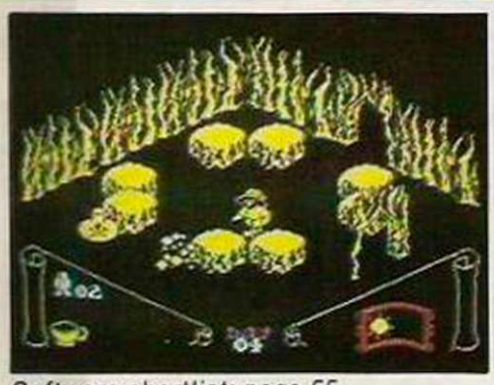
# Contents

JANUARY 1985



*Software shortlist: page 55.*

*Oric review: page 68.*

*Printer survey: page 73.*

*Cover shot — see Fall Guy Competition: page 70.*

**40 EDITORIAL AND YOUR LETTERS:** Which is best — QL or BBC? Colour magnifier for Zoom and software writers sought.

**42 NEWS:** Wine 'N' dine program, Frankie's game, Acorn's avalanche of peripherals and VDU warnings.

**47 FIRST BYTES:** Operating systems and Telesoftware for beginners.

**51 COMPUTER CLUB:** Meirion Jones looks at political clubs.

**53 HARDWARE HITLIST:** Wafadrive, Microdrive, disc drives — our man with the spanner behind his ear puts Spectrum mass storage devices through their paces.

**55 SOFTWARE SHORTLIST:** New, revised, extended — our team of square-eyed reviewers sift through new releases: F-15 Strike Eagle, NATO Commander, etc.

**67 QUEST CORNER:** Hugo North keys in new adventure games.

**68 ORIC'S NEW WAVE:** The £200 Stratos, MSX and possible 68000 kit.

**70 THE FALL GUY — WIN A TRIP TO THE U.S.A.** Two trips to Disneyland and the Fall Guy film set to be won — plus runners-up prizes of BMX bikes.

**73 ECONOMIC PRINTERS:** Hard copy means hard cash. Kathleen Peel takes a long cool look at the range of computer printers currently available sub-£200.

**79 TELSOFT — DIALLING YOUR COMPUTER PROGRAMS:** Every month, selected programs published in *Your Computer* are available over the phone. Now read on.

**81 BBC CATERPILLAR:** Blast it out in the backyard as the encroaching many-legged monster threatens to hit you right in the hardy perennials. By John Wilson

**87 ZX-81 ASTEROIDS:** Michael Pike dodges space rocks.

**90 SPECTRUM SPACE EVADERS:** Security endangered by Justin Staines.

**93 VIC-20 DEATH TRAP:** Sweat trickles down your brow. Time is running out. Can you defuse the bomb in time? A real tension-builder from Richard Hamer.

**97 ORIC DOTMAN:** Klaus Pedersen gulps down a few power pills and gives you something you can really get your teeth into.

**102 DRAGON REVERSI:** Plays a really strong game — a colourful implementation of the popular Renaissance board game by Tom Fiers.

**108 TIRADIANS CBM-64:** David Rees unleashes more aliens.

**112 ZX SPECTRUM FORTH:** Kees Wiersta teaches you a new language.

**116 BOOSTING DISC STORAGE CAPACITY:** John Dawson illustrates methods you can use to double your disc storage capacity for under £40.

**121 AMSTRAD WORMS:** A diet of worms.

**123 COMPETITION RESULTS:** Winners of our MSX prize.

**125 BBC DATACALC:** Bryan Law's spreadsheet, also on Telsoft.

**131 WINDOS:** Part two of Ian Briscoe's series.

**137 CBM-64 MEMORY MANAGER:** D Maynard saves memory.

**141 CBM-64 SAVE THE SCREEN:** D Brown saves screen memory.

**145 AMSTRAD AMSPRITES:** John Charlesworth turns his attentions from the Spectrum to extend Amstrad Basic and provide the CPC-464 with a sprite facility.

**151 VIC ZIP:** Save money on cups of coffee drunk while waiting for programs to load. Your very own fast loader from John Twiddy.

**155 QL 68008:** Phil Holliday continues his series on machine code for the Sinclair QL with a look at Motorola's 68008 micro-chip.

**161 RESPONSE FRAME:** Tim Hartnell answers readers' queries.

**163 SOFTWARE FILE:** Ten pages packed with software.

**208 DATEBASE:** What's happening on the exhibition and conference front. Paul Bond rounds up micro events.

Prizes to be won valued up to

# £40,000

# QUO VADIS

Britain's number one best selling CBM 64 game (Gallup) has now got an even bigger prize to be won. If the winning entry is received in The Edge offices after the 100,000th copy of the game has been sold, then the winner will receive not only the Quo Vadis Sceptre (estimated value £10,000), but also £30,000 in cash!

## Also for the CBM 64 from The Edge:

# Fire Quest

"... what a splendid entry into the market ..."
"... most impressive ... animation ... almost cinema cartoon quality"
"With more games of this quality,
The Edge are going to be a force to reckon with."
Rating 9/10, Personal Computer News, 3 November 1984

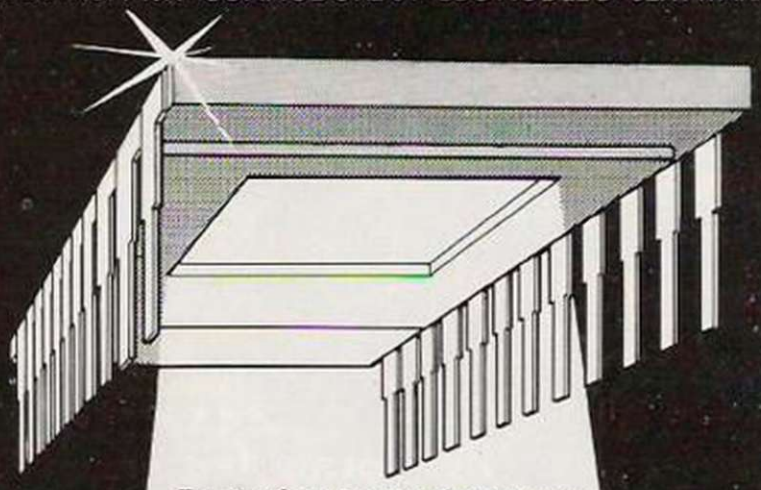
# The Complete Machine Code Tutor

SPECTRUM 48K · COMMODORE 64 · BBC MODEL B · 32K ATARI



Trust New Generation to strip the mystery away from Machine Code. Now the Complete Machine Code Tutor makes learning machine code simple so there's never been a better time to discover the really great benefits of machine code programming – see what the press says:

"A colourful, clear, interactive computer teaching package – the best I've come across in any field."
Jan Watterson – **Popular Computing Weekly**

"This pair of tapes forms a worthy addition to the range, giving a thorough exposition from the most elementary level of machine code programming on the BBC Micro."
**Which Micro & Software Review**

"The best machine code tutor and no serious Spectrum programmer should learn machine code without it."
**Crash**

"By far the best attempt comes from New Generation Software who has recently issued its Complete Machine Code Tutor for the BBC and the Spectrum."
**Popular Computing Weekly**

"New Generation have got a very nice product here. It's well thought out, easy to use, aesthetically pleasing, and (as far as I could tell) bug-free and crash-proof"
. . . "Overall then, an excellent idea, well executed."
**Computing Today**

Supplied with full notes, this package teaches machine code the way it should be taught – at your own pace and actually from the microcomputer, not from a book. You learn programming the professional way, plus a few tricks of the trade. Available from all good computer stores at £14.95.

New Generation products are sold according to their terms of trade and conditions of sale.
**FREEPOST, Bath BA2 4TD. Tel: 0225 316924**

Selected titles of New Generation Software are available from your local computer store and larger branches of:
WHSMITH · John Menzies · WOOLWORTH · Spectrum

# GAMES TO STIMULATE THE IMAGINATION

## FROM

# RUNESOFT

**PARADOX:**
Undoubtedly a real challenge and one with a touch of class rarely found in computer games. Paradox could well achieve cult following . . . Home Computing Weekly.

. . . A pretty interesting one . . . may well keep you occupied . . . Your Computer

**SPOOF:**
The adventure is well constructed . . . (a) brain-wracking experience . . . The humour gives a real lift to the program without interfering with the journey and its problems. Sinclair User.

On playing, it reveals a sometimes biting satire on the fantasy world in general and text adventures in particular . . . As a satirical piece it is often amusing . . . Crash Micro.

. . . makes a pleasant change from the usual seriousness . . . tends to make it stand out from the rest . . . one of the most playable adventures around. Your Spectrum.

One of those rare delights, a genuinely funny adventure . . . Beautifully observed and precisley anticipated — it is a real pleasure to play. Big K.

**ROBYN HODE:**
STAR GAME . . . A good buy for serious adventurers. VID

Addictiveness: Unsurpassable. Overall: Unsurpassable. Big K.

The adventure is massive, providing over 400 locations . . . the vocabulary is equally impressive — over 120 words . . . Odd bodkins and by my troth, this is indeed a smashing adventure, highly original and beautifully put together. Your Computer.

A massive 425+ location adventure based on the original ballads. All the locations and characters areas they actually would have been in the 13th century. ROBYN HODE comes in two parts — BOTH PARTS ON THE SAME CASSETTE! A challenge to beginners and hardened adventurers alike.

Runesoft
£7.50
Robyn Hode

RUNESOFT
£5.00
SPECTREALM

This is one strategy game that I could keep playing. I really enjoyed it . . . I am normally no fan of such games — this is an exception . . . Addictive isn't a word that normally applies to strategy games — perhaps this is the first such . . . CRASH MICRO

RUNESOFT
£5.00
PARADOX

. . . one of the most complicated adventures ever designed . . . addiction is probably ensured. Popular Computing Weekly
Well worth checking out, for adventure fans. WHICH MICRO? & SOFTWARE REVIEW (3 thumbs up!)
. . . one of the best text adventures on the market. SHEFFIELD GUARDIAN

There is a lot of wry humour in the adventure and a lot of satire at the expense of many other well-known programs. Popular Computing Weekly.
Finding Spoof The Magic Dragon is a laugh-a-minute . . . reflecting Runesoft's high quality approach . . . great fun for those who enjoy being frustrated. SHEFFIELD GUARDIAN.

# NO.1
# SWORDS & SORCERY

NEW RELEASE AVAILABLE 20th OCT

WIZARDS *power level 1 — 10*

DRAGON *power level 7 — 9*

LYTCH *power level 6 — 10*

WEREWOLF *power level 4*
a selection of your opponents

the MIDAS adventure concept

## SWORDS & SORCERY

Swords and Sorcery represents the first example of the ultimate in graphic adventures using the unique MIDAS system.

Swords and Sorcery differs from other adventures in that you guide your character through the unending corridors of the underworld on a quest for material, physical and/or spiritual power. The choice is yours.

You begin as a novice with limited abilities in the use of magic, sword play and stealth (lock picking, thieving etc).

As you wander the corridors, you will encounter beings meek and mighty, discover untold wealth and worthless trash. Some objects will increase your powers, whilst some will be dangerous and still others will be protected from pilferers (you!) by friendishly ingenious traps, all designed to help or hinder you on your pilgrimage to power and glory.

There are quests within quests within Swords and Sorcery, for those who want to follow them. Some are given others must be found, and some are lost causes. There are many ways of opening the gate between the levels of the dungeons. Some are obscure and easy, others obvious and dangerous. The most profitable paths are both. The Ultimate goal of many will be to find the lost armour of Zob, which was un-made by its maker, and its parts scattered across the levels. What, where, how, who and why are answers to be found. All that is known is the prayer of the seekers:

WHEN DARK CABALLUS HIS COUNCILS LEND US
LET NOT THE RED CLUPEA HARANGUE US
TURN US FROM WHAT SEEMS TREMENDOUS AND
THUS TO ZOBS GREAT TREASURE SEND US.

You need never tire of Swords and Sorcery — when this dungeon can no longer hold you, the next awaits. . . there are a series of expansion modules planned to extend your enjoyment indefinitely.

**Available on Cassette £9·95**

SPECTRUM 48K OR COMMODORE 64

*(Multi Dimensional Animation System)*

MIDAS ADVENTURE CONCEPT

Stunning 3D graphic animation simulating video disk games.

A unique fully interactive adventure language using the latest ARTIFICIAL INTELLIGENCE techniques.

State of the art data compression techniques enabling enormous scenarious and vocabularies to be incorporated.

Real time Interactive Conflict Sequences.Talk to your opponent, attack them, flee them and even confuse them.

Joystick capability for movement, combat and actions through unique menu feature. Keyboard operation for more complex interaction with the adventure when time permits.

Develop your own unique player characters. For example — specialize in magic, swordplay etc.

Total expandability — your own characters can be transferred to future adventures and new opponents, scenarious and objects can be added to all the games. A series of expansion modules to increase indefinitely the playing life of each game written with MIDAS.

# ATARI XL

## THE NEW ATARI 64K 800XL £129

## EVERYTHING YOU WANT FROM A HOME COMPUTER

1. **ATARI 64K 800XL - £169:** The Atari 800XL has many facilities and includes such advanced specifications that you will be amazed by its performance. At the new retail price of only £169 for a full specification 64K computer with a proper full stroke keyboard, we believe that the 800XL cannot be beaten. Just look at the following specifications:-
   **COLOUR CAPABILITIES:** 16 colours and 16 intensities giving 256 different colours (all of the 256 colours can be displayed at the same time).
   **OPERATING SYSTEM:** 24K ROM including Atari Basic programming language and a self diagnostic test program.
   **KEYBOARD:** Full stroke design with 62 keys including help key and 4 special function keys, international character set and 29 graphics keys.
   **SOUND:** 4 independent sound synthesisers each capable of producing music across a 3½ octave range or a wide variety of special sound effects. (Additional programming can achieve an octave range of up to nine octaves!)
   **DISPLAY:** 11 graphic modes and 5 text modes. Up to 320×192 resolution. Maximum text display 24 lines by 40 columns.
   **SPECIAL ATARI INTEGRATED CIRCUITS:** GTIA for graphics display. Pokey for sound and controller ports. Antic for screen control and I/O (Input/Output).
   **CPU:** 6502C microprocessor - 0.50 microsecond cycle and a clock speed of 1.79 MHz.
   **EXTENDED GRAPHICS FUNCTIONS:** High resolution graphics. Multi-coloured character set. Software screen switching. Multiple redifined character sets. Player missile (sprite) graphics. Fine screen scrolling. Changeable colour registers. Smooth character movement. Simple colour animation facilities.
   **PROGRAMMING FEATURES:** Built in Atari Basic programming language supporting peek, poke and USR plus at least 8 other languages available. The help key will provide additional information and menu screens with certain software. Full on-screen editing is available as well as syntax checking on entry.
   **INPUT/OUTPUT:** External processor bus for expansion with memory and peripherals. Composite video monitor output. Peripheral port for direct connection to Atari standard peripherals. Software cartridge slot is included as well as 2 joystick controller ports.
   **SOFTWARE:** Over 1,500 items of software are available including self teaching programs with unique voice over. The range of programs includes Education, Home Management & Programming aids. There is also APX (Atari Program Exchange) and of course Atari's famous entertainment software now at only £9.95. In addition there is a host of support and help available from specialist Atari magazines like Antic and Analog and from over 75 Atari books/manuals.
2. **ATARI 800 48K COMPUTER - £69:** We have a limited number of the Mk1 model 800 computer with 48K. The price is £69 (as a games machine) or £99 with the Basic Programmer Kit (Basic cartridge & 2 manuals). Both come with a full 12 months guarantee.
3. **ATARI 1010 PROGRAM RECORDER - £34:** For low cost storage and retrieval capability. Data transmission 600 baud. Storage capability 100K bytes on a sixty minute cassette. Track configuration four track, two channels (digital and audio). Auto record/playback/pause control/unique soundthrough facility. Also included is built in accidental erasure prevention and automatic shutoff after each program as well as a 3 digit tape counter.
4. **ATARI 1050 DUAL DENSITY DISK DRIVE - £199:** 5¼" disks holding 127K randomly accessible bytes provide both expansion and flexibility for your 400/800 or XL system with new 'helpful' DOS 3. All customers who purchase a Disk Drive from Silica Shop will be automatically given a FREE set of 100 programs on 3 Disks recorded on both sides.
5. **ATARI 1020 COLOUR PRINTER - £99:** Printer and Plotter with four colour graphic print capability. 40 column width printing at 10 characters per second. Can print 5, 10 and 20 characters per inch. 64 character sizes. Prints text in 4 directions. Choice of line types.
6. **ATARI 1027 LETTER QUALITY PRINTER - £249:** For word processing letters in professional type. Print speed of 20 chars per second.
7. **ATARI TOUCH TABLET - £49:** Enables you to draw and paint pictures on your T.V. screen, with the touch of a stylus.
8. **ATARI TRAK BALL CONTROLLER - £19.95:** Enables cursor movement in any direction and adds arcade realism to your games.
9. **ATARI SUPER CONTROLLER - £9.95:** The ultimate joystick with double fire button to give you a greater competitive edge in your games.

## SILICA SHOP ARE THE No1 ATARI SPECIALIST

Silica Shop are now firmly established as the No 1 Atari retail/mail order and wholesale specialist in the U.K. We already offer our service to over 120,000 customers, 10,000 of whom have purchased Atari Home Computers. Because we specialise (and with a turnover of £1.5 million), we are able to keep prices low by bulk purchases. Ring one of our 45 staff and we will be glad to be of service to you. Complete the coupon below and we will send you our Atari pack with price list and colour catalogue:

**EXTENDED TWO YEAR GUARANTEE:** We are an Atari Service Centre, able to service and repair Atari equipment and have added a 12 month guarantee to the year offered by Atari, giving you a full 2 year guarantee on your computer if you buy it from us.

**SPECIALIST SUPPORT:** Our technical staff are always available on the telephone to help and advise you. We endeavour to hold stocks of every Atari compatible item available in the U.K. and we stock over 75 Atari books and manuals.

**AFTER SALES SERVICE:** Your name will automatically be added to our mailing list and you will receive price lists, newsletters and details of new releases and developments as well as special offers which are exclusive to Silica Atari Computer Owners.

**LOW PRICES:** Our prices are extremely competitive and we will normally match any lower price offered by our competitors.

**FREE COMPUTER OWNERS CLUB:** This is open to all Atari computer owners irrespective of where you purchased your equipment. Membership is FREE and entitles you to receive bulletins giving details of new releases and developments. Send now for your FREE information pack, price list & colour catalogue.

**PAYMENT:** We accept cash, cheques, postal orders and all Credit Cards. We also offer credit facilities over 1, 2 or 3 years, please write for a written quotation.

**NEXT DAY DELIVERY - FREE:** All goods despatched from Silica Shop are normally sent by first class post or parcel post FREE OF CHARGE. As a special introductory offer for a limited period only we will be sending all Computers and Disk Drives by a next day delivery service at our expense.

**So fill in the coupon below with a literature enquiry or order and begin to experience a specialist Atari service that is second to none.**

# LBOURNE HOUSE!

**Commodore 64 Games Book 2**. Just when you thought it was safe to go back to your micro . . . here's 30 more exciting, original games for your Commmodore 64. Every game is new! And every game has been specifically designed with easy to understand sub-structures so you learn programming skills as you go. There's arcade games, strategy games and games you can modify and develop yourself. With CHEXSUM typing in is easier, and mistakes are quickly located. A must for all Commodore owners.

**MSX Games Book**. Easy-to-enter program listings turn your MSX computer into an arcade of electronic fun and thrills. Games to test your reflexes, nerve, logic, strategy and intelligence! This book will open the door for all MSX owners to a fascinating new dimension of computer game action and excitement.

**Advanced Spectrum Machine Language**. This book is a collection of ready-made Machine Language routines which show how to achieve spectacular effects on the Spectrum. Most of the routines are aimed at creating visual displays that are at the frontier of Spectrum capabilities. Routines include features that have never been published before. This book gives a unique insight into the Spectrum and into a professional's Machine Language programs.

'Clear and well thought out, and excellent reading.'
YOUR SPECTRUM.

**Commodore 16 Games Book**. Take on a great challenge!

This new release for your Commodore 16 will test your reflexes, your nerve, your logic, your strategy and your intelligence – with education games, simulation games, gambling games and much more!

With the unique CHEXSUM verification program you can make sure your games are bug free.

All these games explore to the fullest the extended graphics and sound facilities of the new, easier to use BASIC.

Program structures are outlined and key variables are given so that you can learn how to modify and extend these games for more fun-packed action!

**Guide to BBC ROMs**. At last a reference book providing 'at-a-glance' pictures of the fundamental concepts of the BBC ROMs. It lists the entry address of each ROM routine, and summarises each aspect of its function.

Guide to the BBC ROMs gives you an overall view of your BBC microcomputer, showing you where to find everything you need.

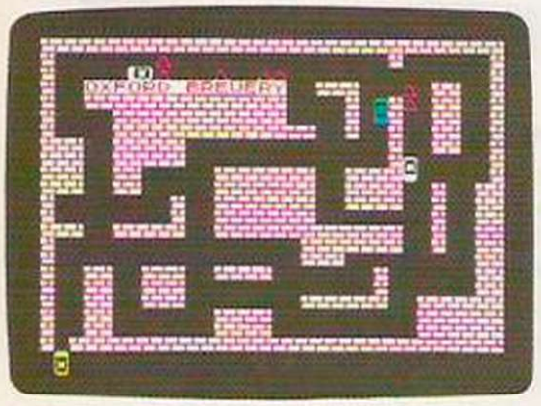
It is readily applicable to all other versions of the BBC microcomputer and its ROMs – a valuable aid to all owners of BBC microcomputers.

# Seeing is

See the pack – see the screen – see the game.
See the difference the moment you pick up one of the games from Firebird's new Silver Range.

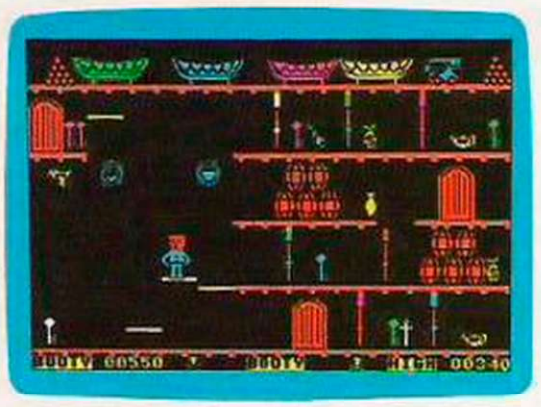
The difference is that our packs show the high quality you'll see on the screen when you play, so you know exactly what you're buying.

Here's a sneak look at three of the NEW games:



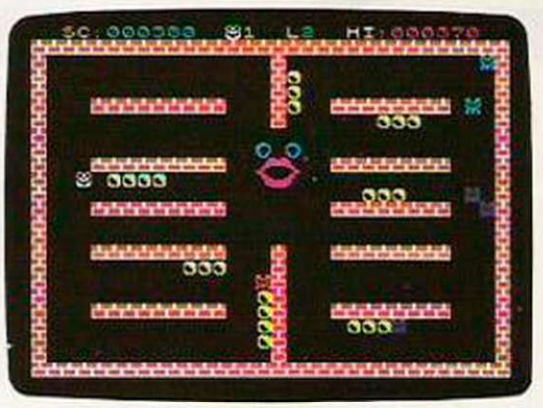
## RUN BABY RUN

RUN BABY RUN is a demanding cop chase around five derelict locations. You, the getaway driver must dispose of six pursuing police cars and elude the seventh car's fire power to make good your escape. It's not as easy as it sounds...



## BOOTY

Well shiver me timbers and splice the mainbrace and pass the grog, me hearties. Here be the greatest pirate adventure of them all, aboard that scourge of the Seven Seas – the dreaded Black Galleon. Feast yer eyes on the BOOTY-ful treasure stored in 20 holds. There be pirates, parrots and fun galore. If you don't like it, matey, we'll hang you by the highest yard-arm!!!



## CRAZY CAVERNS

Ten Crazy Caverns, ten hungry mouths to feed. Line up the Crunchy Cubes and cannon them into the Craving Craw. Watch out for the Crazy Crashers coming to convert your little Cubey Crammer into a Crushed Crisp. It's a cracker!

Look out for these games in the FIREBIRD silver range at selected high street stores.

**SPECTRUM:** THE WILD BUNCH · BOOTY · MR. FREEZE · TERRA FORCE · VIKING RAIDERS · MENACE · EXODUS · RUN BABY RUN · CRAZY CAVERNS · BYTE BITTEN.
**COMMODORE 64:** BOOTY · MR. FREEZE · EXODUS · HEADACHE · ZULU · GOGO THE GHOST.
**VIC 20:** SNAKE BITE · MICKEY THE BRICKY.
**BBC MICRO B:** BIRD STRIKE · GOLD DIGGER · ACID DROPS · DUCK! · ESTRA · THE HACKER.

# believing

The same high standard applies to all twenty games in the range and all are available at the remarkably low price of

**NOW ACCESS PRESENT THEIR LATEST MASTER PIECE:**

# RAID OVER MOSCOW

The Soviets launch a nuclear strike against major cities in the United States and Canada. With our own nuclear arsenal dismantled, in accordance with the Salt IV Arms Agreement, the Soviets believe their treachery will lead to total world domination. Our only hope is our space station equipped with stealth bombers, which can fly undetected in Soviet airspace.

As squadron leader, you must lead your commandos on a virtual suicide mission, knock out the Soviet launch sites, and then proceed into the city of Moscow. Armed with only the weapons you can carry, you must seek and destroy the Soviet defence centre to stop the attack! Top multi-screen action!

Available on CASSETTE £9·95 DISK £12·95

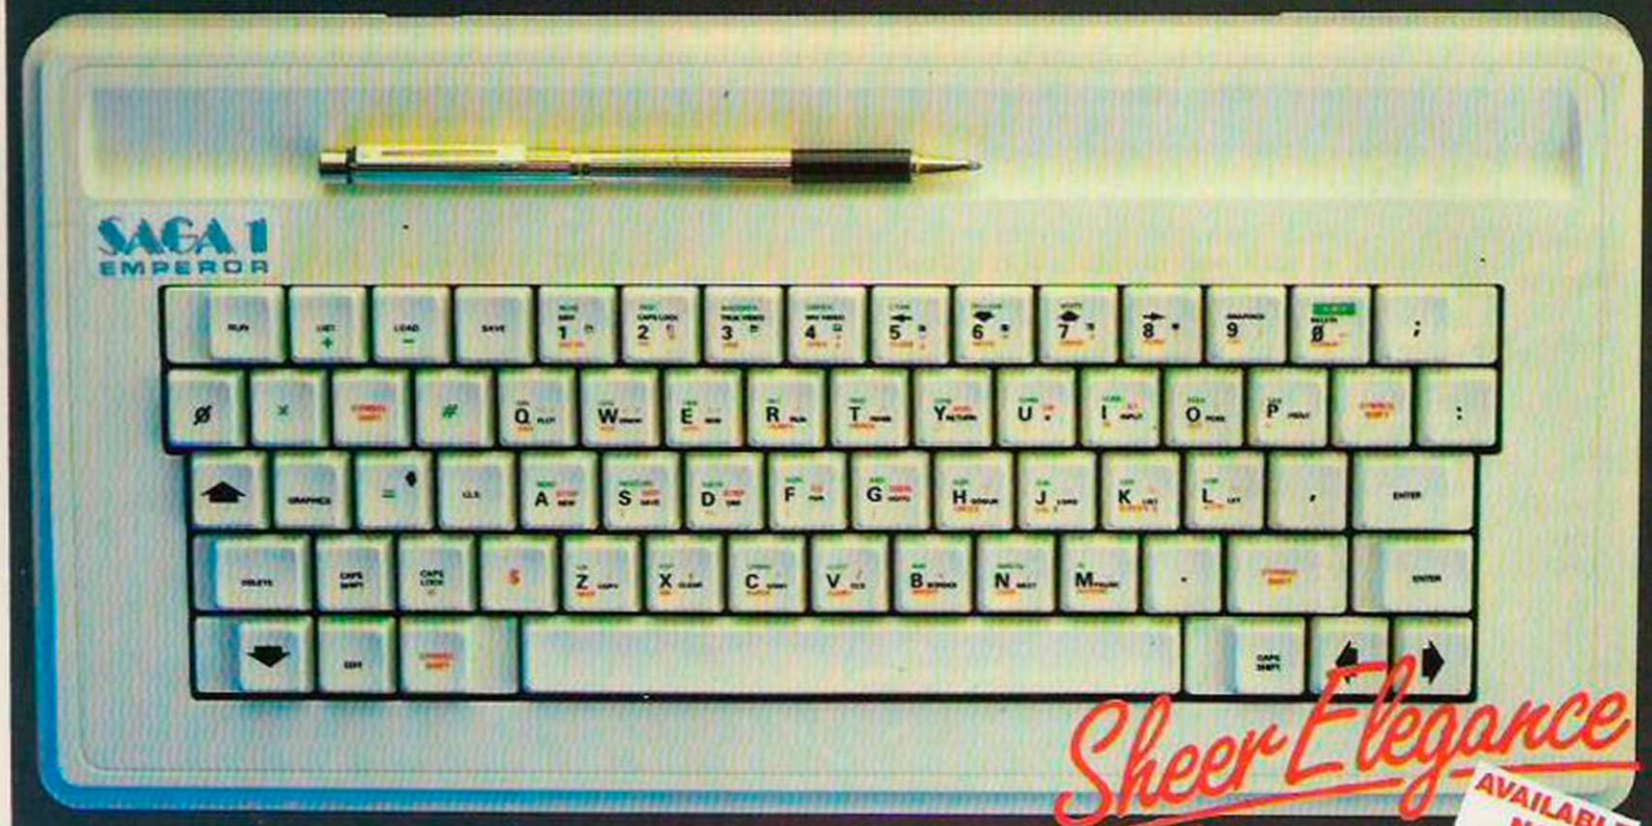
# SAGA 1 EMPEROR



*Sheer Elegance*

AVAILABLE NOW

## THE KEYBOARD FOR ZX SPECTRUM COMPUTERS

- **EASY FITTING**
- **PLEASURE TO USE**
- **LONG LASTING**

The Saga 1 Emperor, equipped with 67 keys, is a carefully designed replacement keyboard incorporating many special functions for the popular Spectrum Computer. For business or pleasure, the Emperor will make your computing time more productive and enjoyable. The SAGA 1 Emperor will enable you to use the Spectrum as a powerful programming tool easier and faster.

The style is easy:- for your benefit, the SAGA 1 Emperor has been designed to ensure that available Spectrum Peripherals will fit in the usual manner.

The assembly of the keyboard is simple — and fast. No soldering required, so that within just 5 minutes you can replace your current ZX Spectrum with the new SAGA 1 Emperor.

AND ALL THIS FOR JUST £54.95 (inc. VAT)

**SAGA P.C.!**
Your very own Personal Carrier, partitioned to neatly accommodate your Spectrum, Saga 1 Emperor and peripherals; Tape Recorder, Power Supply, Cables, manuals and cassettes. Of solid and attractive construction the P.C. is ideal for storing and transporting your computer accessories. The case uses a strong double stitched and bound Black Calf Vinyl with a tough thick ABS inner compartment, leather buckles and a strong handle. Only **£26.95** (inc. VAT).

**DUSTCOVER**
Another top quality product, this expertly produced long-lasting bound and sewn dustcover has been specifically designed for the SAGA 1 Emperor, which will keep everything looking neat and dust free. Only **£4.95** (inc. VAT).

**SOUNDBOOST**
Hear that keyboard click . . . .
with a SAGA SOUNDBOOST
The SAGA SOUNDBOOST is a tiny electronic circuit which considerably enhances the sound volume and quality of the Spectrum sound output. Adjustable from a whisper to a roar, the SOUNDBOOST provides added realism and excitement for games players and security for programmers (Hear that Keyboard Click!). No cutting, no soldering — just connect.
Only **£9.50** (inc VAT).

**FLEXICABLE**
Developed to relieve your Spectrum from the pressure of life, to fit your Spectrum and your add-ons taking the load with ease. By popular demand we now have two versions of the 9 inch FLEXICABLE available to suit your needs.
**Male-Female FLEXICABLE — £12.45**
**Female-Female FLEXICABLE — £9.50**
**Convertor PCB — £2.95**

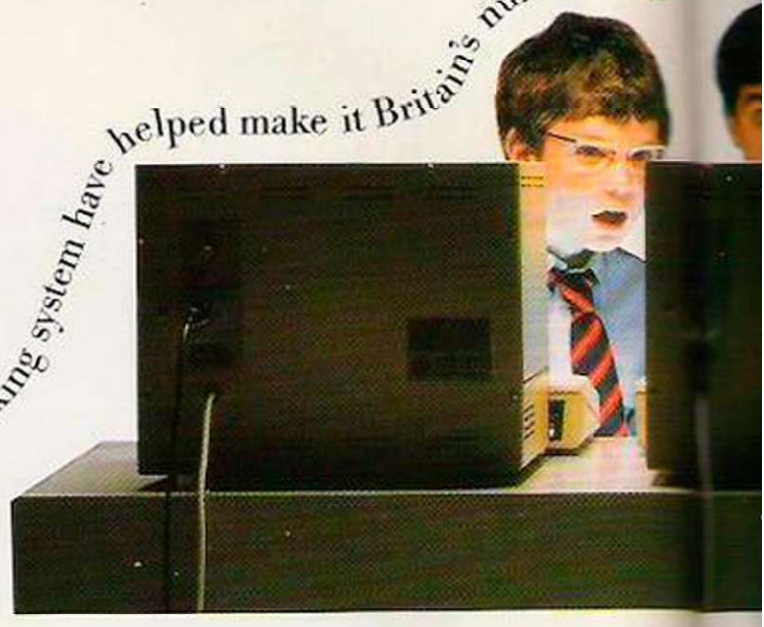
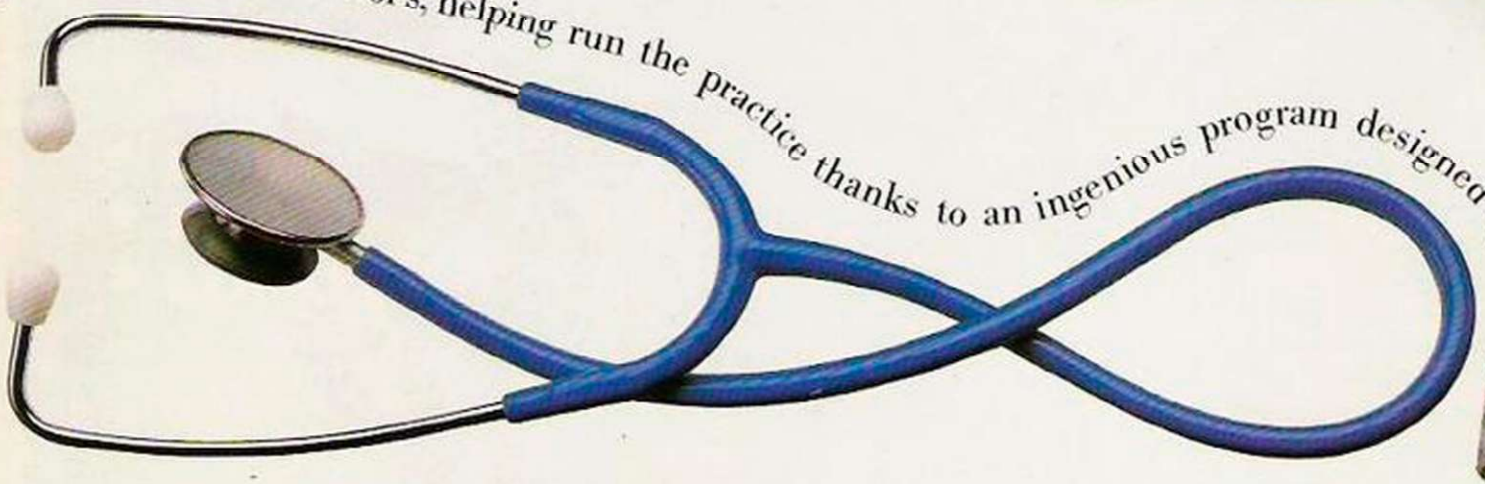
# The BBC Micro is only 16" long. But it stretches indefinitely.

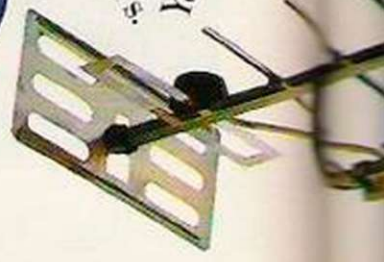
It stretches into schools where BBC Basic and the Econet networking system have helped make it Britain's number one



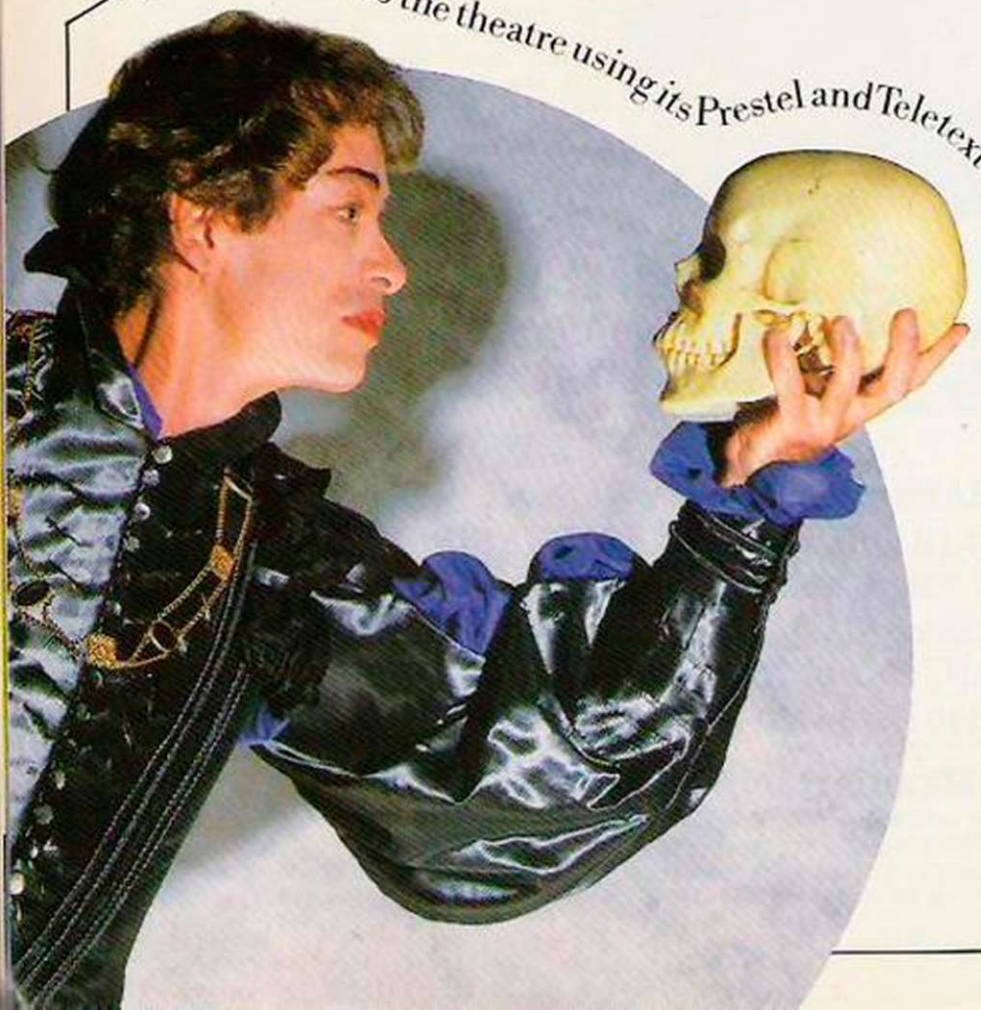
It's down at the doctor's, helping run the practice thanks to an ingenious program designed by two GPs.

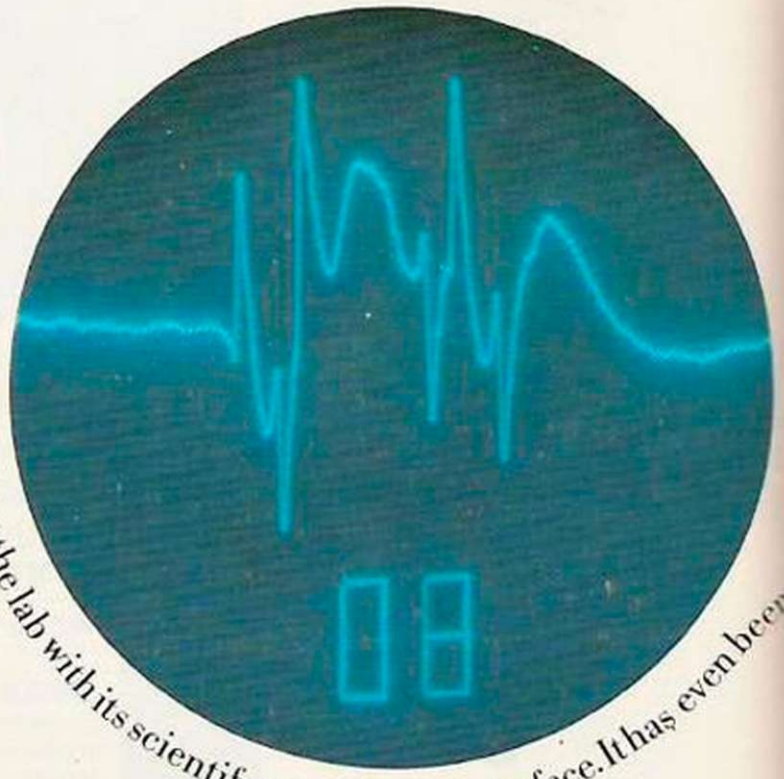


You'll catch it

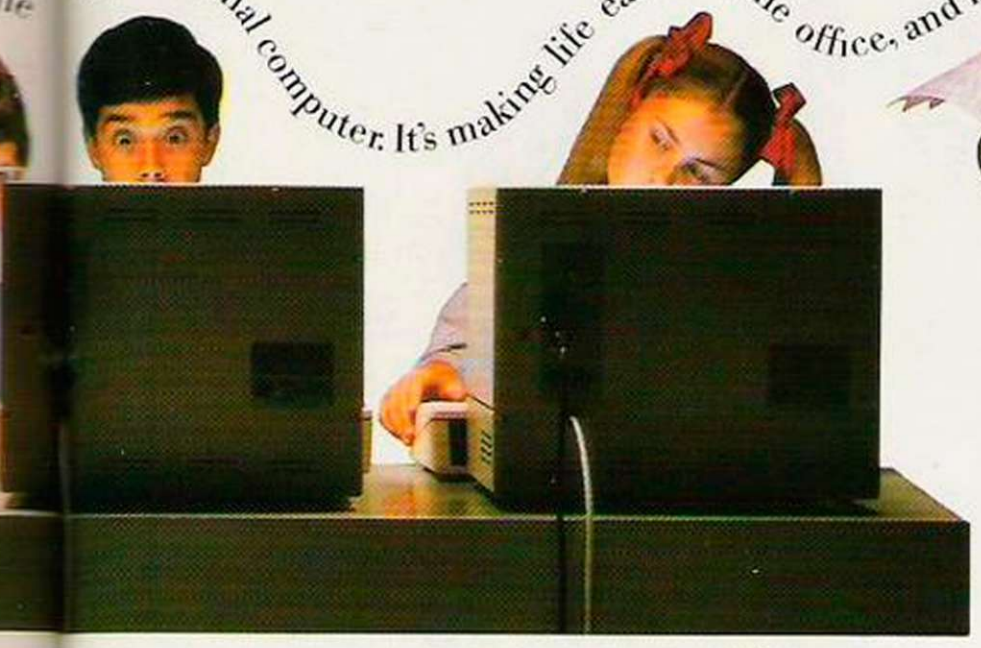


It can take you to the theatre using its Prestel and Teletext adaptors. While helping out at the lab with its scientific monitoring interface. It has even been

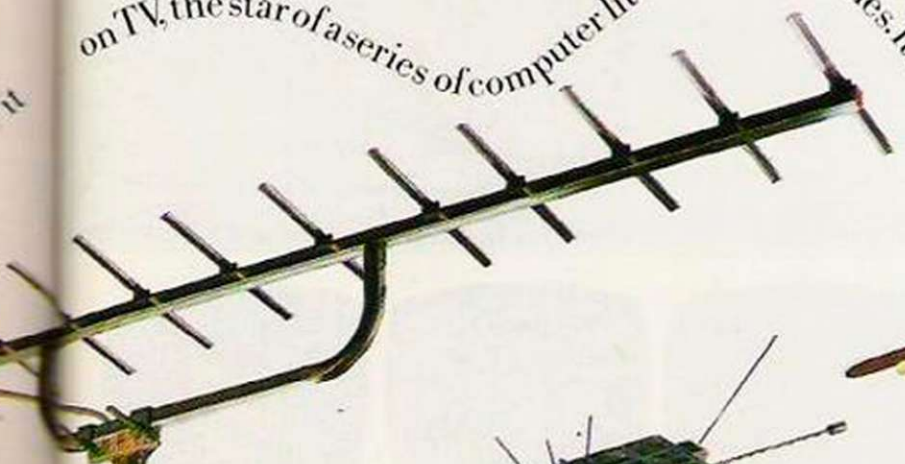




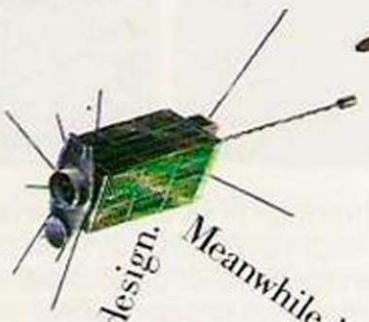
educational computer. It's making life easier in the office, and has grown into the country's top micro for small businessmen.



on TV, the star of a series of computer literacy programmes. Its colour graphics and new Bitstik make it welcome in design studios.



working in space, tracking a satellite it also helped design. Meanwhile, back on Earth at 49 Acacia Avenue, Kingswood, Middlesex...



# The BBC Microcomputer System. The world's best. And still growing.

The BBC Microcomputer System is designed, produced and distributed by Acorn Computers Ltd.

# Spectrum + OCP me

If you've got a 48K Spectrum™ and accounts to manage, OCP will make the job easier and faster.

All our business and utility programs are Sinclair Microdrive Compatible, and the Plus 80 versions are versatile enough to drive full size 80 Column Printers through most centronics and RS 232 Interfaces including the ZX Interface 1. However, our standard programs (except Stock Manager) only work with ZX and Alphacom 32 Column printers.

The magic of MACHINE CODE has enabled us to produce the very latest "on the page" presentation which lets you enter and edit data naturally, as if filling in a form.

## FINANCE MANAGER £8.95 PLUS 80 £19.95

Voted the best in its class by the Sinclair Users Annual, this easy to use program is a powerful and flexible aid to practically all domestic and business accounting applications. Show up to 255 separate accounts with running totals, and review standing orders as you scroll back and forth through your accounts. But that's not all, this program automatically raises a corresponding debit or credit for every entry, and will even open a new account if an entry features an unrecorded account name.

Having all your finance records so neatly stored is the height of efficiency! The program is entirely menu driven for ease of operation, yet the facilities are so extensive you'll soon wonder how you managed without it.

## ADDRESS MANAGER £8.95 PLUS 80 £19.95

A very useful MACHINE CODE application program with limitless applications at work and at home.

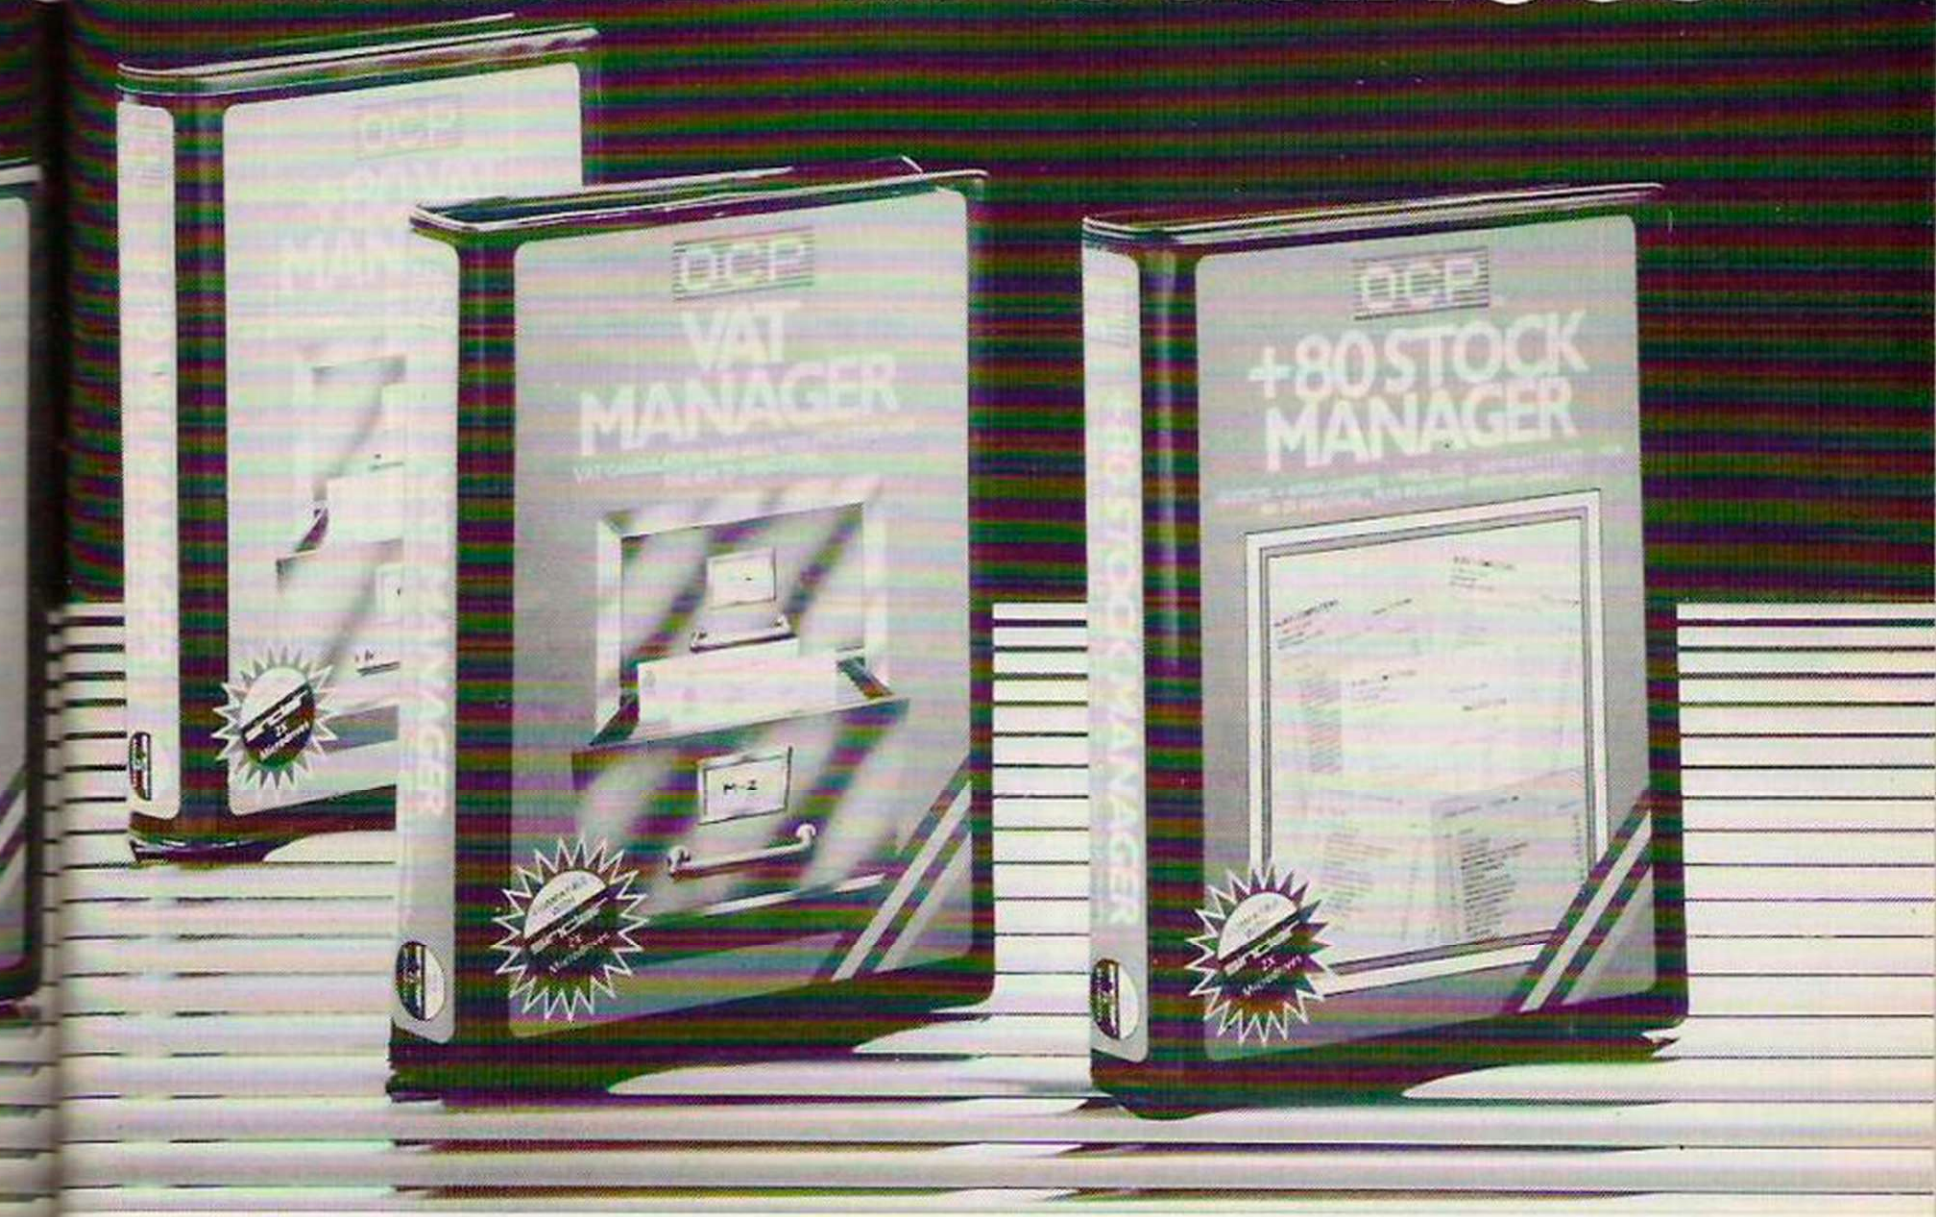
Manage your address book with efficiency and speed! Address Manager stores up to 350 names, addresses, and phone numbers – depending on their length. Or up to 1200 individual names/titles/references. The Plus 80 version also embodies a comprehensive Label Printing routine.

In the office, Address Manager can store internal phone directories, store and analyse customer's records, and much much more.

If you've already got Finance Manager and/or Address Manager but in non-Microdrive format, and you'd like to update them we'll give you a £3 rebate towards the cost of a Microdrive Compatible 32 Column, or £5 off the plus 80 version. This offer is available via mail order only.

The OCP range includes: VAT Manager, Address Manager, Finance Manager, Stock Manager (80 Column only).

# eans serious business!



## VAT MANAGER £8.95 PLUS 80 £19.95

Your VAT 100 return need no longer be a headache! Simply key in the Gross or Net values of all the period's sales and purchase invoices and VAT Manager will check, analyse and total all the relevant details. Available in 32 Column or Plus 80 versions, VAT Manager will check all calculations automatically, and will even work out details of exempt totals where the trader is not required to pay VAT. This is performed with its CLASSIFY feature for types of transactions, and GROUP feature for more detailed analysis.

## PLUS 80 STOCK MANAGER £19.95

Provides a controlled stock environment for up to 600 different product lines.

The program has facilities for the production of invoices, sales totals, price lists, and shows stock status, stock adjustment and re-order requirements.

No business should be without this crucial Microdrive program. Now you can compute your entire stock balances all on one program – Stock Management has never been so easy! Coupled with a suitable printer it will take advantage of the 80 column width printout to produce quality hard copy.

Now the most helpful aids to business efficiency are near as your local software stocklist. Call in soon and see the latest in OCP's exciting range of business software. Available form larger branches of WHSMITH or mail order direct.

For instant purchase contact the OCP Hotline with your details. Telephone: 0753 889 055

# A NEW TYPE OF ADVENTURE GAME

Hampstead is an adventure game for would-be social climbers. Speed of reaction isn't so important. What matters is your ability to solve complex problems, which get harder the further you proceed in the game.

Hampstead is a quest, but not for gold. The aim of it is to reach the pinnacle of social status, and acquiring wealth is only one part of the problem. If you wish to go up in the world you also have to gain the admiration and respect of your fellow men, and there's more to that than a fat bank balance.

**"The game itself is very funny with a joke of some description round every corner."**
— TIME OUT

**"A lot of thought has gone into this game. The result is one of the best adventures I have played. It's a must. Super."**
— HOME COMPUTING WEEKLY

**"Hampstead is an excellent example of a new type of game. It is a concept."**
— COMPUTING TRADE WEEKLY

At the start of the game you are a nobody whose aim is to become a somebody. So lie, cheat, steal and defraud. You know it makes sense.

Hampstead — a new type of adventure game!

# You should see what he's just seen.

Micronet 800.

Stretching the mind of your micro far beyond its limits.

Micro evolution continues with this unique communications, informations and software system. Set on our mainframes nationwide.

Includes 30,000 pages and access to Prestel™ with its full range of services.

A tremendous Communications section that networks you to thousands of other members across the country. Send and receive electronic messages and graphics at a touch of a button.

And there's the Chatline service, Swapshop and Teleshopping.

Check with daily updates on the very latest computer news.

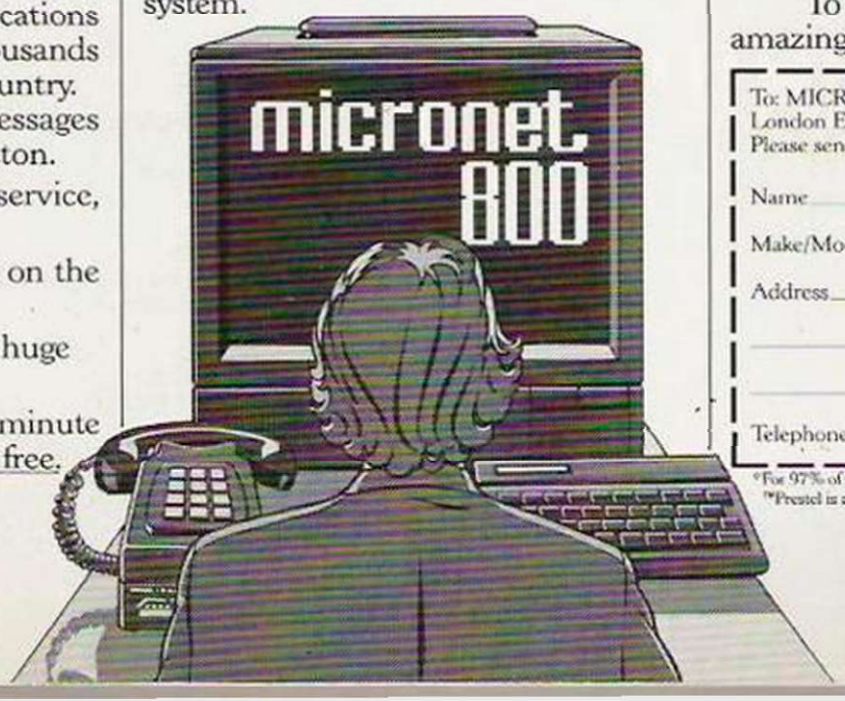
Micronet also has its own huge facts data base.

And a choice of up-to-the-minute software to download absolutely free.

For only £13 a quarter and just a local* telephone call whenever you want to connect up (that's only 22p per half hour at cheap rates) you could be part of Micronet.

The only accessory you need is a Modem.

A small price to pay to join the other visionaries on this exciting new system.



Fill in the coupon for more details and send to Micronet 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

But be warned, Micronet 800's features are almost limitless and constantly updating. So maybe you'd be better to call in at Laskys, John Lewis, main Boots or your local Micronet 800 Action Station.

To feast your eyes on all the amazing things it can do.

To: MICRONET 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Telephone 01-278 3143.
Please send me the full facts about Micronet 800.

# The Key To Success!

Now, with the new Stonechip Spectrum Keyboard, the user has no worry of damaging the Spectrum itself as improved designing enables it to fit the case perfectly.

Assembling the case is simple as it consists of two halves, the top half containing the keyboard, with a small printed circuit board, attached by ribbon cable, plugging into the rear of the Spectrum. The lower half fits precisely around the Spectrum, thus preventing any risk of damaging through movement.

Your Sinclair guarantee need not be invalidated since the Spectrum does not require removal from its case.

THE MAIN FEATURES OF THE KEYBOARD ARE:

- ☐ No modifications to Spectrum necessary as it connects via rear port.
- ☐ Full-length space bar.
- ☐ Built-in 'Echo' amplifier and tape interface.
- ☐ RESET keys remove the need to disconnect power supply lead.
- ☐ Single key 'DELETE'.
- ☐ Single key 'Extended Mode' selection (ie one key replaces the CAPS SHIFT and SYMBOL SHIFT function).
- ☐ Fully compatible with Interface 1 and most peripherals.

BASIC KEYBOARD ONLY – NOW AVAILABLE AT £39.95

# Herbie Briggs has just destroyed the myth that all floppy discs are created equal.

They seem equal. Until you look at the seams.

That's where equality ends.

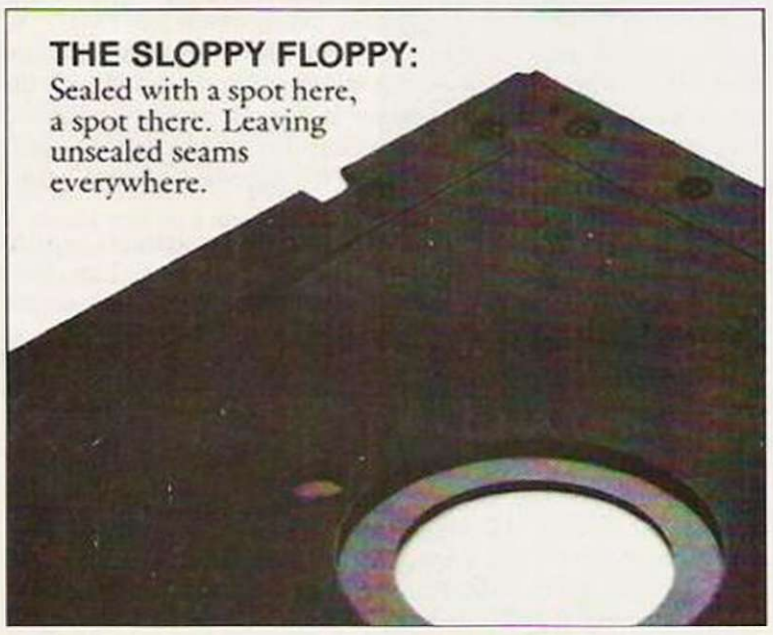
Most companies seal their discs with a spot here, a spot there. Leaving most of each seam not sealed at all.

Sooner or later, the seams might do what comes naturally: they bulge. Warp. Pucker. Open up.

Pens, pencils, fingernails—even a four-year-old's, like Herbie—can catch and snag in those wide open spaces.

That's sloppy. And dangerous. Because if you put a sloppy floppy into your disc drive, it can jam your drive. Ruin your drive head. Lose your data.

So much for their seams. Ours are different.



Memorex uses a process we developed, called Solid-Seam Bonding.

Solid-Seam Bonding seals shut every inch of every seam of every Memorex* floppy disc. Tight as a drum. That makes the Memorex floppy stiffer. Stronger. And your data safer.

To resist bulging, warping, puckering, or opening up.

To resist all the things that can jam your drive, ruin your drive head, or lose your data.

Which proves that a Memorex floppy disc isn't equal to all the others. It's better.

Solid-Seam Bonding is just one example of the extra care that goes into every Memorex floppy disc. Be it 8," 5¼" or the new 3½." Extra care that lets us guarantee every Memorex disc to be 100% error-free.

The next time you're buying a floppy disc—or a few hundred of them—just remember this:

It's always better to be safe than sloppy.

For more information on the full line of Memorex quality computer media products, including computer tape, call Memorex U.K. Ltd., 96-104 Church Street, Staines, Middlesex. Tel: 0784 51488

Your Data. When it matters, make it Memorex.™

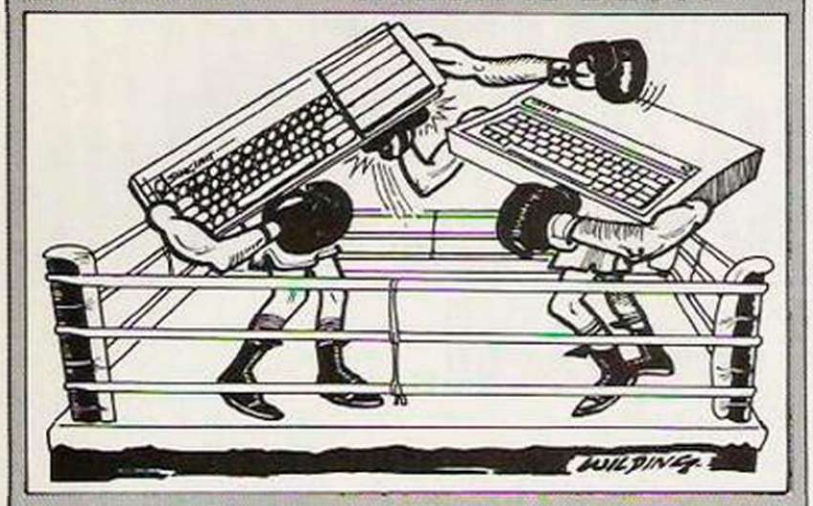
## QL OR BBC — WHICH IS BEST?



I was most interested to read Stephen Corcoran's "unbiased" comparison of the QL and BBC microcomputers. Although some of his criticisms of the QL are undoubtedly valid, he spoils his case by comparing the bare QL with a BBC availed of at least a thousand pounds worth of enhancements!

The fact of the matter is, that for a mere £400 the QL has 88K of memory directly accessible from Basic, a maximum screen resolution of 512 by 256 which uses none of that 88K, and graphics which are at least four times faster than a BBC. How can the QL's fiercest critics deny the outstanding technical achievement this represents?

The thing which amuses me about all the uninformed arguments against the QL is that most of them fail to spot the thing which irritates the actual users most; that is, the present dire shortage of software for the machine. At present the only software you can get for the thing is system software, ie., languages such as Forth, Pascal, BCPL etc! Although this is certain to change soon, it does mean that at the moment there are very valid reasons for people to prefer a BBC micro to a QL.

Just because I like the QL doesn't mean I have to think there is anything particularly wrong with the BBC — far from it. To a large extent the choice between them is just a matter of taste. Does one stick to proven, reliable, established technology, or would one rather take a risk with something new and more powerful?

But remember the early days of the BBC micro, when it was new and untried, and most of its expansion options were just so much advertising copy? Where would the BBC micro be today if many of the current owners hadn't taken the same risk?

*Stephen R. Hill,*
*Boston, Lincolnshire.*

## BASICALLY BAD

In the November issue of *Your Computer* Mr Sharpey — Sharpey-Schafer I suspect — launched a tirade against those who criticise the widespread use of Basic and the consequential sloppy programming techniques that can result from its uncritical use. Mr Sharpey's own letter is itself a salutary example of the very sloppiness that Basic seems to engender.

Mr Sharpey argues that the popularity of Basic on home micros testifies to its superiority. Had Mr Sharpey researched the matter properly he would have realised that Basic isn't popular by choice, but only because that is what is supplied by manufacturers as the native programming language, largely because interpreted Basic occupies comparativly little of the addressable 64K of an 8-bit micro compared with a high-level compiler. The average micro buyer simply doesn't have the choice.

Mr Sharpey is also wildly wrong over the educational value of Basic. It is a common complaint in many university departments that new students whose only computer experience has been programming home micros in Basic frequently have to be "untaught" the bad practices and sloppy thinking engendered by Basic. Mr Sharpey cannot even manage internal consistency in his letter, arguing that OU students find that home micros programmed in Basic improve their studies, followed by a statement about terrible results in computing courses.

To "prove" his point that structured languages are no better than Basic Mr Sharpey attacks the use of Pascal in the Open University's prime computing course (M252) and cites the 1983 course results and drop out rates to show that structured languages like Pascal do not help produce good programmers. It didn't use Pascal at all — it used Basic!

Basic has its place, and if Mr Sharpey wants to use Basic and stuff pundits that's his affair. Those of us who work with computers for a living will continue to use real languages and do things properly.

*Alexander MacPhee,*
*(OU student too),*
*Barnton,*
*Edinburgh.*

## WRITERS SOUGHT

Many people say software writers are mad. We are in total agreement. There is one main reason that brings us to this conclusion. We do not understand why the software houses have not given the Memotech MTX computers any software support. The Memotech range of computers are without doubt the best computers for games writing. The machines have no limitations when it comes to designing games. Despite this the multitude of software writers keep their blinkers on and write for the boring few.

Let's support a British-made, British-designed computer. To help start the ball rolling, a group of current mix software writers have come together and called ourselves Megastar Games — subtle eh! We will be writing many new games and will accept anyone into our clan who can show us they have the ability to write a game which is better than the ones we have done.

We are not trying to set up another User Group as Memotech already have the best user group with Genpat. This is just a bunch of software writers who are sick to death with software houses.

We will be sending in samples of our work at regular intervals so that everyone can see the high quality of work we do.

*Megastar Games,*
*Cheltenham,*
*Gloucestershire.*

## NO ERRORS!

With reference to my program, Aliquid Simplex, published last month, the listing is totally bug free and should work straight away. Some people had difficulty reading the first line however, which should read:

26970 00 3E 13 01 53 43 4F 52 = 89

The only thing to be careful of when typing the program in is that you don't enter one line twice, or miss out a line of data.

Having said the listing was correct, there was a small bug in the machine code itself, the high score routine. It effectively meant that even if you did beat 1000, you wouldn't beat the top score. If you want to correct this, load the program itself, without letting it autostart, and do:

```
POKE 24289,17:POKE 24290,132:
POKE 24291,105
```

Then resave the Rem line program on the final tape as before.

I also feel that I did not say quite enough about the program in the original article.

It is a machine-code game that will run on both Spectrums, which includes:

- Smooth sprite like animation

## COLOUR MAGNIFIER FOR ZOOM

Congratulations to Mark Jones for his idea of the Zoom program in last month's issue. I use the program particularly for examining more closely commercial loading screen pictures such as those of Atic Atac and Sabre Wulf. However, black and white pictures sometimes get a little dull, and in certain places the removal of colour destroys the effect. I have therefore written a colour magnifier to go with the program.

The problem arises — this is possibly why the original program does not have colour — when the window is not aligned with the colour attributes. Magnifying colour in this case may be worse than no colour at all. My program therefore has several options. As it stands, the colour is only magnified if the window is aligned, otherwise the colour is removed.

However, by adding the lines under the Rem statements — 1020 and 1040 — you can alter the program in two ways. Line 1020 removes the instructions which stop the colour from being magnified when the window is in the wrong place. Adding this line causes the area nearest to the window which is aligned to be magnified with colour. Adding lines 1020 and 1040 causes the exact area in the window to be magnified, always with colour.

To use the colour program, first type in lines 10-120 inclusive of the program, and run and correct until there are no errors. Then add the other lines and save the program. Find the cassette on which you recorded the Zoom control program and position it at the beginning of the code. Run the program again, loading in the code and saving the new code in its place.

*Ian Collier,*
*Bolton.*

- Kempston joystick option
- High score table, and
- Amazing new type of music that is a simulation of two channels. Jingles are played during the game, and longer duets on the title screen.

If anyone should find difficulty getting into the game itself, the method is to press space, to stop the music and then 'S' immediately afterwards. Tapes of the game are still available from me for £3 at 16 Viking Way, Pilgrims Hatch, Brentwood, Essex, CM15 9HX. This will shortly be released under the label of Turtle Software.

*D.R. Aspinall.*

## ATMOS BROOD

Thank you for publishing the Oric program Brood in the November issue of *Your Computer.*

The article suggested that for Atmos conversion, only the Plot statements had to be altered. However, for full Atmos compatibility more changes need to be made.

Change the following lines:

```
130 WAIT 7 – LE:GOTO 100
225 LI = LI – 1:PLOT 2,25,STR$(LI)
290 DOKE 634, 48040:POKE 638,27:
    END
630 DOKE 634, 48120:POKE 638,21
745 FOR A = 0 TO 9:READ B:POKE
    A,B:NEXT
765 POKE 85,59:POKE 86,191:
    POKE 87,32
770 POKE 88,21:POKE 89,165
775 POKE 15,191:POKE 16,G:POKE
    17,0:POKE 18,35: PLOT 32,0,T$
1005 FOR A = 0 TO 9:READ B : NEXT
1335 DATA 0,EO,5,DO,5,A2,55,4C,
    2,99,A2
```

*T.W. Phoeng,*
*Holland.*

## CURSE BUGS

With reference to my program "The Curse of Abu Simbel" for the Dragon in the November issue of *Your Computer,* a few bugs seem to have crept into the listing.

Line 600 has been tagged on to the end of line 590, so after the GOTO 3780, (Enter) should be pressed and 600 should start on a new line.

The same has happened in line 670, after the GOTO670. In line 1250 the GOTO3770 should be GOTO3780, and in line 1530 the last statement should read GOTO 470 instead of GOA.

*Nick Stevens,*
*Musselburgh,*
*East Lothian.*

## CORRECTIONS

*Line 60016 in December's Spectrum Telsoft program is incorrect. It should read:*

*60016: 50EDCD47EE38FBCD,5AF*

*Some people have had trouble getting the ZX-81 High-Res program to work. Try the following procedure: using Listing 2 enter eight numbers to define character code 3 as a UDG — 0,0,0,0, 30,160,160,32. When the computer asks if you want to save the program the answer is no. Now enter this Basic program and run it.*

```
10 RAND USR 25614
20 FOR A=1 TO 30
30 PRINT AT 11,A;CHR$ 1;CHR$ 3
49 RAND USR 25686
50 NEXT A
60 IF INKEY$="" THEN GOTO 60
70 RAND USR 25602
```

# EDITORIAL

1984 WAS THE YEAR that made the whole home-computer industry look back in angst. They swore they would never commit the errors of the past again, and then promptly went on to restage the worst and the best of 1983.

The QL gave the year an astonishingly promising false dawn. With 128K, bundled software, built-in mass storage and a 32-bit processor, it contained the very latest technology — up to four months late for those who ordered first.

But despite the delays the QL remains important: it was the first complete home computer in what became the year of the system. Coleco, Amstrad, Commodore with the Plus 4 and Tatung's Einstein produced variations on this total computing theme. Of these five manufacturers only Amstrad has found big-volume success.

If the complete computer system was a sign that the home-computer industry was growing up, software compatibility and standardisation were supposed to be all part of the same process. Microsoft and the Japanese electronics giants worked together with the MSX standard to drive out incompatibility wherever it lurked. Overpriced machines were produced by big names like Sony, Toshiba, Canon and Mitsubishi, yet the long-awaited and much-feared Japanese invasion has for the moment turned into a phoney war with the real fighting postponed for another, more distant Christmas.

As the Japanese were introducing expensive micros to fight their battle, Jack Tramiel's arrival at Atari from Commodore opened up a new front in the price war just when the market was beginning to stabilise.

Tramiel parted company with Commodore in January, had collected Atari for $240 million in the early summer, and was busy making price cuts by the autumn. The 600XL tumbled to £90, and in December the 800XL moved enticingly down to £130 from £250.

In the earlier part of the year the noise in the background was not the sound of falling prices but companies crashing. The two best known names to disappear were Dragon and Camputers but the most commotion was caused by the collapse of a software house — Imagine.

The Liverpool-based software producer was famous for its extravagant claims and continued to blow its own trumpet right up to the end, and beyond — hype after death. But it was the software makers who gave colour to the end of an otherwise dry year for computing.

Some of the products that were pushed out for the Christmas period were not only very playable but had elements of novelty — just when computer users were beginning to forget the meaning of the word. This is especially true of games like Ultimate's Knight Lore, Acornsoft's Elite, Gargoyle's Tir Na Nog and Automata's concept program Deus Ex Machina.

Excellent U.S. imports also muscled in on the British charts — Bruce Lee, Boulderdash, and Ghostbusters with its classy music and synthesised speech. Along with Dallas, Alien, Dangermouse and Fall Guy, Ghostbusters typifies the 1984 gimmick of offering the game of the film, of the TV series, of the book, of the tee-shirt.

But if 1984 scared the industry as the computer boom's exponential growth evaporated, 1985 appears even bleaker. With the disappearance of the skateboard-type fad element from home computing, any success will be hard won and well planned.

## How to write for *Your Computer*

We called this magazine *Your Computer* precisely because we welcome your views, tips and hints and even your criticism of machines and software in general. If you would like to see your name in print, whether on a Software File program or a full-blooded article, here is how to go about it. Ideally, all articles should be typed double-spaced on one side only of uniform sheets of paper. If listings can be dumped directly from a printer — you can always use a friend's or user group's — this minimises the risk of error. In a perfect world a cassette would accompany the article. That considerably speeds up the checking process. Not only do you get to air your own discoveries and opinions, but we will even pay you for the privilege. We pay £35 per published page — that's as it appears in the magazine and includes illustrations.

Why not give it a try? You have nothing to lose but your postage.

## Frankie goes to Silicon

JUST BECAUSE Frankie Goes To Hollywood's computer is a £100,000 Synclavier system rather than a £100 Sinclair isn't going to stop them putting out a Pleasure Dome game of the record for the Spectrum and Commodore 64.

Jill Sinclair (no relation) of Frankie's record label ZTT has fixed up a deal with Ocean Software to produce a £10 game which will be released next month. Will home micro owners be as dismissive of the first Frankie computer game as FGTH's sound engineer was of micro freaks trying to make Frankie-style music at home? "Everyone else with their CX-5s and Commodore 64s will be struggling desperately hard with not really a hope in hell" as he said in our September 1984 issue.

# Acorn's new spare leg stocking filler boots up Electron

ACORN'S AVALANCHE of peripherals continues unabated with disc cassette drives for the Electron, synthesisers and second processors for the BBC. The disc drive/interface unit, Plus 3, looks like a ruthless attempt to exploit parents' propensity to buy anything shaped like a leg for December 25. But at £229 it's an expensive Christmas stocking filler, even if it does have 300K storage on a single-sided 3.5in disc as well as the interface and a new disc filing system.

If only Acorn had built cartridge, joystick, printer and expansion ports into the Plus 3 it could have made the Electron look like a worthwhile purchase rather than a deliberately underspecified machine designed to milk the purchaser for every last penny on peripherals.

Acorn has also launched Music 500 — a £200 synthesiser, keyboard extra, which plugs in to the BBC. Music 500 uses a new computer language called Ample to manipulate sound and music.

Continuing Acorn's promises to make the BBC infinitely expandable 10 Megabyte and 30 Megabyte hard disc storage units are now available as well as the 32-bit architecture 32016 second processor which comes with a bundle of languages — BBC Basic, C, Fortran 77, Cambridge Lisp and Pascal. But just in case you were thinking of saving up pocket money for the ultimate add-ons for your BBC we should warn you that the 32016 second processor plus a 30 Megabyte hard disc will set you back over £3,000.

# Seriously: computers damage your health

IF COMPUTERS were really user-friendly the first message to flash up on the screen might be "are you wearing your protective apron?". Rollenworth International is taking warnings that sitting in front of a VDU is bad for you so seriously that it is selling microwave proof aprons to computer operators.

They are a lightweight equivalent of the lead aprons radiologists wear when they give you an X-ray, although this time made of nickel-coated polyester. Rollenworth points to a series of reports suggesting that sitting close up in front of a TV screen for hour after hour can do you harm, particularly if you are a pregnant woman. A survey by the Civil Service Medical Advisory Service among 800 female employees of the Department of Employment showed that 36% of the pregnancies among VDU operators were abnormal compared to 16% among a control group. Other reports from Denmark, Canada, Australia and America have reached similar conclusions.

But computer companies do not accept these findings — pointing out that they could be statistical anomalies or that the VDU operators are not being compared with similar people working under the same conditions. Most home computer enthusiasts will not be working eight hours a day at the keyboard anyhow so are unlikely to experience problems on the same scale as professional VDU operators. But if you regularly work through the night at your micro you should take regular breaks and make sure you have a comfortable seating position as well as the best possible viewing conditions if you are to avoid more mundane problems such as eyestrain and backache.

If you either have health problems or know of someone who does, which you think might be attributable to the use of a computer, please send the details to Healthscreen, *Your Computer*, L.221 Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.

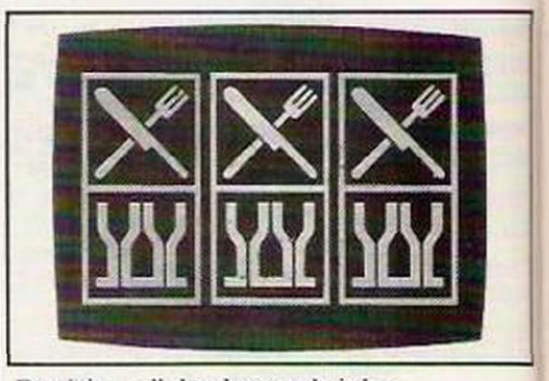
## And a bottle of your Chateau Lafitte for my Spectrum . . .

NOW HIS WINE 'N' DINE program is about to put Spectrums in off licences all over the country, but one year ago Ian Hoare was just a wine connoisseur and chef who would no more have touched a computer keyboard than he would have drunk a bottle of Concorde.

Then as a result of a strange sequence of events involving a bet placed on the outcome of a Dutch theology student's examination results Ian came in contact with a Spectrum. Within months The Computer Cookbook, which was the first program he had written, was in the charts — proving that people would buy "useful" products such as recipes even if the program itself was not very sophisticated.

Since then Ian has become a machine-code fanatic — partly motivated by his colour-blindness to break into commercial programs protected by "these beastly colour code charts". Wine 'N' Dine will recommend wines to customers in branches of Peter Dominic — all they have to do is key in what sort of meal they are about to have. Christmas dinner produces three suggestions ranging in price from £2.45 to over £9 with the Lagunilla Villa Gran Reserva Rioja 1973 at £3.69 as Ian's own recommendation for value for money.

For afters the program suggests champagne, fizzy wine or Madeira with the Christmas Pudding. There are over 200 other dishes which Wine 'N' Dine matches up with a choice of 450 wines.



*My Talking Computer's new expansion cartridge includes a Story Maker which teaches the essentials of word processing but using spoken sentences rather than text on screen. The new 128K expansion Rom which costs £18 consists of 16 different programs with overlay cards for the keyboard. So far Microspeech has sold 50,000 of its £60 speech-synthesiser based Talking Computers.*

## One million K in every bite

WITH 1,000,000K of memory almost anything is possible. Shugart's new laser disc drive can put 1,000,000K — a Gigabyte — on every disc. You cannot erase anything from the disc so it is not as resuable as a conventional one but with so much empty space to play with you might as well keep everything for posterity.

Of course it is not going to be available tomorrow at home computer prices but the 12in Optimem 1000 is now being sold to other computer and peripheral makers — OEMs or Original Equipment Manufacturers as they are called — at a price of around £5,000. Shugart predicts that the OEM price will be down to around £1,000 in a couple of years with giga storage available to everyone at no more than the cost of an ordinary disc drive before the end of the decade.

## Commodore's Apple-beater

COMMODORE IS NOT going to be sitting still while its old boss Tramiel tries to hit back at it through Atari. Commodore has a CBM-128 on the stocks for the home market as well as a cut down Macintosh clone at bargain-basement prices which used to be known as the Lorraine when the project was being developed by an independent company called Amiga.

What with that and a Commodore IBM PC compatible, not to mention a Z-8000 based micro on the stocks, the company is going to be pretty busy.

# Tough Tramiel promises 8 new Ataris including QL smasher

WITH ATARI'S latest aggressive bout of price cutting setting the scene — the 64K 800XL is now £130 compared to £250 last year — Jack Tramiel jetted in to Britain to tell us what the corporation has up its sleeve for us in 1985.

Hard man Tramiel survived the Auschwitz deathcamps and then went on to acquire a ruthless reputation himself as he built Commodore up to become the biggest home computer company in the world. But he resigned from CBM in January 1984 and now that he has taken over Atari he believes he can set home-computer prices tumbling once again just as he did when he introduced the Commodore 64 at a fraction of the price of its competitors.

When he bought Atari this summer 900 people lost their jobs in the first two weeks and he has been known to sack people over the Tannoy.

Now he plans to sell four "families", as he likes to call them, of computers under the Atari name. The first family will be based on the Atari 800XL which will be redesigned to make it cheaper to produce and will be given a numeric keypad. There will be 64K and 128K versions plus a portable with 256K of memory and a 5in. screen as well as a special music computer.

The next family will be 68000-based like the QL and the Macintosh and will start at around £300. It will incorporate an advanced graphics chip aimed at giving Macintosh quality graphics but in colour and at a fraction of the price. This will run under a new operating system TOS — and yes the T does stand for Tramiel.

The eight-bit family will all be compatible with existing software and along with the new 16-bit range they will be shown at the January Consumer Electronics Show in Chicago and launched in Britain this spring. Later in the year he hopes to launch a range of work stations for less than $1,000 which will be based on the massively powerful, true 32-bit 32032 chip.

There will also be a full range of peripherals including printers ranging from £60 to £600 as well as floppy and hard discs. Further ahead Atari hopes to introduce laser disc-based micros in 1986.

Tramiel's strategy is based on cutting costs all down the line — he is currently trying to raise money to buy a totally automated factory to churn out Ataris as cheaply as possible. "The customer is much smarter than I am", or so Tramiel professes to believe "and if someone can produce something cheaper and better they'll buy it from him. Needless to say he believes the Atari 800XL "is a better product at a better price" than the Commodore 64. But then again he says "I believe computers are fun", yet he never smiled once all the time he was in Britain.

# With the aid of this box I can make Duran Duran sound like Mickey Mouse backwards

WITH DATEL'S Digital Sound Sampler, Duran Duran effects, Darth Vader speak and Mickey Mouse noises are no problem. You can use the device simply as a real-time echo unit or if you want to stretch your Spectrum to the limit then according to Mike Connors of Datel "you could write a concerto from one piano note".

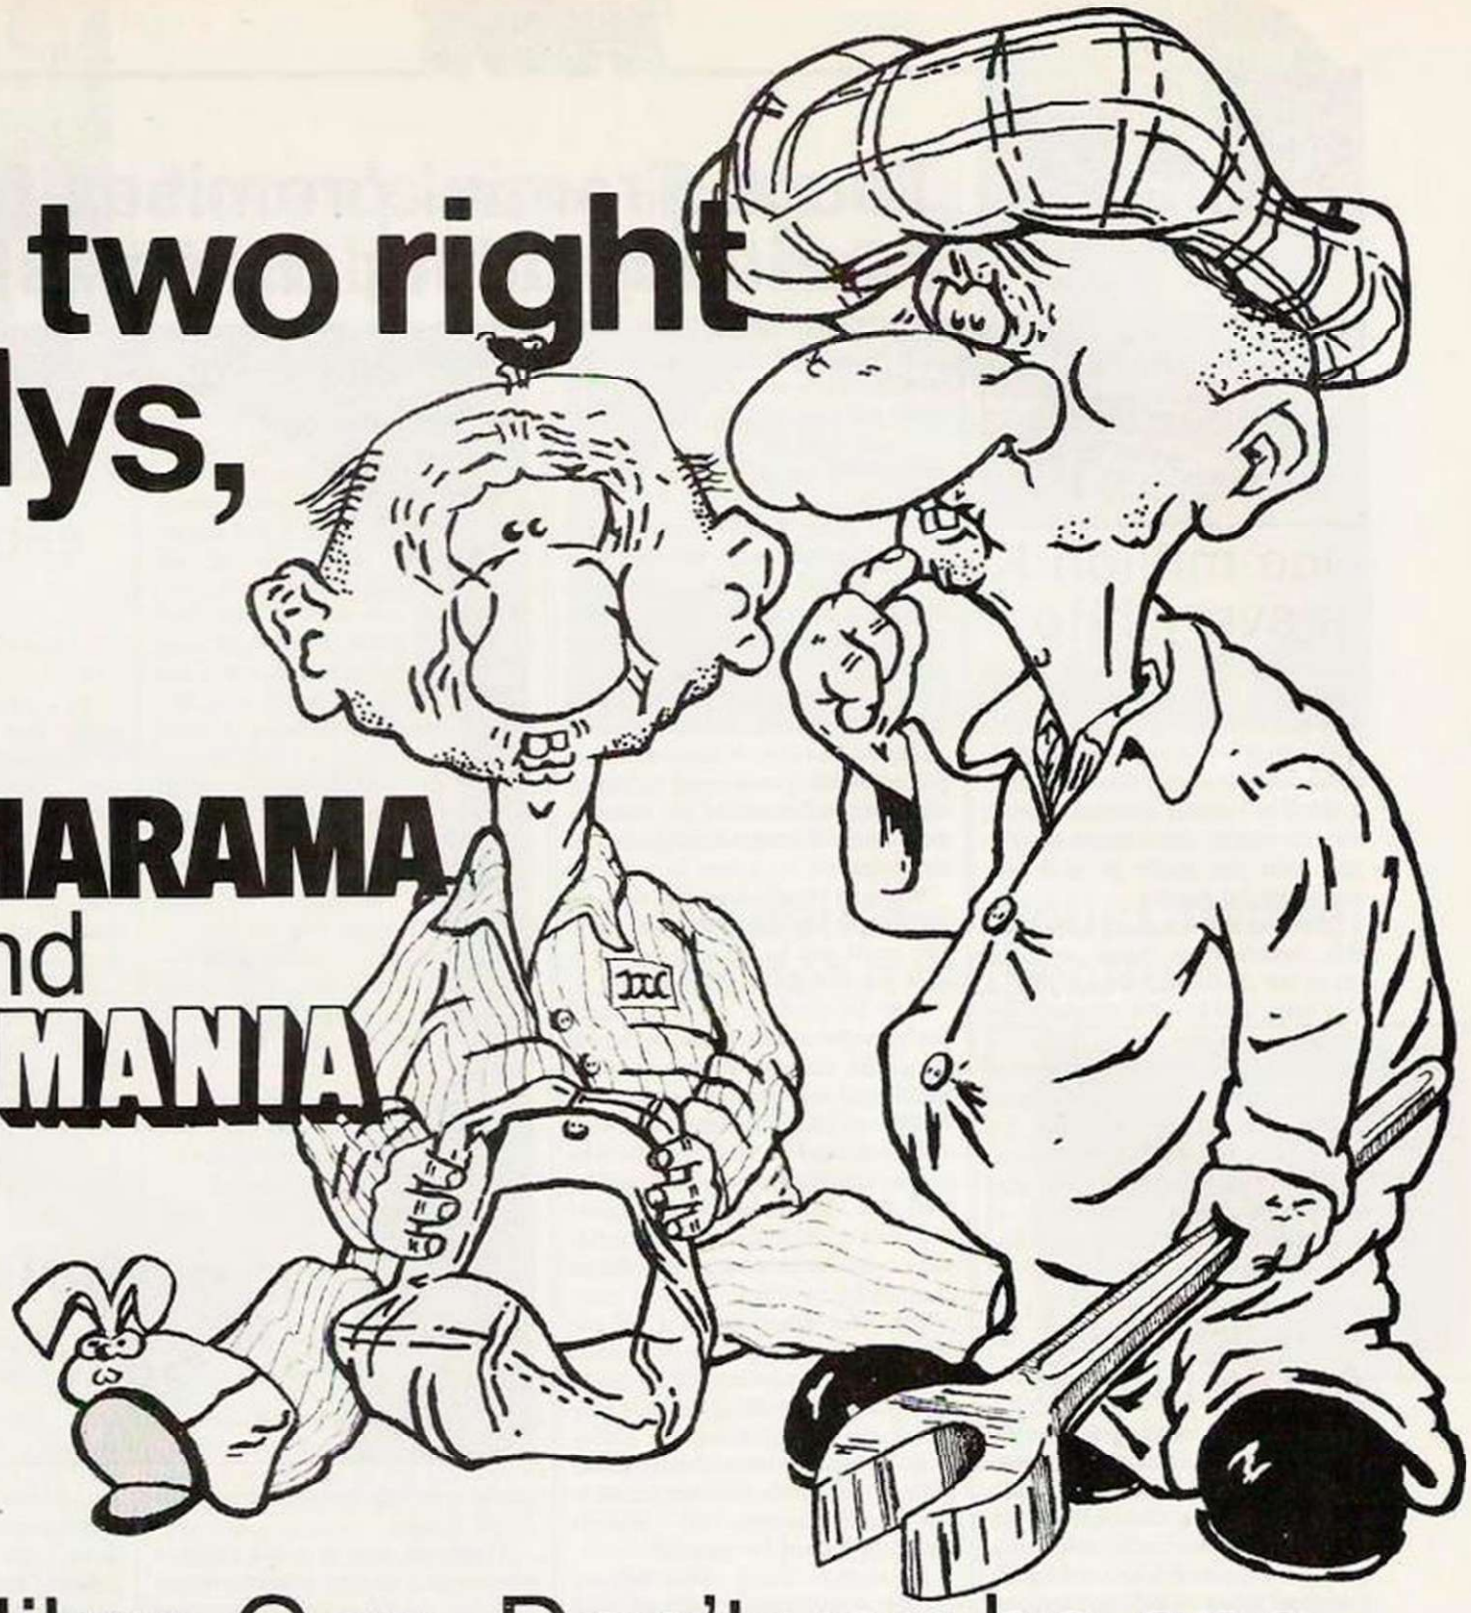
The £50 sound sampler has full eight-bit analogue to digital converters so you can feed in sound either through a microphone or from cassette recorder or other source, then play with it in digital form before outputting the result through D/A converters.

Once the sound is digitised the only problem is finding enough memory to store it. At a rate of 38,000 checks a second the Spectrum can only store about four seconds of full sound.

But this is not as much of a limitation as you would think since most of the sounds you would want to use are very much shorter than that and you repeat the same notes many times in a piece of music — so you could compose a simple piece several minutes long at one go or build a more complicated piece in shorter chunks.

You can use the unit to digitise short bursts of your speech to incorporate in games. But the most impressive part of the software that comes with the Datel device is a sampler which allows you to take a note and then sequence it to create a whole musical instrument with different notes and pitches based on that one sound. Datel is on 0782-273815.

# The two right Wallys,



## PYJAMARAMA and AUTOMANIA

from Mikro-Gen. Don't you be one, order your copies NOW!

● 'Automania must be a front-runner. It features Wally Week who is not a period of time but an idiotic character *a la Cuthbert*, and also a beautifully animated 2 inch or so sprite . . . the graphics are pretty spectacular and the game is amiably silly and good fun . . . there's no reason not to go out and buy this one.'

**POPULAR COMPUTING**

● 'Pyjamarama is the excellent sequel to Automania . . . The graphics are extremely good . . . Pyjamarama is a really first class, amusing and challenging game that is original in its concept and could well make the number one spot.
Highly recommended.

**COMPUTER TRADE WEEKLY**

| | |
|---|---|
| Instructions | 100% |
| Playability | 100% |
| Graphics | 100% |
| Value for money | 100% |

● 'Automania, sub-titled, Maniac Mechanic, is a must for all game players . . . invest in this colourful game with superb graphics and animation.'

**SOLID GOLD**

**Keyboard play:** very responsive
**Use of colour:** very good
**Graphics:** superb with excellent animation
**Sound:** great tune (continuous) with well used sound effects – sound may be switched off
**Skill levels:** one
**Lives:** three

● 'Automania has some of the best animation and realistic graphics that I have ever seen. All the graphics are large and colourful, and, needless to say, they move smoothly . . . The best game that Mikro-Gen have ever produced and worth buying.'

**CRASH MICRO**

*What the media say about our Sensational Software*

# MIKRO-GEN

*Spectrum 48K – £6.95*

## Return of the Enterprise

THE ENTERPRISE computer is finally available after a nine-month's delay.

Available only through Prism, it may be in the high street early next year, when volume production gets underway.

According to Enterprise, the bugs in the "Dave" video chip which caused the delay have now been cured.

The 64K model is £249.95 but the 128K model is still "available soon".

The Enterprise offers 48K Rom with built-in word processor, 64K Ram, up to 256 colours, three stereo sound and one noise channel and a very comprehensive Basic on cartridge.

It also features a full keyboard with function keys and a joystick. It has a wide variety of interfaces.

## Handy Spectrum may follow One Per Desk

WHILE SPECULATION increases that Sinclair is finally about to launch the portable Spectrum which he exclusively revealed to *Your Computer* back in November 1982, ICL has at last released the Sinclair-designed work station which he also told us about at the same time. Both were originally intended to hit the market before the end of 1983.

The ICL concept is remarkably similar to the artist's impression we published at the time — with phone, computer, keyboard, Microdrives and screen in one unit but in January 1983 he decided to adopt the 68000 processor for his more advanced designs. At a later stage of the project he had to abandon using his flat screen in the ICL although it may still surface on the unconfirmed £300 portable which may make do with one Microdrive.

## Adam falls from grace

COLECO HAS FINALLY pulled the rug on its all-in-one Adam family computer system. The original concept of a 64K computer with a built-in word-processor program complete with disc drive and printer for around £500 sounded brilliant when it was first announced in 1983 — and it still sounds good today.

But as production delays pushed back the launch date the price started climbing and the specification dropped. Out went the disc drive to be replaced by a high-speed tape on production machines, and when the Adam finally went on sale in Britain early in 1984 the price was nearer £800.

The machine was never pushed very hard either in America or Britain and there was very little software available other than games written for the Colecovision games console on which the Adam was based.

## Sinclair admits to megagames — now the truth can be told

LIKE A SIGHTING of Lord Lucan or Martin Bormann, any pretence to have seen an Imagine megagame is likely to be disputed but we are sticking by our claim that we have glimpsed Bandersnatch — and not in Patagonia but in the house of Sinclair. Sinclair has now admitted that Imagine refugees David Lawson and Mike Glover of Fireiron are about to produce Bandersnatch for him.

But with every software house now describing its latest hack offering as a megagame we asked Bruce Everiss of Tansoft — no relation of Bruce Everiss who used to work for Imagine — what the megagames were originally intended to look like: "Some other software houses have plagiarised the term. They are using it to describe their latest ordinary products. A megagame is a film which you, the player, take part in.

"You become one of the cast of characters that each have separate and identifiable personalities. What happens when you meet them depends on their personalities and also on what you do, as in real life. Characters then remember how they have been treated by the player and act accordingly on subsequent meetings."

Controls are also important, Imagine envisaged that everything would be controlled by joystick: "There are no lives or score. It is a matter of trying to achieve what you the player want. There is no status line to ruin the realism, the whole screen is action."

The characters use speech bubbles to communicate though given the extra capacity of a Microdrive or disc it could equally well be by voice. Stunning graphics were vital — the megagame team involved twice as many artists as programmers. Realistic animation is also important — especially getting rid of the artificial nature of the transition from one room to another in conventional games.

Incorporating background music also makes the game more like a film. The Imagine megagames would have achieved all this by using a plug-in 64K Rom with bank-switching for quick transitions from one part of the game to another.

There would also be a supplementary cassette tape. This arrangement would discourage pirates. "They would need to copy the Rom contents, the Ram contents and the special hardware necessary for the bank-switching and address decoding. It would be cheaper to buy the real thing."

In all probability the version of Bandersnatch which Sinclair hopes to release will be on Microdrive — perhaps primarily targeted at the QL.

*For the most fun you can have for £30 on your Spectrum the DK'tronics 3 channel sound synthesiser takes some beating. It comes with a Music Designer cassette which claims to give you Beethoven to Bowie — Star Wars to splats on your Spectrum. Inside is the 3-channel AY sound chip which is used in MSX machines and many other computers with better sound than a Spectrum. Cunningly DK has also released another product which looks exactly the same even down to the speaker but which contains an SLO 256 speech chip. The £25 speech synthesiser has a text to speech facility and is at its best using deliberately misspelt English words to get the required sound.*

# Updated Utilities from the Best in the Business...

OCP

## £3.00 Exchange Deal

**MAIL ORDER ONLY**

MACHINE CODE or BASIC we've now updated what were the best programming tools for you! Try them and see why our products are regarded by most programming as the best available – by far!

**MASTER TOOL KIT £9.95**

YOUR BASIC WILL NEVER BE THE SAME AGAIN!!

This program adds a whole new range of really powerful commands: Real time clock and alarm with off/on/set and print commands. BLOCK MOVE, COPY, DELETE and MERGE two lines. FIND and CHANGE character string, RENUMBER, 10 programmable keys, TRACE with execution display. VARIABLE display and dump. COMPRESS, REMKILL and PACK to minimise program bytes. CHANGE CASE upper to lower and back.

**FULL SCREEN EDITOR/ASSEMBLER 16/48K £12.95**

Voted the most powerful MACHINE CODE programming tool yet seen by Home Computing Weekly.

Editing facilities comparable to the most sophisticated word processor with MOVE, COPY and/or DELETE lines or blocks of code. LOCATE, CHANGE or DELETE strings/characters, full 280 set supported, syntax check, powerful expression evaluator etc. and 'SNAKE' a fully noted source code demonstration program.

Many new instructions with this latest version. Plus 80 facilities now included as standard.

**MACHINE CODE TEST TOOL. 16/48K £9.95**

The ultimate professional tutor and debug program. We wrote this to help us write our own MACHINE CODE programs.

TEST and display MACHINE CODE instructions as they're written. Ideal for both the novice and the expert. Fully documented with a 32 page tutorial. HEX: DECIMAL conversion as standard. Character Generator of unbelievable quality. Supplied free with the Spectrum™ version.

This program can co-reside in your Spectrum with the Full Screen Editor/Assembler to provide a complete MACHINE CODE environment, including 80 Column printout.

**£3.00 EXCHANGE DEAL! AVAILABLE MAIL ORDER ONLY**

If you want to update your software, we'll give you a £3 allowance on a standard program, and £5 on a Plus 80 version when you buy your new Microdrive Compatible programs from us, provided you return your old program cassette with your order. What's more, buy Full Screen Editor/Assembler and Machine Code Test Tool together and it'll cost you just £19.95.

- ☐ Master Tool Kit £9.95
- ☐ Replacement Master Tool Kit £6.95
- ☐ Full Screen Editor/Assembler Plus 80 £12.95
- ☐ Replacement Full Screen Editor/Assembler £9.95
- ☐ Machine Code Test Tool £9.95
- ☐ Replacement Machine Code Test Tool £6.95
- ☐ Combined Full Screen Editor/Assembler AND Machine Code Test Tool at Special price of £19.95, less exchange allowance.

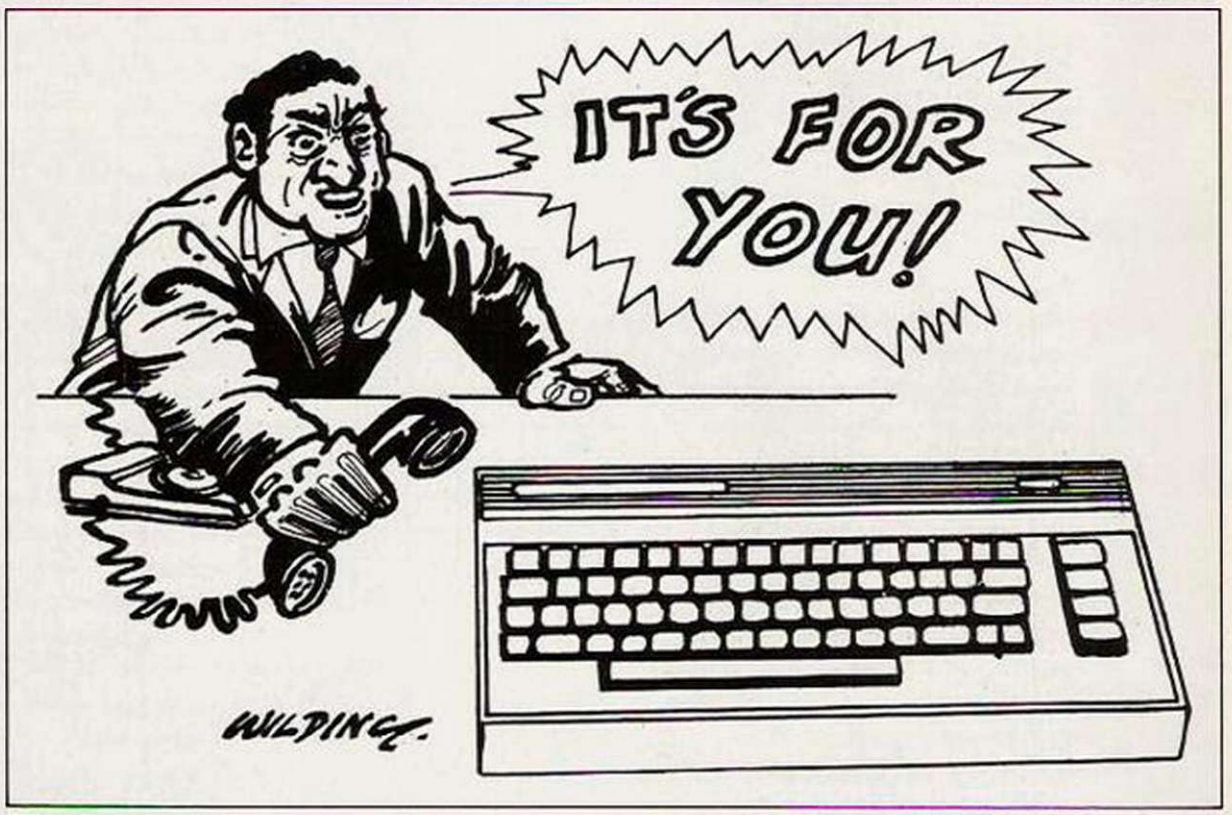
Starting out in home computing? First Bytes is for you. Just write to *Your Computer* with any hardware or software problems, no matter how small or simple.



## I could do that...

For November's competition we wanted you to write fill routine in Basic. The standard of entries submitted was very high indeed, displaying all sorts of fancy programming techniques. We were particularly impressed by the Spectrum program from R. Smith, 59 Bateson Road, Cambridge, CB4 3HF. He managed to squeeze a fill routine to handle convex and concave shapes alike into just two lines. It works by recursively calling itself, a technique which makes heavy demands on the Basic stack but is quite adequate for small shapes. It is not notably speedy but takes the £15 prize for sheer economy of code.

In this month's competition we would like you to produce some artwork. Write a program not longer than 10 single statement lines that creates an interesting or "artistic" pattern. If your micro only has a low resolution display don't worry — we will make allowances.

```

## Programs on the air

OCTOBER'S FIRST BYTES described how free software is broadcast over the radio twice a week by the BBC. In fact there are some other free programs winging their way through the air during most of the day. To gather them is rather more expensive, though.

The system is called Telesoftware, and is literally software that comes through television. The mechanism used for getting this software to you is rather more complicated than that of Basicode. It depends on details of how television is broadcast.

A normal TV picture is made up of some 600 lines on the screen. But in fact 625 lines' worth of information is transmitted. Some of it is technical details sent by the broadcasters and engineers for their own benefit. But some of the spare lines carry the Ceefax service.

This is a bit like Prestel, with pages of information on various topics. You can access them with a special Ceefax adaptor that is fitted to your TV. But there is an additional service that is specially for micros, and requires a Telesoftware adaptor.

This adaptor is only available for the BBC micro at the moment, and costs a rather hefty £200. It is produced by Acorn, the manufacturers of the BBC micro, and can be obtained from Vector Marketing on (0933) 228953. As well as allowing you to access the Ceefax pages on your micro, it also enables you to download software that is sent in the form of pages of Basic programs.

A complete program will typically

## Operating systems take away drudgery

MOST PEOPLE take it for granted that they can start hammering away at the keyboard as soon as they have powered up their gleaming micro. If you are playing a game you expect to find yourself instantly assailed by crazed alien beings intent on mindless destructions. You are not conscious of the actual working of the machine, except possibly during the slight — or not so slight — pause while the cassette loads.

Few realise that the initial command Load or Chain or whatever, is in fact part of a so-called "high-level" language, which happens to be Basic. Even fewer are aware that underneath all this activity is something thought about even less — the operating system.

Yet without this unsung hero/heroine, much of the power of a micro would be lost. Programming would

**WORLDWIDE COMPUTERS LTD.**

# Programs on the air

*(continued from page 47)*

run to several pages. These are sent out one at a time in each sweep through Ceefax, so it takes several seconds to build up all the program. Generally speaking the order in which the pages are received is irrelevant, since the programs have line numbers which allow the original to be reconstructed.

Each page is error-checked as it arrives. That is, it is scanned to see if any errors have crept in during transmission. If a page is accepted, then it is error-free. If it is not, then you have to wait for another cycle of Ceefax to pass by until the same page is broadcast again.

Once the complete program has been built up, you can run it like any other. The software itself is free, and is currently being changed every two weeks. It comes from such sources as the Chip Shop, programs sent in by the public and Telsoft, a group based at Brighton Polytechnic.

To use the service, you will need not only an adaptor, but also a TV licence. This is so even if you are using a monitor with your micro. You are allowed to make two copies of any program broadcast, and adapt or modify it, but only for private purposes.

There are about 6,000 users at the moment, and the number is growing at the rate of 300 a month. There is a possibility that more "spare" lines will be allocated to the Ceefax service, which would allow more telesoftware to be broadcast. Another future development that is being considered is to provide telesoftware on cable television if and when that arrives. Even if it doesn't, you can always be sure that there will be some interesting programs on the television.

# BEGINNERS first bytes

# How operating systems take away drudgery

*(continued from page 47)*

be back in the stone age. So just what does it do?

Operating systems are the drudges of the micro world. They do everything that no "high-level" language would stoop to, and what users and programmers take for granted.

After all, while you play that mega-galactic adventure game, or turn in a really neat piece of programming, who is looking after the screen and the keyboard? It certainly isn't you, and neither is it Basic, which is pretty good at If . . . Thens and Gotos, but not so hot at keeping the VDU going.

All the while that the micro is running, the operating system is diligently looking after the housekeeping functions. It scans the keyboard for input, it keeps the screen ticking over, and if your system extends to the full glory of a disc drive, it handles all the problems of getting information in and out of that.

Notice how these are all very "low-level" functions. The operating system is dealing with basic things to do with the hardware. Just as Basic provides a nice comfortable cushion between you and all the complications of your micro, so the operating system insulates Basic from the harsh realities of the processor, keyboard, VDU and disc drives.

Apart from shielding you from gory silicon details, there are other advantages in having this invisible servant. For example, if a programmer writing in Basic wishes to transfer software to another machine, he or she only has to worry about how the Basic changes on a different machine; the actual details of the hardware are not important.

If the Basic itself had to deal with all the nitty-gritties of a particular machine, it would be irrevocably tied to that particular model. This would make program conversion even harder.

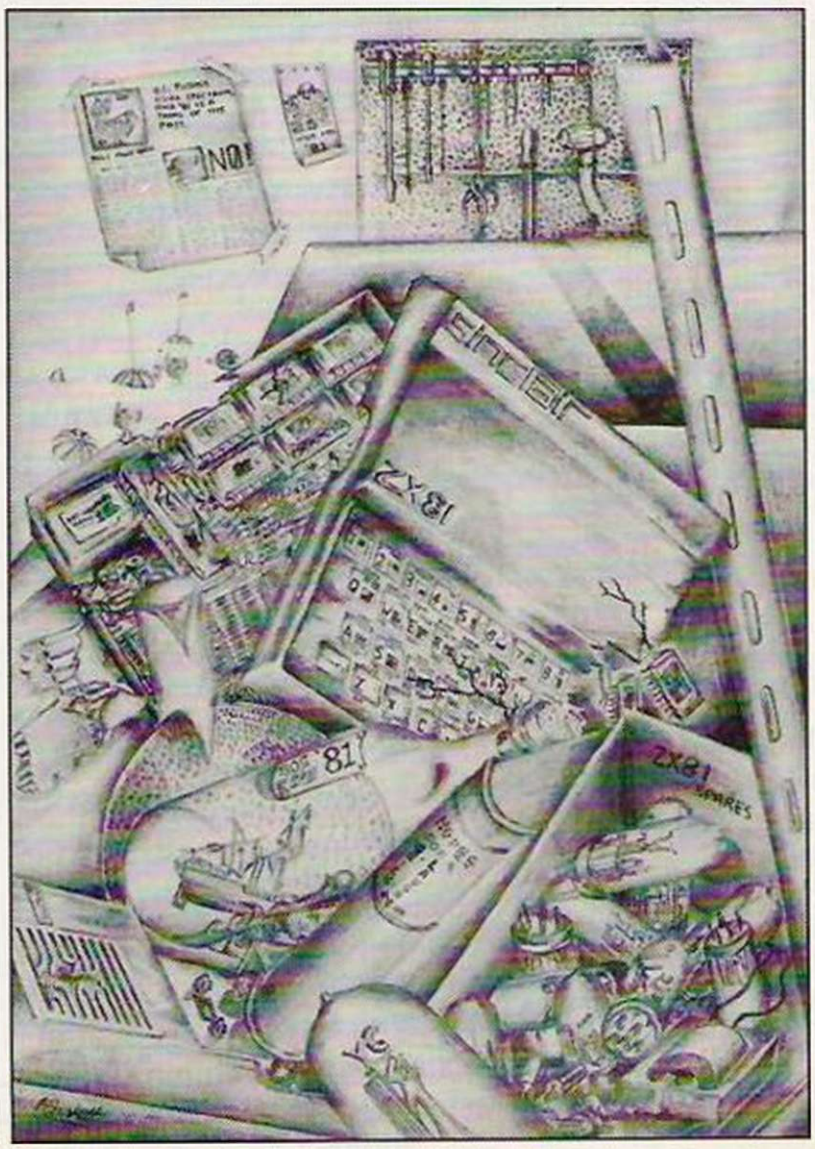
With an operating system separating the high-level language like Basic from the hardware, it is also possible to slot in different languages. Provided their "bottom sides" match the operating system, they can ignore the finer details of the hardware. This enables you to put more exotic languages like Pascal, Forth and Lisp on micros.

They then function in exactly the same way as Basic, with relatively comprehensive commands that let you write programs, and leaving all the messy details to the operating system which they communicate with rather than directly with the keyboard and VDU.

Disc drives are becoming increasingly common on even cheap home micros. Storing 100,000 bytes of information on a 5.25in. or 8.5in. piece of plastic is a tricky business, and the operating system associated with it is quite complex. It is also generally incompatible with other operating systems. The practical effect of this is that you cannot read Commodore discs on a BBC Model B.

If, however, you choose the right operating system to begin with, you may well be able to run software from quite different machines. This is because the programs generally only deal with the operating system, so if this is the same, there will be no effective difference as far as the software is concerned.

There is one standard operating system, rather venerable now, but nonetheless usable for that, which has been very widespread in general business and "serious" applications. This is CP/M.



CP/M was initially designed to handle all the hardware details of machines built around the Z-80 processor family. Thus any micro which uses this chip could, potentially, run under CP/M. This would then give it access to the huge pool of software already written for this system.

This is what the Amstrad and Tatung Einstein are designed to do. By running their discs under CP/M, they hope to tap some of this wealth of software which is already available. In this way they would leapfrog many of the problems of waiting for programs to appear on a new machine.

Normally the user is completely isolated from the operating system itself. The nearest you are likely to come to it is if you start programming in machine code. This effectively misses out part of the buffering effect of a high-level language. Instead, you talk directly to the main chip to get basic computational tasks carried out as quickly as possible.

You will, however, still have to deal with the operating system. This is because things like sending information to the screen or capturing data from the keyboard require handling in some way, and the operating system provides a quick and efficient way of doing this.

Normally the operating system is present on a special Rom chip supplied with the micro. Some systems provide it partly internally, which handles keyboard and VDU, and partly on a disc when a disc drive is added. This Rom is in addition to the Rom which often holds Basic. Sometimes the size and complexity of the operating system can cause problems, as with the QL.

Here, it proved impossible to cram all the operating system and the SuperBasic into the space available on the Rom chips. Hence the unsightly "kludge" — a small board with extra chips — that was stuck into a back socket on early machines. Mostly though, operating systems are so successful you hardly ever know they are there.

# The unicom Modem

- Auto Dial
- Auto Redial
- Auto Answer
- Auto Baud Rate Scan
- Full Duplex (300 baud)
- Half Duplex
- Bulletin Board Facility
- Number Memory Store
- European and U.S.A. Standards
- Complete with Power Supply Leads and Manual at a Breakthrough Price of **£49.95** EX VAT AND P&P.

We've taken the best components from the best suppliers and combined them to produce a modem with everything you could want. Modern manufacturing and quality control techniques have brought a breakthrough in price. Our philosophy is to pass those savings on to you and to recover our R & D costs across increased sales.

We've made the modem easy to understand and use, you don't need to know anything about baud rates or bits, simply plug in and talk to the world.

## Features of the Unicom Modem include:

### Auto Answer
Unicom automatically answers, then uploads or downloads data into your micro and printer just like a telex.

### Auto Baud Rate Scan
When receiving, the modem scans the incoming data and selects the correct baud rate to receive.

### Full and half duplex
One (full duplex) or two-way (half duplex) simultaneous transmission.

### Full U.K. European and U.S.A. standards
V21 and 23, CCITT. Fully compatible with Termi, Communicator and other existing software.

### BAUD RATES
300/300 1200/1200 1200/75 75/1200

### Easy to Use
Complete with all leads, power supply, operating and reference manuals. Just plug in, no soldering required. Fits all RS232/423 interfaces. (State machine).

**All major components are BT approved.**

**Technical Enquiries: Ring Barry Krite on 01 482 1711**

**Dealer Enquiries: Ring Mark Simon on 01 930 1612**

**Orders on Access/Visa: 01 482 1711**

## Software features of the Unicom Modem on ROM include:
BBC only. Electron, Amstrad, Commodore, Sinclair and IBM PC to follow.

### Auto Dial Auto Redial
Redials automatically until connected.

### Bulletin Board Facility
Start your own or contact all information boards throughout the world.

### Printer Routines
Gives the facility to use your printer to record data in and out.

### Software Commands
Commands like * Download * Dial * Answer etc. can be incorporated into your own software.

### Remote Facility
* Remote enables you or your friends to dial and download or upload your micro from any other modem.

### Reliable Transmission
Unique error correct protocol means you can send, store, and receive files and programs reliably with no transmission errors.

### Two-Window Operation
Transmitted and received messages on your monitor at the same time.

### The Unicom Auto Dial Disk
Use the Auto Dial Disk to store all your commonly dialled numbers – manually driven.

# Local news

## Guildford

The West Surrey Computer Club has changed its venue and now meets on the 2nd Thursday of the month at the Stoke Hotel, Guildford. They also run a BBC User Group which meets on the 3rd Friday of the month at the Guildford County College of Technology. The club caters for all interests and has regular illustrated lectures. Contact Jan Spencer on 0483-63512.

## Newtownabbey

A White Lightning User Group is being formed in Co. Antrim for fans of the Spectrum games designer program. Do-it-yourself alien designers should contact Terry Kelly on 0232-51539, or write to him at 353A Merville Garden Village, Newtownabbey, Co. Antrim. N. Ireland.

## Southampton

Southampton Amateur Computer Club has its main meeting on the second Wednesday of each month at the Medical Sciences Building, Basset Crescent East, between 7.30 and 10.30 pm. There is an active BBC group which meets at the Creastwood Centre on the last Friday of each month. Contact Paul Blitz on 04215-69050.

## Crewe

The South Cheshire Atari User Group meets on the first Thursday of each month at the Earl of Crewe, Nantwich Road, Crewe. The club has over 30 members and costs £5 a year for adults, or £2.50 for children. Contact Mr. A. Davis, 48 Blagg Lane, Nantwich, Cheshire or ring 0270-626969.

# COMPUTER *club*

## Meirion Jones looks at how the major political parties use computer technology.

RED, YELLOW and blue, you can have any colour you like so long as it is a political computer club. Conservatives have the Conservative Computer Forum, Labour has the Labour Party Computer Action Group and the Liberals have Micro Lib.

The Conservatives started first, way back in 1978 when Michael Spicer, who is now Deputy Chairman of the party and MP for Worcester South, set up the Forum primarily to advise on technology policy in the run up to the 1979 election. But since 1981 the organisation has been more practical, giving seminars to Members of Parliament on the benefits of computerising their constituency organisations and helping local parties decide which computers they should buy and how to make best use of members' home computers.

*Dr. Jeremy Bray MP, Shadow Spokesman for Information Technology, pictured here with Timothy Schoonmaker, Micronet's Managing Director.*

At constituency level the CCF started off 1984 by recommending the Tycom computer, but after the problems that beset the company the Forum now has discount deals with Apricot and ICL. Gordon Ayres has set up a BBC User Group to help co-ordinate activity at ward level. In the summer Conservative students from Thames Polytechnic were sent into the backwoods of the Tory shires to preach the new technology testament.

It costs £5 to join the CCF which includes a subscription to the Forum's paper Micro News. Local Labour parties' finances rarely stretch to office-style micros although some have Apricots, but BBCs are the most common. The Labour Party Computer Action Group is particularly enthusiastic about Prestel and Micronet 800.

The membership fee for joining the LPCAG is £10 which includes a magazine called Proteus, regular news on Micronet and free access to software that was battle tested successfully in the Chesterfield bye-election which put Tony Benn back in Parliament. When LPCAG decided to open its Micro net 800 pages to the public last year British Telecom at first tried to stop it on the grounds that politics and religion should not be broadcast through Prestel.

But Jeremy Bray MP, the shadow spokesman on science and technology, objected on the grounds that Sir George Jefferson, BT's Chairman, "did not check the legality of such discrimination. To classify religion and politics with prostitution and crime while purveying share prices, exchange rates and the weather, betrays a singularly perverted view of society". At the 1984 conference the Labour Party used a BBC B to work out the results of the constituency votes for the National Executive Committee, the organisation which controls the party.

You can find out more about LPCAG from Roger Ward, Labour Party, 150 Walworth Road, SE17. The Conservative Computer Forum can be reached through Jenny Riley, Highfield, Church Road, Purley, Surrey and Micro Lib can be contacted on 0422-843785.

# software that's hard to beat...

MSX
AMSTRAD
48K SPECTRUM

## TASWORD TWO

**The Word Processor** ✸

*"If you have been looking for a word processor, then look no further."*
CRASH June 1984

*"The number of on-screen prompts, together with the excellent manual, make it ideal – even for an absolute beginner."*
PERSONAL COMPUTER WORLD September 1983

*"Without doubt, the best utility I have reviewed for the Spectrum."*
HOME COMPUTING WEEKLY April 1984

**TASWORD TWO** ZX 48K Spectrum **£13.90**

## TASWORD MSX

**The Word Processor**

The Tasman Word Processor for MSX microcomputers.
All the features of the Spectrum version.

**TASWORD MSX** MSX Computers **£13.90**

## TASCOPY

**The Screen Copier**

Screen copy software for Spectrum with Interface 1 and Amstrad CPC 464. Print high resolution screen copies (in a choice of sizes), and also large 'shaded' copies with different dot densities for the various screen colours. Tascopy supports all eight pin dot matrix printers with Epson type control codes, e.g. Epson RX-80 and FX-80, Shinwa CP-80, Mannesmann Tally MT-80, Star DMP 510/515, Brother HR5, and also Amstrad DMP 1 with the CPC 464.

**TASCOPY ZX Spectrum** **£9.90**
**TASCOPY 464** Amstrad CP 464 **£9.90**

## TASWORD 464

**The Word Processor**

The Amstrad implementation of Tasword Two plus many extra features.

**TASWORD 464** Amstrad CPC 464 **£19.95**

## TASMERGE

**The Mail Merger**

Transfer data from MASTERFILE to TASWORD TWO! Letters and forms typed on TASWORD TWO can be printed with addresses and data taken from MASTERFILE. The mail merge facility allows, for example, multiple copies of a letter to be printed, each containing a different name and address taken from your MASTERFILE data. To use TASMERGE you must have one or more microdrives as well as TASWORD TWO and MASTERFILE by Campbell Systems. (version 9 or later).

**TASMERGE** ZX 48K Spectrum **£10.90**

## TASPRINT

**The Style Writer**

A must for dot-matrix printer owners! Print your program output and listings in a choice of five impressive print styles. TASPRINT utilises the graphics capabilities of dot-matrix printers to form, with a double pass of the printhead, output in a range of five fonts varying from the futuristic DATARUN to the hand-writing style of PALACE SCRIPT. TASPRINT drives all dot-matrix printers with bit image graphics capabilities and can be used to print TASWORD text files. TASPRINT gives your output originality and style!

**TASPRINT** ZX 48K Spectrum **£9.90**
**TASPRINT** Amstrad CPC 464 **£9.90**

## TASWIDE

**The Screen Stretcher**

With this machine code utility you can write your own Basic programs that will, with normal PRINT statements, print onto the screen in the compact lettering used by TASWORD TWO. With TASWIDE you can double the information shown on the screen!

**TASWIDE** ZX 48K Spectrum **£5.50**

## TASMAN PRINTER INTERFACE

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable and driving software. The user changeable interface software makes it easy to send control codes to your printer using the method so successfully pioneered with TASWORD TWO. The cassette also contains fast machine code high resolution full width SCREEN COPY SOFTWARE for Epson, Mannesmann Tally, Seikosha, Shinwa, Star, and Tandy Colour Graphic (in colour!) printers. Compatible with microdrives and ZX Interface 1.

**PRICE** **£39.90**

**TASMAN SOFTWARE**

All prices include VAT and post and packaging.

## ADD-ON EXTRA

### DK Speech

*DK'tronics*
*Speech synthesiser*
*Amstrad*
*£40*

Now speech is available for the Amstrad with DK's neat synthesiser which uses a so-called plain English entry system and also has text to speech capability — but don't expect too much. The SLO-256 chip based unit also incorporates a stereo amplifier to boost the volume compared to the internal speaker.

### Phloopy

*Phi Mag Systems*
*Stringyfloppy*
*Electron*
*£123 or less*

Phi Mag's version of the tape disc compromise — stringyfloppies are high speed tape cartridges like Sinclair's Microdrive which is emulate discs — now available for the Electron at £114 if you have a Plus 1 and £123 if not. This is includes drive, interface, cables, manual and cartridge. The same pack costs £99 for the BBC.

### MFD 700

*Sharpsoft*
*Disc drive*
*Sharp MZ-700*
*£287.50*

Sharpsoft's 180K single sided double-density drive comes with inbuilt disc controller and a disc Basic which is compatible with Sharp S Basic. In use it leaves 31K user-Ram free in the MZ-700.

## Storage and retrieval of programs

SPECTRUM OWNERS are being faced with an ever increasing number of alternatives to the humble cassette. The three devices here all offer fast program storage at a reasonable price. The Sinclair Microdrive has been around for over a year now and has undergone various attempts to improve its reliability.

It has now appeared in a pack with the interface and some software called the ZX Expansion System priced at £100. The interface also has an RS-232 port and a network. The operating system is simple to use allowing programs and data to be saved on the Microdrive. Data is stored by opening a channel and then writing data to it. One drawback with the system is that some games cannot run with the interface attached, as the operating system will grab some of the Ram. The software comprises of the popular Tasword 2 word processor, a database, Ant Attack, Games Designer and a spare blank cartridge. The number of Microdrives can be linked up, each further drive costing £50. The cartridges cost £5 each and hold about 80K.

Along very much the same lines as the Microdrive comes the Wafadrive from Rototronics. The unit has two drives, RS-232 and Centronics ports and comes with two wafers and a word processor for £130.

Although noticeably slower than the Microdrive, this unit scores in several areas. It is said to be more reliable than the Microdrive and the operating system is more informative. The directory command gives more than a list of files like the Microdrive. The formatting command also gives a full report of the state of the wafer.

Unlike the Microdrive, it does not grab any workspace until initialised with a simple New* command. Also, should you wish to back-up a file from one drive to the other, you can do so without upsetting the contents of the memory. It saves data in a similar manner to the Microdrive.

In an attempt to make up for the slower speed, the wafers come in three sizes: 16, 64 and 128K. This obviously means that the average access time on the 16K Wafer will be lower. Thus you could load the main program from a 64K wafer in drive one, and have the data you wish to continually read and write on a 16K wafer in drive in two. The wafers are also cheaper at under £4 each.

Moving away from fast tapes to discs, the Beta Disk Interface from Technology Transfer allows you to interface the multitude of disk drives available for the BBC to your Spectrum. One point to bare in mind though, if the drive uses the Beeb's power source, you will need to buy a power supply.

Having got over that hurdle, the system is fast, user friendly, and of course, at £1.50, the discs are much cheaper than wafers or cartridges. The DOS has all the usual commands you'd expect and you can switch it in and out as needed. It even has a disc password system to keep your software from prying eyes.

You also get a free utility disc with the system with the various utilities they didn't have room for in the interface's Rom. The interface can be used with single or double density, single or double sided drives, and up to four can be connected to the one interface.

The system's major limitation at the moment is that data cannot be loaded or saved on disc, but Technology Transfer promise a new Rom in the new year and will upgrade existing units. The interface costs £97.25 for single density and £109.25 for double density.

Which of these systems you go for really depends on your priorities. Although the Sinclair product is the cheapest, the cost of the cartridges makes it less competitive. The cheapest medium of all, are the discs at £1.50 each. If you've got a collection of 40 discs or so, then the disc drive will have paid off.

## *Direct imports at ridiculous prices*

## NEW BASE-LESS JOYSTICK

£8.95

- Just tilt to operate.
- Single shot trigger.
- Auto-fire button.
- Use it single handed.
- No more wrist cramp.
- No more table suckers.
- Standard joystick connector.

## BEST QUALITY DATA TAPES

Five professional C15 cassettes with Metal reels in a library case.

£2.85

Also a lower cost version, five jumbo plastic reel C15 cassettes in a library case

£2.35

## COMPUTER DATA RECORDER

- For most home micros.
- 3 digit tape counter.
- Switchable monitor.
- Input, output, Din and remote sockets.

£19.95

Also a version for Vic 20 and Commodore 64. Powered and controlled by the computer.

£21.95

*Not a modified Audio machine — A top quality computer data recorder.*

# SOFTWARE Shortlist

## Star chart

### Tapper

*Commodore 64*
*Bally Midway*
*Arcade*

★ ★ ★

Released through US Gold, this is the official computer version of the arcade game, and very good it is too. You are a bar man serving somewhat dubious drinkers who are in the habit of slinging their empty glasses at you, and, should you not serve them quickly enough, instead of waving fivers under your nose, throw you the length of the bar.

Things get progressively worse as the crush at the bar gets bigger. Good sound and graphics, fast and addictive.

### Run for Gold

*48K Spectrum*
*Hill MacGibbon*
*Athletics*
*£6.95*

★ ★ ★

Any more of these Olympics follow-ups and we'll be calling this Software Sportlist. But this one's different — for a start you don't have to drum the keyboard or turn your joystick to jelly and the Pole Position style view up the track encourages a feeling of realism.

The skill lies in balancing your speed against your reserves of energy. It's so real I was even tripped up Zola Budd style.

If you are in a really talented mood you can try your hand at the triple — 400, 800 and 1500 metres all in one day.

### Strontium Dog

*48K Spectrum*
*Quicksilva*
*Arcade adventure*
*£6.95*

★ ★

Do not be fooled by Quicksilva's packaging and the fatuous blurb — although eminently playable this game is scarcely original. You will need to make a map and solve a few problems but otherwise it is simply a matter of travelling from room to room and blasting away.

## Knight's Lore

- *Spectrum*
- *Ultimate Play the Game*
- *Arcade adventure*
- *£9.95*

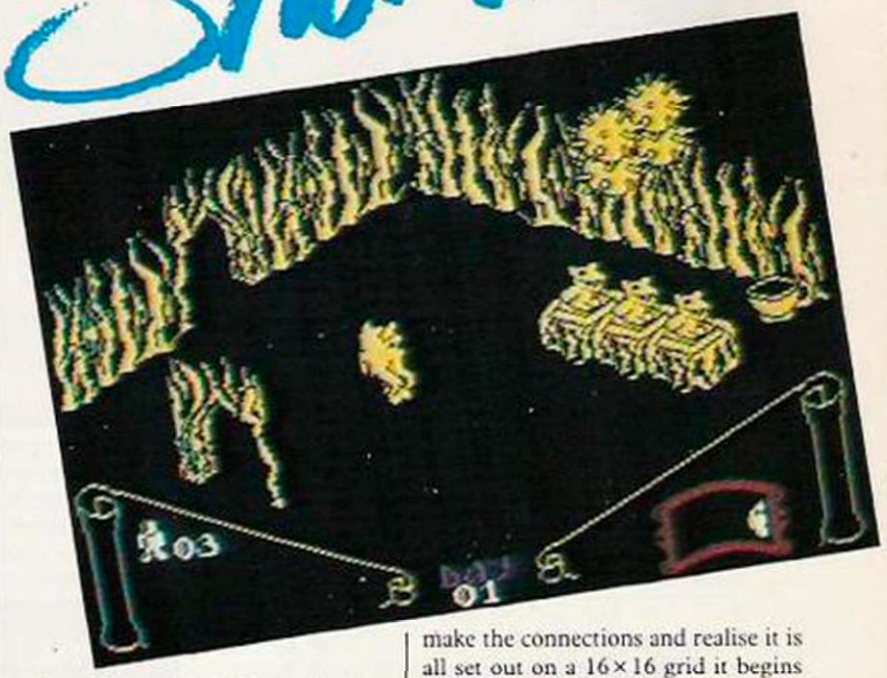
★ ★ ★ ★ ★

QUITE SIMPLY the most enjoyable game I have played since International Soccer on the Commodore 64.

Imagine Atic Atac in three dimensions and you will have some idea of what Ultimate's latest blockbuster looks like — but what makes Knight's Lore so different is the feel of the game. You have 40 days to complete your quest.

Under attack from manic ghosts, plodding guards and killer balls you have to pick up treasures, get over apparently insuperable barriers — usually by dropping treasures as stepping stones or moving around handily placed tables — make the best use of mysteriously moving blocks and map out the maze. People have been talking about arcade adventures for years but this is the first that requires good arcade skills and presents a series of problems to be solved within a satisfying whole.

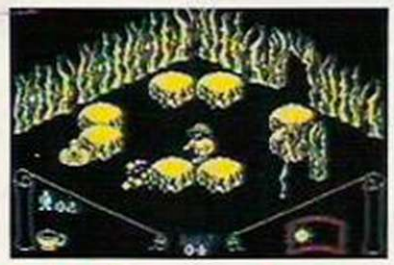
On screen your explorer — or



werewolf as he turns into by night — seems to have a life of his own. At first it can be very frustrating as the computer starts you off in different parts of the maze none of which seem to link to the others. But once you make the connections and realise it is all set out on a 16×16 grid it begins to look solvable.

Yet again the feeble excuses software houses have been making for the weak games produced have been shown up by Ultimate.

*Meirion Jones*



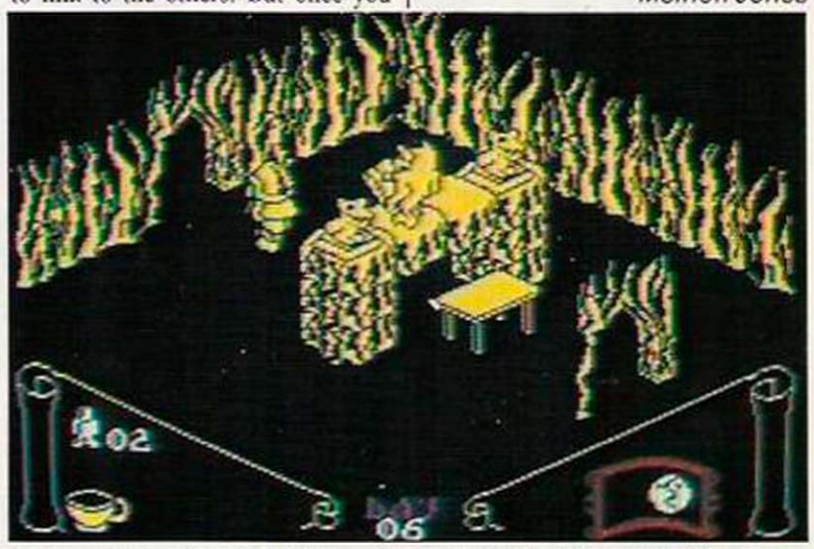
## 3D Grand Prix

- *BBC B*
- *Software Invasion*
- *Racing Simulator*
- *£9.95*

★ ★ ★

FOR THREE years now, Pole Position has been regarded as the best motor racing simulator going. Now that Atarisoft have belatedly got around to converting it for the BBC, the program finds itself faced with very stiff opposition indeed from this program. What Dave Mendes and Mick O'Neal have done is to take the best features of Pole Position and go a stage further.

Although a great game, the old classic could not really be considered



a simulation. Even Nicky Lauda never whizzed past the opposition in such easy style, on a good race you could pass over a hundred cars. Grand Prix puts a little fire in the bellies of the opposition, who now have no qualms about blocking your way very effectively; now getting in the lead and staying there becomes the challenge. There is also a complete gearbox as well as accelerator, brake and steering.

The game also avoids the pitfall of Chequered Flag, all these functions are accomplished with just five controls, so it is quite possible to keep the motor on the road with just a keyboard.

The graphics are excellent, with moving background, road markings, instruments and of course the other cars. The only criticism on this score is that the other cars do seem to approach rather quickly. The instruments are easy to read with a simple gear iondicator, speedo, rev counter and temperature gauge. The sound effects, consisting of the usual engine sound and the occasional — you hope — crash effect were a little on the loud side, but perhaps this is to induce driver fatigue — or at least ear ache — in a big race.

Our old friends the trackside signposts are still there for all the overtake on the grass freaks, but unfortunately they have rather shrunk so you can't easily see them coming.

Pole Position has retained its popularity for a long time and this successor will too. It is more demanding, requiring greater skill and patience.

*Lee Paddon*

## Backpackers Guide to the Universe

*Spectrum 48K*
*Fantasy Software*
*£7.50*

★ ★

A real Hitch-hiker's Guide to the Galaxy game is rumoured to be on the way from Douglas Adams. Fantasy have made an attempt to cash in on a cult — but the game and the name are mutually irrelevant. No jokes, primitive sub-Atic-Atac graphics. More complex than previous "Ziggy" games.

## Havoc

*CBM-64*
*Dynavision Productions*
*Shoot-'em-up*
*£9.95*

★ ★

Graphics on the cover of this game are taken from the 64 version. This is highly misleading. Very bad use of blue and white in the Spectrum version renders this Zaxxon-type game hard on the eyes and exasperating to play. I would have raved about it two years ago.

## Snow Queen

*Dragon 32/64*
*Cambrian Computersolve*
*Puzzle*
*£5.95*

★ ★

You have to save Kay from the icy grip of the Snow Queen. You do this by trying to pick out letters hidden in a frosty maze to spell the word "Eternity".

## A.T.R.A.M.

*Spectrum*
*Miles Bozeat*
*Wargame*

★

First in a new generation of computer wargames. A rather boring board game is made even more tedious by having to enter the moves into the computer. The computer is used as a bookkeeper, the same function could be accomplished with a piece of paper and a pencil.

(continued from page 55)

# SOFTWARE Shortlist

## Ghostbusters

■ *Commodore 64*
■ *Activision*
■ *Sweep'em-up*
■ *£10.99*

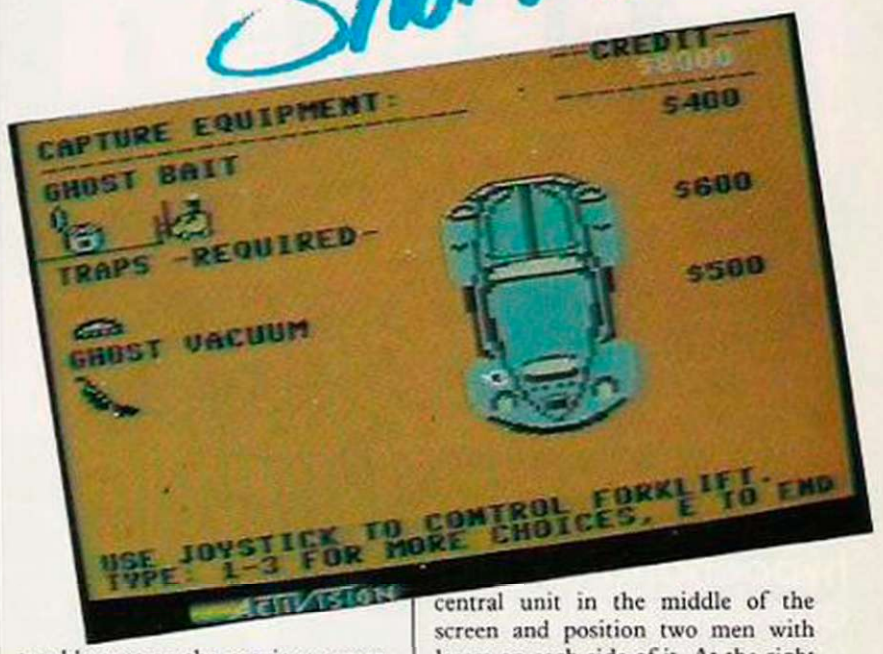
★ ★ ★ ★

"HEH-HEH-HEH! GHOST-BUSTERS!" the computer yells at you when it has finished loading. If there was as much controversy about this game as there has been about the theme music to the film — song-writer Ray Parker Jr is being sued by two different people who claim he plagiarised their music — then I suppose you would describe it as "spirited".

The real strength of this game is the music. I have never heard such a remarkable implementation of a popular song on a home computer before. It puts to shame all the tired, weedy snatches of something or other you usually have to put up with — and actually adds to the enjoyment of the game.

First, you have to outfit your ghost-catching car with things like energy detectors, image intensifiers, marshmallow sensors, ghost vacuum, ghost traps, ghost bait and a laser confinement system. You have to search for, catch and store ghosts and you can literally turn your demons into dollars. It's like a sort of Pac-Man in reverse where you chase the ghosts.

The screen display shows a maze map of New York. Afflicted blocks shine red. You direct your Ghostbusters symbol to the block. Take the shortest route possible because the screen changes to a top view of your car cruising along the highway, vacuuming up any of the ghosts you froze en route to the trouble spot on the previous screen.



There are one or two things insufficiently explained in the on-screen instructions — sometimes it says things like press space when it means press Return, and if you don't collect any traps when you're outfitting the car the game falls into a kind of loop which might lead the unwary to think they had purchased a faulty copy. Most of these problems can be overcome by examining the minute instructions minutely and using a little horse sense.

Another part of the action necessitates positioning the laser confinement system to catch Slimers. Using the joystick, you drop the central unit in the middle of the screen and position two men with lasers on each side of it. At the right moment you can suck down the spectre; if you miss, it attacks one of the men who cries out pathetically "He slimed me!"

Finally, you can sneak two Ghostbusters into the Temple of Zuul for the final battle.

If you are successful in this uniquely American commercialisation of the spirit world, you get your own Ghostbusters franchise and a secret number which you can use the next time you play the game. Apparently you can use this number on any version of Ghostbusters anywhere in the world. Eerie, huh?

*Paul Bond*

## Travel with Trashman

■ *Spectrum*
■ *New Generation Software*
■ *Sweep'em-up*
■ *£6.95*

★ ★

GARBAGE IN, GARBAGE out, as we used to say at break — but Travel with Trashman is a worthy successor to the first Trashman game although not as visually revolutionary as some of the computer games we have looked at this month.

The first screen shows all the cities of the world that Trashman can travel to — but it all costs money. You can travel to America, Spain, Paris, Munich and finally, Jerusalem.

In Paris you have to collect a load of tiny bouncing green dots which are meant to be frogs loose in a cafe. If you bump into a waitress while endeavouring to recapture the rogue amphibian appetisers you lose points. In New Orleans you have to gather up money thrown at a marching jazz band, in Munich you collect the empties after a beer festival.

The deadliest early job is in Spain — and Trashman is not even a football supporter. To show their appreciation of British sanitary technology the Spaniards get Trashman to pick up roses in a bull-ring — while the bull is still in it. A news report about Trashman being killed in Spain is mysteriously followed by the information that you are stranded there without money.

If you do get Trashman to Jerusalem, his job is to mop up tears at the Wailing Wall. So, if you missed giving this game to someone for Chanukah, there's always the Jewish New Year. But I think New Generation are going to have to put in a lot of work on their graphics and brush up their ideas for games if they're going to keep ahead of some of the excellent stuff being produced by companies like Ultimate Play the Game, US Gold and Beyond Software.

*Paul Bond*

## Psi Warrior

*Commodore 64*
*Beyond*
*Shoot-'em-up*
*£9.95*

★ ★ ★

The Psi warrior travels on his psi mat in the enemy silos, going to confront The Source. Nice bit of atmospheric setting, but it is really just a shoot-'em-up type maze game. The graphics are very nice even if the ethereal baddies are kind of odd sploges on the screen.

## Espionage

*Spectrum and Commodore*
*Modular Resources*
*Adventure*
*£8.95*

★

You have to catch the mole in your oil company before he gives away the company secrets. You do a Bobby Ewing impersonation — this is done by answering questions of a petrochemical nature and sussing out which of the people asking the questions is the phoney.

## Crypt Capers

*BBC B*
*Software Projects*
*Maze*
*£7.95*

★ ★

Utterly unorigional maze game on the now familiar Egyptian theme. There are 12 screens to complete before you reach the Pharo's chamber. On the way you have to collect such items as keys, jars and papyrus roots while shooting or avoiding a variety of nasties.

## Valkyrie 17

*Spectrum 48K*
*Ram Jam Corporation*
*Adventure*
*£9.95*

★ ★ ★

A graphics text adventure tracking down Nazis who, as they are wont to do, are busy trying to take over the world. A few enigmatic clues are provided by the packing and a soundtrack on the cassette. Plenty of humour and terrible German accents.

*(continued from page 57)*

# SOFTWARE Shortlist

## Raid Over Moscow

■ *Commodore 64*
■ *US Gold*
■ *Shoot-'em-up*
■ *£9.95*

★ ★ ★ ★

GOOD GAME, SHAME ABOUT the propaganda. Raid over Moscow has some excellent graphic sequences which make Zaxxonesque games appear relatively flat. Sadly, the scenario is set in the near future, just after the Salt IV arms reduction agreement between the US and the Soviet Union. Since Americans can't even get the past right — witness the "Royal Marine Spitfire"(!) in US Gold's Spitfire Ace, or the World War One RAF(!) biplane in Atari's Blue Max, we can hardly place much faith in their perception of the future.

You are the commander of the only fully operative US space station carrying Stealth aircraft — undetectable by radar. Both countries are supposed to be dismantling their nuclear stockpiles but, because the Soviets can't keep up with the new defence technology, they have hung on to a few old warheads for a rainy day. Inflamed by watching John Milius moves like Red Dawn, they decided to launch a sneak attack.

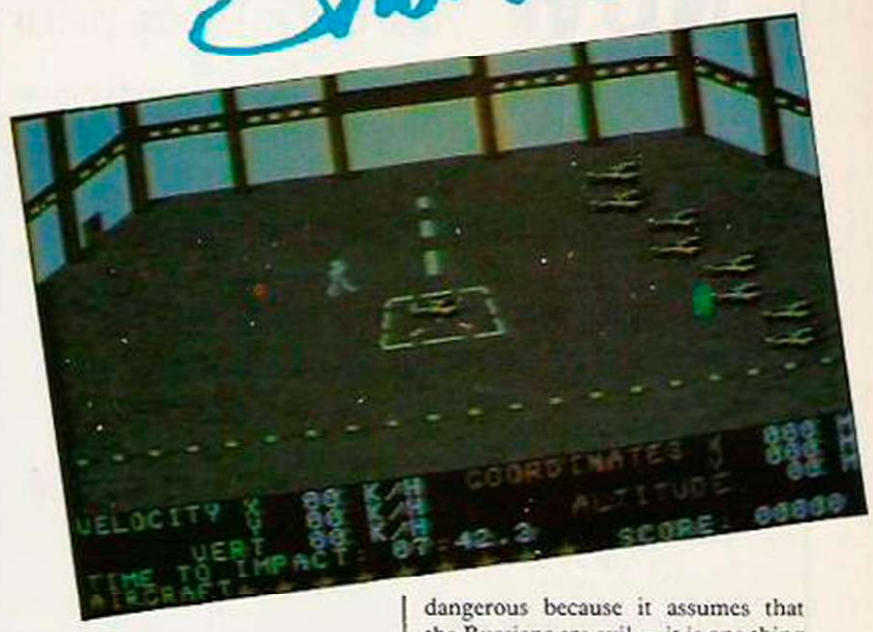
"The Soviets believe their treachery will lead to world domination", it says on the inlay. However, instead of invading Grenada or some underequipped South American democracy you, the Yank, decide to strike at the very heart of the Russian bear himself.

First screen shows the missiles leaving their bases in Minsk or Saratov and wending their way to Miami or even nuclear-free Montreal. It tells you how much time you have left to save the world. The second screen shows you the space-station hangar. You have to hit a key to get the hanger doors open as well as manoeuvre the Stealth craft with your joystick but it is an excellent 3D representation, with the pilot tromping determinedly to his ship like Sam Shepard in the Right Stuff. Unfortunately, before I discovered the key I wasted a few goes trying to fly into the pilots' locker room.

Once you've got a few ships into space — and one or two into the officers' mess — you are in a position to confront the armed might of those sneaky Reds.

Beach-head-style you return to the first screen and position the cursor over the attacking city. Then you go into low-level attack. There are three screens of Zaxxon-style action where you fly over farmhouses shooting up schoolbuses, into Siberian wastelands blasting pillboxes — very tedious screen, this — and around command posts with tanks and lorries.

Your aircraft casts a shadow — the Russian ones don't; perhaps that's as far as their Stealth technology could get — but you can bank and veer to your heart's delight. Ground vehicles are very convincing indeed.



The final screen is a kind of shoot-out in Red Square where you zap armoured vehicles with a bazooka.

Essentially a suite of games rolled together in one scenario, one can only say that it is a pity that such an apalling scenario was chosen. It is dangerous because it assumes that the Russians are evil — it is one thing for school children to knock hell out of a fictional enemy it is quite another to ascribe subhuman characteristics to a real people, with a real history and culture.

US Gold are very smug about this issue, saying essentially that no publicity is bad publicity: but like old man Reagan keeps repeating; "You ain't seen nothin' yet."

*Paul Bond*

## Cyclone

■ *Spectrum 48K*
■ *Vortex Software*
■ *Rescue game*
■ *£6.95*

★ ★ ★ ★

HELICOPTER GAMES are all the rage at the moment what with combat Lynx and Tomahawk — even Fort Apocalypse. But Cyclone from the people who brought you Tornado Low Level is a breath of fresh air. It has the excellent 3D graphics of TLL, with a much more praiseworthy motivation for the action.

You control a helicopter which has to recover medical supplies from islands in the path of an advancing cyclone. The screen display gives you a god's-eye view of a helicopter crouching on the pad. Press I to take off, O to P to rotate. The right-hand side of the screen shows your altitude, fuel, speed and direction — by pressing M you can call up a map which shows you the islands, the cyclone and a real-time plot of where you are.

Naturally, the air is full of planes fleeing the oncoming cyclone so watch out you don't collide with them. Your helicopter also becomes difficult to control as the windspeed strengthens. As you wrestle with the controls, the urgency of your mission is emphasised by the pathetic figures below you, waving for help. Unlike Choplifter, the pathetic figures don't seem to leap into your egg-beater when you put down but the goal of this game is to find five crates of

## Know your Psi-Q

*BBC B/Electron*
*Mirrorsoft*
*Novelty*
*£9.95*
★ ★
Provides five simple games, which purport to test for clairvoyance and precognition, together with questionnaires which assess your psychic potential. If, like most of us, you turn out to have no psychic ability you will find the games dull and frustrating.

The questionnaires brand believers as sheep and sceptics as goats but you might also feel a bit goatish about whether computers are at all suitable for testing psychic abilities.

## Fall Guy

*Spectrum 48K*
*Elite*
*Arcade*
*£6.95*
★ ★
Ever wanted to be a TV stuntman? Well now's your chance. If the job is anything like the game then don't bother. It consists of jumping off variously shaped objects, and with a bit of luck falling on another similarly shaped object. You have five "takes" to make 20 successful leaps, complete the screen, and, you've guessed it, you get something else to leap off. All this is done against the clock as the films budget runs out. Nice graphics, shame about the game.

## P.C. Fuzz

*Commodore 64*
*Anirog*
*Beat-'em-up*
*£7.95*
★ ★ ★
Our friendly neighbourhood flatfoot is having a tough day. Not only are there the usual punks and drunks to deal with in his usual caring manner, but the mafia has come to town and intends to clean up in the bank minding business. All this and only a monocycle and a truncheon for protection.

*(continued from page 59)*
medical supplies.

You can switch from a North view to a South view when searching for crates. You hover directly over a crate to winch it aboard, and refuel at nearby landing pads to keep flying.

You have to land very gently indeed and his can be tricky when battling headwinds.

*Paul Bond*

# SOFTWARE Shortlist

## Mr Ee

■ *BBC Micro*
■ *Micro Power*
■ *Arcade*
■ *£6.95*
★ ★

THE MOST NOVEL thing about Mr Ee is its title. Unfortunately, there is no mystery about the game itself which is yet another version of the arcade game Dig Dug. In other words it is one of those games where you have to dig tunnels through the earth and collect desirable objects. In pursuit is a pack of hostile creatures which you can crush by dropping apples on them.

Mr Ee is, admittedly, a highly refined version of the game with 12 different screen layouts, excellent graphics, and a maddeningly jaunty fairground tune. If you choose to fight rather than flee, as an alternative to dropping apples you can release a crystal ball. This carries on bouncing along the tunnels until it hits something.

There is also a larger cast of creatures than usual — Umphs, Diggers, Letter Monsters, and Maras. When you eat a lump of food the Maras troop on to the pitch as the Umphs and Diggers freeze. But the game is still Dig Dug for all that.

It is a pity Micro Power did not give the action a more original twist. US Gold's superb tunnelling game. Boulder Dash — for the CBM-64 — takes up where this game leaves off. And once you have played Boulder Dash you won't dig Dig Dug no more.

*Simon Beesley*

## Battle through time

■ *Commodore 64*
■ *Anirog*
■ *Shoot-'em-up*
■ *£7.95*
★ ★ ★

TRUNDLING ALONG in a rather innocuous looking armed, all terrain vehicle, your mission is to help mankind with the wholesale slaughter of his enemies. Whose side you're on isn't actually specified. Anyway, you have travelled back through time and your first job is to wipe out biplanes in World War 1 without getting bombed or falling into bomb craters.

Every so often artillery appears on the ground which gives you bonus points provided you run over it. You have vertically and horizontally firing runs to kill the enemy in the sky and shoot at rocks barring your way on the ground.

After you have survived 10 miles of this — indicated on a panel at the bottom of the screen — you are teleported into World War 2 in which a similar scenario ensues.

Another 10 miles and you are pitched into the heart of the battle in Korea with enemy jets firing rockets at you to the accompaniment of the theme from Mash. Next, you find yourself in Vietnam where helicopter gunships are dealing the proverbial death from the skies. Survive this and you must help to win World War 3. Blue clouds fire bolts of lightening at you and black crab-like craft do their best to scatter your component parts. Having survived this mayhem, mushroom clouds sprouted all over the screen and I was told that I was responsible for the destruction of the planet — a heavy burden to bear. However, I got the chance to redeem myself by fighting war mutations.

The last screen I reached was "In the beginning ????BC" with pterodactyls swooping down and little men on the ground throwing spears, boomerangs and clubs — yes, my armed, all terrain vehicle was even threatened by these primitive weapons. Anyway, the idea is to kill the men but not the pterodactyl — it can only be frightened away by firing at it before it reaches the ground so that it goes various shades of puce and retires in disgust.

The game has lots of different music to go with each screen as well as a high-score table, two-player option, two skill levels and a continuous play facility.

*Ian Vallely*

*(continued on page 63)*

# AFGHAN ATTACK

**A 96K PURE TEXT MACHINE CODE ADVENTURE FOR THE 48K SPECTRUM (IN TWO PARTS)**

A large build up of Soviet troops is forming on the South Eastern Pakistan border, with probable hostile intentions. Troops and supplies travel the fragile Eastern Kabul road through unoccupied territory. Your role is to disrupt these troop movements, harass supplies and prevent the Soviets from attaining their objectives. You have British Paratroopers; ground to air missiles for attacking their airfield and destroying helicopters; plus rebel guerillas to lay ambush on troops and convoys.

Please send me ..... copy(ies) of 'AFGHAN ATTACK' at £9.95 each. I enclose a cheque/P.O. made payable to 'Southern Software' to the value of .....

## Zen Assembler

*Amstrad*
*Kuma*
*Utility*
*£19.95*

★ ★ ★ ★

One of the best assemblers available, Zen has been around for some time on a variety of Z-80 micros. This version also benefits from an excellent disassembler which provides labels, and a full machine code monitor with the facility for inserting breakpoints.

## Styx

*Oric/Atmos*
*No Mans Land*
*Arcade*

★ ★

Four screens of swooping aliens to annihilate. Mines are dropped which can impede movement. Fast and noisy but rather unoriginal, addicts only.

## Drelbs

*Commodore 64*
*US Gold*
*Arcade/Strategy*
*£9.95*

★ ★

At first sight the screen looks like a multi-coloured printed circuit board made up of gates which you can rotate to form squares. But then you notice the traditional video nasties — refugees from so many other games in hot pursuit.

With skill you can box them in and if you complete enough squares go on to another screen. If it had appeared in the summer of 82 it might have earned rave reviews, but in 1985 it looks a little bit tired.

## Zombie Zombie

*Spectrum 48K*
*Quicksilva*
*Novelty*
*£6.95*

★ ★ ★

A new game from the author of Ant Attack, which uses the same superb 3D effects. Once again you find yourself roaming around a ruined city, now fighting off zombies rather than ants. This time you can also fly over the city in a helicopter, pick up and transport bricks.

*(continued from page 61)*

# SOFTWARE Shortlist

## Underwurlde

*Spectrum 48K*
*Ultimate Play The Game*
*Arcade adventure*
*£9.95*

★ ★ ★ ★

DROPPING INTO the Long Dark Palace on your way to freedom is just about as easy as negotiating a no-strings-attached pact with the devil. It could be well into 1985 before you have developed enough gremlin-zapping skills, a detailed knowledge of Underwurlde's vast labyrinth and tempered all that with a good deal of luck.

Underwurlde is an arcade adventure in the classic Ultimate mould. As in the horror movie *The Amityville Horror*, your sabreman's house seems to be a bijou residence in need of some modernisation — it's been built over a gateway to hell. Instead of rising damp, your basement is seeping all sorts of nasties, up for a night out from the Well of Evil.

With noisy neighbours like that, you can probably guess that escaping is not easy, especially as you have to go down to the devil's lair in order to climb up again to freedom.

You have a side-on view of the action, unlike Knight Lore's 3D angle or Atic Atac's ceiling perspective. So if you miss your footing you can watch as your man tumbles past gallery after gallery to his death. The correct technique to use if you don't want to squander valuable lives in the early part of the game is to lower yourself down by rope and rise up again on the giant bubbles of inert plasma. Magic gems make you invincible for short periods so they are worth grabbing whenever you can.

Weapons are absolutely indispensible if you want to make any progress at all. The catapult you find at the very start of the journey will only take you so far; you'll need daggers to cut your way past the guardians of the nether reaches of the Underwurlde.

*Toby Wolpe*

## Interview

*Commodore 64*
*Front Runner*
*Arcade Adventure*
*£7.95*

★ ★ ★

PART OF THE new wave of three dimensional maze-style games on the Commodore 64, Interview has that secret ingredient — added Hungarian programmers — which seems to be the touchstone of success for so many new computer games in Britain today.

The game is a race against time. You must reach a job interview punctually. Unfortunately, your journey to the office is dogged by disaster. The first screen shows a close-up, rear view of our hero walking down the street. Using the joystick, guide him around open manholes, banana-skins, dogs, pedestrians and out of the path of falling flowerpots.

The second screen shows an aerial view of the city. You must guide the interviewee from the bank where he has presumably just cashed his dole cheque to the site of the interview. The money is important, because you may have to repair your tarnished image, once the dogs and what-have-you have all had a go at you.

It is possible to waste your money — most significantly in video arcades and computer shops. We feel there is a deep moral message here. Restaurants and coffee shops don't benefit you particularly, either. Should you fritter away your DHSS money, you will have to traipse all the way back to the bank to get more money in the event of getting run over or falling down a manhole. In real life of course you would be able to take legal action against the local authority for leaving an entire street full of uncovered manholes.

There are a number of things which you need to do to get through the interview — this is the real strength of the game, quite apart from the excellent graphics. For example, if you get knocked over three times you should go to the shoemakers. Otherwise you will get a no-no letter in the post, telling you why you failed.

The third screen shows the receptionist — then a letter comes up on screen, usually telling you why you failed to get the job. But if you are lucky enough to have prised yourself free from the poverty trap, the computer then shows you a view of your nice new office. Lo and behold, it's even got a CBM-64.

*Paul Bond*

*(continued on page 65)*

# University Software

## UNISTAT

STATISTICAL PACKAGE

**MULTIVARIATE REGRESSION:** Main output consists of estimated coefficients, t-stats, standard errors, $R^2$, corrected $R^2$, standard error of regression, F stat, and Durbin-Watson stat. Further output options: multiple correlation matrix, var-covar matrix, ANOVA of regression, residuals, plot of residuals, interpolation. Data options: Log/ln option for each variable, no-constant regression, choice of dependent variable, selection of independent variables, auto-omission of linearly dependent variables.

**ANALYSIS OF VARIANCE, SCATTER DIAGRAMS AND TIME SERIES PLOTS;** One-way and two-way (without interaction) ANOVA tables, scatter diagrams of paired data and time series plots with auto-scaling.

**STATISTICAL TESTS, CORRELATION COEFFICIENTS AND PROBABILITY DISTRIBUTIONS:** Basic stats on each column of data (size, sum, mean, variance, std. dev.). Chi-square (contingency table), t (one sample, two sample, paired), F, Mann-Whitney U, and Wilcoxon signed rank tests. Pearson's, Spearman's rank and Kendall's rank corr. coefs. Chi-square, t, F, binomial, Poisson and normal (std., non-std.) distributions. Results of tests and corr. coefs are displayed with significance levels.

**DESCRIPTIVE STATISTICS, FREQUENCY DISTRIBUTIONS AND HISTOGRAMS:** Analysis of raw data or data with frequency counts. Raw data sorted and grouped. Choice of lower bounds and class intervals. Absolute, cumulative and relative frequencies. Histograms with up to 200 classes. Output displays sum, mean, mean deviation, median, variance, std. dev., 3rd and 4th moments, skewness, kurtosis, range, etc.

All programs are datafile compatible with Matrix Operations program in UNIMAX package. Data matrix capacity examples (columns by rows): **CBM-64;** 2x1250, 5x700, 10x380. **BBC-B;** 2x750, 5x400, 10x200, **48K Spectrum;** 2x1800, 5x900, 10x500. **CBM-64** (disk/cass): **£85, BBC-B** (disk/cass): **£85, 48K Spectrum** (mdvcart/cass): **£60**

## UNIMAX

LINEAR PROGRAMMING PACKAGE

**LINEAR PROGRAMMING:** A powerful and instructive optimisation program capable of handling all sorts of linear programming problems (min/max, any combination of <=, =, >= constraints and $x_i>=0$, $x_i<=0$, $-\alpha<x_i<\alpha$ sign constraints). Primal, canonical, dual and their solutions are displayed in standard mathematical form. Unbounded problem and no feasible solution prompts. Edit option for all inputs. Capacity examples (variables by constraints): **CBM-64;** 10x35, 25x30, 40x25, **BBC-B;** 10x25, 20x20, **48K Spectrum;** 10x45, 25x35, 50x25.

**MATRIX OPERATIONS:** Inversion, transposition, determinant, pre- and post-multiplication, scalar multiplication, addition and subtraction of matrices and vectors. Any output can in turn be used as the input of the next operation without re-typing. Matrices can be saved or loaded at any stage. Datafile compatible with **UNISTAT** package. Capacities: **CBM-64;** 35x35, **BBC-B;** 25x25, **48K Spectrum;** 45x45.

**CBM-64** (disk/cass): **£60, BBC-B** (disk/cass): **£60, 48K Spectrum** (mdvcart/cass): **£45.**

## Designer's Pencil

*Commodore 64*
*Activision*
*Graphics Designer*
*£11.99*

★ ★ ★ ★

There are already a number of drawing and painting programs for the CBM-64 but this is something different.

Completely menu driven it provides an extensive but simple Logo-style programming language. Selecting a command is just a matter of nudging the joystick. There is also scope for freehand drawing and adding sound.

When you have entered your program a moving pencil rapidly draws your picture. Great fun to use, these facilities are exceptionally well implemented.

## Trouble in Store

*Oric 1/Atmos*
*Orpheus*
*Platform*
*£6.95*

★ ★ ★

Ten screens to complete in this platform game. There are no conveyor belts or crumbling ledges but a good assortment of mutant tvs, flared trousers, flamingos, and suchlike, along with a tremendous ragtime soundtrack. On the Spectrum this would be nothing new but by Oric standards it is good value.

## Pacmania

*Commodore 64*
*Mr Chip Software*
*Gobble-em-up*
*£5.99*

★ ★

As far as graphics and speed are concerned this Pacman variant is superior to Atari's version. But it contains an alarming feature which Pacman purists will deplore. At the touch of a key you can disappear and re-materialise elsewhere in the maze; in other words, a hyperspace option. Whatever next? How long will it be before we see Pacmen armed with missiles or smart bombs?

(continued from page 63)

# SOFTWARE Shortlist

## Lode Runner

■ *Spectrum 48K*
■ *Software Projects*
■ *Platform game*
■ *£9.95*

★ ★ ★

THERE IS A JUSTIFIABLE awe of American software in this country with consistent scare stories being put about by the computer trade press that this particular software invasion will do for British companies what a cruise missile would do for Minsk.

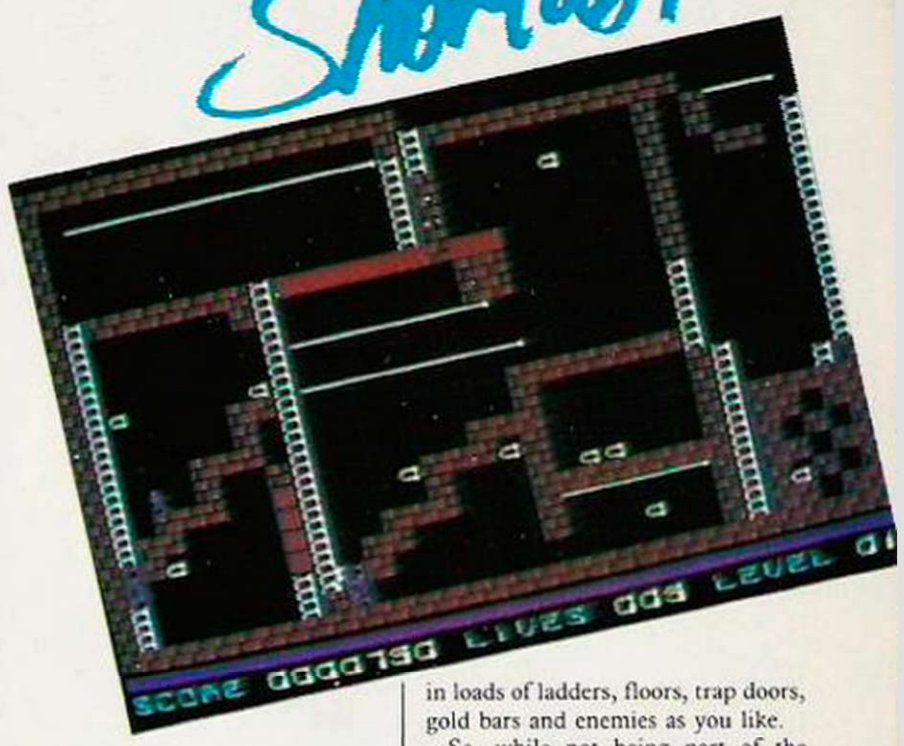
This is a Broderbund game under license — and Broderbund brought us the memorable Choplifter on the Apple II and in various forms for other home computers.

Sadly, this is unlikely to set the world on fire. All of that blurb about being a highly trained Galactic Commando deep in enemy territory is not going to disguise the fact that this is just another platform game, albeit complex and with neatly executed graphics.

In the traditional way, you climb ladders, grab gold, swing on ropes — nice touch, this — and dig holes to get rid of your assailants. Later screens involve you in passage-way mazes and necessitate a certain amount of drilling with your laser pistol. The real strength of this game is that, like Beyond's Mr Robot, it is also a game generator. You can stick in loads of ladders, floors, trap doors, gold bars and enemies as you like.

. So, while not being part of the striking graphics trend, this game may well turn out to appeal to a new market for "kit" computer games.

*Paul Bond*



## NLQ

■ *BBC Micro*
■ *Watford Electronics*
■ *Utility*
■ *£18.40*

★ ★ ★ ★

IS YOUR Epson printer beginning to show its age? Do you hanker after those new printers with fancy type styles? If you have a BBC Micro, you could revitalise your RX or FX model without breaking the bank by adding Watford's NLQ package.

NLQ — it stands for "near letter quality" — comes in an 8K Eprom, which fits not in the printer but in one of the paged Rom sockets of the computer. From there you can call it from Basic or even through commands set in Wordwise text.

Besides plain text printing, NLQ offers some trick features: proportional spacing, underlining, enlarged letters or all of them together. A built-in help page provides a ready reminder of the codes to type.

Printing is somewhat slower with NLQ: to give high resolution the print head has to make at least two passes of every line. And it's a little noisier because of the extra line feeds.

There's a limit to what can be squeezed into 8K, of course, so you don't get an italic font; but you do get some exotica and there is a choice of crossed or plain zeros.

Since printing is carried out in a graphics mode, the proportional spacing feature works even on the RX range of printers. The Rom claims a workspace in page &A00 but this can be moved easily if necessary.

**Besides plain text printing, NLQ offers some trick features: proportional spacing (see?), underlining, enlarged letters or all of them together. A built-in help page provides a ready reminder of the codes to type.**

## Doomdarks Revenge

■ *Spectrum 48K*
■ *Beyond*
■ *Adventure*
■ *£9.95*

★ ★ ★

SO YOU THOUGHT Lords of Midnight was difficult? This, the latest in the series makes its predecessor look like a bunfight in a Brighton tea-room.

The game is a graphics adventure featuring the unique "landscaping" feature which very quickly draws in the features in front of your character. There are 6,000 locations altogether and over a hundred characters, making it vastly more complex than Lords.

Obviously, Mike Singleton has decided that having whetted your appetite, he must now give the punters a real run for their money. For a start, you only have the bare outlines of the map given to you and the characters are far more complex than before.

Every character you meet, instead of being simply friend or foe is trogging around the place bent on his own little scheme, and if you go up to him suggesting he might like to join your merry band, he may either join you, ignore you or turn on you.

The plot is that after the defeat of Doomdark, his daughter is bent on revenge and seduces Luxor's son Markin and takes him off to her castle in the frozen empire. Luxor rides off in pursuit to rescue his son.

The politics of the place are far more complex than Midnight, there are five kingdoms, each of which dislikes the other to a certain degree. These rivalries must be exploited by Luxor.

This game is a worthy successor to Lords of Midnight. Mike Singleton hasn't just revamped the plot and changed all the names, he has given us a logical extension of the LOM system with many improvements and refinements. The player has a whole set of new problems and victory conditions to achieve and I'm sure all LOM fans will want to add this one to their collection.

*Lee Paddon*

# MAY WICO BE WITH YOU

When you're up against all the evil in the universe, you need the finest joystick. Weak, sticky, slow controls can only lead you to your doom.

You need a Wico.® The controls in more than 500 modern arcade games are actually made by Wico.® They set the industry standard for durability and performance. And the same arcade quality goes into the Wico® you take home.

Wico® joysticks work directly with the Commodore 64,™ Vic 20,™ all Atari® Home Computers and Atari® Video Games.

Add an interface, and you can connect into a Sinclair Spectrum or Apple II® and IIe.® If you have a new MSX computer there's the just released MSX Grip Handle for you.

What do you get? A man-sized handle on a virtually unbreakable shaft. Tough, ultra-sensitive Wico® switchgear. A heavy-weight base. A year's guarantee. And more sheer dodging, chasing and blasting power than ever before.

The Wico® range includes the famous Red Ball,™ straight out of the arcades. The Three Way Deluxe with interchangeable handles. The light but rugged Boss. And check out the state-of-the-art Trackball: many owners use it for serious programming, where it gives them effortless cursor control.

Ask your dealer to let you handle a Wico.® Quality (you'll find) costs money.

But if you want to have less trouble fighting your controls, and more power for fighting the forces of darkness . . . only Wico® is worthy of your hand.

**WICO**®

THE FINEST HAND CONTROLS IN THE KNOWN UNIVERSE

*£9.95*
*Level 9*

THIS IS Level 9's sequel to the smash-hit Snowball. As ever with this company's adventures, the plot is exciting, the prose detailed and imaginative, the locations numerous — over 250 — and the adventure awash with stimulating puzzles.

Forced by damning evidence to flee from the interstar transport Snowball 9, Kim Kimberley is the first human to land on the Planet Eden. However, Eden is not uninhabited but populated by robots who live in an eastern city which is constantly under attack from hostile beings of all types. Will the good name of Kim Kimberley be cleared? Will Kim even survive? Play on!

For the first time, Level 9 have included graphics — but only if you've got a Commodore 64, Spectrum or Amstrad. For the rest it's text only, though the BBC B version has a separate program displaying the picture. Not being a company to stint on quality or quantity, they have crammed in about 240 first rate and fast drawn pictures. If you buy no other adventure, you must buy this — Level 9 have come up trumps again.

## The Wheel of Fortune

*BBC B*
*£9.95*
*Epic Software*

TO COMPLETE this roundup of excellent adventures comes, appropriately, The Wheel of Fortune. Containing both graphics and text, this adventure has an interesting plot and many impressive features. Here's a few to whet your appetite: 250 locations, every one with a rapidly drawn, half-screen picture; a sophisticated command analyser allowing complex input and swift response; intelligent characters who live in real time and who can be talked to and asked questions of; a function key set-up facility accessible from within the game itself. Definitely one to feed your Beeb.

## Cuddles, and Ice Station Zero

*Spectrum 48K*
*£1.75*
*Eighth Day Software*

NOW TO WHAT must the adventurer's bargain of the year. Eighth Day Software have released a series of Quilled text adventures for the 48K Spectrum, and each of them only costs £1.75. You'd be forgiven for thinking that they can't be much cop for that sort of money — but you'd be dead wrong. The adventures are good quality with interesting themes.

For example Cuddles has you as a precocious baby trapped in a playpen, guarded by a nanny and with nothing but a bowl of sloppy food and a building block to experiment with. In Ice Station Zero you're on the trail of an international terrorist who is holed out in a polar research station yet holding New York to ransom.

Other titles in the collection are Quann Tulla and, the two most difficult, Faerie and Four Minutes to Midnight. Available only by mail order from Eighth Day, 18 Flaxhill, Moreton, Wirral, these adventures are excellent value for money.

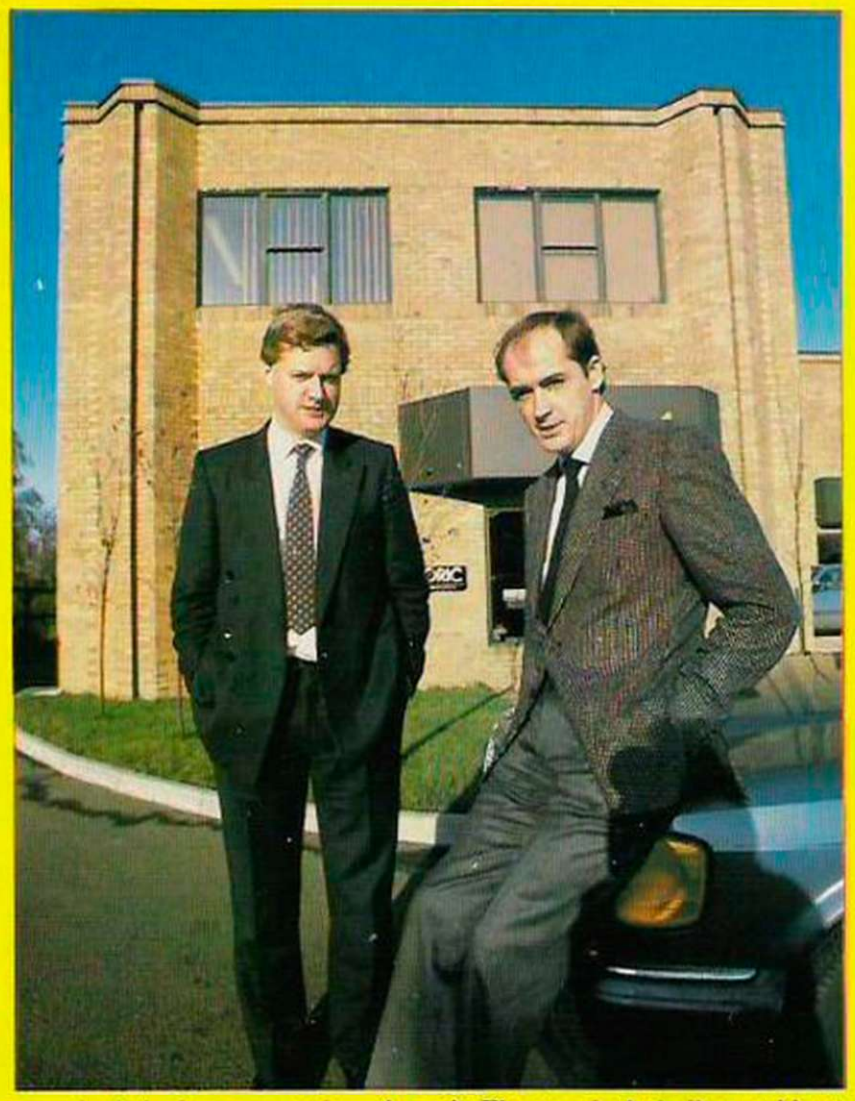
## Danger Mouse in the Black Forest Chateau

*Various*
*£7.95/£6.95*
*Creative Sparks*

BACK TO GRAPHICS and text adventures, Danger Mouse in the Black Forest Chateau is just the thing for the younger or novice adventurer. The graphics are delightful featuring as they do those lovable heroes, Danger Mouse and Penfold.

Entering commands couldn't be simplier; you're presented with a choice of actions at every stage. Select the one you want and the story progresses. The adventure is in two separately loadable parts: you can't start part two until you've finished part one. Danger Mouse is a non-violent, warm and humourous adventure.

# ORIC'S NEW WAVE



*How long can Oric old hand Barry Moncaster keep that long wheel base Mercedes hidden from dark-suited Bruce Everiss.*

ON THE STARTING BLOCKS in Oric's Cambridge based research and development department are five new computers and the company is brave enough to believe that it can launch at least three of them by next summer.

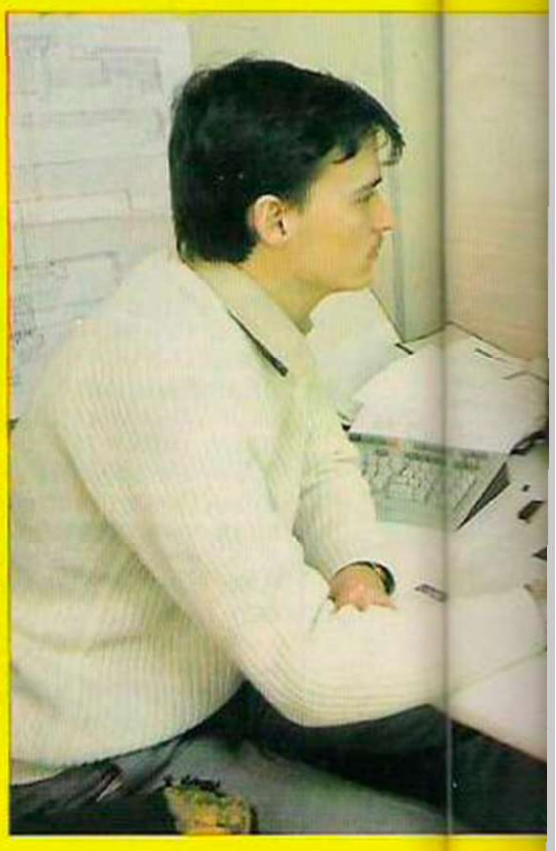
They range from the Stratos, a £200 machine based around the Atmos, through an MSX, to a QL-style 68008 computer, with an IBM PC compatible and a lapheld at the top of the range. Ambitious indeed considering that since the launch of the company with the Oric 1 over two years ago the only new computr from the company has been the Atmos — a revamped Oric 1.

Although 1984 was the year that Oric almost disappeared from the British micro market, confidence for 1985 is based on two assets, a booming European sales — in France even in the sleepiest villages a card in the window of every moped repair shop invites you to buy an Oric Ordinateur Individuel — and expertise in uncommited logic array design.

Using ULAs you can cut down on the number of components in a computer and hence make a cheaper more efficient design. But putting what can be a whole circuit board on to a single chip can create problems as companies like Acorn and Enterprise have learnt to their cost. Much of the year's delay in the production of the Enterprise has been blamed on the difficulties of debugging the 'Nick' chip — the ULA which gives the Enterprise such advanced graphics specification. Acorn's Electron had similar problems with the big ULA which was supposed to replace a large slice of the BBC board.

"We could solve Acorn's problems at a stroke" boasts Oric's Barry Moncaster — an offer Acorn is unlikely to take up. Although Barry stresses the achievements of Oric in such a short time — 350,000 sold in the first two years "by then Sinclair hadn't got round to the ZX-81, Acorn hadn't got round to the Atom" Oric motivators Paul Johnson and Barry Moncaster have a long history in the micro business.

*ic's Daisy is a £100,000 machine for designing ULAs.*



*Design of printed circuit boards is also automated — using a Racal unit. Far right: the new Quick Disc units — the first disc drives to break the £50 barrier.*

Barry claims to have produced the first commercial use of a microprocessor in Britain — a digital taxi meter which appeared on Tomorrow's World way back in 1974, and both were heavily involved in Tangerine, one of Britain's first micro makers set up during the fruity phase when people thought that if you were going to compete with Apple you had to sound like them.

Like Sinclair and other companies Tangerine was angry with the way Acorn was given the BBC contract. Paul and Barry now run Oric but the rancour survives especially with Acorn's Customer Services Department on the same industrial estate, literally overshadowing Oric's Cambridge base. "We share the same dustbin" says Barry "that's why we both have shredders."

## Not impressed with Sinclair

Barry is not over impressed with Sinclair either "look at the Spectrum Plus. It comes out, you turn it over, tap the back and all the keys fall out. It was withdrawn a fortnight later. And he was knighted as a technological bloody genius — no wonder we are in a mess". Of course Oric had its own problems with returns in the early days which led to a crop of bad jokes on the lines of "Definition of an Oric 1 — prototype for Oric 2." But now Oric seems to have sorted out those problems along with the financial difficulties which have haunted it ever since it was launched on £1250 of capital. "If we go down" says Barry "it won't be because we've got an unreliable bad product."

The first new product which will go on sale in France from February is the Stratos — but in this country it's likely to be sold as an own brand under the name of a high street chain store. In effect it is a re-engineered Atmos with a reduced chip count, enhanced speed improved graphics and a built-in disc controller. This will allow you to plug in a cheap off the shelf drive costing as little as £120. Like the old Atari 800 the Stratos comes with no onboard language. Instead it has two cartridge ports and it will come with a Basic cartridge and optional Logo.

Inside this innocent-looking black case Oric's new Stratos and MSX machines are lurking. Meirion Jones steals a glance at what else is in the Atmos makers' research and development cupboard.

The Stratos will have an Atmos command so you can run existing software. Some of the prototype Stratoses have a built-in Modem but this is unlikely to appear in the production version, because of the delays that submitting the whole machine for British Telecom approval might cause. Also Oric is uncertain how many potential owners would rather have the choice left to themselves — "you put up your costs to 100,000 when there's only demand from 10,000."

The same plastic box that houses the Stratos will be used for the MSX Oric. Again Oric expects this to do particularly well in France where the Government resorts to non-tariff barriers such as routing all video recorder imports through a small office in Poitiers against Japanese electronic consumer goods. In this country it is unlikely to appear under the Oric label.

Perhaps Oric's most interesting idea for next year is a cheap QL-basher. This would make sense — after all the Oric 1 was designed as a Spectrum basher. In kit form Oric could produce a 68008-based computer for less than £100 — but the question is whether computer buyers are still interested in kits or whether they have become used to buying a box off the shelf and just plugging it in?

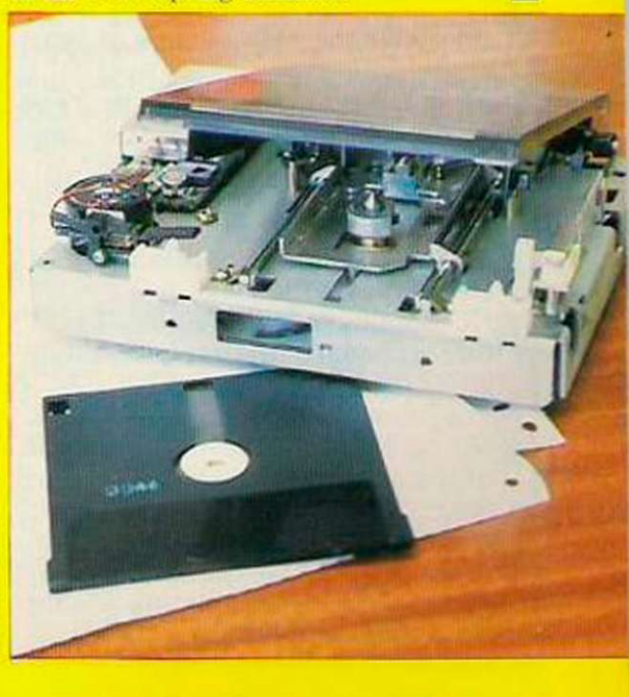
Another plain clothes Oric which will appear next year under someone else's name is their IBM PC lookalike. This 8086-based machine will come with a suite of applications programs from a British software house. It will have a fraction of the number of chips an IBM has and will have "a full WIMP environment" — that does not mean you should be embarrassed to have one but that like a Macintosh it will have a window, icon, mouse program. The graphics chip designed for the PC lookalike is being sold to other companies separately.

Even further from the home market is the £3,000 portable Oric is developing, but around the laboratories are clues to products the company is planning to introduce to the home. One of them is the Radofen Quick Disc a new storage device introduced by the makers of the Aquarius computer.

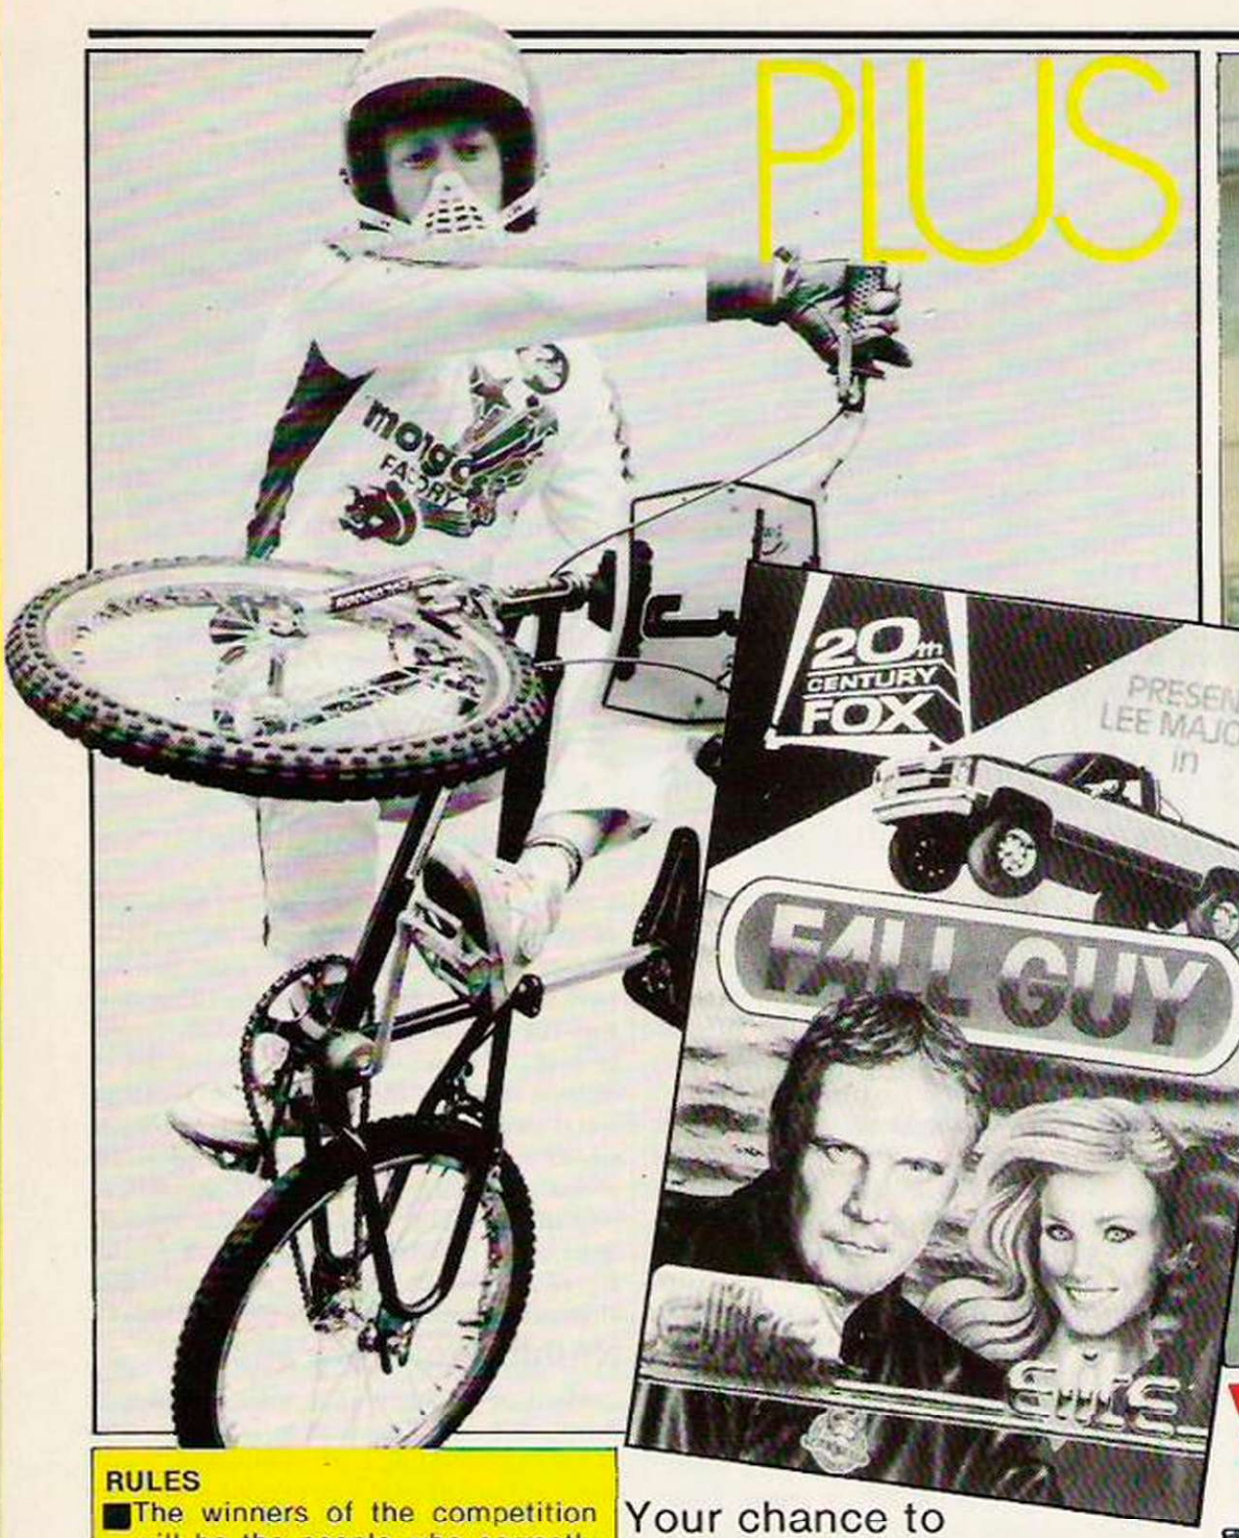
This looks like a small disc drive and has 64K of memory on each side of a cheap disc. But the Quick Disc is not random access. Instead of the concentric tracks on a conventional disc the Quick Disc has a single spiral track — like a record — and the stylus moves sideways across the disc. This makes access times of the order of 7 seconds so perhaps Slow Disc would be a more accurate description but the Quick Disc with a price tag of £50 or less looks like a more reliable alternative to stringyfloppies and waferdrives.

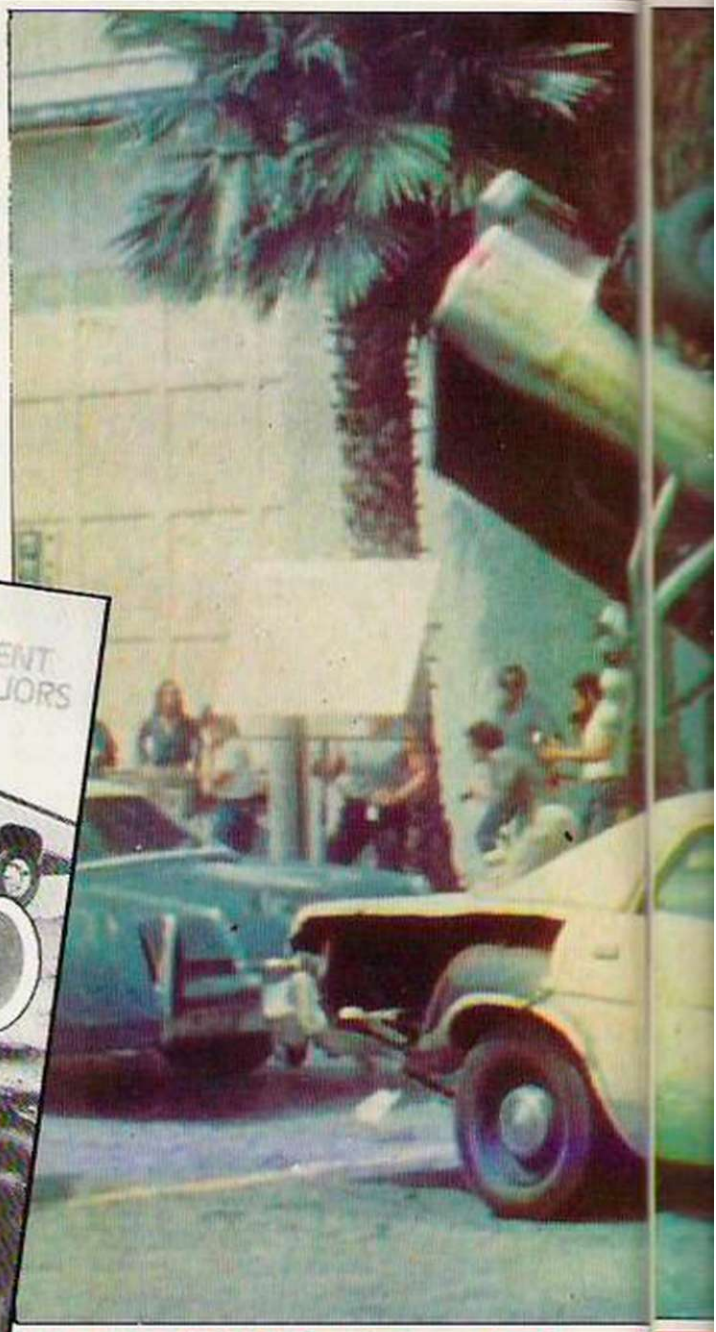
## Nothing to worry about

Many a company has collapsed despite having a research laboratory full of promise but if Oric can bring these products to market, the company should have nothing to worry about. Diversification into other fields such as medical electronics, selling custom chip designs to larger corporations, and the continuing strength of the Atmos in France gives Barry Moncaster confidence that Oric has a solid base from which to launch its new wave in the 1985 Spring offensive. ■



# PLUS





# WIN A T

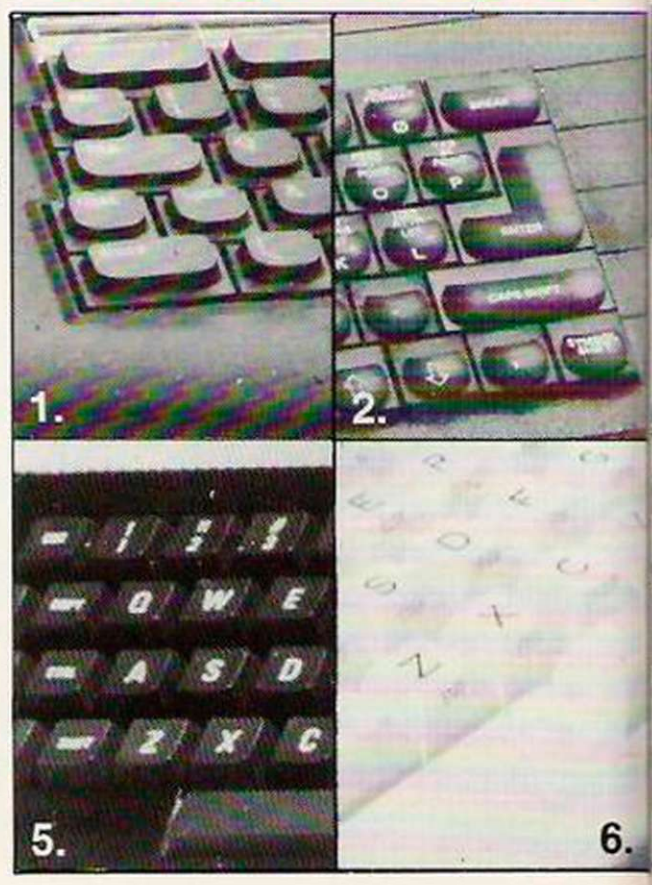
**RULES**

- The winners of the competition will be the people who correctly identify the computers and in the view of the Editor, come up with the most amusing suggestion for a computing film or TV series title.
- The name of the winners will be printed in the March issue of *Your Computer*.
- All entries must arrive at the *Your Computer* offices by the last working day in January 1985.
- Each person may enter, the competition only once.
- Entries to the competition cannot be acknowledged.
- No employee of Business Press International or their relatives may enter the competition.
- The decision of the Editor is final.
- No correspondence on the result of the competition will be entered into.
- Business Press International assumes no responsibility or liability for any complaints arising from this competition.

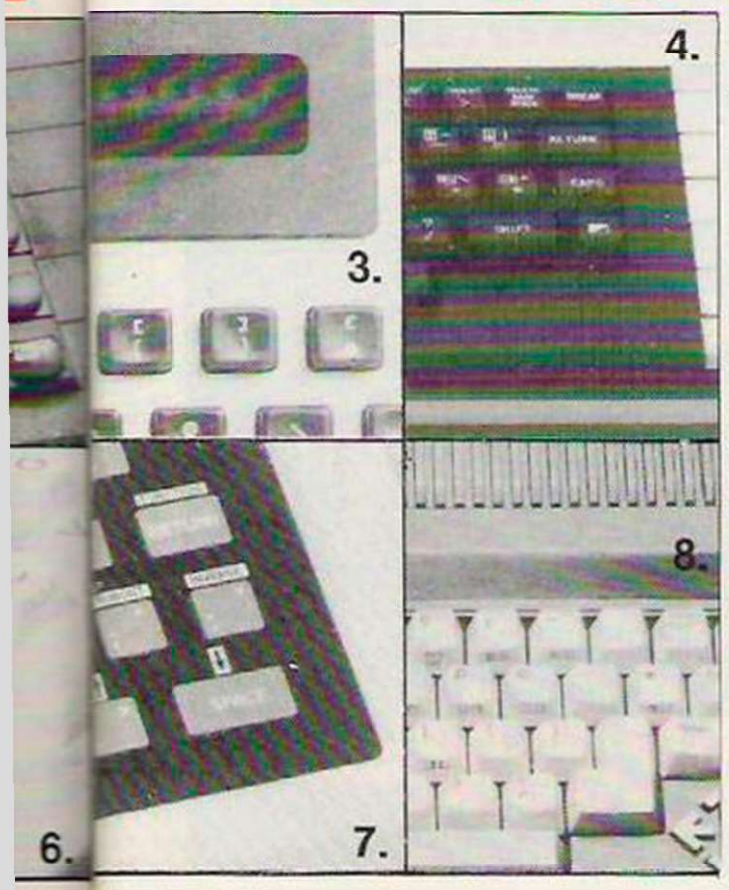
Your chance to win a fabulous trip to Hollywood. Two lucky winners of the *Your Computer* Elite competition will be flown in a British Caledonian jet to LA to visit Disneyland and the film set where Fall Guy is made.

Boots

**British Caledonian Airways**



# A TRIP TO HOLLYWOOD



## YOUR COMPUTER COMPETITION

- ☐ Acorn Atom
- ☐ Acorn Electron
- ☐ Atari 600XL
- ☐ Commodore Plus 4
- ☐ Enterprise
- ☐ NewBrain
- ☐ Spectrum +
- ☐ Texet TX-8000

If you can identify the computers on the left, you could win a trip to Hollywood. Just put the number on the photo in the box next to the machine you think it belongs to. Now put yourself in the shoes of a big-time Hollywood producer about to launch a new block-buster TV series or film about computers. What would you call it?

What would be the title of your new blockbuster?

| Seikosha GP-500 | 10" | 50 | 5 | 6 | 5x7 | 7 | c,e,g | 160 |

t = thermal paper
p = proportional spacing
ch = foreign character sets
e = enlarged print
g = graphics
i = italic
c = condensed print
s = skip perforation
u = user defined

THERE ARE three major factors in the choice of a printer for use at home by the hobbyist, they range from the type of use envisaged for the machine, the environment in which it will work and the physical aspects of connecting the printer to your computer.

The *Your Computer* review is limited to classes of machines that sell for under £200, which this year encompass machines that are capable of producing very reasonable quality print and graphics.

The principal uses of a printer are either producing listings of programs being developed or of printed text, either letter or manuscript. Other more exotic requirements range from modern art to hard copy of household budget details.

The printer parameters that are relevant to the type of use are:

YC0185

(continued from page 73)

Printer paper width: 4in., 8in. or computer paper.
Print type, matrix, thermal or biro.
Printer consumables cost.

Although the 4in. wide paper is perfectly adequate for listings and sending in magazine articles, it is not really practical for letters. The 8in. paper printers use A4 sheets and roll paper, which are not suitable for printing the manuscript of your latest novel, but are ideal for letters. The 9in. wide computer paper printers are capable of meeting most requirements.

The running costs vary with the type of use envisaged for the printer.

A case can be made for each type of printer for average types of usage and the choice will depend on many factors.

A printer subject to considerable use should under normal circumstances be a dot matrix which in eneral is capable of running faster than the other types of low cost printer.

One comment here on the point of speed, unless you have used a much faster printer, it is unlikely that you will be bothered much by a "slow" printer. What you do not know, you will not miss.

Print quality can vary significantly and the following points should be noted.

Generally, black thermal paper provides a much better print quality than the mauve paper that is sometimes available. Many manufacturers supply the 4 inch wide thermal paper now and they are not all of the same quality. If you can, sample different makes.

Several of the matrix printers are capable of providing draft copies of text and a better quality "Elite" print mode where each character is formed by writing the horizontal dots closer together. The printers differ considerably in the standard number of dots used across a character.

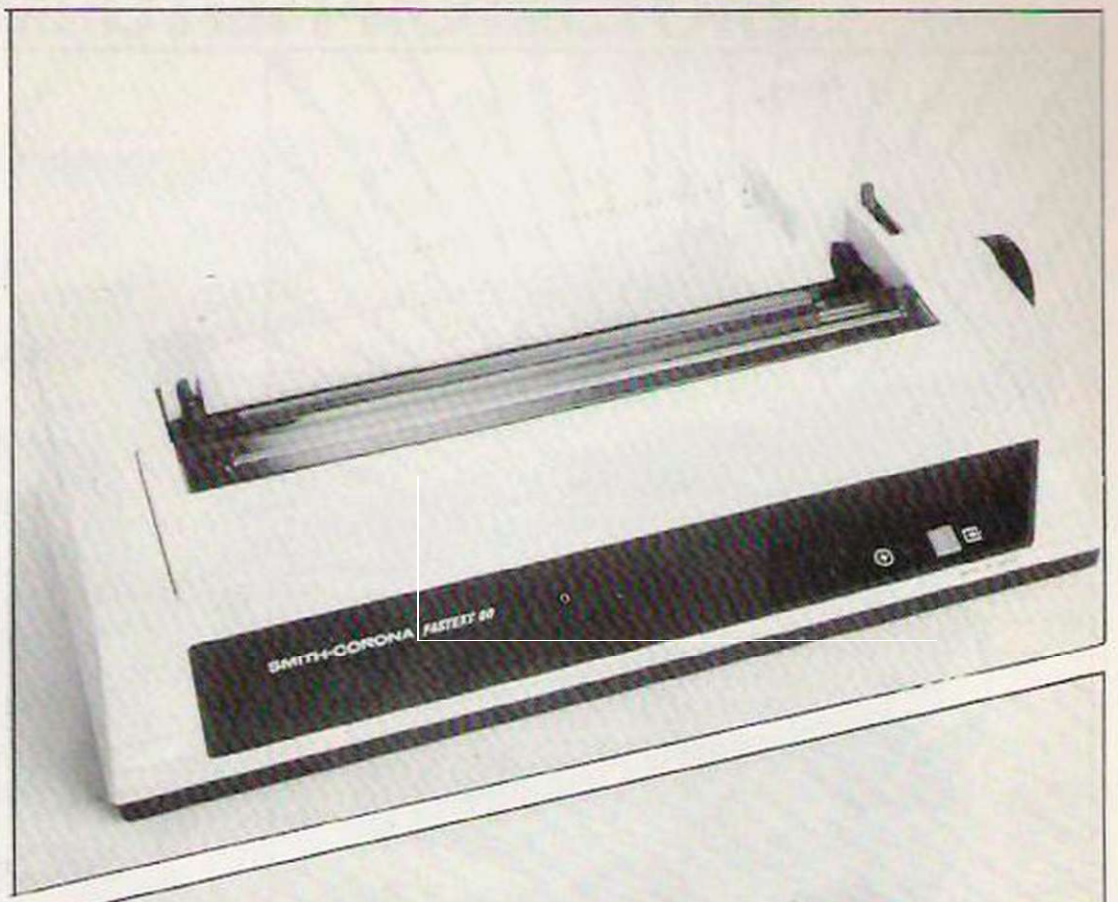
A further improvement in quality is perceived with proportional spacing of text, the I's and the M's etc take up different character space lengths giving a much cleaner look to the text, although you pay for it in terms of what proportional spacing does to right justified text.

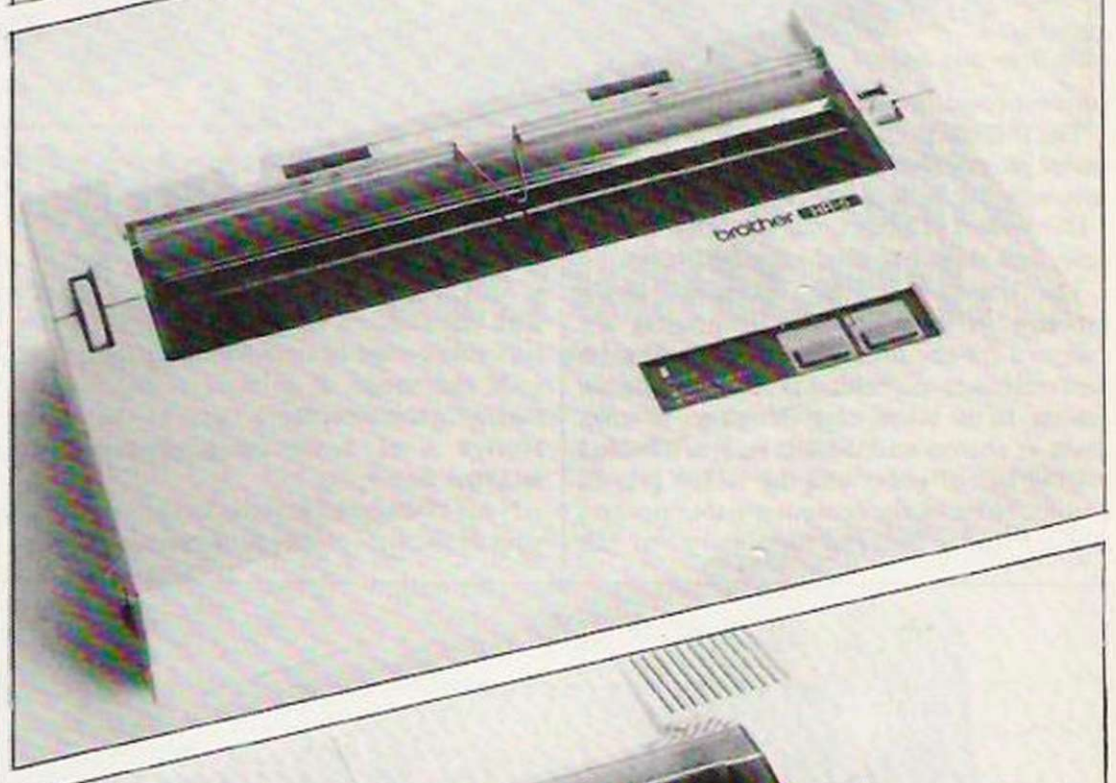
A very important aspect of print quality is the number of pins in the matrix head. There should be nine for true lowercase descenders, otherwise with seven pins the g, y, q and the p sit on lines and look very odd. Printers that use eight pins have a half way position which is perfectly acceptable where the character sits one position above the line with the descender dangling one position below the line.

Where the thermal printer uses a ribbon, the thermal ribbons are normally single pass and have a very limited life. Printer portability without a portable computer is illogical and can become an expensive means of printing if the batteries are not rechargeable, we would suggest that the optional mains supply power unit is a very worthwhile investment if you consider buying a non-rechargeable portable. Getting caught short without a battery is no fun.

Generally, the faster the machine, the noisier it is likely to be. In the home environment, a dot matrix printer of speed greater than 30 cps is likely to annoy people in an

(continued on next page)





(continued from previous page)

adjacent room if running continuously.

The thermal printers are quiet and some are usable in the same room as other occupants without disturbance.

Daisywheel printers break the rules, they're noisy and slow, but produce quality print.

The home computing enthusiast has a problem in that virtually all printers are designed for the office environment where a desk with a space behind is allocated for the printer. In the home, everything goes on small desks or shelves and there is no space behind for the box of paper and the folded printed output. None of the computer paper printers allowed tractor feed and front entry and exit for the paper as they invariably snagged the paper perforations.

The Smith-Corona Fastext 80 was used with friction feed and front access for a considerable period of time without problems.

Of the range of printers tested, all the battery portables were smaller than the average sized home computer taking up minimal desk space.

None of the small printers has any problems with additional space requirements as they are not capable of handling the fanfold sprocketted computer paper.

Generally, printers are fitted with a Centronics interface as the standard, an RS-232 version being available either as an alternative or as an optional extra. Buying a printer with a standard interface makes sense as it can probably be used on any computer that you might buy in the future. Several computers have their own special printer interface and use of these special printers with other computers is unlikely.

The printers are all in the range of about £100 to £200 and provide a wide selection of facilities. The additional cost of running the printer should be seriously considered when evaluating which machine to buy as unlike a computer, as you use the printer, it costs money.

## May not be typical

Note that figures are our assessment and based on a survey of one, which may or may not be typical, but they are as supplied.

The Epson P40 is a true thermal printer using thermal paper, the 8in. wide paper printers are thermal transfer printers that use ordinary paper and a thermal ribbon.

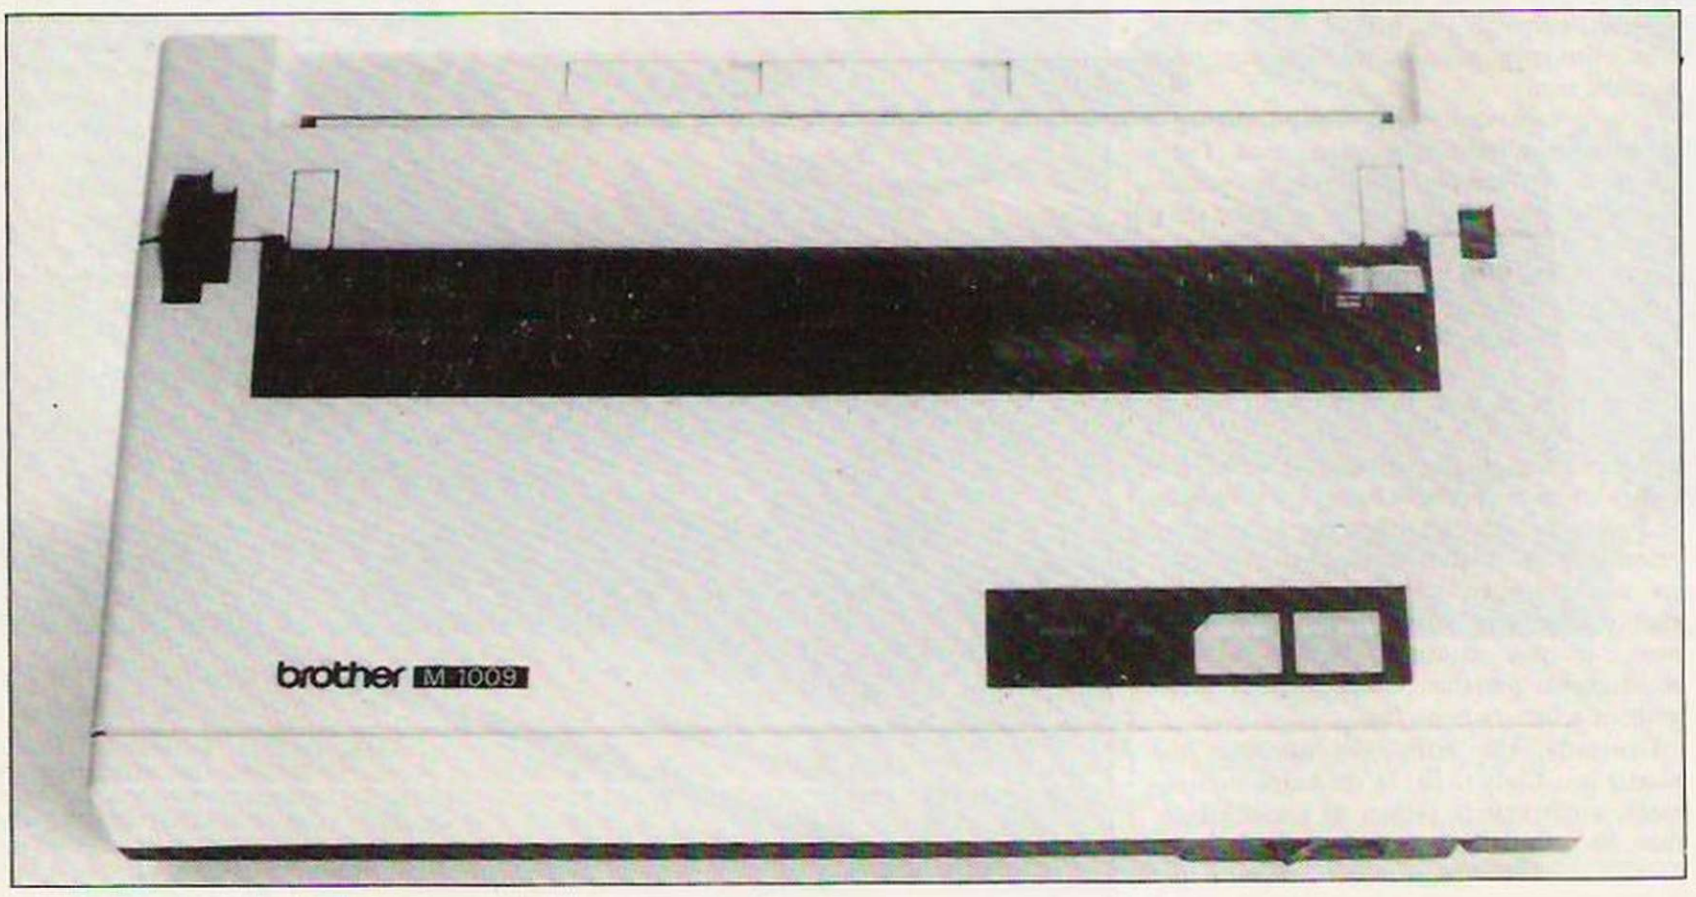
The speed is given for normal draft quality text. Printing "elite" chracters sometimes results in reduced speed of operation.

Print density is for normal print, the printers are capable of double strike/emphasised print modes for darker printing. Higher values are best.

Printer noise is for the printer running at standard speed. Lower values are best.

All the printers are capable of double density graphic printing, the Brother M-1009 has a quadruple density graphic mode with 1920 dots per 8in. line.

Asked to make a choice we would probably choose the Brother HR5 portable with mains unit or any of the mains powered dot matrix printers except the Seikosha. They each represent value for money. ■



# THE COMPUTER PROTECTORS.

# Keep everything you want in.

Static and dust, the biggest enemies of the home computer. Fortunately there are now Targus computer bags.

Thanks to the protectastat, specially treated material, these unique bags give your computer total anti-static and dust protection. Only Targus can do this.

### COMPLETE PROTECTION

And that's not all. Beneath the hard wearing nylon outer, is a high-density, impact-proof, foam padding and a thermal lining to stop the build up of condensation.

It's also fire-retardent and once sealed with the heavy-duty nylon zips, rain-proof as well.

### A PLACE FOR EVERYTHING

There's also a handy compartment for your programmes, joy-sticks, cables, leads, accessories and manuals; so it's ideal for neat home storage, as well as transportation between home and work or school.

### FITS ANY COMPUTER

These sturdy, attractive bags are black with a red trim and come in 3 sizes, fitting any model. Just check the list to see which bag you need.

# And everything you don't, out.

### FREE MICROWIPES

Order any bag and we'll also send you a dispenser of microwipe anti-static treated screen cleaners – absolutely free.

### ONLY AVAILABLE DIRECT

Targus computer bags aren't on sale in the shops, so order direct from us now.

Simply tick box A, B, or C, clip the coupon and send it with the correct remittance, plus £1.75 to cover postage, to: Personal Purchase Ltd., Engineers Way, Wembley, Middlesex HA9 0EB.
Allow 21-28 days for delivery.

# TELSOFT

## A reminder of how to use the Telsoft service.

THE PROGRAMS given here will enable Spectrum and BBC owners to download via *Your Computer's* Telsoft service. First type the hexloader for your machine — figure 1 — and then enter the machine code — figure 2. On the BBC you call the service by entering

CALL &6A00

while Spectrum owners must type

RANDOMIZE USR 60000

So far OE Ltd's Telemod 2 and VTX 5000 modems have been tested with the service, but it also works with a number of other makes.

To find out what is available on Telsoft and how to receive software dial up Colchester (0206) 8068. This audio recorded information line will also advise you which telephone numbers to ring for the 300 and 1200 bit/s services.

When a program you want to download is available, make sure your modem is set up and dial the number appropriate to your modem's speed. As soon as you hear the modem tones switch the modem to line and replace the receiver. Select Option 1 from the menu — Receive. After a block of data is received, you will see "OK" printed if there were no errors, otherwise the program will wait for the blocks to come round again.

When the "Program loaded OK" message appears return to the Telsoft menu and select Option 5. You can now save and run the program.

# FIRST AID

# for your 64

Computers, like people, are fallible. They need the right combination of code and care to perform effectively in the business or the home. And that requires first hand knowledge from you to create a healthy operating environment for your Commodore 64.

Knowledge about machine language, about the lesser known qualities of the 64, about the disc drives, graphics, and about the tricks and tips to keep your 64 on line. That's why First Publishing has now launched in the UK a series of high quality books and software packages to provide a complete health care kit for your 64. Commodore 64 users throughout Europe have already found it a tonic. We think you will, too.

For a brochure on all the Commodore 64 books and software packages available from First Publishing, please fill in the coupon and send to: Amanda York, First Publishing, Unit 20B, Horseshoe Road, Horseshoe Park, Pangbourne, Berkshire.

# CATERPILLAR

## JR Wilson with an arcade-type game for the BBC.

CATERPILLAR IS A GAMES program for the BBC Micro model B or model A with 32k Ram. The program makes extensive use of machine code and the BBC's graphics to make a high speed arcade type game.

You control Fred, from the local pest control department, and are faced with a terrible task. Armed only with your trusty spray gun, you must face a garden full of mutated mushrooms and bugs.

There are 15 different options available from an option page, which can be accessed at any time by pressing the Escape key.

The program includes a pause facility to stop the game at any stage for more pressing interruptions. The initial control keys are as follows:

| | | |
|---|---|---|
| Z | = | Left |
| X | = | Right |
| : | = | Up |
| / | = | Down |
| Return | = | Fire spray gun |
| P | = | Pause on |
| S | = | Pause off |

One final note. Fred earns another charge for his antidote when your score reaches 5,000 points.

The first program to be typed out is the large assembly language program, and is shown in listing four. It will take a lot of time and effort

to get through this program without making mistakes, so take your time. Before you attempt this, I suggest that you reset page to &1B00 by typing

PAGE = &1B00 then Return

then type New and Return.

You will then have to reset page to &1B000 after pressing the Escape key. The program as listed will assemble machine code from &D00 upwards, so for disc users, the Break key must be pressed and page reset before the program can be saved. Once you have finished typing it in, save the program on a separate cassette for a backup copy. Then run the program, but press the Escape key when asked whether to save the machine code.

It is now time to type out listing 1.

Once this program is working correctly it should be saved onto a separate cassette, at the beginning by

SAVE "CENTI"

The second program shown in listing 2 can now be typed out, and can be saved after 'Centi' by

SAVE "Centi1"

Once the program has been typed out, it should be saved after "Centil" by

SAVE "Centi2"

The third program will only work if the machine code is also in memory. Therefore, it is now time to save the machine code following this program on tape. So, load in the assembler program again and run it. Allow the program to record the machine code by pressing the Break key when told.

The game was written on a BBC fitted with the 1.2 Operating System, but should work on any non-0.1 O.S. The programs are also suitable for use with disc or tape systems without modifications.

*This article is available on the Telsoft.*

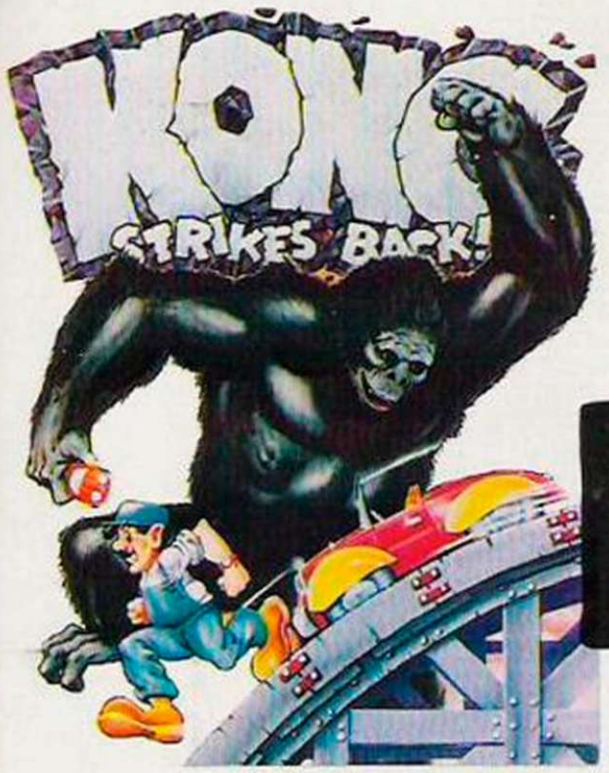
Ocean

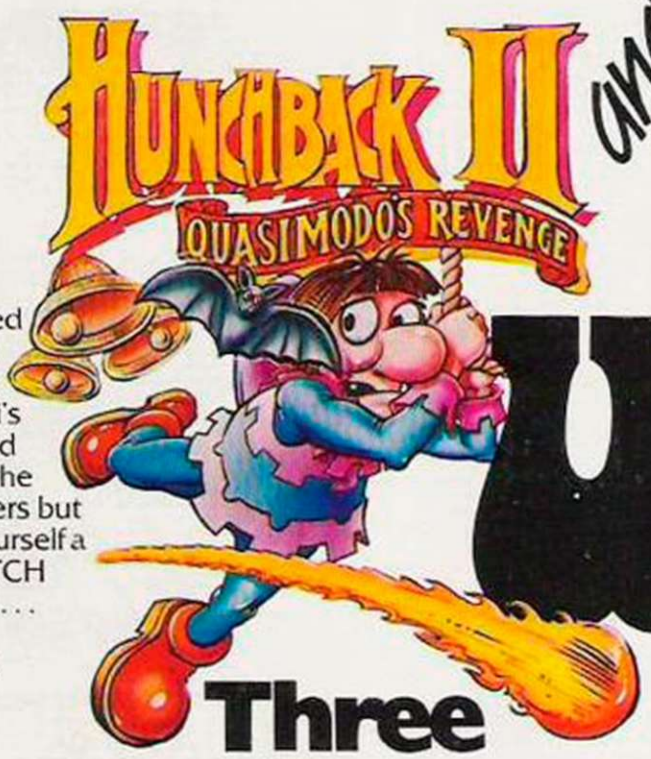
# the good

Yeh, only the good will survive in this the Superstar's,(that's me), first supa-game. . . **"Roland's Rat Race".** Yeh, I'll really need your help, Rat Fans, to wind my way through the underground Rodent World of ladders, lifts, bats and all kinds of creepy crawlies, where I must find the keys to free my furry friends. I can't wait to use my glue gun . . . "Stick 'em down!" . . . on those monster meanies. See you on your screen, from your cuddly, adorable me.
. . . Roland Rat, Superstar.



# the BAD

The fun of the fair and the fury of Kong! Now you can know what it feels like to be a dodgem, only this time you're running up and down the Roller Coaster dodging the cars, giant buns and jumping springs. But the fun has only just begun!...wait until the fury starts! The wacky Waltzer and the zany Swinging Gym are enough to unhinge the sanest fun fair fanatic. **Kong Strikes Back** is all good fun but it's bound to bring out the bad in you!



Ugh! The Hunch is back! Your favourite bell ringer, the all-conquering Quasimodo, swings into action on another breathtaking, action- packed extravaganza. Set the bells sounding and Esmerelda's heart pounding with Quasi's astounding derring dos and athletic antics. The bats in the belfry may send you bonkers but be as bold as brass, give yourself a pat on the hump and, WATCH THAT FIREBALL! . . . phew! . . . Our hero's revenge is a winner all the way, yes, it's definitely for you . . hoo!

# and the ugly!

## Three great games of real character from

You'd expect one of the best-selling home computers in Japan to have a specification list as big as its memory.

But the Toshiba HX10 doesn't just limit itself to that.

It was developed along with other Japanese home computers to operate on one language: MSX. You can swap programs, games, cassettes, even peripherals like disk drives, printers, and joysticks: they're all compatible with every other MSX computer.

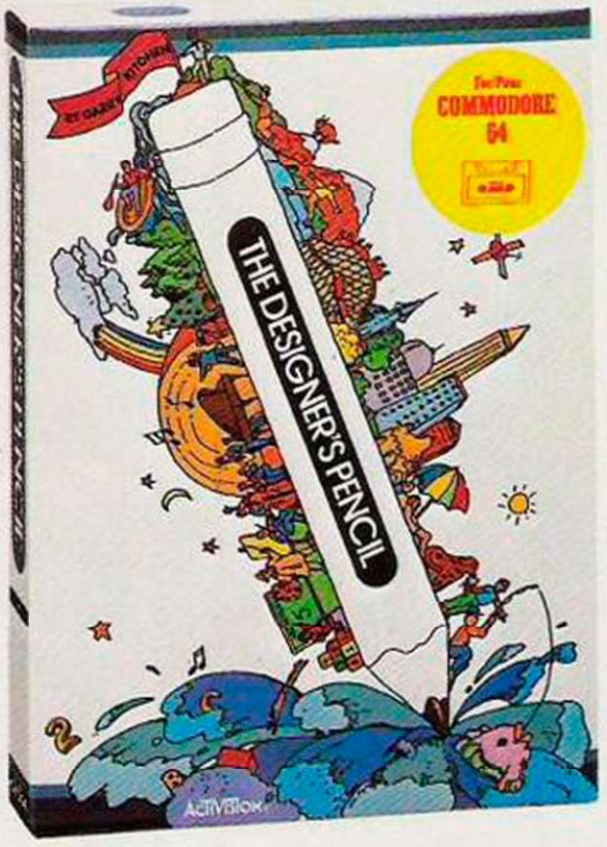
All of which makes MSX the system of the future.

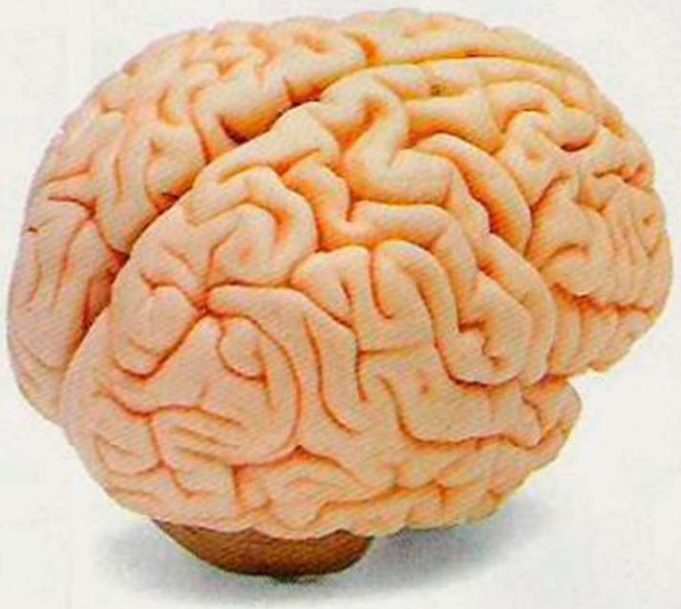
So if you want a computer that won't be obsolete in a few years, buy an MSX. If you want one of the best-selling MSX computers in Japan, buy a Toshiba HX10.

TOSHIBA MSX

FOR MORE INFORMATION ON THE TOSHIBA HX10 CONTACT TOSHIBA (UK) LTD., TOSHIBA HOUSE, FRIMLEY ROAD, FRIMLEY, SURREY GU16 5JJ. TEL: (0276) 681691.

# Our new software makes the most of yours.





By any standards, the Activision Designer's Pencil is a unique piece of software. With it, you can design, draw, plan.

You can draw the world and everything that's in it.

And then set it to music.

You can produce complex designs in no less than sixteen different colours.

You can write and develop your own programs, without having to understand Basic.

You can do all this with a joystick.

But then you've only scratched the surface.

As you use the Pencil, it will reveal the full potential of your computer, in the most entertaining way possible.

£11.99 might be a lot to pay for a pencil.

But not this one.

When you've done zapping the world, rebuild it with the Designer's Pencil.

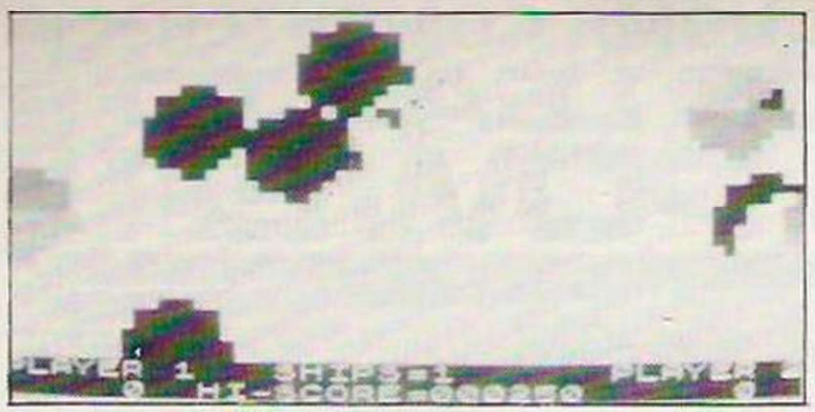
Its scope is as broad as your own mind.

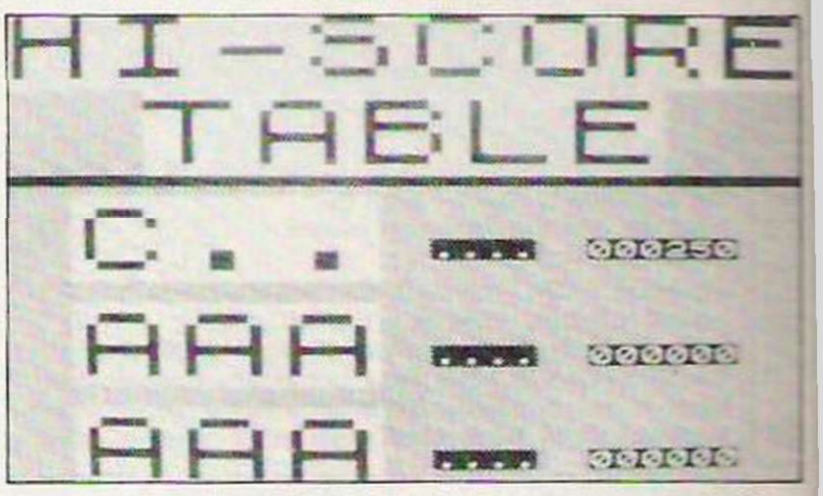
ACTIVISION®

**Your computer was made for us.**

**£11.99 Commodore 64, £9.99 Sinclair Spectrum. Available soon for all popular systems.**

FROM SELECTED BRANCHES OF BOOTS, JOHN MENZIES, AND GOOD COMPUTER SOFTWARE STORES EVERYWHERE.





# ASTEROIDS

## Mike Pike steers a dangerous path.

I HAVE USED the method of entering machine code adopted several times by *Your Computer* i.e., look at the Froggie game for the ZX-81 in the February 1985 issue. My programs 1 and 2 are identical to the programs 1 and 2 in this issue. A hex dump should be obtained in identical format to that in the Froggie program by typing Run 1000.

Obtain a listing of the hex dump on the printer before running the program as running will change the values of the addresses in the Rem used for storing data. These data addresses will be set to zero before running. Changing the values in the data addresses will not affect the running of the program but it may confuse anyone checking the listing, if they have entered it incorrectly and run it, as they may think that its failure is due to the fact that they have entered these data addresses incorrectly.

Program 1 can be obtained from the listing at line 100 and program 2 from the listing at 300. Line 1000 when run will Llist the hex dump on the printer.

The machine code is contained in a Rem statement in line 0, this should contain at least 4542 bytes: Start address — 16514; Finish address — 21055.

The Rem is obtained by typing:

1 REm 160 characters

This is five full lines of X's or any other single character. Edit line 1 and change it to line 2, edit line 2 and change it t line 3 and so on until you have entered lines 1 to 29 in this way. Then type in:

```
POKE 16510,0
POKE 16511,202
POKE 16512,18
```

You now have one Rem at line 0 with more than enough room for the machine code. Now enter the hexidecimal loader, program 1. Run it and type in the machine code in the hex dump. Do not enter the numbers in the left column as these are the addresses of the next hex codes. Enter the hex codes in eight pairs at a time and then enter the number on the far right of each row when prompted by the equals sign. If the number does not match the hex codes you will be asked to enter the last line of hex again.

The hex between addresses 16581 and 16930 are used for data storage and need not be 00, they change after the program has been run once. If the program works after entering the following lines and saving a few times, the hex loader can be deleted.

Enter the following lines, Save and Run:

```
 8 RAND
10 LET L = USR 20336
15 IF INKEY$<> "" THEN GOTO 15
```

If the program crashes or fails to work properly the reload it from tape and enter the hex checker, program 2. Type Run 300 and inut the start and finish address and check that the hex agrees with the listing. When using the hex checker type Cont when the screen is full to continue. Change any mistake by using the hex loader and re-enter the line of hex containing the mistake.

The controls are: 1/3 rotate left/right; 9 fire; 7 thrust; Y hyperspace.

The game gives instructions when run, contains a 1/2 player option and a high score table of the three highest scorers.

### Hex dump.

# SPACE EVADERS

THIS GAME for the 16K or 48K Spectrum is based on the popular arcade game Space Invaders. The object as usual is to stop the five attack waves of aliens, each of which vary in speed and fire power from reaching Earth. You, as the sole survivor of the first attack wave, have to destroy all the aliens while avoiding their bombs.

*Hexloader.*

```
   5 CLEAR 24449

 100 IF tot<>t THEN PRINT "Error
 - input again": GO TO 40
 110 NEXT n
```

## Justin Staines evades the invaders.

The number of space ships you have depends on the amount of skill shown on the first game, ie. reasonably good, three ships — excellent, two ships.

To move use Z — left, X — right, Space — fire. You can, if you have one, use the Sinclair ZX Interface Two (R) which, by the way, uses keys 1, 2 and 5.

When entering the program, type and run listing one — the loader and then you can enter the code in figure 2. After you have entered the, approximately, 8167 bytes, you can Save the code with

SAVE "EVADERS" CODE 24500,8167

then Verify it with

VERIFY "" CODE

You can now play the game with

RANDOMIZE USR 24703

Of course, if you don't want to have to load the game and then type the above you could have a small program before the code — for example:

10 LOAD "" CODE
20 RANDOMIZE USR 24703

and save it with

SAVE "EVADERS" LINE 10

Multiple Combat Scenarios
Full Aerobatics
3-D Graphics

# F-15 STRIKE EAGLE

U.S. GOLD
An American Software

MicroProse Software

64 ATARI

F-15 Strike Eagle features superb 3-D graphics, F-15 manoeuvreability, computer assisted targetting including modern fighter Heads Up Display, airborne radar, air to air missiles, surface to air missile defence, ground target bombing, full aerobatics, and multiple combat scenarios.

**DISK/CASSETTE £14.95**

**SOLO FLIGHT:** Take off with this user friendly flight simulator which includes 3-D graphics, full cockpit instrumentation, dual VORs, ILS, 21 different airports, and real life challenges from weather and mechanical emergencies. **DISK/CASSETTE £14.95**

**SPITFIRE ACE:** Save London during the Blitz in your RAF Spitfire! Outstanding out-of-the-cockpit 3-D graphics; 14 different combat senarios. **DISK £12.95, CASSETTE £9.95**

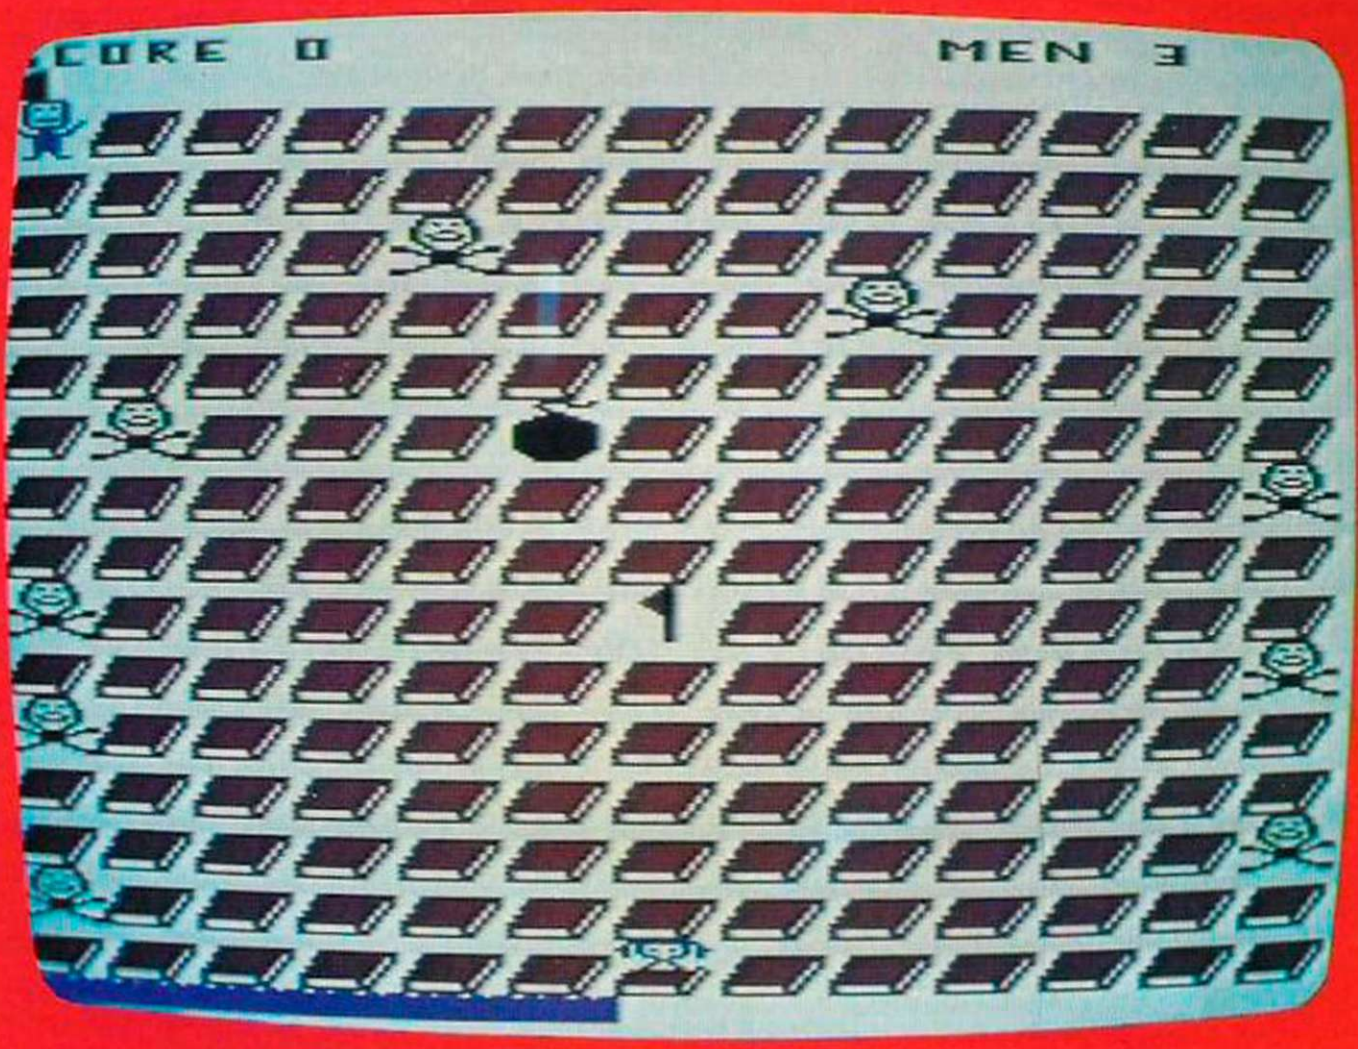
**NATO COMMANDER:** Defend Europe in an accelerated real-time war situation! Full scrolling battle map, includes infantry, armour, helicopters, airforces and tactical nuclear weapons. **DISK £12.95, CASSETTE £9.95**

**U.S. Gold is stocked by all leading computer stores including:**

Boots / John Menzies WHSMITH WILDINGS WOOLWORTH

U.S. Gold Limited, Unit 10, The Parkway Industrial Centre, Heneage Street, Birmingham B7 4LY. Telephone: 021-359 3020. Telex: 337268.

# DEATH TRAP



Richard Hamer shows you how to get blown up by a Vic-20 with 16K expansion.

DEATH TRAP 20 is written for the Vic-20 with 16K expansion, and is similar to the arcade game Gridtrap, in which you control a man who has to defuse bombs before they explode.

Before loading or typing in the game, you must type

POKE 642,32:SYS64824

This is to make room for the user-defined graphics and extra screen memory.

Once loaded and run you will be presented with an options page which will, after a while, change to show the high scores.

Pressing 1 will print out sparse instructions — another key press will return you to the title page.

Pressing 2 allows you to redefine the movement keys — except the transporter key. You are asked, for example, Left? and you are expected to reply with your choice of key and Return.

The keys default to: I-Up; J-Down; D-Left; F-Right; f1-Pause; f1 again-Unpause; f5-Transport; f7 with Shift-Abort — The game ends, and the program returns to the title screen, without going through the high-score process.

Pressing 3 starts the game; pressing 4 alters the time decrease rate — 1 to 4; the lower the number, the faster the time goes down; pressing 5 alters the starting level — 1 to 15; 15 is hardest. If you start on a number, you work your way up through the levels from there.

The object of the game is to pass over the blocks and get to the bomb to defuse it in time, collecting flags for bonus points on the way. Coming into contact with a skull or the block hopper, will be fatal, as is letting the bomb explode. You have three lives. You can move off the side of the screen, and transport yourself out of a nasty situation. You cannot move over blank spaces but, unlike the arcade game, there is no "row scrolling". Defusing five bombs gets you onto the bonus screen.

In the bonus screen you must press space when you are above the flag. If you do so over a

*(listing continued on next page)*

*(continued from previous page)*

skull, you will die.

After pressing the space bar, you will glide down vertically. Lives lost here come off your overall number of lives. If you succeed in reaching the flag, you will receive a bonus, the value of which depends on what level you are on, and how quickly you reached the flag. At the end of all this, you return to the main game.

If you cannot/do not want to type in this game, but would like a copy of it, send £1.50 to 26 St. Barnabas Road, Emmer Green, Reading, Berkshire RG4 8RA. Please remember that the game requires 16K memory expansion.

One last point — the purple bar along the bottom of the screen represents the time left, while the red one underneath the score shows how much transporter power you have left — it is worth 100 points per unit left at the end of the level.

Also, flags are worth 250 points, bombs 500 points plus bonus, and each square "used" is worth 10 points. ■

Castle Of Terror is a suberb graphic adventure game set in the 1880's when and where "Dracula" stories abounded. You are in a village near a large Castle in which the secretive Count lives. You must travel about the village, collecting items which may be of use to you on your bold mission.

You must also find out what your mission is by talking to the right people. But don't be fooled!

- ★ Multi-word "English Language" style input
- ★ Superb, highly detailed graphics
- ★ Animated characters, special effects and sound.

Surviving is success enough, but escaping with the treasure is the ultimate achievement and won't be easily accomplished!

# DOTMAN

## Klaus Pederson presents a fast machine code version of an old arcade favourite.

DOTMAN IS A GAME for the Oric-1. It is written in machine-code and is therefore very fast. Unfortunately this also means that it is hard to type in, even though I have tried to make it simple with checksums, two programs to enter the code and strings instead of a lot of numbers separated by commas.

Dotman is a cute little fellow who must travel around the different mazes and eat dots.

The game contains different features like power dots, ghosts with double score — first ghost score 10 points, second score 20, third score 40 and the four ghost eaten scores 80 points. At every 1,000 points you gain an extra life — you start with three. If the telephone rings during a game, there is a pause button.

First type in the loader — if you are lazy don't, the game works without it. Save the loader with

CSAVE"PROLOAD"

Then type in program 1. If you have confidence in yourself you can omit the checksum — lines 10, 20, 80, 110 and the lines 130-190.

Run the program and, if any errors should

*(continued on page 100)*

```

*(continued from page 97)*

occur, correct them and rerun the program. Save it with:

CSAVE"PROG1"

Now type in program 2. It is not necessary to enter all the mazes — just alter the number in line 15. If you like, you can also make your own mazes — max 10-11. Then save it with:

CSAVE"PROG2"

When you have typed in all the programs and found no errors, you can start mixing them using this method:

Find a new tape and rewind it to start. Load the loader — if it is typed in — save it on the new tape:

CSAVE"LOADER",AUTO

Then clear the memory with New. Load program 1 and run it, then load program 2, run it. When it stops, it will print how to save the final program.

To start the game, enter skill level and press any key except keys 1 and 0. If you press 0, you will see the mazes.

Then you are to guide Dotman around the mazes and eat all the dots. But — beware of the evil ghosts. If you get too close to one of them, they will eat you alive. Of course, you can defend yourself by eating a power dot. By eating one of these the ghosts become angry but harmless and then you can eat them.

If you send £3.50 to me, I can supply you with a copy on tape of Maxi-Dotman. Just send to: Klaus Pedersen, Sondervej 9, Gundsomagle, DK-4000 Roskilde, Denmark.

The underline should be read as a £.

# ...SAVING WITH... ADDED INTEREST.

Open a NatWest savings account and open the pages of a rather exclusive publication.

"ON LINE MAGAZINE." A glossy and exciting journal reflecting today's fashions, street sounds, careers and money management.

However, unlike other magazines, you won't find it for sale on the news-stand, because this publication is only available to ON LINE savers. A select group who not only receive ON LINE MAGAZINE regularly, but have the chance to buy the things they want through our special telephone ordering system.

Naturally, you can't buy what you can't afford. And that's why the first thing we give you when you join the ON LINE Savers Club, is a continuous memory calculator that retains your balance even when switched off.

To join, just drop into any NatWest branch with £5 (£2 covers membership), alternatively for an application form, send the coupon to National Westminster Bank PLC, ON LINE, FREEPOST 2, London EC2B 2GN.

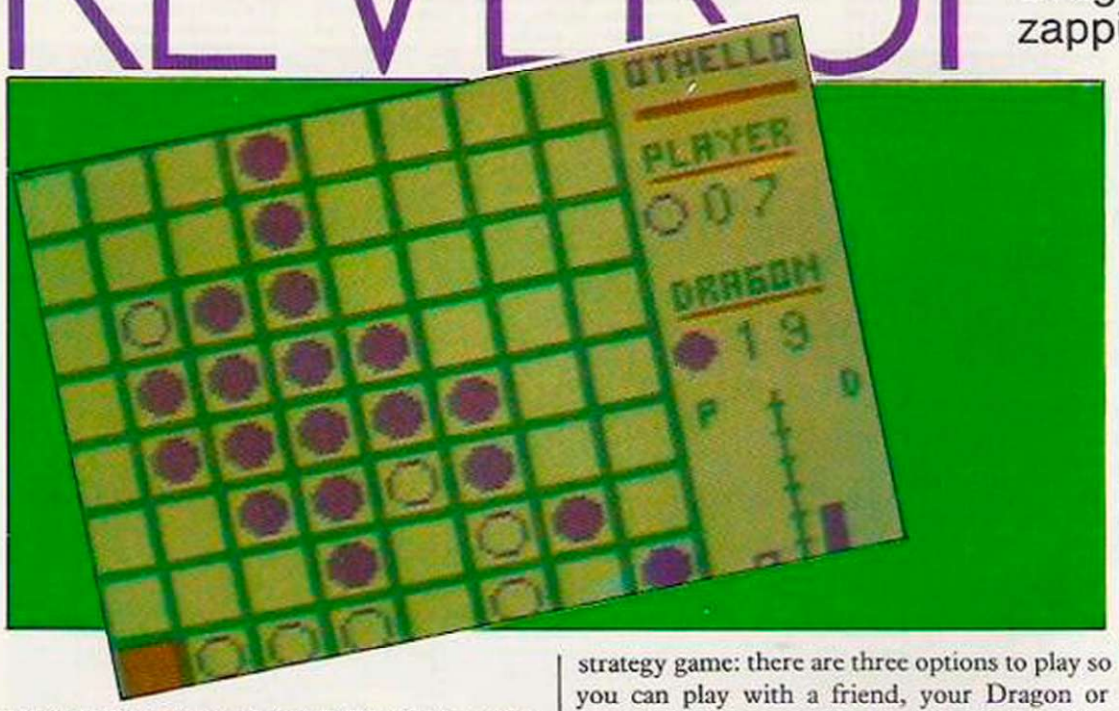
# REVERSI

**Easy to learn but hard to master, Reversi is a board game implemented on the Dragon. A change from all that zapping.**



Is YOUR Dragon overheated? Tired of zapping nasty aliens into hyper-space? Are your nerves breaking? Here is the solution: Reversi, a game to relax and to test your brains instead of the strength of your joystick.

Reversi is a computerised version of an old Chinese board game. The program offers almost every feature you would expect in a strategy game: there are three options to play so you can play with a friend, your Dragon or leave it playing on its own. I included three difficulty levels, the third one being the toughest. The program will warn you and tell you what you did wrong if you made a mistake — so cheating is almost impossible.

Using Takeback you can re-run your last move. With Change you can give your positions to the computer and take over his game. Not fair but quite satisfying if you can't stand to lose.

Full instructions are included in the program so if you are not familiar with the game, a brief explanation should suffice. Taking turns, you place checkers on the board in an attempt to have more than your opponent at the end. Each time you trap a row of your opponent's counters between two of yours, they change colour to show they now belong to you.

To enter the program just follow the instructions given in the hexloader program. You can save the program in parts, saving each part with

```
CSAVEM"Reversi",4608,X,O
```

where X is the address you reached. Don't forget to load previous parts before typing in a new one. Save the complete program with

```
CSAVEM"Reversi",4608,13823,5430
```

before executing it. To play type

```
CLOADM:EXEC
```

*Hexloader.*

```
10 REM HEXLOADER - ENTER THE
20 REM STRING OF HEX DIGITS FIRST
30 REM AND THEN THE CHECKSUM
40 PRINT "ENTER START ADDRESS ";:INPUT START
50 PRINT "ENTER FINISH ADDRESS";:INPUT FINISH
60 FOR N = START TO FINISH STEP 8
65 PRINT N;" ";
70 T1=0:INPUT A$:Z=0
80 FOR G=1 TO LEN(A$) STEP 2
90 P=VAL("&H"+MID$(A$,G,2))

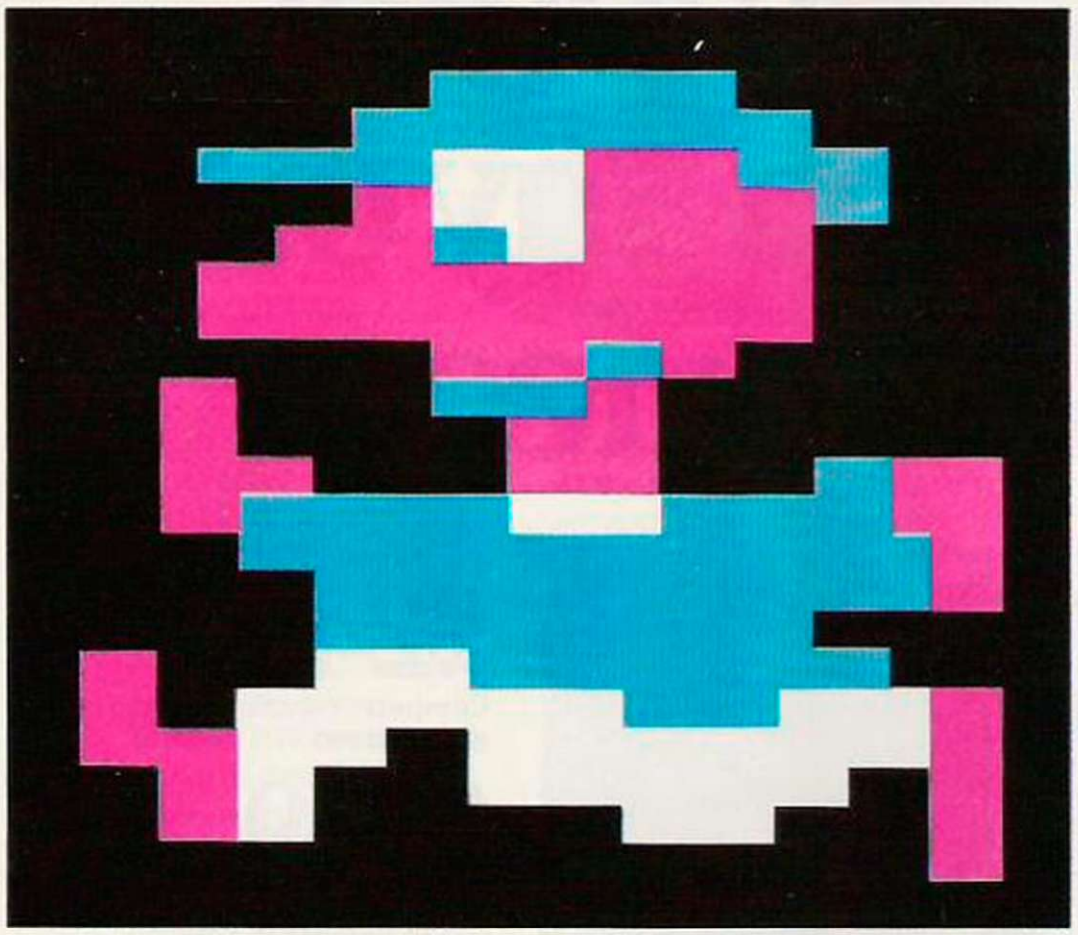
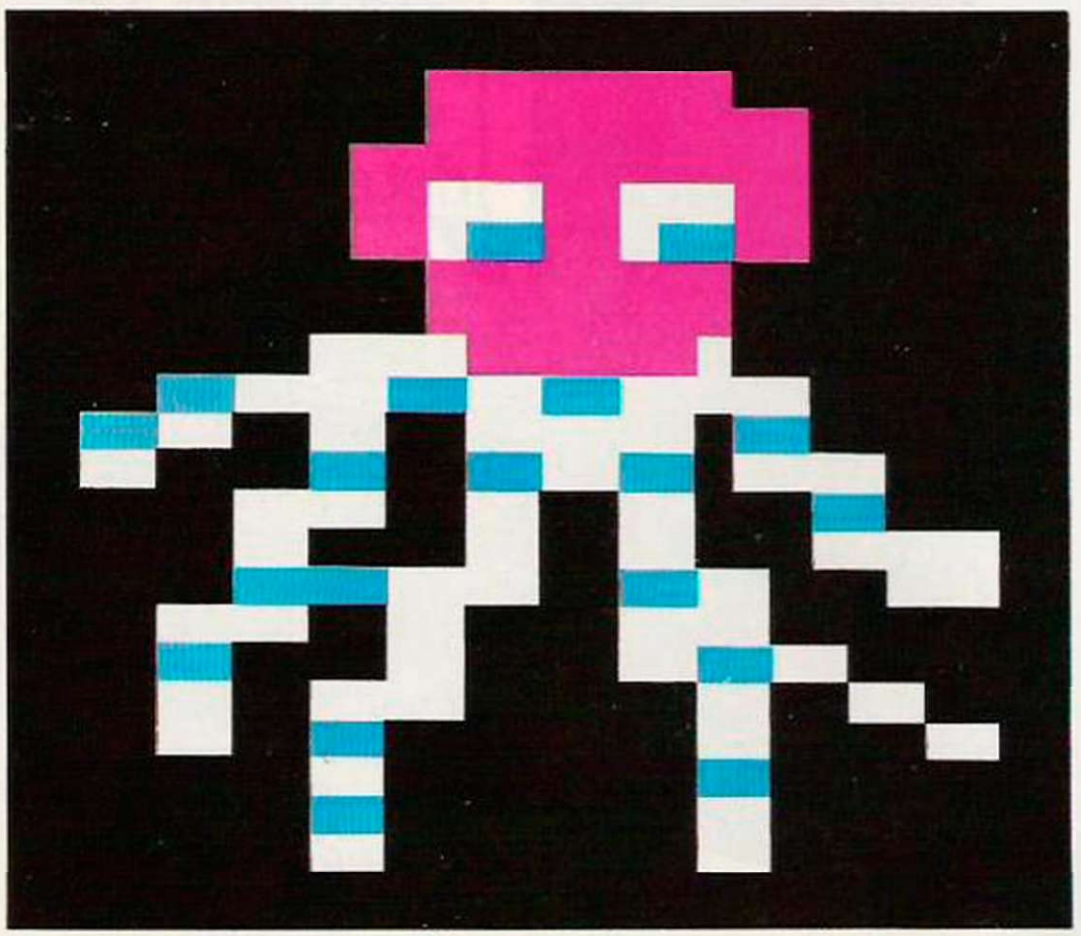
# Make new friends,



# and enemies.



**With Mirrorsoft games, you can make loads of new friends like Mr. Bounce and Ceasar the Cat. Or, now, like Dr. Frankenstein, you can create your very own monsters and aliens. As well as friends and heroes to defeat them.**

### *GAMES CREATOR*

Invent your own games. As simple or as complex as you care to make them. The only real limit is your imagination.

For the CBM64, the Games Creator comes with a step-by-step manual and three ready-to-play games. Each demonstrates some of the programs exceptional features: shapes, movement, speed, scrolling backgrounds, scoring, music, sound effects and many more. And you don't need to know any program language to work it.

On fast loading cassette for the CBM64. **£12.95.**

### *STAR EGGS*

A space fantasy. Earth is threatened by attack from Alien life-forms hatching out in space. You must first overcome the Guardians. Then into the Hatchery, up and down escalators and ladders to crack the eggs before the aliens escape.

On fast loading cassette for the CBM64. **£6.95**

### *CATASTROPHES*

Use a helicopter to build a hotel on an island paradise. But you have to move fast and design your building carefully because earthquakes, floods, storms and lightning can strike at any moment.

For one or two players. On fast loading cassette for the CBM64. **£6.95**

### *HI-BOUNCER*

An arcade type game featuring Mr. Bounce and the Mr. Men. But don't get the idea that it's just a kids' game. Far from it. There are four main screens each with eight levels of difficulty and complexity. Don't worry, there's also a practice program with slower speeds.

On cassette for the BBC B. **£6.95.**

### *CEASAR THE CAT*

Ceasar's cute and quick. Help him hunt the crowded shelves for mice who eat all the food. He must catch the mice before the food disappears. Outstanding graphics, animation and sound.

On cassette for the CBM64, Spectrum 48K, BBC B. **£6.95.**

MIRRORSOFT

*SOFTWARE FOR ALL THE FAMILY*

Available from Boots, W.H. Smith, Spectrum and all good software stockists. Write for a free catalogue to: Mirrorsoft, Holborn Circus, London, EC1P 1DQ.

# Before you compare our new computer system with any other, double the price.

**£249**
Computer complete with green screen VDU (GT64)

**£359**
Computer complete with colour monitor (CTM640)

**CPC 464 complete with monitor and datacorder**

The first low-cost personal computer to be approved by the British Electrotechnical Approvals Board.

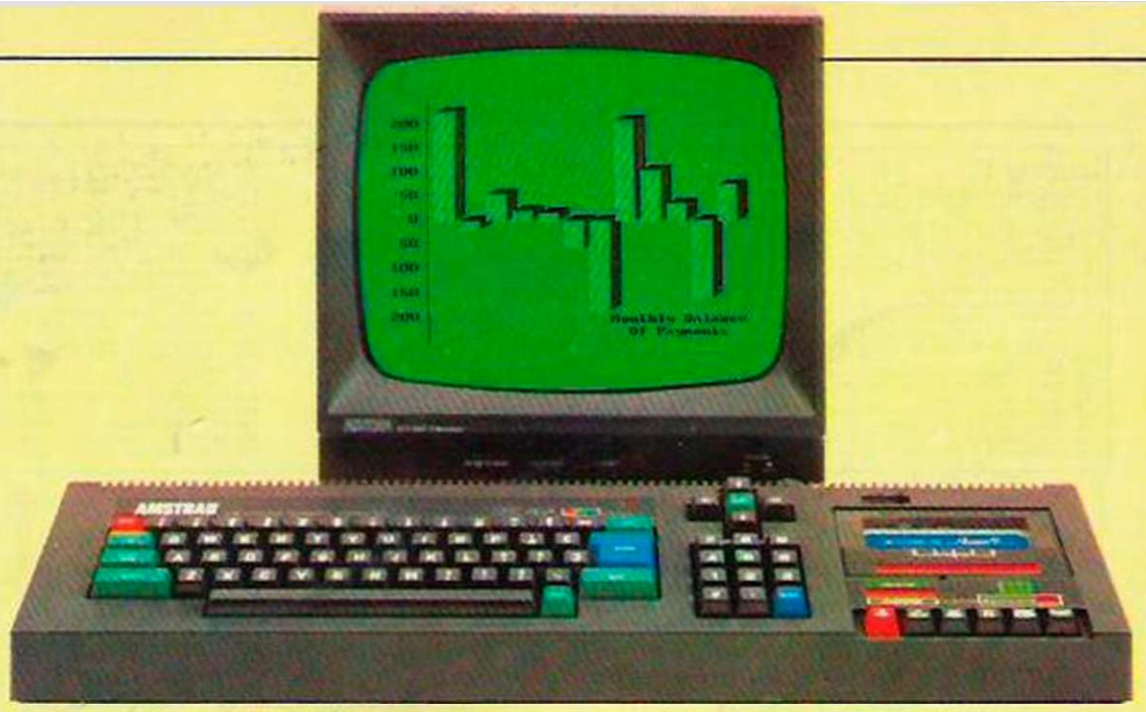
Other computer systems that get anywhere near the new CPC464 on specification cost around twice as much.

Which other home computer, for instance, gives you 64K of RAM (42K available), 32K of ROM and a colour monitor or VDU?

Which other home computer, gives you a built-in cassette data recorder, typewriter style keyboard, numeric keypad and a very fast extended BASIC?

And which other home computer offers it all for £359 with colour monitor or £249 with green screen VDU?

What's more, the CPC464 comes complete and ready-to-go. Just plug it in.



CPC464 green screen VDU (GT64)

## 64K RAM.

Pound for pound, other micros can't match the CPC464's memory. Over 42K is available to users, thanks to the implementation of ROM overlay techniques.

So there's plenty of room for sophisticated and complex programs.

## High resolution graphics. Stereo sound.

The monitor drives each colour on the screen directly from the computer. There's no unnecessary circuitry to distort your view. No tuning problems. And no arguments about who's using the computer and who's watching TV.

Sounds good, doesn't it?

So does the CPC464 with its 3-voice, 7-octave stereo output fed through a hi-fi amplifier and speakers.

## Amsoft. High quality software.

A rapidly expanding range of programs is already available. High quality software that takes full advantage of the CPC464's high specification and speed-loading capability.

Which means even complex programs can be loaded quickly.

Arcade games, educational programs and business applications are all designed to utilise the CPC464's impressive graphics, sound and processing abilities.

## Green screen VDU.

Text and numerical data are bright, sharp and easily read at a glance. Which is invaluable for word processing, accounting, budgeting and developing programs. And this purpose designed visual display system has an 80 column text display.

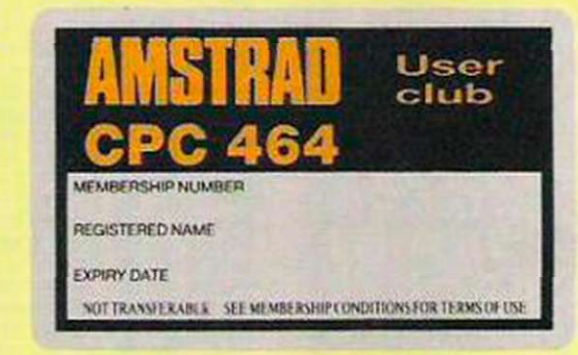
Green screen versions of the CPC464 can be used with a colour TV by connecting the optional power supply and modulator MP-1.

## Amstrad. User Club.

The CPC464 User Club is run by Amsoft, our software division, which provides software, peripherals and publications for members.

As a member, you'll enjoy immediate benefits like the privilege card, Club binder, regular magazine, competitions for valuable prizes and contact with other Amstrad users.

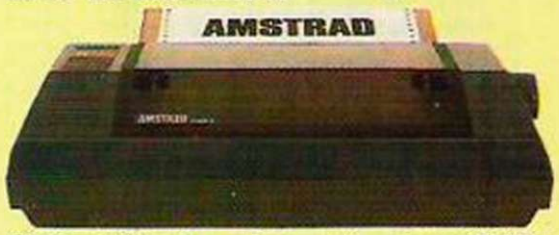
Whether you're interested in commercial applications or you're a games fanatic, you'll want to join the Club.



## CPC464. Unlimited scope for expansion.

At Amstrad, we try to anticipate your future requirements. That's why there's a built-in parallel printer interface. A low cost optional disk drive system including CP/M* and LOGO. A joystick port. And the virtually unlimited potential of the Z80 data bus with sideways ROM support.

Optional disk drive DDI-1 including interface CP/M* and LOGO £199.95



Optional 80 column dot matrix printer DMP-1. Offers high performance computerised text processing for only £199.95.

# TIRADIANS

## David Rees with a CBM-64 program to save the world.

TIRADIANS IS another chapter in the Galaxians saga. A fleet of alien spacecraft shaped in the aliens' own image have grouped over part of planet earth. Swooping down, smaller groups enter the atmosphere to destroy industrial and population centres. You have Earth's only laser base, and your task is to destroy as many alien waves as possible.

You score when your laser bolt hits a Tiradian. Troops — blue ships with yellow eyes — are worth 20 points; Troop supervisors — troops with yellow moustaches — are worth 40 points; Flight leaders — colourful

troops — are worth 80 points; and wave leaders — with the large guns — are worth 160 points. If you manage to hit them while they are swooping down, the above scores are doubled.

Tiradians comes in two parts, a Basic section which sets up registers, updates the scores etc., and a code section which contains graphics and machine code. The code length is rather long, so listing 1 contains a hex loader program. Type in and save this, and save the Basic program — listing 2 — afterwards.

Then, run the program in listing 1. This now allows you to type the code in the hex form of listing 3. The first prompt after running allows you to enter the location from which code will be typed in, the location being in the same form as the locations in listing 3. This allows you to start or resume at any location in the code section. If you have had enough for one day,

RUN 1100

will save the code. To resume, load the main Basic program — to load the code — and then load the hex input program.

**Hex dump.**

Once you think you have all the code in,

RUN 700

will give the actual and correct totals for sections of the code, to give an idea as to whether there are any errors. If any sections are wrong,

RUN 900

will allow you to list the offending area in the same format as the magazine listing. You can then run the hex loader, and correct any mistakes. If you want to save and load the code on disc, change the following lines:

Hex loader: 1220 DATA
162,8,160,255,32,186,255

Basic: 10000 DATA
162,8,160,255,32,186,255

One final note. Check, by Peeking locations 788 and 789, whether the values contained within them are 49 and 234 respectively. If your values differ from those above, then lines 1330-1350, and line 1370 may all be omitted.

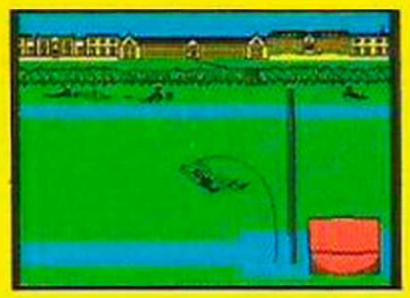
*(continued on page 111)*



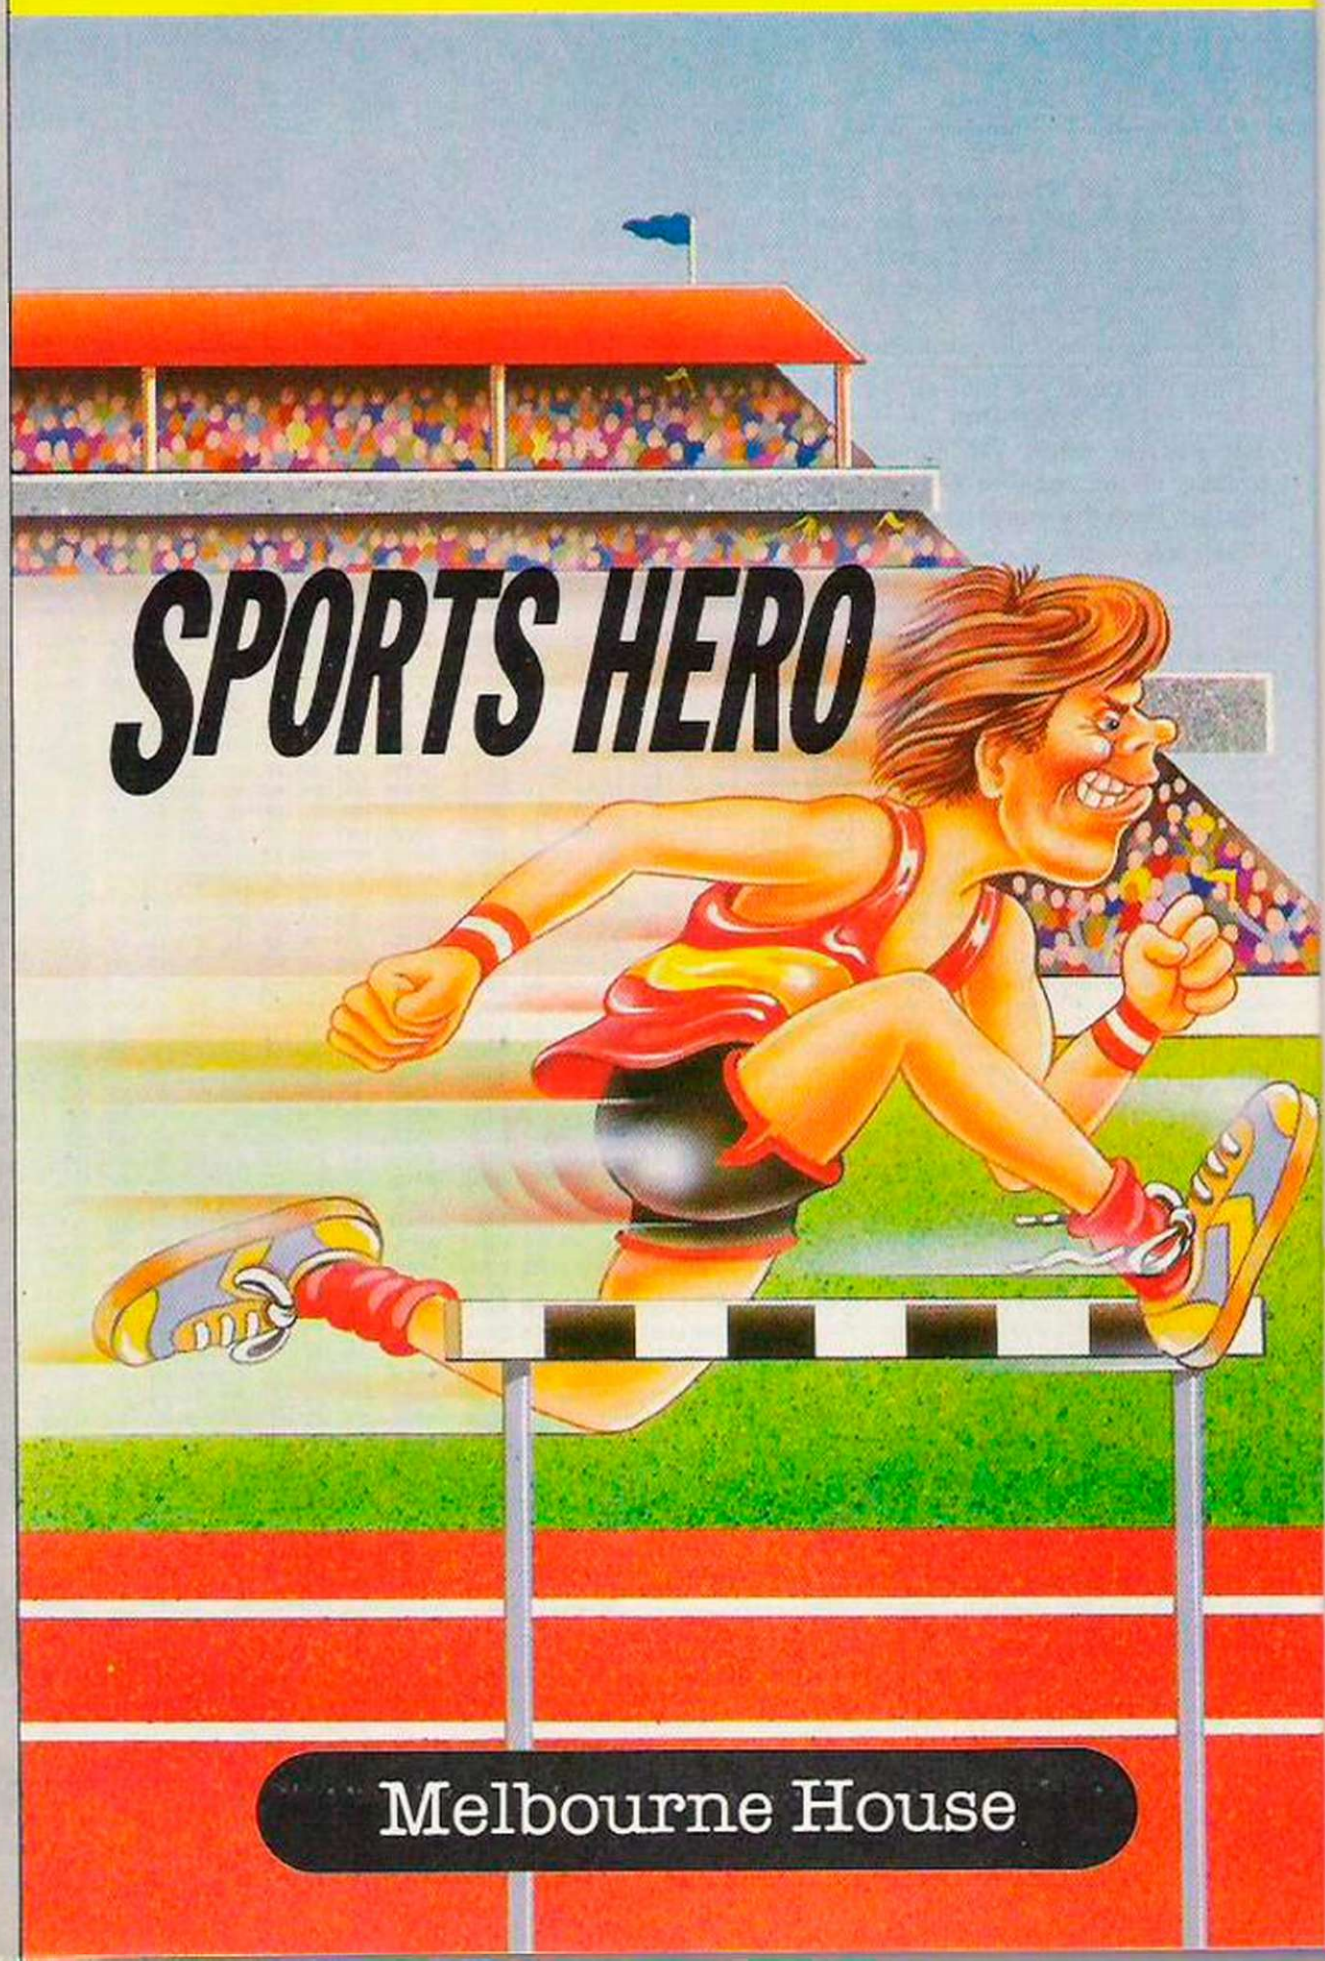
Work your way through the most challenging track and field events. As you gain experience and confidence you begin to excel in the four exciting events: 100 metre sprint, 110 metre hurdles, long jump and pole vault.

Here's your chance to be part of the winning team. Pit yourself against the clock and beat the record.

Sports Hero includes:

- ★ Multi level competition
- ★ Spectacular graphics
- ★ Smooth animation
- ★ Real time action

Can you surpass your personal best!



**Orders to:**
**Melbourne House Publishers**
**39 Milton Trading Estate**
**Abingdon, Oxon OX14 4TD**

Correspondence to:
Church Yard
Tring
Hertfordshire HP23 5LU

All Melbourne House cassette software is unconditionally guaranteed against malfunction.

Trade enquiries welcome.

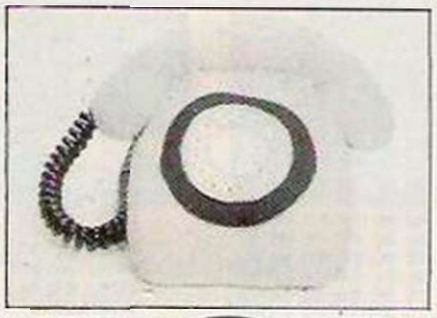
# 4 FORTH



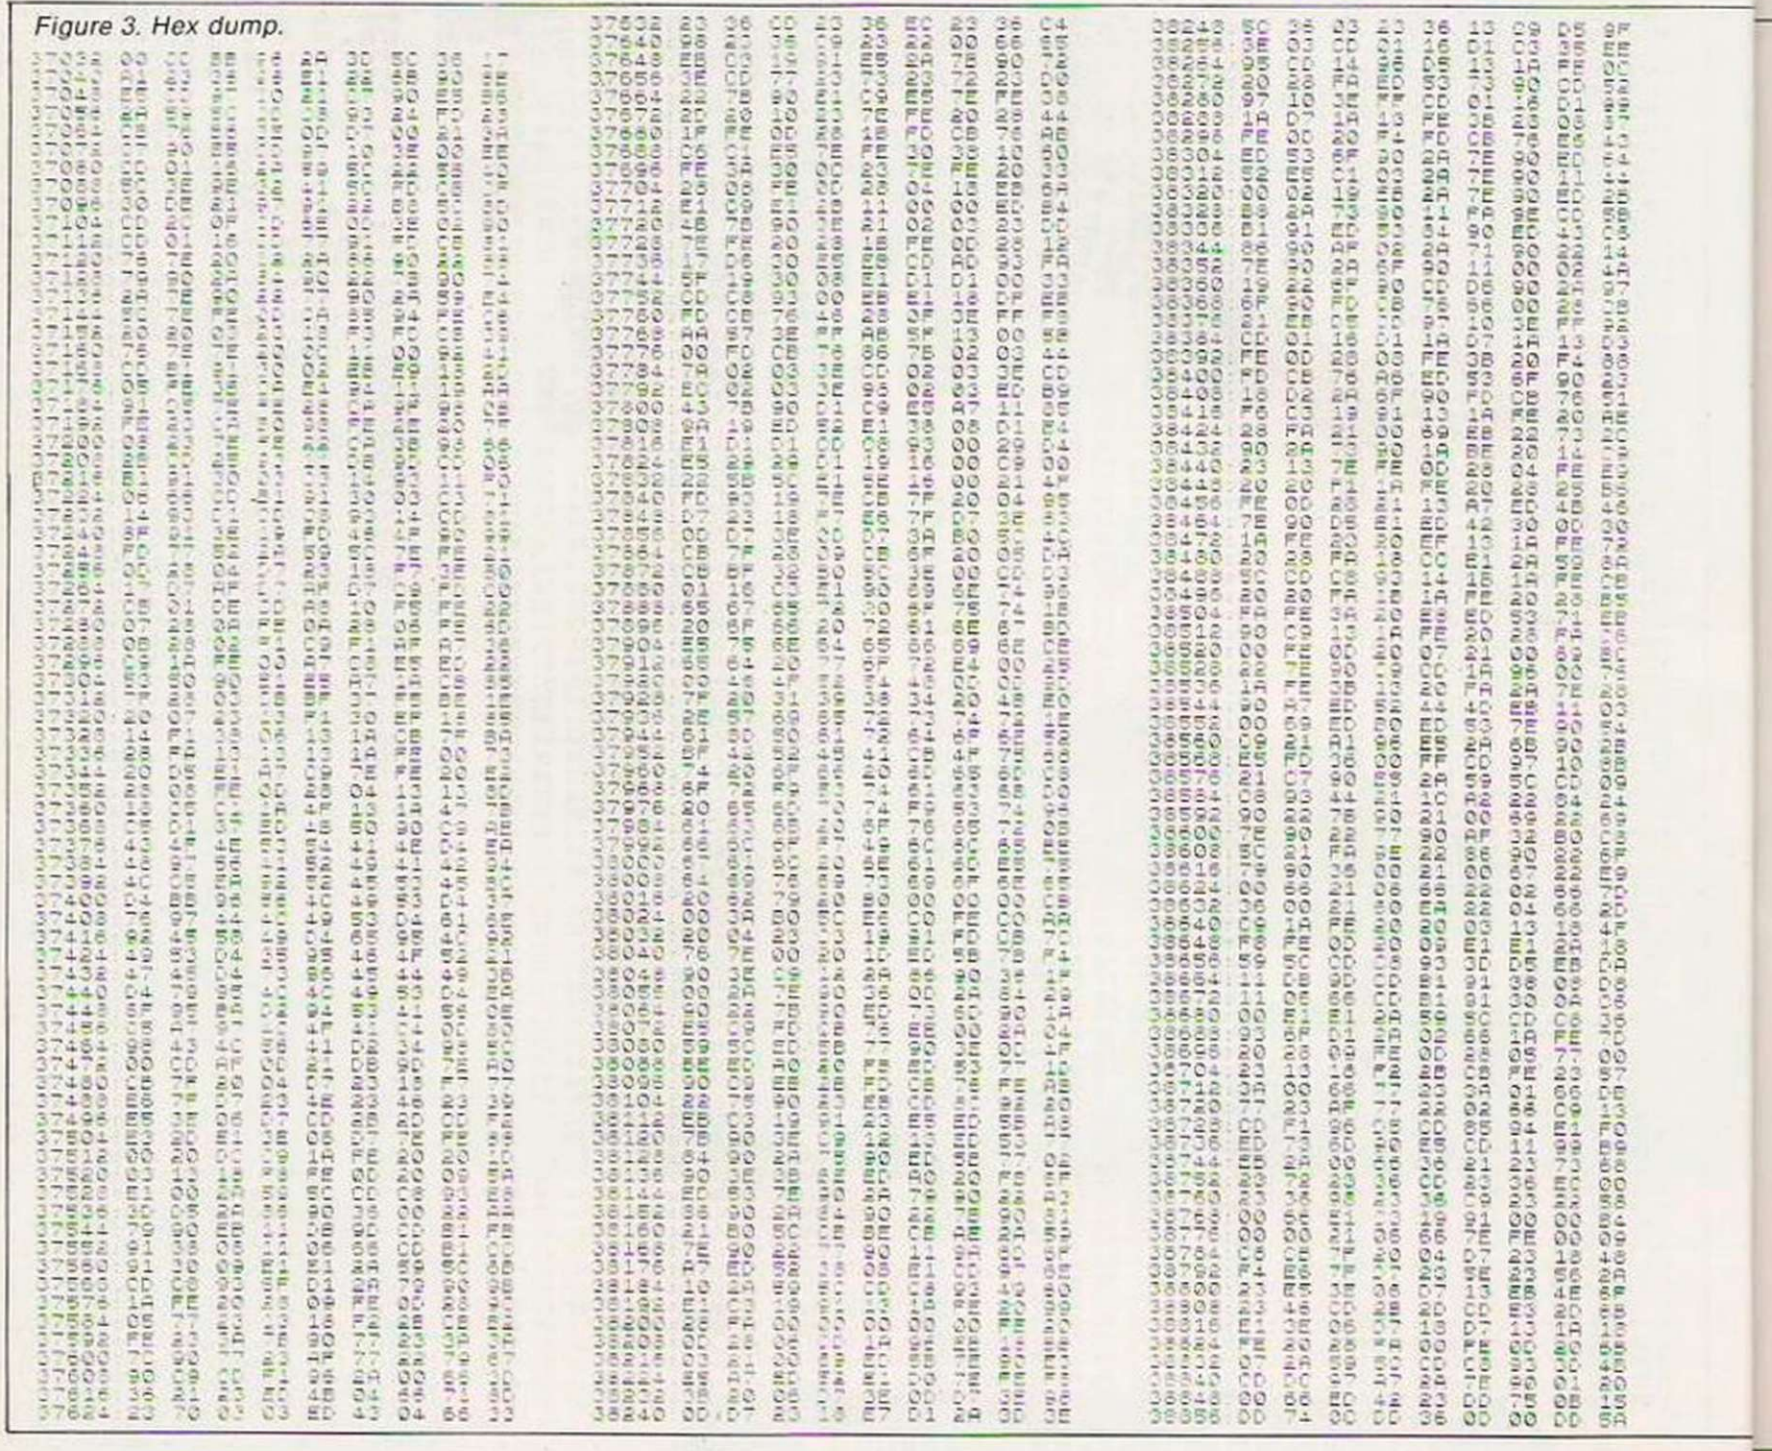
K. Wierstra shows you how to get a fairly complete version of Forth on a Spectrum.

*This article is available on the Telsoft service.*

*Figure 1.*

```
  1 PRINT : RANDOMIZE USR 37036
: STOP
  2 PRINT : RANDOMIZE USR 37030
: STOP
  3 LOAD "CODE"CODE
  4 CLEAR 28111
  5 GO TO 2
```

*Figure 3. Hex dump.*



THE PROGRAM PRESENTED here is a fairly complete version of the Forth language, written for the Spectrum 48K. This article is not meant to teach you Forth. You may learn Forth from one of the many available books. Once you've grasped the concept of the stack and the way of adding and removing numbers to and from the stack, you'll quickly find your way through the dictionary by experiment and a little thought.

The compiler shown here is very well suited for this purpose. The main omissions of my version from Standard Forth are:

- There are no defining words like Create and Does>, but there is no problem creating constants, variables and arrays.
- There are no double precision numbers.

The object of this article is to explain some of the functions of the compiler, particularly the — non-standard — compiler commands and some Forth words which I included to reflect the possibilities of the Spectrum. But first of all you will have to cope with the task of entering the program. Start with typing the Basic Interference given in figure 1 and save it with:

```
SAVE "FORTH" LINE 3
```

Now enter the hexloader listed in figure 2. The machine code in figure 3 may now be entered starting with address 37032. Type a whole line of nine hexadecimal numbers without spaces. The ninth number is a control code. If you made a mistake the last starting address will be shown on the screen and you may try again. Once it all has been typed in save the code with:

```
SAVE "CODE" CODE 37033,3666
```

After rewinding the tape and typing

```
LOAD "FORTH"
```

the whole system should start. You will now see the title of the program and a flashing cursor, a black square which may be considered as a disguise of the C cursor.

## In alphanumerical form

As you will expect all input have to be in alphanumerical form, so a Forth word like Then should be entered by pressing four different keys. All words and numbers have to be separated by at least one space or a Return.

Inserting and deleting is done in the usual way, moving the cursor with the cursor keys and deleting with Delete. Just like in Basic the editor is at the same time ready to accept commands and new definitions, variables etc. A direct command may be one of the editor commands listed in figure 4, or a sequence of one or more Forth words or numbers. An example of an editor command is DList. Type this in and you'll see a list of all predefined Forth words.

After the execution of your command the cursor will reappear on the bottom of the screen, indicating that all is OK, as far as the computer is concerned.

I have refrained from constantly reporting OK — or fine, excellent — since such a message will soon lose its encouraging

*(continued on next page)*

*Figure 2. Hexloader.*

```
  10 REM he (loader
  20 DEF FN h(h$)=CODE h$-48-7*
h$(1)>"9")
  30 INPUT "START ADDRESS ";n
  40 FOR n=n TO 40700 STEP 9
  50 PRINT n;
  60 LET tot=0
  70 INPUT a$
  80 IF a$="END" THEN STOP
  90 PRINT a$
 100 FOR b=0 TO 7
 110 LET t=FN h (a$(2*b+1))*16+FN h a
$(2*b+2))
 115 LET tot=tot+t
 120 POKE (n+b),t
 130 LET a$=a$( 3 TO )
 140 NEXT b
 150 LET tot=tot-(INT (tot/256
)*256)
 160 LET t=FN h a$(2*b+1))*16+FN h a
$(2*b+2))
 170 IF tot<>t THEN PRINT "DATA
INPUT ERROR": GO TO 50
 180 NEXT n
```

*Figure 4. Editor commands.*

| | | |
|---|---|---|
| LIST | — | lists all word definitions. List Example will list from the word Example. |
| LLIST | — | the listing will be sent to the printer — (also Llist Example is possible). |
| VLIST | — | this lists all constants and variables, together with their values and memory addresses respectively; a comparison of the addresses gives you the opportunity to inspect the reserved room for arrays. |
| DLIST | — | lists the whole dictionary. |
| FORGET | — | clears all word definitions from the source but leaves the compiled words in trhe dictionary. Forget Example clears the word definitions from the strt of the source to the word Example inclusive. |
| CLEAR | — | clears the stack. |
| EDIT EXAMPLE | — | this gives the possibility to edit the word definition. |
| RESET | — | clears the whole system and will perform a restart. |
| EXIT | — | return to Basic, you can restart the compiler using Run — leaving all definitions etc. intact — or Run 2 — resetting everything. |
| SAVE NAME | — | saves the source to tape — don't use quotation marks. |
| LOAD NAME | — | loads the source and compiles it into dictionary — this may take one or two seconds; if you omit the filename, then the first file found will be loaded. |

*(continued from previous page)*

meaning. All input will be screened by the editor, lines containing non-acceptable items — undefined words, numbers out of range — will be sent back to the screen together with an error message. The cursor will be positioned just before the unacceptable word or digit to enable you to correct your input. A list of all the error messages is given in figure 5.

The definition of a word starts with : and ends with ; don't forget the spaces.

A word may consist of several lines separated by Returns. Variables and constants are defined using Variable and Constant, e.g.

```
3 CONSTANT THREE
```

If you know anything about Forth you probably wonder how to create arrays, lacking the words Create and Does>. The point is that you have to define every array again. You need for instance an array of 20 bytes, then tyhpe.

```
VARIABLE INSTANCE 18 ALLOT
```

The operation of Variable reserves 2 bytes of Instance and 18 Allot adds another 18 bytes.

The array is defined by:

```
: ARRAY + * INSTANCE + 1 ;
```

Now if you type 3 Array the address of the Fourth component of the array (2 bytes) will be pushed on the stack.

You may inspect the values of the defined constants and the addresses of the variables by giving the command Vlist — see also figure 4.

Editing a word is done as follows: Since there are no line or word numbers the Spectrum Edit key has been disabled, instead you have to type Edit Array and you'll find the definition back on the screen, together with the cursor, willing to accept your editing commands. If the word consists of several lines, the lines will be shown successively and you can step through the word pressing Return.

Comments may be included using (and). Returns are now allowed inside a comment. It is possible to insert machine-code in a word or a direct command. The code should start with # and has to be entered in hexa-decimal form. As an example I give the definition of the Standard Forth word 1+:

```
: 1+ #CD119923CDEC98
```

(no spaces allowed after # , in mnemonics: CALL POPSTACK, INC HL, CALL PUSHSTACK) ;

When the computer is executing a command and it does not produce the expected output — or no output at all — it is usually possible to interrupt the system by pressing Caps Shift and Break. During every loop (Do . . . Loop, Do . . . +Loop, Begin . . . Until, Begin . . . While . . . Repeat) a check is made whether Break has been pressed, and the machine will halt accordingly. If a definition does not contain any loops, but has for instance a recursive structure — which means a word calling itself, see also figure 6 — you may insert — during testing and debugging — the word Break. This word will perform the same operation as the automatic loop control.

In figure 6 I have given a few examples to illustrate the use of the compiler. In figure 7 some special Forth words are described.

Some additional information concerning the compiler — e.g. making it Microdrive compatible — I can supply if you send an envelope with your address to K. Wierstra, Hertogstraat 42, EV Arnhem, Holland. Please include £1. For £3.50 I will send you a tape of the Forth compiler. ■

*Figure 5. Compiler error messages.*

| UDG | — | pushes the address of the first user-defined graphic on the stack. |
| CLS | — | clears the screen. |
| 10 10 BEEP | — | equivalent to ZX Basic's Beep 1,10 — mind the difference between the first parameters; in Forth the duration of the beep has to be given in tithes of seconds. |
| 10 20 PLOT | — | equivalent to Plot 10,20. |
| 3 7 AT | — | equivalent to Print AT 7,3;. |
| RANDOM | — | puts a pseudorandom number betwen 0 and 127 on the stack — you should judge the randomness yourself. |
| 24 EMIT | — | output will be sent to the printer if the screen is in use or vice versa. |

# MODEM.

# HIGH-SPEED COMPUTER TALK FROM PROTEK

Inter-computer communication is easy in anyone's language, thanks to the Protek Modem. Acoustic coupling provides a reliable link between the computer and the telephone line. There are no connection charges, the unit is totally portable. The flexible link between the mouth and ear-pieces ensures a reliable connection between most telephones.

APPROVED for use with telecommunication systems run by British Telecommunications in accordance with the conditions in the instructions for use.

AVAILABLE FROM LEADING COMPUTER STORES

# DOUBLE DENSITY

Too good to be true — an extra disc drive's capacity for £40? John Dawson makes light work of BBC interfaces.

IBM BUILT THE FIRST floppy disc drives to allow its engineering and maintenance staff to exchange data and programs between mainframe computers. The first floppies were eight inches in diameter and, because it was IBM, the electronic protocol for recording data and the physical number and spacing of the tracks became a standard.

Someone thought they could pack the same amount of data on to a smaller disc and the 5.25 inch floppy was born. The number of disc drives that were being sold attracted the semiconductor manufacturers and microprocessors with built-in Rom were programmed to do nothing but record data in the right position on the disc, ready for it to be retrieved later on. It's the job of the disc filing system to act as a go-between, translating the file handling commands issued by the Machine Operating System (MOS) into as series of instructions that can be carried out by the floppy disc controller.

## Disc controller knows

For example, *Cat is a MOS command. The BBC computer doesn't know how the disc controller obtains the right information — it is the disc filing system that tells the disc controller to move to track 0, wait until the index hole in the disc passes the photocell and then read the information from the disc.

The disc controller, using its very primitive built-in program, knows when it has reached track 0, when the photocell turns on, and it can separate the important data that the computer wants from the other data recorded on the disc that is there to keep.

The Intel 8271 chip was chosen by Acorn as the floppy disc controller for the BBC microcomputer. The 8271 has several desirable features, and was a perfectly sound choice at the time that the machine was designed. However, there was a delay between the formulation of the design and the launch of the machine, and between the appearance of the BBC computer and the large-scale use of floppy disc drives.

In that interval the Intel 8271 became obsolescent and expensive. Like everything else in microcomputing it is all a matter of fashion; the 8271 is a perfectly adequate chip that will control a number of disc drives to store large quantities of information.

But other companies, Western Digital in particular, have developed cheaper and more sophisticated chips. Some of these chips will record data on a floppy disc in what is known as "double density". But like all the best things in life that description is slightly larger than the reality.

Double density recording is a method of storing information on a floppy disc more compactly than is possible using single density. The two methods of recording information are quite different. Most of the Western Digital chips can cope with both single and double density recordings. The disc rotates at a constant speed regardless of which recording method is in use.

Some BBC double density disc interfaces record 18 sectors around each track on the disc while others record 16 sectors. The single density Acorn disc interface using the 8271 chip records 10 sectors.

Consequently, it is possible for a double density interface to read either 16 or 18 sectors of 256 bytes in the same time that the Acorn interface will read 10 sectors of 256 bytes. The rate of data transfer between the floppy disc and the computer is increased. Not only is the speed of transfer increased but the total storage capacity of the disc is increased by either 60 or 80 per cent.

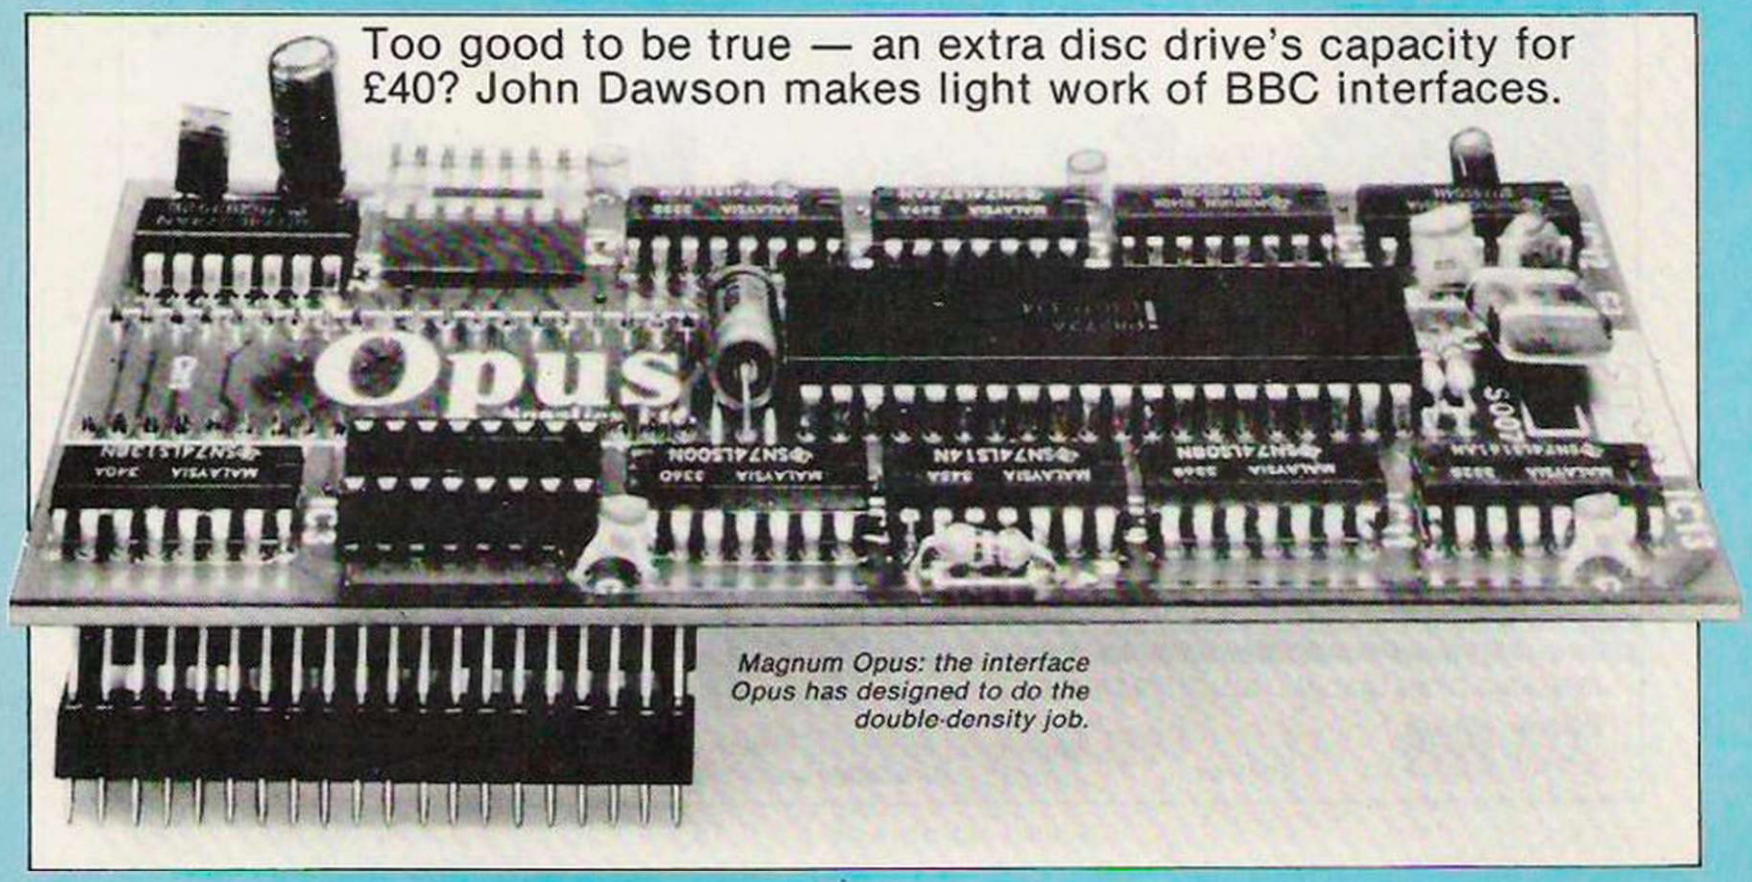
The floppy disc interfaces reviewed in this article will store either 320K or 360K on a single sided 80-track drive where the Acorn interface will store 200K. In fact, the formatting of the disc takes up a small number of bytes and the actual storage capacity is about one 1K less than the nominal totals.

Table 1 lists some of the characteristics of five currently advertised double density disc interfaces. Three other double density interfaces are advertised — Kenda, Microware and Gnomic. A great deal of work is being done by different companies to get their disc interface on to the market ahead of their rivals. Advertisements for a particular disc interface may not reflect the actual availability of the product. I was unable to review the Merlin disc interface although it is potentially the most exciting double density interface for the BBC Micro as it combines both surfaces of a single disc into one storage area.

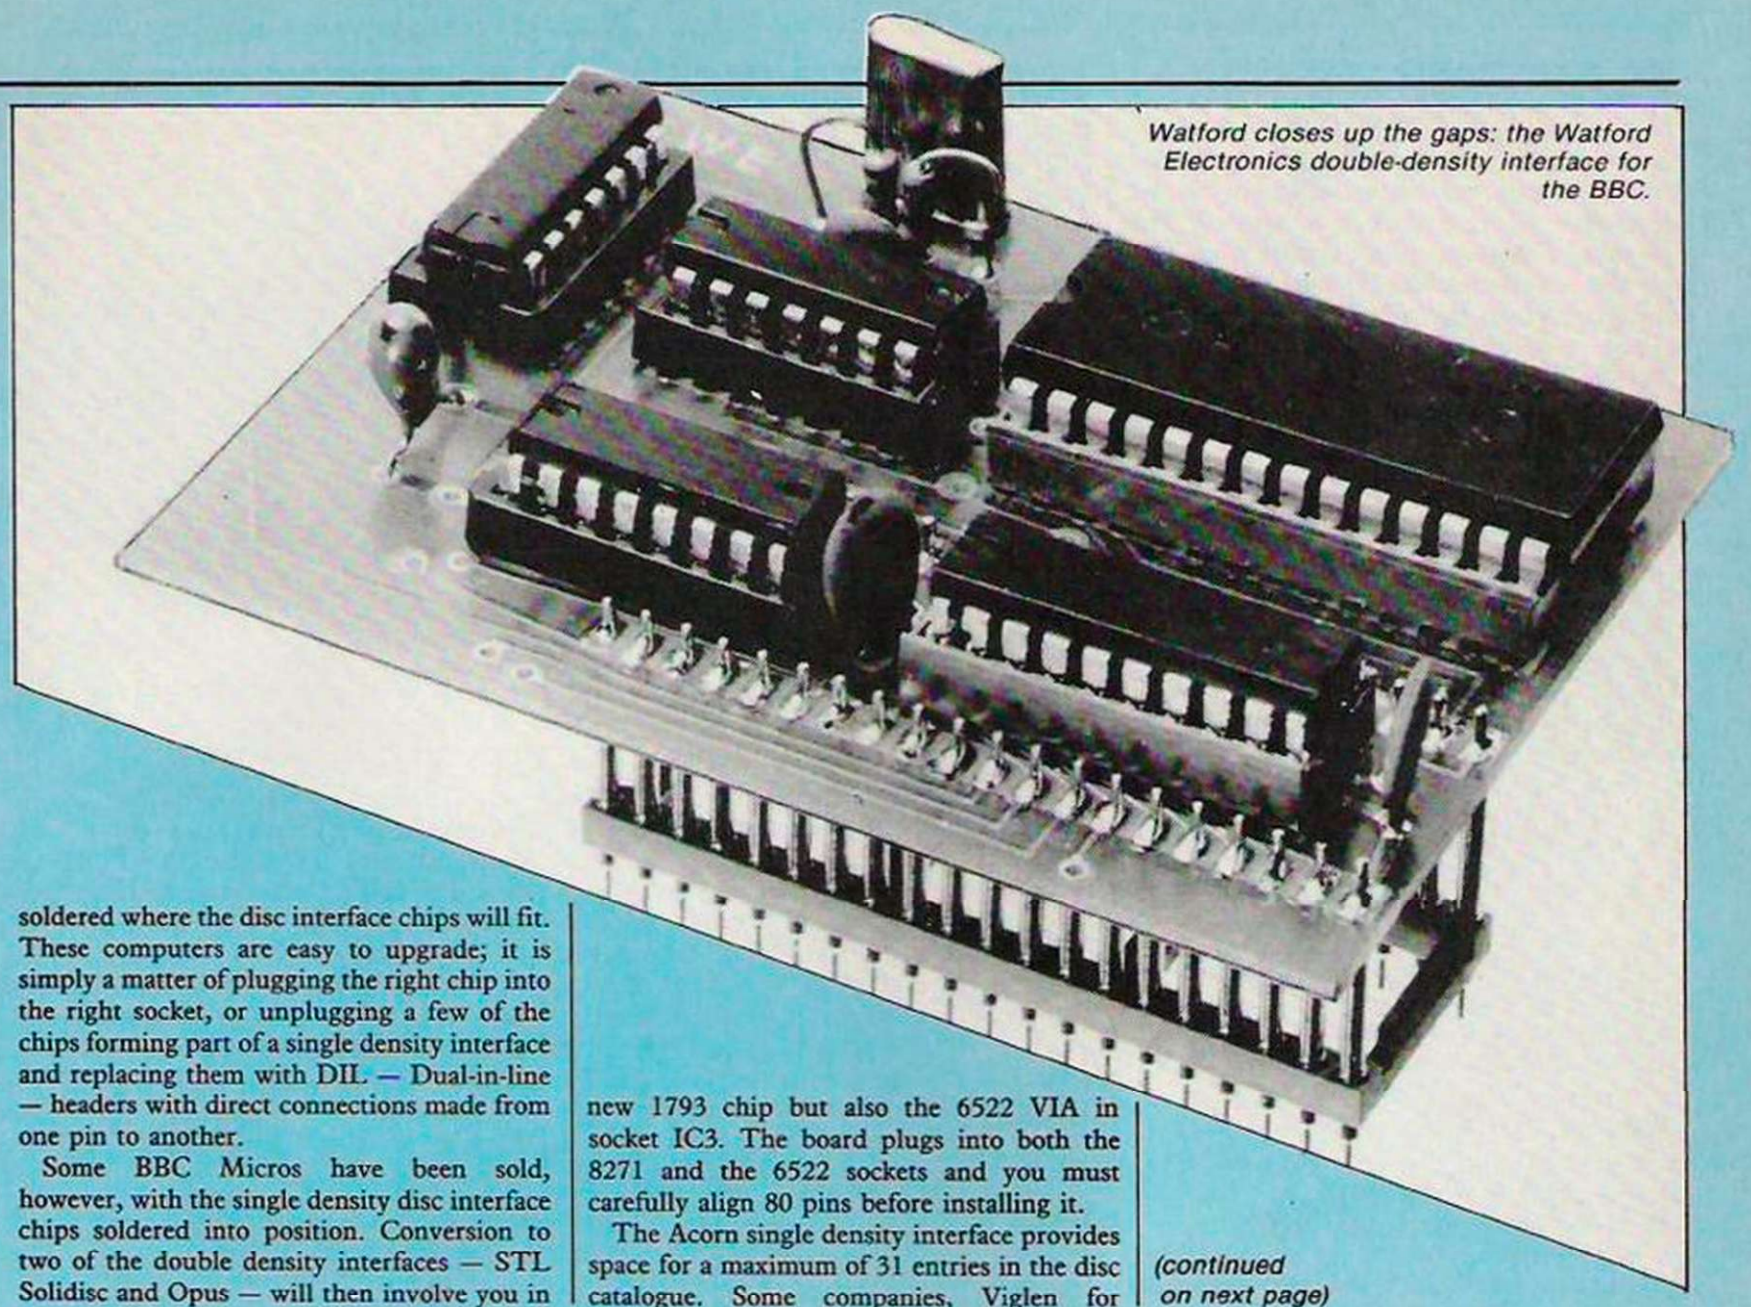
## Straightforward in theory

In other words, where other products treat the second side of the disc in Drive 0 as Drive 2, the Merlin interface simply sees Drive 0 as a very large capacity drive.

Fitting the disc interfaces is straightforward in theory but you may encounter problems with some versions of the BBC Micro. Many machines have been sold with IC sockets



*Magnum Opus: the interface Opus has designed to do the double-density job.*



*Watford closes up the gaps: the Watford Electronics double-density interface for the BBC.*

soldered where the disc interface chips will fit. These computers are easy to upgrade; it is simply a matter of plugging the right chip into the right socket, or unplugging a few of the chips forming part of a single density interface and replacing them with DIL — Dual-in-line — headers with direct connections made from one pin to another.

Some BBC Micros have been sold, however, with the single density disc interface chips soldered into position. Conversion to two of the double density interfaces — STL Solidisc and Opus — will then involve you in the nail-biting business of unsoldering chips from the main board of the computer.

You can probably get away with short circuiting the right pins of the chips while they remain in the board, but that isn't in the instruction manuals. The Watford Electronics manual gives no fitting instructions. You are offered instead the instruction to "Take it back to whoever fitted your disc upgrade and get it done properly" if you fail to get the correct message on screen.

The LVL board is the largest of the four I examined, measuring 14.5cm by 10cm. The STL Solidisc board — the smallest — sits comfortably in the BBC Micro alongside a Sidewise Rom expansion board. None of the other interfaces — Opus, Watford, LVL — were physically compatible with the ATPL Sidewise board.

The Opus board required the removal of the A-D converter chip and two Roms before it could be plugged in, while the Watford board blocked off only the two Rom sockets. The STL, Opus and Watford systems worked successfully with the ATPL Rom board.

The LVL disc interface board has sockets for not only the old 8271 controller and the new 1793 chip but also the 6522 VIA in socket IC3. The board plugs into both the 8271 and the 6522 sockets and you must carefully align 80 pins before installing it.

The Acorn single density interface provides space for a maximum of 31 entries in the disc catalogue. Some companies, Viglen for

(continued from previous page)

example, has produced disc utility programs that reserve space on a disc for a second catalogue giving a total of 62 entries. The Watford Electronics single density disc filing system — this uses the 8271 controller and the company's own disc controller software in an Eprom — also provides space for 62 entries in the catalogue, albeit at the expense of non-standard coding on the disc and a slight loss of speed when saving a file.

For many purposes the standard number of catalogue entries will be sufficient but short games or individual letters tend to use up precious space in the catalogue while the disc remains half empty. Clearly this problem becomes more important when the capacity of the disc is increased by 60 or 80 per cent. Opus has increased the number of files that can be held on one disc by creating eight volumes.

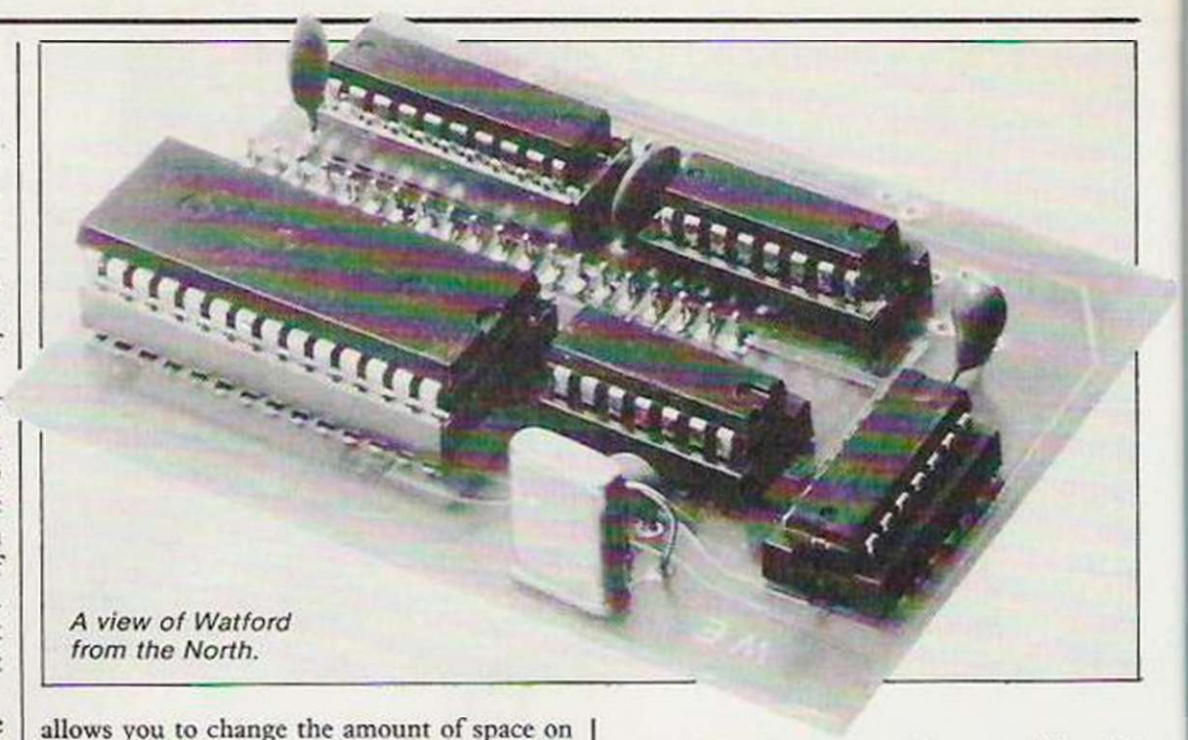
Each volume acts as a separate catalogue holding 31 files; a maximum of 248 files on one disc. Watford Electronics has carried forward the arrangement that allows you to produce a second catalogue giving a maximum of 62 files. The STL manual was clearly a pre-production version and beyond referring to "extended cataloguing" makes no mention of the number of catalogue entries that the system will handle.

## Space is fixed

The LVL disc interface operates quite differently. The manual says:

- 100K drives: In double density . . . You will have only one drive to access, which remains drive, 0. It can hold up to 31 different files and 180K of data storage.
- 400K drives: You have four drives to access; 0, 1, 2 and 3. There is a capacity for 124 separate files and 720K of data storage.
- 800K drives: There are eight drives numbered 0 to 7. With 80-track double density, the number of sectors exceeds the current directory limitations. To retain compatibility each disc surface is split into two logical drives. Add 4 to the normal drive number, so that logical drive 4 is the second half of drive 0, each of 720 sectors . . . hence there is a total capacity of 248 separate files and 1,474,560 bytes of on-line storage if all drives are fully utilised.

The amount of space taken up by each logical drive in the LVL system is fixed in comparison to the volumes generated by the Opus system. The Opus command *Volgen allows you to change the amount of space on the disc allocated to each volume. Reallocation of space erases any existing catalogue entries so the facility is only of practical use immediately after the disc has been formatted.



*A view of Watford from the North.*

At present LVL provides a disc which holds programs to format and verify your own program and data discs. The system is being enhanced at present and the company is moving to 16K Eproms for the filing system. The other double density disc interfaces have format and verify routines held in the operating system Eprom — Watford and Opus use 27128 16K Eproms.

Only the Watford Electronics system explicitly states that the format program will not affect a program already in the computer's Ram. I use the Pace Toolstar chip to format discs for the Acorn single density system and it is useful to be able to get a new disc ready for use at any time, even in the middle of word processing a book chapter.

The STL Solidisk system will address four floppy disc drives numbered 0 to 3. Additionally, you can address a fifth drive (number 4) with the STLDisk DFS to save or load data to the Solidisk Sideways Ram board. Opus has a tape to disc routine in the operating system Eprom, a command which "selects the sideways Rom from which memory is saved when a *Save command is issued which requires memory from &8000 to &BFFF to be saved."

In other words you can save the contents of CMOS Ram chips occupying one of the sideways Rom sockets. The Opus system has been designed to cope as far as possible with protected discs. Two commands *4080 and *Density change the response of the system to stop the automatic identification of density and number of tracks.

Of the systems that I have seen, the Opus and LVL interfaces have the clearest documentation, although the Watford manual is the largest. The STL manual is poorly laid out and omits basic information about the disc filing system that would help new disc users in particular.

## Watford manual extensive

The Watford manual is extensive and contains more information than the others although it is confusing in places because the single density manual has had additional sections dropped casually into the existing text. You must keep a close eye on the brackets to understand what you are reading.

Advertisements for the double density disc interfaces for the BBC Micro all claim some degree of compatibility with the standard Acorn single density interface. However, there is compatibility and compatibility. All the interfaces that I tried would read a straightforward single density disc formatted for the Acorn disc filing system and used to store Basic programs and View documents.

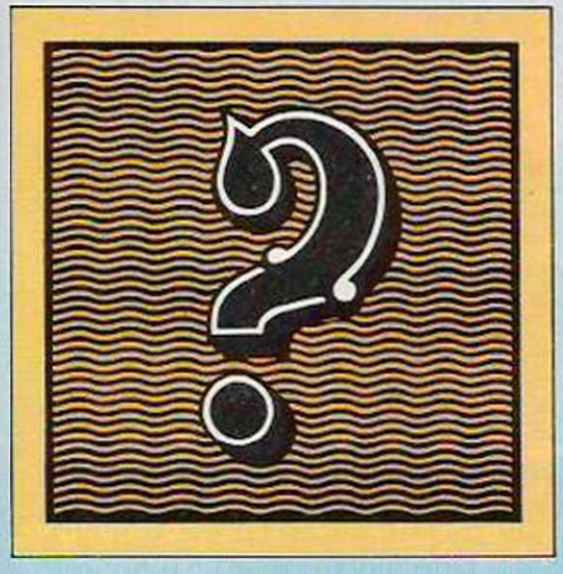
All the double density systems will check the density of the disc in a drive and alter their characteristics automatically. So you can copy a single density disc to a double density disc without trouble even using one drive. The problems arise with protected software.

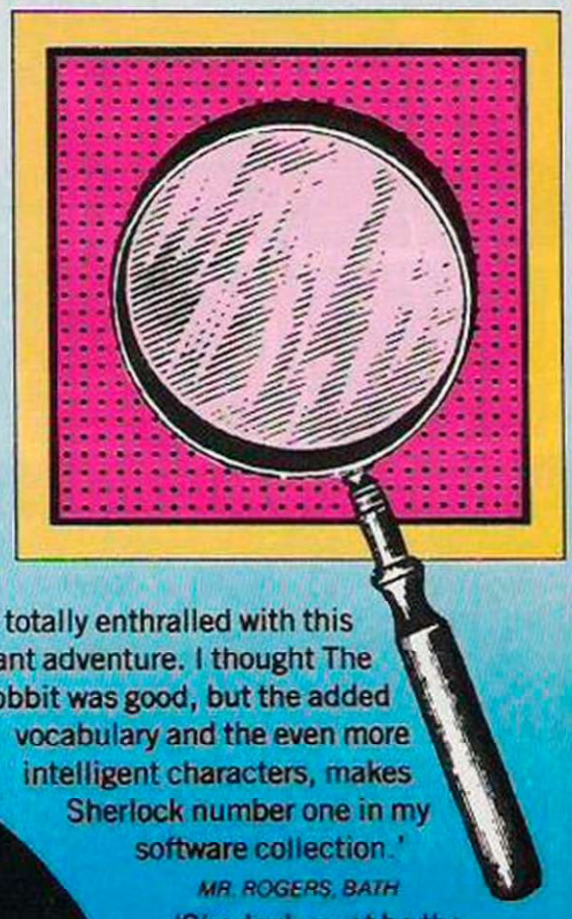
The results of trying to run Viewfinder, Clares Replica II and the new Acornsoft game Elite using the various interfaces were not encouraging. The Opus system did read and Run Viewindex correctly. None of the interfaces would load Lisp or Forth from the Replica disc, and Elite baffled them all.

Opus says it is talking to Acorn to try to establish a standard for double density operation, and to agree how protected discs may be read by these new, non-standard disc interfaces. STL is now advertising a new system that uses the 8271 chip as well as a double density controller; presumably you can switch between the two, maybe that's the answer if you can afford or find the 8271. ■

### CONCLUSIONS

- Commercial microcomputers don't make a fuss about splitting up disc surfaces, the limited numbers of catalogue entries and so on. Nobody wants to know about problems in the disc operating system when they are word processing, budgetting or preparing invoices. I don't care if a file is split up between two sides of one disc; all I want is to be able to use the data held on the disc in a drive.
- The present disc filing systems available for the BBC would be unattractive to business users because they demand too much attention and care. The Merlin system may break out of this low-level trap.
- All the interfaces work and do offer a major increase in disc capacity. If you are buying the BBC machine simply for word processing, and you don't want to use Viewfinder or, I suspect, the View Printer Drive Generator, then the cheap STL double density interfaces will serve you very well.
- If you don't really understand disc filing systems and you do want to be able to play games occasionally then you should ask yourself whether it is worth spending more money for a clearer manual and a more compatible system or whether you want increased storage capacity.
- For myself, I shall soldier on with my ageing 8271 for a little longer.





'Another winner in The Hobbit class. It's a complex real time adventure which will keep devotees puzzled for hours.' *DAILY EXPRESS*

'Sophisticated, rich in atmosphere and amazingly detailed, Sherlock is a game which no Spectrum owner will want to be without.' *MICRO ADVENTURER*

'Sherlock is a long way ahead of the rest of the competition.' *PERSONAL COMPUTER NEWS*

'In Sherlock you can not only talk to other characters, of whom there are at least thirteen, and ask them to do things for you, but you can also interrogate them and even discuss the case.' *SINCLAIR USER*

'Sherlock Holmes has been well worth waiting for with an 800 word vocabulary, real Victorian transport system – cabs and trains and all, and a cast of characters, peopling screens of graphics designed by Mugsy man Russell Comte.'
*YOUR COMPUTER*

'An intriguing and absorbing game.'
*COMPUTER AND VIDEO GAMES*

'I have been totally enthralled with this new brilliant adventure. I thought The Hobbit was good, but the added vocabulary and the even more intelligent characters, makes Sherlock number one in my software collection.'
*MR. ROGERS, BATH*

'Sherlock must be the most complex adventure ever created.

The creation of atmosphere is superb (more like that of a novel, than a computer game) in fact playing the adventure feels more like acting than playing a computer adventure.

The characters in Sherlock behave just as they would in real life and have a very human feel to them, not only in the way they react to situations, but also in their displaying of human emotions.'
*MR. STERN, HERTS.*

'Rich mental imagery.'
*CRASH*

'Sherlock is an adventure which has yet to be beaten.' *YOUR SPECTRUM*

'Sherlock is a superb program and will provide many hours (hours? months more likely) of stimulating entertainment.'
*PERSONAL COMPUTER NEWS*

'Sherlock is an excellent adventure bursting with atmosphere, challenge and inventiveness.' *PC GAMES*

'Sherlock the adventure is about as devious as Sherlock Holmes the master sleuth.' *POPULAR COMPUTING WEEKLY*

## TOM THUMB

Within the scrolling mazes of the six pyramids lie the 48 keys which will unlock the secrets of the ancient Egyptians. Each maze can be viewed as a whole to help you plan your strategy and chart your way. You need superb timing to acquire the keys and fit them in the correct keyholes. The Vic 20 version also has six scrolling mazes and numerous perils to be faced as you collect the treasures in order to survive.

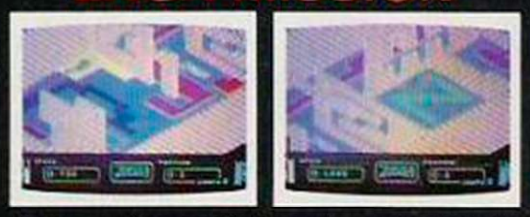
J.S. COMMODORE 64 VIC 20 16K £5.95

## BATTLE THROUGH TIME

This non-stop action adventure takes off with World War II spitfires, jet fighters in Korea and helicopter attacks in the Vietnam war, moving on through time to the murderous weapons of World War III. The mutant offensive brings about the end of civilisation followed by the dawn of pre-historic times and the vicious pteradacktyls. Excellent graphics and sound effects bring this seven stage "Battle Through Time" to life.

J.S. COMMODORE 64 £7.95

## ZAGA MISSION



A diagonally scrolling maze lies ahead of you. There are no enemy fighters or ground fire to destroy you. You have total speed control of a highly manoeuverable helicopter and it will hover while you work out your approach. Absolute concentration is essential to complete ten stages of the "Zaga Mission".

J.S. COMMODORE 64 £7.95

## CATACOMBS

A sealed door bars your entry to an intriguing role playing adventure. Sequence of appropriate words swings the door open to another location. Each location is shown in superb graphics to assist you in your fight for survival. Save adventure facility.

K.B. COMMODORE 64 £7.95

## P.C. FUZZ

P.C. Fuzz has nothing but his flying truncheon to capture the money being literally spirited away by the local mafia. Jostled by punks on pogo sticks and wobbled by well oiled patrons of the local inns at the closing time, he pursues the villains with vigour.

# WAR OF THE WORMS

IN THIS GAME you must guide a snake around the screen using a joystick or keys of your own choice. The object is to collect all the yellow bags of gold and, if possible, the white goblets that appear at random intervals. On no account must you try to collect a red goblet.

You are awarded 10 points for every bag collected and one hundred points for a white goblet. If you manage a high enough score you will be invited to enter it in the high score table provided.

If you ever manage to reach screen 15 and onwards things get rather difficult.

The program is reasonably short and the breakdown of lines give a good idea of how it works. The program could be shortened slightly by substituting various CHR$ references with control codes entered direct.

Do not try to run the program until you have typed in and Saved the entire program on tape. The reason being that the call BB03 statement used within the program not only flushes the keyboard buffer as required but also partially disables the Escape key as well. The only way to stop the program once it is running is to wait until you are confronted with the high score table, then ignore the two options given i.e., C to continue and O for key options, and press E instead.

60-220 Main routine. Scans keyboard or joystick. Checks for collisions. Print snake. Decides whether or not to place goblet.

230-240 Increments score and produces sound when goblet collected. Also increases tail length.

250-260 Increments score and produces sound when bag collected. Also increases tail length.

270-280 Produces sound and decrements lives when wall, snake or red goblet are hit.

290 Blanks out goblet after delay.

300-310 Places goblet of a random colour at a random position on the screen.

320-500 High score routine.

510 Decrements time scale and checks for end.

520-630 Prints screen.
Line 540 prints length of wall.
Line 550 prints number of columns.

640 Routine to print columns.

650-780 Gives keyboard or joystick options and allows user-defined keys.

790-820 Sets up user-defined symbols.

830 Defines three strings to print column.

850 Sets variables, envelopes, and dimension arrays for tail position.

860-960 Sets high scores.

970 Defines functions to check screen positions. ■

# REWRITE HISTORY THIS WEEKEND!

All action strategy games from SSI - the world's No.1 war game company

At last here is your chance to see how you shape up as a General in a real battle! The pages of history record the triumphs and failures as Eisenhower, Montgomery, Rommel and Von Runstedt battled in Europe and North Africa. But with a clear thinking strategist like yourself in command perhaps the historians would have had a different story to write!

U.S. Gold is proud to present four of the best strategy games by Strategic Simulations Incorporated:

KNIGHTS OF THE DESERT pitches the British Forces of Montgomery against the might of Rommel and his Panzer Divisions in the classic North African campaign of 1941.

BATTLE FOR NORMANDY commences on 'D-Day' June 6th 1944 and relives the Allied Forces attempt to smash Hitler's Atlantic Wall.

TIGERS IN THE SNOW reconstructs the legendary Battle of the Bulge as in December 1944 the Panzer Divisions of Von Rundstedt try one last gamble in a desperate attempt to halt Eisenhower's advancing Allied lines.

Who will be the victor and who the vanquished?

Only you have the answers!

And if you're looking for strategy with arcade action then COMBAT LEADER will test all your wits, depth of thought and reflexes in this toughest of battle challenges!

# SONY competition MSX HIT BIT

# RESULTS

IF THE NUMBER of entries for our competitions is anything to go by MSX would seem to be on course for success. November's competition to win a Sony MSX Hit Bit drew one of the largest responses ever, with almost 2000 entries.

You were asked to put five of the computer's features in order of importance, and then tell us what you would connect it up to, what you would use it for and what you would call it. Software compatibility is obviously the machine's most significant feature, and was the one most people gave priority to. Without it MSX computers would probably be seen in the same light as many earlier micros from the Fast East — well constructed but rather dull.

Our panel went on to place MSX Basic in second place. Calling it powerful may be excessive but it is certainly a highly competent version of Microsoft Basic, more powerful, at least, than Sinclair Basic. Our final list was as follows:

1. MSX software compatibility.
2. Powerful MSX Basic.
3. Professional keyboard.
4. Built-in electronic diary, address book and memo pad.
5. Nifty Sony styling.

With five features to put in order there are only 120 different combinations, so quite a few people came up with the same preference as our panel. Of these we chose the entry from B. Mason, "Highlands", Bromsash, Ross-on-Wye, Herefordshire, as the winner. He suggested that he would connect the Hit Bit up to a baby alarm and bottle heater which would prepare the baby's feed on demand. What would he call it? — the Sony Tit-Bit.

Compared to some of the other suggestions this was relatively practical. Although what babies will think of this development is anybody's guess.

Feeding, in fact, was one of the most popular themes among the tiebreakers. J. Draper wanted to connect up to a cat food dispenser. Naturally, he would call it the Kit Bit. Cocktail makers, cookers, and Teasmaids were also common. The other entries covered almost every conceivable appliance: central heating systems, knitting machines, dishwashers, fish aquariums, terrapin aquariums, car tuning kits, burglar alarms, electric toothbrushes, laser discs, video recorders, model railways, robots, soil monitoring devices for the garden, electric blankets, light switches, jacuzzi controls, neck massagers, milking machines, hi-fi systems, and the front door bell — you name it, someone wants to connect up to it.

Whether it is feasible or desirable to link up a computer to these items is open to doubt. It came as a refreshing change to read D. Sewell's tiebreaker. He suggested connecting the Hit Bit to a cardboard box. As to what he would use it for, he confessed he had not the faintest idea.

*The Illustrator is imminent .....*

Now you can add graphics to your
Quill Written Adventure.
For use in conjunction with
The Quill Adventure Writing System on the
48K Spectrum.

Please rush me an order form and full details of
The Illustrator for the 48K Spectrum.
I enclose a stamped addressed envelope.

# GET SET FOR ACTION

Protek Joysticks and Joystick Interfaces give you arcade-quality on the ZX SPECTRUM, BBC MODEL 'B', ORIC ATMOS & ELECTRON COMPUTERS. The perfect Christmas gift for the computer buff.

**GIFT SETS INCLUDE:—**
**BBC MODEL 'B' GIFT SET**
INCLUDES
- Quickshot I Joystick
- Protek BBC Interface

**£19.95**

**ZX SPECTRUM — GIFT SET**
INCLUDES
- Quickshot I Joystick
- Protek Switchable Joystick Interface and a Free Games Cassette

**£24.95**

**ZX SPECTRUM "SWITCHABLE INTERFACE" £19.95**

A new Joystick Interface that's compatible with all Joystick controllable software. There's no programming or software patch tapes required. Just flick the switch to select the system you require.

**ORIC ATMOS 48K PROGRAMMABLE**
**£29.95**

Now you can use any 'ATARI-TYPE' Joystick including Quickshot II Joystick to control your arcade software. You can select up to nine keyboard functions and programme these into your Interface. No software tapes or patch programmes required.

**ELECTRON PROGRAMMABLE JOYSTICK INTERFACE (Available November)**

Now you can use any 'ATARI-TYPE' Joystick including Joystick II to control your arcade software. You can select up to nine keyboard functions and programme these into your interface. No software tapes or patch programme required.

**BBC MODEL 'B' JOYSTICK INTERFACE**
**£11.95**

Just plug this Interface into your 'ANALOGUE-IN' port and you can now use any standard 'ATARI-TYPE' Joystick including Quickshot II Joystick.

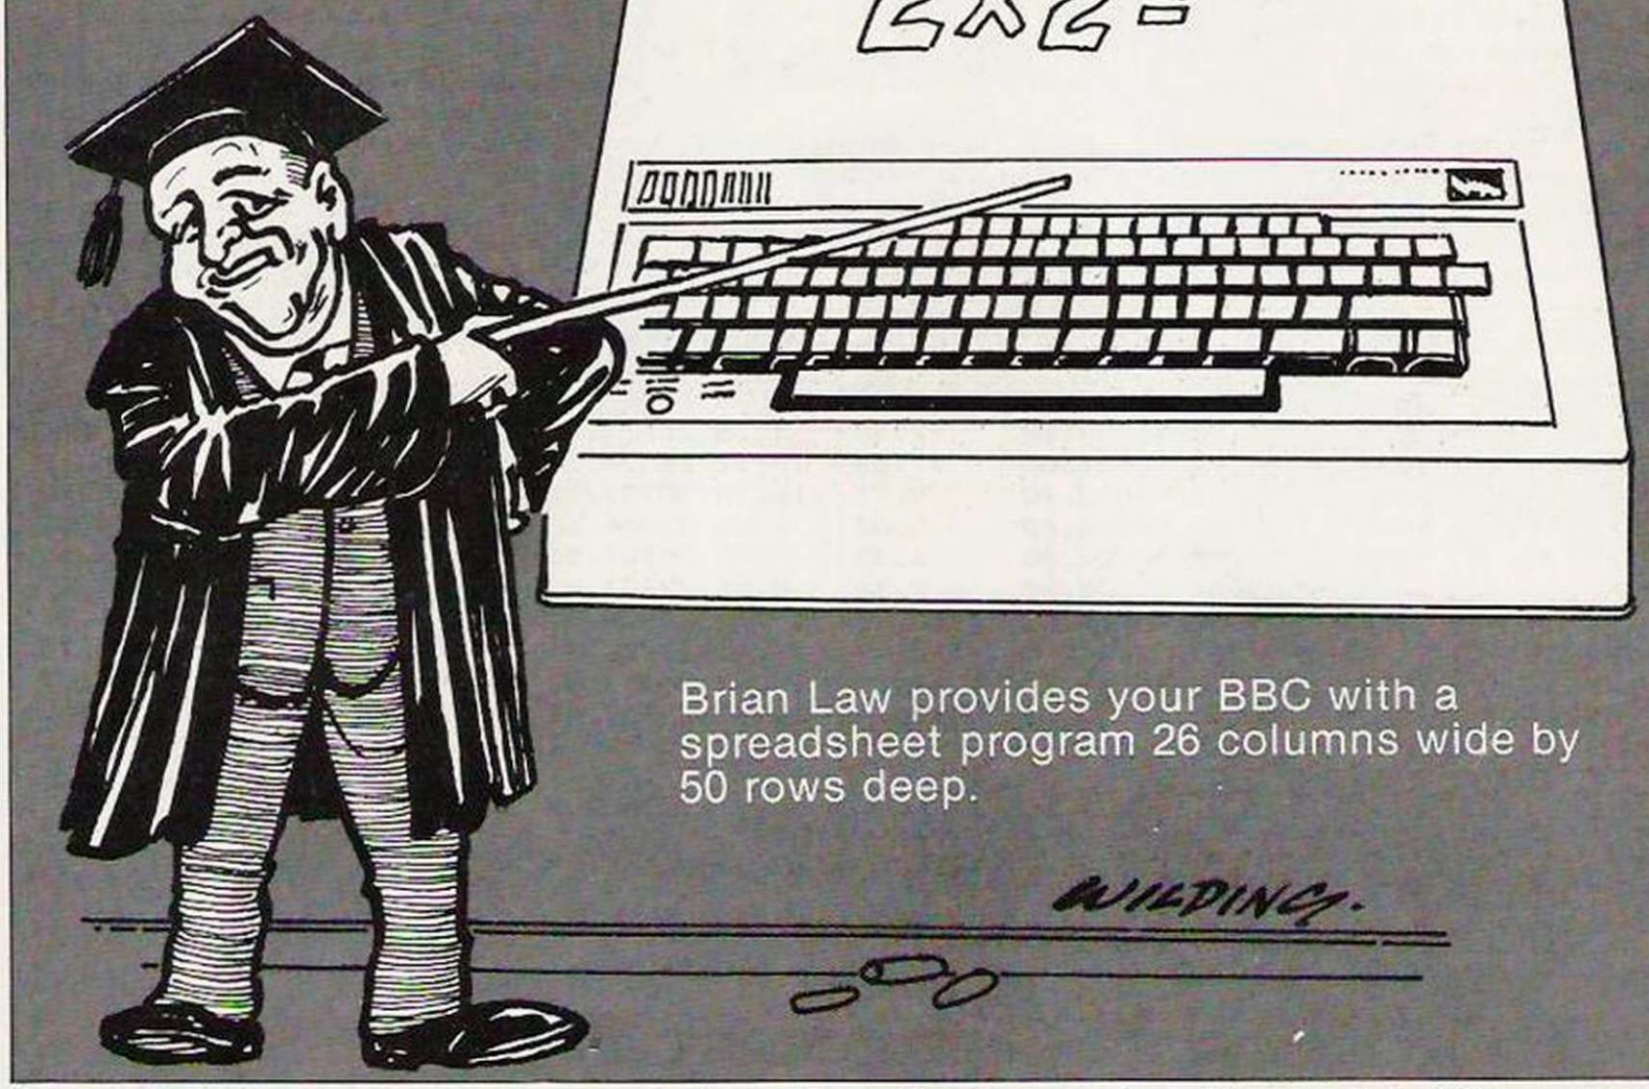
# DATACALC



Brian Law provides your BBC with a spreadsheet program 26 columns wide by 50 rows deep.

DATACALC IS A simple to use spreadsheet program for the BBC Model B. In operation it will give you a worksheet that is 26 columns wide and 50 rows deep — if the DFS is not fitted then this can be increased up to 70 rows. In a standard spreadsheet program you can enter either data, text or a formula into any cell on the spreadsheet, Formulae can usually be extended in any direction and contain either relative or absolute values.

This versatility carries a price in the form of the complexity of entering formulae and also the lack of certain fundamental functions. Datacalc aims to overcome these problems by allowing only one formula to be entered for each column, this formula then applies to each operative row within that column.

Because of this simplification in the design of the program structure it has been possible to incorporate such functions as the summing of all values in a column and sorting values into ascending order.

When loaded using

```
Chain "DATACALC"
```

or

```
Chain ""
```

a short menu of three items is presented. Entering 2 when first loading the program will give you a clean worksheet. Entering 1 will return you to the existing worksheet if it already exists, otherwise it does nothing. Entering 3 allows you to load previously stored data.

If you enter 2 then a clean worksheet will be printed on the screen, the rows are numbered from 1 to 9 down the left hand side of the screen, and the columns are numbered from K1 to K4 along the top. The small v in the top left hand corner shows the direction in which the cursor will move after the data or text have been entered.

The direction can be altered by using function key F0. The number at the top right is the number of decimal places that will be used in the calculation and display. This can be changed betweeon 0 and 3 using the function key F7.

The dotted line at location K1, 1 is the cursor and is controlled by using the normal cursor keys. When the cursor hits the edge of the screen it will move the sheet along by either 1 row or 1 column.

To demonstrate a typical use for the program, the example shown above is for a small factory producing 12 items and is set up to calculate the profit made by each item and the total profit.

The way in which this example was entered is as follows:

Use the function keys to have the 'direction of cursor after entry pointer' pointing down, and the number of decimal places set to 2. Move the cursor down to position K1, 1 and type in "PRODUCT" followed by Return. You will have noticed two things at this stage. First, the word Product was printed in the top left hand corner as you typed it in, this will always happen and gives you the opportunity to correct any mistakes.

Secondly, the cursor moves down one row ready to accept the next entry. In this case the next entry is the underline symbol, there is no need to count an exact eight symbols, just keep the key depressed until you look to have sufficient, the computer will knock off any extra ones. Carry on down the column entering the product numbers until you reach row 14 and then move the cursor back to position K2, 1. You can now repeat the previous process for columns K2 and K3.

*(continued on next page)*

*(continued from previous page)*

Column 4 is somewhat easier to enter because it only requires a formula. T/Over is of course Volume X Price, so what we want to do is to multiply each value in column two, by its corresponding value in column 3. All we do therefore is to ensure the cursor is somewhere in column 4 then press F1 to indicate a formula is to be entered and then enter "K2*K1" followed by return.

The word calculating will start flashing in the top left corner followed by the printing of the results down to column 4. To obtain the total Turnover we need to add together all the values in column 4, this is done for you if you place the cursor in column 4 then press F2. The result is printed at the bottom of the column, below the dotted line. Now enter columns 5 and 6 as columns 2 and 3 were entered.

Column 7 requires another formula, this time we have a lump sum of overheads that has to be apportioned over all of the products, this can be done in many ways, and in fact the spreadsheet is the ideal way to find out the effect on profits by apportioning overheads in different ways.

In this instance we will apportion the overheads relation to turnover i.e. Total overhead × Turnover/Total Turnover or in Datacalc terms 300,000 × K4/S4 NB! The S4 signifies that the sum value of column 4 is to be used.

Column 8 is for total costs i.e. Overheads + (Material + Labour) * Volume or K7 + (K5 + K6) × K2. Column 9 is for profit i.e. Turnover − T/Costs or K4 − K7. Column 10 is for profit % i.e. Profit / T/Over * 100 or K9/K4 × 100.

The spreadhseet only really comes into its own at this point because you can now go back and change anything you wish and have the whole sheet recalculated for the new values.

For example move the cursor to column 2

and change the value in row 3 to 3000. Now press F1 and the whole shset will be recalculated. A more powerful example is to reduce all the values in column 2 by 10 percent to see the effect on profits.

Move the cursor to column 2 enter F1 for formula then enter K2 × .9. This will multiply all existing values in the column by

*(continued on page 128)*

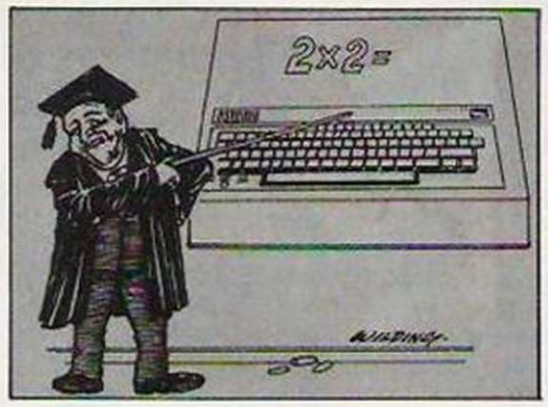
.9 i.e. reduce them by 10 percent. Now enter F1 for formula again and enter K2. This will do nothing to the values already in column 2 but it does remove the previous formula from the column. This is only necessary when you use a formula to act on values in its own column, otherwise each time F3 recalculate is used the values in column 2 would be reduced by a further 10 percent.

The previous example showed how the formula command can be used to carry out arithmetical calculations on columns e.g. K2 × K3. You can also use it for calculations of the type (28 × 10? + 5 or π × 17/4. In fact any of the computers own functions can be used e.g. INT (π*30) is quite valid.

However, this sort of formula will produce the same answer in each row of a column so its use is limited. An interesting variation is achieved however if the letter R is used in a formula. Now R is the variable used in the program to denote the row number so if R is used on its own it will result in the row number being printed in each operative row in a column.

If it is used in combination with some other function or number it can be used to increment. e.g. 10 + (R*.1) will progressively increase the value of 10 by 10 percent. The reverse of this formula will of course decriment the value. R is therefore a powerful tool for loading and manipulating data in the worksheet.

I have used the term operative rows a couple of times within the text and I feel now that I should explain it. When you first enter the sheet it has in fact no size at all, it does however grow as you enter values so that its maximum depth of anytime is only as deep as the last value entered down a column, this is also true for the length of the sheet. The reason for this is to ensure that the calculating functions are not operating needlessly on empty cells.



It also ensures that only the necessary cells are stored when the Save F9 is used. The self expansion of the sheet therefore saves considerable computer time, so it is unwise to use more of the sheet than is necessary as it will only cause delays in the calculations.

If the Escape key is pressed at any time you will be taken to the initial menu.

If a formula is entered incorrectly this will generate an error and again send you to the initial menu.

If the return key is pressed on its own the value above the cursor will be deleted.

If you have difficulty in getting the program to work or simply can't stand the thought of typing in the whole listing, I can supply the program on cassette for £4 if you write to me at 11 Meadhurst Road, Leicester.

*Function keys.*

**F0 — ←+→** This key is used to change the pointer in the top Left hand corner. The direction in which the arrow points is the direction in which the cursor will move after an entry has been made. A plus sign "+" means the cursor will remain stationary.

**F1 — Formula** This key is used to enter a formula into a column. Before using ensure that the cursor is somewhere within the column that the formula is required in.

**F2 — Sum** This key is used to sum all the values in a column that the cursor resides in.

**F3 — Re-calculate** This key is used to re-calculate the whole sheet after a change has been made.

**F4 — Sort** This key will sort a column in which the cursor resides into ascending order and move all the other columns with it.

**F5 — Over Print** This key offers the option of over printing either Titles or Labels or both when the screen is showing any position on the sheet.

**F6 — Jump** This key allows you to move rapidly to any position on the sheet by entering the column and row location.

**F7 — Decimal Places** This key changes the number of decimal places in use between 0 and 3. The number of places in use is displayed at the top Right hand corner.

**F8 — Printer** This key brings a printer into operation, you need to say how many columns you can fit onto a sheet. Eight columns will normally fit onto A4 size paper.

**F9 — Save** This key allows the data on the sheet to be saved.

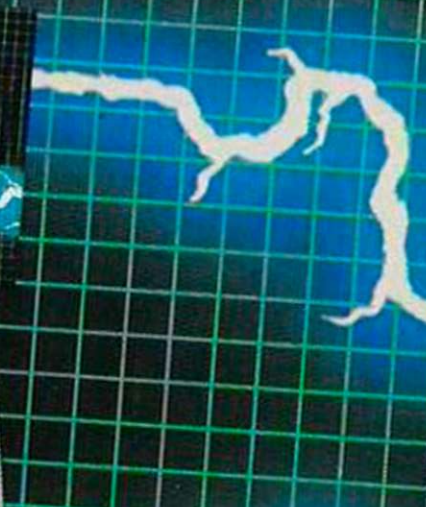
# WHITE LIGHTNING

## LIGHTNING STRIKES TWICE

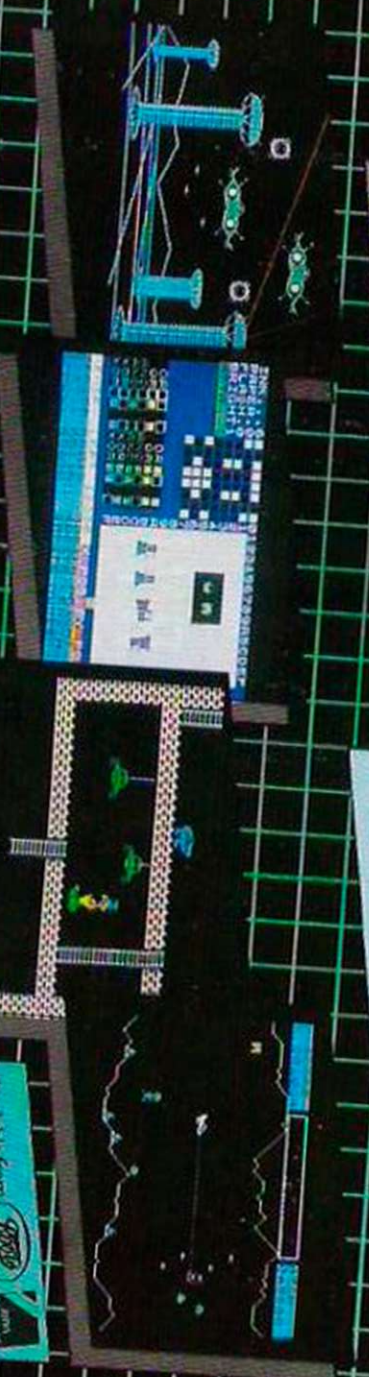
# MACHINE LIGHTNING



**MICRODRIVE VERSION** available for transfer onto 3 cartridges. Write even bigger programs faster.

(Upgrade your existing White Lightning for just £5)

**MICRODRIVE COMPATIBLE**



TWO HIGH POWERED GRAPHICS DEVELOPMENT SYSTEMS FOR THE SPECTRUM 48K.

Machine Lightning is an advanced games writing utility which includes a full Macro Assembler, a Sprite Generator Program and a Monitor/Disassembler. The Sprite Generator Program creates the object code for the White Lightning graphics routines which have almost 100 documented entry points in 3k of code. The comprehensive manual explains how to use two copies of the object code to run machine code routines concurrently using the Z80 interrupts. Games written using Machine Lightning can be marketed with no restrictions.

**THE MACRO ASSEMBLER** This is arguably the most comprehensive assembler yet available for the Spectrum 48k. It supports Macros, conditional assembly and a full screen editor, and occupies 16k of memory.

**THE MONITOR/DISASSEMBLER** As well as all the usual monitor features, Spectre-Mac allows up to 10 breakpoints in ROM or RAM, has front panel display and single stepping.

**THE SPRITE GENERATOR** This is the same Sprite Designer/Editor supplied with White Lightning and can be used to design up to 255 sprites, up to a maximum of 12k.

AND ... LOOK OUT FOR THE LIGHTNING **COMMODORE** SERIES

Basic Lightning, White Lightning and Machine Lightning, all available on tape or disk. Ask your local stockist for details, contact us direct or watch out for our advertisements.

Please send me the following Lightning System Pack(s)

White Lightning £14.95 ☐

White Lightning (Microdrive) £19.95 ☐

White Lightning (Microdrive Upgrade)* £5.00 ☐

Machine Lightning £19.95 ☐

IF YOU TYPED in last month's listings, and managed to get them to work perfectly, then you should by now have realised that used properly, Windos is a pretty powerful aid to graphics creation. There are a few quirks that I neglected to point out last month — if you try to List with the new routines, you will not have a chance to stop the listing, and also no tokens will be printed as tokens, but instead as odd characters. This is not as hopeless as it seems, because you can now set up a character set in Ram, and use codes 128-255 as the user-definable characters.

The normal system variable CharS is the system's character set pointer, except in 64 column mode, as this has its own font near the start of Windos. In addition, you may have discovered that the Plot command works on a full 256 by 192 grid.

Now to the main business. This article is aimed primarily at hackers — ie. fanatical machine-code buffs who delight in nosing their way through other people's programs and systems, and altering them to their own tastes — and ordinary machine-code addicts. You will see in table 1 that there are a few vector tables, which hold addresses of plotting routines, control codes etc. To start with, we'll look at the control code vectors. Remember the window map and the parameter queue?

Well, this is where they comes in. Throughout the following, the byte numbers refer to bytes in the window map, numbered 0-44. When a character gets sent to be printed, it first goes into the A register, then through the current channel until it reaches the output routine.

When it reaches the one in Windos, one of two things can happen. If A is 32 or above, then an ASCII character is output. However,

*(continued on page 133)*

# PROGRAMMERS

## 6502 and Z80
## Spectrum, Commodore, MSX, Amstrad

Bug-Byte Software, one of the UK's top software houses, requires experienced Z80 and 6502 programmers to work as part of its in-house programming team in Liverpool. We are looking for both creative programmers with original ideas, and programmers to specialise in conversion work.

The only qualifications required are programming experience in the computer games field, and the ability to work as part of a team. Salaries will be based on age and experience.

Bug-Byte also requires talented freelance programmers with original ideas, to produce top quality games on a royalty basis. We also urgently require freelance programmers to undertake conversion work on a split royalty basis.

Write in confidence, enclosing details of experience to:–

BUG-BYTE

Tony Milner, Bug-Byte Software, Mulberry House, Canning Place, Liverpool L1 8JB.

# HIRE SPECTRUM SOFTWARE

**OVER 280** different tapes for hire including **ARCADE, ADVENTURE, BUSINESS, EDUCATIONAL**, etc.–even an m/c Compiler. **FREE** 26 page catalogue. **FREE** newsletter, with hints, tips and our top tape chart.

**OVER 3000** tapes in stock, with up to 60 copies of each title for fast service. All tapes sent by 1st class post.

**LOWEST PRICES** – hire up to 3 tapes at a time, from 63p each for two weeks hire. (Plus p&p and VAT). European members welcome.

**Tapes for sale at DISCOUNT prices.** Telephone 01-661 9240 (9am - 5pm) or write for further details, or complete the coupon and **JOIN TODAY** – you've nothing to lose!

**SAVE £3.00!!**

For a limited period, we are offering **HALF-PRICE** membership to readers of this magazine. Join now, **LIFE** membership is only £3.00 (normally £6.00).

**SWOP SHOP**

A new service from N.S.L. **SWOP** your unwanted tapes with tapes from other members for a small handling charge of only 60p (plus p&p and VAT)

**NATIONAL SOFTWARE LIBRARY**

42 Harefield Avenue, Cheam, Surrey SM2 7NE.

I enclose cheque/postal order for £3.00 for LIFE membership. Please rush my membership kit to me. If, within 28 days, I'm not delighted with your service you'll refund my membership fee..

(continued from page 131)

if A is 31 or below, a fair amount of work gets done before anything happens. First the number of parameters it has are checked, by referring to the 32 byte argument table, one byte for each control code.

If this is zero, then the execution address is found by doubling A, adding this to the base address of the control code table, then, in effect, an indirect Call to the appropriate routine occurs. However, if the number of parameters is more than 0, then first the queue is initialised. This is where all the parameters are going to be stored before execution.

Byte 30 becomes A, and byte 33 becomes the number of parameters left to arrive before execution of the control code. Then, on subsequent outputs, the parameters are queued, from byte 15 onwards and byte 33 decremented by 1. When this reaches 0, then the code is executed. The code routine uses (IX+15) etc to fetch the parameters since IX holds the base address of the current window map. Then the whole show starts again when the next character comes through. Confused?

An example of how to alter one of these codes will show the potential of altering these tables. The control code to be changed is CHR$ 29. Normally, this transfers the screen memory to the display memory, but usually these are one and the same. So, to change it to a code which inverts the whole screen, we first need a screen invert routine. See listing 1.

Now we need to change the appropriate vector in the control code vector table. Its address is Base Address, which is 63947, plus two times the code number, so in this case this is 63947 + (2*29) = 64005.

Now using the normal Intel format, 64005 becomes the low byte and 64006 the high byte

(continued on page 135)

# BLABY COMPUTER GAMES

## SPECTRUM DRAGON 32 ATARI VIC 20

## GAMES FROM £1.99

**HUBERT** — Jump for your life, can Hubert change the pyramid colours.
**Spectrum 48K m/c £1.99**

**TRON** — You've seen the film, no try your skill against your partner, can you stay the pace on your light cycle?
**Spectrum 48K m/c £1.99**

**WHIRLWIND — SPECTRUM 48K**

**CHALLENGE — SPECTRUM 48K**

**KILLER KONG** — Featuring five screens of arcade action. Elevators — Kong — Mario — Barrels — Hamburgers — and even Mario's girlfriend.
**Spectrum 48K m/c £1.99**

**BARMY BURGERS** — Baps, Bugers, Cheese and Lettuce — they are all here, all you have to do is to put them all together. It sounds easy doesn't it, but not when you're being chased by a fried egg and sausages.
**Spectrum 48K m/c £1.99**

**GOTCHA** — After escaping from the local nick, Ernie is soon back up to his old tricks again.
**Spectrum 48K m/c £1.99**

**THE CRISP FACTORY — SPECTRUM 48K**

**ICICLE WORKS — SPECTRUM 48K**

**PERILOUS PIT** — Deep underground in the crystal mines roams the dreaded Orbis and his cronies, who are hell bent on stopping the attempts of Boris the miner to fill his truck full of crystals — 4 screens.
**Dragon 32 £1.99**

**BOMBS AWAY BASIL** — Sir Basil is trying to defuse the bombs before he is attacked by his only known fear, SPIDERS. Yes, the truth is finally out and, the cunning natives place Spiders near the bombs they plant.
**Dragon 32 £1.99**

**DARTS** — Open a couple of cans of beer, sit back, and get all the excitement of an evening in the local.
**Dragon 32 £1.99**

**BORIS THE BOLD** — Urgent telegram for Boris, Stop. Please come home, Stop. Beware ofthe patrollers, lasers and bombs, Stop. Please grab a few dimands on your way, Stop.
**Dragon 32 £1.99**

**THE BELL** — You have probably read the novel or seen the film — now you can play the game. Rescue Esmeralda from the bell tower. 14 screens of danger for you to challenge.
**Dragon 32 £1.99**

**MCDOUGALS LAST STAND** —

**GUIDO** — Guido is a small ravenous Rabbit who's sole aim in life is to fill his little tummy full of the farmers best carrots. Can you help him in his ravenous rampage? One small tip — watch out for the bouncing balls, this farmer is as crafty as that darn Rabbit.
**Spectrum 48K m/c £1.99**

**ANDROID ATTACK** — A nuclear reactors has malfunctioned and is in danger of melting down. The only way it can be saved is by sending in a brave volunteer to release the water reservoir manually — congratulations, you've got the job! Except that the andoids have other ideas.
**Atari 16K £1.00**

**GOBBLER/LASER BLAST** — Run around the maze eating the oxygen pills but watch out for the galactic guard of these oxygen pills who will destroy you if he catches you.
Blast the last few laser implacements left on the planet Genymed it's either them or you!
**Vic 20 unex £1.99**

**MORBID MANSION** — Ten rooms in this old Mansion must be negotiated before you come face to face with the dreaded Morbid. You are alone then suddenly the clock gets to 12! 10 screens arcade adventure.
**Dragon 32 £3.99**

**BUG ATTACK** — It was a nice peaceful afternoon in the garden then suddenly all hell let loose, there were BUGS everywhere all I had to combat these fiends were 3 cans of anti Bug Power.
**Vic 20 unex £1.99**

Send sae for full list.

Any of these games are obtainable direct from the company or shortly from Your Computer, Video Shop or where you see the Slush Puppie sign.

Please add 50p Post & Packing.

**BLABY COMPUTER GAMES, DEPT YC, LUTTERWORTH ROAD, BLABY, LEICESTER.**

**TELEPHONE 0533 773641 TELEX 342629 JRHHG**

# The problems of looking after your Micro...

As well as providing the solution to many a problem, Micro's however do present more than a few of their own.
Like how do you prevent it gathering dust when not in use, stop it from getting kicked when Mum's cleaning the lounge, divert the dog from showing it his affections, or even ensure it at least "arrives" safely when Dad decides to take it down to the local.

We at P.A.S. realising these needs, have now developed a range of three superbly made protective cases designed specifically for Micro's. Each case is constructed from Solid Resin Fibreboard has a fully protective foam lining a carrying handle internal retaining strap, a double snap-fastening lid and a price that defies even Micro logic.

Prices apply to U.K. only.

PAS COMPUTER PRODUCTS LIMITED
UNIT 18, CENTRAL TRADING ESTATE,
STAINES, MIDDLESEX TW18 4UX.

*(continued from page 133)*

of the routine address, in this case 65300. The listing shows how its all done. If we wanted to add a routine which needed parameters then we would have had to have changed the appropriate byte in the argument number table.

Providing you know Z-80 assembly language, altering Windos is not at all difficult. At the start of Windos there are four JP addresses. The first two you know, at 6000 and 60003, but 60006 is the entry point to Windos' output routine. Just LD A,n and Call 60006 within your routines. Every single register is saved, except the I and R registers. Obviously, this slows things down a bit, but the peace of mind of knowing that no registers will be corrupted is worth it.

This vector can be altered so that before outputting a character, something else can be done, like a beep, before jumping back to the output routine. This might be useful to someone. The fourth jump is to the copy screen routine. This normally points to a Copy routine for the ZX Printer, which incidentally copies all 192 pixel lines.

However, this can be altered so that it jumps to a full-size printer copy outline instead, and this will be useful to those fortunate enough to have real printers. CHR$ 15 uses this, so any change to this would affect CHR$ 15.

Determined hackers may like to look around the graphics area of Windos. All the relevant addresses are to be found in table 1.

Hopefully, after reading this you will understand and appreciate more fully the thinking behind Windos. I have tried to make it as expandable as possible while still leaving plenty of memory to work with.

You may be cursing the inadequacies of Sinclair Basic which make many programs using Windos fairly bulky or tedious to write. Here is a partial solution which will help Interface 1 owners no end. In a mere 901 bytes I have added 23 commands to the Spectrum's vocabulary using the very well documented method of extending the Basic, which will not be described here.

To keep the size of the Basic down, I used a list to hold the addresses, the command name itself and the length of the name, and I will show you how to add to this list at the end of this article. This method makes adding commands easy.

First of all, to get the Basic going type in and save the loader program. Then Run it. If there are no errors, Saving will begin automatically on Microdrive cartridge. Then, to initialise the Basic, type

RANDOMIZE USR 59000

This must be typed every time you load in the Basic, or want to re-initialise, possibly after a New. Now, making sure Windos is in memory, type the following command line:

*NEW:*INIT:OPEN # 2,"p"

Windos has just been initialised. If the system crashes, check your listing for errors that the checksuims were not able to detect. The full list of commands is as follows:

*PUT n,n,n . . . or *VDU n,n,n . . . n

These are exactly the same and simply output the character codes n directly through the Windos output routine — this is necessary because of the weird things that happen if you don't! — Careful of too many parameters, since the machine stack is used to hold them.

*PLOT mode + routine,x,y: This is exactly the same as CHR$ 14, except it looks much better!

*WPOKE byte, value: This is the window poke. Beware of byte numbers over 44 — you will be poking another window map.

*CSIZE width, height: The same as the QL command, and the same as CHR$ 28.

*UP, *DOWN, *LEFT, *RIGHT: These four commands set the direction of the large printing. Careful use can lead to some very professional effects.

*LARGE: Sets large characters mode.

*NORMAL: Resets to either 32 or 64 column mode, depending on what bit 6 of byte 12 is.

*32COL: Sets the 32 column mode.

*64COL: Sets the 64 column mode.

*INIT: Initialises Windos, and interfaces it to the standard Spectrum system. Equivalent to RANDOMIZE USR 60000.

*NEW: Resets all eight window maps. Equivalent to RANDOMIZE USR 60003.

*DOKE address, contents: This is a two byte Poke, nothing to do with Windos.

*CALL address: Calls the machine-code routine at the specified address.

*RENUM start, increment: At last, a renumber command. No Gotos or Gosubs done, and the parameters are 8 bit not 16. *RENUM 10,10 is valid, but *RENUM 1000,300 is not.

*SCROLL byte 41, byte 42, repeat no: This is a very useful command for setting up first the pixel scroll register and then the attribute register. Then the actual scrolling takes place. The registers remain altered after this command so *VDU 2, number would result in the same scroll taking place.

*WINDOW tlx,tly,brx,bry: This is the same as CHR$ 1, ie. it defines the window size.

*CLS: This is obvious!

*GCOL: This sets the graphics attribute. Note: All of the commands must be preceded by a '*' but thereafter, Upper or lower case may be used in any order, eg. *Large is valid. Also because of the Rom routine NXTCHR, a command spaced out eg.

*Normal would be accepted. The demonstration is a copy of the subroutine 'picture 2' in the main demo of Windos, and shows how concise programming may be achieved. Obviously, the *Plot, *VDU, *Put and *WPoke commands will be used most often and these will cut the size of your programs down a great deal.

There now follows an explanation of the method used to enable lots of commands to be added in a relatively small amount of memory. There is a list at the end of the Basic starting at 59707 and finishing at 59900 and it takes the form:-

```
LIST DEFB length of following string
     DEFM "*command"
     DEFW address of syntax and runtime
     routine

     DEFB 0 terminates the list
```

Now, the final 0 which terminates the list is at address 59900. There are 99 bytes spare between here and the start of Windos, plenty of room in which to place (a) new command description(s), but make sure that the DEFB always contains the full length of the string following, and that the list is terminated by a 0. To get the base address of the current window map into IX just use in assembly language,

LD IX,(23728)

Of course, you need a lot of information and a good assembler before you can start creating the Basic of your dreams. I would suggest that, money permitting, Hisoft's Devpac and Dr Ian Logan's books, *Spectrum Microdrive Book* and *The Complete Spectrum Rom Disassembly* are absolute essentials, not forgetting the trusty old Spectrum Manual.

If you run out of list space, the address which holds the list pointer is 59019, but take care when changing this, and transferring the old list to its new location, unless of course you don't need the commands for Windos, or Windos, in which case you have 5K of list space available.

I hope that you will find a use for Windos and the extended Basic, but to give you some ideas, why not write a 64 column word processor, or spreadsheet, or try your hand at a text and graphics adventure, using the various graphics routines, and remember that the Sinclair graphics routines still work.

Other ideas are a drawing program making use of the alternative screen facility, or for the very ambitious, a multi-tasking language in machine code making use of the windows, which have completely separate identities.

Once again, if you haven't the time or the energy to type in the listings or you have lost the relevant issues, a tape is available for £3.50 from Ian Briscoe, 32 York Road, Maidstone, Kent, ME15 7QY, which has all the programs and a few extra character sets thrown in. ■

# Advicewise and pricewise, you'll find it hard to beat Streetwise.

Sinclair QL and Spectrum+ · Robotics · Software · Communications · Peripherals · Accessories · The lot

At Streetwise you know where you stand. If a product's worth buying, we make sure we stock it. So you get what you want everytime, without the hassle of waiting for your order.

You can buy the complete Sinclair range over the counter – including the new QL, Spectrum, Spectrum +, and the spectacular Wren Executive System. And as part of our enormous range of peripherals we've made a big feature of communications and viewdata.

Our demo facilities let you try before you buy so you can match up a modem to your micro, let a robot run around, or check out items from the vast range on offer –

Sinclair QL · Spectrum · Spectrum + Wren Executive System · Movit self-assembly robots · Software · Viewdata and communications · Printers · Monitors · Interfaces · Joysticks · Light rifles · Data recorders · Keyboards · Microdrives · Accessories · The lot.

## D M Brown with an aid to saving memory on the CBM-64.

MEMORY MANAGER provides a number of extra facilities for saving blocks of memory for both machine code and basic manipulation.

To understand how it works we must first have a look at the way information is stored on tape. Figure 1 shows this in diagramatic form. The program or data file has at the start a "header". This tells the computer what type of information follows, where it should be located in memory as it is loaded, and what name it has, if any. The possible identities (ID) are as follows:-

1. Program header.
2. Data set.
3. Binary data.
4. Data header.
5. End of tape marker.

The ID is the first byte in the header. Then there are two numbers — four bytes — defining the memory locations to be used. Remember, the numbers are nearly always stored with the low byte first followed by the high byte. The first number is the starting address, the second is the finish or end address and the data following the header will normally be sent to successive locations from the start address to the end address.

Occasionally it may be required to load the data into an area of memory different from that specified by the header. In this case the destination is defined immediately following the header.

Data can be put on tape by the Save or Print# commands in Basic or by transferring information using machine code. Both the Print and machine code methods are available in this program. In general Method 1 is used to define a Basic language process and Method 2 a machine language version.

In general, the Basic version is protected by various automatic checks in the operating system while the machine code version is not. The machine code version takes typically one third of the time to execute.

So how do we use the program? Figure 2 shows the available menu. Decide on the area of memory you wish to save. All addresses are decimal. A hex to decimal or decimal to hex conversion can be done using options 3 and 4 from the menu respectively. When you enter "1" from the menu indicating "Save" you will then be asked to choose Method 1 or Method 2 for a Basic save or a machine code save.

With either method you will need to enter the start address and the finish address of the section of memory you wish to save plus the name you wish to allocate to the file. Do not be surprised if having decided on a Method 1 save the tape keeps stopping and starting. This happens every time the tape buffer is transferred to the tape and has to be refreshed. When the tape stops the screen also flashes to the normal display. At the end of the save the program returns to the menu.

To get the file from tape back into memory enter 2 from the menu. Again you have to say whether you wish to use Method 1 or Method 2. You must use a Method 1 load for a program saved by Method 1 and a Method 2 load for one saved by Method 2. What happens if you forget what you used? This is where the header routines, called from number 5 on the menu, are useful.

*Figure 2: Available menu.*

| *Menu* | |
|---|---|
| 1. Save | 4. Dec to hex |
| 2. Load | 5. Header |
| 3. Hex to dec | 6. Free bytes |
| | 7. Exit |

*Figure 1: Format of a header.*

Start of header

| ID | START ADDRESS | END ADDRESS | N | A | M | E | 32 | 32 |
|---|---|---|---|---|---|---|---|---|

1st Byte ◄—— 4 Bytes ——► File name up to 16 characters. Names less than 16 characters in length are extended by spaces.

The clue is the ID. Look at the header using Method 1 or Method 2. At this stage beware, a header Method 1 used for a program saved by Method 2 will give a "string too long" error. This is not too bad as you will immediately use Method 2 header to get the necessary information. More misleading is the problem of using the Method 2 header routine with a tape saved by a Method 1 save. In this instance you appear to have the correct information.

As far as the header is concerned this is true, but the addresses are not the addresses where the data will be sent, rather they are the addresses where the Basic program resides. The memory addresses you need actually follow the header and you must use a Method 1 header routine to display them. How do you know then what to use? Look at the ID. A

*(continued on next page)*

(continued from previous page)

header showing an ID of 1 is a program header so a Method 2 header and load routine should be used.

A header showing an ID of 3 is most likely to be a machine-code program. Use Method 2 again. An ID of 4 is the one you get when the program was saved using Method 1, therefore use Method 1 header and load. These are the ID's you will come across using this program. ID's of 2, indicating the start of a data set — Method 1 — and 5, indicating an End of Tape signal also occur.

If you cannot face typing in all the program, a cassette containing this and the screen save facility, is available from: P and D Computers, 80 Coombe Park Road, Coventry CV3 2PE at a cost of £3.50 including P&P.

# ...LET US BROADEN YOUR HORIZONS

SPECTRUM

## Digital Sound Sampling Technology. NOW Available on your Spectrum

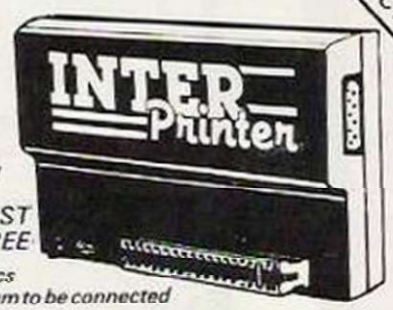
**Complete unit and Software Package**

**£49.99** POST FREE

• Digital Sound Sampling has only previously been available for large micros and costing at least 10 times the amount. • The Sound Sampler allows you to record "Digitally" any sound into memory and instantly replay it at any pitch, forwards, backwards, ascending scale, compressed, expanded, with echo, endlessly looped etc. • Supplied complete with Software package to facilitate the above operations, plus on screen "Voice Prints" + Frequency Plotting. • With on screen keyboard + drum kit a whole symphony could be produced from a single Sample Sound. • This is a professional unit featuring 8 Bit D to ADC converters as used in Digital equipment now sweeping the music world. • Although the unit is not a toy, giving truly astounding results for the musically inclined, we have incorporated a games interface to allow you to use Sound Sampling in your own games etc., so the Sound Sampler would be of interest to everyone.

SPECTRUM

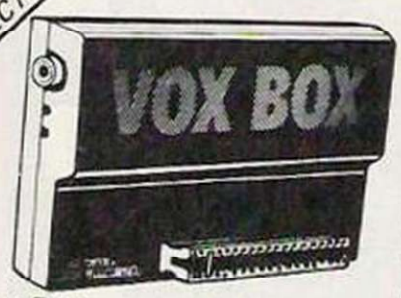
## NOW! You can connect your Spectrum to a full sized printer...



ONLY **£34.99** POST FREE

- The Datel Interprinter is a Centronics Interface which allows the Spectrum to be connected to a whole range of full sized printers.
- Comes complete with connecting cables and 36 way plug to fit most printers including Epsons, Seikoshas, Star, Tandy, Shinwa etc.
- Complete with software to generate text copys plus additional software to facilitate hires screen dumps.
- The Interprinter plugs straight into the expansion port. • **Available Now!**

SPECTRUM



ONLY **£34.99** POST FREE

## THE ULTIMATE SPEECH SYNTHESIZER Plus built in Joystick Interface

- Easily program any word from a unlimited vocabulary.
- Joystick Interface accepts any standard type (Kempston compatible) including Rapid Fire.
- Also boosts Spectrums sound through your TV.
- All in one unit, no messy wires. • **Available Now!**

COMMODORE

## NOW for the Commodore 64 The COMMVERSA © SPEECH SYNTHESISER CARTRIDGE

**£24.99** POST FREE

**PRICE BREAKTHROUGH.**

• Simply plug into the exciting world of Speech Synthesis. • The Commversa has an unlimited vocabulary using the now standard Allophone System. • Programming is so easy and sentences can be made up in minutes! • Comes complete with full instructions + Free Demo Tape. No extras required. • ***Available Now!***

SPECTRUM

## Now you can create Superb Graphics easily with the New Lightwriter

ONLY **£16.99** POST FREE

**Lightpen comes complete with Interface & Software**

• Just plug in the Datel Lightwriter and draw circles, squares, rectangles, make superb hand drawings, paint, fill, erase, choose inks, paper, colours. • Save your results into memory (48K) and use in animation or save onto tape to use in your own games. • All functions selected from screen menu with the lightpen. • Unbeatable value. • Nothing more to buy.

SEND NOW AVAILABLE FOR IMMEDIATE DELIVERY

SPECTRUM

## NEW ALL SYSTEMS GO!! SWITCHABLE JOYSTICK INTERFACE

*With built in Sound Booster for "On Screen" sound*

ONLY **£22.99** POST FREE

**UNBEATABLE VALUE MULTI-FEATURE UNIT!**

**The TURBO ACE gives maximum joystick compatability by simply switching through all systems ie, Kempston , Cursor , Interface 2.**

- The all in one unit also features an Amplifier which delivers the sound from your games etc., directly through your T.V. (also gives keyboard click which helps when typing data etc.).
- These features make the TURBO ACE the number one add on for the games player.
- Accepts any 'Atari' compatible joystick.
- **Available now.**

SPECTRUM

**The ultimate add on for the keen games player!**

## Joystick Interface Plus Spectrum Soundbooster

Actually Amplifies through your TV Speaker

ONLY **£17.99** POST FREE

FEATURES INCLUDE

• Joystick interface compatible with a huge range of games (Kempston system) • Compatible with any Atari type joystick including auto rapid fire models. • Amplifies Spectrums 'Beep' into a roar through your TV speaker! (fully controllable). • Stylish all in one unit, no messy wires. • **Available Now!**

SPECTRUM

**At last, the first joystick that puts the firing button where it should have been in the first place.**

TRIGA COMMAND IS HERE

## THE TOP AMERICAN JOYSTICK IS NOW AVAILABLE IN THE U.K....

**£19.99** ONLY POST FREE

• Including Interface to plug straight into the Spectrum. • The first Joystick to give you "Arcade" feel and control. • "Jet Style" heavy duty, diamond cut grip. • Fire Trigger placed under your index finger... the finger with the fastest reflex action. • Self centering, 360° action. • Compatible with most of the latest Software (Kempston system).

***Also available for Commodore/Atari £9.99***

# SCREEN SAVE

D Maynard presents a program which allows you to save what is on your tv screen.

THIS PROGRAM allows you to save what is on the monitor or television screen of your Commodore 64 and load it back at a later stage. All colours and characters are saved. All the VIC registers are saved.

The problem with saving a screen is that the tape operating instructions corrupt what is there. We therefore have to save the screen information into an area of memory that is not corrupted. This is done in a machine-code routine and another machine-code routine then saves this area of memory to tape. Although the tape operating instructions appear on the screen they are not saved.

In the load condition the screen data is loaded from tape into an area of memory and then transferred into video memory. In order to reproduce the whole screen and prevent the "Ready" signal appearing, the program is looped so that the "Ready" signal does not appear until a key is pressed.

The program is in two parts. Lines up to 190 are necessary to load the data into memory for the machine code routines. When this is run the lines are removed by the New statement in line 190. Then lines 60000 on are entered together with the program that produces the screen to be saved. If you change line 60120 to Return a member of screens can be saved using

GOSUB 60000

When the program runs, nothing happens!

This is because it is waiting for you to press S for save or L for load. No prompts are given because they would appear across the screen you are trying to save. When you press S the prompt Press Record and Play on Tape appears.

| | | ) |
| 49512 | C168 | ) |

## Saved to another area

In the instant between pressing S and the prompt appearing all of the screen and colour memory has been saved to another area of memory. The memory map of this area is shown in figure 1. When you press Play and Record the screen data is transferred from the new location to tape.

If, after running the program you press L the press play on tape prompt appears and the data can then be loaded from tape into memory and afterwards transferred to screen

*(continued on next page)*

(continued from previous page)

memory. When you wish to continue press any key and the Ready prompt will appear. The last screen saved or loaded can always be recalled to the screen using

SYS 49395

If you wish to save sprite data it is necessary to save the area of memory where the data resides. This must be done so that when you wish to recall the screen you must first load the sprite data. When saving you are prompted to provide a file name, a start address (decimal) and a finish address of the area in memory to be saved. Use

RUN 60200

to save an area of memory.

A problem may arise if the program generating the screen to be saved occupies locations from 49152 to 49512 or 50944 to 53019. These are used by the screen save routine. When relocating the machine code the bytes that are underlined will need changing. In the program, bytes 49152 to 49155 (C000 to C003 hex) are used as stores. The relocation must allow space for these four bytes.

Figure 2 gives the memory map of all machine code routines and registers.

Remember to save lines up to 190 first, then lines 60000 onwards afterwards. ■

HISOFT

ULTRAKIT £9·45

*The most powerful toolkit yet for ZX BASIC. All the features you will ever need; AUTO insert, full RENUMBER, block DELETE, CLOCK, ALARM, error trapping, break trapping. Full TRACE with single-step and much, much more. Makes ZX BASIC easy-to-use and powerful.*

DEVPAC £14

*An excellent assembler, an advanced line-editor, a comprehensive disassembler and a superb 'front panel' debugger all in one package. Used by many leading software houses to write their games. "Buy it!" Adam Denning 1984.*

PASCAL £25

*A powerful and almost full implementation of Pascal - not a Tiny Pascal. A valuable educational and development tool, programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turtle Graphics package. " I haven't seen any other compiler that could match Hisoft's Pascal"*

HISOFT
180 High Street North
Dunstable, Beds. LU6 1AT
Tel: (0582) 696421

HISOFT

C

*for the ZXSpectrum*

*Hisoft is pleased to announce a new compiler for this popular and effective systems programming language. Not a tiny-C but an extensive, easy-to-use implementation of the language. Allows direct execution of compiled statements. Supplied with function library. Available direct from Hisoft for £25, or write for further details.*

*All prices, UK delivered, relate to 48K ZX Spectrum versions. Our software is available for many other Z80 machines e.g. Amstrad CPC 464, MSX, Memotech, SHARP MZ700, New-Brain, CP/M etc. Please write for details.*

## ORIC JOYSTICK

Suitable for use with Commodore 64, Vic 20 and Atari **£9.95**
For use with Oric/Atmos Oric Interface required **£11.50**
For use with Spectrum ZX81 Interface required **£7.95**
Tip Fire Button and side fire button fast action.

## TRACKBALL

Improve your scores and skills with the Computek Trackball. Suitable for use with Commodore 64, Vic 20, Atari, Oric 1, Atmos and Spectrum use interface. **£17.95**

## COMPUTEK JOYSTICKS

For use with the BBC Computer. Metal shaft, 2 fire buttons **£12.95**

## PM C16 CASSETTE DATA UNIT

Designed for use with Commodore +4, Commodore 64 and Vic 20. This cassette unit is a device for storing and recalling computer programs on ordinary cassette tapes. It can be used for saving programs you have written and want to recall for later use. It can also be used to read pre-recorded programs that you have purchased. **£24.95**

## DUST COVER

Clips onto the back of the Commodore 64. Pivits up to allow use of keyboard, fully moulded, clear plastic dust cover. **£7.95**

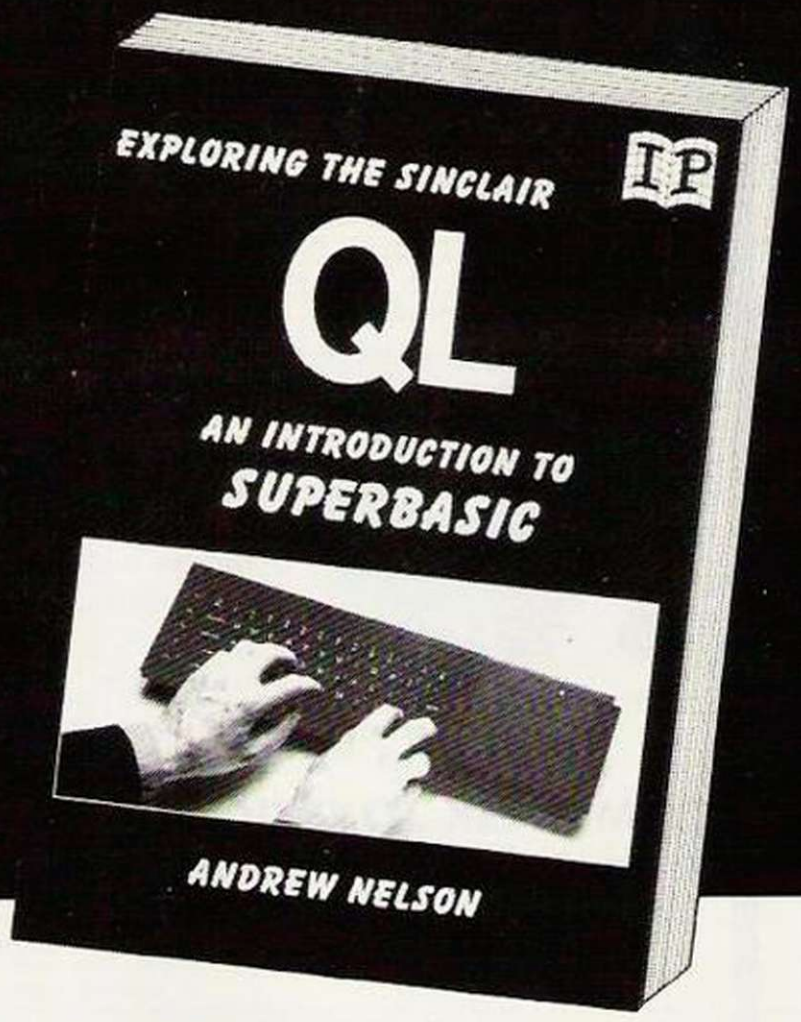
# TWO GREATS FOR THE SINCLAIR QL



## Tim Hartnell's QL Games Compendium

From Tim Hartnell (the author, PCW magazine called 'Mr Sinclair'), comes this major games book for the QL . . .

Not only does it contain listings for more than 20 complete games, but the detailed instructions and ideas will help you develop your own games, whilst improving your programming as you do so. There is even a complete chapter to teach you how to create moving graphics games on your QL!

**The Programs include:**

**ELIZA** — in which your QL acts as a psychiatrist and talks to you.

**QTHELLO** — challenge your QL to a round of Reversi/Othello.

**MAGICIAN'S MAZE** — high adventure exploring ruins after gold.

**DETECTIVE Q** — solve the murder; different each time it runs.

**STOCKBROKER** — a challenging simulation puts thousands in your control as you work towards getting a million.

**TRYST WITH MEPHISTOPHELES** — nearly 20K of challenging adventure.

**QL RACER** — real-time moving graphics, in a game few will win.

## Exploring the Sinclair QL An Introduction to SuperBASIC

Here's your chance to explore the potential of SuperBASIC, the sophisticated language supplied with the Sinclair QL.

Designed to help you write better, clearer programs, Sinclair SuperBASIC is a state-of-the-art programming language, a language which keeps pace with the hardware innovations of the computer.

Andrew Nelson, author of several popular computer books, explains all the important concepts, key words, commands and statements of SuperBASIC. In this book, he explains that many of the programming skills you have from the Spectrum can be directly transferred to the QL, and show how — as you learn the new words in the QL's vocabulary — your programs can gradually be made more complex and sophisticated, by incorporating the new commands and statements.

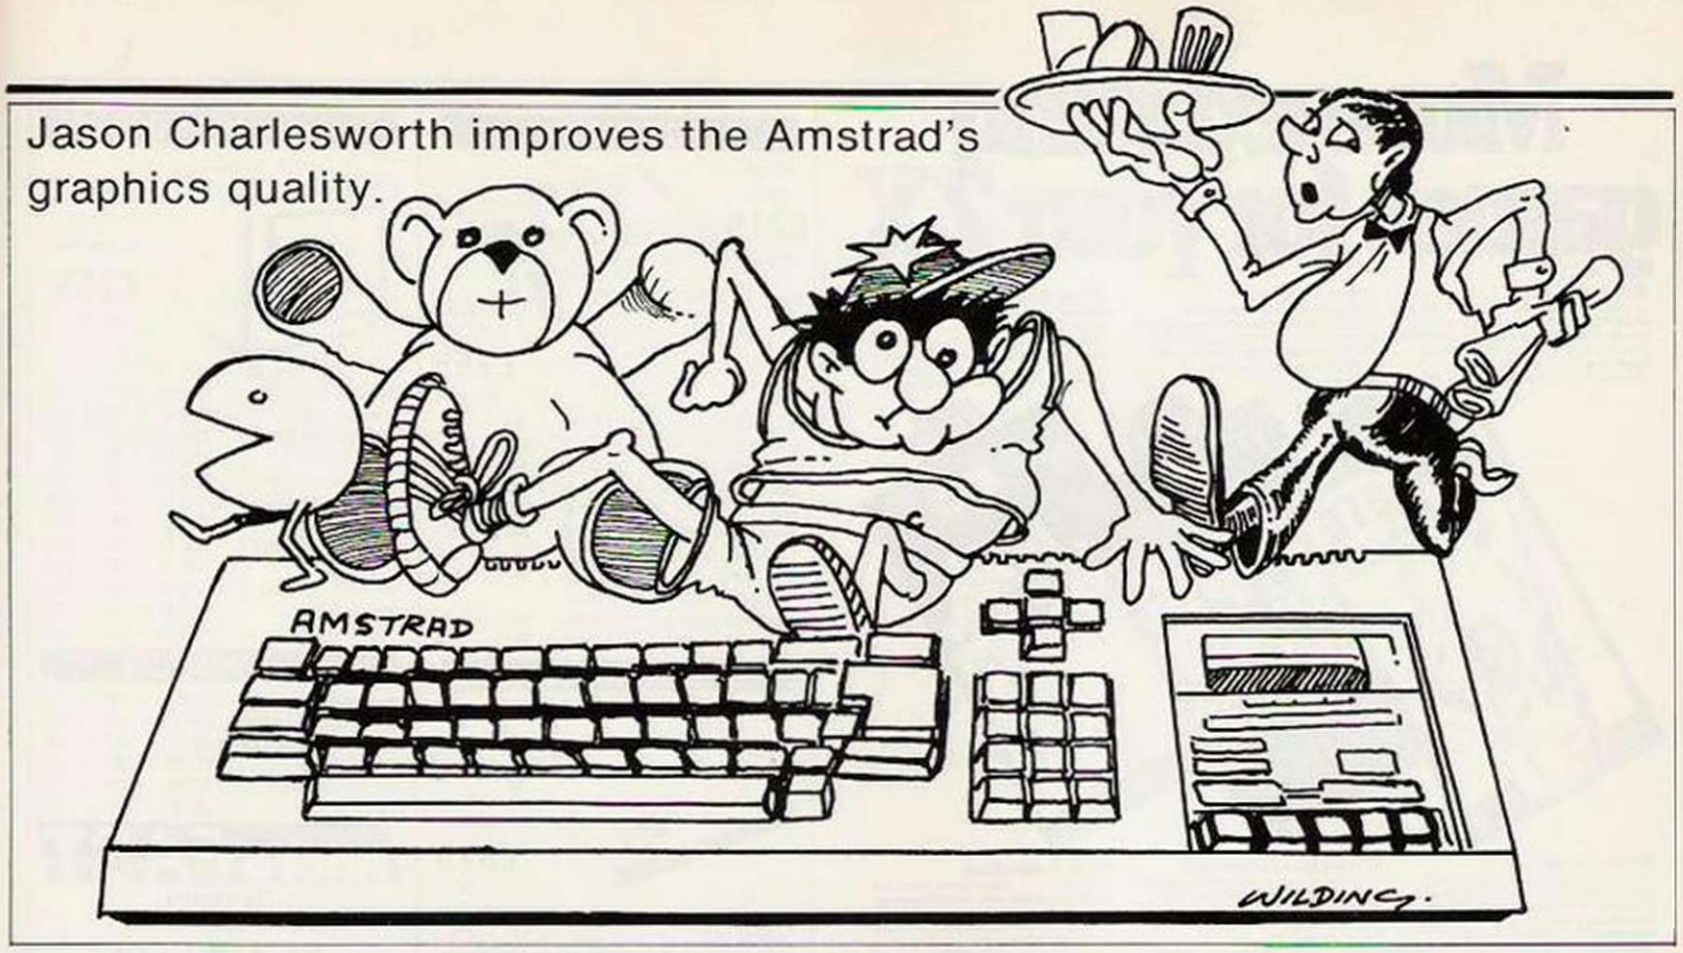
Jason Charlesworth improves the Amstrad's graphics quality.



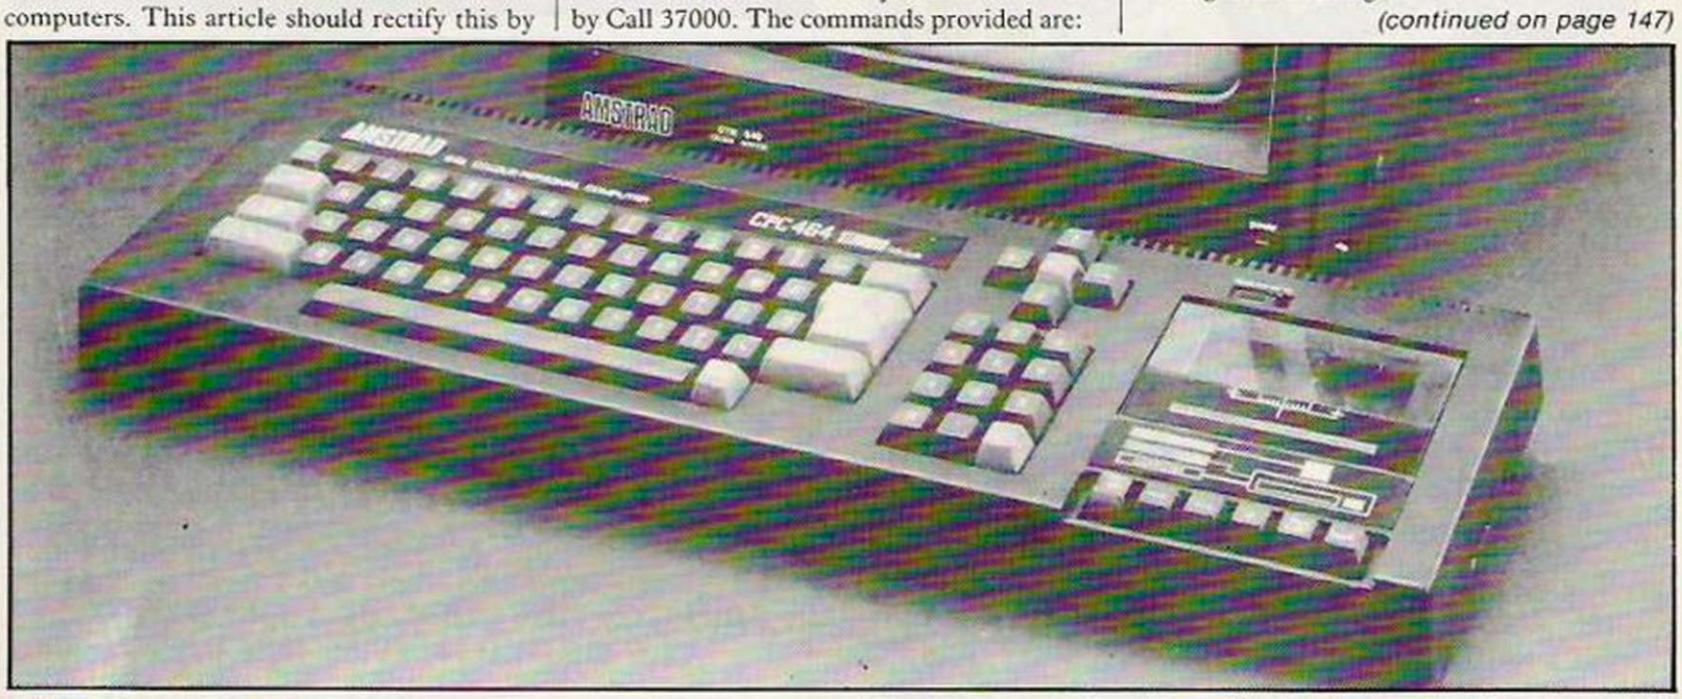
# AMSTRAD SPRITES

THE AMSTRAD is a very well designed computer which is extremely strong in all areas except that of graphics. It has the usual Plot and Draw commands but does not contain any sprite routines, Fill commands or Scroll command unlike most recent computers. This article should rectify this by adding five new Basic commands to Amstrad Basic. These are actually new commands, not just a sequence of Pokes and Calls.

Listing 1, when entered and run will provide these commands but before the commands can be used they must be activated by Call 37000. The commands provided are:

**SPRITEON,X,Y,Z** — This works only in mode 0. X is the X axis co-ord (0-143) and Y is the Y axis — top = 0, bottom = 183 — and Z is the Sprite number — 1 to 15. If any of these are out of range, the routine will return, having done nothing.

*(continued on page 147)*



*Listing 1.*

*(continued from previous page)*
method of telling the Amstrad that the new commands exist.

If you have typed in the run listing 1, save the resultant code with save "commands",b, 37000,500 and any time you need these commands, load them in with memory 36999: Load"":Call37000. The second listing, listing 2 is a sprite editor and this creates the code for the sprite design — without it the first two commands are almost useless.

Type in and run listing 2 and type how many sprites you want to define. You will then be presented with a grid, a list of the colours to one side and a list of the commands at the top. You can move your cursor round the grid — using joystick 1 or cursor keys — and setting or resetting the colour to Pen colour or background colour respectively using the fire or Copy key.

This means pressing the fire or copy key will set a cell to the present pen colour and pressing it again will return the cell to background colour. The commands at the top are:

P — Change the present pen — the colour of the pens are printed to the right of the screen.
I — Change the colour of one of the pen's ink.
N — Start working — or continue working — on another sprite.
C — Clears a sprite and returns to a clear grid.
S — Saves the sprites to tape.

Using all these commands, complex sprites can be designed and saved to tape. In future they may be loaded into memory using Load"" and used by the sprite commands as previously described. The final listing — listing 3 gives a demo of the commands. To run this, type in the program then load in the new commands with Memory 36999:Load"": Call 37000 and then run it.

This demo illustrates how to use all the commands but the most interesting is the sprite demonstration. By using the Amstrad interrupt facility, the Amstrad keeps removing the sprite, moving it a bit then replacing it, animating it. If, however, several sprites are used and/or the amount they move is large the movement is jerky — the first sprite demonstration. However if a limited number of sprites are used and these move perhaps 1 pixel at a time, the movement is very smooth — sprite demonstration 2.

Finally, it should be noted that the Fill and the Spriteon commands assume that the background colour is pen 0 and unpredictable events may occur if this is not so but this should be no major problem as on switching on, the computer immediately makes pen o the paper colour. ■

# ZAXXON

SEGA

## The Unsurpassable Experience.

Sysoft

Now you can play one of the most challenging arcade games on your home computer. ZAXXON's incredible 3-D graphics, diagonally scrolling screen and supersound are reproduced in great detail. Everything you love about the arcade game is here – and much more. ZAXXON is now more difficult than ever before! So hang onto your joystick and keep firing. Then practice. You may eventually encounter the deadly ZAXXON himself.

# RS 232 & PARALLEL PRINTER INTERFACE for ZX SPECTRUM

**Connect to professional printers with this improved and cheaper printer interface.**

£34.95 cable £9.95 inc. VAT

ZX Lprint III interface enables your ZX Spectrum computer (16 or 48K) to print on almost any dot matrix or daisywheel printer with RS 232 or Centronics input. Just plug in ZX Lprint III and LPRINT and LLIST commands will work. COPY works without any additional software on Seikosha 100 & 250, hi-res Epsons, Star 510, 515, STX 80 Gemini & Delta, Walters WM80, Shinwa and CTI...Plus Seikosha GP 700 in full colour. COPY on CGP115 and Microline is optional.
And because NO additional software is needed all of your RAM is free to take Tasword 2 or Kemp Business Accounts, Viewfile etc.

- WORD PROCESSING
- HIGH RESOLUTION SCREEN DUMPS
- PRINTS SPECTRUM AND USER DEFINED GRAPHICS
- JUST PLUG IN FOR LPRINT LLIST and COPY
- COMPATIBLE WITH MICRODRIVES & PRESTEL ADAPTOR

ALL VIC-20 owners will, at one time or another, have envied the loading speed of other computers and more recently the new Turbo load used on some games. It was because of this dramatic difference in speed from the normal cassette operation that I attempted to write my own Zip-loader with the result of a program which will Load and Save reliably at a faster speed than the Commodore disc drive — about seven times faster than normal.

The difference in speed is due to two main factors:

- The data is stored at about 3200 baud compared with the normal rate of 1150 baud.
- No error checking other than a checksum is carried out, hence no redundant data is saved along with the program — unlike the normal situation where sync bits, parity bits, parity bytes and repeat blocks are used.

Despite this lack of error checking and correction, the recording is very reliable and I have yet to get a load or verify error. Since the program records at about 400 bytes a second it is recommended to use fairly high quality cassettes, as you should with all computer programs, because only a little dropout on the tape could render the recording useless.

Once the program has been initialised by a Sys to its start address then the Load, Save and Verify commands make use of the Zip program. The commands operate exactly as normal with the exception that when saving, a secondary address of two does not produce an end of file header. For example:

SAVE "TEST PROGRAM",1,2

has the same effect as

SAVE "TEST PROGRAM",1,1

All the normal error messages remain the same with the exception that if it is unable to understand a file header it gives File Data Error.

The Zip operation will also work with all decent monitors etc. for saving machine code if they use the standard jump vectors.

There are also a few refinements over the normal cassette operation:

- The program flashes the border colour while loading data to indicate error free operation.
- The normal limit of 16 characters for a filename no longer exists and up to 186 are recorded. This may be used to good effect to produce entire title screens from the filename alone.

To enter the program type in listings 1 and 2. Listing 1 is of a hex loader which I would recommend typing in, even if you have a monitor, because it allows you to locate the program anywhere in memory. Recommended places would be 23552 onwards on a Vic-20 with 16K expansion. One word of warning is that the Zip program does not protect itself from being overwritten by your program, variables or strings. Hence, if required, you should move the top of memory pointers down to protect it.

The listings should cause no problem when entering since the Zip program is only about 860 bytes long and each line of data has a checksum which allows the hex loader to identify any errors when it is run. Once the entire program has been typed in, it should be first saved, then run. It will ask for the address where the machine code is to be put and if no errors exist it will give you the option of saving the machine-code Zip program. A Sys to the start address will initialise the Zip program while pressing Run/Stop, and Restore reverts the cassette operation back to its normal slow mode.

*(continued on next page)*

*(continued from previous page)*

The functioning of the reading and writing operations require very precise timing, hence the program makes extensive use of the count-down timers which exist in the Vic's VIA. These counters allow you to load them with a two-byte number which is then decremented at the system clock speed — 1MHz — until they reach zero, at which point an interrupt flag is automatically set.

In order to save a program, the Zip-loader first saves a 192 byte header followed by the appropriate block of memory, as does the normal save routine. Within the header is contained the secondary address used when saving, the start and end addresses of the program, the length of the filename and up to 186 bytes of filename.

The header is saved in the same manner as the memory block that follows it. First, several seconds of binary 00001111 is output — 10 seconds before the header and two seconds before the main section — to enable the Zip loader to get into sync when reading it back. This is followed by the bytes $0E,$0D, ... $02,$01,$00. The next byte output is one which indicates whether the data following is a header — $F0 — or the main program — $0F. Next comes the actual data, byte by byte, followed by a checksum digit which is the sum total of all the bytes loaded.

The Zip-loader program can also be used to speed up the loading of most bought software. All that is required is to save each section of the program via Zip and then just set up the Zip prior to trying to load the game. You would, of course, have to put the Zip-loader program in a block of memory not occupied by the game and be able to get past the normal auto-run feature of the game.

If anyone has a problem or query concerning the Zip-loader program, I will quite happily sort them out on receipt of a SAE addressed to: John Twiddy, 65 Holly Avenue, Wallsend, Tyne and Wear. ■

THE INCREDIBLE

# Micro Speech Module

# Speakeasy

**AVAILABLE AT YOUR LOCAL Spectrum STORE**

JUST £29.95

- *UNLIMITED VOCABULARY*
- *CLEAR AUDIBLE SPEECH*
- *COMPACT, STURDY & BUILT TO LAST*
- *USER FRIENDLY*
- *COMPREHENSIVE MANUAL INCLUDED*
- *SELF CONTAINED SPEAKER*
- *FULLY GUARANTEED FOR ONE YEAR*
- *POWERED FROM HOST COMPUTER*
- *VERSATILE! - the standard SPEAKEASY module can be programmed to speak in any language, for example ENGLISH, GERMAN, NORWEGIAN etc..... THE SCOPE OF THIS PRODUCT IS ONLY LIMITED BY YOUR IMAGINATION!*

* *COMPATIBLE with most popular micros. The standard module can be connected to virtually any computer via our large range of interface cables.*

| *INTERFACE CABLES CURRENTLY AVAILABLE* | | |
|---|---|---|
| **CBM 64* | **BBC* | **AMSTRAD CPC464* |
| **VIC 20* | **ORIC/ATMOS* | **MSX RANGE* |
| **CBM PLUS 4* | **CBM 16* | **CBM 116* |
| **DRAGON 32/64* | **MEMOTECH 500/512* | **SHARP MZ 700* |

*REMEMBER!... If you change your computer, you only need to change the interface cable!*

*PLEASE STATE INTERFACE LEAD REQUIRED*

# THE TYPING MASTER

**(The Keyboard Skills program that puts you in a class of your own)**

- **'The Typing Master'** program exists to teach you to type. The easily met target is 30 words per minute with 95% accuracy after 30 half-hour sessions. The following facilities help you to accomplish this standard.
- **'Sight & Type'** introduces you to the keyboard with the correct finger for each key and takes you to a speed of around 12 words per minute.
- **'Touch-Typing'** takes your speed to around 24 words per minute at the same time ensuring that you learn the peripheral keys to the same standard as those more commonly used.
- **'Practice Exercises'** gives Non-Timed accuracy oriented exercises and Timed speed/accuracy exercises. Your results are given in words per minute and percent accuracy. The target standard of 30 words per minute (and far beyond) is achieved with this module.
- **'Session Monitor'** overlays the whole program to hold your hand all the way through the course from first use of the program to that final, very useful result.
- To back up this Basic version you get documentation on how to approach the course and a record card to fill-in as you progress through the sessions.
- **'The Typing Master'** is not a toy. It is a professionally-written program which has as its sole purpose the teaching of typing/keyboard skills in a way that is friendly and fun. It was written by a typing instructor and it has been marketed world-wide on CP/M, MSDOS, PCDOS and other operating system-based machines over the past three years. It has also been available on Newbrain and BBC Micro (Model A or B) for over a year and is now being released for Amstrad CPC (mono or colour), Commodore 64 and Sinclair QL!
- TAPE formats of the Basic version are available from the following selected list of distributors (media and prices are shown in brackets).

**NEWBRAIN** (Cassette: £15.00 (no VAT)):
GFG Microsystems, 36 Armitage Way, King's Hedges, Cambridge, CB4 2UE. Tel. (0223) 315120.

**BBC MICRO** (model A or B) (Cassette, usable with disk: £15.00+VAT)
**AMSTRAD CPC** (mono or colour) (Cassette: £15.00 + VAT).
E.C.H. Hobday, The Chestnuts, Rodmersham, Sittingbourne, Kent ME9 0PL. Tel. (0795) 24191.
**COMMODORE 64** (Cassette: £15.00 + VAT).
**SINCLAIR QL** (Cartridge: £20.00 + VAT).
P. Ashpitel, 36 Athlone Avenue, Bury, Lancashire, BL9 5EE. Tel. (061-797) 5214.

Please send me_____copies of **THE TYPING MASTER (Basic Version)**

for the _____computer at £_____per copy (+VAT where shown). I enclose cheque/postal order for total amount:

£_____

NAME:_____

ADDRESS:_____

PLEASE SEND THE COMPLETED COUPON AND PAYMENT DIRECT TO THE DISTRIBUTOR FOR *YOUR COMPUTER* AS SHOWN ABOVE.

- DISK formats of the Basic program may be obtained from the following suppliers. They also supply a Business/Schools version which incorporates record keeping and many other facilities. Prices shown below are for the Basic version.

**APRICOT, SIRIUS & VICTOR** (tailored versions). (Disk: £50.00 + VAT).
Anglia Business Computers, 1 Milton Road, Cambridge, CB4 1UY. Tel. (0223) 315580.
**CP/M80, CP/M86, MSDOS, PCDOS.** (Disk. £50.00 + VAT).
Microcomputer Products International Limited, Central House, Cambridge Road, Barking, Essex, IG11 8NT. Tel. (01-591) 6511.
or,
Software Limited, No. 2 Alice Owen Technology Centre, 251 Goswell Road, London, EC1. Tel. (01-833) 1173.

*In case of difficulty contact:*

**ANTHONY ASHPITEL SOFTWARE SYSTEMS**
**56 London Road, Harleston, Norfolk, IP20 9BZ, England. Tel. (0379) 852807 (answer phone).**

## ORIC AND SINCLAIR COMPUTERS

Oric 1 computer 48K £85 (£82) £92. Oric Atmos computer 48K £171 (£158) £168. Oric colour printer £134 (£123) £140. Sinclair Flat Screen TV £113 (£105) £115. Sinclair Spectrum Plus Computer £182 (£176) £187. Sinclair QL Computer £406 (£385) £410. Sinclair Spectrum 48K £131 (£131) £143. Microdrive £51 (£50) £60. RS232 interface 1 £51 (£50) £60. Special offer:- Microdrive + Interface 1 + 4 cartridges £102 (£100) £120. Blank microdrive cartridges £5.50 (£6) £7. Standard floppy disc interface for Spectrum £102 (£92) £112. (See Cumana disc section for suitable disc drives). Fuller FDS keyboard for Spectrum £52 (£52) £62. Fuller master unit £56 (£56) £62. Interface 2 £20.45 (£20) £24. 32K memory upgrade kit for 16K Spectrum (issue 2 and 3 only) £31 (£28) £30. Spectrum Centronics printer interface £51 (£47) £52. ZX printer has been replaced by the Alphacom 32 £71 (£69) £82. 5 printer rolls (State whether Sinclair or Alphacom) £13 (£16) £21. ZX81 computer £45 (£44) £54. 16K ram packs for ZX81 £28 (£25) £30.

## COMMODORE COMPUTERS

Commodore C16 Starter Pack £145 (£142) £162. Commodore Plus/4 £305 (£281) £301. Commodore 64 £222 (£215) £235. Convertor to allow most ordinary mono cassette recorders to be used with the Vic 20 and the Commodore 64 £9.78 (£9) £11. Bargain package:- cassette convertor + compatible cassette recorder £37 (£38) £44. Commodore cassette recorder £43 (£44) £50. Printer interfaces for Vic20 and the Commodore 64:- Centronics £45 (£41) £46. RS232 £45 (£41) £46. Disc drive £233 (£209) £234. 1520 printer/plotter £165 (£149) £159. MPS801 Printer £235 (£220) £245. Light pen £29 (£29) £33.

## ACORN COMPUTERS

Electron £173 (£179) £199. BBC Model B £404 (£357) £387. Kenda double density disk interface system £149 (£131) £141. See below for suitable disc drives.

## CUMANA DISC DRIVES

To suit disc interfaces of Sinclair spectrum, BBC B and Videogenie. Single:- 40 track single sided £176 (£158) £178, 40 tr double sided £218 (£195) £215, 80tr ss £207 (£186) £206, 80tr ds £234 (£209) £229. Dual:- 40tr ss £299 (£280) £320, 40tr ds £395 (£353) £393, 80tr ss £372 (£334) £374, 80tr ds £437 (£390) £430.

## PRINTERS

Oki Microline 80 £138 (£135) £165. Brother HR5 £162 (£146) £170. Shinwa CTI CP80 £225 (£218) £248. Cannon PW1080A £332 (£299) £329. Epson RX80 £277 (£251) £282. Epson RX80F/T £314 (£286) £316. Epson FX80 £339 (£358) £388. Combined matrix printers and electric typewriters:- Brother EP22 £173 (£166) £186. Brother EP44 £258 (£235) £260. MCP40 Oric Colour printer/plotter £134 (£123) £140. Interfaces to run the above printers from Vic and the Commodore 64 £45 (£41) £46. We can supply interfaces to run the above printers from Sharp computers £58 (£52) £55.

## UK101, SUPERBOARD AND VIDEOGENIE

We still support these Computers. Write for our list.

## COMPUTER REPAIRS

We offer a world-wide repair service. Write for a quotation.

**SWANLEY ELECTRONICS**
**The Computer Export Specialists.**
**Dept YC, 32 Goldsel Rd., Swanley, Kent BR8 8EZ, England.**
**Tel: SWANLEY (0322) 64851.**

*Official orders welcome. UK prices are shown first and include post and VAT. The second price in brackets is for export customers in Europe and includes insured airmail postage. The third price is for export customers outside Europe (including Australia etc) and includes insured airmail postage.*

# BETA BASIC 1.8

## ENHANCED BASIC FOR SPECTRUM 48K
## FOR GRAPHICS – STRUCTURED PROGRAMMING – DATA HANDLING

Release 1.8 is more powerful than ever! We don't have space to do this program justice – if you can't believe the ad, send us a large S.A.E. for further information.

Features: Commands are single-entry keywords in graphics mode. Syntax is checked on entry. Fully compatible with Spectrum Basic. Microdrive compatible. Comprehensive manual.
NOTE: Release 1.0 is still available for 16/48K Spectrum at £11.00.

**ALTER** screens colours (general or specific)
**AUTO** line numbering
**BREAK** out of code loops
CLOCK digital clock
**CURSOR CONTROL CODES** allow strings to have complex shapes
**DEF KEY** user definable keys
**DELETE** a block of lines
**DO-LOOP** structure
**DPOKE** double poke
**EDIT** specified line
**ELSE** (used with IF ... THEN)
**EXIT** leave DO LOOP
**FILL** enclosed area with specified ink or paper
**GET** wait for keypress
**JOIN** two program lines
**KEYIN** a string
**KEYWORDS** new keywords on/off
**LIST/LLIST** line TO line
**USED** (used with GOTO, GOSUB)
**ON ERROR** trap errors (with LINE, STAT and ERROR)
**PLOT** a string (may contain cursor control codes)
**POKE** a string
**POP** Basic's stack
**PROC, DEF PROC, END PROC** (for named procedures)
**RENUM** versatile renumber
**ROLL** all or part of screen in any direction by specified number of pixels, with or without attributes
**SCROLL** like ROLL, but without wrap-round
**SORT** arrays (very fast)
**SPLIT** program lines
**TRACE** program execution
**UNTIL** used with DO or LOOP
**USING** used with PRINT
**WHILE** used with DO or LOOP
**XOS, YOS** move PLOT origin
**XRG, YRG** change PLOT scale

## FUNCTIONS

**AND** (bit by bit)
**BINE** decimal to binary
**CHAR$** number to 2 characters
**COSE** fast cosine
**DEC** hexadecimal to decimal
**DPEEK** double PEEK
**FILLED** filled area
**HEX$** decimal to hexadecimal
**INSTRING** string search
**MEM** free memory
**MEMORY$** all of memory as a string
**MOD** modulus
**NUMBER** 2 characters to number
**OR** (bit by bit)
**RNDM** fast RND
**SCRN$** recognises user graphics
**SINE** fast sine
**STRING$** repeats strings
**TIME$** current time
**USING$** formats numbers
**XOR** (bit-by-bit)

Only £11.00 inclusive! (Upgrade price for Release 1.0 owners is £4.00. This includes a 12-page supplement to your manual. Please quote date of purchase. If you did not purchase from us, state supplier and return original cassette.)

Please send me:
Beta Basic, Release 1.8. Payment of £11.00 is enclosed.
(or £11.50 for foreign orders). Cheques payable to BETASOFT.

I don't believe it! Please send me full details of Beta Basic 1.8. I enclose a stamped addressed envelope.

# 68008 QL

# TUTORIAL

Phil Holliday and assembly language

PROGRAMMING IN assembly language is the natural next step for those who are proficient in Basic and who feel a need to extend their skill for whatever reason, whether it is to increase speed of program execution or maybe to make better use of the available memory. Just as different micros have their own versions of Basic, so different microprocessors have their own assembly language.

The Sinclair QL is based on a Motorola 68008 microprocessor and this short series of articles is intended as an introduction to 68008 assembly language specifically on the QL. Those who already have some assembly language programming experience on another processor should find the conversion quite painless, while those who have no previous experience may find the going a little bit tough to start off with.

If this is the case then please stick with it — the benefits are well worth the effort, and this series includes several different examples of assembly language programs with assembled listings containing explanations of not only how the program works but also why a particular approach has been adopted in the first place.

Before getting down to the nitty gritty there are a few items worthy of mention. Firstly, the 68008 is a member of the 68000 family of microprocessors, which are all based on the same instruction set, and so the 68008 and the 68000 are 100 percent sofware compatible.

There are three essentials needed before attempting any serious assembly language programming on the QL. The first is a reference manual on the 68008 itself. The bible is *MC68000 16 Bit Microprocessor User's Manual — Motorola* published by Prentice-Hall. Another book which I have found very useful is *68000 Assembly Language Programming* by Kane, Hawkins and Leventhall published by Osborne/McGraw-Hill.

Secondly, we need a reference manual on QDOS, the QL operating system. We need this because the programs we write will use the resources of QDOS, partly to save us from writing routines which already exist within QDOS, and also so that we can use the much talked about multi-tasking abilities of the QL. Both the *QL Advanced User Guide* by Dickens, published by Adder, and *QL Assembly Language Programming* by Opie, published by McGraw-Hill are highly recommended as a reference manual on QDOS.

They both list all the QDOS system calls provided by QDOS and show how to interface our programs to the QL. System calls are primitive procedures which mean that we don't have to invent our own ways of doing these things. More of these topics later.

Finally, we need an assembler. Strictly speaking it is possible to hand assemble your programs, but this is a much more difficult task on a 16 bit processor than it is on 8 bit machine and is only recommended to the dyed-in-the-wool sadist. I have two assemblers which I can recommend: The QL Assembler Development Kit from Metacomco and the QL Assembler from Computer One.

Both are excellent products and include their own full screen editors. The Metacomco product has more features, most important of which are its support of macros, conditional assembly and include files, which are almost essential when writing large programs.

Before we are able to start to write in assembly language there are certain fundamental facts which must be presented and understood. These are:

- The 68008 programming model.
- The 68008 addressing modes.
- The 68008 instruction set.

These topics will be discussed in that order with the instruction set covered mainly in the next article.

The programming model is the way that the 68008 looks to the programmer and is illustrated in figure 1. It can be seen that the 68008 contains eight 32 bit — equal to four bytes, or two words or one long word — data registers, labelled D0 to D7. These data registers can be used to hold byte, word or long word values depending upon the instruction which operates on it.

If a byte or word operation on a data register takes place then only the low order byte or word contents of that register is affected. There are also eight 32 bit address registers, labelled A0 to A7.

Address registers do not support single byte operations. They are normally used as their name implies to hold addresses which point to memory locations — although they can also be used to hold data. Therefore, word operands are automatically sign extended to long words by the processor before being used. A0 to A6 are general purpose address registers. A7 is the system stack pointer, used to hold return addresses of subroutine branches — calls —

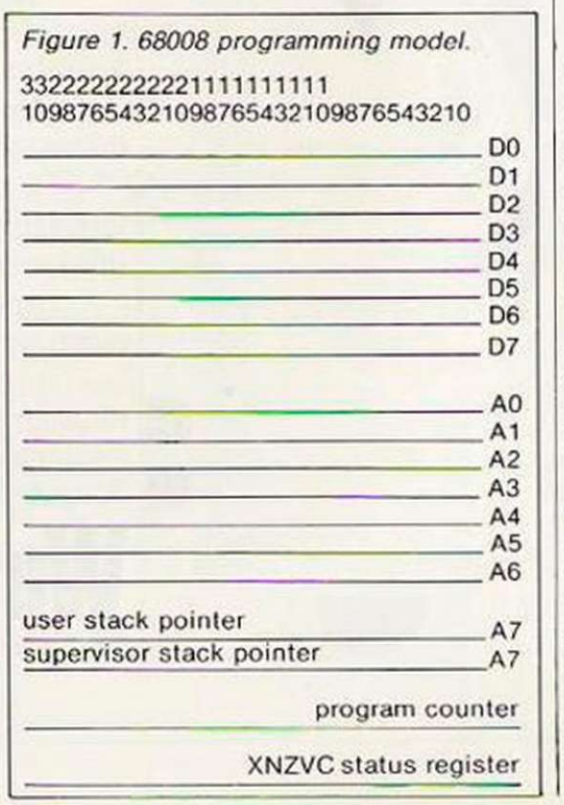
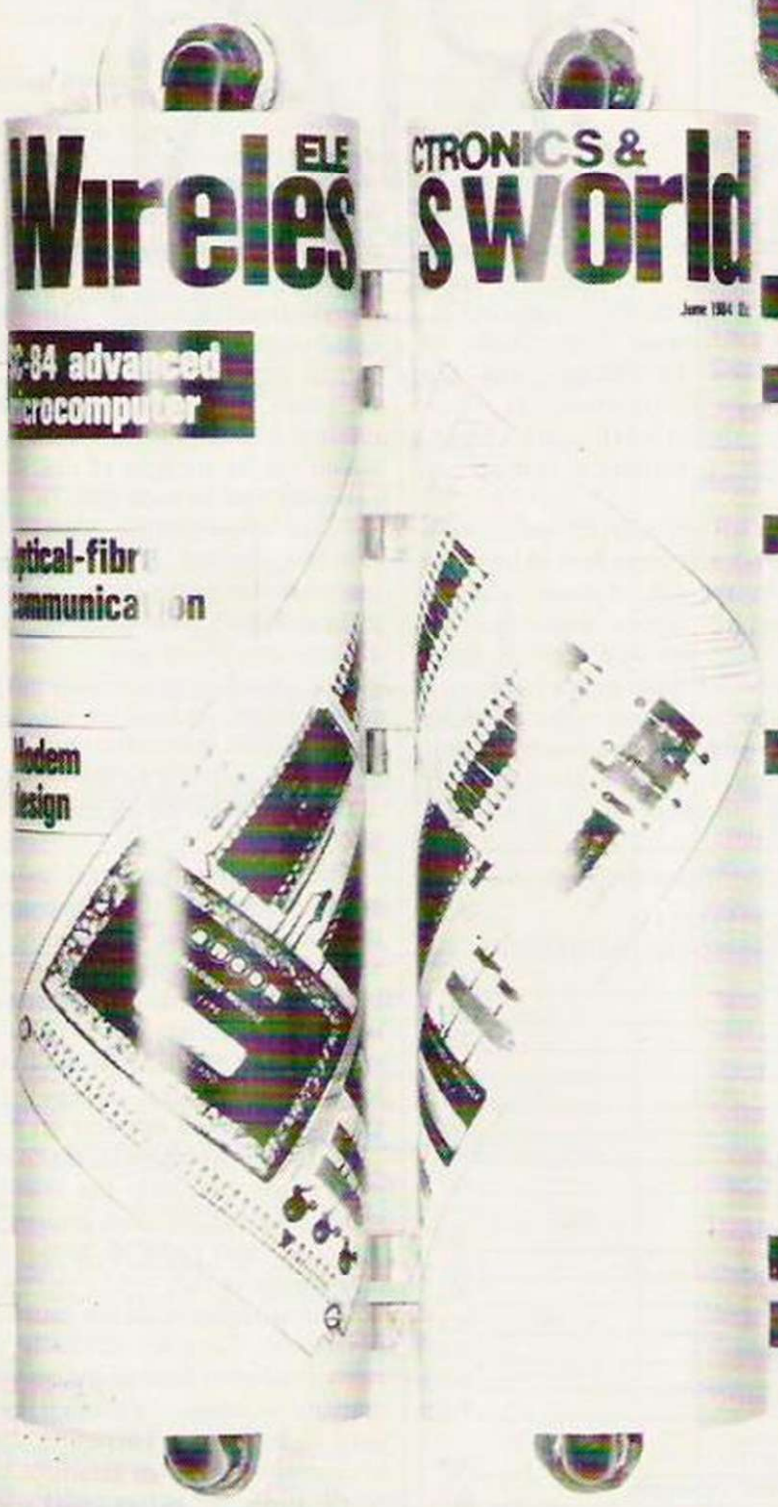
*Figure 1. 68008 programming model.*



# THE ELECTRONICS MAGAZINE PROFESSIONALS CAN'T RESIST.



Electronics and Wireless World is the only electronics magazine to really tempt the professionals.

It's the only one they take the trouble to pick up for themselves.

That's because it's written for the engineer who sees electronics not only as a job, but also as a hobby.

It's written on a technical level that doesn't talk down to you.

It keeps you up to date with all the latest products and processes, applications and equipment.

And it covers every industry where electronics is involved.

Just one look at the new look magazine and you'll see why it gets professionals like you out of the office, and down to the newsagents.

**ELECTRONICS & Wireless world**

**The leading magazine for electronics engineers.**

(continued from page 155)

for example.

In fact, there are two A7 stack pointers known as user stack and supervisor stack pointers which are selected depending upon the mode of operation of the processor. We will normally be in user-mode and this need not concern us any more for the moment. There is a 32 bit program counter, which contains the address of the next instruction to be executed.

It will be realised that not all of the 32 bits of the program counter and address registers S— when being used to hold an address — are used, since the 68008 can only address 1 megabyte of memory, and so only the lower 20 bits are actually relevant. Finally, the 68008 contains a 16 bit status register.

For low order five bits are of most interest to us. They contain condition code flags to indicate when there has been a carry (C), overflow (V), zero (Z) or negative (N) result from an operation. There is also an extend (X) flag which is used to implement multi-precision arithmetic. It is always set by the same operations that sets the carry flag.

Instructions for the 68008 contain two kinds of information — the type of operation to be performed and the location of the operand or operands on which that instruction operates. Most instructions specify the location using what Motorola refer to as an effective address and the different effective address modes will now be explained, with examples using the Move instruction. The Move instruction is used to move the contents of the source effective address to the destination address and the syntax of the instruction is . . .

MOVE source, destination

Before we start you must be aware that not all effective address modes can be used with all instructions — the manuals mentioned above give these details for each instruction individually.

■ Data register direct mode. The operand is in the data register specified in the instruction, so

MOVE.L D0,D1

will copy the contents of data register D0 into D1. Note that the ".L" appended to the Move instruction indicates that the "long word" contents, i.e. all 32 bits, will be moved. To move just the lower byte we would write Move.B and to move the lower word we would write Move.W or just Move as the default size for unspecified length is always word.

■ Address register direct mode. The operand is in the address register specified in the instruction. Note that there is a special version of the Move instruction — MoveA — Move address — which is used in this case, so

MOVEA.L D0,A0

will copy the contents of data register D0 into address register A0.

■ Address register indirect mode. The address of the operand is in the address register, and this mode is indicated by placing the address register in parenthesis, so that

MOVE.W D0,(A0)

will copy the lower 16 bits of D0 to the address held in A0, so that if D0 holds 1 and A0 holds $20000 (20000 hex) then the effect of this instruction is to copy 1 to memory location $20000.

■ Address register indirect with post-increment mode. This is similar to the previous — register indirect — mode, but with the added feature that after the move has taken place the contents of the address register is incremented. Note that the increment is by 1 if the move was of size byte, 2 for size word and 4 for size long.

This mode is indicated by placing the address register in parenthesis and followed by a plus sign. So if D0 contains 1 and A0 contains $20000 then

MOVE.W D0, (A0) +

will copy 1 to address $20000 and after the instruction A0 will contain $20002. When the address register is A7 this mode is equivalent to a stack Push instruction. Also note that when the address register is A7 and the size of the move is byte that the contents of A7 will be incremented by 2 instead of by to ensure that it always contains an even address, necessary as all instructions must start at even addresses.

■ Address Register Indirect with Predecrement mode. Very similar to the post-increment mode, except as you will already have guessed the address register specified is decremented according top the size of the instruction before copying the contents. This provides the equivalent of a stack Pop instruction if A7 is used, and the syntax is equally what would be expected, so

MOVE.W – (A0),D0

will have exactly the opposite effect of the previous example.

■ Address register indirect with displacement mode. In this mode the effective address is the sum of the contents of the specified address register and a fixed signed 16 bit displacement — i.e., the displacement can have a value of from −32768 to +32767.

The displacement is given before the parenthesis around the address register. This mode is extremely useful for accessing a particular element of an array or list. So if D0 contains 1 and A0 contains $20000 then

MOVE.B D0,$23(A0)

will copy 1 into the byte at address $20023.

■ Address register indirect with index mode. In this mode the effective address is the sum of the address in the address register specified, the word or long word contents of an index register which can be either a data or an address register and a signed 8 bit displacement — i.e., the displacement can have a range from −128 to +127. The syntax is of the form . . .

displacement (address reg,index reg.size)

and so if D1 contains $23,A0 contains $20000, A3 contains $10000 then the instruction

MOVE.W D1,$56(A0,A3.L)

will copy $23 to address $30056.

■ Absolute short address mode. In this mode the effective address specified is a signed word which is sign extended before it is used. So

(continued on page 159)

addresses can be specified in this mode in the range 0 to $7FFF — which is all in the QL Rom — and $F8000 to $FFFFF. So the instruction

MOVE.L $7000,D4

will copy the long word starting at address $7000 into data register D4.

■ Absolute long address mode. In this mode the effective address is a long word. It is not necessary to sign extend it as is the case for absolute short address mode of course, but it operates in the same way in other respects. So the instruction

MOVE.W D4,$20000

will copy the word in data register D4 to address $20000.

■ Program counter with displacement mode. This is a most important effective addressing mode as it allows us to write position independent programs, i.e., programs that can run anywhere in memory, as opposed to having to be loaded at a specific address.

In this mode the effective address is the sum of the contents of the program counter, which of course points to the instruction about to be executed, and a signed 16 bit displacement. The assembler format is basically the same as the address register indirect with displacement mode but in this case the program counter is used instead of an address register, so the instruction

MOVE.W $8(PC),D0

will move the word 8 bytes past the instruction into D0.

will move the -word 8 bytes past the instruction into D0.

■ Program counter with index mode. This is again almost identical to the address register indirect with index, using the program counter instead of the address register. Comments made to the previous mode about positon independent code apply equally to this mode, so the instruction

MOVE.L $26(PC,A4.L),D0

will copy the contents of the address formed from the sum of the program counter plus the long word contents of A4 plus the displacement of $26 to data register D0.

■ Immediate data mode. In this effective address mode the operand specifies immediate data rather than the address of that data. The immediate data is indicated by a hash (#) symbol preceeding it. So the instruction

MOVE.B #$44,D0

will move the value $44 into the low order byte of D0.

The main instruction set of the 68008 is tabulated in table 1.I have listed the mneumonic and a brief description of the operation. I have not included all the variants of the different instructions. Of course you need to know a lot more about the various instructions before you can use them, but it does give the general flavour of the 680008.

I do not intend to discuss every instruction in detail, but rather to expand on those which are more frequently used and to use them in various examples of routines which can be tried on the QL. This will form the subject of the next article in this series, but before starting on that it is a useful exercise to show how we can use these routines from Basic.

To illustrate this listing 1 is a simple routine

*Table 1. 68008 instruction set.*

| Mnemonic | Description |
|---|---|
| ABCD | add decimal byte with extend bit |
| ADD | add |
| AND | logical and |
| ASL | arithmetic shift left |
| ASR | arithmetic shift right |
| Bcc | branch conditional |
| BCHG | bit test and clear |
| BCLR | bit test and clear |
| BRA | branch always |
| BSET | bit test and set |
| BSR | branch to subroutine |
| BTST | bit test |
| CHK | check register against bounds |
| CLR | clear operand |
| CMP | compare |
| DBcc | test condition, decrement and branch |
| DIVS | signed divide |
| DIVU | unsigned divide |
| EOR | exclusive or |
| EXG | exchange registers |
| EXT | sign extend |
| JMP | jump |
| JSR | jump to subroutine |
| LEA | load effective address |
| LINK | link stack |
| LSL | logical shift left |
| LSR | logical shift right |
| MOVE | move |
| MOVEM | move multiple registers |
| MOVEP | move peripheral data |
| MULS | signed multiply |
| MULU | unsigned multiply |
| NBCD | negate decimal with extend |
| NEG | negate — 2's complement |
| NOP | no operation |
| NOT | 1's complement |
| OR | logical or |
| PEA | push effective address |
| RESET | reset external devices |
| ROL | rotate left without extend |
| ROR | rotate right without extend |
| ROXL | rotate left with extend |
| ROXR | rotate right with extend |
| RTE | return from exception |
| RTR | return and restore |
| RTS | return from subroutine |
| SBCD | subtract decimal with extend |
| Scc | set conditional |
| STOP | stop |
| SUB | subtract |
| SWAP | swap data register halves |
| TAS | test and set operand |
| TRAP | trap |
| TRAPV | trap on overflow |
| TST | test |
| UNLNK | unlink |

*Condition codes — cc in above table.*

| | |
|---|---|
| CC | carry clear |
| CS | carry set |
| EQ | equal |
| F | false |
| GE | greater than or equal |
| GT | greater than |
| HI | high |
| LE | less than or equal |
| LS | low or same |
| LT | less than |
| MI | minus |
| NE | not equal |
| PL | plus |
| T | true |
| VC | no overflow |
| VS | overflow |

to clear the whole of the screen by writing all zeros to the screen memory which resides from address $20000 to $27FFF inclusive.

The program will be a loop which is initialised with a0 pointing to the bottom of screen memory, and d0 holding the number of times we go round the loop. within the loop we will clear some memory, increment a0 to point to the next memory location, and decrement d0 and test it to see if we have reached the top of the screen memory.

Obviously we will use the Move instruction which has already been described in the section on addressing modes. The LEA — load effective address — instruction is used to initialise a0.

The looping instruction we will use is DBcc where cc is one of the 16 condition codes included in the instruction set table.

This instruction decrements the specified data register and also tests to see if a condition specified is met. In this program we have set the condition to false so that this test will always fail.

If the condition was met then the next instruction would be executed, i.e., it would exit the loop. If the condition is not met and the specified data register has reached a value of −1 then the loop will be exited. In the example this occurs when the whole of screen memory has been cleared.

Having cleared the screen we need to return back to Basic. If this program is invoked by an Exec command then it will be created as a job under QDOS and so it is necessary to remove this job. A system call is used — see the QDOS manuals — which requires small values being placed in data registers, and to do this we use a special version of the move instruction, MoveQ — most quick — which sign extends a number lying between −128 and +127 to a 32 bit number.

The trap instruction is a call to an address locted in a table of address pointers which are set up in the QL Rom and actually causes the job to be removed. Finally we return using the RTS instruction, having first of all cleared data register 0 in case the program is invoked with a Call.

If you have an assembler you can of course enter the program and automatically generate an executable file. Alternatively, you can enter the assembled code which is shown in hex in the listing after the address field using a hex loader, and either place it in the resident procedure area using RESPR, and then Call it, or save it using Sexec as described in the QDOS entry of the concepts section in the QL User Guide. ■

**Q MOD**
V23 modem. Direct telephone line connection, 1200/75 baud full duplex operation for Prestel and other database access, 1200/1200 baud half-duplex operation for user-to-user communication.

**Q CALL**
Auto dial/answer unit for attended or unattended operation.

**Q CON**
Asynchronous multi-speed interface, single chip micro based with software on microdrive cartridge. Operates at 9600, 4800, 2400, 1200, 300 and 75 baud. Independent Tx and Rx rates. 25-way D-type, SER 2, power and expansion connectors, Provides VT100 emulation and software support for Q MOD and Q CALL. Can be used with any modem.

Recommended by Sinclair Research Limited. Guaranteed, designed and manufactured by O.E. Ltd, Cumbria

# Now the QL has got connections in all the right places.

This modular communications package gives your QL more versatility and potential than probably any other add-on.

Using expansion connectors, the units stack on top of each other to provide a universal communications facility for VT100 emulation, telex, electronic mail, and access to the international PSS network and databases like Prestel and Micronet 800.

The modules can also be purchased individually, starting with the Q CON for interfacing, I/O control, and support for subsequent modules. It accepts any modem, including of course the Q MOD V23 modem. Q CALL provides unattended or attended auto-dial and answer facilities.

It all stacks up to universal communications – at a down to earth price. You'll find price and order details in the coupon.

# RESPONSE FRAME

Do you have a problem? Your manual is incomprehensible or you just cannot get the hang of that programming trick you tried — whatever it is, Tim Hartnell will do his best to answer your queries. Please include only one question per letter and mark them "Response Frame".

## MONITOR OR TV?

**■ I own a Spectrum 48K micro and am wanting to purchase a colour monitor. I have seen a feature in a recent magazine which shows how simple the modification is to provide a composite video signal and it is this which has prompted me to consider a monitor rather than a TV. What is confusing me is that I have seen advertisements for a colour monitor designed to accept signals from the Spectrum "direct" — the Microvitec — and I assume "direct" to mean unmodified. Is this a true monitor, or am I misinterpreting the meaning of "direct". I note also there are colour monitor/colour TV composite models available. I would greatly appreciate some guidance on selecting the most suitable type for my computer.**
*Derek Cale,*
*Grimsby,*
*South Humberside.*

ACCORDING TO a Mr Hardy at Microvitec, the monitor you've seen advertised — model number 1431/MZ3 — is a true monitor, that includes all the modifications within the monitor itself. This monitor is driven from the Spectrum edge connector, not from the TV output port. If you connected any standard monitor to the "TV" socket, you would not get a picture.

The Microvitec monitor allows other peripherals to be connected to the Spectrum by duplicating the edge connector. This monitor is "standard resolution" — that is, 452 horizontal pixels — and will therefore work as well with any RGB computer, such as the BBC Micro.

## AMSTRAD SYMBOL

**■ I have been having trouble with defining some characters on the Amstrad using the Symbol command. I've followed the instructions in the manual, but it just doesn't seem to work. When I print the characters which I thought I had defined, they just come out the same as they were when I turned the computer on. What am I doing wrong?**
*William Dodd,*
*Southampton.*

ACCORDING TO Clive Gifford, author of *50 Dynamic Games for the Amstrad*, the problem may well be occurring because the manual does not fully explain the use of the Symbol After command. Before you start using Symbol, you need to use Symbol After, which makes it possible to use Symbol with a group of character numbers. That is, if you wanted to redefine one or more characters whose numbers were greater than 127, you'd need to include the line Symbol After 127 in your program. This would then allow you to redefine characters 128, 129 and so on.

## AUTOMATIC RUN

**■ Many of my friends have programs on their Spectrums which run automatically when they load them. I would like to be able to do this on my Amstrad. I have read through the manual several times, but it does not seem to include this information. What can I do to solve my problem?**
*Terry Stickles,*
*Birmingham.*

IT APPEARS that you have not been looking carefully enough in the manual. Save the program as normal. Then, when loading it back, type in Run "nameofprogram" instead of Load "nameofprogram". This will load and auto-Run your program.

## COMPILER QUERY

**■ If I understand it correctly, the purpose of a compiler is to convert Basic to machine code. I have a Vic-20 and plan to buy a Super-Extender Cartridge. Will a normal compiler be able to function on the Vic-20 with the Expander operating?**
*Pramod K Joshi,*
*West Bridgford,*
*Nottinghamshire.*

COMPILERS HAVE been developed for the Vic-20, but the are only designed to cater for the commands supplied as standard in Vic-20 Basic. There is no way an ordinary Vic-20 compiler could cope with the additional commands — such as extra graphics words — in an Expander's vocabulary. So the answer, Pramod, is — I'm afraid — no.

## LANGUAGES

**■ Most microcomputers are programmable in some sort of Basic. For many of them, it is possible to buy other languages, such as Forth and Pascal. I know that both of these run much more quickly than Basic because they are compiled rather than interpreted. I have been told that each language has its own particular field in which it is most powerful. Can you tell me something about the applications of Pascal and Forth, and possibly about some other interesting languages?**
*S Klaassens,*
*Nijkerk,*
*Holland.*

SPECIFIC LANGUAGES are usually created for specific needs. A general purpose language like Basic, which was created mainly to be easy to learn, is usually all right at many things, but not very good at any of them. Forth, which was created by Charles Moore originally to control a radio telescope, is a fairly primitive language in its supplied form, with a very limited vocabulary.

However, its immense strength is that it allows you to create new words of your own, and use them from then on as though they were part of the language, even to the extent of using your own words in the creation of others. For example, if you invented the word Dash to draw 20 hyphens on the screen, you could invent a word called, say, Lottadashes to equal Dash being executed 20 times. Dash and Lottadashes could stay in your Forth vocabulary for ever. Basic has no such capability.

Pascal was developed by N Wirth with the intention of creating a language which would enforce disciplined programming techniques.

Pascal programs can, in some cases, read almost like a statement of the problem in English. They are usually "transparent" to people other than the programmer — which is rarely true of Forth programs, and only true of well-structured Basic programs — and are consequently easy to maintain and modify. It is interesting to note that QL Super-Basic — and to a lesser extent BBC Basic — incorporate some of the better features of Forth and Pascal.

Other languages, such as Logo and Lisp, have found applications in specific fields. Experience with any language in additon to Basic will help you to become a better programmer, as you'll start thinking more in terms of what you want the program to achieve rather than in terms of what lines of program will do this.

Most languages have strong, if not fanatical, adherents. Forth programmers, in particular, defend Forth most ardently. I was being interviewed on Capital Radio once with a Forth programmer who nearly punched me in the face when I tried to make a case for Basic being a good language to start programming with, because it was so easy to get positive feedback from the computer.

## COLOUR OR NOT?

**■ I would be most grateful if you could explain the problem which I am experiencing with my ZX Spectrum 48L. When connected to my Philips TV it functions normally and responds to all the colour instructions, but when connected to an Hitachi 12in. portable it will only produce black and white signals. I have, of course, adjusted the necessary pre-set tuner controls without any improvement. I have seen in a previous reader's query a similar problem which necessitated the reader making an adjustment within the Spectrum.**
*R L Turner,*
*Redditch.*

EARLY SPECTRUMS, in particular, were a little choosy regarding the colour TV's they would work well with. A spokesman for Sinclair Research said there was no evidence that any particular model or make refused to generate colour signals when fed by a Spectrum. The easiest answer I can give you is to wait until the warranty period is over, open the Spectrum, and turn the little screws on one of the flat potentiometers you can see, which controls colour intensity. Apart from that, I'd stick to the Philips.

*In a recent issue of* Your Computer *a reader asked about including Verify within a Spectrum program. A number of people wrote to me regarding their experiences with this. Ian Philpot from Tonbridge, Kent writes:*

*I have been using the Verify command in a program in exactly the way your correspondent describes. What may be the significant difference is that I have been saving data in a character array (in fact, the league tables of my local badminton league) and then verifying the saved array. This seems to work perfectly. However, I had not, until I read your comments, tried to Save and Verify the main program in this way. I then tried the following program:*

```
 5 FOR n = 1 TO 96
10 PRINT "a"
20 NEXT n
22 SAVE "test" LINE 1
25 PRINT "Rewind and press
   any key"
30 PAUSE 0
35 VERIFY "test"
```

*This worked perfectly every time. It seems to work just as well with further lines added. It appears therefore that any problem would lie with the saving routine, rather than in the use of the Verify command in the program.*

*M R Trevarthen of Alexandria, Dunbartonshire, points out in reference to the same query, that you should* not *include user-friendly inputs like "Do you wish to Verify" ;Z$ between the Save and Verify lines in the program, as this adds to or changes part of the program already saved. This Verify will fail. Using Inkey$ does the same thing.*

# REWRITE THE HIGH SCORE TABLES

With the Gunshot, you'll have all your enemies cowering in corners. 8-directional action and an all-in-one moulded stem allows accurate annihilation and strength to survive those all-night sessions. Dual fire buttons for fading fingers (and a rapid fire version when they're really coming thick and fast). And, if you break it (and we know you'll try) our 12 month guarantee will prove invaluable. The Gunshot plugs directly in to practically all popular home computers (ask about Vulcan interfaces for the BBC, Spectrum, Electron, C16, Plus 4). Only £8.95.

See the range of Vulcan joysticks and interfaces at your local stockist ... we'll see you on the high score tables.

**VULCAN ELECTRONICS LTD**

*Joystick Genius*

200 BRENT STREET HENDON NW4 1BH TEL: 01-203 6366

# SOFTWARE FILE

Software File gives you the opportunity to have your programs, ideas and discoveries published. We will accept contributions for any home computer provided they are submitted to *Your Computer* exclusively. Please double-check your programs and specify the memory they require before sending them, preferably on cassette. We pay between £6 and £36 for contributions published.

## Moon Rescue

*T Loton,*
*Stoke-on-Trent,*
*Staffordshire.*

AMSTRAD

YOU ARE the commander of the Intergalactic Rescue Service. You are informed that four scientists are stranded on the moon's surface and it is your job to rescue them. As you hover above the moon's surface in your spaceship you see below you a dangerous asteroid belt which separates you from the stranded scientists.

When you think the time is right you must launch your rescue pod and guide it through the asteroid belt to pick up one of the scientists. Watch out when returning to your spaceship because the asteroid belt has now been replaced by a fleet of enemy flying saucers. You get 10 points added to your score every time you rescue a scientist successfully.

If, however, you hit an asteroid, a flying saucer or the moon's surface or fail to re-dock with your spaceship you lose a life. You start each game with three lives, 25 fuel units, and four scientists to rescue. At the start of each game a tune is played.

Keys to use are: Z = left; X = right; \ = launch pod/thrust.

No loading instructions are needed, just type in the program and save it normally.

## Sheepdog

*Neil Ghani,*
*Gosforth,*
*Newcastle-upon-Tyne.*

SPECTRUM

YOU CONTROL a sheepdog and the objective is to muster a small flock of six dirty yellow sheep through a sheep dip and then the clean white sheep must be chased through the gate into the next field. For every unclean sheep you have 25 seconds added onto your time.

There are also bushes dotted about around the right-hand side of the field and the sheep may stop to graze at these. Keys 5, 6, 7, and 8 control the sheepdog.

```

PRINT-SP ROM 81 PROMER 81 S MONITOR STANDS

# NIKE

## POWER BUFFERS

WAITING TILL YOU GET CAUGHT OUT?

Nickel Cad. batteries with ON-OFF switch.

Versions for Spect., ZX81, ATMOS. Gives time to save program on tape.

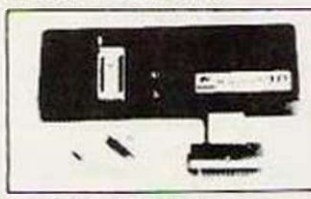
Visible status warning by LEDs £17.35.

DEALER ENQUIRIES WELCOME.

PROMER 81 P10 81 NIKE 81 P10 SP MEMIC

## EPROM PROGRAMMER

### BLOPROM-SP
### A uniquely sophisticated EPROM PROGRAMMER



Eprom programmer for the 2516, 2716/32/32A/64/64A/28/128A, yes even the 64A/128A from Intel. Check, Read, Progam & Verify all or part of Eprom.

So immensely user friendly you'll hardly need the manual. Designed for the beginner but includes a single key entry route for the professional. Supplied as firmware, the m/c driver routine alone is worth more than the price of BLOPROM-SP. No Personality Cards, or other additions, just a Spectrum. Several inbuilt safety features. On-board Vpp generation. 28pin ZIF socket. Cabled connector and extender plug. ABS case. £89.95

STATUS
NO OF SYSTEM — HEX
EPROM TYPE — 27128
RAM START ADDR — 4000
EPROM ST ADDR — 0000
JOB LENGTH — 4000

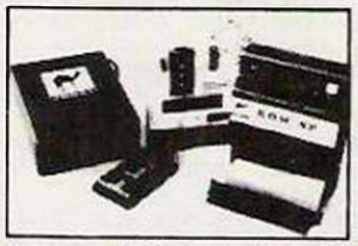
WHICH TASK DO YOU WISH TO DO
W) CHECK THAT EPROM IS CLEAN
X) READ THE CONTENTS OF EPROM INTO RAM
Y) BLOW AN EPROM WITH DATA FROM RAM
Z) VERIFY THAT EPROM DATA IS THE SAME AS IN RAM
0 TO QUIT  P TO RESTART

FAST CODES AVAILABLE
D H POR WXYZ

**BLOPROM-81**
As above but for ZX81. Programs 2516, 2716/32/32A/64 & 27128 £79.95

**AT LAST!** for the Spectrum user. Put your programs, utilities, Assemblers into EPROMS for instant load from the unique ROM-SP

BLOPROM-SP MULTEPROM DHOBI PRINTER STANDS



CRAMIC-SP ROM SP CRAMIC 81 BLOPROM-81 PROMER SP

**ROM-SP** for Spectrum
Ingenious unit for Spectrum, with 2×28 pin sockets and a Reset button allows up to 16K of Basic or M/C program to RUN or LOAD instantly from EPROMS. Cabled connector and full extender card. NOTE: Does not disable Sinclair ROM. £29.95

**PROMER-SP** for Spectrum
A brand new Spectrum programmer for 2764/128. Zero insertion force socket & software on tape. £29.95

**PROMER 81-S** for Spectrum
The very popular PROMER-81 for the ZX81 has been adapted to the Spectrum and the price kept low. NEW PRICE £24.95

**ROM-81**
Provides two 24 pin sockets for up to 8K of EPROM memory in the 8-16K area. Can use 2516/32 or 2716/32 £14.95

**PROMER-81**
A low cost reliable programmer for 2516/32, 2716/32 EPROMS. Requires 4×PP3 batteries NEW PRICE £24.95

**DHOBI 1** UV ERASER
Compact. Mains powered. Safe. Fully cased. Up to 3 EPROMS £18.95

**DHOBI 2** With automatic timer £22.95

**CRAMIC-SP** NEW for Spectrum
Ingenious software paged 16K non-volatile CMOS RAM to co-exist in the same area as Spectrum ROM. Easy storage and retrieval of BASIC, M/C or DATA on a 48K Spectrum £89.95

**PRINT-SP** NEW for Spectrum
Centronics Interface with standard centronics Cable. Plus free introductory offer SP WRTIE text processor. £31.25

**DREAM-81** for ZX81
64K Rampack with link options to disable 0-8-16K. Plus a 28 pin EPROM socket for 2716, 2732/2764 and 27128. £59.95

**MEMIC-81** for ZX81
4K CMOS RAM with lithium battery. Easy SAVEing, 10yr storage and instant retrieval of programs. £29.95

**INTRODUCING MULTEPROM**
The most economical, sophisticated gang copier in the world. Based on BLOPROM £199.95

# SPECTRUM

## RAINBOW COPIA

★QUITE SIMPLY THE BEST BACK-UP COPIER EVER FOR THE SINCLAIR SPECTRUM
★ALMOST ANY PROGRAM IS REPRODUCED ON BLANK TAPES
★TESTED ON OVER 100 TOP GAMES WITH A 98% SUCCESS RATE
★MULTIPLE PART PROGRAMS BACKED UP IN ONE GO
★ALSO BACKS-UP HEADER LESS PROGRAMS
★FULL INSTRUCTIONS WITH THIS EASY TO USE PROGRAM
★THIS INCREDIBLE MACHINE CODE PROGRAM IS EXCELLENT VALUE @ £5.95 incl. P&P

★ ★ ★ ★ ★ ★ ★ ★

# COMMODORE 64

## BRING YOUR 64 TO LIFE WITH.....
## LIGHTNING LOAD

★CONVERTS ALMOST ALL YOUR FAVOURITE SOFTWARE & GAMES INOT A SUPERFAST LOADING VERSION
★YOUR CASSETTE PROGRAMS WILL INDEPENDENTLY LOAD FASTER THAN THE COMMODORE DISC DRIVE!!
★LIGHTNING LOAD HAS SOPHISTICATED FEATURES WHICH LEAVE OUR COMPETITORS LIGHT YEARS BEHIND
★COLOUR & SOUND ARE USED IN SPECTACULAR & UNIQUE WAYS TO ENHANCE THE PROGRAM
★100% MACHINE CODE, FLEXIBLE MENU SYSTEM ALLOWS SAVING OF MORE THAN 48K CONTINUOUS RAM
★THIS AMAZING PROGRAM IS NOW ON SPECIAL OFFER £7.95 NOW £6.95 incl. P&P

★ ★ ★ ★ ★ ★ ★ ★

# COPYCAT

## THE ULTIMATE BACK-UP TAPE COPIER

★MAKES BACK-UP COPIES OF ALMOST ALL SOFTWARE
★SPECTACULAR MULTICOLOURED LOAD AND SAVE
★WIZARD AUDIO SOUND EFFECTS
★CASSETTE MAGIC SENSE
★100% MACHINE CODE TAPE COPIER WITH FULL INSTRUCTIONS
★CAN YOU FIND A BETTER COPIER? — WE CAN'T!
★SUPERB VALUE AT £5.95 inc. P&P

# Sprinter

*Nicholas Giacoumatos,*
*Shoreham by Sea,*
*West Sussex.*

VIC-20

THE OBJECT of the game is to run as fast as you can in two races. The first is the qualifying race, the second is the final. Your power increases and so does your speed when you hit the key. You can win gold, silver bronze or nothing but watch out — the more power the more energy is used. At the end of the first race you are awarded bonus energy to see you though the final, but if you run too fast you will collapse of exhaustion.

Type in the first part of the program and save it. Do the same with part two — be careful with the data — and save it after part 1 on the same tape. After part 2 type in and save part 3. You should then have a copy of Sprinter. To load hold down Shift and hit Run/Stop, and press play on the tape deck. The program should load automatically. At the start of the game you will see a track, a crowd and a 10 second countdown in the top left corner to give you time to build up a start, good luck. 3K expansion is needed.

Parts 1 and 2 of the program have an auto load system at the end of them. When you type them in save them first. Do not run them until they are saved. If an error occurs note it down and load the part in again. Type the correction in and save the program once again. Do this until the two parts of the program are perfect.

*Part 1.*

# Picasso's paintbrush

*Matthew Sillett,*
*Dulwich,*
*London SE21.*

BBC

PICASSO'S PAINTBRUSH is a multi-feature drawing program for the BBC Micro. Impressive pictures can be created quickly and easily using the many built-in functions.

- Automatic circle, triangle, semi-circle, rectangle and elipse drawing routines.
- Extensive colour mixing.
- Three cursor speeds.
- Three line thicknesses.
- Rubber band facility.
- Load and Save screens.
- Spray colour option.
- Print text anywhere on the screen.
- Colour-fill routine.
- Full MODE2 colour graphics.

Program 1 contains full instructions of how to operate these functions and the keys involved — all 30 of them. There are three methods of colour mixing provided, all of which are very easy to use.

The first way is to fill the area involved in one of the two colours to be mixed — e.g., red — and then to overlay it with alternate pixels of the second colour — e.g., yellow. The combination of Red and yellow produces a very good orange.

The second way is the same as above, but to overlay with horizontal lines — e.g., A darker orange may be produced using this method. The final method is to use high GCOL values to produce "hatching". On pressing the specified key, you must enter this value — e.g., 198 produces a good brown, when the colour is set to white.

Copies of the program are available for £3.50 from: M. J. Sillett, 41, College Rd., Dulwich, London SE21.

# QL Trace

*B J White,*
*Wirral,*
*Merseyside.*

THOSE OF YOU who know what a trace is may skip this paragraph. A trace shows the line number and line details which the program is using at that instant and at the same time allows the program to proceed normally or if wished slower — down to frame by frame to use a video recorder analogy. Thus the programs of others may be followed for quicker understanding and one's own followed at leisure to find where a problem occurs. Errors in typing out printed listings can also be most readily found with a trace particularly if the programs are not fully understood. This program uses as narrow a window as possible at the top of the screen to show the instantaneous listing, long lines are not shown in full.

A trace showing where you were in a program along with control of speed of the program is, or was, the province of machine code and a fairly long one at that. Trace was supposed to be on the early QLs but it is not there now and I have not seen one for sale. This QL trace is so much easier than guessing where to put all the prints and stops to find out where one is in a program.

The typing amount is not as bad as it looks because Del-Trace is constructed from a renumbered d-lined Init-Trace and merged back with first parts. Take care with the string statements, it is easiest to think out the "" and $ rather than copy. Remember you can join any $ with anything within "" and the join must be &, nothing else can be joined or used for joining. The QL reads the instruction as if none of the "" nor the $ nor the & were there. There is only one character recorded in a line that you do not get printed on screen and that is the CHR$(10) forcing new line hence its appearance in the program when additional lines are put in by program and its presence being used to determine the end of a program line so a new one may be collected.

Init-Trace: These headings are procedures and called by entering like a direct command. QLTrace requires a blank line after every program line so it can insert its call for tracing. Renumber your program line so it can insert its call for tracing. Renumber your program on the QL if necessary. Load QLTrace and put cassette with your program in either drive. Run and answer questions, which drive your prgram is in, name of your program, and final line you wish to trace — QLTrace stops at the end anyway. The modified program will now be on the same cassette and named the same except it has a T in front for trace. Note the T program is not

*(continued on next page)*

(continued from previous page)

in the computer.

Trace 1 or 0: Load the program when required. Enter Trace 1 for trace on, Trace 0 for trace off. Run your Tprogram. The stepping is by holding down Shift and Ctrl with Press of V.

Del-Trace: After modification using QLTrace you can strip the Tprogram clean if wished. Place a cassette with Tprogram in any drive, run QLTrace and find similar questions to Init-Trace. The new ordinary program will be on the same cassette, the old one is deleted, but the Tprogram is kept ready for future use.

Other windows can interfere, so modify either position. Inkey$ polls covering the weird choice of CHR$(182) used in program will need modifying. Trace 1 or Trace 0 must be entered before running the Tprogram or it will stop. Progress of Init- and Del-Trace is shown on screen so hic-cups can be seen. Lines jumped from are not shown.

# Lightcycle

*Andy Sheppard,*
*Burnkey,*
*Lancashire.*

SPECTRUM

THE PROGRAM is in two parts: A short Basic controller program and 2K of machine code, containing the game routine, and various other routines for instructions etc. plus data for a redefined character set.

Loading and Saving instructions: Type in the Basic program — listing 1 — and Save it — without attempting to Run it — by using

SAVE "LIGHTCYCLE" LINE 9997

Next, either: Enter the machine code from the assembly listing — listing 2 — or enter the machine code from the hex-dump — listing 3 — using the hex-loader — listing 4:

If by this time you have had enough of typing in the hex., then you have no need to enter listing 5, which is data for a new character set : if this is the case, then delete the statement

POKE 23607,116

from line 9997 in listing 1.

If you *do* want to use the new character set, then type in the hex. from listing 5 using the hex-loader, inputting "7580" as the start address.

When all the code has been entered and checked, save the code using

SAVE "0" CODE 28672,2100

immediately after where listing 1 was Saved. After Verifying , type

RANDOMIZE USR 0

to clear the computer. Rewind the tape and type

LOAD "LIGHTCYCLE"

The Basic will auto-Run, Loading the machine code. If the program crashes, reload the hex-loader and further check the code using the List option of the loader.

*Keyboard layout.*
Either:

1) Joysticks in ports 1 and 2 of the ZX Interface II

or 2)

# Raid

*G Dobbing,*
*Stockton on Tees,*
*Cleveland.*

DRAGON

THE OBJECT of the game is to move your shuttle down between the shields and capture the parts that are being sent to the humans own space station.

This may seem easy enough but the shields get faster and the more parts you collect the more shields appear. The parts also increase in speed as the game progresses.

There is also an "on screen" fuel gauge and this is used up each time you have to hit your rockets. The numbers of parts you have collected and how many ships you have left is shown on screen along with the remaining fuel.

The game also incorporates a freeze frame to allow you to leave your game for a while without coming back to find you have been destroyed. Instructions are included within the program.

If you find this too difficult you can make it easier by altering the number of parts you need to collect by changing the 'TP' variable in line 1250 to a smaller amount.

# Four in a row

*Martin Roberts,*
*Dewsbury,*
*West Yorkshire.*

BBC

FOUR IN A ROW is exactly the same as the popular Connect Four game. The game can be played either against the computer or against another human being. The rules are very simple.

The game is played — in this case — on a 9 by 8 board. The player makes his move by dropping coloured disks down the board. The disk always falls to the bottom of each column. The next player then makes his move by dropping a different coloured disk.

The winner is the player who gets four of his disks in a row. The row can be either horizontal, vertical or diagonal. In computer play mode, the user is asked which level of difficulty he would like to play at. The levels are from 1 to 5. In level 1 the computer will only play defensively and so does not play a very good game. In level 5 however the computer will provide a challenge to most players. The speed of play varies with difficulty. The computer can take up to 40 seconds to make a move in difficulty factor 5.

A detailed description of the workings of the program would be beyond the scope of this article but there is a brief description of what each section of the program does.

| Lines | Operation |
|---|---|
| 30 to 70 | initialisation of variables and characters. |
| 160 to 200 | instructions. |
| 310 to 390 | initialisation of arrays. |
| 460 to 550 | main loop of program. |
| 610 to 720 | check for win. |
| 890 to 900 | program data. |
| 920 to 1970 | computer move section. |

Briefly the computer move making section operates as follows. The computer scans each column from left to right and calculates the numbers of disks in a straight line which would result in going in that column. Different values are assigned to each number in the row. So two in a row might be worth 10 points whereas three in a row might be worth 30 points — four in a row is of course given the maximum of 13000 points as this wins the game.

Things do not stop there though, the computer must then calculate the values for stopping the opponent from going in that particular column. This is done in the same way but these values are negative since they are defensive.

But what about the position above? This must also be considered or there would be danger of letting the opponent in i.e. there would be no point in going in a column which lead to three in a row if the position above lead to your opponent getting his four in a row. So the position above is also examined in the way previously described.

When the computer has finished calculating the values it then simply scans all the columns to find the one with the highest value. This is the computers move. Readers may like to experiment with the computers play by changing the data in lines 890-900.

# VDU 19

*Andrew Daines,*
*Bungay,*
*Suffolk,*

SPECTRUM

THESE MACHINE-CODED routines are designed to emulate the VDU 19 command found on BBC and Electron computers. The first routine performs a universal ink change without disturbing the text already on the screen. It will not search for and replace any colour but it will change all the text to blue, for example.

The second routine is similar to the first but changes the paper colour instead of the ink, again this routine leaves any text unchanged. After this comes the third routine, this is more complex than the previous two. It searches through the text and if it finds a certain colour it will change it to another, again this leaves all text unchanged.

Finally comes the fourth routine which searches through paper colours and if it finds a specific colour it changes it.

Now you know exactly what each routine does you must type them in. First type in and run the program provided. This will ask you for the address you want the machine code to start from, on a 16K machine 30000 is a good origin and 60000 on a 48K machine. When this address has been entered ten more addresses will be displayed, the meanings of which are given here:

Address 1: Poke this with the new ink colour.
Address 2: Randomize USR for routine one.
Address 3: Poke this with the new paper colour.
Address 4: Randomize USR for routine two.
Address 5: Ink colour to search for.
Address 6: New ink colour.
Address 7: Randomize USR for routine three.
Address 8: Paper colour to search for.
Address 9: New paper colour.
Address 10: Randomize USR for routine four.
Addresses 1 and 2 refer to routine one.
Addresses 3 and 4 refer to routine two.
Addresses 5, 6 and 7 refer to routine three.
Addresses 8, 9 and 10 refer to routine four.

After printing these addresses the program will proceed to poke the machine code and after a few seconds you will either see the message "code O.K. . . ." in which case you can save and verify the code or the message, or "Check sum error; check data" which means that you have mis-typed one or more of the numbers and the program will stop allowing you to check and rectify the data. When you are satisfied the data is correct, re-run the program.

The basic programme will then re-new itself, you can then type:

CLEAR ST — 1

where ST is the origin. And then type Load"" Code and load back the machine code in memory, then you are free to use the routines.

*Wiltshire.*

AMSTRAD

THE AMSTRAD CPC-464 has some excellent facilities for graphics — with a resolution of 640 by 200 pixels in Mode 2. Although the excellent Basic includes a comprehensive suite of graphics commands there are one or two useful commands that are not present in Amstrad BASIC — a circle drawing command and a command for colouring large areas of screen.

The Circles program draws the outline of a circle with a radius of 100 pixels and with its centre in the middle of the screen. To change this, alter variables r — the radius — ,x and y — the centre.

The second program — concentric circles — draws two circles — both with the same centre. One has a radius of 100 pixels and the other a radius of 50 pixels. The variables used are r and r2 — radii of circles — ,x and y — centre of circles.

It is also possible to draw solid — coloured in — circles on the CPC-464. All we need to do is to draw lines across the circle.

The Solid Circles program draws a coloured-in circle with a radius of 50 pixels in the centre of the screen — see variables s,x and y. The program draws a line in the top half of the circle which is then reflected in the bottom half.

Run the solid circles program again and type:

```
INK 1,1
```

The circle — and the cursor — has now disappeared! To get them back again type:

```
INK 1,24
```

Make the following alterations to the solid circles program:

```
25 INK 1,1
40 IF s=0 THEN INK 1,24:END
70 IF s=0 THEN INK 1,24:END
```

In Mode 1, up to 4 Inks are available, after switching-on or resetting the CPC-464 defaults to Mode 1. Ink 0 is the background — paper — and Ink 1 is the foreground — pen — you could change this though. The circle "disappeared" because it was the same colour as the background. Inks can be used to create the effect of animation.

It is also possible to draw ovals on the CPC-464. The program is similar to that for drawing circles, after all, an ellipse is only an elongated circle.

The oval is twice as high — 100 pixels — as it is wide (50 pixels). To change this, alter the variable r in line 40 and the number of r's in line 70.

Ink-swap circles demonstrates the use of filling-in circles and Inks. I have used Mode 0 because it offers most Inks (16) although it has a fairly low resolution of 160 by 200 pixels. A circle is drawn at a random position on the screen and with a random radius. Then the Border and Inks are changed and another circle is drawn.

This is done repeatedly to create a pleasing effect. To change the maximum radius of the circle alter variable R in line 40. "Ink-swap circles" is a "sit and watch" program.

*Program 1.*

VIC-20

HAVE YOU NOTICED that all those useful machine-code routines published in magazines are always located at the top of unexpanded Vic-20 memory. This is extremely inconvenient if you want to have, more than one routine in memory at a time.

Here is a Basic program to help you move "un-relocatable" machine-code routines around in memory. It occupies just over 2K and with very little alteration will also work on the Commodore 64.

The program will recompute all "JSR" "JMP" and absolute instructions to addresses within the subroutine and move the machine code anywhere in user Ram. Be sure to protect the new area of memory before loading any other programs.

The program was written only as an aid and should be used with care. For example numbers loaded via the accumulator into the zero page for subsequent use as an indirect address back into the subroutine will not be altered by the program and will still have to be changed by hand. Any text or data contained within the machine code may also cause confusion and the best way to handle this is to poke data or text bytes to zero before moving the code, then poking back the correct values in the new memory locations.

The program works by first setting up three arrays containing all valid 6502 op codes, with zero, one and two byte operands in separate arrays.

The user is then asked to input the old start address, old end address of the code to be moved and the new start address it is to be moved to.

The program then compares the first byte to be moved with the list of op codes until it finds a match, if the op code has no operands

*(continued on next page)*

(continued from previous page)

or one operand, the code is transferred directly by the for next loop in line 390.

If the op code has a two byte operand, the address the instruction points to is compared with the start and end addresses of the code being moved and if it is in range the address is recomputed before being moved. All other instructions are moved without alteration.

Once the code has been moved it can easily be turned back into data statements using the program "self writing" published in *Your Computer* in October 1983. Because it is written in basic the program is not very fast, in fact if you are considering moving more than about 1K you might as well go and do the shopping while the conversion is done. However, it does work and is still quicker than recomputing jumps by hand.

*Vic machine-code mover.*

# Program Loader

*Colin McShane,*
*Coatbridge,*
*Lanarkshire.*

ORIC

THIS PROGRAM will display the contents of a personal cassette. It also allows the selection of the contents of the cassette. New files of programs can be added to the utility program itself.

By moving the cursor up to the appropriate line number where the arrays A$(1-10) display the program names, copy the whole line using Ctrl-A and type in the new program name. When you have finished typing in the program name, press return and continue to add other program names.

If you have finished entering new files then re-Run the program. Leave some space on the tape after saving the Program Loader. This is due to extra memory space being required by the program when new files are added.

Up to 10 program files can be utilised but with a few modifications, extra files can be added. Prompts throughout the program will guide you through the loading and saving procedures.

*Program rundown.*

**Lines**

1—4 : Initialisation and screen set-up.
30—50 : Program selection screen.
60: Load routine
100—145 : Program name filespace.
150—170 : Extra filespace.
1000— : Editing files routine.

"Without doubt the best value MSX Machine"

# GOLDSTAR MSX

## "This is the one"
## "It's unlikely that you'll find a better MSX bargain"
## "I could imagine choosing this as my MSX machine"
(MSX user Dec '84)

## "At less than £240 the Goldstar is a positive bargain"
(What MSX Nov/Dec '84)

Yes—the exciting new world of MSX computing is now here, with the superb new Goldstar MSX micro! And just look at the rave reviews it's received from the press.

MSX micros are made to a standard specification—but some things do vary and that's where the Goldstar comes out on top. It's POWERFUL—a full 64K of user RAM, 32K of ROM AND a 16K video RAM. Its sixteen vivid colours and eight octaves of sound make it a great games player's micro, and there's a powerful Z-80A processor to take on a world of home or office tasks.

But it's the price tag that's really special—just £239.99, a lot less than most of the others. Take a look at the superb Goldstar MSX, at your Spectrum dealer NOW!

SENSATIONAL VALUE

**£239.99**

- General purpose MSX micro
- Powerful 64K user RAM
- 32K ROM, 16K video RAM
- Hi-resolution colour graphics
- Full typewriter keyboard and cursor controls

## Omega Compucorder

- Battery/Mains Operation
- Built-in condensor microphone
- Automatic level control
- 3-digit Tape Counter
- DIN Socket

GREAT VALUE AT ONLY **£24.95**

## BBC Emulator

This superb unit enables you to process your BBC projects on your Commodore 64 at home. All you do is type programs in BBC BASIC and the Emulator allows your Commodore 64 to 'imitate' the BBC.

Spectrum Price **£13.95**

## Quickshot II Joystick

Helicopter-style grip with the Fire button on top. Features suction feet for stability and Auto Fire mode. Compatible with most micros.

**£11.95**

## Super Value Shado Add-Ons

### Shado BBC Compatible Data Recorder

Also suitable for other micros

This neat, stylish data cassette recorder is a terrific value-for-money way to save your program and data from your BBC Acorn or Electron micro. The Shado connects easily, offers reliable and consistent performance and features a Tape Position indicator for easier data access.

Spectrum Price **£32.50**

### Commodore 64 Compatable Data Recorder

Directly compatible with the Commodore 64 and VIC-20 micros, this excellent data recorder eliminates the problems of using ordinary cassette recorders - at a top value price too!

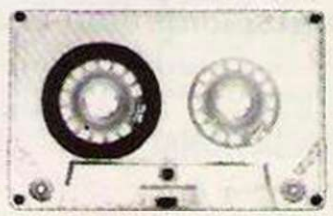
Spectrum Price **£34.97**

### Shado Joysticks for the BBC

Designed as direct replacements for the Acorn originals, these superfast joysticks (connected to the Analogue port) feature much improved hand action with sprung response. left & right are identified by the colour of the fire buttons.

Spectrum Price Per Pair **£16.95** per pair

### Blank Data Cassettes



C12 Standard Data Cassette..... 50p
C15 Standard Data Cassette..... 58p
C12 Reel to Reel..... 75p

Not all stores carry every advertised item, please phone before making a journey - prices correct at time of going to press E&OE

spectrum CHARGE CARD

## Up to £1000 Instant Credit

- There's up to £1,000 worth of Instant Credit available on a Spectrum Chargecard. See your local SPECTRUM dealer for written details (UK mainland only) Typical APR -29.8%

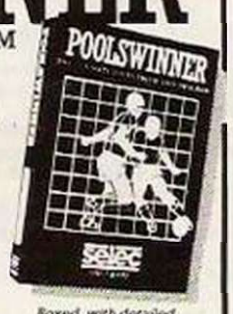
# POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM



*Boxed, with detailed instruction booklet*

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available – 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture – choose as many selections as you need for your bet. The precise prediction formula can be set by the user – you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape, with simple instructions for conversion to disc/microdrive operation.

(This seasons results are supplied with the package so that predictions can start immediately.)

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, IBM pc

**PRICE £15.00 (all inclusive)**

NEW

**FIXGEN 84/5** AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

**POOLSWINNER with FIXGEN £16.50 (all inclusive)**
**Fixgen alone £5.50**

**COURSEWINNER V3**
**THE PUNTERS COMPUTER PROGRAM**

Coursewinner is designed to allow you to develop and test your own unique winning system. Using information from daily newspapers or 'Sporting Life', the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), Dragon, Atari (48K), Apple II

# Ask an expert why the Electron's the best micro in its class.

Most schoolchildren will tell you that one computer prevails in British classrooms today. Acorn's BBC Micro.

With a hint of pride, they'll also tell you that they're fluent in the computer language which Acorn developed for the BBC Micro. It's called BBC Basic.

And if you ask their advice on choosing a home computer for around £200, they're likely to tell you that there's really only one sensible choice.

The £199 Acorn Electron.

Like its £399 stablemate, but unlike any other micro, the Electron speaks BBC Basic. Which means that children can easily carry on with their computer studies at home. And their parents can quickly start catching up, because BBC Basic is such a simple language to learn.

However, language isn't the only thing which makes the Electron outstanding among every other micro in its price range.

A powerful choice.

The Electron is a 64K microcomputer which has 32K of RAM, combined with another 32K ROM.

This simply means that it has more power than most people ever need from a home computer.

Nevertheless, it has been designed to help you make the fullest use of its power.

For example, its graphics have the highest resolution of any home computer bar none.

This is because Acorn specially designed the chip that controls the graphics. And it's among the most advanced chips of its kind.

Indeed, it delivers twice as many characters across the screen as the Electron's nearest rival.

It expands into a system.

With the Electron, even total newcomers have been surprised at how quickly they can find their way into the complex world of computing.

Where many computers have keyboards which are confusing and clumsy to operate, it has a keyboard just like an ordinary electric typewriter's.

And for issuing main commands, there are single entry keys. Instead of literally spelling out the command, letter by letter, you just push the relevant key and it's issued.

There's also a built-in loudspeaker which gives high quality sound.

And what is perhaps most exciting is that the Electron has the capacity to grow with your knowledge and ambition.

With Acorn's Plus 1 expansion module, it can link up with a printer, joy sticks and fast-load cartridge software including View and Viewsheet word processing and spread sheet programs.

With the Plus 3 module, which will soon be available, you'll have a disc drive system and will be able to enjoy all the speed and convenience of 3.5 inch discs.

But let's not get carried away too quickly. You can start using and enjoying your Electron as soon as you get it home.

All you need is your television set and a cassette recorder.

And when it's given you some new ideas about home accounting, it will challenge you to a few games and even spend a few seconds doing your whole family's biorhythms for you.

But remember, although it holds 15 programs, the cassette will only give you a glimpse of the Electron's full potential.

Because the potential is as infinite as your own imagination.

## The speed of a business micro.

Some home computers respond pretty slowly to your commands. After you've pressed the keys, they leave you twiddling your thumbs for more than a mere few seconds.

The plodders, however, are a very long way behind the Electron.

In fact, on processing speed, a recent bench test survey ranked the Electron up with such high fliers as the IBM PC and the Apple III. Both are machines which cost well over £1,000.

It's an astonishing accolade when the Electron makes no greater claim than to become part of the family.

## No shortage of software.

Although the Electron is still a relative newcomer to the market, the range of software available for it is considerable.

Besides plenty of games, there are many educational programs for children of all ages, from playschool to A Level.

There's a great deal to keep adults occupied, too. From money management to helpful domestic programs, even a range of foreign language programs, teaching the basics of French, German, Italian and Spanish.

And of course, with its simplicity and flexibility, the Electron could soon be processing programs created and written by none other than yourself.

## Your starter for free.

With your Electron, you'll receive a free introductory cassette.

It will give you a taste of the exceptional colour graphics. It will show you how the Electron can play and rotate music.

You can find the Acorn Electron with its full complement of accessories and software at local Acorn dealers and major high street stores.

For the address of your nearest supplier, ring 0933 79300.

# HAVE AN ADVENTURE THIS CHRISTMAS WITH LEVEL 9

"The appearance of a new program from Level 9 is a flag-day for all aspiring adventures and, in my household, a signal for the cat to hide under the bed for the duration against the inevitable moment when I go rampaging through the flat, a wild look in my eyes muttering ferociously about bricklaying birds nudist beaches and the like. Since *Return to Eden*, the sequel to *Snowball* is out, the cat may be in hiding until Christmas.

You don't need to have played *Snowball* to get into the sequel as ever, there is ample documentation with the tape which in my Commodore 64 version (it is also on the Spectrum, Amstrad and BBC), is turbo-loaded. It starts with you, agent Kim Kimberly, having been framed for sabotaging the colonyship Snowball, in a crashed stratoglider on the planet Eden. For the moment your mission is to survive the misplaced retribution by your own people, but life gets very much more complicated than that. Solving these puzzles has nothing to do with luck, you either figure your way out of trouble on Eden or die there.

One major difference between this and former Level 9 efforts is that the Spectrum and C64 versions have graphics of a very high quality and can be switched off if required. The scope of the vocabulary appears unscathed by this addition.

Even experienced adventurers will probably get fried a few times by the avenging engines of the Snowball, before discovering how to take shelter. But, once that hurdle is passed, the real adventure begins, and it's a lulu.

From the radioactive desert caused by the engine blast, you progress through a variety of hazards through some highly unlikely locations.

I haven't got to that point yet, and so far superhuman willpower has stopped me using the clue sheet provided, but I can't hold out very much longer since I am having what could be lethal communication problems with some robots.

Terrific fun, but should carry a mental health warning." *Popular Computing Weekly 7 Nov 84*

**DISTRIBUTORS**

If your local dealer doesn't stock Level 9 adventures yet, use the coupon to buy them from us, or ask him to contact: Centresoft, Microdealer UK, Lightning, R&R, Leisuresoft, PCS(SW), MCD, TBD etc.

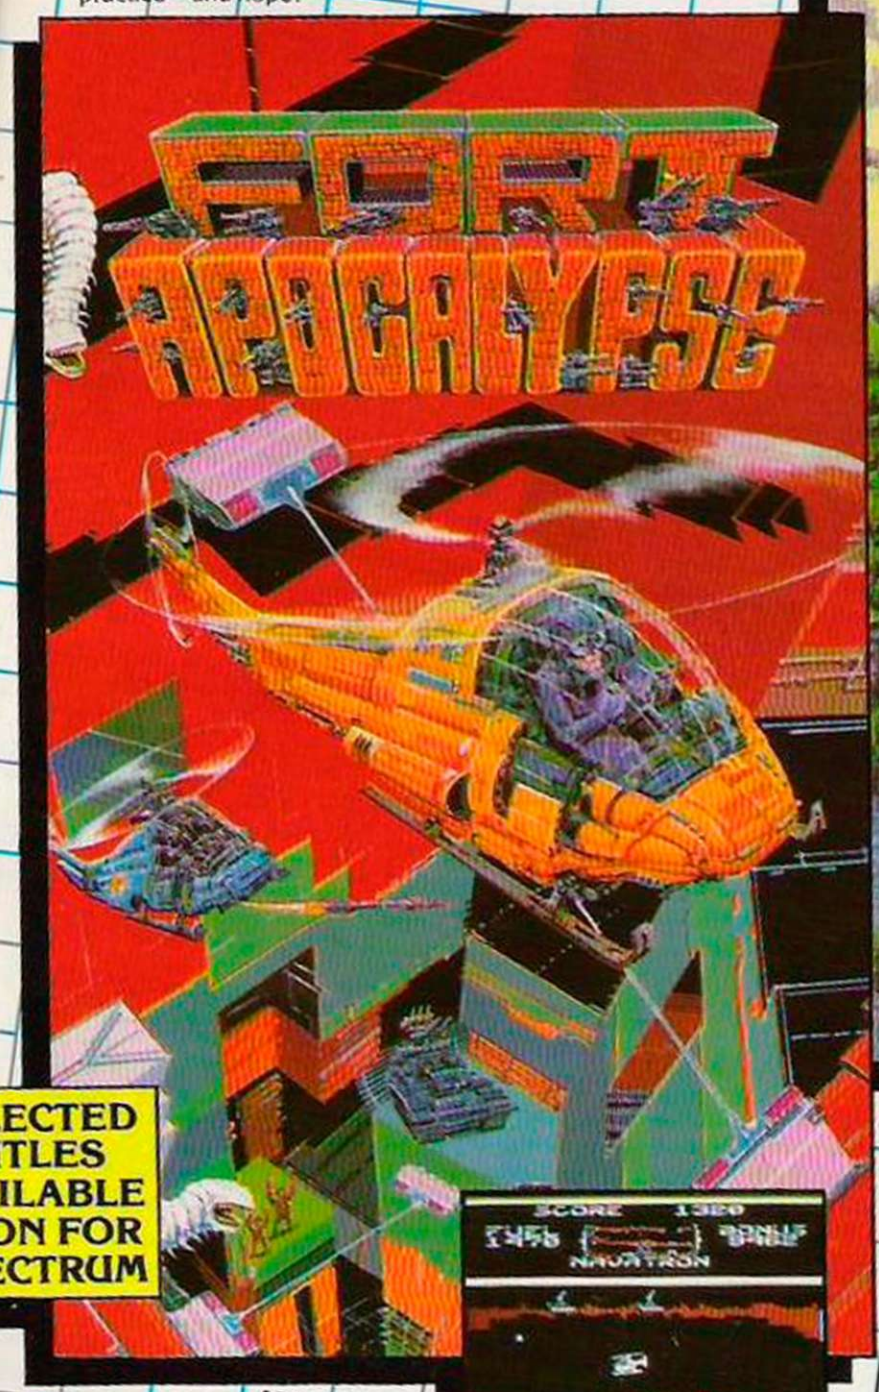
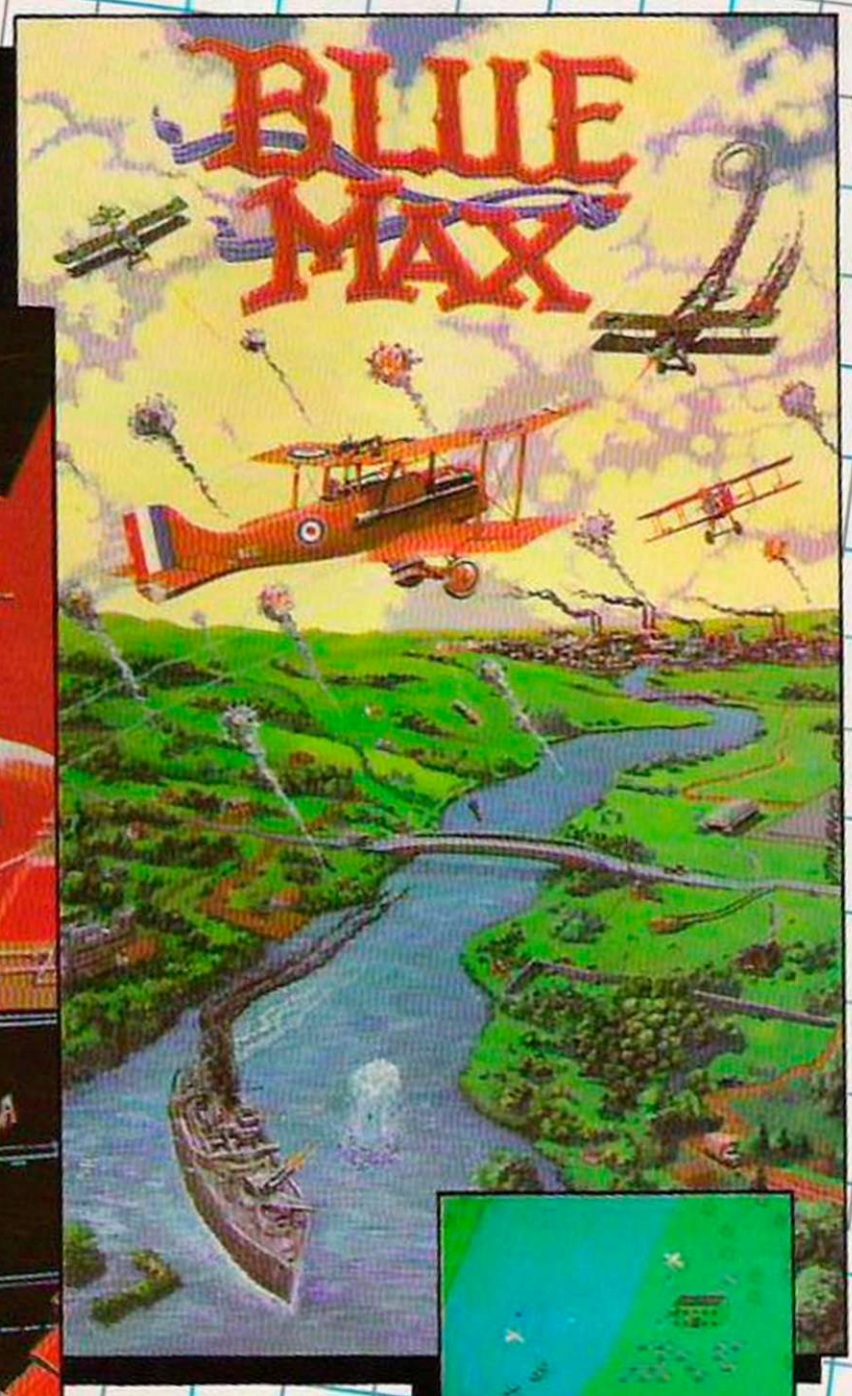
# BOMBS AWAY!

Play this multi-level extravaganza three different ways. You and your chopper must bomb and fire on vile enemies, navigate hazards like deadly laser rooms and hyper-energy chambers, rescue 18 trapped friends – and make your way through the most demanding, maddening set of caves ever devised. Super graphics, unnerving sounds, constant scrolling, plus randomly placed dangers so the game is always new. You can't really learn **Fort Apocalypse.** Just hold on to your joystick, practice – and hope!





ATARI 64

You're at the controls for this World War I dogfight game.

Shoot down enemy planes, bomb targets, strafe tanks and gun emplacements – there's constant action on the incredible 3-D diagonally scrolling screen. At the same time, you have to keep track of altitude, speed, fuel and damage. Medals don't come easy. You must master a series of flying skills and perform them with pinpoint accuracy. One slip and you've lost it all – even your life. Happy landings, ace!

## 747 Flight Simulator

*from DACC — The Simulation specialists*

*©Actual screen photograph (BBC version)*

Unrivalled and unbeatable for accuracy and realism — the DACC 747 Flight Simulator is the most successful of its kind on home computers. The only simulator which shows all the essential flight and engine instrumentation of the Jumbo Jet, as they really are — real dials — and with a precise 3D view of the runway. The control and response of the 747 are faithfully reproduced using genuine aero-dynamics formulae. Start options include take-off, random landing approach, passenger and fuel load selection, etc. You control the throttles, elevators, ailerons, flaps, spoilers, landing gear, brakes, reverse thrust, etc. Joysticks are optional on all but Dragon and Tandy versions.

# TAKE A TEST FROM THE RANGE

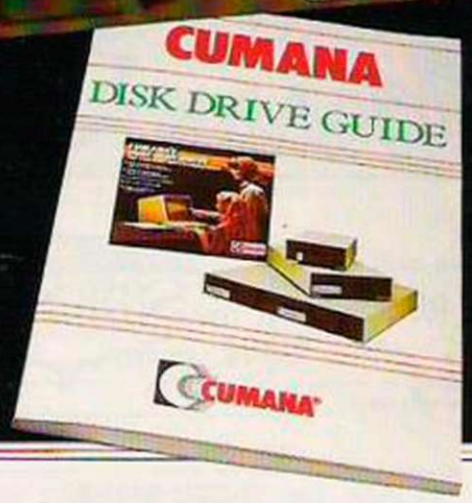
So now you have got your home computer, you're ready to talk to Cumana – the best name in memory. Already a market leader throughout Europe for their range of disc drives Cumana now have other products on offer, all to the same exacting standards that have made their disc drives the number one choice in the home and in education.

**The Touch Pad**

The Touch Pad is a low-cost graphic plotting aid for the BBC micro. This compact display cursor moving device simplifies programming with the touch of the stylus.

The product comes complete with an instruction booklet, basic software, stylus and connecting cable. Its uses are in graphics, computer aided design, education and games.

**£69.95**
including VAT.



**Disc Drives**

Cumana have spent years on research, development and marketing a range of drives second to none. Their drives are compatible with BBC, Spectrum, Dragon, Oric, Tandy Models I,II, III and 4 and Video Genie. They are fully guaranteed for 12 months and approved for electrical safety by the D.M.E.E. and are extensively used in GLC and ILEA establishments. Cumana were the first independent disc drive supplier and are now Europe's market leader. Their products have been proven in the schools, universities and homes throughout Europe. Let us drive you in the right direction, send now for further details of the Cumana range, or see them at our distributors and at selected branches of W.H. Smith, Lasky's, Greens, Currys, and Spectrum UK.

# CUMANA

**The Acorn Electron Computer**
A microcomputer with a proven track record. Using BBC Basic, the Electron was developed out of the Micro that has been chosen for over 80% of schools participating in the Government's current Micros In Schools project. It connects into almost any TV set and cassette player and is supplied with a comprehensive User Guide which runs through, in a simple to follow manner, the basic principles of programming. A wide range of software is available, including games, educational packages and home accounts.

Cumana price
**£199.00**

Disk interface now available for the Acorn Electron, details from Cumana.

**Diskettes**
Only when Cumana found a double density diskette up to their stringent quality control requirements, and at a price that made sense to the end user, were Cumana ready to put their name to it.

The result was a top quality diskette, complete with a plastic protective case for the ten-pack (they are also sold in two-packs!) together with index stickers.

Cumana diskettes are available now in both 5¼ inch and 3½ inch as single or double-sided, 40 or 80 track, from your local computer dealer. Don't trust it to chance, go for the best name on record.

Cumana BBC Microcomputer compatible disk drives: retail price list.

Cumana disk drives supplied with formatting diskette, drive connecting cable and comprehensive user manual. Independent power supply, mains lead and moulded plug included.

# HERE'S SIX WAYS TO M

## PAINTBOX

**Superb Graphics — without expensive hardware!**

PAINTBOX is a must for every owner of a 48K Spectrum.

It will give you the ability to produce stunning graphics on your micro — simply.

With PAINTBOX there's no need for expensive hardware — why pay up to £150 for hardware when you can produce incredible picture and graphics with one cassette-based software package?

If you haven't seen PAINTBOX demonstrated you're in for a pleasant surprise!

For instance, PAINTBOX will enable you to draw practically anything on your screen and save it either as SCREEN$ or as a machine code memory file to use in your BASIC or MC programs.

You wield enormous power over the graphics capability of your SPECTRUM — including the definition, storage and use of up to 84 UDG's — 4 times more than normal! A brief description of facilities are as follows:

UDG DRAWING BOARD for defining up to 4 Banks of UDG's including ROTATE, MIRROR, INVERSE etc.

UDG EDITOR for storing up to 84 UDG's for use in screen planning or in your other programs.

PRECISION PLOTTER. A high-resolution drawing board which allows you to draw anything on the screen. Facilities like CIRCLE, FILL, ARC, PLOT, DRAW, ERASE, OVER, DRAW RADIALLY, INK, BRIGHT etc are included and easy to use!

SCREEN PLANNER gives you the best of both worlds! The combined use of PRECISION PLOTTER and your Banks of UDG's for highly detailed and precise screen graphics.

The program is complete with DEMO on side two of the cassette and a 28 page instruction booklet.

PAINTBOX can be used with Joysticks and is Sinclair Microdrive compatible.

## SCREEN MACHINE

**Instant Machine Code for graphics and text**

SCREEN MACHINE is a completely professional graphics utility to use with Paintbox (or any other graphics hardware or software).

It will allow you to manipulate your screen graphics and text in ways which will make your programs better and more memory efficient. For instance:

If you have produced a screen-full of superb graphics you can enlarge, reduce, recolour, flip screen, relocate your graphics to another part of the screen, superimpose one screen on another and perform all sorts of other wonders!

Then you can take your results and put them through a series of memory compression routines to allow you to save enormous amounts of memory. Such items like compressing with or without attributes, saving thirds of the screen and multiple combinations of both are possible.

Never has machine code storage of graphics been simpler because SCREEN MACHINE automatically creates re-callable multiple screen files with a location catalogue so that you can add them to your programs!

SCREEN MACHINE also allows the user to program UDG's or text directly into machine code, so if your programs use a lot of text instructions or menus SCREEN MACHINE is going to save fantastic amounts of memory!

SCREEN MACHINE is a major graphics toolkit for the 48K SPECTRUM. It is completely menu-driven, Sinclair Microdrive compatible, and comes with instruction book and an unbelievable DEMO on side 2 of the cassette.

## ADVENTURE PLANNER

**A must for the adventure game fan**

If you're an Adventure Game nut, Print 'n' Plotter's new ADVENTURE PLANNER is exactly what you have been looking for!

It's a 50 page, BIG SIZE (16¾" x 11¾") pad with a complete 'mapping' system with over 150 locations on each sheet . . . created to help you solve Adventure Games.

It's the best way to beat the 'system' and is obviously for use with any make of computer.

ADVENTURE PLANNER will also assist you in planning Adventure Games for programming — a helpful pad to keep by your computer at all times.

# O IMPROVE PROGRAMS.

ADVENTURE PLANNER is published with instructions for use, examples, hints and tips on how to play and win the game faster.

ADVENTURE PLANNER is a high quality pad, board-backed and fly-leaf cover . . . economically priced too!

## ZX SPECTRUM JOTTER

**Pre-planning your screen made easy . . . and precise!**

Print 'n' Plotter JOTTERS have become a household word for the Sinclair enthusiast.

Despite various imitations our original ZX SPECTRUM JOTTER is still the one people prefer!

Of course it could be because it is professionally produced . . . the quality is superb.

And the fact that it is BIG SIZE A3 (16½" x 11¾") is a distinct advantage when working in high-resolution.

It's also 100 pages thick. 50 pages of PLOT grids showing each numbered pixel co-ordinate and 50 pages of PRINT grids showing every character and graphic character position and INPUT lines.

Each page also contains 24 UDG planning grids (2400 per pad).

Consider also the fact that it is printed on Artist's Detail paper . . . thick enough to take any writing, drawing or colouring, yet thin enough to overlay onto a drawing and trace-off.

For pre-planning graphics, text, tabulation or anything to produce 'on screen', a Print 'n' Plotter JOTTER won't be beaten.

The complete package comes with a set of coloured pens, a Pixel ruler and a handy corrugated storage tray.

If you use PAINTBOX, SCREEN MACHINE or any other graphics utility . . . you'll do things better with the ORIGINAL Print 'n' Plotter JOTTER!

## KEYBOARD OVERLAYS

**The simple answer to "Which key?"**

Print 'n' Plotter KEYBOARD OVERLAYS for the standard ZX Spectrum keyboard are the economic answer to "Which key does what?"

If you program, or buy commercially-produced software, sooner or later you'll be faced with a mind-boggling mass of keys that perform different functions.

Let's face it, the Spectrum keyboard is complicated enough so why not take the easy way to remember . . .

. . . lay over the keyboard a Print 'n' Plotter OVERLAY and write the function underneath . . . it's child's play!

Print 'n' Plotter KEYBOARD OVERLAYS come in packs of ten. Punched to fit your Spectrum. Priced to suit your pocket!

## ZX PRINTER PAPER

**High quality. Cheaper Price!**

Print 'n' Plotter have gained a good reputation for the most reliable and high quality PRINTER PAPER for your ZX PRINTER.

Now it's even better because we've reduced the price!

So if you want ZX PRINTER PAPER that gives good, clear print . . . and you want it a little cheaper . . . send today for quick delivery!

## BASIC+ on microdrive

BASIC+ adds 13 extra commands to ZX BASIC for structured programming ie, Procedures, Repeat/Until loops, If . . . Then . . . Else. Also graphic commands including a fast fill and utility commands including a renumber. Commands are entered by two key presses but appear in the program spelt out in full. BASIC+ loads in less than four seconds and occupies just over 1K of RAM and so is suitable for both the 16K and 48K Spectrum.
For a copy of BASIC+ and instruction booklet either send a blank cartridge and £4.95, or £9.90 only to the address below or send a SAE for further information.

**PROSIGN**
**Dept. E, 80 Windsor Drive,**
**Wigginton, York. YO3 8YE.**

**WDSoftware**
**Utilities for the QL (£10 on Microdrive)**
This package offers single-key loading, running or deletion of files, multiple formatting of cartridges, and auto backup of files from one or more cartridges to another with optional over-writing of namesakes. In addition, a directory of 60+ files can be viewed without screen overflow. NB a VERIFY program is unnecessary — QDOS does this automatically. Now includes directory print-out and 'qprint' to print any or all files on a cartridge with optional dated titles. Owners of the earlier package can update by sending OUR cartridge and 25p.

**Morse Tutor for QL £8.50**
**As for 48K Spectrum without speech**
**Current Spectrum Software**
**Tradewind (£5 Cassette)**
Buy a ship, provisions and cargoes to trade between the harbours of the Coral Islands. Make a fortune if the weather and pirates let you live long enough to master seamanship and economics. A strategy/-adventure game with graphics for 48K.

**Jersey Quest (£5 Cassette)**
Following an accident, you are stranded in the labyrinth of time and must find your own way back to the present with the aid of persons and objects from Jersey Folklore. Meet the Black Horse of St Quen, the Dragon and Knight of La Hougue Bie, the Black Cat of Carrefour a Cendre, the Witches of Rocqueburg and many others. A text-only adventure for 48K in machine code (Quill).

**Morse Tutor (£4 Cassette)**
The one has it all! 4-19 words/minute, variable spacing, variable number of groups of random letters numbers or mixed, random sentences, own message, single characters (including punctuation), variable pitch, FEEDBACK via screen, printer or SPEECH (phonetic alphabet via Currah u/Speech on 48K version only), and repeat facility. Takes you to and beyond RYA and Amateur Radio receiving standards. 16K and 48K versions on one cassette. 48K only on Microdrive cartridge.

**Spectrum Programs on Microdrive**
All the above are available on Microdrive cartridges at a price of £4.50 for one cartridge + the price of each program as shown above. E.G., a cartridge with Tradewind and Morse Tutor would be £13.50. As a bonus, Gavin Monk's Indexed Loader is included free with each cartridge.

*available from*
**WDSoftware,**
**Hilltop, St. Mary, Jersey, C.I.**
**Tel (0534) 81392**

NEW!!

## TAPE COPIER 6

Make your essential BACK-UP copies with our second generation copier package TC6. Manages virtually all programs. 48K SPECTRUM only.
* Deals with fast loaders + converts them to normal speed for drive transfer.
* LOADS in program parts CONTINUOUSLY — even when there is no sound gap, short tone leaders, false/illegal headers, etc, making the process simple and effective. User friendly.
* Copes with v. long programs (say 65000+ bytes).
* Extra features. e.g. integral header reader, pause, delete, abort, repeat copies, FULL manual.
* MINITAPE 6 (MT6 — extra program transfers Basic, Code + arrays directly to m/drive + other features.
TC6 costs £5. (£ with MT6 on same tape). MT6 £3 on separate tape. (old customers old tape + SAE but £2 reduction on above prices).

## MICRO/WAFA/DISC DRIVE TRANSFER

48K Spectrum owners with Micro/Wafa/Disc drives can NOW transfer the MAJORITY of their programs (inc headerless, long programs, + those with LOW addresses — say 16384).
To transfer from tape you must convert the program, and then transfer the converted bytes. MD1 (or WD1) has 5 programs *giving you the tools* to do the modifications to get them running. MD1 also has two "CAT" housekeeping programs. MD1/WD1 has a comprehensive manual with example transfers and exercises.
This widely acclaimed program (see Your Spect. No. 9 P14) is ESSENTIAL if you are going to transfer MOST of your programs to your drive. MD1 (WD1 for disc or Wafadrive owners) costs a mere £6.50.

**ALL PRODUCTS CARRY OUR MONEY BACK GUARANTEE**
OVERSEAS: add £1 Europe, £2 other for each product.
SAE for enquiries.

**LERM, DEPT YC, 10 BRUNSWICK GDNS, CORBY, NORTHANTS**

## STOP—REVEAL

A unique cassette for the 48K Spectrum. Genuinely lets you:

1. STOP virtually all programs, BASIC, MACHINE-CODE and even HEADERLESS-FILES, protected or not.
2. REVEALs the hidden Basic in Machine-Code programs. (Could be clues in adventure games).
3. LISTS actual Machine-Code on your video.

Now you can STOP, LIST, MODIFY, STUDY most Spectrum programs at your leisure. (And cassette is Microdrive compatible).

Includes a DISSASSEMBLER so can even study Sinclair ROM, etc, plus the most Advanced HEADER-READER ever written, plus pages of SECRETS OF THE TRADE explaining professional methods used to hide lines/programs, etc.

*YOU CANNOT GET A MORE POWERFUL CASSETTE*

(Even STOPS/REVEALS programs which are a genuine 48K long).

**POST £5.95 FREE**

*(Europe add £1. Other areas add £2)*

KERR, 1-2 HIGH STREET, KING'S LYNN, PE20 1BX.

VIC TAPE BACKUP will backup most Vic-20 programs, in BASIC, machine-code, or both. Detailed instructions are printed on the card inlay. VIC Tape Backup is easy to use, with prompting by colour and by sound — when the colours change and the tone sounds, the copier is ready! Load errors are signalled, so poor originals can be tried again. Works with all memory configurations — one machine-language program allows automatically for memory differences! Send crossed cheque/PO for £7.95 to: **Level Software Ltd, PO Box 55, Shirley, SOLIHULL B90 4SL. Tel: 021-643 6728.**

# FUN WITH SPEECH 64!

## Speech Synthesiser for the Commodore 64

***SPEECH 64*** for the Commodore 64 is ready to talk immediately on power-up, has an infinite vocabulary and extra BASIC commands. Retailing at only **£29.95**, ***SPEECH 64***'s advanced features will give you, your family and friends lots more fun with your computer! Its sister unit μSPEECH — for the Sinclair Spectrum — is a smash hit in the UK and over 10 other countries, and has been awarded the CTA 'Product of the Year' accolade.

***SPEECH 64*** is easy to use! It needs no software to be loaded, it does not steal RAM from the BASIC operating system, or stop arcade style action.

With extended BASIC commands like SAY and its Text to Speech facility ***SPEECH 64*** can be programmed in plain English, just like this:

**SAY "to say anything you want"**

You can choose from two different voices, each with programmable intonation, and other commands control the voicing of keys as they are pressed — a useful educational aid for young children.

***SPEECH 64*** comes complete with full documentation and two free full colour posters. Watch out for ***SPEECH 64*** as it appears in retail outlets nationwide — or use the order form below, at no extra cost.

# MATCH DAY

Match Day is no ordinary soccer game. Blistering 3-D action, total animation and automatic camera scan are just some of the intricate techniques which make Match Day the league leader of soccer games. Now follow the "Action":

Your striker traps the ball from a perfectly placed corner-kick, takes on the defender and dribbles neatly round him making space to

chip in a teasing cross-ball to his advancing team mate in the

six-yard box. There is no time to control the ball, your player must commit himself to a snap shot on goal. . .

his powerful half-volley rattles the cross-bar, the ball returns, floating menacingly above the penalty

area and your star striker seizes this half-chance

to head the ball decisively into the back of the net. . .

. . .GOAL!

Match Day is as compelling as soccer itself. You will marvel at the depth of play and ball control offered only in MATCH DAY . . . Shoot to win!
