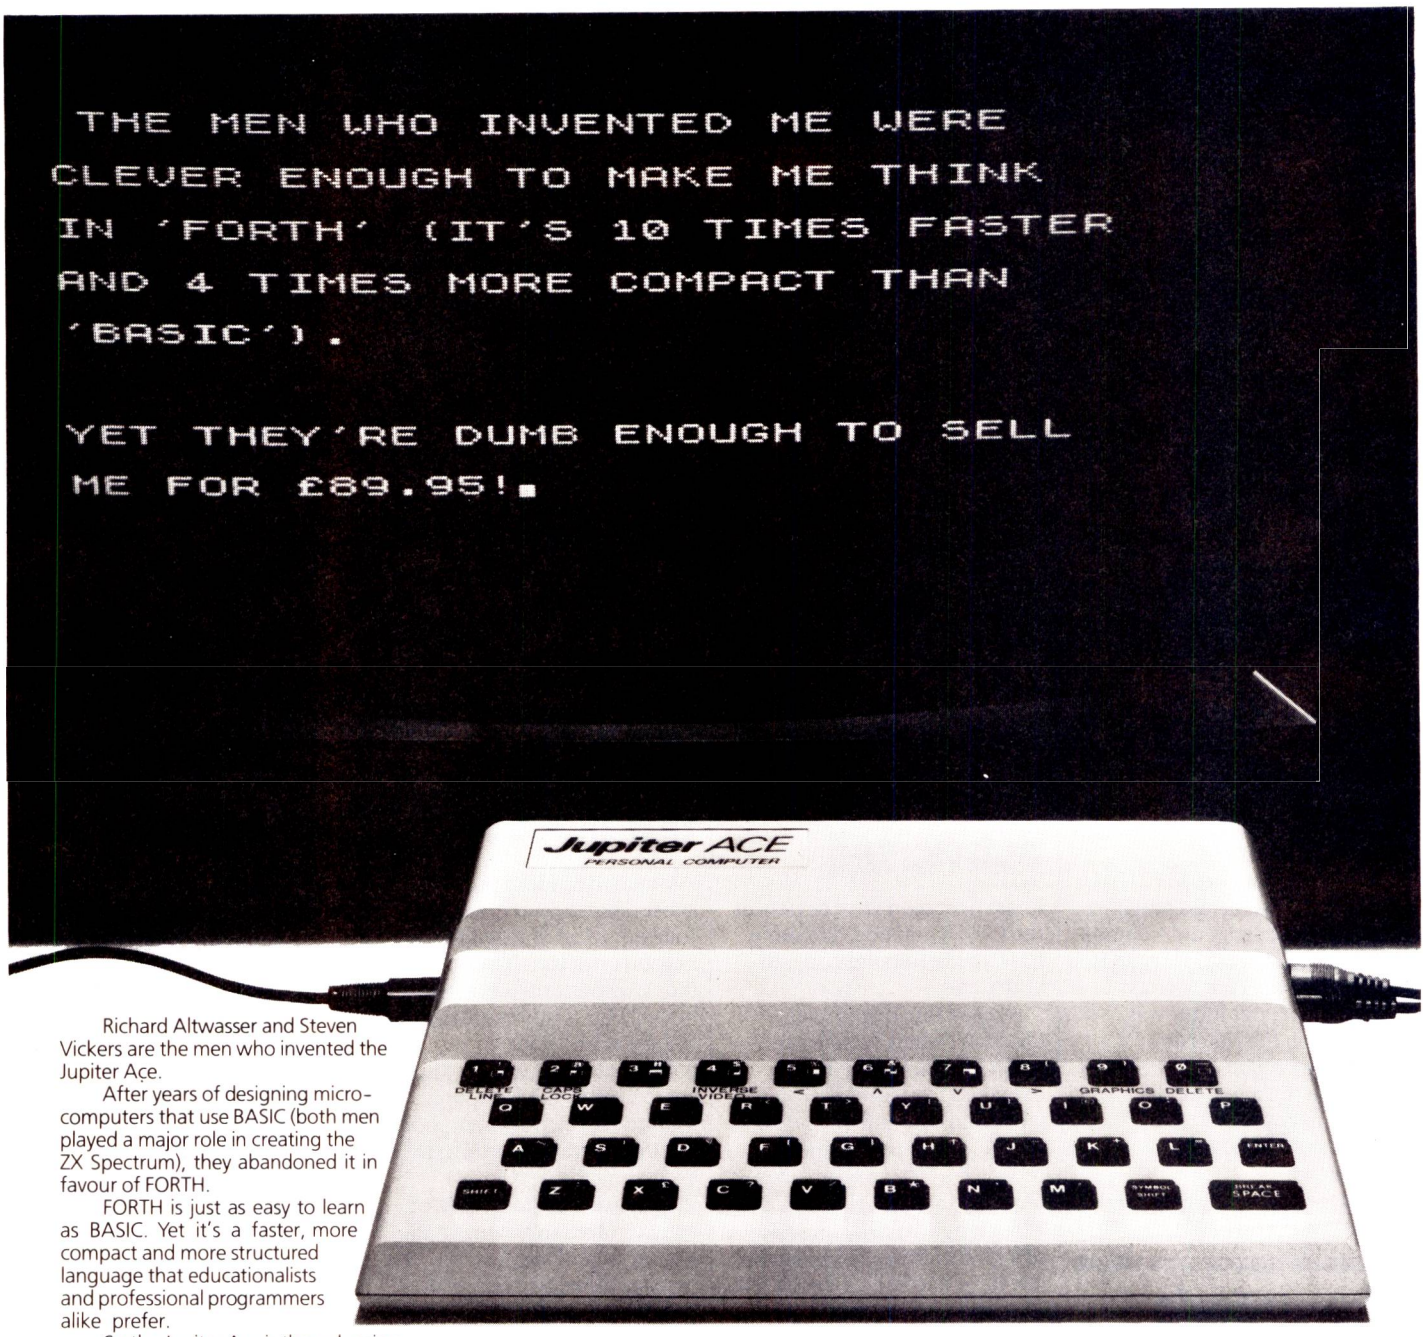

My problem started in September 1982 when, at the Personal Computer World Show, I approached a representative of the Bug Byte company with an item of software which I considered had a potential market.

Having given the representative a cassette containing the program and an operating manual, he said that Bug Byte would be in touch with me within a fortnight (ie, at the beginning of October).

However, I did not hear from them, and so at the beginning of December I wrote to the company enquiring about what was happening. No reply was received from Bug Byte.

A telephone call was made to the company. The person who answered did not know the program and said that he would follow it up. On telephoning a few days later, he said that he had not been able to find the program. After further telephone calls Bug Byte was going to 'put something in the post' (I don't know what, since they said they had lost my program!). However, nothing appeared.

This was in January.

Richard Altwasser and Steven Vickers are the men who invented the Jupiter Ace.

After years of designing micro-computers that use BASIC (both men played a major role in creating the ZX Spectrum), they abandoned it in favour of FORTH.

FORTH is just as easy to learn as BASIC. Yet it's a faster, more compact and more structured language that educationalists and professional programmers alike prefer.

So the Jupiter Ace is the only micro-computer you can buy that is designed around FORTH.

Using it, there's little fear of accidentally 'crashing' programs halfway through and having to start all over again (a common fault with BASIC). The Jupiter Ace's comprehensive error checking sees to that.

The Jupiter Ace has a full-size keyboard, high resolution graphics, sound, floating point arithmetic, a fast, reliable cassette interface, 3K of RAM and a full 12 month warranty.

You get all that for £89.95. Plus a mains adaptor, all the leads needed to connect most cassette recorders and T.V.'s, a software catalogue (35 cassettes available, soon to be 50), the Jupiter Ace manual and a free demonstration cassette of 5 programs

The Jupiter Ace manual is a complete introduction to personal computing and a simple-to-follow course in FORTH, from first principles to confident programming.

Plug-on 16K and 48K memory expansions are also available, at very competitive prices. (There'll be a plug-on printer interface available soon, too.)

It'll take you no time at all to realise how clever Richard and Steven were to design the Jupiter Ace around FORTH. And even less time to realise what a silly price £89.95 is to charge for it.

Technical Information

Hardware
Z80A; 8K ROM; 3K RAM.

Keyboard
40 moving keys; auto repeat; Caps Lock.

Screen
Memory mapped 32 col x 24 line flicker-free display upper and lower case ascii characters.

Graphics
High resolution 256 x 192 pixel user defined characters.

Sound
Internal loudspeaker may be programmed for entire audio spectrum.

Cassette
Programs and data in compact dictionary format may be saved, verified, loaded and merged. All tape files are named. Running at 1500 baud.

Expansion Port
Contains D.C. power rails and full Z80 Address, data and control signals. Can connect extra memory peripherals.

Editor
Allows complete editing and listing of compiled programs.

Please send cheque/postal order to:
Jupiter Cantab Ltd., North Wing, Freemasons Hall, Bateman Street, Cambridge CB2 1LZ

Available for immediate delivery. Allow 14 days for p. & p. U.K. price only (export price on request).

Nothing more was done for a while, but at the end of February, Bug Byte was again telephoned to tell them that nothing had been received, and Mr Tony Milner promised to put something in the post the next day. However, again nothing arrived.

Since then another letter has been written to Bug Byte stating that if no reply was received, then letters would be sent to a number of computing magazines.

Perhaps selling software through Bug Byte is in their own words 'from difficult to suicidal'.

S J Harris, Bedford

Acorn replies

We are in regular contact with Morten Christiansen (*PCW* May 1983) and have already replied to him regarding his questions on 8in disk drives support.

The BBC micro is a very flexible system and has the inherent capability of supporting 8in disk drives.

The market place is, however, moving increasingly to the 5¼in format and we have chosen to give this priority. The Z80 2nd professor (ANCOX) will include an excellent package of CP/M software on 5¼in disks at a planned price of £295. We also plan for key software houses to make additional CP/M software available in business format.

Rest assured that we intend to fully support serious business applications on the BBC Micro Computer.

D J Bell, Acorn Computers, Cambridge

Keyboard Krisis

In your reply to the letter from S Douglas concerning alternative keyboards for the ZX Spectrum, you mentioned two that have no space bars.

Dean Electronics makes a keyboard that not only has a full-sized space bar and the break space key, but is also fitted with six spare keys. Using fine gauge wire, these can be connected to other keys, so that you can have conveniently placed duplicates of functions such as 'caps', 'lock' and 'symbol shift'.

As far as I know the keyboard is only available from Buffer Micro Shop, 310 Streatham High Rd, London SW16. Tel 01-769 2887. The price is £49.50, and although the firm is a retail business it will accept mail order (if you send £51.50 to cover P&P).

K J Brickwood, London

Customer relations

We were sorry to see that Mr Ferguson had to resort to a letter to *PCW* (March), having tried to contact us on three separate occasions.

It is true to say that the tremendous popularity of the BBC Micro and the general success of Acorn had caused our communications with some customers to become stretched to the full.

This is precisely why we have established our Customer Services Centre, which is run under my direction. A new 10-line telephone system has been ordered specifically for customer enquiries. This installation will be in addition to the existing 10-line Acorn exchange – and when it arrives we will be fully operational. We have significantly increased the number of staff in the Customer Services team and will be dealing promptly with all queries like Mr Ferguson's, and in his particular case we have already written to him and answered his questions.

M J Bicknell, Customer Services Manager, Acorn Computers.

Pat on the back

I applaud the recent moves in the editorial of this and other magazines to expose some of the blatant techniques used to market products that are by no stretch of the imagination ready. This is obviously a step in the right direction, but would it not be a giant leap in the right direction if this and other magazines refused to publish some of the more obvious transgressions?

Iain M Worthington, Nottingham

We do, or rather, we don't – Ed.

TOMORROW'S OFFICE

continued from page 156

Documentation

Tomorrow's Office has two manuals — a traditional reference manual and a Training Guide. The Training Guide is good and clear, and has *an index* and some complete examples — unfortunately in my copy most of the printout from these was badly printed and very hard to read. The Reference Manual is better presented than most, with page layout and emphasis used to good effect. It does, though, take the common completely solution-oriented approach. This, combined with the more usual lack of an index, makes it quite hard to find particular pieces of information of the 'I know I've read that somewhere' kind. The confusion in Tomorrow's Office between the use of the word 'index' for a sorted list and for a selected list made this finding process just a little harder still.

Costs

The package costs £695, and runs on the Sirius under MS-DOS; it is a development of a Commodore PET package, the Administrator, which is in widespread use. The purchase price includes all updates of the life of the package, and support via the telephone 'hot-line' at Stage One's headquarters in Poole. The package will run quite happily on the single-sided disk version of a hard disk. At present Tomorrow's Office is a single-user system; I understand that the originators are expecting to provide a multi-user version once the networking scene on the Sirius has become more stable.

Conclusion

Tomorrow's Office, judged as a data management package, provides a good range of facilities for an application where interactive access to the data is through the primary key field. With this kind of data, you can extract, order, manipulate and maintain your data with a fair degree of flexibility and ease of use. It also provides a master/transaction file facility; the ability to have one master record associated with any number of transactions gives the user a virtually unlimited record size. So, for an application where primary key access is the norm, and particularly where the data is of the master/transaction record type, Tomorrow's Office would be a very good buy, particularly as the package makes excellent use of the special features of the Sirius, the prompting and 'help' are well provided, and the facilities for printing reports are very good.

However, for applications with less well-structured data, the package might not be quite so appropriate. The restriction to 484 characters for a master record will often mean that the user must use two or more transaction records per master to get all the information in (given the accompanying limit of 240 for master and 244 for transaction records where both are needed). The restriction to a single screen-worth for display might mean that not all the data could be displayed at once. Further, the restrictions on access by other than the primary key could also cause problems in some applications, again where the data is less highly structured, particularly as the secondary indexes are not automatically kept up-to-date when data is amended or added. I was also rather disappointed that the facilities for providing users with special menus, and for storing commands in a file — while excellent as far as they went — did not include any form of conditional execution.

So once again, this is very much a 'horses for courses' situation. Tomorrow's Office is a well thought out package with many facilities and on the whole a very good user image. If you have, or are thinking of buying, a Sirius, you would do well to give the package serious consideration, since for the right kinds of application it should prove a very good buy for the data management. But it is not, despite its name, an 'integrated' package, and for word processing and 'calc' facilities you would have to use Tomorrow's Office in conjunction with other software.

END

CHECKOUT

THE FINANCIAL DIRECTOR

Keen to accept the challenge to demonstrate the Financial Director's user-friendliness, Ian Griffiths of Accountancy Age was up from his corner before the bell . . .

In the latter part of last year I was asked to attend a small press conference held by Financial Director Software to launch its new suite of accounting programs.

The company's claims for its software were, it seemed, grandiose. The package was said to be so user-friendly that a bookkeeper or accountant with absolutely no computer experience at all could fire it up and use it straight away with no trouble.

Everybody claims that for their own software, said I. But everyone knows that user-friendly software is just as likely to bite your head off as to work properly for you. Financial Director's Managing Director Stephen Brookner insisted that using the Financial Director was, in principle, like using manual accounting books only much easier, because it took the long, hard work out of the process.

Being an out-and-out cynic I couldn't refrain from declaring, in MicroScope's issue seven, that the Financial Director might be good, but that only time and real, unbiased feedback would prove it.

This observation did not make me popular. Stephen Brookner — as our reviewer, Ian Griffiths of Accountancy Age, also notes — was not too pleased with me.

In December when he read my original article he rang me and issued a challenge: 'Find an accountant with no computer knowledge and he can prove its simplicity.'

Computer experts, according to Bryan Horton, Brookner's partner, have said the system is 'insultingly protective'. That for a start led me to think I was maybe being a little too harsh. Those words simply mean that error checking on input is stringent. And although this appears time consuming, in accounting it is more time-economical to get everything right from the beginning.

Ian has given the prices and most of the technical details necessary in this review. It was surprising to find that Financial Director Software's own books are kept on the package, running on a Millbank System 10 and, apparently, it runs very well on that machine. It is this computer which is used in the review which follows.

The Financial Director is now sold through 90 outlets nationwide. Each dealer is treated to a two-day, all expenses paid, intensive course in the use and sale of the package and basic bookkeeping. A diploma is awarded to the dealer at the end of the course. Financial Director is hoping to take on more dealers in future.

Maggie Burton

Bookkeepers beware!

Stephen Brookner was not a happy man. Somebody had voiced doubts about the Financial Director bookkeeping and accounting package he had helped develop and he wanted to put the record straight. He issued the challenge: 'Find me an accountant who has no computer knowledge and let him prove how simple the package is.'

Brookner was rightly confident. Financial Director is a very simple package to use. It is also unnervingly well versed in complex yet fundamental principles of accountancy. And it is this combination which should secure its place in the field of accountancy software for some time to come.

One of the central concepts underlying the Financial Director is that it is a package which is replacing a bookkeeper and indeed the books of account themselves. It therefore incorporates all the principles and skills of bookkeeping and, at the same time, builds in safeguards which prevent the user from making an entry which the bookkeeper would not. Brookner claims that 70 per cent of the program is devoted to preventing simple accounting errors.

It is perhaps an unusual package in that it was developed by taking accounting principles as a base and then building upwards to create a product which could be used in a computer, rather than by adapting computer wizardry to produce a set of accounts.

All this became clear after some time using the Financial Director, but actually getting started was an awesome prospect, particularly for a man who had spent four years avoiding any contact with computers and resisting all attempts by one of the big internatioanl firms of accountants to allay his inherent fear of newfangled technology. But once the computer itself was safely installed and the printer connected up, there was really no excuse for further delay. Or was there? It seems there was, because this is the crucial time to sit down and read the manual.

Fortunately the manuals are not too critical with the Financial Director and you can simply leap in and start bashing away at the keyboards. A glance through the manual, however, gives a much clearer idea of what the package can do for you, and how you can set about the task of utilising the functions you need most efficiently.

Functions

The Financial Director offers seven broad functions: cash book, journal, bought ledger, nominal ledger, sales ledger, management accounts and budgets. This is more than adequate for the size of business for which the package is intended.

Setting up the books of account is surprisingly simple. This is, of course, a crucial stage for the user with little accounting knowledge or training. The Financial Director is aimed at taking the drudgery out of day to day bookkeeping — it is not intended to replace the expert financial advice which all businesses require. You are well advised to seek the assistance of your financial adviser if you have any doubts about the type of information needed, the number of accounts or the transfer of balances from a manual system. Once the books have been created the system virtually runs itself, and will produce the financial information and leave an audit trail to satisfy your accountant's needs.

Using the system

The system leads you through the start-up procedures slowly and surely. At almost every stage you are asked to confirm what you have input is correct. Once details about your company — such as name and VAT registration number — have been registered, you then move on to the creation of ledger accounts. If you have the more sophisticated Financial Director II you can also include details of departments.

For the computer novice this user friendliness is a great advantage. Simple choices and simple instructions given in plain English make it a pleasure to deal with, certainly in the early stages of acquaintance. There is the danger, however, that what is helpful and almost essential in the beginning could prove to be a little tedious and time

consuming as the user's familiarity improves.

The argument against this is, as you process various transactions, the time taken to turn a cheque stub or pluck another invoice from the file will compensate for the Financial Director's occasional tardiness. The argument cannot really be used, however, when you are moving from one operation to another. It was a little tiresome, for instance, when wanting to access the bought ledger to have to go through a series of questions and answers from the main management accounts disk before being allowed to remove that disk and replace it with the bought ledger disk.

As with many packages it is a lot easier to get into a function than it is to get out. However, this is infinitely more preferable to allowing inaccurate accounting to creep in.

A more detailed examination of the operations offered by the Financial Director will give a clearer indication of its value to the businessman.

The cash book is the inevitable starting point for any business and the Financial Director recognises this. All cash transactions can be entered, analysed and automatically posted to the nominal ledger. It also offers the additional and valuable facility of setting up standing order payments for automatic posting on due dates — something the traditional bookkeeper often overlooks. It thus allows the current bank balance to be displayed at any time, and a full cash book listing can be requested whenever you want.

The nominal ledger can also be listed at any time either in full or simply for selected accounts. The listing gives full details of each transaction and also indicates accruals and prepayments at the end of each relevant account. This accrual/prepayments facility is again a bonus, since it allows a much clearer picture of the company's performance to be created. However, as the facility is again a reflection of the traditional double entry bookkeeping of the accountant, you are well advised to consult your accountant before overindulging in creative accounting.

The Journal is the age-old vehicle by which the accountant corrects his errors. The logic behind it is to leave a full explanation of the error, be it a misposting or a misallocation, to show how the error has been corrected and, above all, to ensure that the hallowed principle of double entry is not abused. Following these principles, the Financial Director's journal facility will allow errors to be corrected — but only through a balancing journal entry and certainly not through the cash book. All journal entries are printed out to allow the audit trail to be preserved.

The management accounts include trial balance, balance sheet and profit and loss account. If the budget facility has been used, the appropriate budget figures will be included together with the variance between budget and actual. The management accounts can be produced at the end of any accounting period.

The bought ledger section of the Financial Director provides a comprehensive compilation of all the data necessary to run this essential part of any business. The bought ledger allows full details of the supplier to be retained, together with complete details of transactions, VAT, the discount which might be available to you, the due date for payment and date actually paid. Postings to the nominal ledger are made when invoices are entered. Print-outs of the purchase day book and payment journal are provided as another contribution to the extensive audit trail which the Financial Director offers. Other print-out options include a complete or individual detailed supplier ledger account listing, remittance advices, due date and aged balance reports and others which are necessary for control of the bought ledger. Cheque printing is also available as an option.

The sales ledger function is equally comprehensive in the details it can retain of a business's customers. Traditional details are incorporated with details of credit terms, normal cash discount balance owing and credit limits. Full transaction details are provided including VAT, date due, discount available and payment received. As with the bought ledger function, a sales day book and receipts journal are automatically printed after each entry session to allow the audit trail to be preserved.

The Financial Director allows instant enquiries to individual accounts and this is supported by the numerous print-outs available, which include a listing of customer accounts, individually or in total, as well as an aged debtor report — an essential element of tight credit control. The report highlights overdue balances and accounts which have exceeded their credit limits, and it can be printed for any specified date. The sales ledger function will also provide customer statements complete with detachable remittance slips.

The budgeting function of the Financial Director is particularly useful and will perform a number of tasks which will aid the running of a business. It includes the facility to prepare budgeted profit and loss account, balance sheet and even a source and application of funds' statement — a particularly useful document. Calculation of stocks, trade debtors and creditors and VAT balances is automatic. Budget figures can be entered individually, by automatic period allocation, as a percentage of another or by 13 weekly groupings. The budget figures can be varied to allow the user to assess outcomes under differing conditions. This speeds up this essential technique and will encourage more use to be made of it. The calculation of profit and cash balance by period is automatic and the budgets

What do you do if your BBC Micro goes wrong?

If you value your BBC Micro and your money you can now purchase extra one and two year full guarantees direct from us or via most Acorn dealers.

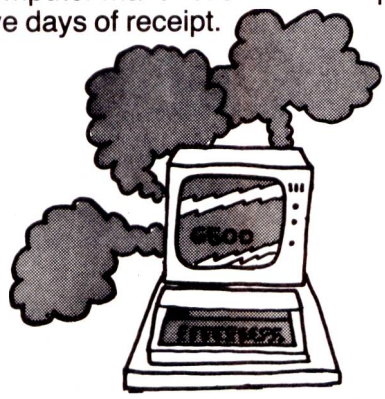

If your Micro is still under warranty, just fill in the expiry date on the coupon* and the guarantee will start from that date.

We carry a full stock of parts and should your computer malfunction we will repair it within five days of receipt.

A full one year guarantee costs just **£18.40**
And a full two year guarantee costs just **£27.60**

If your Micro is already faulty, and out of guarantee, we will repair it on receipt and issue a full years guarantee for **£29.90** or a full two years guarantee for **£39.10.** Please state fault when sending micro.

For you and your BBC Micro's peace of mind send the coupon today

☑ Please tick service required.
☐ I enclose **£18.40** for a full 1 years guarantee
☐ I enclose **£27.60** for a full 2 years guarantee
☐ I enclose **£29.90** for an immediate repair and a full 1 years guarantee
☐ I enclose **£39.10** for an immediate repair and a full 2 years guarantee

This offer applies to mainland UK only. This guarantee does not apply to major damage caused by abuse.

Selling the outside is one thing . . . knowing the inside is something else.

The IBM Personal Computer is a very special micro. Here is a machine of technical excellence – a standard which others will be measured against. It's not surprising that such a product demands professional sales and service back-up.

Zynar is well established at the forefront of personal computing. Our network systems lead the field in Europe and the USA – our design group networked the Personal Computer even before its UK debut. We are professionals, having worked for many years in the computing and 'chip' industries.

Zynar will help you optimize the easy-to-use hardware and lead you to the best software solution: tailored, off-the-shelf, simple or sophisticated.

The Personal Computer has been worth waiting for. You will know it. IBM knows it. And we know it – inside-out.

THE FINANCIAL DIRECTOR

themselves will be incorporated in the monthly management accounts print-out.

Flexibility

At this stage it is perhaps worth mentioning that there are two versions of the Financial Director; I and II. Financial Director II — which is the version under review — is an extension of the basic package and is more suited to the larger business. It offers the ability to operate more than one company from the same software, and allows a departmental or branch analysis for nominal ledger accounts within the profit and loss range. There is an option of 12 or 13 accounting periods and budgets or management accounts can be printed by department or account number, in details or summary format. It also allows the user to allocate his own account numbering system within the nominal ledger, with up to 800 individual nominal ledger open accounts.

The range of services which the Financial Director offers is, therefore, more than adequate for most small to medium-sized businesses. One notable exception is the lack of sales invoicing and stock control. The production of sales invoices is a tedious process and one where great time savings can be made. The Financial Director is, however, essentially a bookkeeping package and steers clear of this side of the business. This is not necessarily a weakness in the package. It sets out to provide a bookkeeping system based on the principles of double entry and does just that!

Expert advice

In terms of the practicalities of operating the package and utilising its services, it posed no major problems. However, it is very important to take expert financial advice in order to get the most out of your Financial Director.

The budgeting function, in particular, will be wasted if you do not appreciate exactly what you want from it. Used properly it can be a most useful tool for the manager to monitor his business — but a little learning is a dangerous thing and it would be quite easy to get bogged down trying to establish what you really want to do.

Setting up opening balances again will require a degree of accountancy expertise. The package will not operate if there is a non-balancing trial balance, and a failure to appreciate any error you have made will be most frustrating. It is a pity that the Financial Director does not allow you to make corrections to the trial balance without going through the process of printing out all the balances.

It is most annoying to wait patiently for the printer to spew out the balances, only for the computer's screen to inform you that the trial balance does not actually balance. The process has to be repeated following what you hope is the proper correction. It would be more helpful to be informed of this type of error at an earlier stage.

But credit to Financial Director: it is a very polite package and is most gracious when it tells you what a buffoon you have been.

User friendly...

Using the cash book is a simple process and the analysis which the Financial Director provides is as much as, if not more than, the traditional manual cash book. Details of the transaction are clear to see and the debtors and creditors analysis is useful to have. As mentioned earlier, the automatic inclusion of standing orders in the cash book ensures that these transactions are not overlooked, and permits an accurate cash balance to be produced.

The creation and deletion of files on both the bought and sales ledger posed no difficulties. The package is designed to lead the user very simply through the system and the instructions are easy to follow. The production of sales and purchase day books allows ample analysis of transactions. But if the Financial Director does not produce invoices, there can be no complaints about customer statements which give details of the month's transactions, an ageing of the oustanding amounts and analysis of how the balance is made up.

The journal is simple to operate and built-in safeguards prevent any misuse and ensure that the all-important audit trail is preserved.

The standard of the accounts which the Financial Director produces is to be commended. Easy to read and sensibly laid out, combined with the inclusion of gross and net trading margins, they allow the business manager to obtain a clear assessment of how the company has performed.

In summary, the Financial Director achieves its objectives admirably. It is by no means a sophisticated gadget on which to perform all manner of weird and wonderful calculations. It is, however, a simple, honest, solidly-based aid to the business manager. Its simplicity should not be allowed to detract from the package. To gain the most from the Financial Director, it is important to have an awareness of the underlying accounting principles and techniques which provide the foundation on which the package is built. The appreciation of accountancy is perhaps more important than a knowledge of computers — a point which is perhaps overlooked too often.

...but slow

The one criticism which does arise is the apparent slowness of the package once a degree of familiarity has been achieved. The easy-to-answer and follow questions (which are a marvel at the outset) always have to be answered, but perhaps this frustration is justified if it avoids complacency on the user's part.

The Financial Director is described by Brookner as the 'accountant in a briefcase' and, indeed, this is what the disk is packed in. It also comes complete with a cassette tape which will certainly assist when starting out, and when browsing through the manual which has been recently updated.

The package will be suitable for most small and medium-sized businesses which require basic accounting records. It could also be used quite successfully by professional firms of accountants or solicitors which need to keep a number of accounts on behalf of clients.

It would seem then that Brookner's challenge was based on a little more than pure bravado. The Financial Director is indeed a staggeringly simple package to operate. Its user-friendliness stretches to saying goodbye when you switch off and it poses no fears for the uninitiated in the computer world. The information it can provide, with regard to the company's cash position, money owed and owing, profitability, long-term potential and cash requirements, is enough to satisfy many budding businessmen who need that information but don't always have the time to collect it.

For a man who had dutifully avoided any contact with computers, the Financial Director turned out to be a great place to work.

System capacity

The Financial Director can be supplied for use with any computer capable of functioning under the CP/M, MS-DOS or PCOS Operating System with a minimum of 64k memory. Speed of operation and number of disks depend upon the disk storage available. The maximum quantities of records of each type permitted by the standard system are as follows:

Supplier accounts	1500
Open purchase invoices	4000
Customer accounts	1500
Open sales invoices	4000
Active nominal ledger transactions	2000
Active day book transactions	unlimited

The user can select any combination of maximum data within the limits provided disk storage is adequate. Selections in excess of available disk storage will be rejected by the system at initial set up.

Prices

	Financial Director I	Financial Director II
Individual prices excluding VAT	£	£
Bought ledger	425	425
Sales ledger	425	425
Cash book and management accounts	600	600
Budgets	450	450
All the above excluding budgets	995	1295
All the above	1295	1595

The prices are correct at the time of writing. The all-inclusive prices quoted above only apply if all the appropriate modules are purchased at the same time. Additional modules purchased subsequently are at the individually quoted prices.

Further information from *Stephen Brookner, The Financial Director Software, Asphalte House, Palace Street, London SW1, tel 01-828 4377.*

YANKEE DOODLES

Sol Libes sends his first dispatch of news and gossip from Stateside.

Random rumours

It seems that Xerox is short of cash and is looking to sell its Shugart Associates disk drive operation... Details are leaking out on the new Osborne computer. It is expected to offer twice the RAM capacity and storage of the Osborne One, include a 7in display and an optional 8088 add-in card with IBM PC compatibility. A hard disk option may come later. Price is expected to be between $2300-2500... Victor Technologies is said to be preparing a portable version of its Victor 9000... Cosmos-Gavilan is apparently about to introduce a portable computer with an 80x80 LCD display and a 3.5in disk drive that will fit inside a briefcase... Sinclair is thought to be working on a business oriented machine for possible introduction this fall. It is expected to have 128k of RAM, a flat screen, micro disks, to be IBM compatible and sell for about $500... There are rumours that IBM plans to alter its version of MS-DOS (they call it PC-DOS) so that it will have unique features and limit compatibility by competitors... Digital Research is working on a VMS-like, multi-user, multi-tasking disk operating system for the National 16032 chip. The DOS will not be related to CP/M. A first for DRI... There are rumours that now that Microsoft has implemented MS-DOS in the C language it will attempt to bring out versions for the Z80 and 68000... Intel is expected to supplement its ROM implementation of CP/M with an implementation of MS-DOS while Digital Equipment Corp is expected to implement its proprietary VMS operating system in ROM... Altos Computer Systems is expected to release a new terminal with a built-in Trackball and using the NEC 7220 graphics controller chip. Integrated software, high-intensity software packages to support the terminals will also be produced.

Steve Wozniak, creator of the Apple II, is rumoured to be working independently on a project using a new video graphics display technology which will eliminate most of the video support circuitry... It looks like the American National Standards Institute (ANSI) standard for micro-disks is floundering and there will be no standard adopted this year leaving the battle to be fought in the market-place... Data General is at last promising to enter the personal computer market later this year with a 32-bit system... And Prime Computer is also expected to enter the Personal Computer market with a desktop workstation using either the 8086 or 80186... Computer Distributors Inc, Bellevue WA, are rumoured to be ready to introduce the Pick DOS for the IBM PC. The Pick DOS is a business oriented DOS widely used on mini-computers to compete with the Apple Lisa that will be half the price of the Lisa. The units are expected to use the Z8000 16-bit and 6501 8-bit microprocessors... The Apple Mackintosh computer is now anticipated for September or October, cost under $2000 and aimed at the school and home markets. Units have reportedly been in the hands of software developers for several months... Tandy should shortly introduce the Model IV, replacing the III, with 128k of memory and 24x80 screen. Second will probably be a new colour computer with 64k of RAM and a lower price. And last a portable version of the model III selling for under $1000... Coleco is also expected to introduce a Z80-based micro system this summer.

IBM doings

As of the fourth quarter of last year IBM passed Apple Computer in monthly shipments of personal computers. It is expected that by 1984 IBM PC and IBM-like PCs will have grabbed at least 52 per cent of the $3-5000 personal computer marketplace... IBM has also introduced versions of its PC designed to function as replacements for the terminals used with its S/34 and S/38 and large mainframe computers. When used with the S/34 and S/38 the terminal costs $3400 and when used with large mainframes such as the 370s, 30XX and 308X the terminal costs $5800.

AT&T to release micros

American Bell (the independent AT&T subsidiary) has begun quietly to demo their new line of Unix-based micros to other AT&T subsidiaries. They are all high performance, high-priced systems using the MAC-32, 32-bit,micro-processor. The systems have networking capability and use the Fortune Systems 16/32 as workstations. DEC and Onyx are also expected to supply system components.

Rent a PC

General Electric ('GE'), one of the largest manufacturers of electronic equipment in the world, has gone into the business of renting personal computers and software to business customers. Initially they will rent IBM PC, Apple and Hewlett Packard equipment and ship through a packaged delivery service. GE believes that this is an excellent way for customers to try various machines and software before buying or needing systems just for special projects.

GE is offering to buy the systems from computer dealers and distributors rather than from the companies themselves. This may cause some problems with violation of dealer contracts. GE indicated that a typical rental for an IBM PC system would be $317 per week or $625 per month with GE maintenance included.

At the shack

Tandy has given up trying to market its Colour Computer outside of its own organisation and admits that it was never able to get this marketing effort off the ground. Last year Tandy had signed up RCA to distribute the system via its distribution network. However, only 60 dealers took the product on — with many later dropping it.

The Colour Computer, which competes against the Commodore VIC-20, TI-99/4A and Atari 400, got caught in the competitive squeeze when Commodore, TI and Atari dropped their prices to under $200. Tandy, which markets the unit via its own distributors as well, refused to drop prices or provide the margins sufficient for these independents to compete (see 'Home Computer Prices Keep Dropping' below).

Tandy is now in a quandary. By limiting its distribution to its own outlets it is losing market share to companies marketing through mass merchandisers such as Sears and K-Mart. The under $200 market place is becoming extremely competitive with very low margins and a great deal of advertising required to yield brand recognition (certainly not the Radio Shack style of doing business). However, by so limiting its distribution it can control selling price and maintain its profit margins. There are rumours that Radio Shack may pull out of the market with the feeling that the competitors are cutting their own throats.

The story on how Tandy came to adopt Microsoft's Xenix as its multi-user disk operating system for the Radio Shack Model 16, 68000/Z80 system is now leaking out. Tandy had introduced the system early last year with its single user TRS-DOS Z80-based DOS and promised to release an unspecified multi-user DOS within three

months. The scuttlebut is that Tandy wanted Xenix from Microsoft but Microsoft would not commit to this time schedule. So, Tandy approached some other software houses — including Ryan-McFarland and CRDS — finally entering into an agreement with the latter. Fearful of losing its competitive position in the Unix-based micro DOS market (the way Digital Research lost out to MS-DOS on the IBM PC), Microsoft approached Tandy late last year and offered to deliver Xenix for the Model 16 in three weeks if Tandy would commit to it. Tandy — thinking that Microsoft could never deliver on time — agreed. Microsoft coerced its software engineers into a non-stop three week effort and delivered Xenix on time and ahead of its competitor. Without Tandy adopting Xenix the product would be in second place behind Unisoft's UniPlus in the 68000-based Unix market.

Zilog sues NEC

Zilog has filed suit against NEC Electronics charging that they unlawfully copied the Z80 microprocessor and infringed on patents. They allege that NEC copied the Z80 and related chips and Zilog manuals in manufacturing their PD780 and PD780-1 micro-processors.

Home computer prices keep dropping

There still seems to be a lot of room for price cutting in the home computer market. I recently saw a newspaper ad for the Timex 1000 (Sinclair ZX81) offered by a mass merchandiser for $59.95 with a $15 rebate from Timex, which means that the customer got the unit for $44.95. There is no doubt that the price for this unit will soon go below $40, particularly when offered with software.

And I recently saw a toy store newspaper ad for the Commodore VIC-20 at $84.95. This appears to be a response to the introduction of the Timex 2000 (*née* Sinclair Spectrum) and TI 99/2.

It looks like a repeat of the calculator price wars. Thus we can expect eventually to see the Timex 1000 soon selling for $29.95, and maybe even as low as $9.95 with software. We are already seeing the Timex 1000 being used as a premium give-away to purchasers of cars and major appliances.

IEEE LAN standard close

The proposed IEEE 802.3 standard for Local Area Networking has moved a step nearer adoption with the endorsement by 13 key hardware and software vendors. This proposed standard has moved to the next level of approval by the IEEE microcomputer standards committee. From there it goes to the computer standards committee and IEEE standards board for final adoption. If everything goes well we may see it officially adopted by year-end

The standard conforms very closely to the Ethernet LAN as proposed by DEC, Intel and Xerox. This LAN standard is expected to be used by most high performance LAN systems. It should be noted that IBM and AT&T are known to be working on their own LAN systems which do not conform to the proposed standard. Further, the overwhelming majority of LAN systems already installed are of the low and medium performance type where nothing approaching standard exists, and in fact the situation may be termed chaotic.

Unix update

The implementation of Unix on 68000-based micros appears to be split evenly between two different implementations. . . Xenix from Microsoft, Bellevue WA, and UniPlus+ from Unisoft, Berkeley CA. There are a few vendors who have done their own 68000 ports but it is likely that they will switch to either Xenix or UniPlus+ to achieve some level of compatibility and a wider market base, since there is already some software available for these systems. UniPlus+ was the first port to reach the market and implements the Berkeley version of Unix which accounts for its popularity. Xenix on the other hand is an implementation of the Bell Labs version of Unix and comes from one of the largest micro software houses in operation today (namely Microsoft).

The 8086 and Z8000-based micros appear to be going with Xenix. The only other alternative here is Coherent from Mark Williams Co, Chicago, and they have not been aggressive in getting their product out.

National Semiconductor has already demonstrated their Unix implementation and one done by Human Computing Resources, Toronto, Canada. The initial results do not indicate that this implementation is any faster than the 68000, 8086 and Z8000 implementations despite the claim by National Semiconductor that this micro has been specifically designed to support Unix. The initial demonstrations of the product, however, are still considered prototypes and tuning should improve its performance.

Hot DOS competition

Digital Research and SoftTech Microsystems have both dropped the price of the Disk Operating Systems for the IBM PC. DR's CP/M-86 has been available from IBM for $250 and SM's p-System was $600 while PC-DOS (Microsoft's MS-DOS with minor changes) was offered for only $40. Reportedly, only about three per cent of the PCs have been sold with CP/M-86 and less than one per cent with the p-System. IBM also held up supplying these packages so that PC-DOS had the field to itself for several months giving it another advantage over its competition.

DR therefore decided to take marketing matters into its own hands and market an improved version of CP/M-86 for the PC themselves, and is making it available for only $60. SM and IBM announced that they will make the p-System available for $50 for the run-time system.

Video disk-based games expected

As early as this summer we can expect to see the appearance of the first video disk-based computer games. Using video laser disks these games are expected to appear first in the games arcades with home units to follow within another year or two. One such prototype unit was demonstrated at the Consumer Electronics Show, held last January.

The basic problem of slow access time (it can take as much as ten seconds to move from one frame to another with a typical access time of five seconds) is currently being attacked by developers. One technique proposed is to use two disk players in a game unit. This is feasible since the players are fairly low in cost.

IBM PC News

IBM has released an upgraded version of the PC (called the XT) with a 10Mbyte Seagate hard disk, Zebec controller and larger power supply. IBM took advantage of the chance to also change the printed circuit board to utilise the new 64k RAM chips so that now 64k is the standard minimum RAM size for the PC. Also the number of expansion slots was increased from five to eight and the dual-sided floppy disk capacity was increased from 320k to 360k per drive. IBM also increased the price for the basic unit (less hard disk drive) from $1265 to $1355 (following in the footsteps of the Apple IIe). The unit is $40 less than the Apple IIe and only a few bucks more than the new TI IBM PC compatible system.

IBM also finally started selling the Color CRT display they began showing at Comdex last fall. IBM is also offering its dealers a communications interface which will allow them to interact directly with the factory via phone, by-passing the US mail service. The likelihood is that

IBM will soon offer this interface to customers, too.

At the same press conference at which the XT was introduced, IBM also unveiled new models of the 3270 CRT terminals designed for use with the mainframes. One of the models can also function as a stand-alone personal computer. Further, another model uses the gas-plasma display shown at last year's NCC show. This significantly reduces the depth of the terminal.

Rumours are still rampant that IBM will soon introduce an 8086 or 80286-based system and low-cost consumer oriented system. A Stamford Conn, market research, firm (Gartner Group) predicts that this year IBM will sell 500,000 PCs. If we add to this another 200,000 to 300,000 IBM PC compatible systems made by other companies, then the operating system and disk format used here may finally establish a *de facto* standard in the 5.25 inch disk market that will ultimately challenge the 8 inch CP/M standard.

Home computer price wars

TI and Commodore are going through a new round of price cuts for the home computer — an action that Tandy has called 'cut-throat'. Both companies slashed $50 from the price of their already 'slashed' prices for the TI 99/4 and Commodore VIC-20 bringing selling prices down to the $130 level.

Atari, in an attempt to be competitive, introduced an 'under $90' keyboard add-on for their 2600 video game system to convert it into a low-cost 'home computer'. This has been seen as a defensive move since the low-cost personal computer appears seriously to have impacted the sales of video game units. Atari also recently introduced a $55 rebate for the Model 400 to effectively lower its price to just under $200. TI and Commodore broke the $200 barrier five months previously.

TI recently introduced its 99/2 computer with a dealer cost of $75. Tandy is expected to introduce a new lower cost colour computer to replace their current unit which has a $299 price tag. There are rumours that the unit, made in Korea and costing $150, should appear soon.

Atari, in an attempt to reduce manufacturing costs, laid off 1700 workers and shifted a large part of its video games and personal computer manufacturing to the Far East.

Super-microprocessors — a status report

National Semiconductor demonstrated its 16032 system recently at a Unix conference running a port of Unix done by Human Computing Resources Corp, Toronto. Further, it has been accepting orders for the chip set promising production quantities this summer. The company has been shipping sample quantities for several months. Thus we can expect to see initial shipments of 16032-based systems before the end of the year.

NS is expected to start shipping their 'Mesa' system this fall. The Mesa, an 8-user system, is expected to contain the 16082 memory management unit with a 32-bit wide virtual memory. NS is promising to start sampling its floating point co-processor chip this month.

The 16032 is reported to be really a 32-bit processor with 16-bit I/O. The 32032, which NS says it will begin sampling in the fourth quarter of this year, is reported to be an upgrade of the 16032 with true 32-bit I/O. Further, NS claims that it will be possible to build a fault-tolerant transaction system by running two 32032s in parallel and comparing results on alternate memory cycles to detect soft errors. NS says the 32032 will be 1.8 times faster than the 16032.

The Motorola 68000 although doing many operations — 32-bits at a time — has an internal 16-bit wide data path and hence the redesign task to move up to a 32-bit version (68020) is a more difficult undertaking for Motorola vis-a-vis National. The 68020 is being promised for April '84 (samples) and August '84 (production). This will be Motorola's true 32-bit micro operating at 16Mhz. It will do 32-bit multiply/divide. The device will use 150,000 transistors, consume 1.5 watts and have approximately 100 pins.

The Motorola 68881 floating point co-processor production schedule has slipped and Motorola is now promising samples in July '84 and production quantities in December '84. It will contain eight 80-bit registers, have all the addressing modes of 68020, be compatible with the IEEE floating point standard plus some additional functions.

The Motorola 68010, its 16-bit micro with virtual memory facilities, is now being sampled and production is expected this summer. The maximum clock speed will be 16Mhz.

A crimp was thrown into Intel's 286 project and 32-bit upgrade when a large group of engineers upped and left their Portland OR operation to form a Unix systems house based on Intel's technology. However, Intel is already shipping limited production quantities of the 80286.

The NS 16032 will compete with the Motorola 68010 while the 32032 will compete with the Motorola 68020. Samples of both the 16032 and 68010 became available at about the same time with NS promising earlier production quantities. It appears that NS may be sampling and producing the 32032 well ahead of Motorola's 68202. Thus although National was very late entering the super-micro marketplace it appears that it now has a good opportunity of garnering enough to be worthwhile.

Further, Digital Equipment Corporation is rumoured to have given its 'VAX-on-a-chip' program top priority and NCR is expected shortly to start sampling its 32-bit chip set to external customers. It is also likely that Western Electric may soon start selling its Bellmac 32 chip set to external customers.

Intel is expected to bring out a new 32-bit micro that is upward code-compatible with its 8086 processor. It is expected in the second half of next year and is tentatively called the 80386.

One last note is that the new 32-bit micros are expected to be implemented in CMOS to reduce the power consumption and heat dissipation of these devices.

Where is the iAPX432?

It is over two years now since Intel introduced its iAPX432 32-bit microprocessor chip set and as yet no commercial product has been introduced using it.

Many of the pioneering users who started product development projects using the 432 have since cancelled the projects or put them on hold due to performance limitations which have shown up with the 432. First of all Intel was a year late in delivering samples and then some users claimed that the samples delivered operated at only 20 per cent of their rated speed.

Further, the unique architecture of the 432 meant that companies were starting from ground zero in software development, and software development tools and support chips have been slow in becoming available. The complex architecture also means that the software development task is more complex and more expensive and few companies have been willing to make the investment.

Intel is currently starting production on the third revision of the 432 chip set which it hopes will finally meet Intel's original performance claims. Also, the bus interface and memory control ICs are expected finally to become available and we will soon see 432-based systems being introduced.

Intel text co-processor chip

Intel has announced an IC (82730), to operate in conjunction with its 8086 16-bit micro, that provides word-processing display functions such as proportional character spacing, smooth scroll, display of superscripts and subscripts, variable fonts, allows users to define their own character sets and provides complete corres-

pondence between display and printed copy. The unit can also be used in conjunction with Intel's new 82720 graphics co-processor allowing mixing of text and graphics on the screen. IC samples are now being supplied to OEMs and production is expected this fall.

Hard disk drives shrink

The portable and desktop computer markets are increasing the need for smaller disk drives. Hard disk makers are now striving to reduce the size of the five and ten Megabyte hard disk drives to match the size of the new micro-floppies. The problem is that no standard form factor has yet emerged for these drives. Further, there is no agreement on media size, total drive package size, interface, transfer rate and recording format. The result is that, although the demand is there, the manufacturers are floundering trying to figure out which way to go. It is likely that manufacturers will use the ST506 interface used on 5.25 inch drives as the standard interface with the same transfer rate.

Seagate has already committed to building a 3.25 inch micro-floppy and will probably have the same size in their micro winchester while Tandon and Shugart are committed to the 3.5 inch size. Syquest Technology, the only vendor currently shipping micro winchesters, is using 3.9in media.

PCN vs LAN

Manufacturers have been fighting among themselves for several years now to develop a standard for Local Area Networks (LANs) with little progress being made. In the meantime Personal Computer Networks (PCNs) have moved into the market. The PCN interconnects a small number of personal computers allowing them to transfer data and share peripherals such as high-speed printers and large capacity hard disks. When a personal computer is used as part of a PCN it is referred to as a 'workstation'.

Although of lower performance than the LANs, the PCNs are now threatening to overshadow the marketplace. Strategic Inc, San Jose CA, a market research firm, estimates that nearly 12,000 PCNs were installed up through the end of last year — compared to only 800 base-band and broadband LANs. Further, it predicts that by the end of 1987 there will be 110,000 PCNs.

This trend is apparently due to the fact that most installations include only a small number of workstations (typically six or less), use lower data transfer rates and have less traffic, and hence high performance is not required. Also, some PCN makers offer interfaces to allow the PCN to serve as a gateway into an LAN. The problem with PCNs are that there is no established standard and interfacing different peripherals may be a problem.

Low cost PCNs ($300-500/station) typically use either twisted wire pairs or coaxial cable to interconnect devices transmitting data at anywhere from 800k to 2.5 Mbits per second (bps). A single personal computer or special interfaces may be used. In higher performance, higher cost (typically $2000/station) PCNs coaxial cable is used with controller/transceivers at each station.

Japan in US market

Nippon Electric (NEC), a $6 billion a year company which dominates Japan's personal computer market, entered the US over two years ago with a modes marketing effort. They now claim to hold three per cent of the 16-bit micro market, which is roughly 20 per cent of IBM's share and close to 30 per cent of DECs share. Sony and Epson also entered the US markets last year with 8-bit and portable machines.

Japan has proved that it can build good machines and is committed to long term investments in establishing its position in the marketplace. However, it has met with problems. The rapid pace of change and the innovations introduced by American competitors have proved a formidable challenge to the Japanese whose products are generally unimpressive.

However, it was only two years ago that US IC memory and printer makers were boasting that they would outmanoeuvre and outproduce the Japanese. However, manufacturing and quality control problems in these two markets created opportunities for the Japanese. Using conservative technology and improved manufacturing techniques they now dominate these markets. The Japanese are now attacking the floppy disk and hard disk markets with the same techniques. It is likely that they will attack the segment of the personal computer market that is less innovative and use older technology with success. For example, a portable 8-bit microcomputer, such as the Osborne, is an ideal candidate for Japanese competition.

Offshore manufacturing

American microcomputer and component manufacturers are moving their manufacturing facilities outside the US to maintain their competitive positions in a marketplace that is becoming increasingly more price competitive. They are setting up plants in Taiwan, Singapore, India, Mexico, Puerto Rico, Brazil and France.

The auto computer

At a recent automobile show in New York City, Ford showed a prototype car called the Concept 100 that is slated for introduction next year. Among other features it sported a touch-sensitive 5 inch CRT built in to the dash and a Z80 CPU. General Motors showed a prototype of its 1995 Buick Queston with a flat screen built into its dashboard.

Who sells micros?

Future Computing Inc, a Texas marketing research firm, claims that this year computer stores will sell $3.5 billion worth of micro-computers, while $900 million will be sold by systems houses, $600 million by mail order, $500 million by office-products suppliers and lastly $500 million by industrial distributors.

No business like show business!

The Comdex Fall Computer Show now claims to be the fastest growing show (of any kind) in the country. Its last show exhibit space almost doubled and attendance increased by a whopping $125 per cent. The only larger computer show is NCC (National Computer Conference). NCC and Comdex Fall are so large that there are few convention facilities that can handle them. The Las Vegas Convention Center, believed to be the largest single-floor hall in the country, is already too small for the next Comdex show and it is spilling over into two other hotels.

Random bits

Later this year Harris Corp plans to introduce the CMOS version of the Intel 8086 and DEC PIP-11... As Sinclair/Timex have now introduced the Spectrum/Timex 2000 in the US, one wonders when they will introduce the micro-drive and RS-232 add-ons for the unit that they have been advertising, but not delivering, in the UK for almost a year now... The IEEE 796 Bus (Multibus) Standard has to be adopted by the IEEE and is now an official standard. Also, the IEEE expects to shortly adopt the Binary Floating Point Arithmetic (IEEE 754) and Assembly Language Mnemonics (IEEE 694) standards... For those into country and western music check out the record titled *Basic Ain't the Language of Love.* It tells the story of a woman involved with a personal computer addict...

Quotation of the Month

'I am not an Atari Democrat.' Alan Cranston, announced candidate for President. END

MICRO CHESS

ALPHABETICAL CHESS

Tony Harrington interviews Don Beal on the subject of his computer chess search theory inter alia.

Don Beal is not an entrepreneur or a supplier of micro-chess computers. He's a lecturer in the computer science department of the University of London's Queen Mary College. There may come a time, if all goes well with his research, when a Beal chess computer will come onto the market place. But that would be more or less incidental to his real interest, which might be described as the theory of computer chess programming.

I almost met Beal last September when he was due to enter the *PCW* tournament. His program was then running on a mainframe computer and he was struggling to transpose it to a micro. On the opening day of the tournament there was still some slight possibility he would succeed by the start of the third round. But he didn't. It was a great pity, since his presence would have considerably strengthened the amateur entry.

Among the computer science and artificial intelligence communities a certain dabbling in the problems of chess programming is fairly common. But Beal is unique in that his daily work as a lecturer – as well as his research – is concentrated to a large extent on computer chess search theory.

How did this come about? Beal learned his programming skills working for the Ministry of Defence before joining Queen Mary College. He played chess as a schoolboy and was reasonably enthusiastic about it – making the school team, and winning the school championship. When he went to university, however, chess quickly came to seem merely a way of wasting valuable time.

At the MoD his work with computers led to an interest in the potential of artificial intelligence. 'It occurred to me that chess would be an ideal field; a nice, limited problem with which one could investigate some aspects of AI. In fact, as I got into it, it turned out to be a huge problem,' Beal recalled.

He began a doctorate on computer chess, which he still brushes the dust off from time to time, and hopes one day to finish. And, since some portion of his teenage years had been spent mastering the secrets of electrical engineering, a few years ago he began to build microprocessor boards to turn his theories into practice.

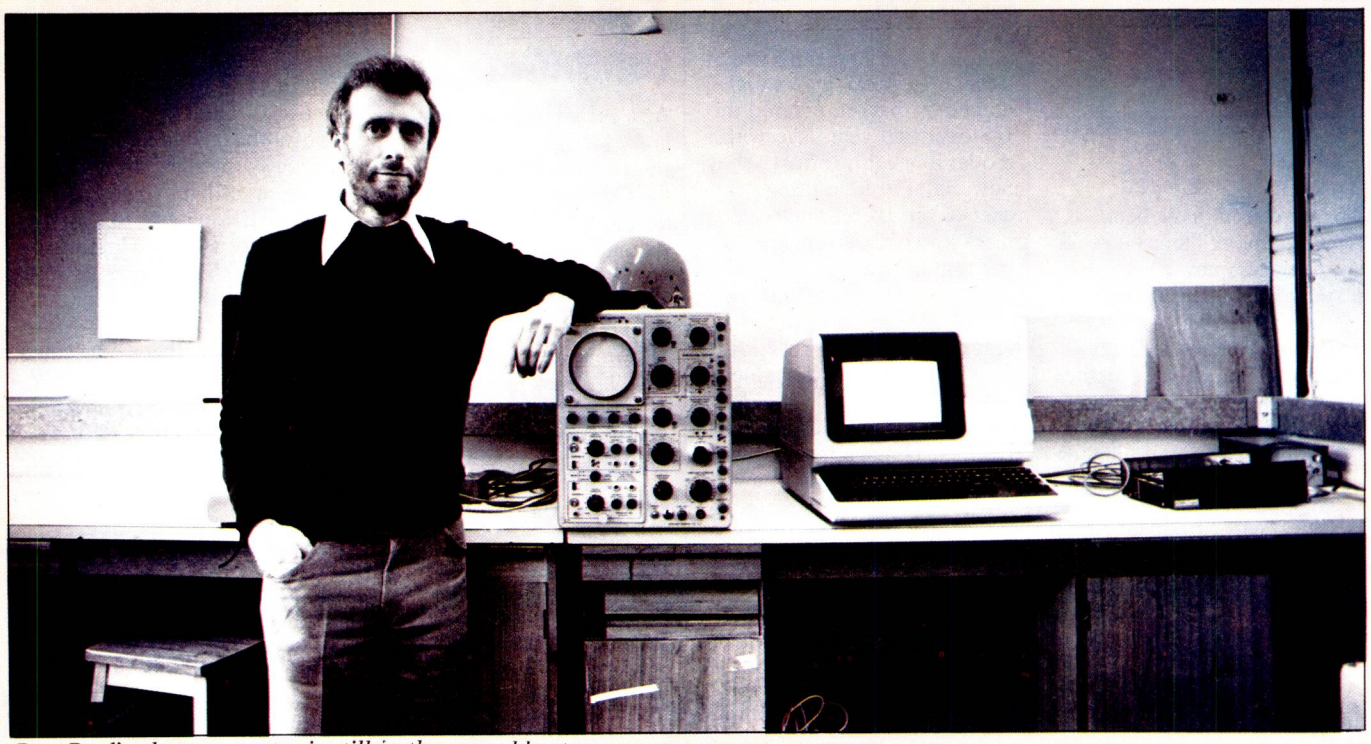

Most of the material that he works with is a closed book to me, and minimax search theory is not something to be picked up lightly in the course of an hour's chat over coffee. So those of you who have wondered from time to time how the machine does it when it nicks your rook unexpectedly, won't be much wiser by the time you finish reading this. That topic is one we will return to in another column another day.

Part of the problem is that the language used by Beal and his colleagues to talk about games theory bears a misleading relationship to English. I thought I followed reasonably well, for instance, when he explained his job at Queen Mary College. It involves, he said, some research into minimax theory, particularly the question of why it is that look-ahead systems result in better moves being played by the computer. 'For many years now look-ahead has been known to be effective in practice, but people have not made much progress in explaining in a convincing way, at the theoretical level, why this should be so.'

When he'd finished saying this, I nodded wisely and confessed to being totally baffled. Beal, it seems, has produced a reasonably convincing theoretical argument which does provide such an explanation. 'Does it mean there will be better chess computers?' I asked. 'Not really,' he said. 'It just explains why doing the things they are doing already produces reasonably good chess-like decisions.'

One piece of theory which might be of interest to readers new to this sort of thing did emerge from our chat. There is a well known algorithm in chess programming which saves a great deal of time without any risk that the short cut it produces will lead to the machine overlooking some vital move. It is called the Alpha Beta algorithm.

'The algorithm involves the idea of accumulating 'bounds' as the search pro-

Don Beal's chess computer is still in the assembly stage.

ceeds. As the program moves through the search tree, it locates a worst move sequence for white, and a worst move sequence for black. When you find this, there is no point in looking any further for an even worse sequence. Instead the program stops looking at move possibilities once they equal this value. In other words, it sets a bound or a limit on the search. At any moment in the search then, you have a best and a worst possible bound,' he explained.

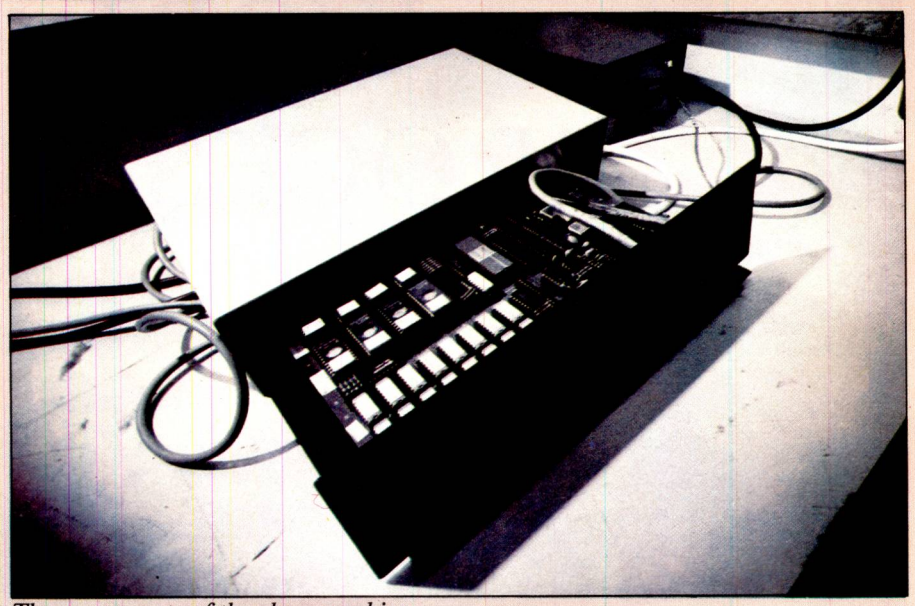

The advantage is that where a standard search algorithm will go on to look at every possible move, using the Alpha Beta algorithm will save a very precisely definable proportion of search time. At its best, the algorithm will reduce the number of possible moves looked at (or search nodes, as they are called) to the square root of the number of moves that would otherwise be looked at. On a search sequence that would normally look at a million moves, for example, it will result in a thousandfold improvement (ie, the program will only need to scan 1000 instead of 1,000,000 search nodes).

How well all this theory translates into practice can be seen in the games section where one of Beal's program victories can be studied at leisure, together with David Levy's comments on it.

Beal's own micro is still in the assembly stage, and when I spoke to him, he thought it would need a month or two's 'uninterrupted work' to be brought to full tournament strength. The heart of the machine, Beal says, is a piece of fast sequential logic. 'This bit of hardware is what makes it different from the Thomas Bell hardware (Belle). Belle is a huge piece of hardware. Its inventor calls it portable, but it weighs about 60 pounds and you have to be dedicated to carry it about. My machine is about the size of the usual hard cover book and it will have around one quarter of Belle's search speed,' he explained. ('One quarter' might sound like a modest development, but it should be enough to make Beal's machine an absolutely formidable opponent. It would give it a much faster search speed than any of the current commercially available micros.)

Beal has used some very expensive chips in the construction of his machine, and working on the usual rule of thumb that a retail version should cost four times the component price, it would be priced out of the range of all but the wealthiest chess enthusiasts if it ever came to the marketplace.

At least, that is what he thinks at the moment. But if it ever gets out of its academic environment it might well find a businessman to get the production lines rolling and the prices down.

The components of the chess machine.

Games section

White: BCP; Black: 'Strong player on an off day' Sicilian Defence: Notes by David Levy

1 e2-e4 c7-c5
2 c2-c3

(This move has become extremely popular in recent years. Its chief merit is that it avoids the volumes of openings theory that have been written about the Sicilian Defence, but it must also be said that the move c2-c3 is not so easy to meet as might first appear. White threatens immediately to establish a powerful pawn centre with d2-d4.)

2 ... Ng8-f6
3 e4-e5 Nf6-d5
4 d2-d4 c5xd4
5 Bf1-c4!?

(An interesting gambit. White offers a pawn in return for a lead in development.)

5 ... Nd5-b6
6 Bc4-b3 d4xc3
7 Nb1xc3 e7-e6

(Blunting the attack along the b3-f7 diagonal.)

8 Ng1-f3 d7-d5

(This move may be playable, but I think it possibly premature. I would have played 7...Bf8-e7, followed by ...0-0, and only later try for ...d7-d5.)

9 e5xd6 e.p.

(This *en passant* capture leaves White without the cramming influence exerted by his pawn on e5, but in return it (I almost said 'he') develops a strong initiative.

9 ... Bf8xd6
10 0-0 a7-a6?

(Black was worried, with good reason, about the possibility of an eventual Nc3-b5 by White, but the text wastes too much valuable time, and allows White's initiative to grow even more dangerous.

Better would have been 10...Bd6-e7, or 10...0-0, or 10...Nb8-c6.)

11 Bc1-g5 Qd8-c7?

(Black should have played 11...Bd6-e7, and if 12 Bg5xe7 Qd8xd1 and 13...Ke8xe7, with an extra pawn and few real problems. Note that after 12 Bg5xe7 Black cannot recapture with the queen because of 13 Qd1-d4, forking the pawn on g7 and the knight on b6. This theme recurs again during the game.)

12 Ral-cl Nb8-c6
13 Nc3-e4 Bd6-e7

(Black was by now torn between the devil and the deep blue sea. The other retreat, to f8, would have left White with such a commanding lead in development that it would have been extremely difficult for Black to survive. Nevertheless, that is the course that I would have followed, because now Black loses castling rights for good.)

14 Bg5xe7 Qc7xe7
15 Ne4-d6+ Ke8-f8
16 Rf1-el g7-g6

(Hoping to escape with the king at g7, but he should have tried ...h7-h6, possibly followed by ...Kf8-g8 and ...Kg8-h7.)

17 Nf3-d4 Nc6-a5
18 Nd4xe6!

(The first surprise. White wins back the pawn with a little combination.)

18 ... Bc8xe6
19 Qd1-d4 Rh8-g8
20 Bb3xe6 f7xe6
21 Rc1-c7!!

(Simple and decisive. If Black captures the rook, White's queen comes in on f6, forcing mate.)

21 ... Nb6-d7
22 Rc7Xd7! Black resigns

(Again the capture of Black's rook allows 23 Qd4-f6+, with mate next move. A convincing display by White, fully justifying the pawn sacrifice in the opening.)

A short apology

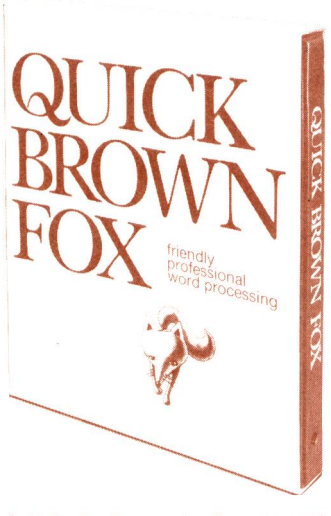

Before my post box is crammed with letters pointing out that Hegener and Glaser do not make a machine called the Roman II or even the Roman III, let me explain how these mysterious machines came to find their way into last month's column. Some thirty lines of copy were added to the article rather late in the day. I painstakingly read these lines out to a kindly colleague down the other end of the telephone line. To make sure that no mistakes occurred over the phone I said, when I came to talk of the Mephisto III, '... the result, in the Mephisto III's case – that's Roman iii, not arabic, got it?' 'Yes,' said my colleague, and wrote: 'The result in the Mephisto and Roman III's case is that it now plays a very intuitive game.' Those of our readers with sharp eyes and long memories will have noticed that the same fate befell a comment made on the Mephisto II a little further down the column. May we respectfully hope that those of you who fell off your chairs laughing at us didn't bruise yourselves too badly! END

WORD PROCESSOR?

Yes!
One of the best!
Quick Brown Fox word processing has more features than most other software and runs on your VIC-20 or Commodore 64 computer. Put yourself in league with industry standards like WORDSTAR, SCRIPTSIT, WORDCRAFT and WORDPRO. We can supply you with a complete first-class word processor for less than £1,000 – this includes computer, additional memory, 80 column display monitor and a daisy-wheel typewriter which doubles as a computer printer.

It all starts with the Quick Brown Fox software at £60

(all R.R.P. excluding VAT)

LESSON IN LOGO

Dick Olney went back to school recently. Here he reports back to us on the latest educational tool, the programming language Logo.

Being a fairly recent convert to Seymour Papert's ideas regarding the use of computers in schools, I was excited to find his name billed as the introductory speaker at the AISB conference on artificial intelligence (AI) and education. Since a weekend in sunny Exeter seemed infinitely preferable to standing in the rain watching thousands of — presumably quite sane — health freaks run half way across London, I decided to go along and see what the great man had to say.

If you haven't read *Mindstorms*, Papert's book on the use of Logo, I suggest you do immediately. I can't begin to do him justice in this article, but some of the main points are as follows. Papert believes that the traditional dichotomy of 'scientists' (particularly mathematicians) versus 'artists' is counterproductive and in no way reflects the reality of an individual's cognitive potential. He argues that the emphasis of schools on the acquisition of knowledge can have the effect of alienating the child from particular areas of study, not least because the 'facts' presented frequently have little applicability in the child's everyday life. Children, after all, have a powerful facility for natural learning, which can only be utilised with an approach which teaches children *how to think*, indeed how to *think about thinking,* regardless of subject matter.

The programming language, Logo, is presented by Papert as an educational tool which is not merely an extension of normal teaching practice, but which provides an entirely new learning environment where traditional relationships between teacher and child are radically changed. Fundamental to the Logo programming language is 'turtle' geometry. By giving the turtle (a small screen based creature) commands such as forward, right, left, etc, simple shapes and patterns can be designed. Useful routines are defined as new commands (much like Forth) which are then combined to produce complex programs. These programs can then be easily debugged because they are reducible to readily comprehensible 'mind size bites'. Throughout all this, children are able to predict the outcome of a series of commands by putting themselves in the position of the turtle (playing turtle). This active association between the child and the turtle is in direct opposition to the kinds of dissociated activities, such as the endless repetition of times tables, so common in the contemporary classroom, and is an example of what Papert terms 'syntonic learning'.

I have dedicated the previous two paragraphs to Papert's ideas partly to compensate for the fact that, due to unspecified ill health, he was unable to attend the conference. A note to this effect was pinned on the notice board when I arrived, together with a copy of his original telex agreeing to attend, as if the organisers felt the need to prove they had not purposefully dragged us all that way under false pretences. Nevertheless there was plenty on the agenda, with workshops in Logo and Prolog, discussion sessions and no less than twenty different papers being presented.

The introductory speech was given by Dr Jim Howe of Edinburgh University. Like Papert his concern is with Logo, but their approaches are quite different. Dr Howe and the 'Edinburgh school' dismiss the concept of undirected learning as unpractical and Utopian preferring a more traditional approach through the use of work sheets and specific projects. While this approach tends to suppress some of the most exciting aspects of the Logo 'learning environment', eg, spontaneity and self-direction, one has to admit that it is much more easily integrated into present classroom procedures, and as such less threatening to the teachers concerned. For these reasons there can be no doubt that, in this country at least, Logo will initially be implemented in this way. Dr Howe and his colleagues are presently working on a series of work sheets which should be available towards the end of this year.

My disappointment at the lack of Seymour Papert was offset to some extent by the presence of the delightful Cynthia Solomon, one of his closest associates. Cynthia — along with many of the original Logo researchers — is now working at one of the Atari research centres in Cambridge, Massachusetts. She was at the conference to demonstrate a pre-production version of the forthcoming Atari Logo, which should be available in the autumn. This implementation makes full use of the Atari's player missile capabilities (there are four turtles), giving rise to one of the Atari Logo's most interesting features, that of collision detection. Background procedures, called 'when demons', can be set to activate on detection of any one of a variety of collision conditions. Incidentally, the coming Acorn Electron will feature Logo, and versions are also being produced for the CBM VIC 64 and Sinclair Spectrum machines, but these are unlikely to be on sale before next year.

I should note that Logo is, of course, old hat to Cynthia, who is now working on a language called Gesture. She was not overforthcoming on details of her work.

But from what I can gather, Gesture is, as you might imagine, a language which works by direct perception of body movements. Quite how it distinguishes meaningful movement from peripheral activities, such as nose picking or thumb sucking, I can't imagine, but I'm sure all will become clear in the fullness of time!

Although Logo undoubtedly emerged as the favourite language at the conference, it was by no means the only language presented. The antecedent of all AI languages is Lisp, an introduction to which can be found in the May issue of *PCW*.POP II was also discussed. Logo itself is written in Lisp, as is the other main language featured over the weekend — Prolog.

Prolog differs from most programming languages in that it is 'declarative' rather than 'procedural'. The following extract from a paper by Robert Hawley of Plymouth Polytechnic summarises the basic principles of Prolog :*Prolog provides an easy way of specifying particular types of program in terms of the rules governing the problem rather than in terms of the procedure needed to solve the problem. The procedure is embedded within the Prolog system and each program makes use of it implicitly rather than explicitly.*

Prolog certainly does hold a great potential for educational use, though descriptions of its power varied from 'the language of God' (Richard Ennals) to 'pretty neat' (an American). The 'main man' with regard to Prolog emerged as Professor Robert Kowalski (language of God school) who also, as it turned out, was the most powerful speaker at the conference, in style if not in content. The name Prolog is derived from 'programming in logic' and its importance for Kowalski derives from its use as an instrument in introducing formal logic to the school curriculum. My own feeling is that 'formal logic' is about as useful in real human decision making as differential equations, and has little or no applicability outside the academic environment. Presumably, however, Professor Kowalski spends most of this time inside the academic environment where logic is protected from the more unpredictable elements of the human psyche.

One point on which everybody agreed is that Basic, as a language, should be discarded immediately. Basic may or may not have its uses, but as a first programming language it is confusing and inadequate, not least because it's so difficult actually to do anything worthwhile with it, without a lot of effort. Before long the computer manufacturers will realise this, and I predict that the language will become an historical curio within the next five years!

Footnote

Intelligent Educational Computing, an overview of the AI approach to educational computing, by Mazoud Yazdani will soon be available for £15.50. It can be ordered now from Ellis Horwood Ltd, Market Cross House, Cooper St, Chichester, W Sussex.

Two summer schools on Logo programming are to be held in July and August at Edinburgh University. Details from K R Johnson, The Logo School, Dept of AI, Forrest Hill, Edinburgh, tel (031) 667 1011 ext 2556.

CHECKOUT

ACCOUNTANCY AID

Alan Secker analyses the businessman's accounting requirements and assesses the instrumentality of accounting software in simplifying his work load – in terms of time and cost saving. We present (in an edited version) his comprehensive questionnaire which throws some light into this dark corner.

Now that I have a computer, shouldn't my accountancy bills go down? How often have I heard that?! The plain fact is that the one need not follow the other as sure as night follows day. It 'depends'.

Microcomputer accounting software at present often possesses many glaring deficiencies. Glaring, that is, if you have already learnt what to look for. It is these deficiencies that add to – rather than detract from – the burden of your accountant and/or your auditor. It can also affect the time it takes and the number of queries asked of you by the VAT Inspector when he examines your records.

Some of the problems may be overcome by improved procedures; some by changes in the software, but some, you will have to accept as a trade off against the benefits of a computer system, namely:
- speed
- arithmetical accuracy
- efficiency
- reliability

Cash book

The concept of the 'cash book', so long ignored by suites either imported from the United States or rewrites of the same, has for some time been banished to a wilderness. It is now beginning to return. For example, Microshade have one. For those that do not know, the cash book is the document that records the ins and outs of your most active bank account, normally your current account. For any given period it will disclose:

(i) The balance at the commencement of the period (ie, in hand or overdrawn)
(ii) Receipts (sums received) from customers (sales ledger)
(iii) Receipts from other sources (nominal ledger)
(iv) Payments to suppliers (purchase ledger)
(v) Payments to non-suppliers, for example, wages cheques, (nominal ledger)
(vi) The balance at the end of the period.

The reason that there is no direct equivalent to the cash book is primarily due to the way accounting software is constructed. It is invariably sold in encapsulated modules each corresponding to a different ledger. For example, if you were to acquire a sales ledger package, then it would (see note 1) contain a cash received routine which would only deal with receipts relating to the sales ledger. Thus the sales ledger package will happily accept receipts from customers, but if you were to deal with the repayment to a customer, for example, in respect of a return of goods, you would have to deal with this under a completely separate routine (see note 2). The same problem arises with the purchase ledger, and so there are two cash transaction reports in respect of each ledger plus an opening and closing balance that represent the cash book for any given period, not an easy concept to hold in one's mind.

Very few packages draw these components together to produce a cash book. Even if they do, is it in a useful form? Before answering that question, let me tell you what answer you would get from a software vendor if you mention the absence of a cash book. His reply would be 'but the information is in the nominal ledger'. To some extent that is true. The totals (if you are lucky) from each of the six sources mentioned above, should have found their way to the bank account as part of the nominal ledger but in no way can you go directly to *the* cash book to find

General

Must all entries be followed by a carriage return or will the system accept single character input such as 'Y' or 'N' in appropriate circumstances?
Are data entry forms fixed or can they be modified by the user?
How customisable is the system?
Does it take advantage of the maximum available memory?
Does it use highlighting?
Do data inputs indicate data type and number of characters?
How many decimal places does the system work to?
How many digits are allowed in working numbers, and how many in total numbers?
Can the system handle:
– multi company situations (*viz* groups of companies)?
– branch accounting?
– pseudo consolidations as subsidiaries of a group?
Do you have a reference for the number of accounts, each with a specified number of entries that can be held on a disk for a given system?

Ledgers

When entering the content of an invoice, the layout of the input screen very often determines the speed with which the data can be entered.
What form does the screen take:
– full screen questionnaire?
– item by item displayed?
Is document numbering accomplished by:
– automatic incrementation?
– user insertion?
Does the system allow input to be handled by:
– single item entry and posting?
– batch entry and posting?
If batch entry is allowed, are nominal items automatically grouped before being posted or are summaries provided and output at the end of each input batch *viz* sales journal or purchases journal?
Is a recovery procedure available if an item is to be posted to an account that is not yet opened or at least is not yet named?
Can individual ledger accounts be examined on the screen? (By individual ledger accounts one refers to all the transactions including opening balance and closing balance for all periods of activity that are held on the current disk file.)
How are journal entries dealt with and what is their general appearance on:
– the screen?
– a printed report?
What printed reports are generated?

details of any item you require. Instead, you have to go from one listing to another, reading the cross references as you go. The answer as to why this will frequently be necessary is outlined in 'Bank reconciliation'.

Notes

1 It may not. Some (Pegasus or TCS, for example) allow you to do several different things in the same entry routine. The net result is that your listing of the transactions is neither one thing nor the other.

2 Similarly, in some packages you can combine receipts and payments in the same routine. It allows for loose discipline and – in my view – contributes to making the system less easily understood by outsiders, such as your auditor, accountant, etc.

Cheque numbers

In the perfect system, only one cheque book should be in use at any time. This ensures that when cheque details are introduced to the system, they will be sequential. In a manual system one can tell 'at-a-glance' whether a cheque is missing from a sequence and, if so, the auditor will invariably enquire as to why. Indeed, experienced bookkeepers will usually enter the details of a cancelled cheque as a NUL line stating that the cheque has been cancelled, rather than incur the possibility of later time-wasting in answering the auditor's inevitable question. In the computerised system, an undisciplined user is going to have cheque numbers all over the place. He may pay suppliers throughout an accounting period (month) interspersed with wages cheques, PAYE cheques, etc – the net result being that an audit check is going to be slow and laborious.

The only kind of package that can handle this situation is one that will allow entry of cheque payments regardless of destination and similarly of receipts. So far I haven't found one that will run on any of the machines with which I am familiar.

Solution

Before giving a possible solution, let me give you a cardinal rule about purchase ledger systems. If a transaction generates an invoice or its equivalent (rates demand, for example), then pass it through the purchase ledger system. The benefits include:

(i) All such bits of paper will be filed in one place (purchase invoices file);

(ii) They will all be reference numbered in the purchase journal and, hopefully, the same numbers will be written on the documents themselves thus making them relocatable; and

(iii) Most of your payments will be to suppliers in settlement of such bills and what payments are left will not be numerous *viz* items such as PAYE, cash cheques, VAT and bank charges, etc.

Note: Direct debits and standing orders, when made in respect of payments to suppliers, should be tested like cheque payments and entered together with them.

The solution is, therefore, that *two* cheque books are needed, one for suppliers (purchase ledger) and one for the remainder (nominal ledger).

Bank reconciliation

The method for proving that one's bank transactions are properly recorded is to compare them item by item for the period under review with the bank statement, and to make a list of all the differences. The differences should all represent transactions which although being revealed on succeeding bank statements had not been processed at the last date on the statement in hand.

In order to check the bank statement, you now have to check it against six possible sources of data; two from the sales ledger, two from the nominal ledger, and two from the purchase ledger. This assumes that you have only done one posting run during the period in hand. If you have done more, then you have to multiply the number of documents you have to check from. True, if you have implemented the two cheque books' approach, the payments will be relatively easier to locate but what about the banking?

Bankings

On any day when you pay a number of cheques into your bank, you probably enter them on a single paying-in or bank giro credit slip. However, when you come to enter them, most may be from customers and destined for your sales ledger; the remainder being for your nominal ledger.

When you eventually get your bank statement, the figure you will see for that day's lodgements will be the same as the total of your paying-in slip. But that figure will not appear in your accounting records!

How, then, do you handle the reconciliation of bankings? The answer is 'with difficulty'!

Solution

Clearly the answer must be analogous to the solution for the payment side. You should either use separate paying-in slips for suppliers' cheques (sales ledger) as opposed to non-suppliers' cheques (nominal ledger) or, alternatively, use completely separate paying-in books but mark them clearly.

This in itself does not necessarily solve the problem. If you are entering the transactions of, say, several days' bankings, you may find that the routine used will not allow you to subtotal the transactions for any day before going on to those for the following day, and as a result you will simply obtain one single total for the whole period (say, a month). This means that again you have no figure from your accounting system corresponding with the receipts side of your bank statements.

GOTO page 236

Bank accounts

Does the report generated from the entry of lodgements (received cash book?) produce a total of the day's lodgements – the same figure as would appear on the bank statement?

Must the bankings report be generated on a daily basis to achieve such a total or will the system still produce a total of a giro slip if, say, a month's transactions were entered as a batch?

Is a Cash Book or its equivalent generated?

Can the system tolerate more than one bank account and identify it?

How does the system allow account titling?

How are deposit accounts recorded?

How are standing orders handled?

Payroll

Will the payroll handle the generation of both weeklies and monthlies at the same time?

Will the program accept the default gross pay and use this unless otherwise instructed?

Can a default gross pay figure be amended on a one off basis, and be returned to 'automatic' at the next calculation date?

Can the system handle holiday pay – *viz* give two or three weeks' pay with appropriate free pay in the calculation?

Can the system allow for retrospective changes *viz* where a payslip has been created incorrectly and has to be re-generated?

Can the system display all the parameters relating to each individual on the screen *viz* name, reference number, gross pay to day, default gross, period of increment of pay, total tax to date, PAYE, code number, National Insurance Class Number, etc?

Can the system produce P45s or, if not, how much does it produce?

Will changes of tax and National Insurance rate affect entries made to the date of the change?

Does the system compute the amounts payable to the Inland Revenue in respect of PAYE and National Insurance separately?

Can it be linked to the financial records so that a record can be maintained of what is owed to the Inland Revenue and what has been paid?

CROSSWORD MAGIC

Maggie Burton reviews a software package that enables you to design and compose your own brainteasers.

Some people like to solve puzzles. Others who are a little more clever prefer to make them up for friends and family to solve.

Crossword Magic will help those smart puzzle-setters to design their own crosswords. It doesn't pretend to help you invent clues or get the grid symmetrical as it should be (incidentally, how many newspaper crosswords these days are symmetrical?), but it's far easier than drawing crosswords out by hand. What's more, it's entertaining and could even encourage people who'd never thought of it before to dig out their dictionaries and start inventing puzzles to mystify and enlighten everyone.

It runs on an Apple II with DOS3.3 and comes on a double-sided disk. Side one is the crossword maker and side two is the player. In the process of making, storing and playing one puzzle, much opening and shutting of drives and turning over of disks goes on. This is a little irritating sometimes but is infinitely preferable to cassettes.

The program is attractively packaged in a hard, plastic-coated booklet containing disk and instructions. This is a good idea as it keeps disk and documentation together in a pack which is hard enough to protect the disk and at the same time easy to store.

After switching on the Apple and shoving the disk in drive one as usual, a display of the program name and author appears for a few seconds and then vanishes, throwing you into the middle of the main crossword maker menu. At this point, if you haven't read the instructions, you should do so — although the program is very friendly to use.

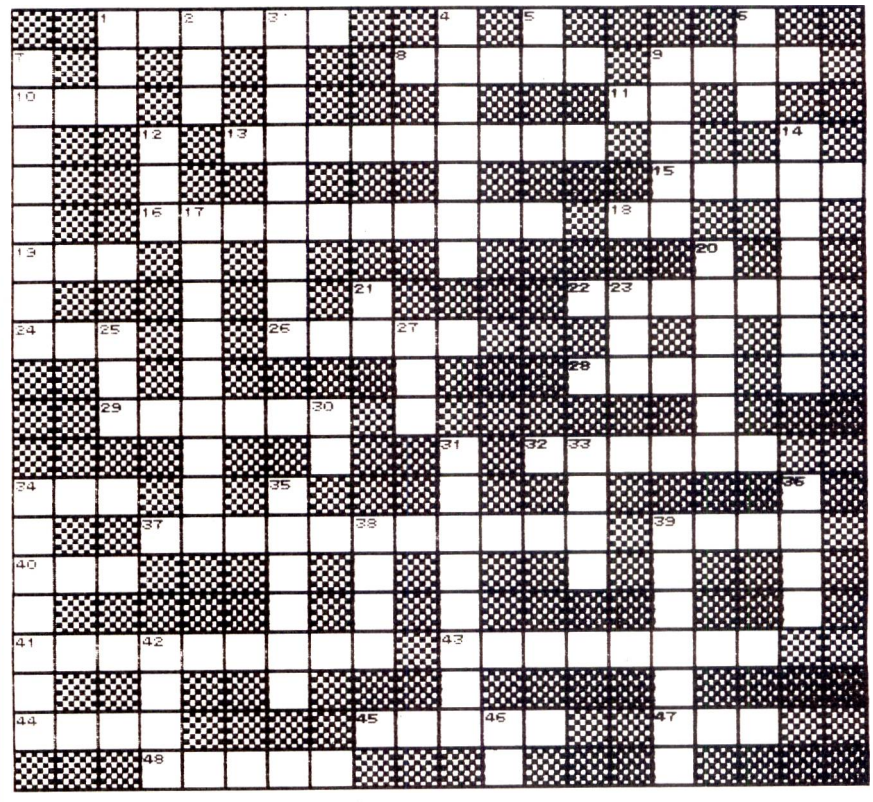

Seven options are provided by the main menu. One of those is that of the existing program; another is to delete a crossword. Then there's 'create puzzle', 'edit puzzle', 'print puzzle', 'transfer puzzle' (ie, move one to another disk) and 'complete puzzle'.

Procedure

It's logical to begin by explaining how a crossword is made. This is naturally initiated by choosing the 'create puzzle' option from the main menu. The first step is to size your crossword. It needn't be square although it must be rectangular. The program defaults to a 10*10 square if you decide to use automatic sizing. Once this has been done the program draws a grid on the screen and you can start to enter words onto the grid.

Words are placed on the grid simply by typing them in and pressing 'return'. The program then locates them in one of (usually) several possible locations. The first word to be entered is always put at the top left hand side of the grid, beginning in the far left corner. Once you have entered a few words you can juggle the whole lot around using control-R (relocate). After you have entered more than about six words (depending on the size of the crossword), you lose the ability to juggle the words around. Only the 'object word' (that which has just been entered) may be moved.

It is here that Crossword Magic's big disadvantage comes to light. It is impossible to delete any word apart from the object word. Now, it is obvious that deleting one word from a puzzle means also deleting all words which connect solely with that word. You'd need some very skilful programming to get a computer to work that one out for you but

ACROSS CLUES

1. SOUNDLESS
8. AROUND AND AROUND IN SPACE
9. FROM MICRO TO TV
10. SOMETHING BELONGING
11. EXIST
13. QUICK TO DEDUCE
15. STRIP TO BIND SMETHING DOWN
16. CONSERVATIVELY NECESSARY
18. ONESELF
19. TINY COLONIAL INSECT
22. DETERMINED IN PURPOSE
24. ABBREVIATION FOR TABULATION
26. RELATED SEQUENCE OF EVENTS
28. THE RESPONSIBILITY
29. FALSE PREFIX
32. IN POOR MENTAL HEALTH
34. FOR EVERY
37. ONE WHO CALLS BACK THE DEAD
39. DISGUSTING. HORRIBLE.
40. SOMETHING TO GO TO WORK ON
41. BOILING WITH ENTHUSIASM
43. FAVOUR FROM ABOVE
44. AGILE SEABIRD
45. THEATRICAL QUARREL
47. PUT INTO OCCUPATION
48. GO INSIDE

DOWN CLUES

1. THE NEAREST STAR
2. EYE COVERING
3. MONSTROUS IN PURPOSE
4. TREASON! THE PERSON WHO TAKES A TEA TRAY ON A GUIDED TOUR
5. USED IN CALCULATING THE AREA OF A CIRCLE
6. WOOD TO BIULD OLD ENGLAND'S NAVY
7. ONGOING: CONTINUOUS
9. A LENGTHY TERM OF HIRE
12. A WELL KNOWN TRADEMARK
14. MAIN CITY
17. FAT,FURRY INSECT
20. THE PRODUCE OF SANE THOUGHT
21. THE END OF A BOXING MATCH
23. WOMAN IN BLACK
25. A SMALL, FLAT LOAF
27. TO REND APART
30. CHOICE BETWEEN OPTIONS
31. THE 'RIGHT' SORT OF BEHAVIOUR
33. SLANG AVERAGE
34. GIFTS TO THOSE WHO WERE THERE
35. DAMAGED; POSSIBLY BEYOND REPAIR
36. POSITIVE SUPERLATIVE
38. AROMATIC HERB
39. DEFECTIVE IN CHARACTER
42. A SERIES OF POINTS
46. DEFINITE NEGATIVE

is would be possible — and very helpful.

It's a good idea to fill the grid as much as possible with longer words first and then type in smaller words towards the end to fill in the gaps. Of couse, you are supposed to fill in as many squares as possible but at any time you can stop entering words and begin composing clues.

You may also abandon your clues and return to entering words. These functions are performed by pressing the escape key to 'view options'. Options are easy to understand and need little explanation.

Clue entry is very easy. The word needing a clue is highlighted and the clue typed in and entered. This is done in the same order as that in which the words were input in the first place. When you have finished entering clues, you are given the option of reviewing them and thus correcting any mistakes you have made.

All in all, composing your own crossword is very absorbing. Using a dictionary as an aid in choosing words and inventing clues is not only helpful — and a bit educational — but it can also help make clues a little more difficult to solve. You'd be surprised how many people don't know the exact dictionary meaning of some quite common words. While constructing your teaser, you may also select one of four display options for the grid using control-B. These are as follows: words can be enclosed in square boxes (rather like an Othello board); blanks can be filled in with fine chequered shading on top of the boxes; you can have no boxes and just shading or neither; making for a very confusing crossword!

At any stage in the design of a puzzle you can stop, save what you've done (as an 'incomplete' file — with the extension 'inc') and pick it up later. Should you be in danger of losing what you've done, the computer will warn you.

The 'edit puzzle' option from the main menu is a rather limited one. It allows you to do no more than change the puzzle name and clues. You cannot change word positioning, nor can you correct a mis-spelled word which you have only then discovered.

When you've finished your puzzle you can print it out immediately or save it for later use.

Final Form

The printouts generated by this system are of a very good quality (even on a Silentype...). The grid is printed (empty, of course) with clue numbers on it, followed (after a pause so you can adjust the paper) by the clues, and then (after another pause) by the answer on a mini-grid. One is printed as part of this review and it comes from a Silentype. We'll print the answers next month...happy puzzling!

Crossword Magic can be used with several different printers. These include Epson MX-80 with graftrax ROM upgrade, Microline 82A and 83A with okigraph ROM upgrade, Prowriter, Itoh, Anadex DP-900 (and others from that range) and several printers from the Paper Tiger range. You also need a compatible parallel interface card to drive the printer. Crossword Magic has to be set up to communicate with your particular printer and the 'print puzzle' option begins by asking you to specify your printer from a list presented to you and then to input your I/O specifications, including the slot number from which the printer is being run. You don't have to change these every time you print, of course, but you do have to see them and make sure they're right.

The last thing to do when you've finished composing a crossword is to exit the program cleanly. Then you can play it (or any other puzzle if you want to) by turning the disk over and booting it by pressing 'ESC'. This side of the disk, the player disk, also gives you a program to format other disks for puzzle storage. The maker disk and any storage disk may contain a maximum of 20 puzzles.

To play a puzzle, the player software is loaded and you are then asked to insert the disk containing the puzzle you wish to play (followed by return to signify that you're ready to go ahead). The computer will then list all the puzzles on that disk, assign numbers to them and ask you to type in the number of the puzzle you want.

Actually playing a puzzle is a bit confusing at first. The left and right arrow keys move you around the grid from one square needing a letter to another. The space bar toggles you between across and down. As you move from one word to another, the clue for that word is displayed below the grid on the screen. Changing from across to down where two words meet also changes the clue.

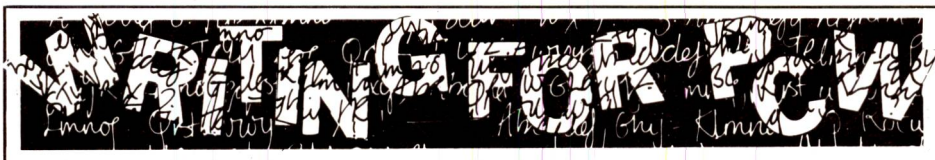

The disadvantage, however, is that you can't delete your input. You can overtype but it's confusing to have filled a few squares wrongly and to be unable to delete what you've filled in. When you've finished doing the crossword, the computer tells you your percentage score. You can also stop halfway through doing a puzzle and save your progress, using your initials as an extension.

Conclusions

Crossword Magic is a lot of fun to use. Because it is the sort of fun software which lasts and lasts, the price of £24.95 — though it may seem pricey at first — is really justifiable.

As with all software, it has its little idiosyncrasies — the lack of an ability to delete, for instance, but it is logically designed and easy to learn. One or two good readings of the instructions are all you need. It's the sort of program which will go down well on family computers — for children it does, in a way, provide real Computer Aided Learning and for adults it is entertaining and fun.

Crossword Magic is directly available from Micro City Ltd, PO Box 54, Norwich NR2 1SZ. Tel (0603) 25648. END

PCW welcomes approaches from would-be writers, even those who have never appeared in print before. In this game it's often those with practical experience who have important things to say so we don't mind if your prose is less than perfect — providing submissions have a sensible structure and follow a logical sequence, we can take care of the polishing.

If your article is already written, send it in — taking care to ensure that your name and address, together with a daytime phone number if possible, appears on both the covering letter and the manuscript. Manuscripts should, preferably, be typed or printed out (dot matrix output is quite acceptable) but *must* be double line-spaced with ample margins top and bottom and on each side. Make sure you keep a copy of *everything* you send us.

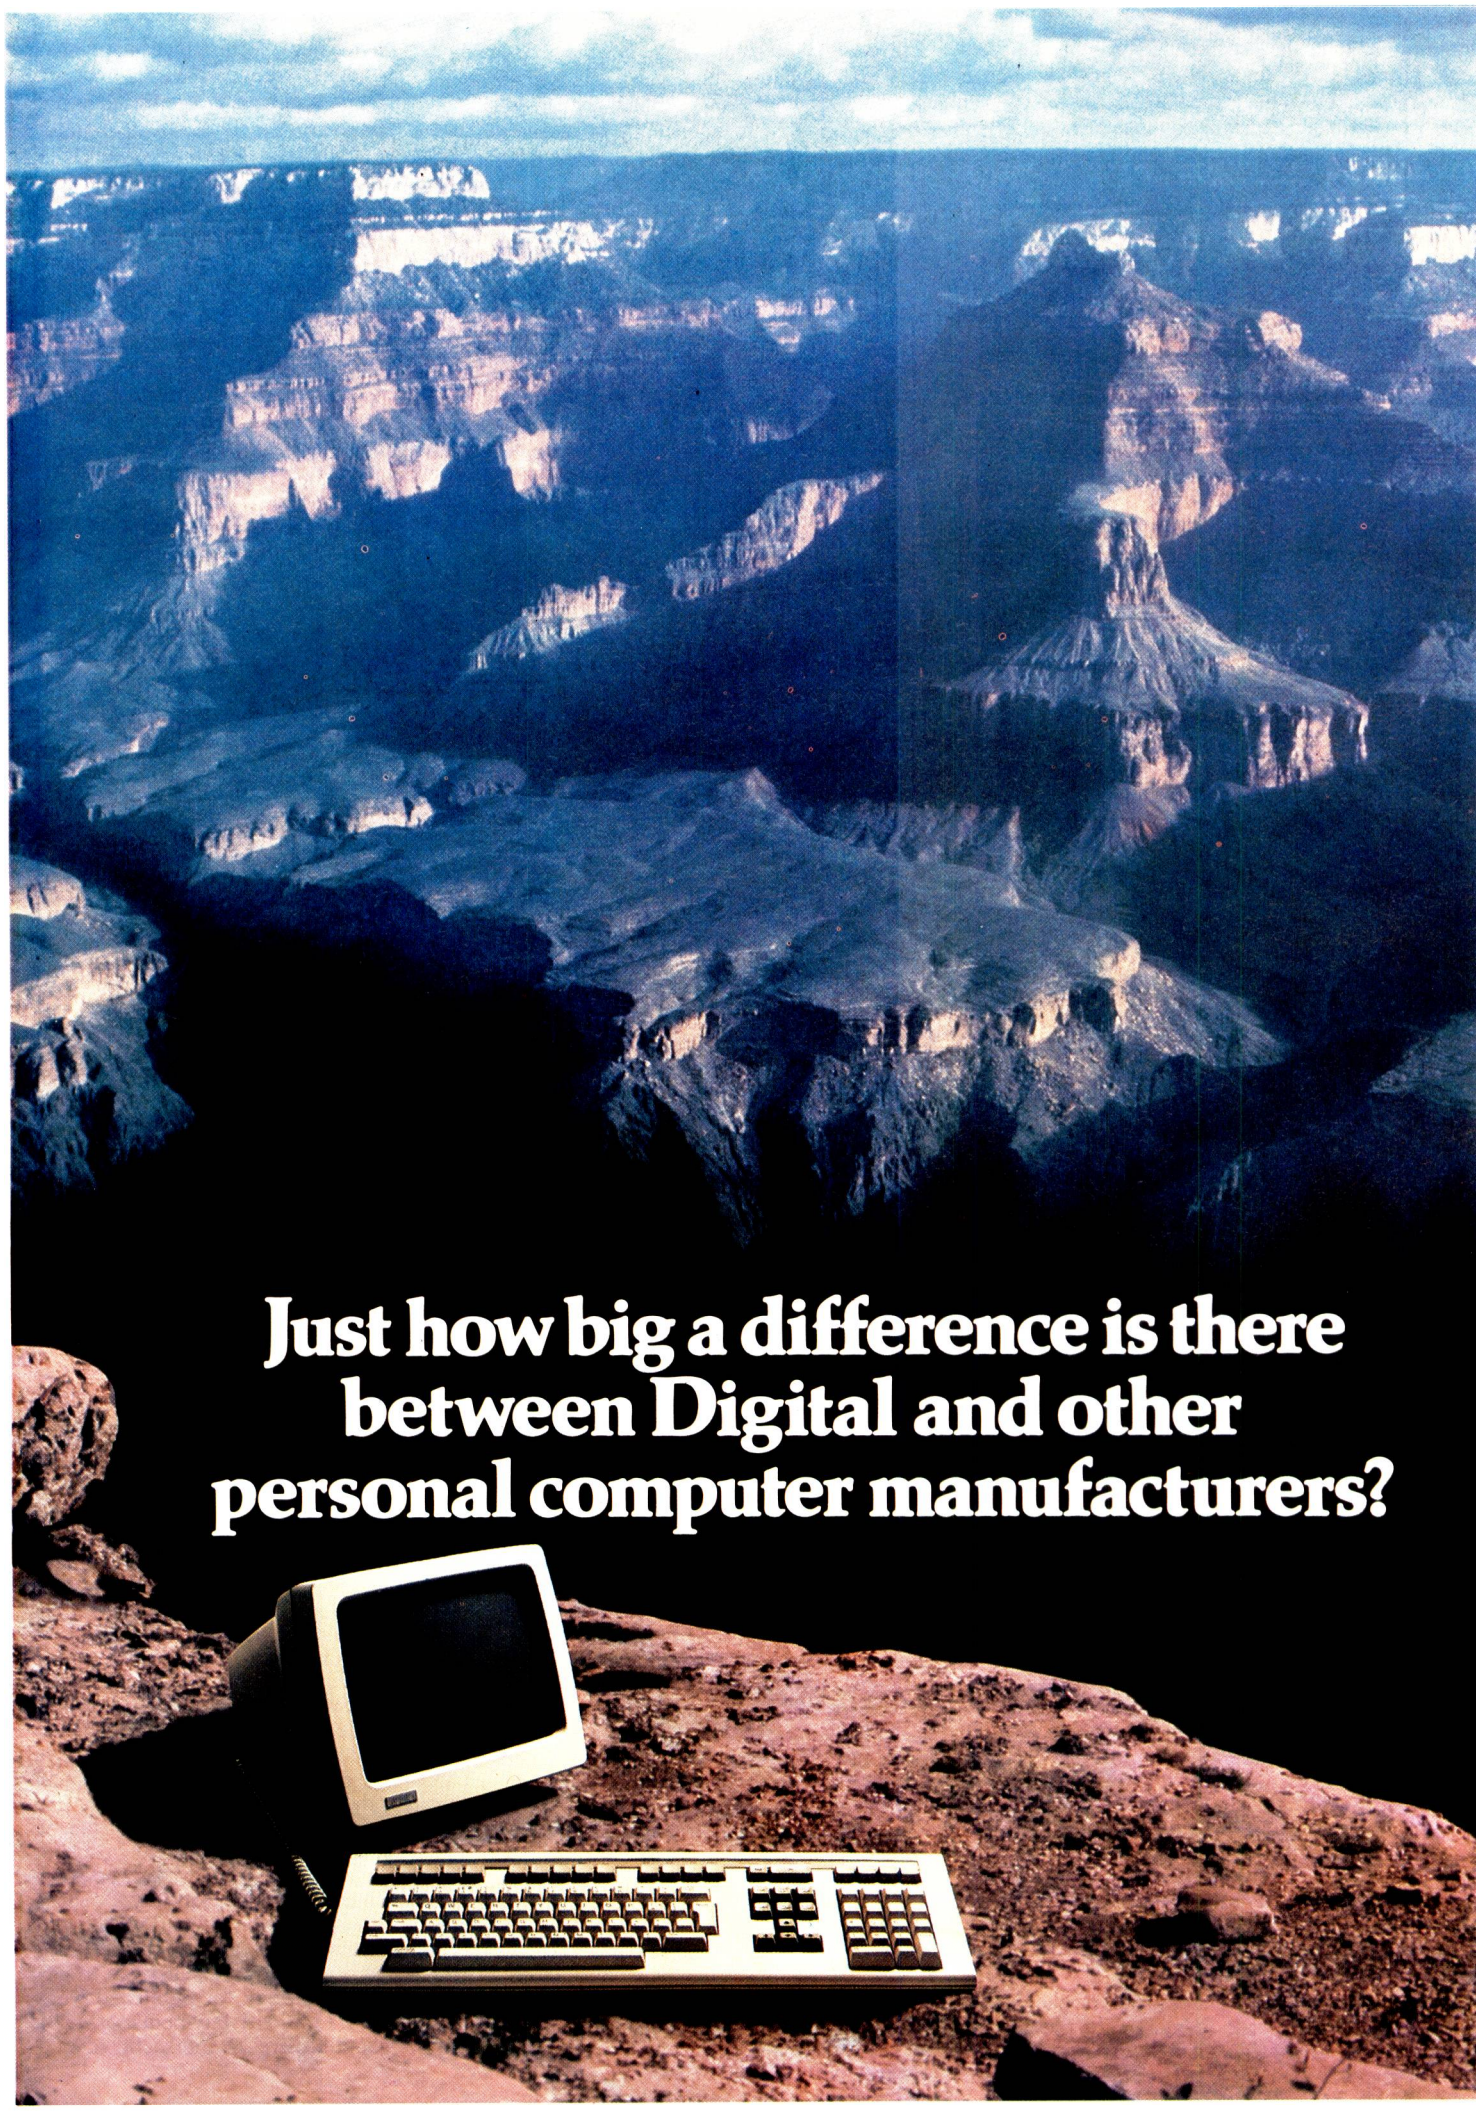

We can now accept articles on a limited number of disk formats: standard IBM 3740 single-sided, single-density 8in, and the following 5¼ in formats: Superbrain SSDD 35-track; RML 380Z SSSD; Sharp MZ-80K/A DSSD, Cromemco SSSD, Nascom DSSD, Rair/ICL DSDD, SD Sales SSSD, Triton 35 track SSDD and ACT Sirius 1 (CP/M-86 or MS-DOS) single-sided. By prior arrangement we can accept stuff over the phone by modem using BSTAM at 300 baud but as we can only do this during office hours (10am to 6pm) it's not exactly a cheap way of getting your article to us! In the near future we hope to be able to accept material by The Source and Rewtel. Please note that if you want to send your article in this way, it should be as an ASCII file rather than as a 'work file' for any one type of word processor — ie, use your word processor to print the text to disk instead of to paper.

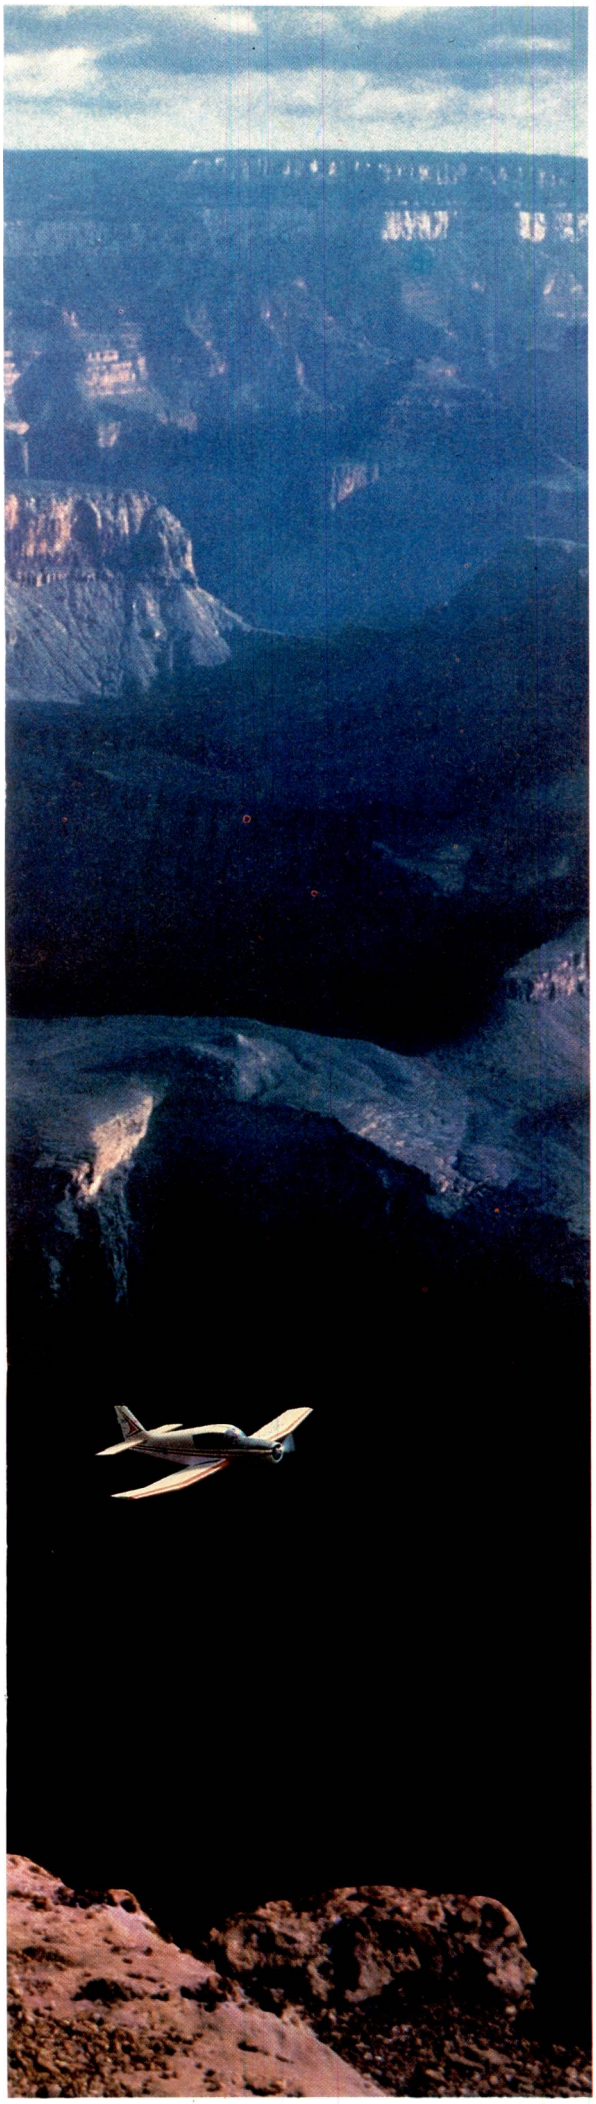

Please note that we cannot undertake to return manuscripts, diagrams and photographs, although we always try to return the latter. We can only return disks if they are accompanied by adequate postage *and* packaging.

If you have an idea for an article or a series, write us a letter outlining your ideas. A one- or two-page synopsis giving the proposed structure, sequence and content is what we're looking for. But before you send anything to us, take a good look through *PCW* to see what sort of articles get published and to see what style of writing we prefer (basically, avoiding promposity at one extreme and flippancy at the other). Also take a look through the Back Issues advert to see what sort of things we have already published — no point in re-inventing the wheel.

Once you've sent off your article or proposal, please don't hassle us for a decision. We receive far more submissions than we can ever use and it takes us a while to sort through them, acknowledge receipt and give an opinion one way or the other. Please be sure to tell us if you've sent the article to another magazine — it would be very awkward indeed if the same article appeared simultaneously in two publications! Frankly, we're more likely to accept something which has been offered exclusively to us.

Finally, we do pay for published work but please be patient! Payment *normally* follows about 4-6 weeks after publication.

Just how big a difference is there
between Digital and other
personal computer manufacturers?

The gap, believe us, is wide.

And the confusion surrounding personal computers, widespread. Because the term 'personal' computer now stretches to include a multitude of machines, with a diverse range of functions and capabilities.

So let's set the record straight. And get down to business. Over the past quarter century Digital's main objective has been to personalise the computer. Permitting direct access to *real* computing power to whoever wants it.

And in that time Digital have introduced minicomputer power into banks, mines, steel plants, farms, refineries, aviation, broadcasting, universities and assembly lines to name but a few.

Digital were also the first company to mass produce minicomputers, and the PDP-11 is, in fact, the world's most popular minicomputer today.

A fact that makes Digital the world's largest manufacturer of minicomputers. Which, in turn, makes it less of a surprise that Digital have now developed a range of personal computers unrivalled in their ability to meet today's professional requirements. From the dual microprocessor Digital Rainbow to the highly advanced Digital Professionals, the first personal computers with the ability to perform numerous functions at once, there's a Digital personal computer to suit practically any need.

And the Digital difference becomes even wider when you consider Digital's unique service back-up, which includes access to our Customer Information Centre, service support, software services and maintenance. And in the unlikely event of anything going wrong, Digital guarantee to deal with any problem, on site, within 8 working hours anywhere on the UK mainland.

Plus you automatically get a free 12 month warranty to cover all our hardware and software.

It's a service record that is, in fact, unrivalled by any.

If you'd like further information about Digital professional personal computers ring Digital on Basingstoke (0256) 59200 or contact any of the Dealers shown overleaf, then compare the facts with any other machines to see just how wide that chasm of difference really is.

You'll end up on our side every time.

Doing more. The Digital difference.

PACKAGES

PCW's 'Packages' section is produced bi-monthly, alternating with our 'In Store' hardware guide. We have confined coverage to business packages which are available and supported at national level and which have been in use for at least six months in a minimum of five sites. Producers of packages which fall within these constraints should send details or updates to: **Dick Olney,** *PCW,* **62 Oxford Street, London W1.**

The layout has been designed to allow you to discover which packages are available for the application you have in mind and to show you which packages are available for your computer if you already have a machine. In either case the code enables you to look up the supplier's name and telephone number in the table below.
All details published are the latest made available — some may have changed since this issue went to press.

SUPERBRAIN II

-THE BEST THING SINCE SUPERBRAIN I!

OFFERS: – *Basic Interpreter.*
– *Full Reverse Video and True Descenders.*
– *Superbly Improved Circuitry.*

ALL AT REDUCED COST!

Choose From:

THE JUNIOR (JR) WITH 350K FLOPPY DISKS
THE QUAD DENSITY (QD) WITH 750K FLOPPY DISKS
THE SUPER DENSITY (SD) WITH 1.5MB FLOPPY DISKS

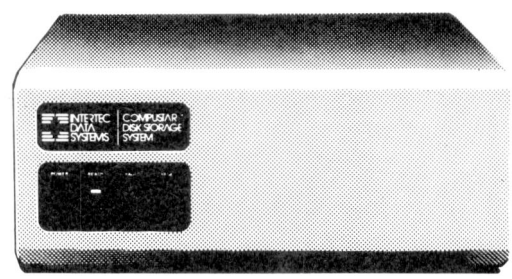

FROM £1665 EXCL. VAT
MAINTENANCE CONTRACTS AND SOFTWARE AVAILABLE

SUPERBRAIN CAN NOW BE CONNECTED TO HARD DISKS
FROM **£2565** FOR 10MB OF EXTERNAL HARD DISK STORAGE

+ COMPUSTAR

– LETS 255 USERS SHARE 10 OR 144MB OF WINCHESTER DISK

Compustar II Terminals look and act exactly the same as **Superbrain** and with prices from **£1305** excl. VAT low-cost multi user systems are now a **reality**

You could print this line perfectly in just two seconds on an £1800 printer.

However you can do exactly the same on our £1136 printer.

5

Why waste your money?

For £1,136 we'll give you a printer that performs equally as well as our somewhat pricey counterparts.

The ESW 3000.

With a full range of interfaces it's compatible with all microcomputers and major word processors.

Whereas some people sacrifice print quality for speed, we combine the two.

The Daisywheel produces good-looking print at an eye-blurring rate.

It's intelligent too.

It can print out from its own 4K memory buffer, releasing your computer to handle other business.

The ESW 3000 offers the option of sheet or tractor feed. The sheet feed costs £398 (or around half the price of our competitors), and the tractor a mere £150.

To find out more fill in the coupon.

If you don't you could find yourself needing another printer.

One that prints money.

To: Intelligent Interfaces, 18 Central Chambers, Wood Street, Stratford-on-Avon, Warwickshire CV37 6JQ.
Telephone: 0789 296879. Please send me full details of the ESW 3000.

Equipment to help you mind your own business

Beware that you do not lose the substance by grasping at the shadow

Even Aesop would have been confronted by confusion. Coming from the Fifth Century BC, the average newsagent would seem like one enormous fable factory. Row after row of micro-computer magazines, all filled with conflicting opinions. Each, in its own way, claiming to be the fount of all knowledge.

He would soon deduce, as many have already discovered, that reading the wrong magazine is no better than chasing shadows. The truth, he would conclude, is often hidden, as indeed are the shadows in the darkness.

Of course, he would have to admit that some micro-computing magazines are, in their own way, very good indeed. But many, he would soon realise, are but pale and imprecise imitations of the genuine article.

Careful reading would convince him that for complete, comprehensive and authoritative coverage, there really is no substitute for *PCW*.

Nor would he be alone in his opinion. Not for nothing is *PCW* Britain's largest selling micro-computing magazine.

He would appreciate *PCW's* continuous commitment to editorial excellence. The unrivalled attention to detail and accuracy.

Eureka!, he would exclaim, *PCW* is indispensible. Compulsive and essential reading, every month.

Being no fool, Aesop would place a regular order with his newsagent. But, with no newsagent close to hand in Ancient Greece, Aesop would go one better. He would subscribe.

After all, you do not have to look long to realise that a magazine of the quality of *PCW* often sells out extremely quickly. Far better to be sure of getting your copy, rapidly delivered to your door by your postman, immediately upon publication.

And so, being an exceptionally wise man, Aesop would subscribe today. He would know that having found the substance, he could afford to wait no longer.

Be like Aesop. Return the subscription order card opposite immediately. Before the opportunity is lost in the darkness.

1 Year Subscription (U.K. only)	*£12.50*	*We send you 12 issues of* PCW *hot off the press direct to your door.*
2 Year Subscription (U.K. only)	*£21.50*	*You receive 24 issues saving yourself £3.50 off the full current subscription price. Plus you protect yourself against future increases in cover prices and postal rates which will save you £££'s over the period.*
3 Year Subscription (U.K. only)	*£32.50*	*You receive 36 issues saving yourself £5.00 off the full current subscription price. Plus you protect yourself against future increases in cover prices which will save you £££'s over the period.*

PLUS

We have now arranged for special 'first-off-the-press' copies to be mailed direct to subscribers which will ensure that they arrive either on the same day or one or two days in advance of national distribution in the U.K.

PLUS

Existing subscribers can take advantage of any of the offers above. Just tick the 'this is an extension subscription' box on the coupon and enclose your payment. The additional copies will be added to your existing subscription automatically. You do not have to wait until it is time to renew (by which time this offer will probably have been withdrawn). Save money by extending your subscription today!

PLUS

We have completely reorganised our Subscription Department and any problems, change of address, special requests etc etc will be promptly dealt with by an extremely 'user-friendly' human being should you need to write to us.

PLUS

We send subscription copies of PCW *in a tough polythene wrapper. It will reach you promptly every month, unfolded and in good condition.*

PLUS

You can pay for your subscription to PCW *by cheque, postal order or by using Barclaycard (Visa)/American Express or Access. And you don't even need a stamp for your envelope. Use the coupon on the right.*

Why do more people read PCW than any other microcomputing magazine in Europe? Subscribe today!

BUILD A BETTER BRITAIN WITH C-D-S (UK) MICRO

IMPORTANT ANNOUNCEMENT

TO ALL U.K. MICRO COMPUTER PEOPLE

A national scheme for local community developments and business initiatives is being set up, which will be of great interest to everyone involved with home/micro computers and ancillary equipment, whether they are students, enthusiasts, users, designers, distributors or manufacturers.

The scheme is called C-D-S (UK) MICRO and it offers considerable opportunity for large scale supply of hardware, the design and production of special programs software, and unique commercial activity. Micro compuer users can set up dynamic C-D-S management projects in their own immediate local area as profitable business enterprises.

For general information about the scheme, together with schedules, plans, programs and specifications please send £5.00 (users) or £20 (suppliers & distributors) to: **C-D-S (UK) Micro, 89 Hexthorpe Road, Hexthorpe, Doncaster DN4 0BE.**

MAKE YOUR MICRO EARN ITS KEEP – AND YOU A GOOD BONUS INCOME

ALSO:
Membership applications are now invited for registration with the new

PUT YOUR IDEAS, AMBITIONS AND INTERESTS INTO PRACTICE IN PARTNERSHIP WITH C-D-S

NATIONAL C-D-S (UK) MICRO ASSOCIATION

Providing job opportunity, full or part time, and special provision for area and regional management positions. Direct participation *must* have prior association registration. Payment of registration fee entitles direct members to take up area, regional or national C-D-S SHAREHOLDING. For full information and Association literature, send fee as:

NCDS (UK) MA MEMBERSHIP REGISTRATION FEES

Users (Individual)	**£15.00**
Students	**8.00**
Clubs or Groups	**5.00 per member**
People interested but non technical participation	**3.00 (for info)**

ACC NEWS

Rupert Steele presents his monthly round-up of news from the Amateur Computer Club.

Communications looks set to become the front end of computer development work in the future. It is possible that, within the next 15 years, most useful single machine software will have been written, and people will have to turn their attention to communications. Prestel has been the first attempt to bring data communications to the nation as a whole, and (in the language of the Civil Service) it has not been an unqualified success. Its major achievement so far has been to pinpoint many of the problems of such an undertaking.

Prestel has in the past suffered from being too small and too expensive; and possibly being launched too soon. The small size of the database has meant that an information provider would only gain marginally from being online. If having Prestel and being an IP were very cheap, then the marginal benefits would have been enough to see the system take off. But because an IP account is expensive, and there is a connection charge in addition to the phone bill (and, until recently, adaptors were hideously expensive), the system has never taken off and most of the computers are in mothballs.

It is only now, through involving the home micro owner, with cheap adaptors and tangible benefits such as micro software ('telesoftware' in Micronet 800) and home banking ('homelink'), that the numbers of subscribers may build up. Moral: if you're setting up a completely novel system, you must expect to lose a lot of money if you want it to take off. Setting unattainable economic targets will strangle it at birth.

Technology is now entering a new phase in communications. We are setting new methods for handling large bandwidths, through innovations such as fibre optics and large scale exploitation of existing ideas (which reduces prices) such as cable TV. I'd like to start some kind of discussion, through this page, of the ideas the amateur movement have about all this. Should there be a programme to install BT-operated fibre optic or co-ax links to the nation's houses, and, if so, what would be done at which frequencies? Should channels be made available for high bandwidth modem communications, and would we like to see a high speed high res 'Prestel'-like service? Can the cable TV system (if it ever gets 'off the ground') be used with micros? Now is the ideal time for everybody out there to give their high bandwidth wish list an airing and, you never know, a man from the ministry might actually read *PCW* and take note.

News

I hope you're receiving Club Spot 800, on Prestel page *8008#, loud and clear. By the time this comes out, Club Spot will have been in operation for three months or so. You aren't editing on Club Spot yet? Then, contact me. We are thinking of holding a further Editors' Conference in the autumn, so the more people who write asking about editing in club spot, the more likely the conference is to come off.

A couple of exhibitions are on in June. On Sunday 12 June, there is the South of England Personal Computer Fair to be held at the Wood Green School, Witney, Oxfordshire OX8 6DX. The ACC and OPeCC will be there, showing the amateur flag. Enquiries about the show to Mr P J Wilde on 0993 2355 during school hours.

This year's IPC Computer Fair is at Earl's Court from 16—19 June. The ACC will be there, as will lots of other clubs. If you didn't get a stand for your Club via David Annal, then too bad. But you might like to contact him for a stand for the PCW show this autumn. His address is: 142 Windermere Road, London SW16 5HE. The ACC wouldn't mind a bit of help on the stands. If you're interested, contact Peter Whittle, 49 Bartlemas Road, Oxford OX4 1XU or give me a call. The ACC has lots of nice A3 posters to give away for you to display in your Club meeting place, shop or library. Let me know if you want one (or more); they are free, gratis and for nothing. Peter Whittle (address above) has some ACC T-shirts for sale: write for details or pick up one at a show.

Club things

At the beginning of this year, a new club was formed in Gravesend. The Secretary is Steve Janday and the Club's address is: Gravesend Computer Club, c/o The Extra Tuition Centre, 39 The Terrace, Gravesend, Kent DA12 2BA. Their membership is about 50p, with a wide range of machines owned.

North a bit, we come to Mr M Osborne of 8 Elvington, Kings Lynn, Norfolk, who would like to start a Spectrum User Group in his area. So why not drop him a line if you are of like mind?

Continuing our northward trek on the east coast, Mr Ian Waugh of 13 Briardene Drive, Wardley, Tyne Wear NE10 8AN writes of his group of BBC computer owners, who are thinking of becoming a formal club. So if you're in Wardley and have a BBC m/c, then you know who to contact.

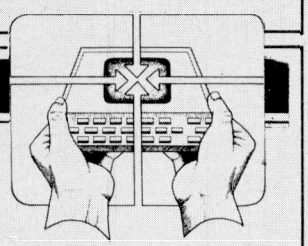

Still north and east, we have the Grimsby Computer Club (contact Kevin Turner on Grimsby 824063 — evenings). With a membership of over 85, they meet at St James Choir School in Grimsby. They have lots of ideas, such as cheap equipment hire (including Teach-yourself BASIC tapes) and a business appreciation course. Interested? Then give Kevin a call.

Down in the deep south, a Mr P Cherriman writes of the Arun Microcomputer Club, which meets at the Wick Amenity Centre, Wick Farm Road, Littlehampton, West Sussex BN17 7BL. Ring Littlehampton 7607 for more details.

And finally, I cannot resist a mention for the Mold Computer Club, who recently wrote saying 'the Mold Club is a non-constitutional organisation...we have more applicants for membership than we can manage [and] we would request you to remove our name from your correspondence file, and not advertise us in any way. So if you live in Mold, you can't join your local club. How Moldy.

* For futher information about the ACC, or anything mentioned in this article, contact: Rupert Steele, St John's College, Oxford OX1 3JP or telephone (0865) 512811.

Whatever your business needs, there's an Apple III value-added package to match.

No two businesses have the same problems, that's why we've put together some very special packages, built around the versatile 256 K Apple III at the incredible new price of £2,395.

Apple III gives you superb value and big capacity in personal computing. But did you know about the even bigger value and extra power our special Apple III systems offer?

Ideal for the business user, the **Apple III Business System** which has a 256 K Apple III, Apple Dot Matrix Printer, word-processing, spread sheet software and our revolutionary special self-training packs. Price £2,995.

The **Apple III Profile system** offers the solution for users requiring extra information storage power. An Apple III with our 5 MegaByte Profile hard disk unit has the capacity, for example, to handle a mailing list of 32,000 names and addresses. Price £3,495. Then, for the really big applications there's the **Apple III Big Business system,** an Apple III system with 10 MegaBytes of profile storage capacity, that's approximately 4,000 sheets of A4: Price £4,950.

Apple also offers software solutions, AppleWriter word-processing, VisiCalc for numerical work such as financial planning, and Business Graphics for presenting that important information graphically.

Our trump card is **Catalyst.** Catalyst allows you to run your system with all of your data and applications software on the Profile hard disk. It allows you to move from task to task with the speed and efficiency that no other currently available microcomputer can offer. Fast operation, no floppy disks to keep track of and care for, and most important, it is simplicity itself to use.

Apple III data interchange capability allows you to use information generated with one application program, in others. For example, when writing a memo using AppleWriter, you can include a financial model generated by VisiCalc and mail the memo to a list of addressees generated by QuickFile, Apple III's very own filing system.

All of these packages are available now. Talk to your Apple dealer about your business needs or send the coupon for further details – no microcomputer has more programs* . . . ranging from personnel records, statutory sick pay and payroll, to accounts, to capital evaluation and Critical Path analysis.

The personal computer apple™

*Apple III will also run many Apple II programs and has CP/M compatibility. Prices exclude delivery and VAT and are correct at time of going to press. Apple reserves the right to change specifications without notice. All offers subject to availability.

To: Apple Computer (UK) Limited, Eastman Way, Hemel Hempstead, Herts. HP2 4BR FREEPOST.
Please tell me more about the Apple III special value-added packages.

PROGRAMS

Unstoppable as I seem to be on a 'meteoric rise to obscurity' (to quote one comment of wry congratulation from a referee), the time has come to hand over to a new programs editor – Surya.

Surya has stepped in, perhaps a little at the deep end, from a background in freelance writing, educational software programming and work with children. From now on he will be the person to contact about anything concerning programs.

I'm sure all of PCW*'s readers will join me in extending Surya a warm welcome, and in wishing him all the best with us on* PCW.

It only remains for me, in the capacity of erstwhile programs editor, to say 'thankyou' to all the referees, authors and readers who've put fingers to keyboards and cassette recorders over the past 18 months.

Programs will continue in the same vein for the foreseeable future. But naturally Surya's great organisational talents will ensure a faster turnover of software and related correspondence. As a part of my own 'obituary', I have only to apologise for all the letters that went unanswered – correspondence to PCW *does tend to be one-way – and to express the hope that Surya will not be short of programs to include in* PCW.
Maggie Burton

Ok. Boring stuff first. When submitting programs to *PCW*, please include the following:-
(a) A cassette or disk of the program.
(b) A listing on plain, white paper (typewritten if no printer available).
(c) Documentation – this should be comprehensive, but please try to be brief.
(d) A suitable *sae* if you would like your material to be returned after use.

Please mark (a), (b) and (c) with your name and address, program title, machine and minimum RAM required and – if possible – a daytime phone number. All programs must, *please*, be fully debugged. Send contributions to: Surya, *PCW* Programs, 62 Oxford Street, London W1A 2HG.

I'll do my best to acknowledge programs within a few days of receipt, but please give me a fortnight or so before querying delivery. Following this acknowledgement, it may take quite some time before a decision can be made, so please be patient. Generally speaking, programs which are rejected for any reason are returned fairly quickly so 'no news...'

Finally, readers sometimes remark on the lack of programs for certain machines (witness the reader who sent in an Atari program with the comment 'you may have heard of this machine'). All I can say is, you send them in and we'll publish them. Note: All programs we publish are paid for at a regular rate.

Anyway, enough of all that and onto this month's offerings...

BBC Balloon

by A Roe

Ok, so it's another maze game. With this game, however, the object you have to manoeuvre through the maze is not a pac-man or gobble monster, but a hot-air balloon (what else?). Your balloon will be punctured if it strikes a wall of the maze, so a fair amount of skill is required. The erratic motion of the balloon (to simulate the effect of the wind) adds to the difficulty.

You are given three balloons, with a bonus balloon being awarded for every 10,000 points scored. There is no time limit.

One criticism is that the program only offers a single maze, so it is possible to learn the route thus detracting from the challenge of the game. Overall, though, the game is well-written and makes impressive use of the BBC's excellent graphics.

MICROMART

calcsheet78

financial planning and modelling for the CBM 8032 and CBM 8096.

NOT JUST ANOTHER SPREADSHEET PROGRAM BUT A COMPREHENSIVE SUITE OF PROGRAMS.

IT WILL sense automatically if you have a 32K or 96K machine.

IT WILL create **dt** (TM) data transfer files which can be accessed directly, via the **calcsheet78** (TM) or word processing programs (eg WordPro).

IT INCLUDES a specimen VAT spreadsheet which will calculate tax paid and received and how much tax due to or from the Customs for each quarter.

IT INCLUDES examples of invoicing and book-keeping using the spreadsheet.

Concise, comprehensive manual supplied.

All this for just £75 inc VAT (plus £1 p&p). Manual only £5 plus 50p p&p (deductible if **calcsheet78** (TM) is ordered subsequently.

Also available: **USING VISICALC,** a simple guide to the world's most famous spreadsheet program (£5 plus 50p p&p).
Available soon: **VICtory over B*A*S*I*C,** a programming manual for the VIC20 user (£2.50 plus 50p p&p if ordered now, £4 plus p&p if ordered after publication).

ESSENTIAL SOFTWARE
4 Fanshaw Avenue, Barking, Essex

DRAGON'S TEETH

The Dragon Dungeon vaults are filled with the widest selection of software and peripherals for the Dragon 32 available in the UK. 30 page catalogue of Dragonware available (50p, refundable first order – free to club members). We are also the home of the largest **Dragon User Club** in existence and publish the monthly newsletter "Dragon's Teeth". Annual membership £6.00 (6 months' trial subscription £3.25).

DO YOU USE CP/M?

VeerPort Ltd.
can help you

- Un-ERA-se a file? (UNERA)
- Find out how CP/M allocates disk storage? (DDUMP)
- Patch any byte on a disk? (DDUMP)
- Test a disk for bad spots? (DTEST)
- Recover damaged files? (DDUP+DDUMP)
- Transfer files or programs between 2 CP/M machines (must have serial link) (FILE MOVER)

(Soon available for CP/M 86)

All programs are menu driven and complete with manuals.

These general disk utilities work on any single user CP/M 2.x system with any diskette size and format, and many hard disks.

Prices from £21.95 (inc VAT).

★★ Program of the month ★★

Apple VAT

by Alex Lake

This is an excellent VAT records program written for the 48k Apple II with at least one disk drive. The program allows you to enter your purchases and sales in the form in which they would normally be recorded by a small business/self-employed person. It calculates your input and output tax from the invoice totals, stores the records on disk and prints your VAT summaries for each of your quarterly tax periods.

All items are automatically sorted by date, and may be deleted and re-entered in case of error. The program does *not* automatically update its files, so it is important to remember to use the UPDATE

ASCII KEYBOARDS

- Parallel 7 bit TTL ouput
- 5v Positive Strobe
- Full ASCII character set
- 62 keys inc. ESC, CAPS, REP, DEL, TAB etc.
- Single +5v supply required
- Circuit diagram supplied
- New — Unused — Guaranteed

Cased (685 x 232 x 78mm) £34.50
Uncased (333 x 175 x 40mm) £32.20
Inclusive of VAT and Postage (UK only).

Nameworth Limited
31 Barnfield, Hemel Hempstead, Herts, HP3 9QJ (0442-66878/48460).

THE POWER BANK

sealed for life, batteries included

system compatible sine wave output

The Uninterruptable Power Supply which will:

- Continue to operate your Micro Computer System when the mains electricity supply fails
- Suppress dangerous spikes and surges
- Stabilise voltage and frequency to your sensitive equipment

Operate your Micro/Disk/Printer System from a Power Bank and forget about a disabling break in the electricity supply. 120 VA UNIT £320. 250 VA UNIT £450.

Please contact: Power Testing (Sales) Ltd, on 0277 233188. Telex 24224 Monref G (ref 586). 65a Shenfield Rd, Brentwood, Essex CM15 8HA.

DISK FILES option whenever new data has been entered.

The rate of VAT is set in line 190, and the first month of your financial year is set in line 260. The default tax year is 1983, and this can be updated later by resetting the value of Y$ in line 510.

The error-trapping routines are comprehensive, and the program as a whole is very professionally presented and easy to use.

The printer used for the listing given below doesn't distinguish particularly well between O(string) and 0(numeric): the variable in lines 410 and 1480 is O0$ (letter O, number 0). The variables CO, CO$, CO(), CO$(), MO$, NO, NO() and PO$ are all letters.

COMMODORE 64

We were the first to have a range of software for the Commodore 64, and we intend to maintain our lead. Here is a selection from the range.

VIZAWRITE £69 (DISK ONLY)
A powerful word processor with on-screen formatting. Very easy to learn and demonstrate. VIZAWRITE will drive most printers (including parallel Epson, Qume, Diablo, etc. directly from User Port – cable extra). A tape based version will be available April/May.

BUSICALC £39 (TAPE/DISK)
Versatile spreadsheet program that anyone can learn in minutes. Also available for VIC (+16k) and PET/CBM machines.

VICTREE £65 (PLUG-IN MODULE)
The VICTREE fits neatly into the cartridge port adding over 40 new commands to Basic, including advanced toolkit functions and Basic 4 disk commands. With the optional cable (£15 extra) VICTREE will drive a parallel printer through the User Port.

GAMES, GAMES, AND MORE GAMES
Our first arcade games are TANK ATAK and MANGROVE (£8 each). We can also offer an adventure game, the HITCH-HIKERS GUIDE TO THE GALAXY at £12. Many more games are in preparation.

WE ARE URGENTLY SEEKING DISTRIBUTORS FOR OUR PRODUCTS IN FRANCE, GERMANY, AND MANY OTHER COUNTRIES

M & J SOFTWARE

DRAGON COMPANION BOOK £4.95
Discover 7 extra graphics modes. Study the workings of BASIC with the disassembler. Take complete control of video memory mapping. Increase the processor speed (not a hardware mod.). Append programs from tape. Incorporate useful routines from BASIC in your programs.

DRAGON fig-FORTH £10
This is a cassette based implementation and is fully documented.

FORTH ASSEMBLY LISTINGS £7
6502, 8080/Z80, 6809, 6800, 8086/8088, 68000, PDP-11, 1802. These are standard fig-FORTH assembly listings.

INSTALLATION MANUAL £5
Necessary for implementing FORTH and its editor.

6502 MACRO ASSEMBLER £5
This program is written in fig-FORTH and is a structured one-pass assembler. It will work on any fig-FORTH implementation with only one alteration. Control structures include:- BEGIN, END, AGAIN, IF, THEN, ELSE, ENDIF, REPEAT, UNTIL, WHILE,

All prices fully inclusive of Postage and Packing etc. Cheques and PO's to: M & J SOFTWARE, DEPT. 6, 34 GRAYS CLOSE, SCHOLAR GREEN, STOKE-ON-TRENT ST7 3LU

PET HI-RES!

£149 plus VAT brings you 320 by 200 dot resolution on your PET/CBM screen. No soldering is necessary - SUPERSOFT graphics boards just plug in!

Three models are available: for 80-column machines specify the HR80 board; large screen 40 column machines need the HR 40B board; for other machines (except very early PETs with no Rom sockets) order the HR 40 board. All three boards add 8k of RAM and include GRAPHIX machine code utility software in EPROM. Over 500 boards have been installed in the UK – by schools, colleges, hospitals, research establishments, even home users – and hundreds more are being exported worldwide.

SUPERSOFT are Commodore specialists. We have a large range of software, accesories, and supplies for existing COMMODORE machines and will be supporting new machines as they are launched. Our 20 page catalogue is free to owners and users of PET/CBM machines – but here's a selection of products to whet your appetite! Add 15% VAT to all prices.

BUSICALC (FINANCIAL SPREADSHEET) £39.00
PAPERMATE PLUS (WORD PROCESSOR) £45.00

DRAGON ATOM ORIC I

Add low cost 10 power with a V.I.A. board drive extra I.O. devices from LED lead and switches to extra peripherals link to micros for data/program transfer, spool listings to a second micro to print/fave etc (see TEVLINK below).

HARDWARE

6522 V.I.A. provides 16 IO lines + control, serial port, twotimes, interrupt register, IO, voltage and interrupt lines taken to 26 way I.D. plug for easy connection to peripherals etc.
Connectors available for Dragon, Atom, Oric 6522A version should be out soon. The board may be interfaced to most other 6502/6809 micros, and maybe between m/c's by changing the plug-in connectors.

SOFTWARE "TEVLINK"

package provides two-machine parrel link (two boards needed) over all speed about 8K DATA bytes/second with error checking. A PRINT SPOOLER is included (only 1 board needed): connect printer part to V.I.A. boards on receiving micro and use normal LIST/PRINT etc.

Assembled board + Atom connector **£16.50**
Assembled board + Dragon connector **£18.75**
Assembled board only/for your interface **£14.00**
Atom connector ..... **£4.00** Dragon connector **£6.00**
Cable: printer port to V.I.A. (State machine) **£7.00**
TEVLINK board to board cable **£4.50**
TEVLINK software Dragon/Atom/Cassette **£7.75**
Blank cassettes/cased 10xC10 for **£5.75**

OTHER SOFTWARE

Cave Quest-underground quest for the ring of power. Dragon/Atom/Oric cassette **£2.30**
Laser invaders – dragon joystick game **£2.30**
Tevrog's Kingdom – a real time quest for magic powers and survival Dragon/Oric **£5.75**

Other software and hardware available soon! WANTED!!! Good software (games & sirius) for royalties or outright purchase. Send for details. Mail order only. Send for Lists/details. All prices fully inclusive + p&p.

ORIC-1 SOFTWARE

ORID INVADERS

You must defend earth from hordes of bomb dropping Space Invaders, using only your earth bound laser base. The more invaders you hit, the faster they come – leading to a gun-blazing shoot-out as finale. Written in MACHINE CODE, at £4.00 (post free).

MUSHROOM MANIA

Blast the fast moving centipede, as it snakes down towards you, in the depths of the green forest. Score points by shooting-up mushrooms, and the deadly spiders. But beware of the hungry PACPERSON, which will gobble anything in its path. The higher your score rises, the faster the action becomes, until it is only a screaming blur of colour and sound. Entirely in MACHINE CODE, £4.00 (post free).

Please mention PCW and specify 16K or 48K ORIC-1 when ordering

MZ-80k Trains

Adapted by Frank Rooney from a PET program by Jeff Aughton.

PET owners may remember Jeff Aughton's 'Trains' in the October '82 issue of *PCW*. This program is an adaptation for the Sharp MZ-80k.

A grid is drawn on the screen to represent a railway network with between ten and sixteen points depending upon the skill level chosen (1-3). The idea is to manipulate these points, using the keys A to R, in order to prevent a rapidly increasing number of trains from either colliding or derailing at open points. Just to keep you on your toes, the points will take it upon themselves to close down for repairs at random intervals. You are scored on the length of time you manage to control the network without killing any passengers!

It's a highly addictive game requiring fast reactions and the ability to keep an eye on several different parts of the screen at the same time. There's a sub-routine at line 930 which prints a message congratulating you on having survived for longer than five minutes; the only place I've seen this message is in the listing. . .

PET Zombies

by P Barker

'Zombies' is a PET version of the arcade game. A number of zombies converge steadily towards you, their one goal in life (?) to zombify you. Your only defence is to lure the zombies into the open graves dotted around the screen and thus postpone your eventual zombification for as long as possible. You can have anything between 20 and 50 zombies, and you control your movements via the number keys as explained in the program. If you avoid your horrendous fate for longer than five minutes, I reckon that's pretty good going.

MICROMART

The SATURDAY dBASE II INTRODUCTORY COURSE

This course enables a rapid grasp to be gained of using database packages, in particular **dBASE II** (TM: Ashton Tate), on micros under CP/M. It is planned for those who have litte or no prior knowledge of data base systems on computers, or **dBASE II**, and starts virtually from scrach covering:

- Introduction to Micros & CP/M
- Databases on Microcomputers
- Introduction to **dBASE II**
- Hands on use of **dBASE II**
- System design for **dBASE II**
- Programming in **dBASE II**
- Practical work on **dBASE II**
- Programming aids & style

Numers are **strictly limited** to not more than 20 delegates. Registration is at 0900-0915, lunch 1300-1415, and conclusion at 1800. Several micros are used for hands on work including: Osborne, Sirius, Televideo, Galaxy, etc. Four lecturers are present so as to ensure that every delegate receives individual help in the practical sessions.

The next course is on Saturday **JUNE 4th**. Currently planned dates are for the following SATURDAYS at a West London hotel:

June	4, 18
July	2, 16, 30
September	10, 24
October	15, 29

Cost: £90 + VAT payable in advance but with scaled refunds if cancellation within specified notice periods. Cost includes course material, meals and refreshments, and a copy of Arthur Green's book: "dBASE II User's Guide". Payment by Cheque, PO, Access or VISA. Detailed explanatory leaflet available with fuller description. To make a booking or to obtain further details, telephone or write to: Steve Conlon at:

AQUA COMPUTING LTD

Commodore 64 Sprite editor

by A R Bennet

A Sprite, for the unenlightened, is a programmable graphics object 24 pixels by 21 pixels — a sort of high resolution user-definable character. Working out the codes for these little creatures (or planes/missiles/space invaders/etc) is normally a boring and time-consuming task. This editor, however, allows you to 'draw' your sprites on the screen using a joystick, so you can design hundreds of weird and wonderful creations quickly and painlessly. You simply draw your design, enlarge it along either axis as you wish and then let the editor produce the appropriate code which it will helpfully place into DATA statements for you.

To quote Simon Rockman, who checked the program for *PCW*, the editor is '. . .very nice to use, does the job perfectly and is better than the one I bought. I will be using this version in future.'

The joystick, by the way, must be connected to port 2.

UK 101 SOFTWARE ON TAPE

from the guy who wrote "Le Passe Temps"

GALACTIC HITCHHIKER (8K). An adventure, all in machine code. A beauty! **(£7.00)**
SUPERTREK (8K). Sail boldly through the universe, zap-ping moving Klingons in real time. Superb graphics. **(£7.00)**
STARTREK (8K). The old favourite, beautifully presented. **(£6.00)**
LUNAR LANDER. A real challenge. You won't get down in less than 3 hours. **(£3.00)**
HANGMAN. Excellent graphics. P.E. said so! **(£3.00)**
BASIC TUTOR (8 x 4K). The only way to learn – at the keyboard. **(£12.00)**
LE PASSE-TEMPS. You NEED this, if you haven't already got it. **(£3.00)**
MAD MONK (8K). It's ready at last! A machine code adventure with some truly remarkable graphics, this programme is in a class by itself. **(£9.50)**

These ORIGINAL PROGRAMS are compatible all 2K Monitors and are available for 16 x 48 and 32 x 43 displays (including exhanced Superboards).

HARDWARE

These kits are complete in every way. Full socketed high quality PCB, all components, switches etc. plus preformed cable assembly for easy interconnection to J1, or our
MOTHERBOARD SYSTEM. Now you can add on all those extras easily. Provides eight, yet EIGHT, fully buffered J1 type sockets. **(£19.50)**
8K STATIC RAM BOARD (£39.50)
HI-SPEED CASSETTE INTERFACE. At last, a system that works COMPLETELY RELIABLE 4000 baud (8000 with reasonable cassette) plus software for named file handling. A delight to use. **(£19.50).** *For software in EPROM, add* **£8.00.**
VIDEO ENHANCEMENT. Switch selectable 16 x 48 or 32 x 48 displays without butchering your computer. **(£19.50)**
Monitor EPROMS re-blown to suit for just **£2.50.**
8K EPROM BOARD (£19.50). A 2K Extended Monitor is available in EPROM FOR **4cecE.00** plus, coming soon, TOOLKIT in EPROM and BASIC V.
MONITOR BOARD. Plug into Monitor socket to provide switch selection of up to 4 EPROMS. **(£9.50).**

AVAILABLE SHORTLY: EPROM Programmer. PIA/ Sound Board. Analogue Board and something rather nice on the graphics side.

All inclusive. Please add 15% VAT. Write or phone for further details.

Spectrum Blaster

by Alan Green

Well, yes, it is another space-invader type game, but it has redeeming features. Like the fact that it demonstrates many of the special features of the Spectrum, including colour (BRIGHT, FLASH, INVERSE, etc), sound (ok, bleep) and user-defined graphics. And anyway, *I* happen to *like* zapping bug-eyed monsters.

The program runs on both 16 and 48k machines and contains full instructions: the usual 'blast the aliens before they kill your grandmother and eat your pet dog' (or visa versa, of course). Please note that the 'A', 'B' & 'C' in lines 40, 50 & 60 respectively should be entered as graphics A, B & C. The same applies to 'B' and 'C' in line 487. Thanks to Neil Marshall for the modifications in lines 212 and 214.

ACCOUNTANCY AID

continued from page 197

The alternative, then, is to separate each day's processing and to enter the routine, introduce the entries for the day's bankings and then exit the routine. A disadvantage here is that you will probably get a form feed and have a separate sheet for each single day's banking transactions, and that adds up to a lot of paper at the end of the month.

Sadly, most of the suites that I have seen do not allow a sub-total of each day's transactions.

General

One of my personal hates is piles of stationery, and systems which insist upon keeping you hanging around while the printer trundles out the items that you have just entered. In my opinion, this defeats the whole object of efficient use of the machine itself. There are better ways of handling the situation such as entering the transaction into a temporary transactions file which is directed to the printer only when the contents of that file are posted into the ledger system. Some packages actually do this. Indeed, if the system is fast enough and you have an external large capacity printer buffer, you might well find your computer is held up by a transmission of data to your printer for seconds in the hour rather than a large number of minutes.

In reviewing accounting software over the last few years, I have compiled a series of notes which eventually found their way into a questionnaire and this questionnaire gets updated from time to time. Within the last four months I have sent it to a number of software vendors.

Pegasus answered it in full. TABS and Compact didn't reply. ACC banned me from demonstrations of Pulsar by its dealers on the grounds that I was dealing in a rival machine (it could be true).

Microshade – which was only available on CPM-80 machines when I tested it – did, as I mentioned above, include a cash book and also had a delightful standing order handling routine although the suite had other drawbacks. The company did respond to my various criticisms and it appears that the update of their suite (then being tested) incorporated some substantial improvements, and I look forward to seeing the new version.

For the last eighteen months I have actually been using an American version of the Peachtree software, which was written some three years ago. It has proved very reliable. Indeed, we haven't had one single error, but in many respects – probably because of its age and origins – it is very primitive. I feel sure that the Peachtree software available today will be much more sophisticated, although I have not actually tested it. Two years ago I saw Graffcom software and at the time I rejected it on the grounds that certain reports could only be received if they were printed rather than be seen on the screen, and I regarded this as time consuming and wasteful. Naturally, two years is quite a long time and things may have changed. END

SPECTRUM PLUS

continued from page 147

all at different memory locations and are designed to slot in with whatever other parts of the system are being utilised. The other parts include Sofmon — a comprehensive and easy to use disassembler/monitor — a graphics kit and a programmer's toolkit.

Softime is unique in that it offers a digital clock with alarm and stopwatch facilities that can be left on display while entering or running a program. It is fairly accurate in normal operation but is adversely affected by SAVE, LOAD or BEEP. But the real value of Softime is the fact that it gives nine function keys —seven of which may be defined by the user with up to 100 bytes of Basic. These keys are accessed by using the SPACE key as a third shift key — holding down SPACE and key 0 allows you to define/edit/inspect each of the digit keys. Key 1 is set to RANDOMIZE USR 49152 to use Super C; key 6 toggles the clock on and off screen; key 8 allows you to set 'ON ERROR' to whatever takes your fancy, and key 9 does the same for 'ON BREAK'. The other keys can be given any function you desire — the only restriction is that the code for each key must be 100 bytes or less. You can, of course, change the functions on keys 1 and 6 if you wish. You have the choice of defining a key with code that is executed immediately (as in RAND USR 49152) or with Basic that is brought down in editing mode. This is done by putting REM after the definition — thus to access the toolkit you would define, say, key 3 as RAND USR 63488: REM . If you now press SPACE and 3 the line is brought down and you simply tack the toolkit function on the end before pressing ENTER to execute it.

I was not over-impressed with Softek's compiler, which seemed to me to be overpriced in comparison with its rivals. With Softime, though, I think the Softek programmers have excelled themselves — as far as I know it is the first implementation of function keys on the Spectrum and it certainly makes using the compiler, toolkit or assembler very easy. Highly recommended at £8.99.

LEISURE LINES

by J J Clessa

Quickie

A rope ladder hangs down the side of a ship. The rungs on the ladder are one foot apart. At low tide the water just covers the bottom rung. At high tide the water level goes up by 3 feet. How many rungs will be covered then? The answer is *not* 4.

Prize Puzzle

In my house there are many cats. Seven of my cats won't eat fish, six of them won't eat liver, and five won't eat chicken. Four of them eat neither fish nor liver. Three of them eat neither fish nor chicken and two of them will eat neither liver nor chicken. One of them will eat neither fish, liver nor chicken, and none of them will eat all three foods.

How many cats have I got?

MARCH PRIZE PUZZLE

Not a very big response for this puzzle. About 50 replies in all, of which 16 were able to give an *exact* answer to the problem.

Incidentally, about 10 of the replies did not qualify for the prize since they were not on postcards. Please remember postcards (or backs of envelopes) only for your entries.

Several of the correct entries came from overseas but the winner, selected at random, was Mr Martin Brown of Worksop, Notts. Congratulations Mr Brown, your prize is on its way.

Mr Brown's solution was:

X = 5 476 209 930

Y = 20 000

which gives the required value exactly.

SPEAK TO US AND WE'LL SOON HAVE YOU TALKING TO A NEW APPLE

The above are just a selection of the many helpful Apple dealers around the country.

Most offer training courses as well as a complete back-up service, and many will lease you an Apple for as little as £70 a month.

Remember, whatever you do you'll do it better with Apple. And with a dealer network like ours it's easy and convenient to get started.

Everybody should have a friend like Apple.

BACK ISSUES SERVICE

Here is a complete guide to all available back issues of *PCW*. A quick guide to their contents is shown below. Check the coupon overleaf for the issues you require.

Volume 1 No 1, 1978
The 77-68/Practical hints on kit building/Nascom 1/Charity case study/Flowcharting/Pontoon flowchart.

Volume 1 No 2 1978
Kit building Basic — first steps/ Case study — a software house/ PET 2001/Research machines 380Z/School computing/E78 — Europa Bus.

Volume 1 No 3, 1978
More efficient programs/Cosmac 1802/The PDP11 Part 1/Small busines computing — an approach/ The Z80/EPROM programmer construction.

Volume 3 No 6
June 1980
Benchtest: Tandy TRS-80 Model II/ Benchtest: Sintrom Periflex 630/48/ Staff case study/Checkout: Softy Intelligent EPROM Programmer/ Checkout: Exatron Stringy Floppy/ Practical examples of the IEEEE-48 bus use/Programs: Naming Nascom files/380Z Pictures/Fuel tank calculations — PET/PET large numerals/PET tank battle/Basic string handling.

Volume 3 No 12
December 1980
Benchtest: Microwriter/ Printerfacing: Series — Part 1/Sharp PC-1211 speed-up/Programs:TRS-80 Tarot, PET Cat & Mouse, PET Rebound, MZ-80K Alligator Swamp, PET Connect, UK101 Minefield, PET Simon Benchtest: Raannd SP1

January 1981
Benchtest: Transam Tuscan/Real-time control using trains — part 1/ Recover from a data tape disaster/PET Music Multi-user systems — part 1/Programs: TRS80 Four in a row, TRS80 Target Practice, PET Convoy, PET Wire, PET Maze Chase, PET Android Attack, PET Anagram

Volume 4 No 3
March 1981
Benchtest: Onyx C8002/Benchtest: Bigboard/Micro music software package/ALC circuit/Commons report/HP 43C/Programs: TRS80 Show Jumping, PET Grand Prix, PET Aircraft landing, PET Bouncy.

Volume 4 No 5
May 1981
Benchtest: Pascal 640/WP Benchtest: Magic Wand/PET colour/Low-cost digital tape system/ Using calculator printers on micros/ Apple music-making/Multi-user Benchtest: MVT-Famos/Programs: PET Grand Prix, PET Aircraft Landing, PET Bouncy.
report/Radio Teletype/WP Benchtest: Wordpro 4 plus/Budget tape interface/Further Casio quirks/ Programs: UK101 Zor, PET

Volume 4 No 6
June 1981
Benchtest: NEC PC-8001/Multi-user Benchtest: MP/M/Benchtest: Sinclair ZX81/West Coast Faire

Volume 4 No 8
August 1981
Benchtest: Tandy Model III/ Viewdata update/WP Benchtest: Spellbinder/Printer survey/ Microholism/Programs: ZX80 Othello; Easter Sunday; Apple Mondrian; MZ-80K Duck Shoot; PET Gomoku; MZ-80K Football.

Volume 4 No 7
July 1981
Benchtest: Sharp PC-3201/Multi-user Benchtest: Acorn Econet/Case study: Accident investigation on TRS-80/Zilog Z8 family/WP Benchtest: Format-80/Pascal Benchmarks: readers letters/Quicker Casio computations/Programs: ZX80 Sliding letters, UK101 Car Rally, TRS-80 Calendar, UK101 m/c code to Basic converter, PET Exam Questions, MZ-80K Designer, ZX91 Sketch Pad.

Vol 4 No 12
December 1981
Benchtests: Sharp MZ-80B Philips P2000/School network/BBC Micro inside story/'Turtle' Graphics for Apple/Forth language/Curve fitting/ Calc corner: HP14C review/ programs: PET Fantasy, ZX81 Battleships and cruisers.

Vol 5 No 1
January 1982
Benchtests: BBC Micro Xerox 820/Frames of Reference (new series)/ZX81 printer Checkout/ Digital Drummer for PET/Calc Corner: benchmarks/Programs: MZ-80K Fortune, TRS-80 Reaction Timing, ZX80 Laybrinth, Apple Letters.

Vol 5 No 3
March 1982
Benchtests: Texas Instruments 99/ 4A, Hewlett-Packard 125/Choosing a Database/Compsoft DMS REVIEWED/Screenplay (new series)/Calc Corner: Hewlett-Packard Interface Loop/Programs: TRS-80 Solitaire, TRS-80 Ducks, Nascom Business Documents, MZ-80K Race Chase, ZX81 Graphplot.

Volume 5 No 4
April 1982
benchtest; Monroe OC8820/DB Benchtest: FMS-80/Checkout: Sid 1/Generating screen forms/Comal/ Logo/Brain Dump-New series/Calc Corner: Casio FP-10 printer/ Programs: TRS-80 Maths & Trig, PET Boot the Cat, ZX81 Resistor & Res code.

March 1983
Benchtests: Corvus Concept, Computers Lynx/Database Benchtest: DataPrism/Which Spreadsheet? — Prophet II/IBM 9000 Instrumentation Computer/ Apple Word Handler/Networks — Part II/ZX81 Graphics Module/Sharp MZ-80k Enhancements/Micro Chess — the Conchess range/Screenplay — Atari 800/Portable Computer World — hex listings for Casio fx602p and Sharp PC1211/Programs: Atari Animation/Chinese Horoscopes/ PET Patience.

BACK ISSUES CENTRE

We have a complete selection of all available *PCW* back numbers in our flashy new Back Issues Centre in the West End of London, just half a minute's walk from Oxford Street (close to Tottenham Court Road tube station). Of course, you could order them from our excellent mail order service using the coupon below, but by visiting in person you save on postage costs. The Back Issues Centre also often has back numbers of *PCW* on sale which we cannot offer through the mail order service because of shortage of stock. Our receptionists will also be happy to sell you a set of binders to take your subscription. And there's a range of interesting computer books on sale as well. Drop by next time you're in the West End. We're open Monday to Friday, 10am to 6pm. The address is 14 Rathbone Place, London W1P 1DE.

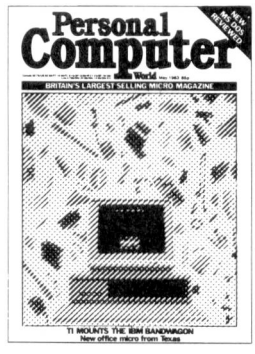

Come up and see us... Mon-Fri 10am-6pm Saturday 11am-6pm

Vol 6 No 4
April 1983
Benchtests: Oric-1, LSI M-Four/ Database Benchtest: Rescue/Which Spreadsheet? — Multiplan/Networks — Part 3/Shelton Signet/A Look at C/Interfacing the BBC Micro/ Screenplay — Dragon 32/Petspeed compiler/Speech on the BBC/Dork program generator/Micros in dentistry/Genealogy — Coding family relations/Portable Computer World — Tax tables on Casio/ Chess — Intelligent Software/ Programs: BBC Bigprint/PET Billy/BBC Engine Failure/ZX81 Molecular Weight/1K Adventure/ Beebdump/TRS-80 Word Scrambler.

Vol 6 No5
May 1983
Benchtests: Commodore 64, TI Professional/Database Benchtest: MicroPen/Which Spreadsheet? — Plannercalc/Word Processor — MicroScript/Audio training packs/Reliable Code/Centronics Hook-Up/BBC Music/MS-DOS 2/ Lisp/Screenplay — 2X Spectrum/ Portable Computer World — Casio PB100/Chess — Mephisto/ Programs: Oric Bug Eater/Spectrum Big Print/MZ-80k Mole Man/BBC Paintbox/MZ-80k Terrapin/MZ-80k Double Trouble/Tandy Colour Demos.

CHANGE OF ADDRESS

Readers should note that all mail order subscriptions, binders and back issue enquiries must now be addressed to 55 Frith Street, London W1.

However, for personal callers only, a selection of *PCW* back issues, binders, micro-computing books etc can be purchased from the shop at 14 Rathbone Place, London W1.

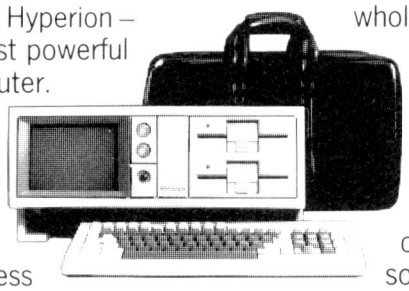

Any one issue £1.50; all additional issues £1.00 each. Benchtest special £1.80. Desktop Computing £2.25. Binders £3.95 each. All prices include post and package. *Overseas orders requiring Air Mail postage add £1.00 per copy. Cheques/P.O. payable to Computing Publications Ltd, 53/55 Frith Street, London W1A 2HG Please allow up to 3 weeks for delivery and don't forget to state your name and full address with your order. Please send me the following copies of PCW. I enclose a cheque/P.O. for £... Please tick appropriate boxes.

Name _____ Address _____

Introducing Hyperion – the world's most powerful portable computer. Weighing in at less than 20lbs. The new star which makes other personal business computers seem small-minded. Or heavy footed.

The petite Hyperion is biggest in performance, with 256kb memory (four times what most competitors offer). Truly, for the first time, a whole business can be carried in a small case.

Naturally, the Hyperion is IBM-pc compatible – and it's cheaper. It also runs the MSDOS and BOS operating systems – so you can interchange disks and data. And it offers an extra the IBM doesn't – a RAM disk. Unlike other portables, the Hyperion displays star quality on a large seven inch screen – with crisp, clear presentation.

And it looks the part – so stylish, yet unobtrusive on the desk. The Hyperion. What it takes to be a star.

For more information just fill in the coupon below and send to Gulfstream Technology Limited Unit 3A, Tunnel Estate, 726 London Rd, West Thurrock, Grays, Essex RM16 1LS
Telephone: (04026) 4926

Mini Micro or Super Micro?

Only Cromemco offer this depth of choice

Two solutions representing the extremes of microcomputer evolution–both from the Cromemco stable –both breaking new ground in microcomputer technology–both unbelievably cost competitive in their specific areas of application.

C10 Mini Micro- The Manager's Micro for just £1195 complete. Designed for the Manager's Desk, or his staff. A stand-alone Desk Top 64K, Z80A, single board Personal Computer–with 12″ easy to read, green phosphor screen, detachable keyboard with optional function keys and numeric pad, plus 390K floppy diskette drive; supplied complete with CP/M compatible operating system, easy to use word processing and financial planning/spread sheet application software and 32K structured BASIC.
The Cromemco C10 is the first stand-alone micro to make computer power cost effective at an individual by individual desk top level throughout an organisation or company, with the opportunity of adding full networking capabilities at a later date.

68000 Super Micro- The DP Professional's Dual Processor Micro. The Dual Processor Micro-computer with a Motorola 68000 16 Bit processor **plus** an on-board software selectable 8 Bit Z80A. You have a choice of S100 bus systems with comprehensive I/0 options for business, scientific and research applications, and memory expansion of up to 4M Bytes. You have the option of 5″ or 8″ floppy diskette drives, or Winchester Hard Disk subsystems up to 70+M Bytes, with a choice of CP/M compatible system software or Cromemco's Cromix; a 12 station Unix-like multi-user, multi-tasking operating system. Cromemco's comprehensive 16 Bit and 8 Bit development language library includes FORTRAN, BASIC, PASCAL, COBOL, C, RPG11, Assembler, LISP and RATFOR.

If hardware and software compatibility, and future networking potential are prime considerations for your organisation, then Cromemco must be the first and only choice.

Comart are Cromemco's longest standing, most experienced European Distributor. So with Cromemco choice, and Comart support you won't have to write off the past to step on forward into the future.

SOFTEK
SOFTWARE

SOFSYS

The only true system for the ZX Spectrum Microcomputer. Sofsys comprises of a USR definable key program which allows single entry to the other units which include: Sofcom (our BASIC Compiler), Sofsem (our Assembler), Sofmon (our Monitor Disassembler), Sofkits 1 and 2 (our toolkit and graphics kit).

MASTER KEY This is the heart of Sofsys. This amazing program does the impossible. It offers up to seven user-definable keys, ON ERROR and ON BREAK definition, and a real-time clock with alarm and stop-watch features! They keys come preprogrammed for instant entry to any of the Sofsys units, but can easily be redefined. Astounding value at £7.99. Any ZX Spectrum.

SOFCOM Possibly the only true BASIC compiler for the ZX Spectrum, Sofcom is in use not only by many members of the public but also in industry and Universities around the world. It will compile virtually any integer BASIC which lacks full string handling and an enhancement will be available in May to allow Sofcom to handle floating point and strings. Sofcom works in a 48K Spectrum, uses its own (faster-than-ROM) routines, and costs just £14.95. Available at W. H. Smith.

SOFMON The most complete disassembler/monitor on the market. It has around 25 functions and facilities. It has the uniquely useful feature of disassembling HEX as you modify memory. Tantamount to a mini assembler. Only £7.99 for any ZX Spectrum.

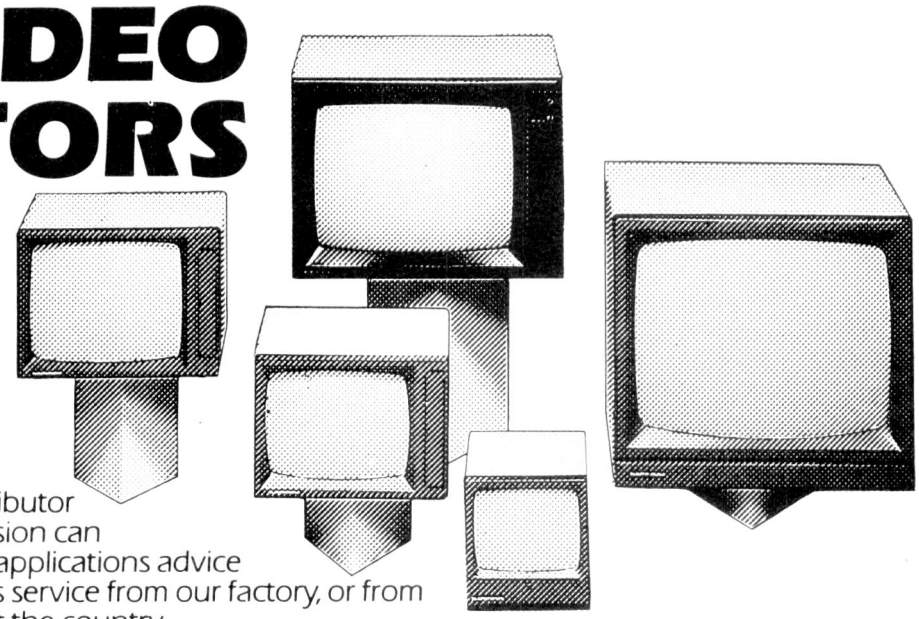

SOFKIT 1 Our toolkit. This superb toolkit offers not only a full renumber routine, search and replace, display variables, and the only implementation of TRACE for the ZX Spectrum. Any memory size. Only £7.99.

SOFKIT 2 Our unbeatable graphics kit. This kit offers scrolling in any direction, instant attribute change, define a separate window, store extra screens and create cartoon effects. Plus much more! Any Spectrum. Only £7.99.

SOFSEM Coming very soon. We need only say that as well as forming an integrated part of Sofsys, it will be quite simply the best assembler for the ZX Spectrum.

329 CROXTED ROAD, LONDON SE24

PROFESSIONAL VIDEO MONITORS

Telefusion have the full range of video monitors manufactured by Electrohome. These monitors are extremely rugged, dependable and available in a variety of screen sizes, and phosphor options, to suit the Communications, Industry, Home and Office Computer and OEM.

As the U.K. authorised distributor and service repair centre, Telefusion can offer competitive prices, expert applications advice and a comprehensive after sales service from our factory, or from the regional depots throughout the country.

One card every dealer should have up his sleeve

The ***PROFIT LINK*** *card – the symbol of membership of a national accredited dealer network supplying Sapphire Systems quality software.*

A fully trained and qualified dealer network who believe increased profitability can only result from supplying ***quality products, quality service and quality support****.*

PROFIT LINK – why?

The business microcomputer user is rightly becoming more discerning in his choice of software, and is demanding quality in ***product performance, dealer service and after sales support****.*

Sapphire Systems believe that ***PROFIT LINK*** *will offer the dealer the incentives and support to service this healthy development more successfully.*

PROFIT LINK – how does it work for the dealer?

By becoming members, dealers will have the opportunity to sell Sapphire Systems proven software, including the outstanding SAPPHIRE MARS financial modelling system, across the majority of business microcomputers.

To ensure the excellence of service and support to their customers membership provides: –

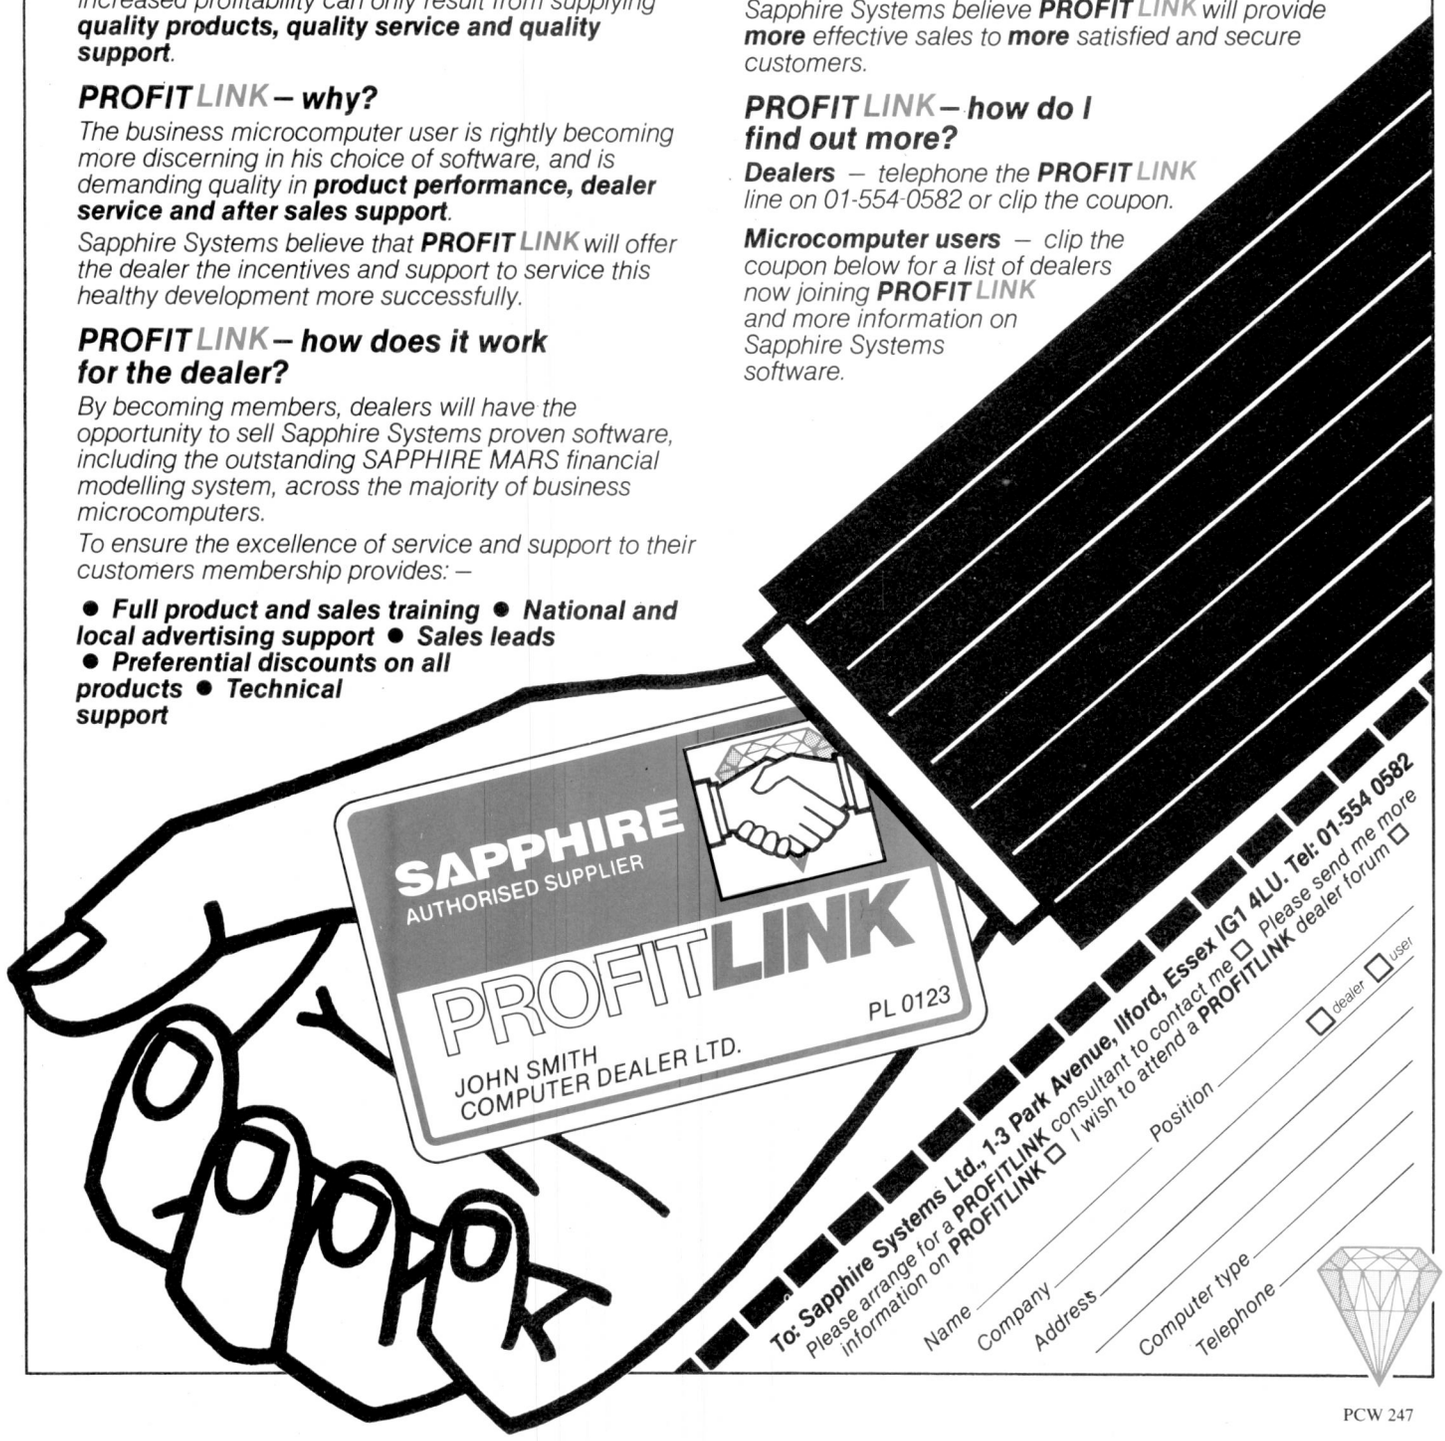

• Full product and sales training • National and local advertising support • Sales leads • Preferential discounts on all products • Technical support • Special offers • Continued product development and enhancement • Plus much, much more.

Add all these benefits together and you will see why Sapphire Systems believe ***PROFIT LINK*** *will provide* ***more*** *effective sales to* ***more*** *satisfied and secure customers.*

PROFIT LINK – how do I find out more?

Dealers *– telephone the* ***PROFIT LINK*** *line on 01-554-0582 or clip the coupon.*

Microcomputer users *– clip the coupon below for a list of dealers now joining* ***PROFIT LINK*** *and more information on Sapphire Systems software.*

Fourth Generation

(Fourth-Generation-Users get more)

The most advanced micro-computer; the Fourth Generation will be put onto market through a professional dealer-net. Compudata is searching for these dealers and will estimate the very best on the right level.

Becoming one of the leading manufacturers in just a few years isn't just appearing out of the blue.

The philosophy underlying this development is very simple:
Compudata only hires high qualified staff who design and manufacter even higher qualified products.

In many important area's Compudata's know-how is on an unequalled level.
Research for new and even better products is one of the fundamentals on which Compudata's continuaty is built. So is the relationship with Compudata's dealers. Compudata's technical and commercial reliability has become legendary already.

The more astonishing it was for some competitors, that it's Compudata introducing the Fourth Generation micro-computer.

It's what the professional dealer has been waiting for. From now on their is this link: Compudata and the TULIP System® I; a successful combination of which you will benefit from the very start.

16 BIT = 16 BIT = Compudata's TULIP System® I. With the TULIP System® I Compudata introduces a high speed and one of the most powerful micro-computers in the whole world. The appliance of the 8086 micro-processor plus the 8087 arithmetic co-processor is due to this.

The Fourth Generation is a fact now.

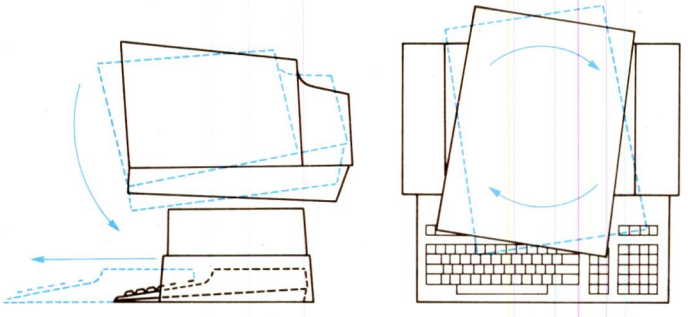

But not just its speed, also the fulfilment of all possible ergonomical requirements are very important.

Due to the vast keyboard with 103 clearly arranged key-tops, the TULIP System® I is very easy to operate and user-friendly.
What's more. Lots of standard software packages can be (are already)

dealers earn more.

implemented on the TULIP System® I.
The capacity? Main memory of standard 128Kb, expandable upto 896Kb. Mass storage of 350Kb Floppy Disk as well as 5Mb removable Winchester Hard Disk or upto 20Mb fixed types.

As much as 8 standard aboard and software selectable character sets ensure high flexibility. Together with the colours and high resolution graphics it makes the TULIP System® I to be unique.

Earn more: Professional Dealers will gain in selling the TULIP System® I. With its extra-ordinary price/performance you will find a blooming market for the TULIP System® I. Both you and your clients have been waiting for this.

Dealing with Compudata's TULIP System® I means for you: Selling the Fourth Generation quality and getting a "very attractive" profit.

Yes indeed, it's worth a great deal for Compudata to handle with the best dealers. Contacting us can mean the upmost to you: Phone Compudata 73-422045, telex 50316 cdata nl or write to Compudata BV.,

Hambakenwetering 2, 5231 DC's-Hertogenbosch, The Netherlands.
We speak your language – the language of the Fourth Generation.
Profile of the Fourth Generation: TULIP System® I.

"SNAPSHOT"

The Disc Copy Card TWO

*Apple II or II+ or Franklin, one drive and Language Card/16K required. Works with most popular cards, including Apple, Microsoft, Computer Stop, Merton, Ramex, Digitek, MPC, RH Electronics, Orange, Franklin, etc. Other brands: specify when ordering. Graphics dump requires graphics interface card and printer.

The disc copy card with all the great features of SNAPSHOT, plus:

WIDER COMPATIBILITY: Works with virtually any 16K card

EASIER TO USE: Just press the trigger on the attached extension cable. Never open your Apple's cover. Simple 1-2-3 copy procedure. Copies most programs in 30 seconds.

PEELINGS II magazine (Feb 1983) compares SNAPSHOT with Wild Card and Crack-Shot:

"Overall, with one of the supported RAM cards, SNAPSHOT is the best buy."

"The copy procedure is perhaps the easiest and clearest of the three cards."

SNAPSHOT will copy any memory-resident program that runs on the 48K Apple. SNAPSHOT uses your 16K RAM card* to interrupt a running program and dump the entire contents of 48K and registers to an unprotected backup disc. SNAPSHOT backs up programs that baffle nibble copiers like Locksmith without any complex parameter changes or trial-and-error hassle. And SNAPSHOT is still more effective, less expensive and easier to use than its imitators.

- ★ You have full, normal use of other hardware and software.
- ★ Ideal for debugging or analyzing programs.
- ★ Freeze-frame your game! Print the graphics on your printer and resume play.
- ★ Shooting down space invaders and the phone rings? Interrupt your game until later, or tomorrow. Save your high scores!
- ★ Repeatedly interrupt and resume running programs.
- ★ Faster and easier to use than nibble copiers or other copy cards.
- ★ Full monitor capabilities to examine, modify, trace, single-step or disassemble any interrupted program.
- ★ Suspend work with one program while you use another (for instance, interrupt word-processing a letter to look up an address in a database, then resume the letter exactly where you left off.)
- ★ Move protected programs to hard disc or 8" disk; copy several programs onto the same disk.
- ★ List "unlistable" Basic programs; make custom modifications. Backups run without SNAPSHOT present; most run without 16K card.

And there's more! Write or ring for complete technical information.

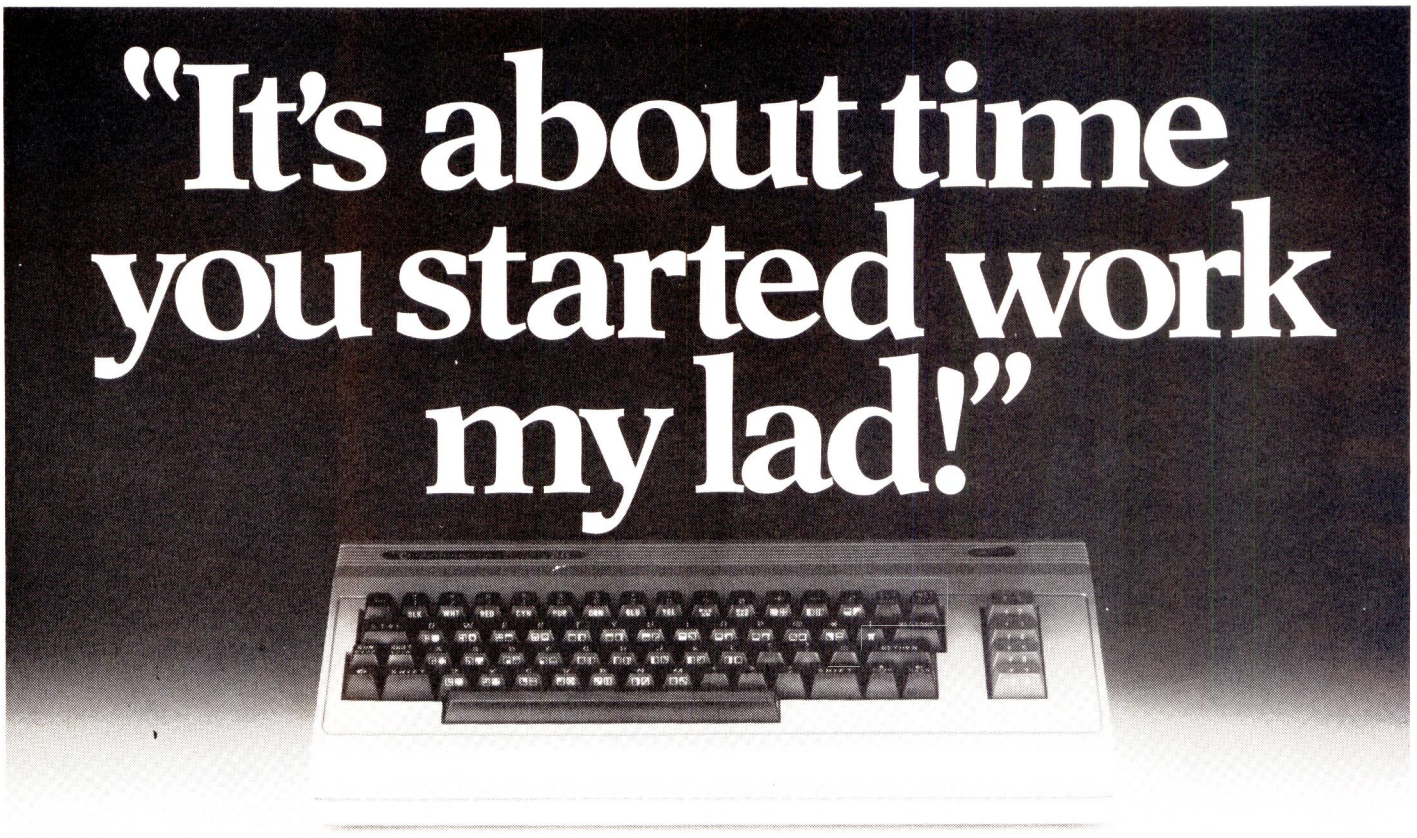

PRICE: **£95.00***

"It's about time you started work my lad!"

"All the money I've spent on you, young Vic. And all you do is sit around all day playing games."

"Well it's about time you started earning your keep like a big computer."

"With the help of PractiCalc you could give me a hand with the household budgets, business accounts, and even the work I bring home from the office."

"You could also help me work out cash-flow problems, choose the best life assurance policy, and decide whether it's best to pay for my double-glazing now with a loan, or to wait for a few more months."

"In fact PractiCalc would allow you to do in seconds, the kind of repetitive calculations that would take hours with a pencil and paper or pocket calculator."

"And do it for just £24.95."

"It really is about time you took your computing seriously."

PRACTICALC. THE SPREADSHEET FOR 16K VIC 20.

Also available for Commodore 64. (And soon from all good software dealers.)

ADD-ONS, ADD-INS AD INFINITUM

Tecmar's PC-Mate Add-ons will transform your IBM Personal Computer. They add breadth to its possible applications and depth to its capabilities. You can choose from over 60 PC-Mate Add-ons - all fully compatible with your IBM PC. You can improve your standard facilities, or add new specialised functions. You can share data storage and output resources between several PC's, or eliminate the need to purchase new PC's for more occasional and less demanding requirements.

Tecmar Add-ons are already proven in thousands of applications world wide, and are now available in this country from Comart–Tecmar's Sole UK Distributor.

Just look at the possibilities for expansions and enhancement–then send for further information, or talk to your local PC-Mate dealer. The possibilities are infinite.

1 DATA STORAGE EXPANSION UNITS

Add Data Storage as Fixed Disk Winchester in 5, 10 or 15M Byte Units, or Removeable Cartridge Winchester in 5M Byte Units, or twin 8" Floppy Diskettes–or any combination of all three in one neat visually co-ordinated unit. Shared System Adaptors and Software will allow data storage to be shared between up to 4 IBM PC's with full data integrity.

2 MEMORY EXPANSION

Add dynamic memory as individual 64K, 128K, 192K or 256K cards, or as integrated All-in-One cards with serial and parallel ports, plus calendar and clock. Add development capability with 32K CMOS Memory Cards with battery backup, EPROM and EEPROM Programmer/Readers and Expansion Cards, and Static RAM/ROM Cards.

A visually compatible expansion chassis provides a further 11 expansion slots to accommodate PC-Mate Add-ons, keeping your system looking neat and tidy and the expansion slots in your IBM PC free and available for future needs.

3 EXTENDED I/O CAPABILITY

Add-on multiple Input/Output capabilities in a single expansion slot; medium speed serial and parallel ports emulate IBM ports, and are fully IBM software compatible. Add Communications potential with multiple RS232 ports with optional DMA high speed data transfer capabilities. Add a further shared resource facility for up to four IBM PC's sharing a common printer.

4 INDUSTRIAL/SCIENTIFIC/LABORATORY INTERFACES

Add-on a full range of industrial, research and laboratory equipment and test device capabilities via an IEEE-488 Interface with an optional Software sub-routine library. Add-on multi-channel 8 and 12 Bit Digital/Analog converters, 8 to 16 Bit Analog/Digital converters or a Digital Input/Output option. Add-on stepper motor controllers, timers, counters and other aids to advanced data acquisition and process control functions.

5 GENERAL SUPPORT

Add-on a whole armoury of special purpose cards for voice recognition, video digitizing, special cursor movement control, timers/clocks/calendars, or external device control for security and energy conservation applications. You can also add-in the essential supporting software for all PC-MATE Units, and boards including useful sub-routine libraries.

Please expand my information on PC-Mate Add-ons and Add-ins specifically developed by Tecmar for the IBM Personal Computer

When you play chess with the Dragon 32 Family Computer, you're taking on a real challenge.

Because Dragon's Chess program was put together by a genuine Grand Master.

This doesn't mean you have to be Boris Spassky to enjoy a game, however.

Dragon Chess offers 9 different levels of difficulty.

So whether you're just a beginner or a champion, you can be sure we'll match you with a worthy opponent.

THE FIRST FAMILY COMPUTER.

While the Dragon teaches you better chess, you're also learning something else. You're becoming familiar with the new technology of computers - technology that's becoming increasingly important in all our lives.

The Dragon 32 is the first family computer. It's easy to use. It's easy to learn - thanks to its beautifully simple instruction manual. And once you get going, it's very hard to stop.

You'll be surprised how quickly you and your children pick it up.

And nowadays, you

Our chess program

can hardly offer them any more valuable experience.

SOFTWARE TO MATCH.

The Dragon's 32K RAM memory means that it's a serious computer. But it also offers a lot of fun.

A whole range of games software, with popular arcade-type games like Meteoroids, Astroblast and Cosmic Invaders.

And complex and mystifying Adventure games like Calixto Island, Madness and the Minotaur, and Quest.

Our new software range doesn't stop there. There's our Personal Finance program, to help you organise the family's finances. Educational programs like our Typing Tutor, which uses the Dragon's own keyboard to teach you to type.

And every month, we're adding more and more new titles to our range.

Next time you feel like a game of chess, make friends with a Dragon.

It could introduce you to a lot of new mates.

DRAGON 32

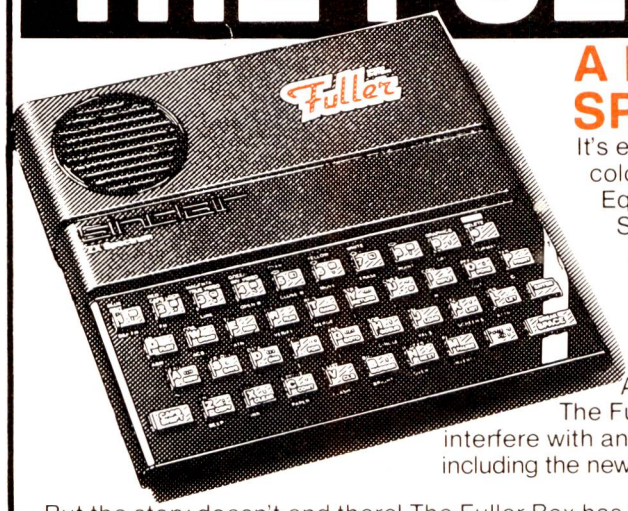

The first family computer.

has plenty of mates.

NOW . . . FOR ZX SPECTRUM USERS EVERYWHERE

THE FULLER BOX...

A NEW DIMENSION IN SPECTRUM CAPABILITY

It's easy to see why the ZX Spectrum is outselling all the other small colour computers, it really is a marvel of new technology.

Equally marvellous is the new 'Fuller Box' for your Spectrum.

Sound Quality is improved enormously with the built in *Audio Amplifier* which works with all Spectrum programs. *The Sound Synthesiser* will make any sound you want to design: explosions, laser blasts, trains, birds etc. It's based on the popular G1-AY-3-8912 chip, and is supplied with a demo program.

Finally, the *Joystick Port* enables you to use any low-priced Atari/Commodore joysticks with your programs.

The Fuller Box fits neatly on to the back of your ZX Spectrum,and does not interfere with any peripherals, including the new Spectrum microdrives.

PRICE (INC. VAT)

£29.95 + 80p p&p

But the story doesn't end there! The Fuller Box has been designed to perform many other functions, and extra, expanded versions are already available.

The Fuller Orator An amazing Speech Synthesiser which can be programmed to say anything you command, using the keyboard or demo cassette. It uses the GI SP0256 AL voice synthesiser chip; and comes complete with the Fuller Box.

£39.95 + 80p p&p (inc. VAT)

Fuller Sound Amplifier Box, including Audio Amplifier (non-expandable) **£6.95 + 80p p&p (inc. VAT)**

Fuller Orator upgrade kit – to fit inside Fuller Box **£24.95** (inc. VAT) (postage free, does not include Fuller box)

Fuller 'Master Unit' – including Orator, synthesiser, amplifier and Joystick port in Fuller Box

£54.95 + 80p p&p (inc. VAT)

Fuller FD42 System NOW FOR ZX81 or ZX SPECTRUM

This famous, best selling product immediately converts your ZX Computer into a sturdy, attractive and professional unit, with full size typewriter keyboard. A tough plastic case encloses the keyboard, P.C.B. and power supply. It has 42 keys including all the ZX81/Spectrum graphic characters printed on them. The full travel key switches have gold plated contacts and guaranteed life of 10^6 operations. IT'S SO EASY TO INSTALL! You simply unscrew the ZX PCB from its case, screw it to the FD case, and plug in the keyboard. No soldering or technical knowledge required.

NOW ALL ONE PRICE! £29.95 (inc. VAT) + £2.50 p&p

16K Spectrum Expansion Module – to fit into back of Fuller case – **£24.95** (inc. VAT & p&p).

RAM Adaptor Board – enables you to fit 16K Expansion inside Fuller case – **£9.75** (inc. VAT & p&p).

Fuller FDS Keyboard for the ZX81 or ZX Spectrum

Our new advanced keyboard has the same, fine specifications as the FD42 system, but with a new, re-designed case, space bar and double-sized shift and enter keys. A must for the discerning ZX81 or Spectrum user.

SPECIAL LOW PRICE £39.95 (inc. VAT) + £2.50 p&p.

Fuller ZX Spectrum Upgrade Pack

16K Spectrum owners – upgrade to 48K with a Fuller Spectrum Upgrade Pack – Complete with full assembly instructions. Model 2 or 3 only. **£23.50** (inc. VAT) plus 50p p&p

Personal Computer World
CENTURY

THE INFORMATION TECHNOLOGY YEARBOOK 1983/4

Century are pleased to announce the first edition of an essential reference manual, The Information Technology revolution touches every aspect of our lives – education, industry, the office as well as our homes. But for the uninitiated, it is a field cluttered with incomprehensible jargon and a bewildering array of new companies and products which are often difficult to track down.

Packed with clear definitions and practical advice, the Information Technology Yearbook 83/84 provides a comprehensive survey of the most important areas affected by this new industrial revolution.

The Yearbook comprises two main sections. The first is a series of sixteen state-of-the-art reports summarising developments in Information Technology as they affect areas from education to banking, from computers to telecommunications.

The second section provides a detailed dictionary of IT terms and a bibliography of IT related texts, plus a valuable database listing hundreds of hardware and software companies, products, names and addresses covering the whole spectrum of Information Technology in the UK.

In a single volume, the Yearbook gives you all you need for open access to the whole vital field of Information Technology.

Contributors include: *Robin Bradbeer, Donald Moore, Sir Norman Lindop, Diana Green, Donald Wray* and *Ken Keen.*

288 pages £14.95

CENTURY

If your software's not on the menu, they won't be ordering it.

How would you like to sell your programs to thousands of genuine, enthusiastic and committed users?

If you're a professional supplier, how would you like to get rid of all those merchandising headaches on your general and games software?

And how would you like to do all this from just one cassette?

Micronet 800 makes all this possible.

When this huge database for microcomputers was launched just a few months ago, it attracted thousands of enquiries from educational, business and home users. Users who could see the huge new vistas opened up by linking them with Micronet 800...an 'Aladdin's Cave' of hundreds of programs which can be downloaded to machines like the BBC Micro, ZX Spectrum, ZX81, Apple II, Tandy TRS80, and PET...hundreds of thousands of pages of news, reviews, product data and prices from the computer world and from *Prestel*...and an electronic mail-box for exchanging messages and ideas with other users right across the country.

All this for around a modest 15p a day. Subscribers are linked by telephone through a modem...making it the fastest and most direct means of selling your software downline to genuine and serious buyers.

Right now, Micronet 800 is looking for further general and games software to add to its enormous library. This is an opportunity which authors and suppliers, professionals and hobbyists, simply can't afford to ignore.

Get on-line today and find out what you stand to gain from Micronet 800.

Phone Robin Wilkinson, Software Manager on Peterborough (0733) 237111, or send your disk or cassette together with the coupon to Micronet 800 to the address below.*

Telephone: (312) 364-4141
Telex: 9106860036

Computer Products International Inc. is currently establishing European dealers and distributors to market our products. Due to the recent surge of European interest in CPI products, the company is embarking upon an aggressive dealer campaign to find highly qualified companies to market our products.

CPI is a highly technical manufacturing and marketing company with highly innovative microcomputer products. We currently have peripheral products available for the IBM PC, DEC Rainbow, Sirius, and Texas Instruments Professional Series.

If you would like to meet with us when we are in Europe, please contact us immediately so that we may make arrangements.

Examples of our products are as follows:

Product	Dealer Price U.S. Dollars
IBM Compatible	
64K Memory Board	199.00
256K Memory Board	299.00
10mB Hard Disk	1595.00

ORIC TREK SPACE ADVENTURE GAME

You are in command of the Federation's most powerful starship the USS Enterprise. Armed with your phasers and photon torpedoes, your task is to patrol the furthest reaches of the Galaxy, protecting Federation space against the forces of invading Klingons. Your ultimate mission is to rid the Galaxy entirely of the Klingon menace...before they destroy you. Your crew awaits you aboard the Enterprise. Starfleet Command wishes you Bon Voyage and Good Hunting!

ORIC products available from:-
WHSMITH ● DIXONS ● GREENS
LASKYS ● MICRO'C' ● MICRO PERIPHERALS ● SPECTRUM COMPUTERS FOR ALL
And hundreds of independent dealers.

Critical review?

"The sound commands on the Oric 1 are, for a computer of this price, very sophisticated. Three music channels, and one noise channel, mean that you can program some fairly complex sounds."

POPULAR COMPUTING WEEKLY

"Oric is everything you hoped it would be. Alive with colour, and zapping with built-in sound effects, the Oric looks like a match for any machine now selling for less than £200"

YOUR COMPUTER

"The 16k Oric – fighting the 16k Spectrum – is £25 cheaper. It feels a good deal more 'professional' than the home-appeal Sinclair. Oric's sound is extremely versatile, and well up to the standard of the £300 or £400 BBC microcomputer made by Acorn."

WHICH MICRO?

"Oric was over twice as fast as the Spectrum. Surprisingly perhaps the Oric, which initially seemed only faster when performing the simplest of calculations, has come back to beat the Spectrum by a small amount. As the problems get more complex the Oric comes into its own. One final point – in entering the benchmark tests – the Oric was certainly the easiest to handle."

WHICH MICRO?

"This slope coupled with the design of the keys makes the Oric an easy machine to touch-type on. All keys have auto-repeat and there are four keys dedicated specifically to cursor control. It is certainly easier to type on than any of Sinclair's offerings."

YOUR COMPUTER

"Oric will soon be selling a Modem so that Prestel will become available. Owners will be able to accept telesoftware – programs loaded straight down the phone line – eventually electronic mail could come into the home by the same route, and with the addition of a tape recorder the Oric with its Modem could become a telephone answerer and message taker."

YOUR COMPUTER

"One good feature of the Oric is an on-screen reminder in the top right hand corner to show that you've engaged all-capitals mode. So much better than the BB's variety of lights in the corner of the keyboard. The Oric is sound, simple to get along with and offers great expansion potential."

WHICH MICRO?

"When compared to the stogginess of the Spectrum's keyboard this is certainly an improvement. I can't see any Orics failing through bad assembly. If only the £2400 IBM were so easy to use."

WHICH MICRO?

"Instead of the Spectrum's 28 look-up single-character error reports, the Oric has 18 self-explanatory messages. If you actually want to do computing, rather than just exploring the world of off-the-shelf games programme entertainment the Oric will be a better buy."

WHICH MICRO?

"A good speaker and built-in noises get the Oric's sound off to a good start. Typing Zap, Ping, Shoot or Explode produces convincing arcade game noises which can easily be incorporated into any program."

YOUR COMPUTER

"The modem is certainly unusual in a machine of this price. Together with the other peripherals, when finally available, it should make for an attractive package for a small business... surely a match for machines costing much more"

ORDER INFORMATION

When ordering CP/M software please specify the format you require. All software items are subject to VAT. Manuals, when purchased separately, are not subject to VAT. Please add £3.75 (plus VAT) for postage and packing for the first item purchased, and then £1.15 for each extra item. For overseas please add £6.50 per item and then £1.50 for each extra item required. Most software in this advertisement is available from stock and a 72 hour return service is thereby offered on most prepaid orders. These details and prices are all current as of April 1983 (Telephone at time of purchase to confirm latest prices.) All payments must be in Sterling and drawn against a U.K. bank.

MAIL ORDER · TELEPHONE ORDER · VISIT · Send Cash, Cheque, Postal Order, IMO, Access or Barclaycard/Visa number to

NEW BOOKS FROM

Prentice-Hall International

Pascal for the Apple

Iain MacCallum

Pascal for the Apple is a complete package made up of a book and an accompanying disk of 23 programs which gives a thorough introduction to Pascal as a first language. For use on the Apple II or Apple II Plus, **Pascal for the Apple** uses graphics throughout, not only to entertain but also to teach program construction.

☐ £15.95 including V.A.T. paperback and disk
512 pages 13-652909-7

Pascal Under UNIX

J.N.P. Hume and R.C. Holt

Pascal is introduced in easy stages so that you can prepare working programs almost immediately. All the features of the UNIX command language necessary to enter, file, edit and execute programs are explained with many example programs.

☐ £14.35 paperback 386 pages 8359-5445-5

System Programming Under CP/M-80

Lawrence E. Hughes

Technical information on CP/M as well as detailed instructions on installing CP/M and writing assembly language programs are illustrated with numerous sample programs.

☐ £13.55 paperback 208 pages 8359-7456-1

The First Book of Josef

An Introduction to Programming

Ivan Tomek

This light-hearted approach to programming is suitable for anyone wanting to learn about computers and programming concepts. The powerful programming language used in the book was developed by the author. It resembles Pascal but is less rigid and allows for truly top-down solution.

☐ £11.00 paperback 336 pages 13-318287-8

IBM BASIC for Business and Home

Robert Funkhouser

For new users and owners of the IBM PC, this practical book covers BASIC, creating screen displays and reports, "menu" applications, data files, debugging, using DOS commands and the Batch Processing facility of DOS.

☐ £12.70 paperback 224 pages 8359-3018-1

The VisiCalc Book for the IBM Personal Computer

Donald H. Beil

Among the topics covered in this comprehensive book are uses of VisiCalc; data entry; creating models; commands; recognizing, preventing and correcting errors; VisiCalc's limitations and training others to use the system.

☐ £13.60 paperback 320 pages 8359-8395-1

The VisiCalc Applications Book

Jack Grushcow

For the IBM PC, Apple II and TRS-80 Models II and III, this handbook concentrates on common problem areas in VisiCalc use, then discusses six key applications in business — credit control, financial statement analysis, forecasting, budgeting, cash management and portfolio management.

☐ £14.40 paperback 276 pages 8359-8389-7

The Complete Book of Word Processing and Business Graphics

Walter Sikonowiz

This practical discussion of hardware and software for word processing and graphics generation covers computer operation and basic equipment as well as mass storage media, networks for the office and advanced techniques.

☐ £12.70 paperback 218 pages 13-158659-9

Prices are correct at the time of going to press but may be subject to change without notice.

Introducing Perfect Software.™ Now, put the power of our remarkable new programs to work for you!

If you've been looking for powerful, flexible software that's also easy to use, take a close look at what we've got to offer.

An integrated product line with the state-of-the-art features and common-sense prices you're probably looking for.

Perfect Writer™
Perfect Calc™
Perfect Filer™
Perfect Speller™

Whether you're interested in one or all four of our revolutionary products, you owe it to yourself to find out what we have to offer:

Perfect Writer.

The most powerful and versatile word processing software for microcomputers available anywhere. Features include Virtual Memory, multiple editing of up to 7 files at once, dual display windows, automatic footnotes, table of contents and indexing.

Perfect Calc.

You get 17 application programs that are ready to use for any planning and financial control task. Plus multiple editing of up to 7 files at once *and* dual display windows.

Perfect Filer.

This incredible double data base management system produces personalized standard letters and versatile sort menus for generating lists or invoices. It prints labels, envelopes and more. It can even handle accounting functions!

Perfect Speller.

Now, get a 50,000 word dictionary that checks over 4,000 words a minute. It even locates and corrects document design errors!

Take a look at what you get:

- ☐ Britain's first fully-integrated product line. Learn only *one* set of logical commands.
- ☐ Easy-to-use, user-friendly features that are unmatched in the industry.
- ☐ Interactive teaching disks make Perfect Software easy-to-learn.
- ☐ Available for both 8 and 16 bit micros, CP/M™ operating systems and the IBM PC.
- ☐ All programs maximize virtual memory architecture for all applications and multiple file display.
- ☐ True ASCII files for powerful communication capability.
- ☐ And lots, lots more.

Pretty baby in appearance. But the TRD170 is a real work horse when it comes down to performance.

We believe it's just about the best value around in dedicated daisy wheel printers. In fact, the TRD170 is probably the lowest priced full-featured daisy wheel printer on the market.

With features such as bi-directional printing with a logic-seeking head. The TRD170 zooms over white space at five times print speed. So the effective speed over actual documents is a lot faster than the solid text speed of 17 c.p.s. implies.

Then there's the choice of four pitches (10, 12 or 15 c.p.i, plus true proportional spacing), selectable manually or through software. And with a maximum print line of 198 characters.

The TRD170 handles vertical movement equally smoothly. So subscripts and superscripts are no problem at all. Vertical adjustment is as precise as 1/72nd in.

Then add in the little touches, like the motorised paper positioning, top of form selector and 256 character buffer. And there are built-in character sets for major languages. So your TRD170 is just as multi-lingual as you want it to be.

Easy to change 100 character daisy wheels — and with a wide range of type styles. Ribbons are equally easy to change. Readily available everywhere in one-time carbon (with a choice of four colours) or multi-use nylon.

What about tractor or single sheet feed? Both are available as options. And that's all the options there are. Everything else is built in.

The price? A mere £725, plus VAT.

Add the superb print quality — just what you'd expect from Triumph-Adler. Plus the rugged reliability of the TRD170.

There's really no other choice, is there?

LOW-COST COLOUR MONITORS

Advanced design and manufacturing techniques put the new colour monitor from DIGIVISION at the top of its class. Produced specifically to compliment the latest generation of micros. In the office, in the home, in the design studio, at college, wherever a micro is at work this new monitor will work happily with it. A 14" screen gives exceptional display clarity and high-quality colour resolution presented in a two-tone case at optimum cost. At a price of £300 it must be THE monitor for anybody requiring high quality colour communication in its simplest, most effective form.

DIGIVISION with your micro will prove to be a more exciting and rewarding investment.

Cash with order (cheques will not be presented until despatch of goods) or send for further details.

CAREER OPPORTUNITY WITH LEADING BRITISH MICRO MANUFACTURER IN OXFORD

TECHNICAL AUTHOR

MICROCOMPUTER USER DOCUMENTATION

£7K TO £12K+

Research Machines microcomputer systems have a reputation for quality and innovation. Designed and manufactured to exacting standards of hardware performance and versatility, they are supported by mature, professional software, and backed by a high level of user support. As a result they are very widely used — throughout the educational sector, in scientific research, by government, and in industry.

Due to continued expansion, a vacancy exists for a technical author in our Technical Publications group. The quality and variety of our product range, and the diversity of its application, make the work of our technical authors particularly stimulating and challenging.

Our systems are used equally by the most experienced computing professionals and by people without computing experience. You will, therefore, need considerable skills in communication to satisfy the needs of widely different audiences.

You should also have the following qualifications:

- ☐ Demonstrable experience of producing good user documentation.
- ☐ Sound knowledge of, and interest in, microcomputer hardware and software.
- ☐ Well developed writing skills.
- ☐ The ability to liaise effectively with technical departments.
- ☐ A degree or equivalent is desirable.

We offer a particularly attractive range of benefits including good salary; 39 hour week; 25 days paid holiday; free BUPA, life and disability insurance; pension scheme; relocation expenses.

If you are interested in this vacancy please contact Mary Oakey on Oxford (0865) 728224 or write for an application form, quoting ref: **TA/PCW5**

from small systems.....

IBM 80 CARD

Expand the capability of your IBM PC with our CP/M 80 second processor card.

- True CP/M 80 not an emulation.
- Built in Corvus hard disk interface with multi user capability.
- Drive "M" utility makes RAM behave like a super fast disk drive.
- Files generated under CP/M 80 and 86 are identical in structure and are interchangeable between operating systems.
- File transfer utility between PC DOS and CP/M Mz

4version £299
6Mz version £335

PET CP/M £495

The **SOFTBOX** allows the PET to run under the world's most popular operating system CP/M80.

- Built in RS232 and CORVUS hard disk interfaces.
- Operates with any 2000, 3000, 4000, 8000 system.
- Z80 cpu running at 4Mz with no wait states.
- 64K RAM, full documentation, free copy of CP/M80.
- Will run any standard CP/M 80 software.

IEEE-488 INTERFACES

B300
Bidirectional IEEE-488-RS232 interface 40 char input buffer, full handshake, etc etc £186

C100
Unidirectional IEEE-488 to RS232 ..... £120

A100
IEEE-488 to Centronics/Anadex Parallel £106

GPI 1000
Z80 based bidirectional IEEE-488 to RS232 with up to 59K input buffering £275

GPI SC
A version of the GPI 1000 configured as an RS232 controller for the IEEE-488 bus £475

TV/VIDEO interface
Reproduces the content of the pet screen on a TV or video monitor £46

RS232 to 20 Ma current loop adaptor £17.50

PET HARD DISKS £495

The **HARDBOX** is the intelligent controller that lets you add a CORVUS hard disk drive to your Commodore computer.

- PET DOS 1 and 2 compatability.
- Multi User capability with file and record locking, passwords.
- 16 Mb max file size and up to 65535 records per relative file.
- 2000 files on 6Mb drive.
- Access to 6,10,20 Mb drives with video tape backup.

SIRIUS/VICTOR 9000 CARD

This card now being manufactured under licence by Sirius Systems Technology allows the Sirius/Victor to run any standard CP/M 80 program without modification.

- Specification as per the IBM 80 CARD

6Mz version £365

DEVELOPMENT TOOLS

8048 family in circuit emulator £850
8748 Programing card £395
Cross Assemblers for most popular microprocessors £125
P+T 488 S100 to IEEE-488 controller card £355

Small Systems also carry a comprehensive range microcomputer software for detailed information on this or any of the above products ring 01-328 7145.

COR! Level 9 Computing's EPIC ADVENTURE GAMES are now available for 32K (or more) versions of the:

ATARI® 400/800
COMMODORE 64
LYNX

as well as for the:

BBC
NASCOM
& SPECTRUM!

ATARI 400/800 COMMODORE 64
BBC LYNX NASCOM SPECTRUM

GIANT ADVENTURE GAMES

1) COLOSSAL ADVENTURE: The classic mainframe game "Adventure" with all the original treasures & creatures + 70 extra rooms.

2) ADVENTURE QUEST: Through forest, desert, mountains, caves, water, fire, moorland and swamp on an epic quest vs Tyranny.

3) DUNGEON ADVENTURE: The vast dungeons of the Demon Lord have survived His fall. Can you get to their treasures first?

Every Level 9 adventure has over 200 individually described locations and is packed with puzzles – a game can easily take months to complete. Only sophisticated compression techniques can squeeze so much in! Each game needs 32K and costs £9.90

BBC FORTH, FORTH TOOLKIT

"r q FORTH" runs on 16K or 32K BBC micros and costs £15. It:

- follows the FORTH-79 STANDARD **and** has fig-FORTH facilities;
- provides 260 FORTH words;
- is infinitely extensible;
- has a full-screen editor;
- allows full use of the M.O.S;
- permits use of all graphic modes, even 0–2 (just!);
- provides recursion easily;
- runs faster than BBC BASIC;
- needs no added hardware;
- includes a 70 page technical manual and a summary card;
- has hundreds of users.

Level 9 Computing are pleased to announce a new toolkit for "r q FORTH" on 32K BBC micros. It costs only £10 and adds the following facilities to FORTH:

- a 6502 assembler, providing machine-code within FORTH;
- turtle graphics, giving you easy-to-use colour graphics;
- decompiler routines, allowing the versatile examination of your compiled FORTH Programs;
- the full double-number set;
- an example FORTH program: and demonstrations of graphics;
- other useful routines.

nascom

Extension Basic ..... £15/£30 ROM
Adds 30 new keywords to BASIC

Galaxy Invaders ..... m/c,g £5.90
Missile Defence ..... m/c,g £7.90
Super Gulp ..... eb,g £4.90
5-games cassette ..... misc £5.90
(FULL RANGE IN CATALOGUE)

ALL PRICES INCLUDE P & P AND VAT. All programs are in stock and will be sent within 2 days of receipt. Please send order or SAE for catalogue, describing your micro, to:

LEVEL 9 COMPUTING
Dept W , 229 Hughenden Road, High Wycombe, Bucks. HP13 5PG

NEC *PC8000+DisCache*

DisCache was designed and developed for the NEC PC8000 in the UK by Eicon Research Ltd of Cambridge.
Get the full picture from NEC Business Systems.

DisCache

You've never had it so fast

DisCache is not just a Winchester
It's a Winchester with its own computer. So it can handle files intelligently, and provide background processing for printing and communications. The result? DisCache + the NEC PC8000 gives throughput unmatched by any other personal computer in the world.

Process while you print
Genuine print spooling in a personal computer for the first time – DisCache will supervise a queue of jobs to be printed, leaving your computer free for other work.

Back-up simplified
DisCache offers a startlingly simple solution to the perennial problem of hard-disk security copies. A typical daily back-up takes less than a minute.

You've never had it so fast
DisCache will run all your existing applications programs – WordStar, DMS Database, accounting packages, everything – faster. All the advantages of DisCache are available without modification to your software.

Technical data: 10 or 20 Mbytes capacity; 64 to 256 Kbytes RAM cache; intrinsic back-up facility; Centronics and/or RS232C printer port.

"FUTURE-PROOF" MULTI-USER CP/M SYSTEM

ARE YOU LOOKING FOR A MULTI-USER SYSTEM?

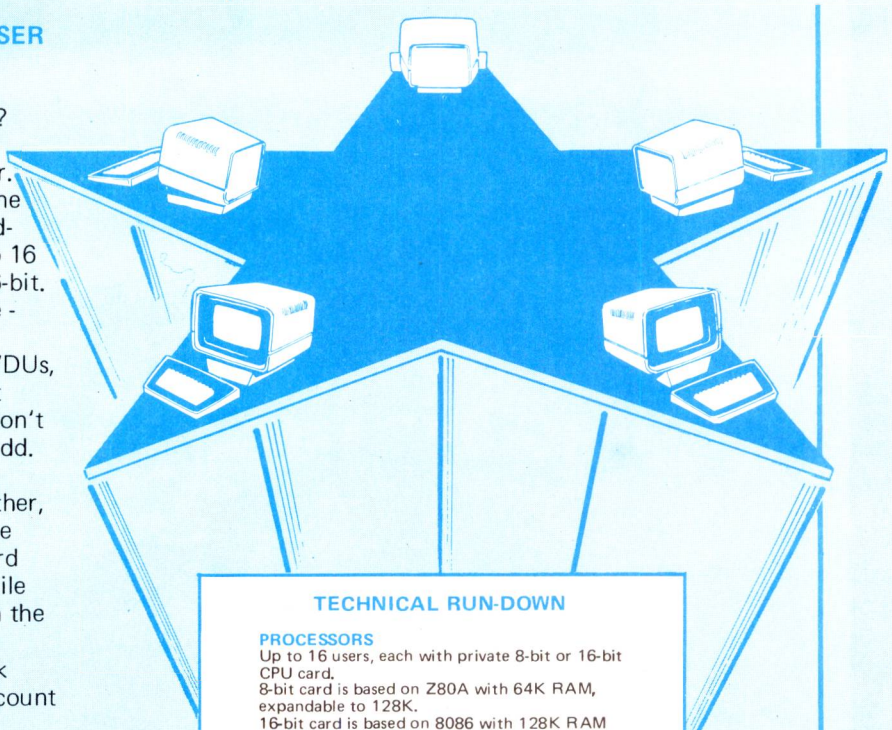

You will sooner or later!
Do you want to expand on a stand-alone? Or perhaps you haven't started at all yet. Either way, you should look at SuperStar.

Starting as a floppy-based stand-alone costing the same as any comparable stand-alone, SuperStar can accommodate up to 16 processors, each of which can be 8- or 16-bit. SuperStar is almost infinitely expandable - with NO CPU DEGRADATION.

You can add a choice of different VDUs, different disk drives, tape units, different printers as and when needed. And you don't have to throw anything away - you just add. In the field.

All users are independent of each other, either isolated or fully integrated as a true multi-user system, with full file and record locking and print-spooling. Concurrent file access and updating are achieved through the system without fuss. Up to 16 users can simultaneously enter orders, update stock records, carry out invoicing/payment, account enquiry &c in any combination.

The system has been field-proved over a number of years and our clients include: Large Corporations, Local and Health Authorities and many small businesses.

SuperStar

- MINI-computer Performance at MICRO-computer Prices.
- True MULTI-USER operation with record/file locking.
- True CONCURRENCY: all users can operate on any or the same program.
- PRIVATE-PROCESSOR means expansion without CPU degradation.
- S-100 BUS for FUTURE-PROOFING against hardware innovation.
- 8-bit/16-bit user-mix each with dedicated CP/M.

BROMCOM

Bromley Computer Consultancy Ltd.

417-421 Bromley Road, Bromley, Kent BR1 4PJ
Tel: 01-697 8933 Telex 896691 TLX1RG

TECHNICAL RUN-DOWN

PROCESSORS
Up to 16 users, each with private 8-bit or 16-bit CPU card.
8-bit card is based on Z80A with 64K RAM, expandable to 128K.
16-bit card is based on 8086 with 128K RAM expandable to 1M.
System automatically loads CP/M 80 into 8-bit processors and CP/M 86 to the 16-bit processors. Each processor has VDU and printer or communication I/Os.

STORAGE
Integral 5-1/4in winchester disk with up to 20Mbyte capacity; integral 5-1/4in floppy with up to 800K capacity.
Add-on winchester up to 160Mbyte and 14Mbyte cartridge tape unit.

PRINTER INTERFACES
One RS232 and one full parallel I/O shared by all users plus one private RS232 for each user.

SYSTEM SOFTWARE
Each user processor runs its own dedicated copy of the industry-standard CP/M 2.2 or CP/M 86. Shared resources (disks and system printers) controlled by DPC/OS, supporting file/record locking, print spooling, multiple printers and interprocessor communications. Languages available include BASIC, COBOL, PASCAL, FORTRAN, PL/1, APL.

APPLICATIONS SOFTWARE
Word Processing; Financial Modelling; Sales, Purchase and Nominal Ledgers; Payroll; Order Processing/Invoicing; Stock Management; Job-costing; Mailing System; Property Management; and many more.

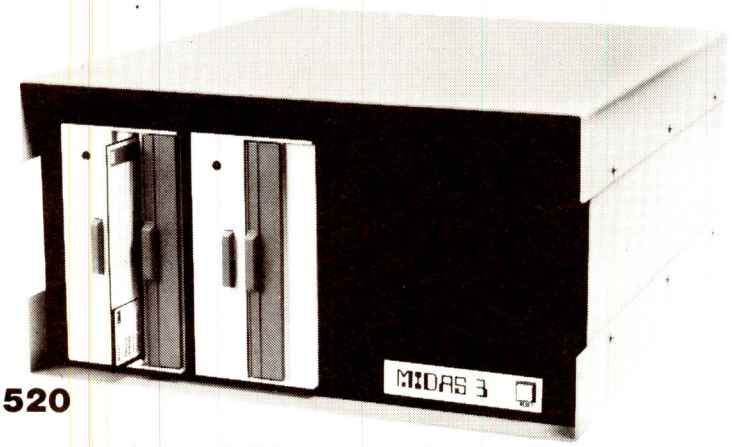

SOON
CP/M Plus (or 3.0) will be implemented on 8 bit processors so that each user can access up to 128KByte via bank switching.
New private CPU cards being developed around Intel iAPX-286 and Motorola 68000. Operating system being integrated include MS-DOS and XENIX.

SuperStar is a trademark of Bromley Computer Consultancy.
CP/M is a trademark of Digital Research.
MS-DOS and XENIX are trademarks of MICROSOFT

SLAYS INFERIORS

From the publishers of Personal Computer World

Lots of micro magazines pretend to take computer games seriously.

But seriously, as a person with the perspicacity to read this magazine, you know better.

Yet you still want to play games with your micro, rather than let your micro play games with you.

So that's why from June onwards, you can buy a special magazine published by VNU called 'Personal Computer Games' which will help you do just that.

No matter what micro you own, 'Personal Computer Games' will tell you everything you've ever needed to know about the games you can play with your micro.

And the wherewithal of playing them.

Make sure you don't miss out. Shoot on down to your newsagent, or use the coupon below to order your copy. Now!

And start winning, winning, winning.

☐ I enclose my cheque made payable to Personal Computer World for £1.45 (P & P inclusive)

COMPUTER 'CAB'

All in one quality computer cabinet with integral switched mode PSU, Mains filtering, and twin fan cooling. Originally made for the famous **DEC PDP8** computer system costing thousands of pounds. Made to run 24 hours per day the PSU is fully screened and will deliver a massive +5v DC at 17 amps, +15v DC at 1 amp and –15v DC at 5 amps. The complete unit is fully enclosed with removable top lid, filtering, trip switch, 'Power' and 'Run' LEDs mounted on Ali front panel, rear cable entries, etc. etc. Units are in good but used condition – supplied for 240v operation complete with full circuit and tech. man. **Give your system that professional finish** for only £49.95 + Carr. Dim. 19" wide 16" deep 10.5" high. Useable area 16"w 10.5"h 11.5"d. Also available **LESS PSU** with internal dim. 19"w. 16"d. 10.5"h, £19.95". Carriage & insurance £9.50.

COOLING FANS

Keep your hot parts COOL and RELIABLE with our range of **BRAND NEW** professional cooling fans.
ETRI 99XUOI Dim. 92 x 92 x 25 mm. Miniature 240 v equipment fan complete with finger guard. **£9.95.**
GOULD JB-3AR Dim. 3" x 3" x 2.5" compact very quiet running 240 v operation. **NEW £6.95**
BUHLER 69.11.22. 8-16 v DC micro miniature reversible fan. Uses a brushless servo motor for extremely high air flow, almost silent running and guaranteed 10,000 hr life. Measures only 62 x 62 x 22 mm. Current cost £32.00. **OUR PRICE ONLY £12.95 complete with data.**
MUFFIN-CENTAUR standard 4" x 4" x 1.25" fan supplied tested EX EQUIPMENT 240 v at £6.25 or 110 v at £4.95 or BRAND NEW 240 v at £10.50. 1000's of other fans Ex Stock. Call for Details. Post & Packing on all fans £1.60

8" FLOPPY DISK DRIVES

Unbelievable value the DRE 7100 8" floppy disk drives utilise the finest technology to give you 100% bus compatibility with most drives available today. The only difference being our **PRICE** and the superb manufacturing quality!! The 7100 single sided and 7200 double sided drive accept hard or soft sectoring IBM or ANSI standard formats giving a massive 0.8 MB (7100) 1.6 MB (7200) of storage. Absolutely SHUGART, BASF, SIEMANS etc. compatible. Supplied BRAND NEW with user manual and full 90 day warranty. Carriage and insurance £9.75.

7100 Single sided £225.00 + Carr. **7200 Double sided £295** + Carr.

Optional accessories: Full technical manual £20.00 alone. £10.50 with drive. Refund of difference on drive purchase. DC and AC power connector and cable kit £8.45. 50 way IDC connector £5.50. 50 way ribbon cable £3.20 per metre.

RECHARGEABLE BATTERIES

CYCLON type D001 sealed lead acid maintenance free 2v 2.5 ah. will deliver over 300 amps on short circuit!! Brand new at only **£2.95**

VIDEO MONITORS

12" CASED. Made by the British KGM Co. Designed for continuous use as a data display station, unit is totally housed in an attractive brushed aluminium case with ON-OFF, BRIGHTNESS and CONTRAST controls mounted to one side. Much attention was given to construction and reliability of this unit with features such as, internal transformer isolated regulated DC supply, all components mounted on two fibre glass PCB boards – which hinge out for ease of service, many internal controls for linearity etc. The monitor accepts standard 75 ohm composite video signal via SO239 socket on rear panel. Bandwidth of the unit is estimated around 20 Mhz and will display most high def graphics and 132 x 24 lines. Units are secondhand and may have screen burns. However where burns exist they are only apparent when monitor is switched off. Although unguaranteed all monitors are tested prior to despatch. Dimensions approx. 14" high x 14" wide by 11" deep. Supplied complete with circuit. 240 volt AC operation. ***ONLY £45.00 PLUS £9.50 CARR.***

24" CASED. Again made by the KGM Co with a similar spec as the 12" monitor. Originally used for large screen data display. Very compact unit in lightweight alloy case dim. 19" H x 17" D x 22" W. All silicon electronics and composite video input make an ideal unit for schools, clubs, shops etc. Supplied in a used but working condition.
ONLY £55.00 PLUS £9.50 CARR. & INS.

14" COLOUR superb chassis monitor made by a subsidiary of the HITACHI Co. Inputs are TTL RGB with separate sync. and will plug direct into the BBC micro etc. Exceptional bandwidth with good 80 col. definition. Brand new and guaranteed. Complete with full data & circuit. 240 v AC working. Dim. 14" x 13" x 13".
ONLY £199.00 PLUS £9.50 CARR.

SUPER DEAL? NO – SUPER STEAL!!

The FABULOUS 25CPS TEC Starwriter
Daisy wheel printer at a fraction of its original cost.

BRAND NEW AT ONLY £499 + VAT

Made to the very highest spec the **TEC Starwriter FP1500-25** features a heavy duty die cast chassis and DIABLO type print mechanism giving superb registration and print quality. Micro-processor electronics offer full DIABLO/QUME command compatability and full control via CPM Wordstar etc. Many other features include bi directional printing, switchable 10 or 12 pitch, full width 381 mm paper handling with upto 163 characters per line, friction feed rollers for single sheet or continuous paper, internal buffer, standard RS232 serial interface with handshake. Supplied absolutly **BRAND NEW** with 90 day guarantee and **FREE** daisy wheel and dust cover. Order **NOW** or contact sales office for more information. Optional extras: RS232 data cable **£10.00.** Tech manual **£7.50**. Tractor feed **£120.00**. Spare daisy wheel **£3.00**. Carriage & Ins. (UK Mainland) **£10.00.**

TELETYPE ASR33 I/O TERMINALS

FROM £195 + CAR. + VAT

Fully fledged industry standard ASR33 data terminal. Many features including ASCII keyboard and printer for data I/O auto data detect circuitry. RS232 serial interface. 110 baud, 8 bit paper tape punch and reader for off line data preparation and ridiculously cheap and reliable data storage. Supplied in good condition and in working order
Options: Floor stand ***£12.50*** + VAT
KSR33 with 20ma loop interface ***£125.00*** + Sound proof enclosure ***£25.00*** + VAT

SOFTY 2

The amazing SOFTY 2. The complete "toolkit" for the open heart software surgeon. Copies, Displays, Emulates ROM, RAM and EPROMS of the 2516, 2532 variety. Many other features include keyboard, UHF modulator. Cassette interface etc. Functions exceed capabilities of units costing 7 times the price! Only ***£169.00*** pp £1.95 *Data sheet on request*

DATA MODEMS

Join the communications revolution with our range of EX TELECOM data modems. Made to most stringent spec and designed to operate for 24 hrs per day. Units are made to the CCITT tone spec. With RS232 i/o levels via a 25 way 'D' skt. Units are sold in a tested and working condition with data. Permission may be required for connection to PO lines.

MODEM 13A compact, async, same size as telephone base. Up to 300 baud, full duplex over 2 wires, but call mode only **£75.00**

MODEM 2B/C Fully fledged, up to 300 baud async, ANSWER & CALL modes, auto answer, auto switching, ideal networks etc. Just 2 wire connection to comms line. **£85.00**

MODEM 20-1 Compact unit for use with PRESTEL or full duplex 2 wire link. 75 baud transmit – 1200 baud receive. Auto answer. **£130.00**

MODEM 20-2 same as 20-1 but 75 baud receive 1200 baud transmit. **£130.00**

MODEM 20-3 Made for data rates up to 1200 baud in full duplex mode over 4 wire circuit or half duplex mode over 2 wires. **£130.00**
Carriage. 13A £4.50. 2B/C & 20 £9.50.

DATA PUMP MODEM compact unit upto 1200 baud full duplex over 4 wires or half duplex over 2 wires. BELL specification with data i/o via RS232 25 way D socket, remote test etc. 240 v operation. Supplied complete with data **£65.00** carr. £4.50.

For more information or details of other types of ex. stock modems contact sales office.

D.C. POWER SUPPLY SPECIALS

Experimentors PSU Ex-GPO unit all silicon electronics. Outputs give +5v @ 2 amps. +12v @ 800 ma. -12v @ 800 ma. +24v @ 350 ma. 5v @ 50 ma. floating. Dim 160 x 120 x 350 mm. All outputs fully regulated and short circuit proof. Removed from working equipment, but untested. Complete with circuit. Transformer guaranteed. Only ***£14.50*** +£2.50 pp.

Buy our £475* Daisy Wheel Printer for your computer and you have an Electronic Typewriter absolutely FREE

The T/Printer 35 is the lightest weight and lowest cost daisy wheel printer you can buy for your computer. So it will fit within your budget and you can carry it wherever you take your micro. Yet it is tough enough to give years of reliable service. Interchangeable typefaces (standard Olivetti 100 character daisy wheels), variable pitch, multiple copies—all the features you would expect of more expensive word processing printers.

Yet the T/Printer 35 costs only £475 with parallel interface. Operating speed under computer control is approximately 120 words per minute of letter perfect output. What typist can equal that?

Then when you're finished using it as a computer printer, the T/Printer 35 is ready to go right on working as an electronic typewriter.

That's the dual-purpose T/Printer 35—the versatile computer printer that fits your budget.

**The T/Printer 35 costs £475 with Centronics compatible parallel interface. With RS-232C interface it costs £535. Prices listed are exclusive of VAT.*

UCSD p-System

designed for change

Change of hardware that is, not software! This is because the UCSD p-System is the first truly portable operating system ever developed. No longer is there need to worry about 8 bits, 16 bits or even 32 bits, the p-System runs them all! Whether it's an ACT Sirius/Victor, Apple, Osborne, IBM PC, Displaywriter, DEC PC, TI, SAGE or even VAX, the same operating system and software are available. And what an operating system it is! Genuinely user friendly, it provides a superb screen editor that's addictive, a comprehensive file manager and the option of three development languages Pascal, FORTRAN 77, and BASIC.

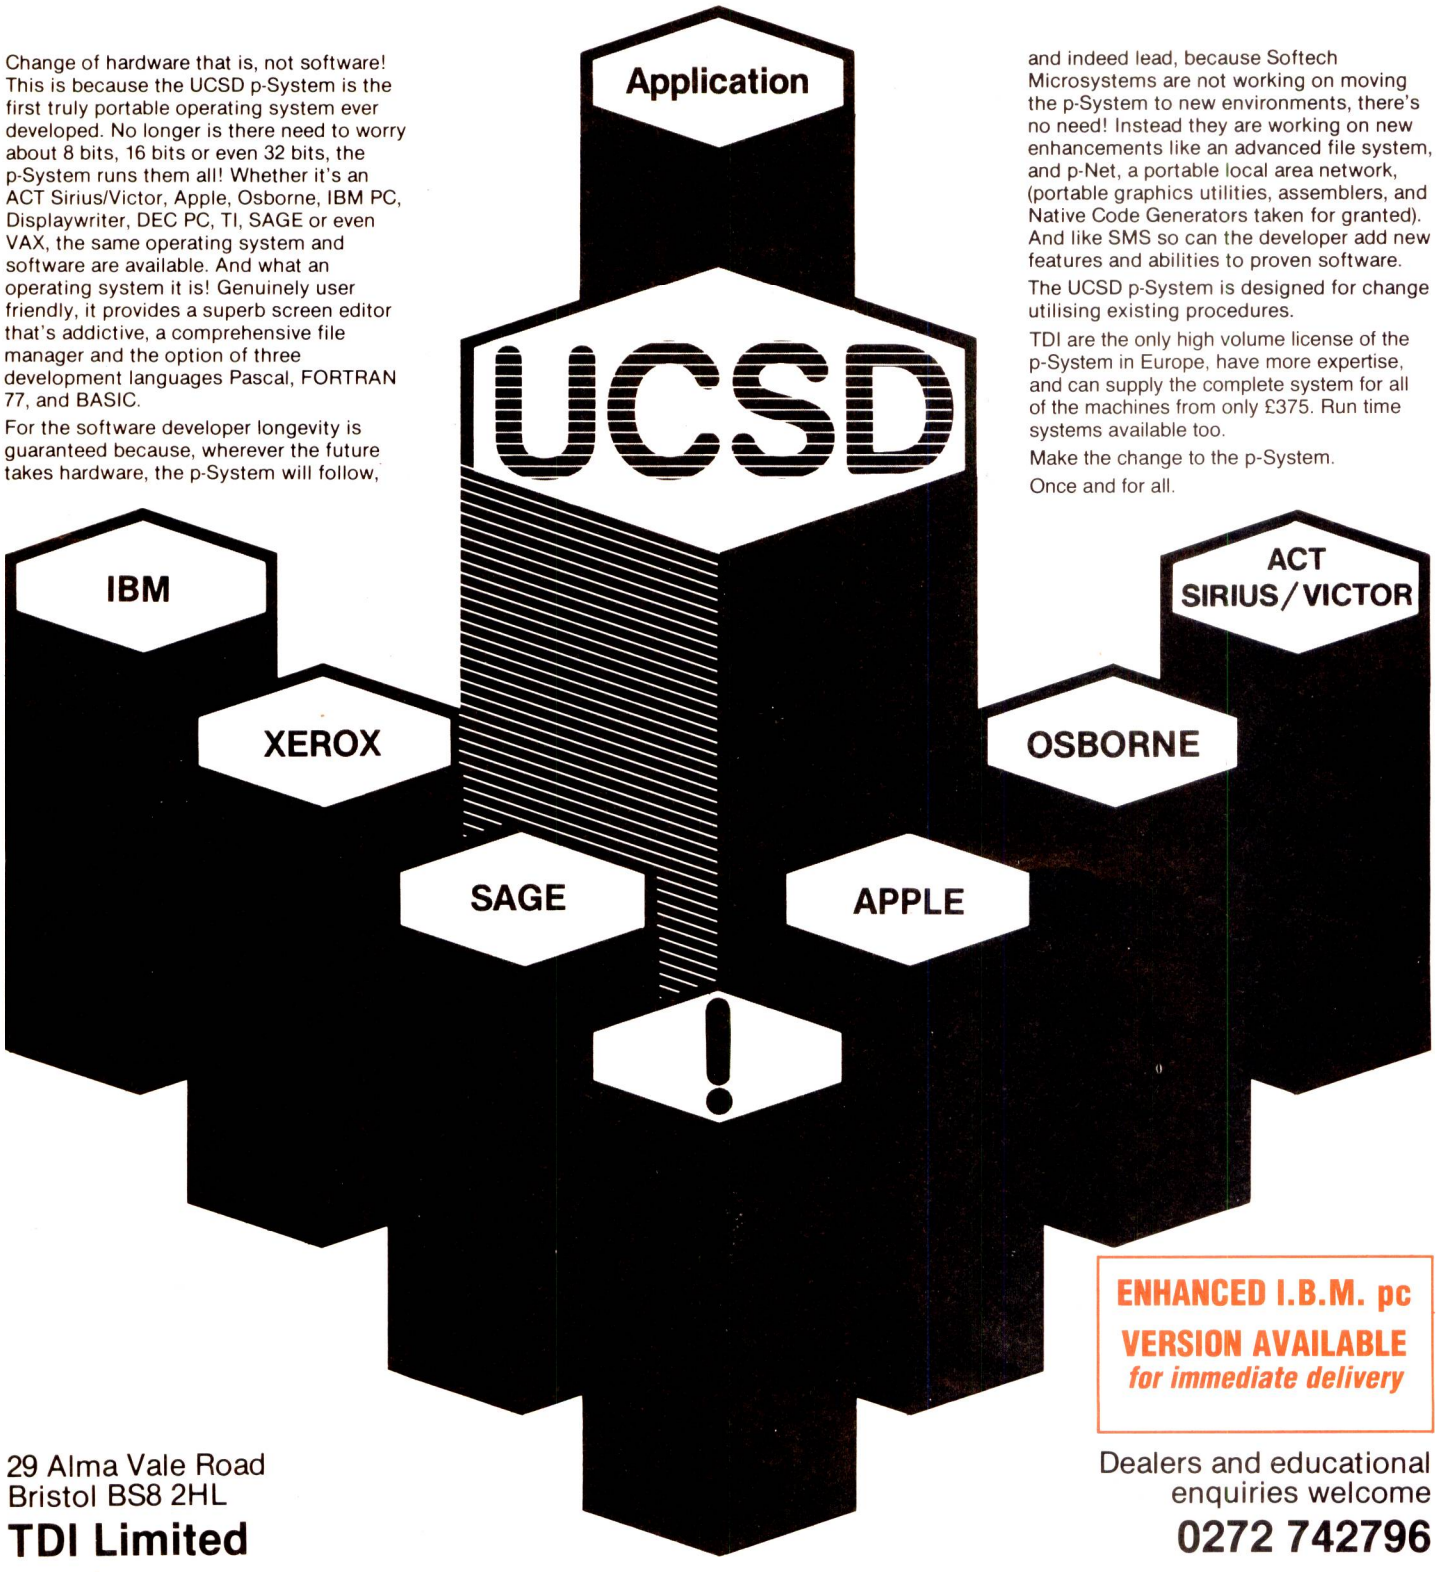

For the software developer longevity is guaranteed because, wherever the future takes hardware, the p-System will follow, and indeed lead, because Softech Microsystems are not working on moving the p-System to new environments, there's no need! Instead they are working on new enhancements like an advanced file system, and p-Net, a portable local area network, (portable graphics utilities, assemblers, and Native Code Generators taken for granted). And like SMS so can the developer add new features and abilities to proven software.

The UCSD p-System is designed for change utilising existing procedures.

TDI are the only high volume license of the p-System in Europe, have more expertise, and can supply the complete system for all of the machines from only £375. Run time systems available too.

Make the change to the p-System.

Once and for all.

Business Blueprint

THE VECTOR 4

From the small business to the large multi-national, Almarc provide one of the largest selections of quality business, scientific and industrial applications software available today, including:

Wordprocessing/Mailing, Financial Modelling, Solicitors Package, Financial & Arable Management, Printers Estimating/Costing, Phototypesetting/Wordprocessing Interface, Data Base Management, Estate Agents Package, Manufacturing Software, Critical Path Analysis, Motor Trade Package, Planning Application Monitoring, Estimating, Data Logging, Graphics Packages, Business Accounting, Accounts Receivable/Payable, Payroll, Stock Control, Invoicing, Ordering, Purchase Control, Clothing Industry Software, Network & Resource Analysis, Job Costing, Insurance Brokers.

All available on probably the most advanced, "New Generation', micro-computer system produced today.

The Vector 4, is an advanced 8/16 bit desk top computer. It allows you to take advantage of the existing 8 bit CP/M programs, while also providing 16 bit processing power. The future is built into the Vector 4, with its Z-80 and 8088 processors, 128K of main memory (expandable to 256K), 3 S-100 expansion slots and standard software facilities with high resolution graphics that are second to none. Floppy disc and hard disc systems are available.

At Almarc, we pride ourselves in our systems and our high level of customer support. We can offer back-up and training which is second to none, with 24 hour on site maintenance available in all areas.

BUILDING ON SUCCESS

EPSON

When you've got a product that has earned a reputation for cost effective performance and outstanding reliability, you build on it.

Meet the new Epson FX printer from Westrex. An exciting new machine that meets all the usual Epson qualities like reliability, speed and modern styling.

With a Print speed of 160 CPS, proportional spacing, forms tear off, superscript, subscript, dot addressable graphics and a RAM area for loading 256 of your own characters the new FX is even better value than its famous predecessors.

Centronics parallel interface comes as standard or choose from the optional RS 232C or IEEE interfaces.

Superscript

Now available for CBM 500-700 series

A Commodore enthusiast wanted a word processor that was simple, fast and easy to use. He wanted to handle up to 20,000 characters of text, use a wide screen format of up to 240 characters, with full window scrolling in all directions, and be able to use the screen while printing. He wanted a word processor at a reasonable price. The enthusiast, Simon Tranmer, couldn't find one... so he wrote

Superscript

Superscript does everything he wanted... and much more. It provides a complete document preparation and storage system, making optimum use of memory and disk space. It gives access to all the letter quality printer features, such as boldface and ribbon colour change. In short, it provides all of the advantages of a dedicated professional word processor.

Superscript

is now available for the Commodore 500 and 700 series computers, with arithmetic, calculator and a host of new features. And finally, the magic ingredient ...

Superspell

a 30,000 word disk-dictionary with automatic spelling checker, that will verify the largest SuperScript (or Wordpro) document in under two minutes... and you can easily modify the dictionary or add your own words.

New prices and products!

God didn't make little Green Apples...

Datalink isn't the largest dealer in the SW of England

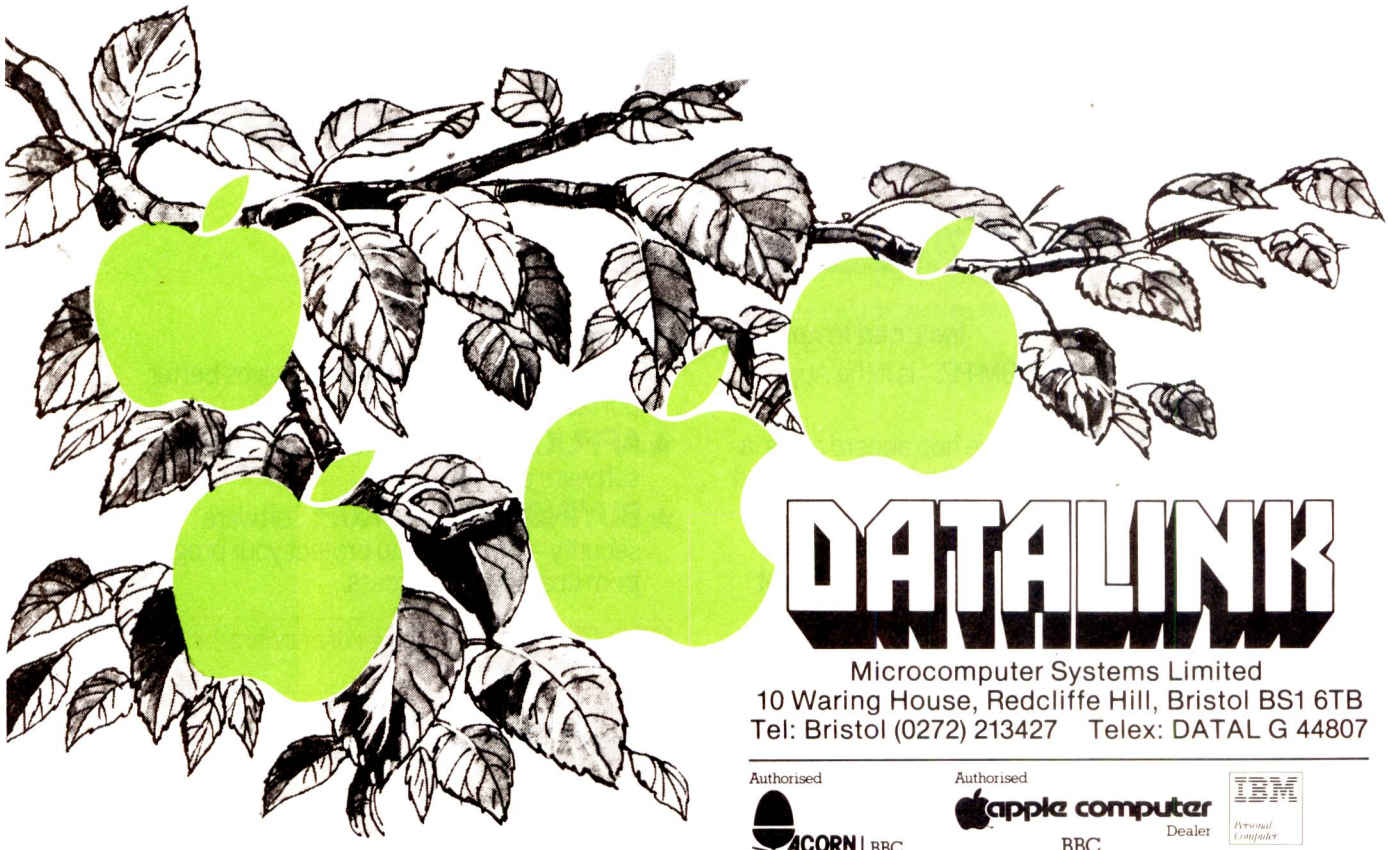

In the same way as we all know who's responsible for nature's bounty, there's no secret about the stature of Datalink in the S.W. of England. Especially if you happen to be one of those highly professional, computer orientated blue chip and multi-national companies who are customers of ours.

And when you think that we only took three growing seasons to reach our present position it says a lot for why companies, large and small, come to us. Things like professionalism, knowledge, service and pricing.

If you're sceptical we'll give you some names where you can check. Names that you *will* have heard of.

Let's hope we can use your company as a reference, too, before long.

And bear fruit with the rest.

VIC 20/COMMODORE 64 IEEE 488 CARTRIDGE

The DAMS IEEE is a simple, plug-in Cartridge interface which slots into the back of your VIC/64 and links it to disk drives, language packs, printers and other peripherals.
Run several VIC/64's. from one disk drive.

£49.95 + VAT.
(Price including VAT. £57.44)

'CLEAR-VIEW' ANTI-GLARE SCREEN

This exciting new product from DAMS is the answer to eye fatigue, headaches and migraine – symptoms regularly encountered by VDU operators.

up to 12"
£19.95 + VAT.
(Price inc. VAT. £22.94).

13" to 20"
£24.95 + VAT.
(Price inc. VAT. £28.69).

Suitable for Commodore 4032, 8032, etc. **20" and larger by special order.**
All prices include postage and packing

VIC/COMMODORE 64 LIGHT PEN

A high-quality light pen to make the most of the vivid colour graphic displays on the VIC 20 or Commodore 64.

The DAMS light pen plugs straight into your computer with no special interface needed.

£17.35 + VAT.
(Price inc. VAT. £19.95)

OR Light pen for PET 12" Screen –
£19.95 + VAT.
(Price inc. VAT. £22.94).

VIC AID
Commodore 64 version available on disk or cassette

VIC Aid is a chip which slots easily into the DAMS RAM'N ROM Board, and offers two sets of Utilities in one for the keen programmer:

Programmers Tool Kit
Gives extra commands. Auto, Number, Help, Delete, Change, Trace, Step, Light Pen, Break etc.

Machine Code Monitor
Gives Save, Memory, Display, Load, Verify etc. (similar to TIM on PET).

Slots into the DAMS RAM'N ROM board or similar. If similar please state type.

£19.95 + VAT.
(Price inc. VAT. £22.94)

VIC MON
Commodore 64 version available on disk or cassette

Another fine product to enhance the machine – code capabilities of the VIC. VICMON is the ultimate programming aid, incorporating: Assembler, Dissassembler, Fill, Re-Locate, Identify, Printing, Display Status Register, Display Memory with pause facility, Full Screen Assembly Edit, Software re-set from loops, Single step with variable speed etc.

Slots into the DAMS RAM'N ROM board or similar. If similar please state type.

£19.95 + VAT.
(Price inc. VAT. £22.94).

VIC 20 RAM'N ROM BOARD

Doubles the memory capacity of your basic VIC and gives you the facility to fit extra functions (VIC AID, VIC MON etc). Comes complete with specially designed cover.

Technical leaflets available on request for all products.

£22.95 + VAT.
(Price inc. VAT. £26.39).

PCW 297

More K's.

ATARI 800,™ no price increase, upgraded from 16K to 48K RAM.

Less £'s.

ATARI 400,™ reduced from £199.99 (SRP inc. VAT) to £159.99.

It's hard to know which set of figures is more attractive. Certainly the ATARI 800™ Computer, upgraded by an astonishing 32K without any increase in price, will have its admirers.

However, £40 off the ATARI 400™ Computer makes it remarkable value for money, particularly when you take into account its 16K RAM (on some computers you'll be charged extra to upgrade to 16K).

It's even more remarkable when you look at our computers feature by feature.

The Family Computer.

Before we designed them, we thought about who was actually going to use them.

One day our computers might be playing games; next, they're wrestling with household budgets; teaching geography to an 8-year-old; or printing letters.

In other words, we designed our computers and software for as many applications as a family has ideas. (Now the ATARI 800 Computer has 48K RAM, there's even more memory for even more applications.)

Next we built in high-resolution graphics. Inside our computers, we have a microprocessor whose only job is to operate our graphics.

(All told, you can choose up to 16 different colours in 16 intensities, which gives you a spectrum of 256 different shades.)

In fact, our computers divide the screen up into 60,000 tiny points, each one of which can be changed without affecting the other.

A friend not a fiend.

We also looked at ways to make computers rather friendlier.

On the ATARI 400 Computer, we've incorporated touch-sensitive keys with ridges, so fingers won't slip; on the ATARI 800 Computer, we have keys much as you'd find on a standard typewriter.

You can talk to your computer in a choice of languages (five for the Atari 400, nine for the Atari 800), including ATARI BASIC, using software which you load in on cartridge, cassette, or disk.

For our computers, we have one of the largest software libraries in the world: everything from speech synthesis to sophisticated data management.

No doubt you know all about our famous games such as PAC-MAN†, SPACE INVADERS† and STAR RAIDERS,™ winner of the 1982 Game of the Year Award.

However, we also boast home and office application software as well as educational programs to satisfy the most enquiring mind.

You can learn French, Spanish, German or Italian on our computers and through our unique 'sound through' system you'll hear the language and learn it the way you learnt your mother tongue. (Other computers will leave you speechless.)

You can teach yourself touch typing, compose and play your own music or teach a child the alphabet.

On another program you can find out if your current mortgage is giving you the best value for money; while yet another program will answer a question that has vexed mankind for generations: "Where does all my money go?"

At the same time, the outstanding VisiCalc* program is available for the ATARI 800 Computer.

Write your own programs.

As if all that isn't enough, through Atari's Program Exchange (APX), you can have access to a wide range of the most imaginative programs written by our users.

Or you can learn to write your own programs with the help of our 'Invitation to Programming'™ series, using our unique 'sound through' system.

Surprisingly, you won't have to plough through a small library of manuals to do so, since most of the series is on software, not in hard books. Of course, we've always had just about everything you're looking for in computers.

From today, we've got even more.

Atari 400 and 800 Home Computer Technical Specifications.

Colour Capabilities: Choose from 16 colours, and 16 intensities (up to a total of 256 shades).

Sound: Four independent sound synthesisers for musical tones and games sounds. Three and one half octaves. Variable volume and tone for each voice.

Display: Three text modes: 24 lines of 40 characters, double-width characters, or double-height, double-width characters. Nine graphic modes: from 40 columns by 24 rows up to 320 columns by 192 rows.

Memory: Includes a built-in 10K Read Only Memory (ROM) Operating System with 48K Random Access Memory (ATARI 800) and 16K Random Access Memory (ATARI 400).

C.P.U.: 6502B Microprocessor 0.56 micro-second cycle. 1.8Mhz.

Special Features: Three customised integrated circuits.

Extended Graphics Functions: High-resolution graphics. Multi-coloured character set. Software screen switching. Mixed text and graphics modes.
Multiple re-defined character sets. Player missile (sprite) graphics. Fine screen scrolling in any direction. Changeable colour registers. Smooth character movement.

Peripherals: A range of peripherals and accessories that are available now.

CAN YOU AFFORD TO TURN DOWN £693?

Twelve weeks ago we announced CONTEXT, the newest, most friendly best value-for-money microcomputer word processor you can find. CONTEXT, with its rock-steady green screen and its IBM-style keyboard, uses a specially tailored WordStar with Mailmerge which is a delight to use. Forty functions on ten special keys are always at your finger tips for any kind of word processing.

WE GIVE YOU THE FRIENDLIEST WORDSTAR

But CONTEXT can do more than process words sweetly. Use it with any standard CP/M program and you have a twin processor computer faster (but much less expensive) than Sirius or IBM PC*. Even CP/M itself has been given a lesson in friendliness and now presents easy-to-use menus.

WE GIVE YOU MENU-DRIVEN C/PM

And if you want the best of the micro-database managers, CONTEXT runs dBase II, the market leader. And to gild that lily we add Autocode I, a dBase II program generator using artificial intelligence to cut programming time.

WE GIVE YOU INTELLIGENT dBASE II

To add to all this, we have a new matrix printer, the CTI CP 80 – small, fast (80 cps) and wholly compatible with the lamented Epson MX 80, but with some extra goodies, including italic, subscript and superscript type.

WE GIVE YOU A BRAND NEW PRINTER

The package includes CONTEXT twin processor microcomputer, twin double density disk drives (370k), IBM-style keyboard, CP/M and C/WP WordStar (already a remarkable bargain at £1495) plus the new CTI CP 80 printer (RRP £349) plus Mailmerge (RRP £149), dBase II (RRP £395) and Autocode I (RRP £200), a total of £2588 + VAT for only £1895 + VAT – a saving of £693. Offer must end 30 June 1983.

WE GIVE YOU CONTEXT AND ALL THIS FOR £1895

*In performance of PCW Basic Benchtests

TYPE STAR

OBSOLETE
replaced by Typestar combining the best of the typewriter & computer.

The typewriter is dead—long live the computer!

WORDSTAR

TYPESTAR | MAILMERGE | PROOFREADER | GRAMMATIK | BIBLIOGRAPHY

THE TYPEWRITER IS DEAD, REPLACED BY THE COMPUTER!

Based on the World's best selling word processing program **WORDSTAR.** Raven have put together a suite of program's designed to take care of all word processing requirements which make the typewriter, the dictionary, the thesaurus and quotation query redundant.

WHAT DOES IT COMPRISE OF AND HOW DOES IT WORK?

WORDSTAR program is rightly the world's best seller due to its power and versatility. The first time user can immediately prepare the documents without specialist knowledge and can then easily progress to highly sophisticated activities with very few key strokes. Adding, deleting or moving text around becomes second nature with very little practice. Cost £295.

TYPESTAR is the new jewel in this suite. Written by Raven to fulfill an obvious gap in the capabilities of a computerised system. How to lay out the screen as you would a page. With **TYPESTAR** it is simple – don't look at the screen but look at your printer and type as you would with a normal typewriter. Press the space-bar or return key on your computer and the printer does exactly the same. You can print in single character mode, line mode or even paragraph mode. Cost £75.

PROOFREADER is the new spelling checker with a 32,000 word dictionary. It will look at any **WORDSTAR** file and check all words against the master dictionary and then correct the spelling. Words can be added to the dictionary which may be pertinent to your business or of a foreign language. Cost £65.

GRAMMATIK is designed to check the grammar in a document. Such items as double words or using lower case letters after a full stop. Grammatik also assesses a document for word usage to indicate overworked phrases. This program is menu-driven, easy to use and can be used immediately without any training.

BIBLIOGRAPHY will construct a bibliography of all words cited and/or replace each citation in the text with the appropriate bibliographic entry. The bibliography can have a variety of formats. In addition to the main program bibliography includes several helpful utility programs.
SORTLIB sorts the lib in alphabetical order.
LISTKEY prints a list of all keywords in the lib.
MERGELIB constructs a single alphabetised bibliography from a number of different manuscript files.

MAILMERGE. A major use of the mailmerge command is to produce form letters. Mailmerge is also able to insert variable data into a document during print out, insertion of other named files in the print out and printing multiple duplicate copies of a document, automatic reforming of paragraphs containing insertions to maintain margin alignment.

ComX 35. The new world in family microcomputers.

The new COMX 35 is the space-age answer to home computing, with a microprocessor that has been tried and tested by no less an authority than NASA and used in satellites and the space shuttle.

Whatever the application, whether for business, home accounting, education or simply for fun games, the COMX 35 will prove to be an investment for the whole family.

Supplied with every COMX 35 come 10 free cassette programs. An easy- to-follow instruction manual will quickly teach you the skills of programming your own ideas.

- CPU 1802A, providing excellent graphic/ sound capabilities.
- 16K ROM super enhanced BASIC
- Massive 35K of RAM (32K available to user) expandable to 67K
- Full-size keyboard with 55 moving keys
- Built-in joystick for easy game control
- 24 rows x 40 characters, high resolution
- Teletext/Viewdata compatible graphics
- Advanced sound capability. 8 octaves, 1024 tones, and 16 volume steps
- 8 background and 8 foreground colours
- 12 combinations of colours on characters
- Different output/input colour
- Easy, fast and full editing with CHANGE, DELETE and INSERT commands
- Peripherals available shortly: RS232 + Centronics; Four-colour Printer/ Plotter; 5¼" Floppy Disk Drive; Expansion box; True Speech Synthesiser
- Usable with any cassette recorder

Peachtree Software

The gilt-edged investment for your microcomputer

You need to be sure that the application software you choose carries the hallmark of stability and reliability and will be a sound investment for the future. It should enhance the value of the microcomputer you select to solve your business problems.

The Peachtree Portfolio of Application Software meets this need. The range provides for simple book-keeping *(Peachtree Basic Accounting Systems)*, comprehensive accounting *(Peachtree Business Management Systems)* and integrated office automation *(Peachtree Office Productivity Systems)*.

Peachtree is part of the world's largest Application Software company. We have over 20 years experience helping users of large *and* small computers get the full value from the computerisation of their business.

A nationwide network of independent computer retailers offers our portfolio of products on many different types of micro-computer. These companies provide the local support you want - *backed up by Peachtree.*

Major microcomputer manufacturers and distributors have made their investment in Peachtree Software for their computers.

They include:
IBM, DIGITAL, BRITANNIA, RANK XEROX, PHILIPS, OSBORNE, POSITRON, OEM, EPSON, GRUNDY, WANG, MEMORY, SAMURAI (distributed by Micronetworks) SANYO and ALTOS (distributed by Logitek)

Peachtree Software is available for these machines through their own distribution networks - *backed up by Peachtree.*

THE SOFTWARE THAT WORKS FOR YOU.

Peachtree Software International Limited

SOFT OPTION SOFTWARE CENTRE

When you're thinking software, think Soft Option first. Chances are we'll have the right product, in the right format, on the shelf in quantity.

We despatch fast from stock. We also offer a dealer pricing system to suit individual needs with cumulative discounts available.

Finally, we *know* about software—we can give you technical support when it's needed.

So make Soft Option your first call. We'll soon become your first choice.

8 BIT | 16 BIT | 16 BIT

CP/M 80 CP/M 86 MS-DOS

and IBM PC Software

SOURCES INCLUDE:

We hold stocks of most software manufacturers including:

MICROPRO
MICROSOFT
DIGITAL RESEARCH
SORCIM
IUS
ASHTON TATE

MACHINE FORMATS INCLUDE:

Software can be made available in 8 BIT or 16 BIT formats to suit most micro-computers currently on the market including:

Superbrain
North Star Horizon
North Star Advantage
Columbia PC • IBM PC
Televideo • Apple
CP/M 8" • Rair • Sirius

PROGRAMS INCLUDE:

Our complete list of software is too long to publish and changes by the hour but here are a few examples to whet your appetite.

WORDSTAR	MICROPRO's comprehensive word processing system.
PL/I-80	DIGITAL's PL/I Compiler.
BASIC-80	MICROSOFT's popular and powerful basic Interpreter. There is a Compiler too.
FORTRAN-80	Fortran Compiler to ANSI X3.9 1966 except COMPLETE data.
SUPERCALC	SORCIM's spread sheet and modelling system.
EASYFILER	Data Recording System for the IBM PC from IUS.
dBASE II	Relational Database Management from Ashton Tate.

Be a lucky dog in the exciting Flexette competition.

5 great reasons to order Flexette floppy discs

1st PRIZE: MICRO COMPUTER SYSTEM

FOUR 2nd PRIZES: VIDEO CASSETTE RECORDER

TEN 3rd PRIZES: PORTABLE COLOUR TV

HUNDRED 4th PRIZES: DISC CAMERA

THOUSAND 5th PRIZES: Copy of 'COMPUTER BLUFF' by Dr Stephen Castell.

The more you order the more chances to WIN!

Competition entry form with every pack of Flexette floppy discs you order. Check the letters on your form to see if you've won a fabulous prize.

5 more great reasons to order Flexette

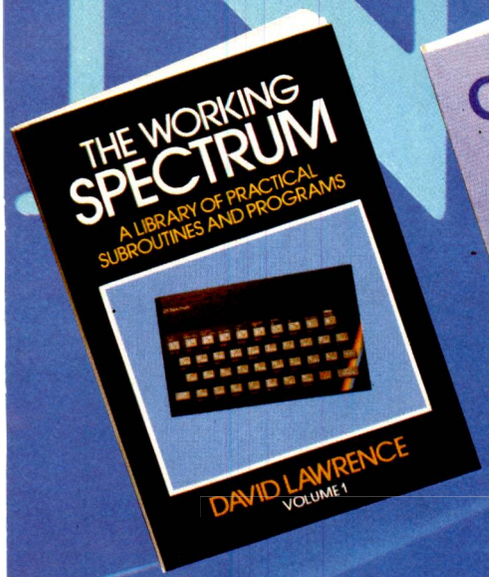

* Made by Rhône-Poulenc, one of Europe's leading manufacturers of computer media.
* 100% certification of total disc surface to ensure error free product.
* Cost-Quality-Performance.
* Surface coating that reduces headwear by 25%.
* A choice of 5¼" or 8" single or double density, single or double sided, and quad density (100 TPI).

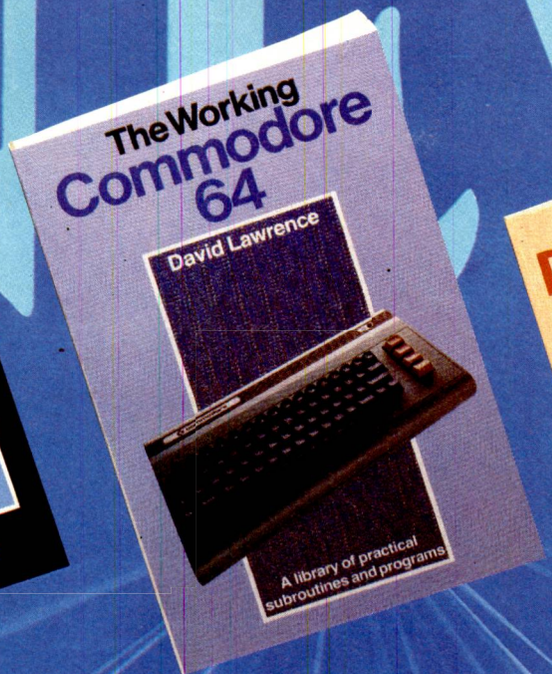

Order Flexette now from your usual distributor, or for more information ring or write to Rhône-Poulenc Systems Ltd., High Street, Houghton Regis, Bedfordshire, LU5 5QL. Tel: Dunstable (0582) 605551.

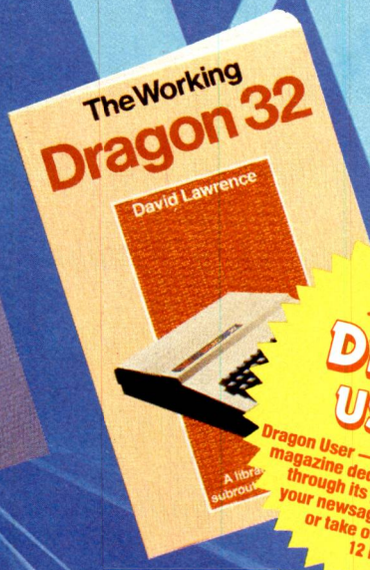

RHÔNE-POULENC

A computer's best friend.

NEW

NEW DRAGON USER

Dragon User — the new independent monthly magazine dedicated to putting the Dragon through its paces. Available through your newsagent from May 18 for 60p, or take out a subscription for 12 issues for £8.

The Working Spectrum

A collection of sophisticated Basic programs and subroutines including Unifile, Renumber (handles Gotos and Gosubs) education, accounts, games and scores of essential routines. Put your Spectrum to work with what must be the most comprehensive Spectrum book. 248pp **£5.95***

The Working Commodore 64

Some of the more advanced programs in this collection include a word processor and text editor, a music and sound synthesiser, a sprite editor and a program which allows you to enter high resolution graphics mode. This is not available in the standard Basic. 160pp **£5.95**

The Working Dragon 32

This computer has capabilities far beyond most other computers in this price bracket. With this collection of Basic programs and routines David Lawrence introduces word processing, music and shows you how to mix text and high resolution graphics. As with the other books in this series, each program is built up out of re-useable subroutines. 160pp **£5.95***

New from Sunshine

Cruising on Broadway

Behind the wheel of your machine. **Cruising on Broadway.** You look mean. People stop to stare. Suddenly a black-and-white pulls onto the Broadway behind — its light flashing and siren wailing. The chase is on! **Cruising on Broadway** is a tyre-burning fast machine-code game for the 16 & 48K Spectrum. The further you can get the more difficult it becomes — cash prizes are being offered each month for the highest scores. **£4.95***

Blind Alley

A deadly duel, deep in space. **Blind Alley** is what passes for sport in the year 3017. Your craft must use strategy to out-wit and corral the opponent — in this crazy development of the pursuit games of the late 2600s. After each round in the enclosure game more players are sent against you to test your skill and agility. **Blind Alley** is the machine-code action of the future — now! For the 16 & 48K Spectrum. **Blind Alley** can be played with a Kempston Joystick. **£4.95***

Submit *your* program to Sunshine and your name could be here next month.

SUNSHINE

*Available through W. H. Smith's and computer dealers.

£1,495*

The MIMI 803 is a supreme example of high quality British engineering. It is a truly professional microcomputer that really does meet all the criteria of a sophisticated business machine - at a price you can afford.

Our competitors expect you to make do with the basics and then buy expensive extras in order to fulfil your needs. The MIMI 803 has all the 'extras' as standard - so when you buy a MIMI you really are getting a microcomputer that will do the job from the outset.

The MIMI's operating system OS/M † is fully compatible with CP/M ‡ 2.2 in all system calls and functions. This ensures that you have access to the comprehensive range of Software currently available in the open market.

During the next few months we will be announcing the availability of TROJAN - a major software innovation that totally simplifies the learning process and use of micros, and dramatically eases the creation of new applications software in record time - so we can guarantee its performance.

Don't settle for less... contact us or one of our dealers now.

Features include:

- Z80A at 4MHz
- 64K dynamic RAM, plus additional 16K RAM for the graphics
- Integral D/S - D/D 5¼ ins floppy discs - 800Kb.
- Full RS232C and Centronics parallel ports.
- 96 Key ASCII keyboard - colour coded.
- 17 programmed function keys.
- Elegant compact and light - 24 lbs.
- OS/M † operating system - CP/M ‡ compatible.
- Disc format conversion facility.
- Wide range of software, utilities and languages.
- Super high resolution graphics (512 x 256 pixels).

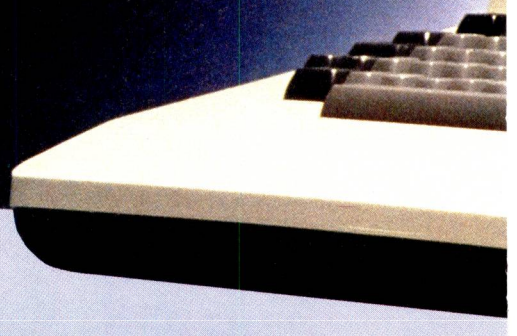

And now with:

- Winchester disc option.
- Choice of orange or green display.

MONITOR SUPPLIED BY PHILIPS

NOW ALL OTHER MICROS ARE LESS THAN PERFECT

† OS/M is the trademark of Scifax Microsoftware.
‡ CP/M is the registered trademark of Digital Research Inc.

*Monitor extra, from £142.

YOUR SEARCH FOR FULLY TESTED EDUCATIONAL PROGRAMS FOR THE BBC MICRO IS OVER

35 EDUCATIONAL PROGRAMS FOR THE BBC MICRO

Ian Murray

Here is a selection of fully documented programs ranging from mathematics to geography, history and general science to spelling.

Designed for use in schools, colleges – all programs have been checked in a classroom environment – and at home, this book will allow you to put your BBC to work as soon as it is unpacked. Each program makes full use of the BBC micro's remarkable graphics capabilities and together they provide a useful insight into programming techniques.

Triumph Adler has made word proc

the WP system that stands alone

Compare the exclusive Triumph Adler Alphatext WP system with other leading systems. . . and one thing stands out.

At under £3,000.00 — complete — the Alphatext system stands alone.

That price includes everything

* a powerful Alphatronic P2 — part of the largest range of 'ready to use' micros on the market. A high quality, engineered computer, able to cope with many of your computing tasks as well as word processing.

* a TRD170S daisywheel printer, with variable line spacing and choice of typefaces.

* a comprehensive systems manual, plus a unique step-by-step 'teach yourself' user manual that enables almost anyone to become competent, quickly and easily.

* and the Alphatext WP system — powerful yet simple, with a host of easy-to-use features for text generation, formatting and editing, simultaneous printing and processing, text storage and so on. A weak point in many WP systems is the lack of a mathematical calculation facility. Alphatext has it — and you'll find it invaluable for invoicing and quotation preparation.

Just compare the Alphatext features

+ upgradeable × video courses	Block move/ duplicate	Full headers/footers	Auto decimal tab	Auto word wrap	Auto centring	Auto pagination	Background print	Display format (characters x lines)	Disk storage capacity	Optional applications software	Daisywheel printer	Audio training courses	Approximate price

formulate/recall on selection criteria
13 interrogation question types
short filing output/audit trails

User-define files/field words/sizes. "sale-mail-shots"; "production-process"; "purchase/sales-analysis"; "personnel-file"

DBMS III.7 new switch mode facility enables you to cross up to 12 different files (32000 records per file) pre-selecting any of up to 20 fields per record/file for display/print output (240 fields) in all. One massive enquiry can pass through 384,000 records.

You might have two files whose records are directly related to each other, so that the first file (say containing names and addresses) refers to the second file (say financial and other information relating to the same record numbers if the first file) directly. Then you can simply choose that in file 1 you are interested in just the name and telephone numbers, whereas in file two, you are interested in the income, trading period and number of branches, information. Your enquiry can then pass through both files highlighting that information only. Actually there doesn't need to be a strict correlation between the same record numbers in different files, and you can also on just one JUMP command go to any record in any of the 32000 records in any of the twelve files and carry on cross-referencing from there onwards.

DBMS'S MACROS WORK FROM THE MOMENT YOU INSERT THE 'TASK DISK' IN THE COMPUTER

Simply design your file, give its fields your words, setup your report mask, and then enter your records. Switch to 'automatic drive' and formulate any task you wish the program to fulfill, the task is stored as a macro. Take a copy of the program on another 'task disk' and from then on, the task disk will function without a single keystroke. Think of a number of such 'task disks' such as "stock-re-order reports"; "stock-valuation reports"; "analysis"; "patient history analysis"; "research-analysis"; "budgetting"; "plus more?"

Not only does this program surpass most of its kind that you might buy elsewhere, but if you buy the hardware from us, then you get it – FREE...

DBMSII (WITHOUT MACROS) AND DBMS III ARE FULLY IMPLEMENTED UNDER CPM-86 (tm) AND MS-DOS (tm) ie: <SIRIUS/VICTOR/IBM> DBMSII IS 395.00 (or 250.00 by mail order ex. training). DBMSIII is 575.00 (or 295.00 by mail order ex. training).

SOFTWARE COMMENT!!!

INTEGRATED SOFTWARE IS PROPERLY REPRESENTED, when the degree of integration reflects the ability to refer to as many different files, as well as employ as many different functions, under as many different modes as possible in one program only. This principle not being observed, will confer upon your purchases the attribute of their being expensive as an aggregate even though individually they are cheap. "DBMS III.7" and "THE KEY" are comparably worthy of such a label.

SYSTEM DEALS (Our Speciality) SAVES YOU 1500.00 +

FORTUNE 32:16™

The real world computer

With many micros, you could be forgiven for thinking they weren't actually intended to work in the real world of business. They're either incomprehensible, difficult to use, or missing something you want (usually software).

Fortune is different. Everything you need – word processing, financial modelling, database management, accounting, extensive file capacity, communications – has been beautifully executed as an integrated system.

You'll love the thoughtful human engineering that makes Fortune a joy to use. You'll benefit from professional features that are hardly the norm even in products costing thousands more. And you'll appreciate Fortune's built-in data protection which is quite unprecedented in micros.

Fortune protects your investment too, because it is easy to expand. And that's exactly what you'll want to do when you see the added control and efficiency Fortune brings to your business.

You'll soon want other users to share the computer, to run different tasks simultaneously or to access common files. All you have to do is plug in additional low-cost Fortune workstations (as these cost only £850 each, this is much more economical than having a computer for every user). With Fortune's state-of-the-art, UNIX™ based, 32/16 bit processor you have the power and speed you need.

So that you can comfortably evaluate Fortune for yourself, we have carefully selected a network of dealers to help and advise you. Like us, they are data processing professionals with years of experience in the industry.

Backing them is Tetra's single source systems service. Our support team comprises professionals in all areas of business and scientific computing. Their expertise encompasses a wide range of operating systems, programming languages and communications technologies, vital to the in-depth understanding and implementation of your applications. Similarly, hardware maintenance, throughout the UK, is provided by Tetra's own engineers whose sole responsibility is to support the Fortune range.

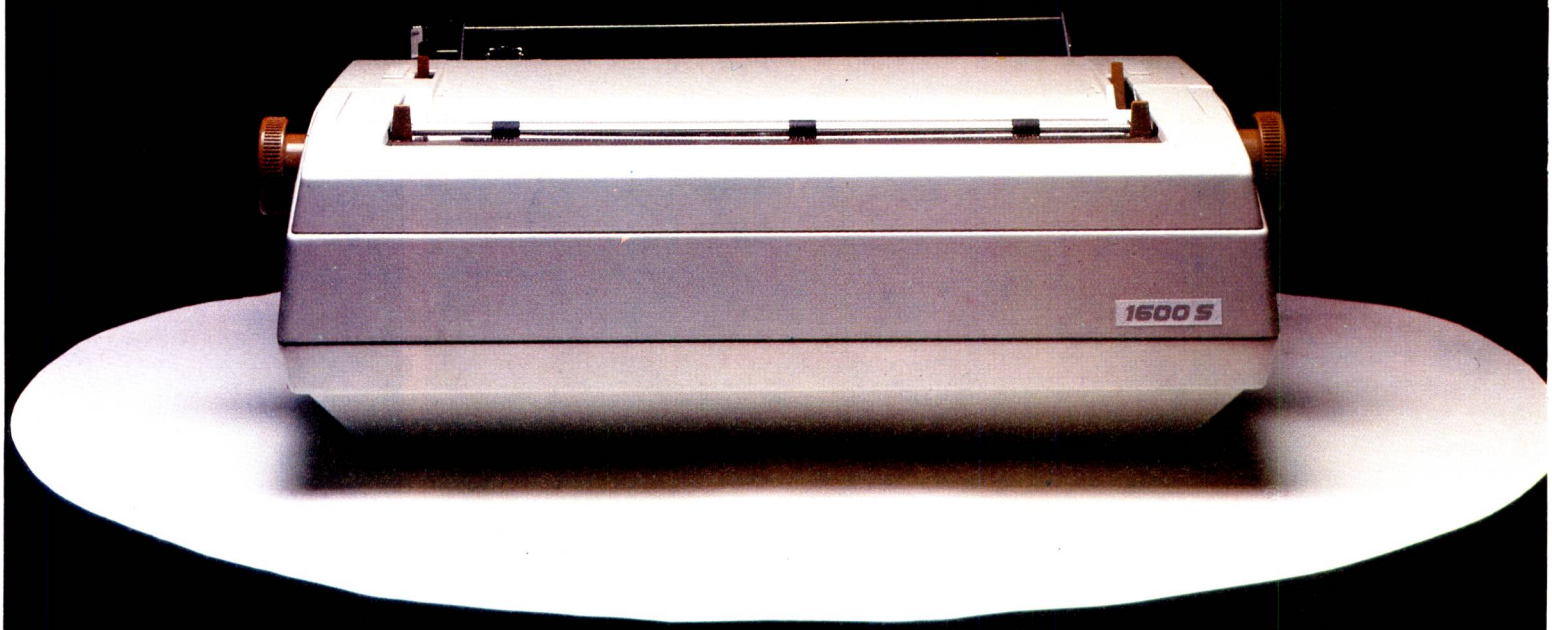

Processor: 32 bit MC68000. Memory: 256K to 1Mb.
Multi user/multi tasking UNIX™ system supports up to 16 users.
Languages: C, COBOL, BASIC, FORTRAN, PASCAL
Disk capacity: 1Mb Floppy, 5/10/20/40/80 Mb Winchester.
Options: communications, high resolution graphics, local networking.

TETRA

THE BEST SELLER OF 1982

In 1982 the RICOH 1600S outsold every other comparable printer because of its speed, reliability, intelligence, flexibility and sophistication.

Because it is compatible with all known systems and software packages.

Because of the 12 month warranty that Micropute offer.

Because Micropute are a company who care, who are constantly aware of changing needs and who can fulfill any special requirements.

Not least of all, because of the price

In 1983, there will be thousands more satisfied customers.

We hope that you will be one of them.

ONLY MICROPUTE GIVE YOU SUPERCOVER

As an extra bonus Micropute Supercover will provide a 12 month on site maintenance for only £99.00 parts and labour.

DON'T FORGET THE RICOH 1300S

...a little bit slower but every bit as clever.

Please send details of the RICOH 1600S and 1300S

Adding high resolution colour graphics to your Nascom or Gemini system need not cost more than £199.

Introducing the new **Microvector MV256** adding a high Resolution Colour Graphics capability to your *NASCOM* or *GEMINI* computer system.

★ High resolution display. 256 x 256 x 4 planes (16 colours).
★ 32k of display memory with flicker-free update (Outside of the host computers memory address space).
★ Non-interlaced 50Hz CCIR 625 line display format.
★ High Quality PAL UHF output with intercarrier sound facility.
★ Composite B/W video 75 ohm output (16 grey levels).
★ Red, Blue & Green video 75 ohm outputs (sync. mixed on each) available on MV256B only.
★ Audio & light pen inputs.

The **MV256** uses the *Thomson EF9365* graphics display processor to provide high level graphics functions in hardware.

★ Ultra fast vector and character generation give full animation capability (typ 800 000 pixels/sec, max 1300 000 pixels/sec).
★ Selectable line types (continuous, dotted, dashed, dotted-dashed).
★ 96 ASCII character set. Programmable character sizes and orientations.
★ Rectangle fill, clear screen and scan screen operations.
★ Host computer access to display memory via registers.
★ Comprehensive display status information.
★ Light pen control.
★ NMI interrupt generation (on board link option).

MV256A **£199** + VAT MV256B **£220** + VAT

Both the **MV256A** and **MV256B** are supplied built and tested with comprehensive documentation and programming examples, Postage & Packing free.

Colour Video monitor 10 inch 0.6 mm pitch tube 9MHz bandwidth, suitable for use with MV256B. Also has PAL decoder enabling direct connection to domestic video recorder.

£199 + VAT & CARR.

Arfon Light pen, Plug in, compatible with Micro Vector board.

£50 + VAT

Cable Accessories available.

Linsac's ZX Companion series has received excellent press reviews:

"Far and away the best" — *Your Computer*

Thoughtfully written, detailed and illustrated with meaningful programs ... outstandingly useful" — *EZUG*

'The Spectrum Games Companion' is the latest addition to the series and is aimed at the games player and programmer alike. Twenty-one games designed specifically for the ZX Spectrum are included, with clear instructions on entry and play. Each program is explained fully with complete details on how it is designed and written. Introductory chapters show how to set up and use the Spectrum and how to create your own games. Later sections cover number games, word games, board games, simulation games, dice games, card games and grid games. If you want to enjoy your ZX Spectrum and learn its secrets at the same time then this is the book for you!

Bob Maunder is co-author of 'The ZX80 Companion' and author of 'The ZX81 Companion'. He is a Senior Lecturer in Computer Science at Teesside Polytechnic, holds an MSc degree in Computer Science, and is a Member of the British Computer Society.

The Spectrum Games Companion is available from good book shops, or send £5.95 to:

ONLY £5.95

SimpliFile™ puts your files before your eyes.

ONLY £75 + VAT

See your files.

- Your screen is divided into a disk area and a file area for instant recognition.
- Disk information and commands are displayed at the top of the screen.
- The file area lists one file per line, by name, size, date of last change, and your description.
- If your files won't fit on one screen, use the arrow keys to scroll through the list.
- To move through the file list one screen at a time, type N (Next Screen) or P (Previous Screen).

Issue one-touch commands.

- To perform file operations, point the cursor at the desired file. SimpliFile will then respond to the following single-character commands:

B Back the file up to a backup diskette.
E Erase the file — SimpliFile asks you to verify by typing Y.
C Copy a file — SimpliFile asks you the name of the file to copy to.
R Rename a file — SimpliFile asks you the new name of the file.
L List a file on your printer.
V View the file contents in text or in hexadecimal.
X Execute — you can enter and execute any program, passing it a file name or text, then return to SimpliFile.
? SimpliFile displays a command summary.
M Marks the file for a Multiple command, executed from the disk area.

And there's more.

- Files can be sorted by name, type, or size.
- The Multiple command lets you Backup, Erase, or List all files marked M.
- SimpliFile allows you to change either the Current or the Backup diskette at any time.
- The DiskId eliminates confusion about which diskette you're working with.
- SimpliFile maintains today's date. Type it once, and it's never forgotten.
- All file and disk information can be printed in one report for easy reference.
- Print your screen at any time.
- Whenever SimpliFile expects a response from you, you can abort the action by hitting the (ESC) key.
- Comprehensive and detailed documentation helps you get the most out of SimpliFile.

Revolution, pure and simple.

- SimpliFile will change your CP/M work habits for good.
- Looking at file descriptions and change dates, you'll recognize each of your files instantly.
- With the Sort and Multiple commands, backing up files will become a pleasure.
- SimpliFile will become your normal CP/M environment. With the Execute command, you'll move in and out of programs easily.
- You will never use CP/M utilities again. Goodbye to PIP, STAT, ERA, REN, and DIR!

SimpliFile is available on 8" SSSD diskettes exclusively from SELVEN SYSTEMS, Dept.PCW 3/5 Guithavon St., Witham, Essex CM8 1BJ. Please enclose a cheque for £86.25 payable to "Selven Limited" with your order.

New for APPLE II/IIe

Compare these FORTH attributes with other languages for Apple II:
Suitability — FORTH is suitable for all programming tasks, particularly games, graphics and business applications. Both novices and professionals can benefit from FORTH'S unique blend of facilities.
Productivity — FORTH programmers are more productive. Of the thousands that have changed to FORTH, many report a tenfold increase in their useful output.
Efficiency — The Metacrafts FORTH compiler produces threaded code which is very compact and which runs 10-20 times faster than BASIC and 2-5 times faster than Pascal p-code.
Extensibility — FORTH lets you design your own program control structures and data handling primitives. This means you can truly extend the language to suit your application, instead of being forced to "bend" your application to suit the language.
Simplicity — FORTH encourages a highly modular interactive style of programming which simplifies program development. This is backed up by a powerful set of tools, including a full screen editor and a debugger which allows you to test programs at the source code level.
Flexibility — Metacrafts FORTH can be configured to handle any device type, and diskettes can be generated to handle turnkey applications.
PRICE £79 includes: comprehensive user guide. FORTH 79 system, full screen editor, macro assembler, debugger, utilities. Extension word sets for double length arithmetic, strings, graphics, heap and buffer handling. Dictionary overlays. Support for 40/80-column display + printer + language card. Customer support service.
Requires 48K **Apple II/IIe** + 1 **Disk II** (16 Sector).
Payment by cheque/cash with order.
Write for additional information. Dealer discounts.

The fir second g

The Need

SOFT is the first of the second generation of microcomputer magazines. The first to be written specifically for the microcomputer user.

Most people look to computers to perform specific tasks, whether it's the business user needing to produce a spreadsheet analysis, the archivist wishing to computerise files, or the games enthusiast looking for another Space Invaders. In every instance the solution starts not with the hardware, but with the software. Find the right software, and you've found the answer to your problems. Buy the wrong hardware, and your problems have just begun.

The logical approach to buying a computer is first to choose the program which performs the required functions and only then to decide on the hardware which will most efficiently run that program.

Clearly there is a need for a magazine which helps its readers do just that. A magazine that provides solutions, not problems. A magazine that considers the ever-increasing volume of software available and guides its readers to that which will best suit their requirements.

SOFT is that magazine.

The Publishers

Anybody can have an idea. It's making the idea work that matters. That's why at Sportscene Specialist Press we launch very few titles. Waiting until we know we will get it right.

We took Personal Computer World to market leadership before selling the title to VNU last Autumn. Then we launched MicroScope. Now established as the market leader, MicroScope is required reading throughout the industry. SOFT will be only our third title in this field. But it will be the first radically new approach to consumer micro magazines since PCW began it all in 1978.

The Writers

The Managing Editor of SOFT will be Dick Pountain, currently MicroScope's Software Editor, and previously Managing Editor of Personal Computer World. SOFT's Editor will be Gareth Jefferson, MicroScope's present International Editor and a man with considerable experience in editing specialist consumer magazines. The contributors will include people of the calibre of David Tebbutt, Guy Kewney, Mike Liardet, Kathy Lang and Sue Eisenbach. With SOFT they will establish a new standard in microcomputer magazine publishing.

The Concept

SOFT is committed to reviewing more software in greater depth than any other microcomputing magazine. It will not merely make mention of the software package and documentation, it will thoroughly analyse every program in its entirety.

SOFT will certainly not ignore hardware. But hardware will be important only in so far as it influences the improvement of software.

SOFT talks not about computers, but about what computers can do. And all those involved with microcomputing, on any level, will need to read SOFT. Every month. To get the most from their computer. To keep pace with the explosively-expanding availability of software.

In short, SOFT will be the first magazine to take software seriously.

The Magazine

SOFT will be a prestige, glossy, perfect-bound A4 monthly magazine, printed on high-quality coated stock throughout. It will make extensive use of editorial colour, not only for illustrations, but also to signpost departments and clarify tabular information.

A major innovation will be the introduction of the first

st of the eneration

benchmark tests for evaluating software. A whole new series of review formats. For example one analysis of, say, a financial modelling package will be directly comparable with another.

The features will investigate all aspects of microcomputer software, from profiling the software authors, to arguing the merits and demerits of programming languages. Articulating the advantages which individual software packages have to offer. Analysing user requirements. And exploring the effectiveness of the solutions that software can provide.

But at all times SOFT will remember that computers are used by people, whether they are enthusiasts, games players, home hobbyists or business users. The editorial emphasis will always be on the human interface.

The Resource

SOFT will not confine its coverage to commercially available software. It will explain how to use languages and generate programs. And it will show how the individual can profit by creating programs to sell.

Additionally, every month SOFT will carry a continuously updated, comprehensive software directory which will be an invaluable source of reference.

Written and produced to the highest standards, utilising the best available journalists, illustrators and photographers, SOFT will be in a class of its own.

Special offer to PCW readers

Having published PCW for so long we feel that we know the average PCW reader rather well. And we believe that SOFT will appeal to the PCW reader even more than to the man in the street.

So we are offering very special terms to PCW readers who subscribe to SOFT. Return the coupon below to us by the 10th May, and we'll cut £2 off the normal annual rate of £12. Should you be dissatisfied in any way we'll refund the unused portion of your subscription.

Alternatively send us £1 and we'll rush you the first issue. Before it hits the street.

PRIORITY ORDER FORM

I would like to subscribe to SOFT for one year (12 issues).

☐ UK £10.00 ☐ Rest of the world £23.00

☐ I would like a sample copy of SOFT. I enclose £1.

☐ I enclose a cheque made payable to Sportscene Specialist Press Ltd.

POWER FAILURE "SPIKES" "GLITCHES"

A disaster for companies running computers.
"NOT" if you have "BATTPOWER" – the uninterruptable power supply.
When Battpower is between the mains and your computer all your worries are over.

In the event of a power failure you may carry on operating your computer and ancillaries for at least one hour with our basic unit, costing only £599.00 plus VAT. Featuring:

QUARTZ FREQUENCY CONTROL ★ REGULATED SINE WAVE OUTPUT ★ INTERCHANGEABLE BATTERY PACK ★ TOROIDAL TRANSFORMER TECHNOLOGY ★ 300 VA OUTPUT ★ EASY TO INSTALL

Alternative units, with longer operating times, also available.

WE STOCK THE COMMODORE 64 COMPUTER –
Ring us for our latest price.

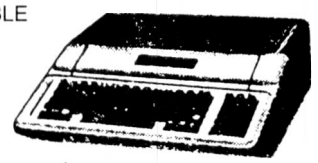

Announcing our own Cat & Mouse Game for Commodore 64 – machine code based.

LARGE STOCK OF SOFTWARE ALSO AVAILABLE FOR VIC 20 AT COMPETITIVE PRICES.
Access and Barclaycard accepted.

SINCLAIR OWNERS READ THIS FROM

You've probably heard about MACHINE CODED PROGRAMS and thought "so what! How can they help me?"

Well now you can find out and taste the very real difference by purchasing our latest MACHINE CODED programs. These emulate features of the most modern professional computers (12 years writing machine coded programs for IBM, ICL, UNIVAC and Sinclair means we know what we're talking about).

Just read the specification and you'll see what we mean.

MACHINE CODE TEST TOOL

The ultimate professional tutor and de-bug program, we wrote this to help us write our own programs.

- **TEST** and display machine code instructions as they're written.
- **IDEAL** for both the novice and the expert.
- **FULLY** documented with a 32 page tutorial
- **HEX:DECIMAL** conversion as standard.
- **CHARACTER GENERATOR** — of unbelievable quality
  Supplied free with the Spectrum version.

Available for the 16K ZX81 and 16/48K Spectrum.

SPECTRUM CHESS Dare you face The Turk

The original Turk was an eighteenth century automaton, a life-size mechanical figure resplendent in Turkish costume and seated behind a wooden cabinet on which a chess board and pieces were placed.

OCP now offer you the twentieth century equivalent of that Turk — a chess-playing computer program.

The Turk challenges you to a game of chess!

MANY OPTIONS INCLUDE:

- 6 LEVELS OF DIFFICULTY
- DEMONSTRATION MODE
- BOARD EDITOR
- GAMES PRINTOUT FACILITY
- BLITZ CHESS AGAINST THE CLOCK
- TWO PLAYER MODE
- UNFINISHED GAMES CAN BE STORED
- RECOMMENDED MOVE

FULL INSTRUCTIONS PROVIDED

ADDRESS MANAGER.....

Works on the 16K and 48K Spectrum, in 48K it will store, file, select and retrieve over 400 full addresses (over 1500 individual names); Dynamic Memory Management and compression techniques makes all this possible and there's a lot more:

- **FULL SCREEN INPUT and EDITING** — see it as a page as it happens with insert, delete and TAB Commands.
- **MULTIPLE INDEXING** — 3 way user-defined index enables you to define, catalogue, select and print entries as needed, (essential for the more sophisticated applications.)
- **INSTANT RESPONSE** — yes, this program is very very fast.
- **SUPER FRIENDLY** — crash-proof, extremely easy to use and efficient in a way that BASIC can never be.

MANY USES

- **AT HOME** — (storing addresses, printing out Xmas Card lists etc.)
- **AT WORK** — for mail-order work, internal telephone directory, sorting customers into types, areas, size you choose.
- **CLUBS** — print-out members list, sort different categories etc.

MACHINE CODE.. IT MAKES ALL THE DIFFERENCE.....

Post order to: Oxford Computer Publishing Ltd., P.O. Box 99, Oxford.

Please rush me: **Address Manager** at £8.95 each. ☐Spectrum only.
Chess The Turk at £8.95 each. ☐Spectrum only.
Machine Code Test Tool at £9.95 each.

Tick box for edition required: ☐ZX81 ☐Spectrum

SOFTEK SOFTWARE

SOFSYS

The only true system for the ZX Spectrum Microcomputer. Sofsys comprises of a USR definable key program which allows single entry to the other units which include: Sofcom (our BASIC Compiler), Sofsem (our Assembler), Sofmon (our Monitor Disassembler), Sofkits 1 and 2 (our toolkit and graphics kit).

MASTER KEY This is the heart of Sofsys. This amazing program does the impossible. It offers up to seven user-definable keys, ON ERROR and ON BREAK definition, and a real-time clock with alarm and stop-watch features! They keys come preprogrammed for instant entry to any of the Sofsys units, but can easily be redefined. Astounding value at £7.99. Any ZX Spectrum.

SOFCOM Possibly the only true BASIC compiler for the ZX Spectrum, Sofcom is in use not only by many members of the public but also in industry and Universities around the world. It will compile virtually any integer BASIC which lacks full string handling and an enhancement will be available in May to allow Sofcom to handle floating point and strings. Sofcom works in a 48K Spectrum, uses its own (faster-than-ROM) routines, and costs just £14.95. Available at W. H. Smith.

SOFMON The most complete disassembler/monitor on the market. It has around 25 functions and facilities. It has the uniquely useful feature of disassembling HEX as you modify memory. Tantamount to a mini assembler. Only £7.99 for any ZX Spectrum.

SOFKIT 1 Our toolkit. This superb toolkit offers not only a full renumber routine, search and replace, display variables, and the only implementation of TRACE for the ZX Spectrum. Any memory size. Only £7.99.

SOFKIT 2 Our unbeatable graphics kit. This kit offers scrolling in any direction, instant attribute change, define a separate window, store extra screens and create cartoon effects. Plus much more! Any Spectrum. Only £7.99.

SOFSEM Coming very soon. We need only say that as well as forming an integrated part of Sofsys, it will be quite simply the best assembler for the ZX Spectrum.

329 CROXTED ROAD, LONDON SE24

CRYSTAL RESEARCH LTD

XTAL BASIC 3

A Z80 based Interpreter. Disc and Cassette versions including CP/M are available now or in the near future.

FEATURES

1. Has over **110** Commands and Functions and is user extendable.
2. **Xtal BASIC 3** incorporates its own editor that is independent of VDU or terminal being used but appears to have the facilities of the most sophisticated direct screen editing, in brief the editor contains the following:
   Lines of 127 characters (can be extended up to 254)
   Full on screen editing, up, down, left, right.
   Auto insertion of lines.
   HOME CURSOR, CLEAR SCREEN, DELETE LEFT, DELETE RIGHT, INSERT CHARACTER, ERASE WHOLE LINE, ERASE TO END OF SCREEN, PRINT SCREEN CONTENTS TO PRINTER, and ABANDON LINE. A LINE EDIT MODE IS INCLUDED AS STANDARD.
3. Variables can be of any length. First five characters used to distinguish one variable from another. Multi-dim arrays, string arrays and integer arrays.
4. Full Tape and Disc file handling.
5. 32 standard error messages and traps. Ability to trap **BREAK KEYS.** Error table is extendable.
6. Possible to run programs larger than memory capacity.
7. Special features allow transfers of programs from machine to machine.
8. **Xtal BASIC 3** is designed to be compatible with most available BASICS and a program is supplied for many BASIC to BASIC conversions.
9. The manual, consisting of over **100 pages,** includes full description of the BASIC, sample programs, useful Machine Code Subroutines in Xtal BASIC 3, examples of extra commands and functions.
10. **SIZE 12K to 14K** depending on the System.
11. Available on **Cassette** and/or **Disc.** Please contact Crystal Research Ltd., for availability on your particular machine.
12. On Cassette **£40.00** + **VAT** On Disc **£60.00** + **VAT**
    OEM and Manufacturers are invited to contact Crystal Research Ltd., for licence details.

Da Vinci Computer Shop

Now at Computer Plus in Watford

At last a fully integrated computer that is versatile and big enough for any business but small enough for a desk.

The latest 16 bit technology gives mini computer performance at a fraction of the cost only £2395 or about £12 per week.

Jarman modular accounting systems are available for the VICTOR 9000 from Computer Plus.

Jarman accounting software has been designed to help business men who are looking for solutions to accounting problems.

Problems such as **invoice production, debt collection, cash control, cost analysis, budgetary control and payroll.**

There is nothing like the VICTOR 9000 or the JARMAN accounting package, see them both at Computer Plus.

Software package transforms efficiency

Plastics Technology of Lewes, Sussex
Manufacturers of high quality transformers

Everyone knows reliable accounting software is an asset to any business. Sadly really good packages are not so easy to find.

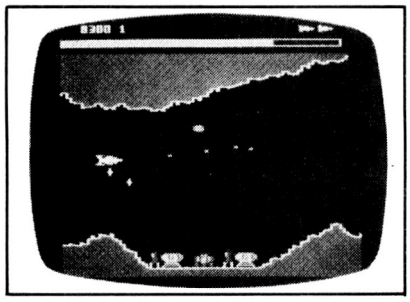

But Plastics Technology have got just such a package from Open Computer Services. It's easy to use and offers a comprehensive programme that can readily be updated.

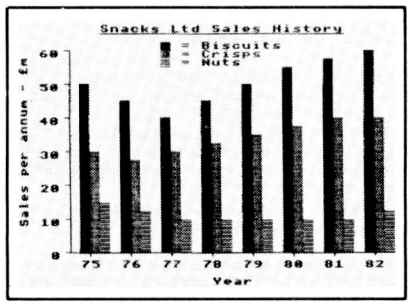

Contact Open Computer Services for quality software. And don't forget, should you find a bug in one of our packages, we'll give you £100.

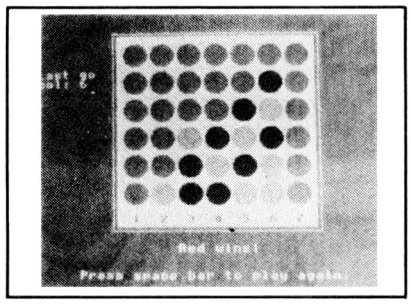

Payroll now incorporates Statutory Sick Pay module

Screen Photographs of programs in BEEBUG

BEEB UG BBC MICRO

REGISTERED REFERRAL CENTRE FOR THE BBC PROJECT

BEEBUG FOR THE BBC MICRO

BRITAIN'S LARGEST SINGLE-MICRO USER GROUP

MEMBERSHIP NOW EXCEEDS 17,000

17,000 members can't be wrong – **BEEBUG** provides the best support for the BBC Micro. **BEEBUG** Magazine – now 64 pages including new product guide supplement – devoted exclusively to the BBC Micro. Programs – Hints & Tips – Major Articles – News – Reviews – Commentary. **PLUS** members discount scheme with National Retailers. **PLUS** members Software Library. 10 Magazines a year. First issue April 1982. Reprints of all issues available to members.

February Issue: Program Features: **BEEBMAZE** – Find your way through the random maze, guided by 3D views from inside the maze – an excellent game. **FIVE-DICE** – A Beeb implementation of YAHTZEE (R), a novel dice game. Also a listing of **WINDY FIELD** – a creation from Acornsoft, **SPIROPLOT** screen doodler, and a complete memory display program in a user key. Plus **Machine Code Screen Dumps for the Epson and Seikosha Printers**: articles on **USING FILES, IDEAS ON ANIMATION** (including a Rotating Cube program), an **Introduction to the Use of Procedures, a Survey of Books on the BBC Micro**, and a Roundup of **Disc System Hints**. Plus a variety of **HINTS, TIPS AND INFO**, including a single VDU command to perform a SIDEWAYS SCROLL.

March Issue: Program Features: Life (32k), Artillery Duel (16k/32k), Square Dance, Microsketch (16k) screen drawing program in only one line of code. 3D Rotation (will rotate any object). Printers for the BBC micro – Review of Epson, Seikosha, Tandy and Olivetti. What to do with the new Operating System Chip, Disc Formatter Program, and full Disc instruction set. Newcomers article on Text and Graphics Windows. **PLUS** How to get a new Operating System ROM and a special deal on Wordwise (members only).

April/May Issue Special Anniversary Issue – Contains index to the whole of BEEBUG Volume 1. Music Composer – create complex 3 part harmonies with this synthesiser Program. **Colour bar chart generator** program. Beeb implementation of the **Connect-Four Game. Invasion** – a 16k. Plus **Review of Tape Recorders** for the Beeb; a Basic Program Editor, which lists variables and procedures, and executes Find and Replace in a Basic Program; **Reviews of Acornsoft Games** and the **Torch Z80 Disc** Pack. Disc Menu Program. Newcomers introduction to Mode 7. How to save the unsaveable; and a routine to print Double Height Characters in all modes.

STOP PRESS
BEEBUG has negotiated a deal with ACORN over the new 1.2 OPERATING SYSTEM ROM. BEEBUG members are offered the ROM at around half-price. See BEEBUG Feb. issue for details.

SOFTWARE DETAILS

BEEBUGSOFT : BEEBUG SOFTWARE LIBRARY

offers members a growing range of software from £3.50 per cassette. 1. Starfire (32K). 2. Moonlander (16K). 3D Noughts and Crosses (32K). 3. Shape Match (18K). Mindbender (16K). 4. Magic Eel (32K). 5. Cylon Attack (32K). 6. Astro-Tracker (32K). **Utilities**: 1. Dissembler (16K). Redefine (16K). Mindi Text Ed (32K). **Applications**: 1. Superplot (32K). 2. Masterfile (32K).

Magazine programs now available on cassette to members at £3.50 inc: VAT & p + p – see April/May issue for details.

For editorial material send to: The Editor, BEEBUG, PO Box 50, St. Albans, Herts AL1 2AR

ZX81 MACHINE CODE?

ZX.ASZMIC rom transforms ZX81 into an

Assembly Language programming unit

NOW IN USE IN EUROPE AND U.S.A.

ø FULL~SCREEN EDITOR

Sixteen shift keys take you into a world with a word processor feel. A blink cursor moves at your command to control insertion, rubout, line or string deletion, atuoscroll & page flip up or down. Text block operations. Ulta-fast editing.

ø MULTI~FILE SYSTEM

Declare as many files as you like, with any names you like, & they are automatically handled by the Operating System. Merge them, delete them, print, save & load them, & edit them by name. Superb flexibility with a simple but powerful system.

ø TOTAL ASSEMBLER

Full Z80 mnemonics, unlimited length labels, ORG & EQU directives, proper assembly listings with errors flagged on screen or printer. Relocatable object code & options to faciliatate cross-assembly. Interpretive immediate execution available.

ø POWERFUL DEBUG

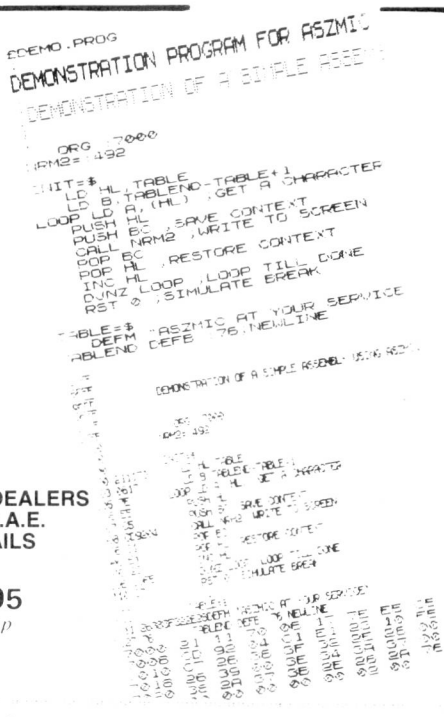

All the usual dump, modify, fill & copy commands; plus breakpoints, single stepping, context control, the convenience of interpretive execution mode, full use of the names in your program, Command Macros, autodump, and full operating system interface.

ø HI~RES GRAPHICS

255 × 144 resolution under program control to give you truly convincing graphics. With the power & flexibility of assembler you can really use this high definition.

ø MUCH, MUCH MORE

Repeat function on all keys. Double height & fine pitch on printer. Cassette catalogue. 120 page "ASZMIC GOLD" manual with training exercises, discussion chapters, sample programs, documented monitor routines & much reference information. Communicate with Basic via cassette (skeleton programs with machine code in REM) or via memory using the optional software switchable dual ROM board available from Capital Computers Ltd (£9* vat). ASZMIC redefines the ZX81 hardware to give you an integrated development system with professional facilities which rival even very expensive systems. Why not get in touch for more details?

Driving Commodore is getting easier

Steer your way to greater efficiency and meet all your administrative needs of the future with the SUPER range of quality software.

Whether you want a fast and flexible database, a comprehensive and easy to use word processor, or a completely integrated office 'manager', Precision Software has the answer. With software that harnesses the full power of the new 700 business computer from Commodore.

Superbase Database manager for all business environments where accurate and up-to-date information is the key to success.

SUPERBASE sets new standards in flexibility and ease of use, with large record sizes, fully re-definable multi-screen record formats, spreadsheet-like calculation facilities, fast 'B+ tree' keyaccess with selective retrieval, transaction linking, sorting and fully definable report formats. SUPERBASE can also be linked to SUPERSCRIPT II.

Superscript II Enhanced version of the popular full feature word processor. Unrivalled table handling with 240 column wide screen, scrolling in all directions, arithmetic, memory calculator, column manipulation and mail merge with record selection. Comprehensive editing and finish quality output formatting. Handles up to 2,100 lines of 80 column text. And it spells!

Versatile, fast, simple to learn and use, SUPERSCRIPT II processes letters, quotations, reports, mailshots and standard forms with professional ease, enhancing presentation and ensuring perfect copies every time.

Superspell Fast, effective spelling checker ensures 100% typographic accuracy. An integral part of SUPERSCRIPT II, SUPERSPELL checks documents against a standard 30,000+ word dictionary and displays a list of every unrecognised word. SUPERSPELL handles both English and American spelling variants. You can accept, ignore, correct or add new words, building up your own dictionary extension. SUPERSPELL also includes a word look- up facility.

Superoffice The ultimate integrated office administration system, with full records management, calculation, word processing and spell checking.

SUPEROFFICE combines the database handling of SUPERBASE with the document editing and formatting power of SUPERSCRIPT II.

The availability of SUPERSCRIPT II as an integral word processor enables lists selected from data files to be used for mailshots, tables, standard forms and labels. SUPEROFFICE includes a powerful programming capability, enabling you to build up a library of your own programs. System-wide help screens are supported by clear comprehensive manuals and tutorials.

Choose an off-the-shelf application to suit your business from a steadily expanding library.

Come and see for yourself at the Commodore Computer Show, Cunard International Hotel, Hammersmith 9-11 June 1983 on Stands B36 and B124. Also at the London Computer Fair 16-19 June on the Commodore Stand.

DON'T CASH YOUR CHIPS IN UNTIL YOU'VE SEEN SIMON'S CARDS

Sirius 1/Victor 9000

128K RAM £349

A high quality fully socketed board which upgrades Sirius/Victor internal memory by 128K. Switch selectable address decoding means memory can be mapped into any free address block allowing up to four boards to be individually configured in one machine, giving a total upgrade capability of 512K.
Full instructions for simple installation.

Timekeeper £99

There's no time like the present for installing a Simon Computers Timekeeper, so that your Sirius/Victor will always know the time of day. It is supplied with utility programs for MS-DOS and CP/M-86 to access seconds, minutes, hours, day of the week, month, year. The time is retained when the computer is turned off by an on-board battery which is automatically trickle charged when the computer is on.

apple® II *Aristocards*

Parallel £69

A general purpose printer card with 4 foot cable which is designed to work with all Centronics compatible printers: Centronics, Anadex, Epson, Seikosha, Ricoh, Microline, Paper Tiger. Supplied with Amphenol 36 way connector wired to Centronics specification. CP/M, Pascal compatible.

Serial £75

Bi-directional asynchronous interface conforming to RS232C standard and implementing full hand-shaking protocol. Switch selectable baud rates from 110 through to 19200. Supplied with 4 foot cable and DB25 female connector. The manual gives instructions on interfacing to all popular serial printers. CP/M and Pascal compatible.

Graphics £75

Identical to the Parallel Aristocard except on-board software contains routines to print Apple Hi-res graphics to Epson or Seikosha GP100 printers. Features include: inverse, large, rotate 90° and text screen dump, all of which are available through simple control commands.

68000 £320

An evaluation and development board for the Motorola 68000, which plugs into the Apple 11 and utilises it's input/output facilities. There are two Assemblers supplied, one of which is menu driven and a second which uses the Apple's 6502 through an editor to assemble 68000 code.

MASSIVE DEMAND
AND TECHNICAL SUCCESS FOR THE SP48

Memory prices down!

With an increasing demand for our ZX Spectrum accessories we invite you to share in our success, with a special price reduction.

SP48
32K MEMORY EXTENSION
(giving you the standard 48K)
£23

SP80
64K MEMORY EXTENSION
(giving a massive 80K paged)
£46

Both the SP48 and the SP80 fit inside the Spectrum case, are fully compatible with all Sinclair add-ons (ZX Printer, RS232, Microdrive etc.), are very low in power consumption, require no soldering, are easy to fit and remove and carry our full warranty.

ZX SLOWLOADER £10
Transfers contents of ZX 81 tapes on to your Spectrum in minutes. Ready for SAVEing and EDITing. Send s.a.e. for details.

If you cannot identify whether you hold issue 1 or issue 2 Spectrum, please contact us for confirmation.

FIT & TEST SERVICE. Available on all memories. For personal callers while-you-wait £3. 2-5pm Mon-Fri, or by return registered post £7.

Please send me by return the following items (tick products required)

	Quantity	£	p
☐ SP48 issue 1 £35			
☐ SP48 issue 2 £23			
☐ SP80 issue 1 £50			
☐ SP80 issue 2 £46			
☐ ZX Slowloader £10

Could the elusive Software Engineer really be a Boojum?

Software Engineer or not, Snark or Boojum?
You may not know the answer; for what to you is a 'scientific programmer', 'engineer with computing experience', or 'commercial on-line systems designer', may well be a Software Engineer to us. The point is, however you identify yourself it could be you we're looking for.

"For the Snark's a peculiar creature, that won't
Be caught in a commonplace way.
Do all that you know; and try all that you don't:
Not a chance must be wasted to-day!"

More than pure spirit of adventure, our motivation is to offer you an interesting prospect that you may not have realised was open to you. Our client is a Software House, successful and expanding. They're also far sighted, appreciating that many of the men and women who qualify for their opportunities may not yet call themselves Software Engineers - may not even know that someone is willing to develop them.

Call us,
and we'll tell you where you might fit in.

"They sought it with thimbles, they sought
it with care;
They pursued it with forks and hope;
They threatened its life with a railway share;
They charmed it with smiles and soap."

No less determined in our approach, we'd like to talk to computer people of all kinds, and particularly graduates with PASCAL and CORAL. This experience could bring you a role ranging from Senior Engineer to Project Leader. It will extend your career prospects, through excellent training and facilities, using such machines as VAX, HP1000, GEC4000 and IBM, and through a diversity of applications in Telecommunications, CAE and C^3I systems. You'll find the scope for independent action within a well structured operation, where positive results will bring early management responsibility. In salary terms we're talking of between £8 - £12k and more for exceptional people.

Whatever you are, wherever you are, call yourself a Software Engineer by ringing me, David Woolf, on 01-836 3932. Alternatively, send me your c.v. to, Juniper Woolf Consulting Partners, 26 Wellington Street, London WC2E 4BB, quoting ref MSG/3, and let me know if there are any companies with which you do not wish to be put in contact.

CONSULTING PARTNERS

SEARCH & SELECTION
RECRUITMENT ADVERTISING

"In the midst of the word he was trying to say
In the midst of his laughter and glee,
He had softly and suddenly vanished away -
For the Snark ***was*** *a Boojum, you see."*

* All quotations from The Hunting of the Snark by Lewis Carroll

SINCLAIR AND ORIC COMPUTERS

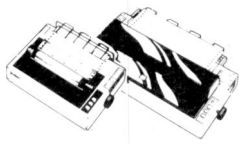

UK prices are shown first. The bracketed prices are European export prices which include insured air-mail postage to all the countries of Europe including Norway, Sweden, Finland, Denmark, Spain and Italy. For overseas customers outside Europe an extra £5 postage per item is charged. Oric 1 48K computer £147 (£158). At last our new luxury versions of the 48K Sinclair Spectrum are here with full sized typewriter keyboards enclosed in a tough larger plastic case which also houses the power supply and the computer pcb. Full-travel, gold-plated switch contacts with a life of 10^6 operations are fitted. Believe it or not these cost only a tiny bit more than the standard model. Spectrum ZXK £161 (£181). Spectrum ZXKS (as above but also fitted with a space bar and double sized shift and enter keys) £169 (£189). Standard ZX Spectrum 16K £108-70 (£129). Standard ZX Spectrum 48K £152 (£172). 32K memory upgrade for 16K Spectrum (Issue 2 only) £44 (£45). Fuller master unit for the Spectrum including speech synthesizer, sound synthesizer, amplifier and joystick ports £47-78 (£56). Zx microdrive n/a (n/a). Zx RS232 n/a (n/a). zx printer £52-13 (£61). 5 printer rolls £10-43 (£16). zx81 £43-43 (£52). zx81 ram packs 16K £26-04 (£28), 64K £49 (£51). Keyboards for zx81 and zx Spectrum:- without space bar £28 (£33), with space bar £36 (£41).

COMMODORE COMPUTERS

Commodore 64 £299. Vic 20 £130. Kit to allow the use of an ordinary mono cassette recorder with the Vic 20 and the Commodore 64 £6. Commodore cassette recorder for these computers £36-50. Super expander high resolution cartridge £27-95. We stock most accessories.

GENIE COMPUTERS

New Colour Genie £179. Accessories for Genie 1 and Genie 2:- EG3014 32K £189. Disc drives:- single £199, dual £369. Printer interface £36.

PRINTERS

The Epson MX80FT3 has been replaced by the almost identical CTI CP80 £299. Epson FX80 £387. Epson MX100/3 £425. Oki Microline 80 £207. Oki Microline 82A £360. Oki Microline 83A £503. Oki Microline 84 £730. Oki Microline 92 £470. Oki Microline 93 £640. Seikosha GP100A £199. Low cost daisy wheel printers:- Smith-Corona TP1 £418, Brother HR1 £520. The Bytewriter, the latest miracle, a combined daisy wheel printer and electric typewriter for only £418. We can supply interfaces to run any of the above printers for Sharp Computers.

SWANLEY ELECTRONICS

Dept PCW, 32 Goldsel Rd., Swanley, Kent BR8 8EZ.

Postage £1 on Sinclair products (UK), £3-50 on other computers, £4-50 on printers and 50p on other orders. Please add VAT to UK orders. Official credit and overseas orders welcome.

CHIP CHAT

Let's start on a less scathing note this month by thanking the ACC for a card wishing us a happy fifth birthday. We'd now like to congratulate them on their tenth ... and talking of fifth birthdays, a heavily vetted report on the *PCW* fifth birthday, held at the Planetarium in London W1, neglects to mention the more interesting aspects of this event. Journalists, important members of the industry and honoured publishers from VNU (*PCW*'s owner), mingled in a great uproarious celebration which ended abruptly at 9.30pm, only after the champagne had run out and had been replaced by something one might normally add to fish and chips ... Celebrations relocated and continued deep into the night in a nearby pub. Rumour has it that certain people (we're forbidden to mention which ones) had a good time ... A recent issue of *Which Micro?* reveals a warmhearted competition offering a BBC Computer or disk drive as the first prize. As is customary in these competitions, a tempting picture of one of the prizes was shown. How strange that it was a picture of an Oric instead of a BBC? – that ol' Oric gets everywhere ... Computer shows gets more snobbish every day. A press release about the Office Automation Show insists that 'Class consciousness is a key issue in the spread of office automation systems in the UK'. Isn't class consciousness a key issue in the spread of anything that costs money? Naturally, the exhibition last year attracted 'a large percentage of directors and senior managers from a wide range of industries'. This 'class consciousness' could lead to a 'keep up with the IBMs' phenomenon taking over our computerised offices before long. How about company computers with vinyl roofs or managerial printout paper with watermarks!... Fed up with having your press releases or sales leaflets thrown out by your contemptuous public? Lowe 'Electronics' odd logo is a mystery which has often puzzled *PCW* hacks. In vain we have considered sine waves, voice patterns, martian landscapes and oceans. But the world's great mountain ranges, deserts and cliff faces are nothing to do with Lowe's logo. No, Lowe has a deep love for the comforts of home. The logo symbolises the Derbyshire hills ... Sinclair's recently published company profile and facts report for 1983 was in fact headed 1982. Among the more conventional reasons put forward for this is that, in the distant future, when people are – as they always will be – speculating about various social and industrial phenomena of our time, they will look at this historic document and deduce that Sinclair's great success in computers was due in part to his ability to see into the future ... And now for the bit you've all been waiting for – the Horace Competition!!! This was rather difficult to judge. Many entries were received, some of them not funny, others too rude to print and some utterly impenetrable for reasons of either handwriting, sense of humour or both. It was thought that, as so many of the entries were good, we should use these to bring a bit of sunshine to this sober page. But, folks, we're sorry and all that, there can be one winner and only one ... According to you, the readers, Horace games could involve the little chap setting fire to the royal corgis, neutering gay leopards (we take no responsibility for offended parents over that one), suing Atari (or being sued by Atari), being a lawyer in the sensational case of Horace v Pacman, signing over to the BBC Computer, (or becoming chairman of Channel 4!), taking a bath with two sharks and coming out of the closet and going Forth. Those entries which were more puns than games include: I was a teenage Horace, A horace of a different colour, the king and Horace, and (lord preserve us) a chip off the old horace. The ones which came close and caused a great dilemma for *PCW*'s overworked editors were: The Last Horace – the only computer game you'll ever need, Horace leads the SDP (using joystick to steer carefully left/right), Horace sends Eliza to a psychiatrist and Horace Sings Opera (making the most of the BEEP command). But the winner, by a pretty narrow margin has to be Horace – This is Your Life: The ultimate graphic adventure! Struggle to remember people you haven't seen for years, your only clue being Eammon telling you which adventure you met them in. Answer impossible questions about your life, supply witty anecdotes at a moment's notice and keep smiling while some chap you're supposed to have been at school with tells everybody how you got drunk and fell into a river. Only after you have survived half an hour of terrifying memories can you accept the 'Red Book'. Totally random questions and meetings. Not to be missed! Congratulations to Terry Kavanagh of Letchworth in Herts for that piece of wit rivalled only by that which features all the time in Chip Chat ... £10 and copies of both Horace games will be on their way to you by the time you read this... Thanks also to all the other readers who joined us in having a laugh at Horace's expense. We hope he isn't too offended.

BLUDNERS

Fallible beings that we are, we admit our culpability for some recent oversights.

In the April issue we apologize for the stir we caused with the PET Billy program. Quite how this error occurred is a mystery both to us and to the author, but somehow two lines went missing from the listing despite appearing on the screen ok. Anyway, the following two lines should be added.

Building Extensions

A SUITE OF 19 EASY-TO-USE PROGRAMS TO

- produce plans and maps
- overlay 2 and 3-D symbols, histograms and pie charts
- draw 2 and 3-D images, including perspective, scaling, rotation, superimposition
- annotate images with lettering, symbols, keys, shading etc
- measure parts of images, distances, regular and irregular areas and volumes
- digitise map coordinates, boundaries and plans
- produce drawings and diagrams to report quality standard

AVAILABLE ON A RANGE OF 8 AND 16 BIT MICROS WITH:

- high resolution graphics
- digitising tablet for data input, measuring and program control
- dot matrix printers for hard copy direct from screen
- optional colour pen plotter for high quality production

MicroPLAN

A Powerful Interactive Graphics Package for Drawing, Measurement and Processing of Images.

Designed for Planners, Engineers, Architects, Geographers, Demographers and Researchers.
