SPECTRUM
BBC

Bounty Bob™ returns in this new and exciting follow-up adventure to Miner 2049er.® This time around it's even tougher than before and Bob needs your help more than ever to guide him through the mine. The mutant organisms have multiplied and over-run the mine entirely, making it extremely difficult to survive the hazards of the underground passageways. Using the high-powered special equipment in the twenty-five new caverns is Bob's only hope of achieving his objective of securing the mine and defeating the plans of the evil Yukon Yohan!™

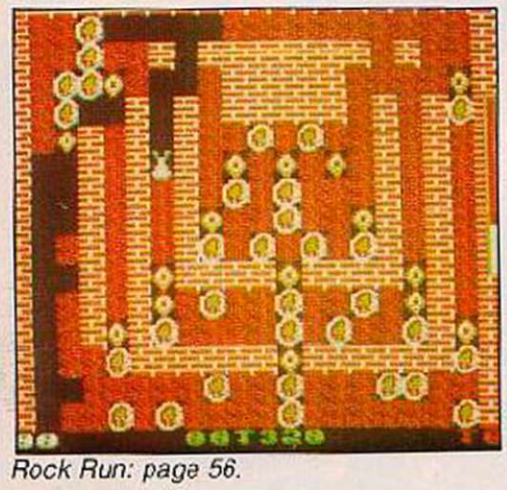
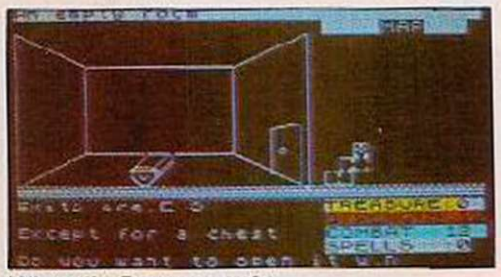
JUNE 1985

Commodore 128 review: page 48.

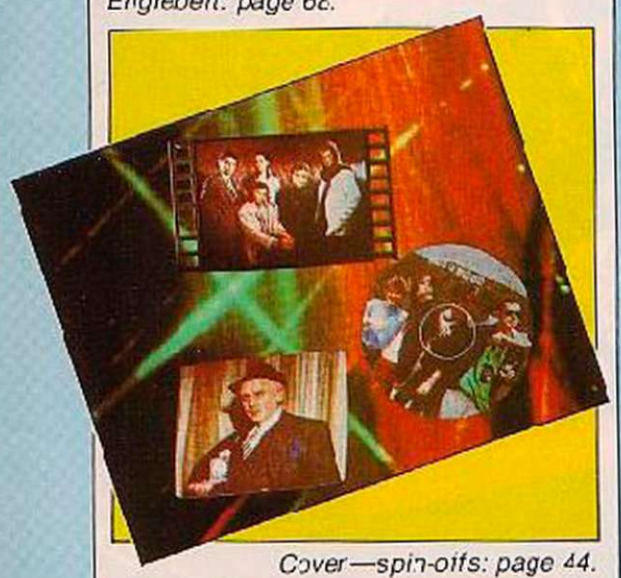


Rock Run: page 56.



Wizard's Den: page 61.

Englebert: page 68.



Cover—spin-offs: page 44.

20 **NEWS:** New BBC +, Commodore 64 digitiser; Hanover Fair report.

25 **LETTERS:** Observations on the nature and content of software advertising.

29 **FIRST BYTES:** Novices' guide to printers and animation.

33 **HARDWARE HITLIST:** Datel sound sampler; CBM-64 stringy-floppy.

35 **SOFTWARE SHORTLIST:** WW II? Who'y gonna call? Dambusters!

43 **QUEST CORNER:** Dead at the controls. Gremlins with Hugo North.

44 **SPIN-OFFS:** What do Arthur Daley, Frankie Goes To Hollywood and James Bond all have in common? They have been computerised. Paul Bond investigates.

46 **AMSTRAD CPC-664 REVIEW:** Lee Paddon looks at one of the few success stories in the current home computer scene. Their new baby has promising features.

47 **ATARI 130XE REVIEW:** Jack Schofeld bows ceremonially at the Atari altar and finds that good graphics and big memory makes this a real Amstrad-basher.

48 **COMMODORE CBM-128 REVIEW:** Arthur Young takes the first look at the three machines in one: old 64, extra memory and CP/M — naturally.

50 **BBC MICRO DATABASES:** John Dawson leafs through the wealth of databases available to the BBC Micro. Now you can file all those phone numbers.

56 **BBC MICRO/ELECTRON ROCK RUN:** Inspired by the most innovative game of 1984 — Boulderdash — Brian Lewis has created a real gem of a game here.

61 **SPECTRUM WIZARD'S DEN:** The wizard is hidden at the heart of the maze. Can you find your way through David Hamilton's micro-puzzle?

67 **COMPETITION RESULTS:** Winners of the Design A Robot competition. From spotter planes to Sinclair chauffeurs, plus the Iron Teacher.

68 **AMSTRAD ENGELBERT:** Please release me, let me go. John Kennedy has written an exciting variation on the Q-bert theme.

73 **AUTO 64 COMMODORE:** Auto 54 by David Swinnerton makes use of multicoloured sprites and interrupt-driven music. You can use keyboard or joystick to play.

76 **ZX-81 PLATFORM SURVIVOR:** By combining this program with May's survivor you can amend or completely rewrite levels to your own wishes.

79 **AMSTRAD LANDSCAPES:** Here is computer creativity, says Brian James in his second discussion of landscape creation.

83 **COMPETITION:** Win the new Atari 130XE with massive 128K memory. See review on page 47 of this issue.

84 **SPRITE BASIC:** Robert Newman describes a routine which adds new commands to Spectrum Basic. Plus Mark Jones on the QL.

90 **PROCEDURES:** Amaze your friends with Richard Taylor's program.

94 **SPECTRUM MULTIFONT:** Turn your Spectrum into a typewriter.

97 **COMMODORE 64 DISMON:** If you've got a 64 you need a machine code monitor if you want to do anything fast. John Twiddy fills the gap.

102 **BBC BASIC COMPILER PART TWO:** D J Pilling describes the TC Basic run time system generator.

106 **TELSOFT:** Spectrum Sprite Basic and BBC Rock Run, the second part of BBC compiler and 64 Space Junk are to be found in this unique *Your Computer* service.

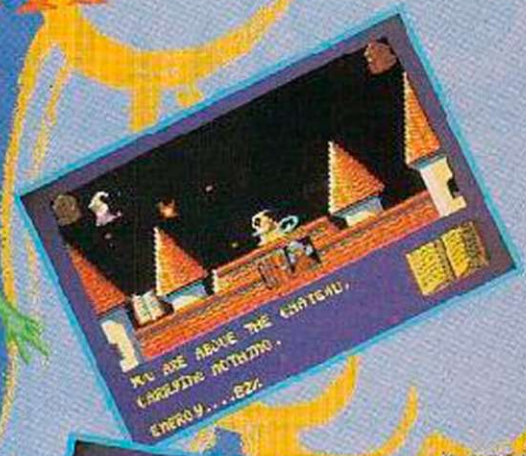
108 **COMMODORE 64 SPACE JUNK:** Nalin Sharma continues his bid to get into the Guinness Book of Records with the longest listing ever published on earth.

111 **RESPONSE FRAME:** Tim Hartnell lends a kindly ear to readers with computer problems. If you need advice, then this is the column for you.

113 **SOFTWARE FILE:** Ten pages of software for most popular micros.

138 **DATEBASE:** Paul Bond rounds up micro events.

GET SORCERY OR YOU'LL TURN INTO A FROG



"Get Sorcery or you'll turn into a frog."
Well, that was the verdict of Which Micro on the Commodore 64 version. Now available on the 14th February is a greatly enhanced, stunning new version of Sorcery for the Amstrad and MSX. 40 screens of amazing and breathtaking graphics (50 in the case of the MSX version), with endless hours of tough and challenging game play.

What the press said about the "Amstrad" version:

"Amstrad owners should welcome it with open arms – it's far and away the best game I've yet seen on the micro" – Personal Computer News.

"What makes this game special is the astounding quality of the graphics" – Popular Computing Weekly

The World has fallen into the Dark Ages. The Evil Forces of the Necromancer are creeping to every last corner of the ancient land that was once the powerful domain of the Great Sorcerers. You are the last free Sorcerer, all the others have, one by one, been entrapped by the hideous evil that abounds.

So don't delay, get your copy now. It's available now from leading computer stores.

Mail Order
Sorcery is available from all good retailers, however, if you cannot find it in your local shop, send £8.95* inclusive of postage and packing to:–
Virgin Games, 2-4 Vernon Yard, 119 Portobello Road, London W11. (*Price for Spectrum version £6.95)

Available for
AMSTRAD CPC 464 £8.95 CBM 64 £8.95
MSX £8.95 SPECTRUM 48K £6.95

ALL SCREEN SHOTS FROM AMSTRAD CPC 464 VERSION.

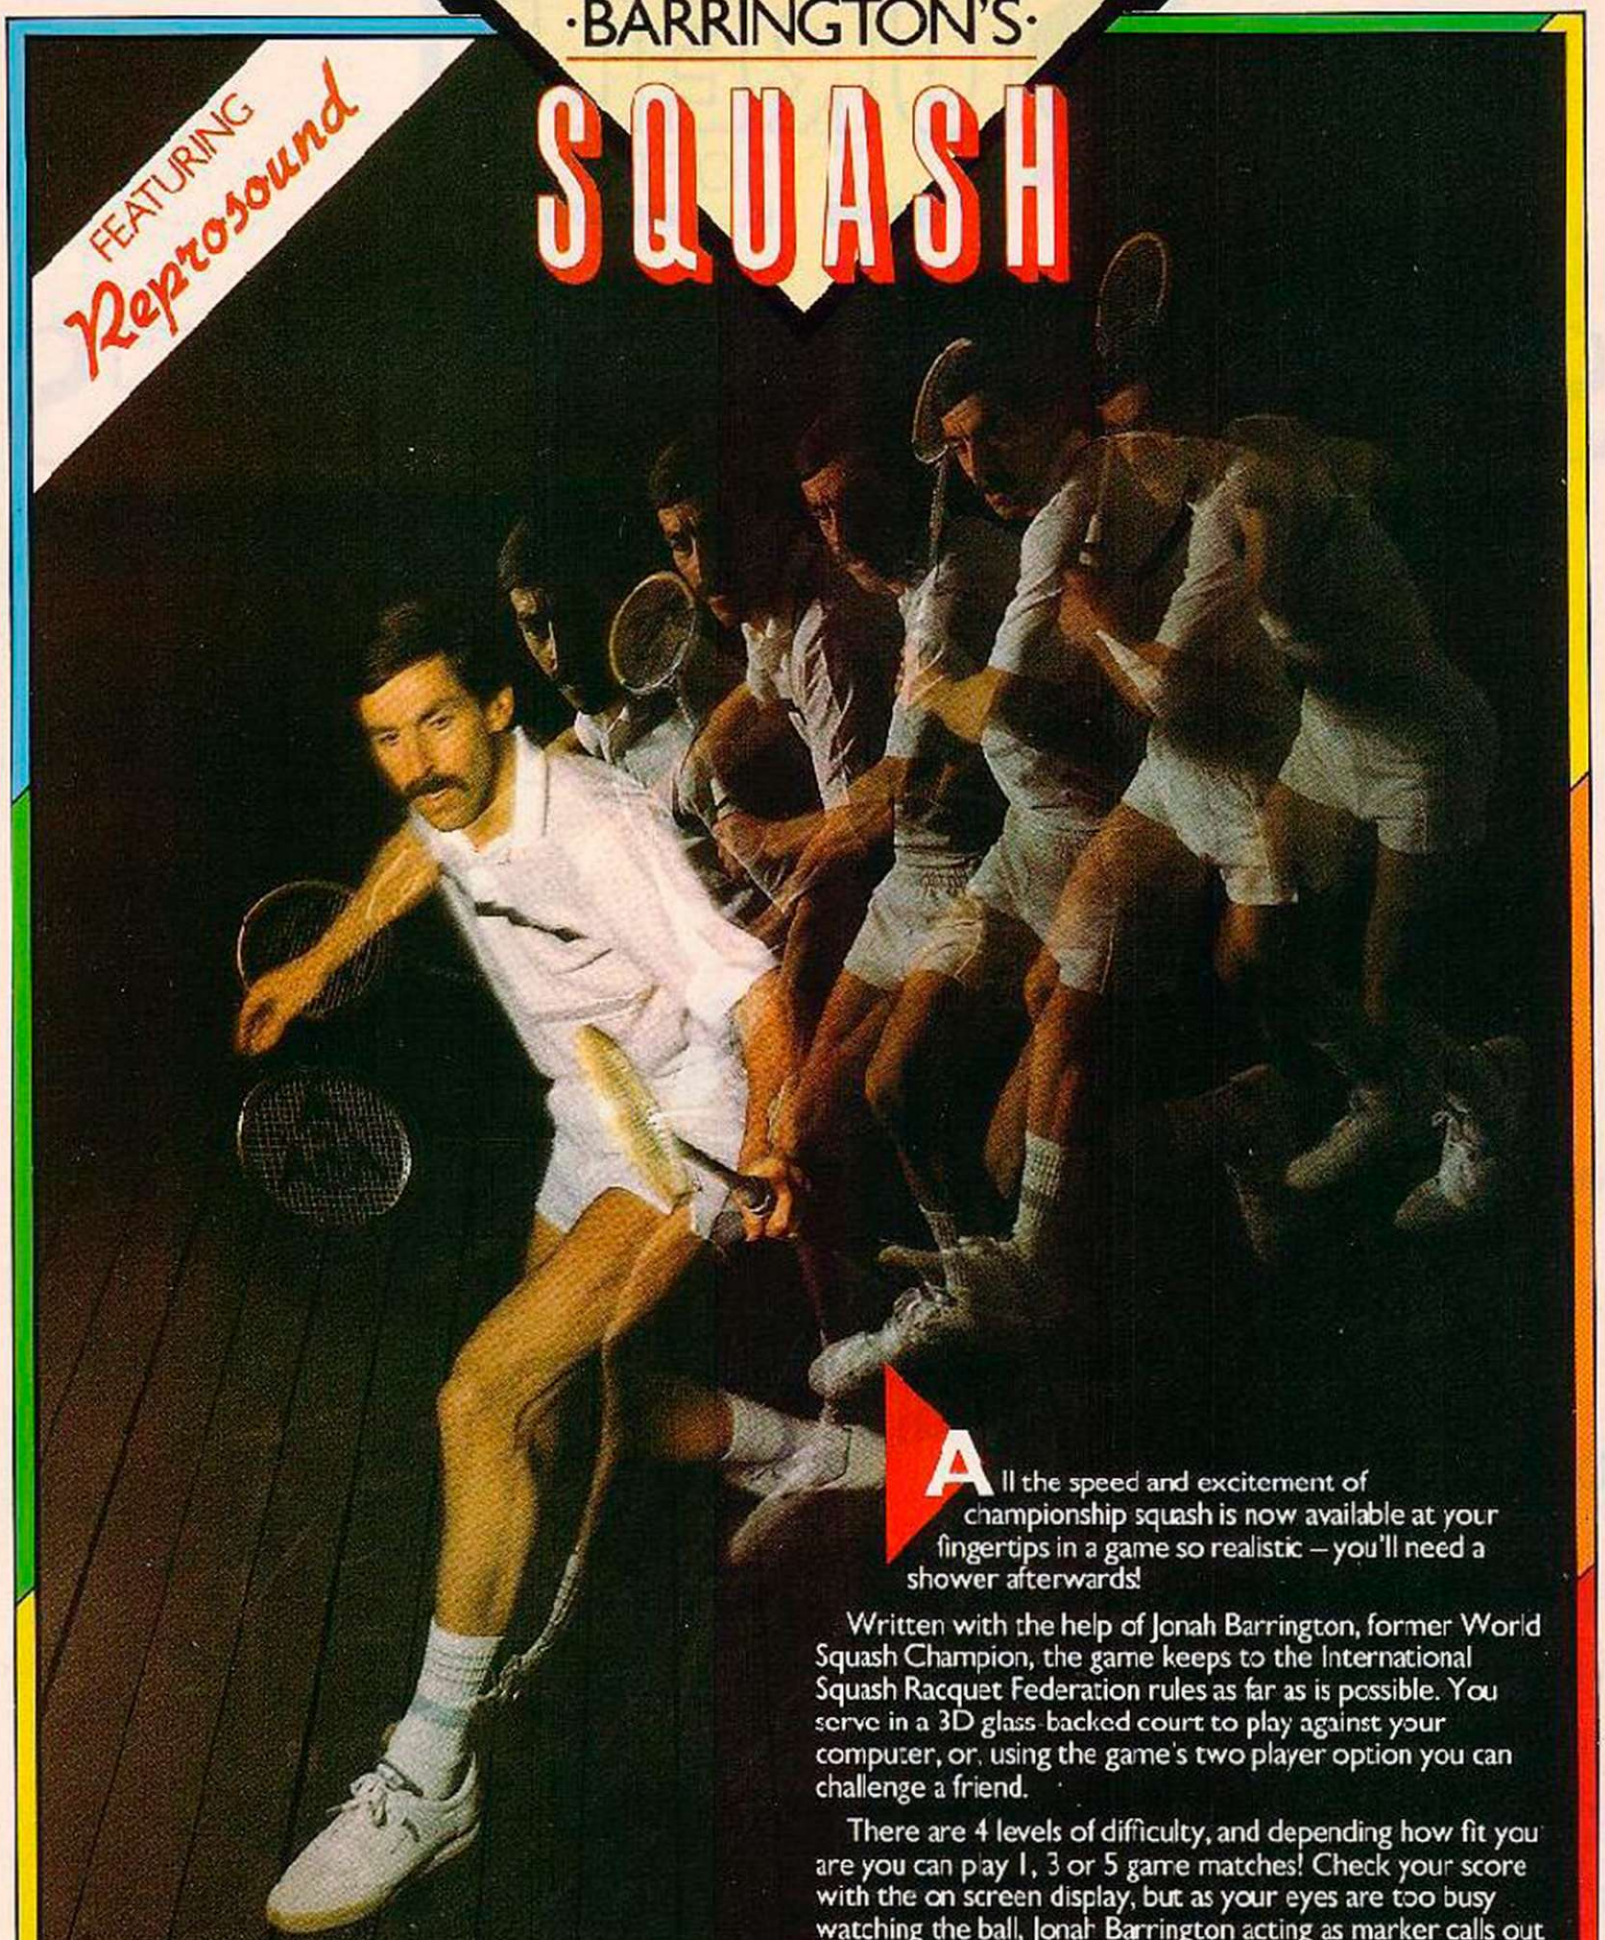
·BARRINGTON'S·
SQUASH

FEATURING *Reprosound*



All the speed and excitement of championship squash is now available at your fingertips in a game so realistic – you'll need a shower afterwards!

Written with the help of Jonah Barrington, former World Squash Champion, the game keeps to the International Squash Racquet Federation rules as far as is possible. You serve in a 3D glass-backed court to play against your computer, or, using the game's two player option you can challenge a friend.

There are 4 levels of difficulty, and depending how fit you are you can play 1, 3 or 5 game matches! Check your score with the on screen display, but as your eyes are too busy watching the ball, Jonah Barrington acting as marker calls out the score for you. All this is due to a programming breakthrough that enables your computer to accurately reproduce the human voice without any hardware add-ons!

The game also incorporates a User Defined Joystick/Keys option which means that you can set your keyboard to suit you, or play with just about any make of joystick.

So get in training for this high-powered action game now.

It's your service next!

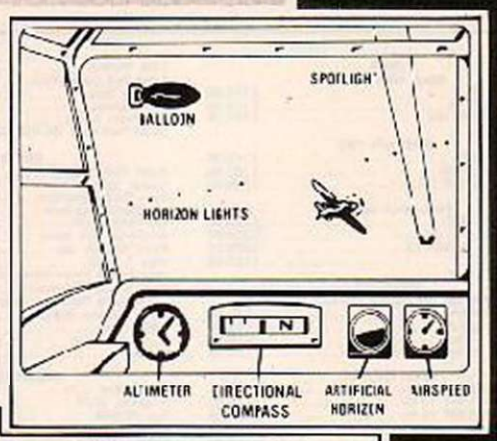
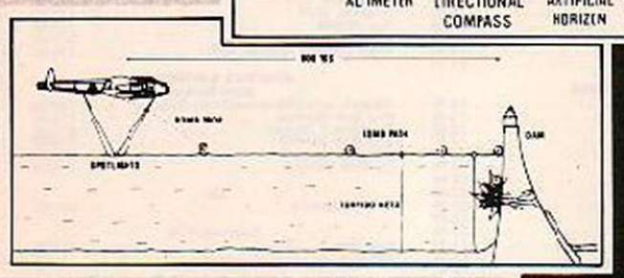
THE DA BUST

At 21.15 hours on the evening of May 16th 1943 a flight of specially prepared Lancaster bombers left Scampton Airfield for Germany. After months of planning and preparation Wing Commander Guy Gibson and his 617 Squadron were at last embarking on a mission so daring that it would guarantee them a place in the annals of history.

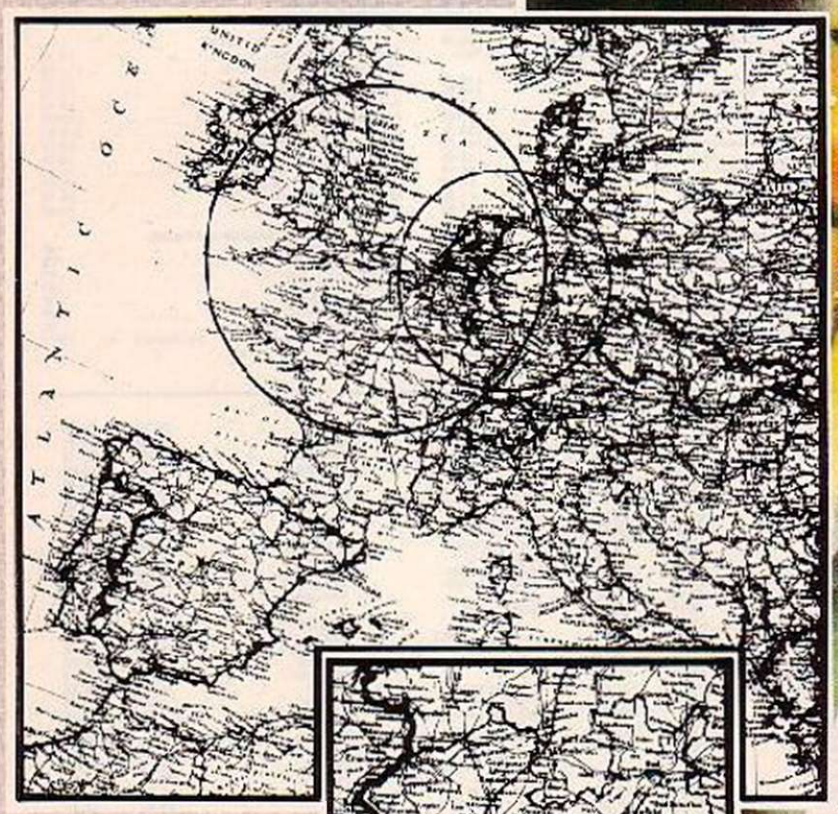
The mission would strike at Germany's industrial heartland. If the giant dams of Moehne, Eder and Sorpe could be breached, millions of tons of water would flood the Ruhr, cutting vital water supplies to steelworks and homes, flooding factories, power stations and farmland, and





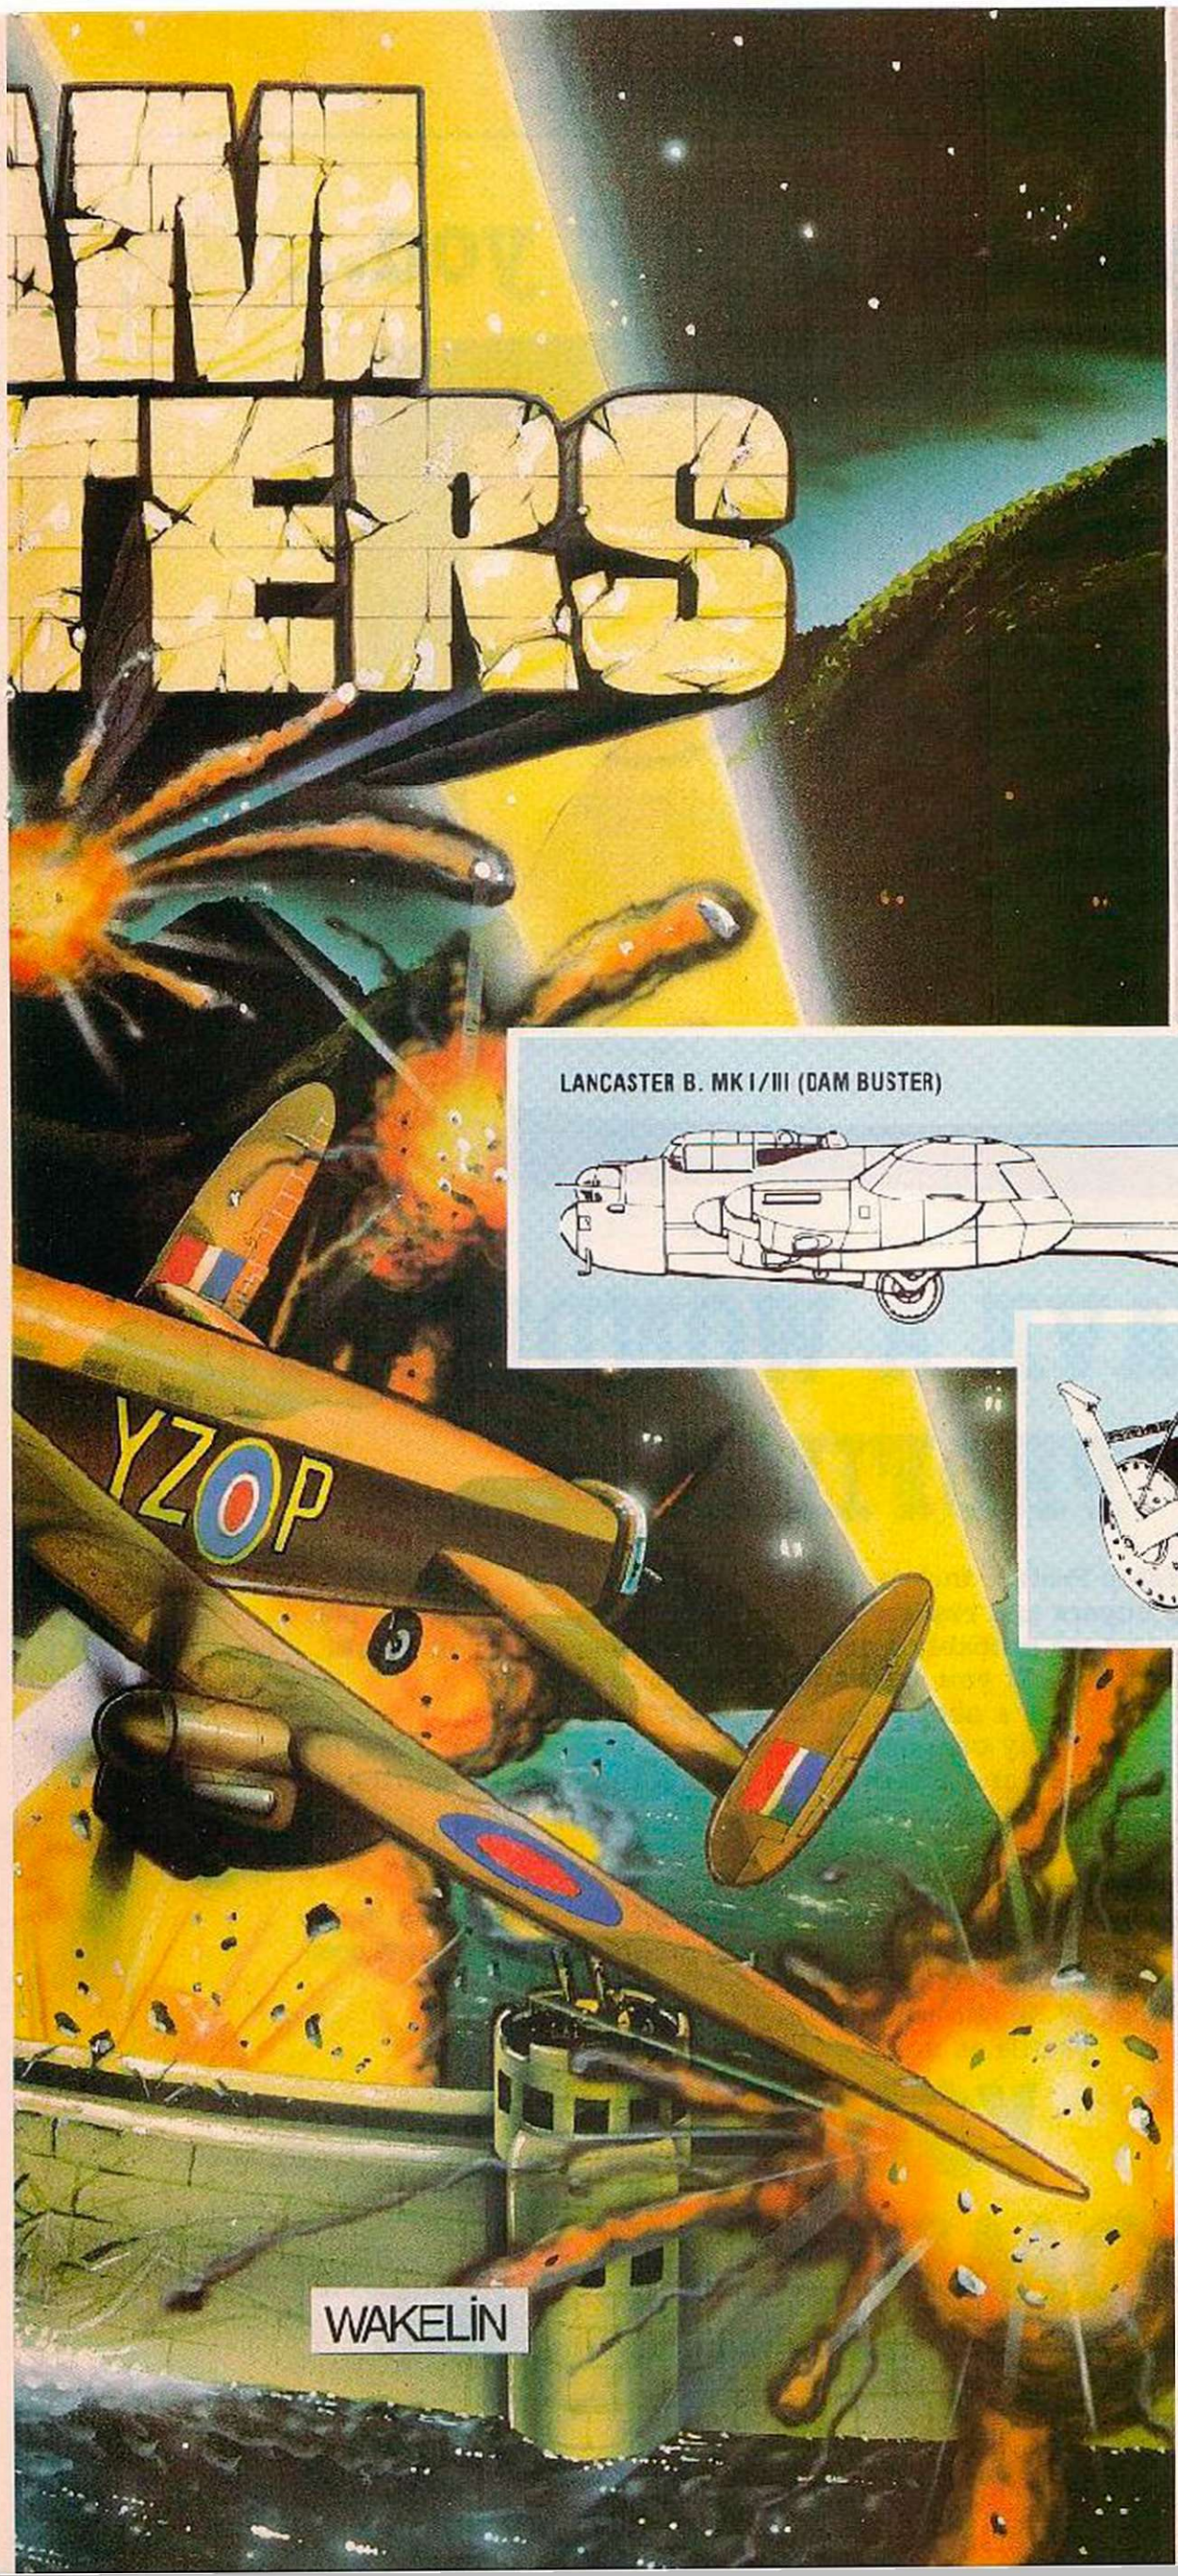
bring the important Mittelland Canal to a virtual standstill.

Of course the successful conclusion of this raid is now legendary, the young men who took part are acknowledged as heroes; and now U.S. Gold in conjunction with Sydney



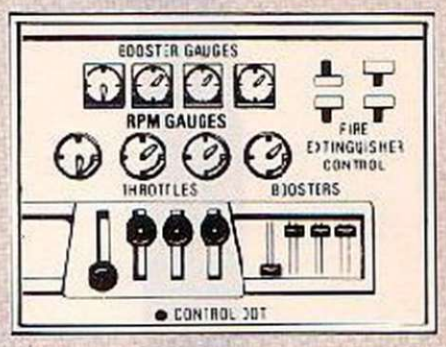
Development Corporation and the International Computer Group are giving you the opportunity to relive the excitement, tension and drama of this famous mission.

You will be able to play the part of **PILOT**, flying the Lancaster from Scampton to the target, **NAVIGATOR** using screens maps of Europe,

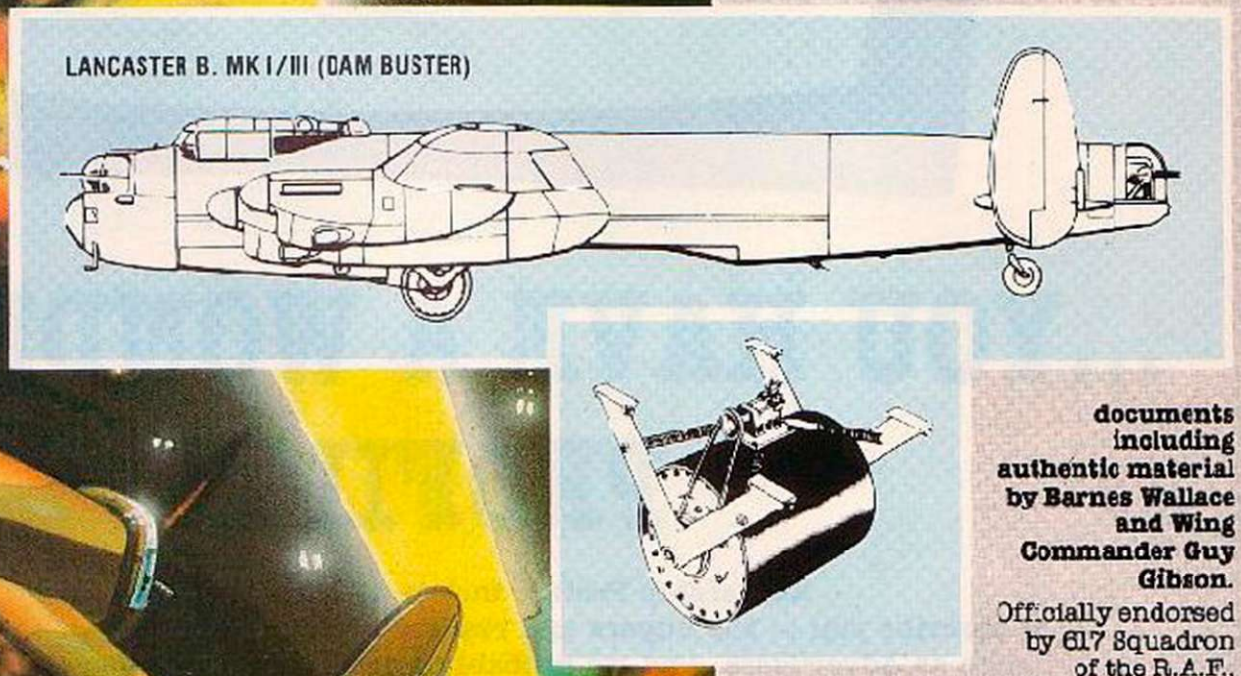


FRONT GUNNER, REAR GUNNER, BOMBARDIER and **FLIGHT ENGINEER.**

You will have to fly across Europe at low level to avoid radar; lookout for the deadly ME109 night fighters, dodge barrage balloons, spotlights and flak. At the target you will need all your nerve and skill to control the aircraft and release your deadly payload at just the right moment while avoiding enemy attack.



Game Features: **Superb graphics and sound, realistic joystick control, Pilot's screen and indicators, multiple screen navigators maps, front and rear gunners screens, bomb sighting screens, engineer's indicators, and much much more.** The package comes complete with **comprehensive flight instructions, maps, and confidential documents including authentic material by Barnes Wallace and Wing Commander Guy Gibson.**



Officially endorsed by 617 Squadron of the R.A.F., Dambusters is available for **Atari** and **Commodore 64** computers with versions for **Spectrum, BBC** and **Amstrad** coming soon.

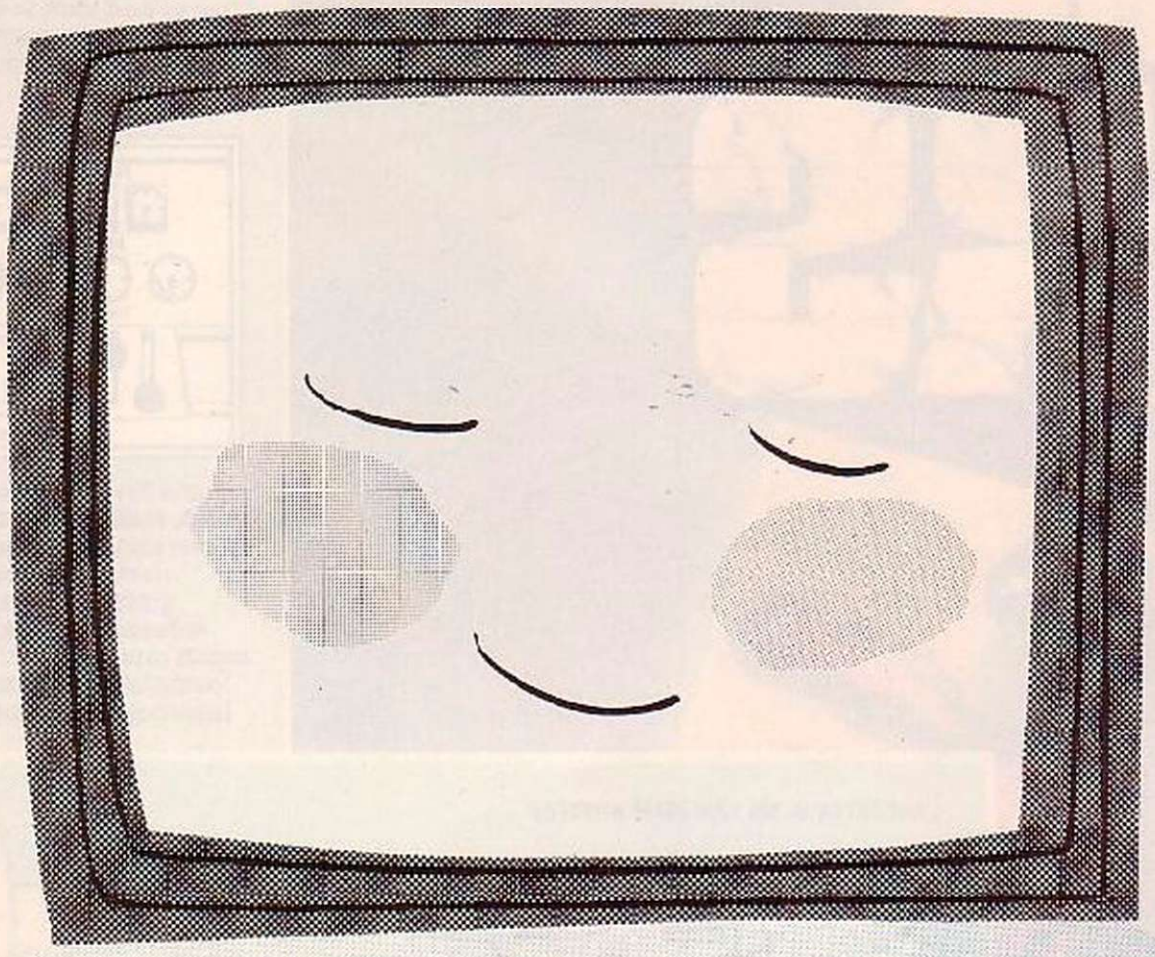
Has anyone ever told you...



...YOU HAVE A WONDERFUL PROFILE!

Readership Profile, that is. It's the jargon we use to describe you — the buyers and readers of Your Computer — to other people, such as Advertisers. And we probably know more about you than you think! For instance: 65% of you are under 24. 34% of you are considering buying a new computer — even though an overwhelming 96% of you already own one. On average, you each spent £376 last year on computers, software and add-ons, and during the next 12 months 75% of you intend buying more software, with 72% buying other add-ons. And that's not all

There are well over 130,000 of you buying Your Computer every month — making it the biggest selling home computer magazine in Britain. Which is good news for our Advertisers as it gives them the lowest cost per thousand of any magazine in the computer market — just £7.39. No wonder they love your profile as much as we do!

YOUR COMPUTER

Britain's biggest selling home computer magazine.

Spectrum Computer Centres have no connection whatsoever with the ZX Spectrum Computer manufactured by Sinclair Research Ltd.

spectrum

See your local Spectrum Computer Specialist today!

Herbie Briggs has just destroyed the myth that all floppy discs are created equal.

They seem equal. Until you look at the seams.

That's where equality ends.

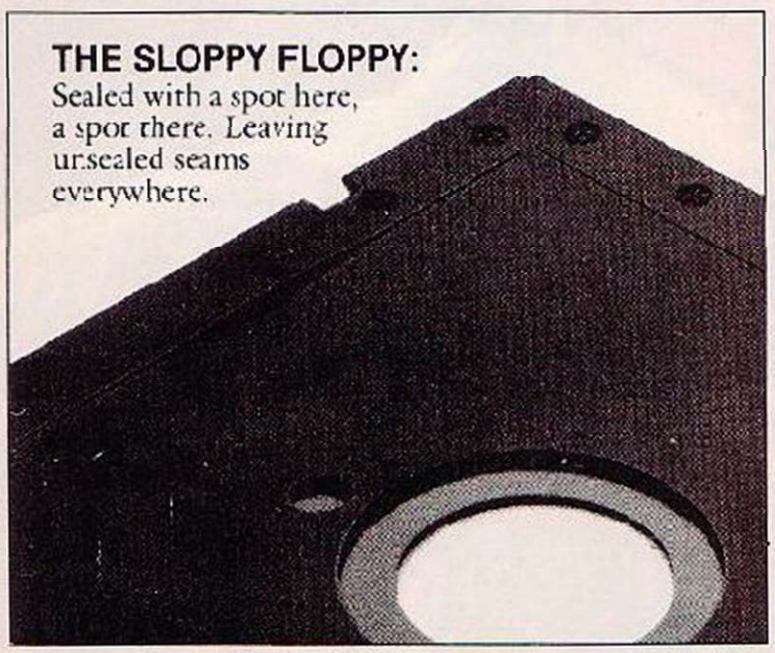
Most companies seal their discs with a spot here, a spot there. Leaving most of each seam not sealed at all.

Sooner or later, the seams might do what comes naturally: they bulge. Warp. Pucker. Open up.

Pens, pencils, fingernails—even a four-year-old's, like Herbie—can catch and snag in those wide open spaces.

That's sloppy. And dangerous. Because if you put a sloppy floppy into your disc drive, it can jam your drive. Ruin your drive head. Lose your data.

So much for their seams. Ours are different.



Memorex uses a process we developed, called Solid-Seam Bonding.

Solid-Seam Bonding seals shut every inch of every seam of every Memorex® floppy disc. Tight as a drum. That makes the Memorex floppy stiffer. Stronger. And your data safer.

To resist bulging, warping, puckering, or opening up.

To resist all the things that can jam your drive, ruin your drive head, or lose your data.

Which proves that a Memorex floppy disc isn't equal to all the others. It's better.

Solid-Seam Bonding is just one example of the extra care that goes into every Memorex floppy disc. Be it 8", 5¼" or the new 3½". Extra care that lets us guarantee every Memorex disc to be 100% error-free.

The next time you're buying a floppy disc—or a few hundred of them—just remember this:

It's always better to be safe than sloppy.

For more information on the full line of Memorex quality computer media products, including computer tape, call Memorex U.K. Ltd., 96-104 Church Street, Staines, Middlesex. Tel: 0784 51488

Your Data. When it matters, make it Memorex.™

Nice Password.
Shame about the Identity.

It's a unique combination.

Your Special Identity Number and Personal Password. The valuable key to huge databases teeming with activity, set on our Mainframes across the nation.

On Micronet 800, you're a valued individual, adding your own special flavour and personality to the database.

Take our exciting new "Gallery"- You control your personal screens for all to see. The intriguing "Chatline" public conversation service gives you freedom to express your views and meet some remarkable people.

All part of a tremendous Communications section that networks you to 50,000 Micronet and Prestel users across the country. Try Teleshopping, or interview celebrities live on "Celebrity Chatline" every Wednesday night.

And there's FREE (& instant) National Electronic Mail, plus International Telex, and the Contact and SwapShop bulletin boards.

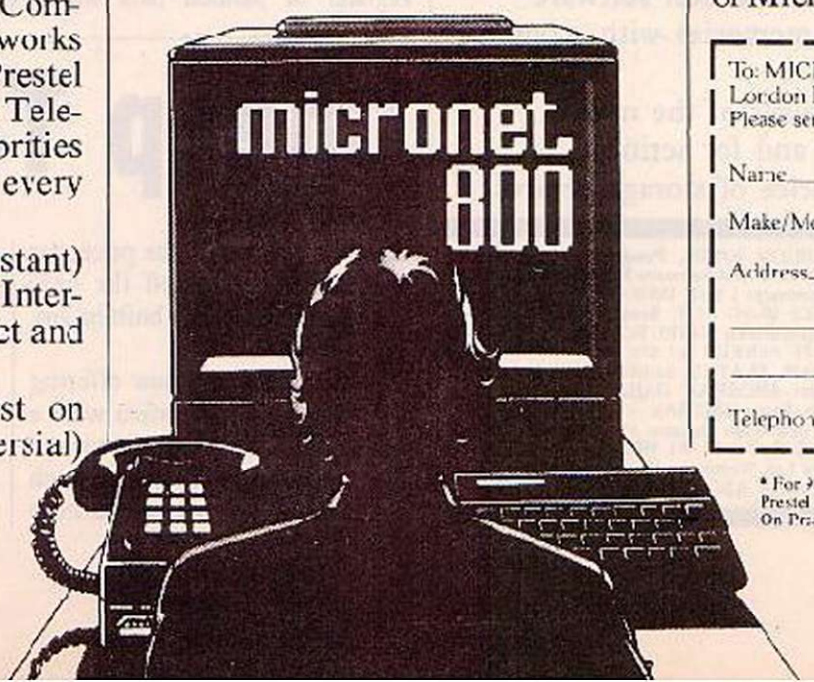
Get computer news first on Micronet's daily (and controversial) "Newsflashes" and read up on the latest reviews and courses. Feast from our regularly changing menu of programs to download straight into your micro - absolutely free.

You also get access to Educational Computing's "School Link" and Prestel's huge 300,000 page database, including world news, business & share bulletins and optional homebanking. For only £16.50 per quarter, that's less than the price of a daily paper!

Micronet is unique amongst networks and bulletin boards as it keeps your phone costs very low with special local* rate calls whenever you connect up – that's around 40p for a whole hours entertainment each evening.

The only accessory you need is a Modem, to get the best value for money around in micro communications.

Fill in the coupon for the full facts and send to Micronet 800, 8 Herbal Hill, London EC1R 5EJ. But be warned, Micronet 800 is a 'living' service with ever-expanding features. So maybe you'd be better to call in at your local Micronet 800 Action Station. There are thousands of Micronetters waiting to meet you!



To: MICRONET 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Telephone 0-278 3143.
Please send me the full facts about Micronet 800.

TRIPPING UP DOWN MEMORY LANE

WITH RAM CHIP prices tumbling downwards, the biggest plus for Acorn's new 64K machine is the £170 it costs more than the old BBC Model B. In 1983 when memory chips were scarce and expensive there might have been some justification for a big price hike for a computer with more Ram. But now Atari's 128K XE for £170 puts paid to the memory-equals-price myth.

Computer manufacturers pay less than £1 for a 64K-bit Ram. Take four of these and you've got 32K of memory and a little change left over. Back in 1981 the ZX-81 retailed at £70 and its 1K memory was a major production cost — a 16K Ram pack cost £50. Today micro-makers find themselves staring up at Ram mountain.

The turning point was the 1983 chip famine. Machine manufacturers over-ordered to ensure an adequate supply and then cancelled their bids as they satisfied demand. It takes time for a chip producer to ramp up production and it's difficult to scale down output precisely at the point demand peaks. The result? — over-supply and cheaper chips for everyone.

Add to that the sudden arrival of a major new source of memory chips in the Far East like Samsung and the competition hots up even further. Korean Samsung aims to put $750 million into chip manufacture over the next five years and has already spent $300 million in the last year to crank its output of memory chips up to six million 64K-bit Rams a month. Compare that with Hitachi, the biggest memory-maker at 15 million a month. It seems that Samsung has already pulled in some big customers like Sinclair, who has been using their chips since September.

But just how useful is all this extra memory to home computer owners? 64K is the most an eight-bit chip like the Z-80 or 6502 can address without resorting to bank-switching. Perhaps adventure writers will benefit from the extra space but it will take some time for software houses to capitalise on it. In any case, it is often argued that more memory just make programmers flabby — some of the best software around was written for small memories with economy in mind.

What really counts is the power of the main processor and graphics chips, and for serious applications the quality and price of storage devices.

Emlyn Hughes hopes micros can keep hooligans out.

STOP THE HOOLIGAN

AS THE FINAL WHISTLE blows on another troubled soccer season ex-Liverpool star Emlyn Hughes suggests micro-technology can reduce football hooliganism.

Instead of the referee's red card a white card could curb trouble on the terraces. All bona fide fans would be issued with photo cards with an identifying magnetic stripe. This would have to be passed through a reader on the turnstile connected to a micro at the ground. Convicted hooligans would be put on a mainframe central register of banned fans which would be used to update local computers each week.

But unless all football clubs agreed to join there would still be problems with away supporters and uncommitted fans. David Crolfs of Sperry which is proposing the scheme in association with Emlyn admits that it would only be fool-proof if everyone was forced by law to carry an identity card.

Meanwhile our Robot Competition winner Guy Taylor has a different approach to stopping soccer hooliganism with technology — see page 67.

Cheap Tatung

TATUNG has joined the price war by chopping £150 off the 64K Einstein, which has a built-in 3in. disc drive.

Some dealers are now offering a package of an Einstein with a single drive, colour monitor and £190 of software for £500, which could make it tough competition for the new Amstrad CPC 664 which, like the Einstein, is Z-80.

At £350 the Einstein comes with various bundles of software depending on the whims of individual suppliers. The twin drive version now costs £500 — the same as the single when it was launched last year.

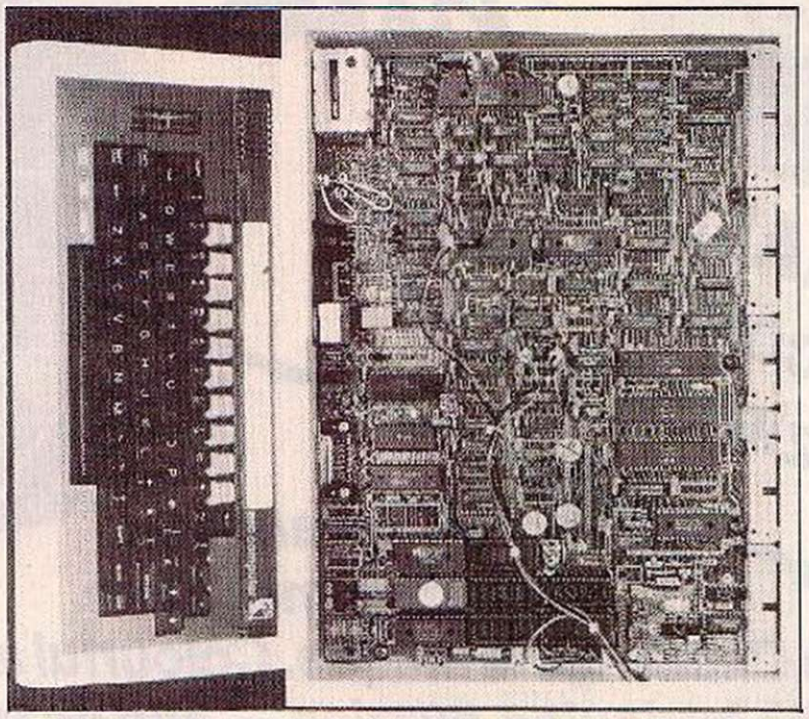
D– FOR BBC B+

New Acorn is not enough

GAMES WRITERS, dealers and even Acorn enthusiasts are all giving the new B+ BBC micro a D–. Meanwhile the top man in charge of selling BBCs and Electrons, consumer director Peter O'Keefe, appears to have voted with his feet by resigning from the company as soon as the Plus was launched.

The redesigned Plus board has two extra Rom sockets, 64K Ram, with Basic and operating system combined on a single 32 kilobyte chip to make space for a built-in WD 1770 Disc Filing System — which means you can plus a drive straight in. But although the new DFS has the advantage of utilities like Verify and Format on Rom, many commercial disc-based programs are currently protected by calls to the 8271 DFS chip Acorn has used up till now and so will not run on the Plus.

Externally the Plus retains the BBC micro's case but inside the new simplified board should make it cheaper to produce than the old B, despite the improved specification. With BBC micros already looking overpriced at £330 this makes it all the more remarkable that Acorn intends to sell the Plus for £500 — when the 64K Amstrad 664 costs £50 less and includes a disc drive and colour monitor, while the Atari 130 XE has twice as much money for a third of the price. No wonder one dealer told us he was "dreading" the arrival of the BBC B Plus.



New board simplifies BBC — but not by much.

INSTANT HAIRCUTS ON 64 DIGITISER

From picture to screen by video digitiser.

CRL'S NEW VIDEO DIGITISER for the Commodore 64 could be a breakthrough on the road to realistic graphics. For around £150 the cartridge, which plugs into the back of your 64, allows you to take a picture from a video camera or recorder and present it on screen as a 160×200 pixel image, which can be stored or altered by introducing new colours or zooming in on small areas of the picture. It could be used by a hairdresser to show a picture of a customer's head and then show what different haircuts would look like on screen rather than waiting till the scissors have done their worst to find that it is not what the client wanted. CRL may use the digitiser themselves to make background effects in games more realistic and to improve animation. The digitiser comes complete with software to output images to a colour printer and is designed to be used with graphics pads like the Koala and lightpens. And if that isn't enough for CBM graphics enthusiasts, SMC is introducing a Magic Mouse sprite and icon designer for the 64 at £60.

Trading Standards clamp down on piracy

IF PIRATES think that the heat is off them until William Powell's Copyright (Computer Software) Amendment Bill becomes law, a recent case in Bath may make them think again.

Rod Evans of New Generation Software called in the Trading Standards Officers when he saw half-price versions of NGS's Knot in 3-D and Quicksilva's 3-D Ant Attack advertised for sale by Leosoft.

After several months work the TSO established that these were illegal copies made by one Antony Yarpold of Mill Hill, London and he was successfully prosecuted under the Trades Description Act.

Meanwhile, Powell's Bill is now through the House of Commons and the Federation Against Software Theft hopes that it will be law by July.

Hotline for warriors and Wallies

IT'S FOR YOU-HOO. Software houses have at last discovered the phone. Mikro-Gen is now operating a Telephone Tranquiliser Service on 0344-56447 for Everyone's a Wally fans who need desperately to know what Wilma should do when she's read the looks. In stark contrast, if you want to go nuclear in PSS's Theatre Europe, an authorisation phone call must be made first — and PSS lays on the drama before giving the code word.

Long live QL-Com

QL-COM LIVES. Despite the collapse of OEL which developed the QL-COM telecommunications package for the QL, the modules will still come to market under the name Q-Link now that Tandata has bought the rights.

NEXT GREAT ISSUE MAY 23

MICRO CHALLENGE . . .
the first computer-age puzzle magazine

On sale every month at all good newsagents, price £1

No, not another computing magazine.

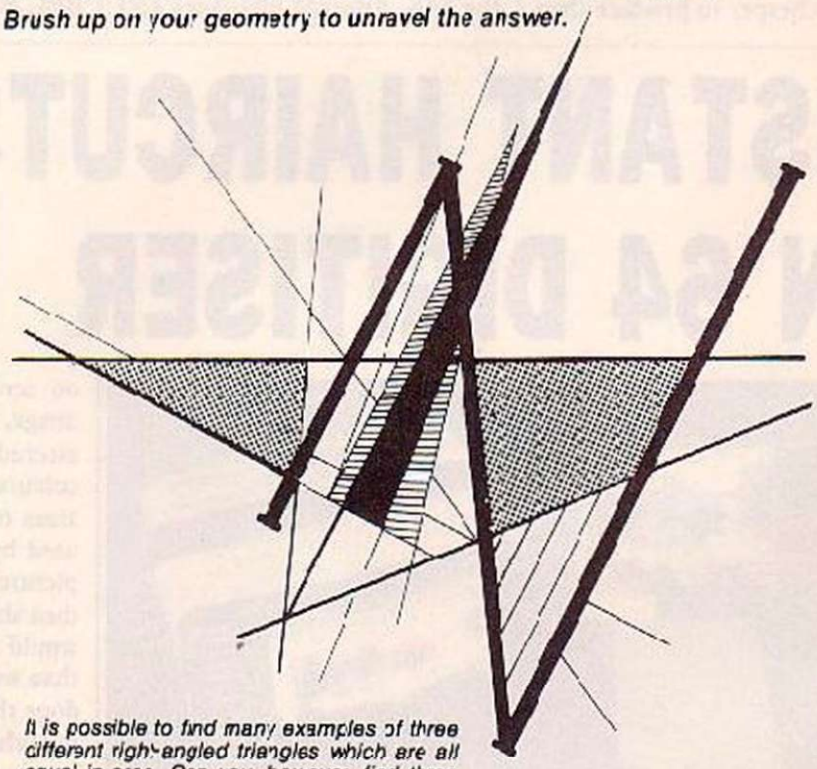
Micro Challenge is unique. Colourful and exciting, it's packed with intriguing puzzles — and prize competitions — devised specifically for microcomputer owners.

WIN A COLOUR TV!

This is an example of one of the many types of puzzle to be found in Micro Challenge — but it's also your chance to win a superb JVC portable colour television with remote control. Solve the problem, using skill, judgement and your own micro, then send the solution, on one of the prize puzzle entry forms from the May/June issues of Micro Challenge, to the address given in the magazine, marking the coupon AP1. (A proper form must be used; no photocopies or facsimiles are permitted). The competition closes first post on June 17, 1985, and the first correct entry opened wins the prize.

TRIANGLE TANGLE

Brush up on your geometry to unravel the answer.



It is possible to find many examples of three different right-angled triangles which are all equal in area. Can you, however, find three such triangles for which every side is a whole number of units (an integer)? Try to devise a program to find the trio with the smallest possible area.

Moving at the speed of light you could still snap up our fabulous launch issue. Order a regular copy from your newsagent now. Details of subscriptions or postal deliveries contact:
MICRO CHALLENGE
Somers House, Linkfield Corner, Redhill, Surrey RH1 1BB

DIARY

AS I WRITE THIS, Steven Jones of Manchester is on his way to the offices of Scorpio Games World to collect another royalty cheque for his game Manic Mushrooms — or so he thinks. Waiting for him will not be Eamon Andrews and the This is Your Life team but a list of questions because Scorpio really wants to know why his game looks so much like Manic Climber — a Spectrum game by Hugh Dereli published in *Your Computer* last September. Scorpio was sceptical at first when we phoned to say that Dereli had seen Manic Mushrooms reviewed in another magazine and had his suspicions. Then we asked Scorpio to load up the game and then push 1, 2 and Caps Shift simultaneously. As the copyright sign and Dereli's name appeared on screen there was a gasp at the other end of the line followed by a promise to "do something nasty to the fellow who sent it in", then a more considered offer to pay all royalties to Dereli.

AMONGST THE LOTS at the Soft Aid auction in aid of Ethiopia at GLC County Hall, London on June 15 will be the last remaining piece of the original Imagine. Days before the most-hyped company in the history of computers crashed we were sent the inlay card of a game which never was — Cosmic Cruisers — and stapled to it the traditional bribe, in this case a packet of Smash instant potato.

FIVE OF THE WORST games ever is how James Learey of Firebird is describing Don't Buy This, the company's latest release. Instead of the usual copyright warning is an invitation to copy it if you don't mind wasting a tape.

SINCLAIR'S RECENT TV ADS which showed him jumping dozens of feet in the air may have been good for Sir Clive's ego but have done little to shift QLs which have not even been produced for the last two months because the warehouses were bulging. Now his press campaign comparing the QL with disc-drive based IBM PCs is raising eyebrows. Apparently if you ask a dealer what micro he or she would buy given up to £2,500, the answer would be a QL. We cannot find one dealer who agrees — can you? Name names Sir Clive.

Elsie Dee

HARD TIMES

Atari shows Hanover discs

THE ATARI "Power without the price" slogan takes on a new meaning as Tramiel's men still refuse to put an exact price-tag on the 10Mbyte hard disc.

But what is clear is that the disc — first seen at Germany's vast Hanover Fair mascarading in a 1050 floppy disc drive box — will trample current hard disc prices and should cost as little as £500 for around 8Mbytes' formatted storage.

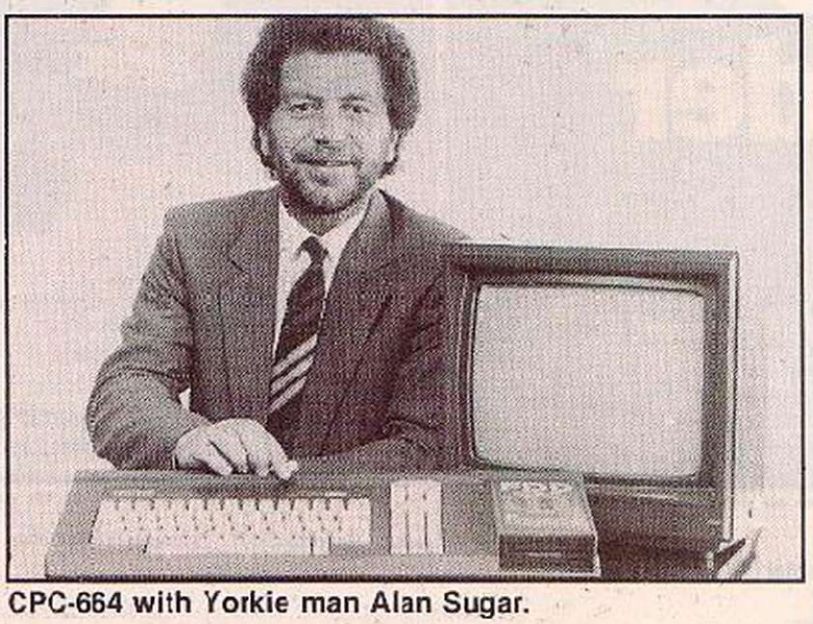
Like Atari's 16-bit, 512K 520 ST, the hard disc is already out with software developers, albeit in pre-production versions. The controller board has yet to be scaled down to fit into box size.

Computer-watchers should spot the £700 ST in the shops by July — although small production runs have already started — and the hard disc should be visible a month or two later. With Atari putting all its efforts into getting the ST and peripherals including the half-megabyte 354 and 1Mbyte 314 disc drives ready to time, other products in the company range have been hit by the "delayed" kiss of death. Others have not been so lucky. While the 65XP portable and 65XEM music machine are "delayed" the 65XE, 130ST and 260ST are dead.

Not deterred by these early fatalities, Tramiel is still promising a 32-bit "Vax in a box" for the autumn, and is even talking about a Turbo 68010-based ST for the end of the year.

Open the box. Jack's lad Sam Tramiel with hard ST.

664 FOR YORKIES NOT FOR YUPPIES



CPC-664 with Yorkie man Alan Sugar.

AMSTRAD'S NEW DISC-BASED CPC 664 is only the first of a number of new Amstrads. Alan Sugar plans to release an Amstrad with a built-in modem and other variants with extra memory are likely products.

The 664 has a built-in 3 in. 180K disc drive instead of the cassette in the 464 which will continue in production at its old price. Like the 464 the 664 comes with a monitor and the whole system — computer, drive and screen — costs £339 with a monochrome display and £449 for colour. Sugar says all his products are aimed at the "average truck driver and his wife" rather than the Yuppies and technological whizzkids which seem to be some other companies' targets.

But Amstrad is also aiming the 664 at small businesses with claimed CP/M compatibility. Unfortunately the 664 has insufficient free memory to allow some CP/M classics — such as WordStar — to run in their full form. Amsoft will market its own business software some of which requires an additional £160 FD 1 disc drive.

SWANLEY ELECTRONICS
The computer Export Specialists

Dept. YC, 32 Goldsel Rd., Swanley, Kent BR8 8EZ, England

Tel: SWANLEY (0322) 64851

Official orders welcome. UK prices are shown first and include post and VAT. The second price in brackets is for export customers in Europe and includes insured airmail postage. The third price is for export customers outside Europe (including Australia etc) and includes insured airmail postage.

3 storey computer homes for under £60

3rd storey
Impressive view and just the place for your monitor and printer

2nd storey
– Lots of floorspace for your computer and disc drive or cassette recorcer. Ample storage space for your software.

1st storey
– Parking space for your books, manuals and magazines.

And at only £59.95 you won't even need to take out a mortgage.

Looking for a new home for your compute·? Tired of being pushed from room to room with your family of peripherals? Better take a look at the Organiser showhome from Opus Supplies. It's fully mobile and combines practical features with modern design.

The Organiser desk from Opus Supplies comes complete with castors and simple assembly instructions and our price includes VAT and free delivery.

To order your system phone us on: 0737 65080 or post the coupon to Opus Supplies Limited.

To: Opus Supplies Ltd,
55 Ormside Way, Holmethorpe Industrial Estate, Redhill, Surrey.

Please rush me the following:
(PRICES INCLUDE VAT AND CARRIAGE)

MAXAM-UM HYPE

I DON'T KNOW about the quality of Arnor's assembler board MAXAM, but the quality of their marketing must be pretty good if they have been able to convince you that any Amstrad owner who does not have their product cannot possibly be a "serious" user.

One thing I do know is that the quality of the cassette-based assembler I bought from Arnor some time ago leaves much to be desired. Corruption of the source-code after saving and loading is all too common, often a load of garbage being added on at the end or, more seriously, great chunks of code disappearing altogether, making the thing completely unreliable.

In any case, the suggestion that a "serious" user must have a £60 add-on to be able to program in machine-code is utter nonsense. Any programmer worth his or her salt should be quite capable of utilising Ram effectively, without need of extravagant luxuries.

If you really want to recommend a useful utilitarian product, I suggest the assembler Deep Thought, available from Ultratec (Compuring), Floor B, 93 Mount Road, High Barnes, Sunderland at the rather more sensible price of £8.95. Its author Phil Murray may not be a very slick marketeer, but he strikes me as a darn good programmer.

Nick Godwin,
Eyemouth,
Berwickshire.

POKING ABOUT

I WRITE TO your regarding software protection on the Commodore 64. The following is a list of Pokes which help to prevent unlawful copying of programs.

1. To prevent the use of the Stop key:
a) POKE 808,225
b) POKE 808,239
2. To prevent a program being Restored:
POKE 808,255

Below: Rusty by Gareth Thomas of Caerphilly. See page 67.

This also produces a confused listing.

3. To prevent a program from being listed:
a) POKE 775,0
or b) POKE 774,131 : POKE 775,164
or c) POKE 774,226 : POKE 775,252

Part (c) produces a cold start if an attempt is made to list the program.

4. To prevent a program from being Saved.
a) POKE 818,131 : POKE 819,164
or b) POKE 818,226 : POKE 819,252

Part (b) produces a cold start if anyone tries to save the program.

5. To prevent a program from being Saved and listed:
a) POKE 808,255 : POKE 818,32

6. The following Poke causes a cold start if an error occurs:
a) POKE 768,226 : POKE 769,252.

S F A Shah,
Enfield,
Middlesex.

CHEAP PRESTEL

FURTHER TO Robert Evans' letter — May issue — re "Prestel Warning" to modem users, I would like to point out the statistics of Prestel telephone call access. At the present time over 96 per cent of the U.K. telephone population has Prestel available at the local rate — i.e. 40p for one hour — and the remaining percentage is under review.

In all Prestel/Micronet literature it gives details and invites any potential customer to check the access rate by dialling 100 and ask for the Freefone Prestel Service.

Clair Walker,
Micronet 800.

ELITE TIPS

TO REACH Elite is a hard task as a lot of you have probably gathered by now. If you want to keep a low profile with the Galactic Police don't trade in slaves, narcotics or firearms. If you aren't a trader a fuel scoop is generally useless. For the combateer if you want to reach Elite quicker don't bother to pick them up, shooting them down increases your rating — I'm talking about the five sided Thargon Rem-craft. I just bought a fuel scoop to make my Status page look pretty. Every ship, besides cobras and vipers gives a bounty and increases rating.

Useless equipment.
Right beam/pulse laser
Rear beam/pulse laser

If you're a combateer include fuel scoops and large cargo bay on your list. Missiles near the useless point the useless point because most pirate ships and all Thargoid battle cruisers are equipped with ECM systems. Try not to make more than 3.5 to 5.2 light year jumps because every so often a whole fleet of Thargoid battle cruisers catch you while you are jumping to your already programmed world. If you manage to destroy all of 5-10 cruisers you'll have enough fuel to escape out of Witch Space.

If you have an energy bomb it's well worth the trouble to press Tab.

A list of objects which improve your rating.
Cobra mk III
Mambas
Pythons
Sidewinders
Thargoid Invasion Ships/Battle Cruisers
Thargons
Vipers
Asteroids
Missiles

If you're a fugitive you'll get frequent visits from vipers from locations 1, 2, 3 and 4. If you're an offender and are attacked by a viper patrol don't fire back. Look for pirates, shoot them down and hopefully you're offender tag will be eliminated. Using escape capsules returns your legal status to clean.

A Mannan,
Seaforth,
Liverpool.

Your Computer now has its own Prestel Mailbox. Our number is 019991800. If you have any program enquiries send us a message. We will try and give you an answer within a few days.

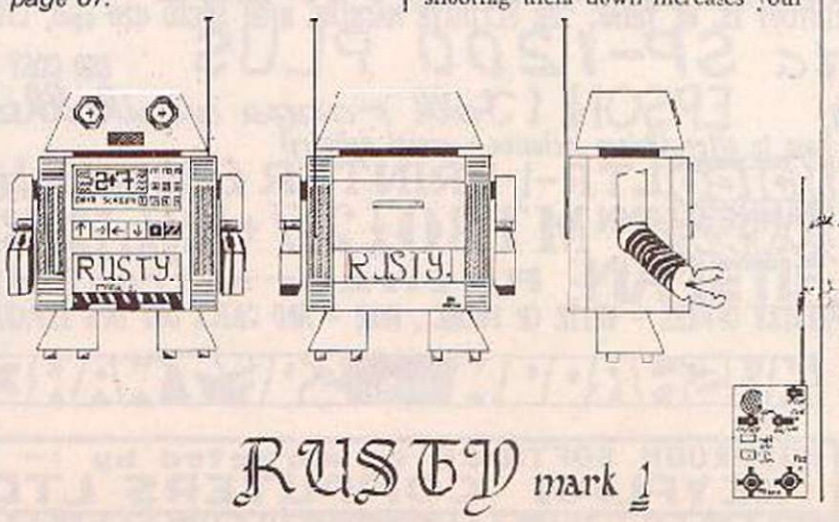
ENTERPRISING

A SMALL bunch of Enterprise owners wish to start up an independent users group for the machine, as we feel it deserves more support than it is currently receiving.

I would be grateful to hear from any other users who are in a position to offer assistance, or simply want to join us as a member. If interested please send a SAE for full details of the club.

Mark Lissak,
40 Mansfield Road,
London NW3 2HT.

(continued on page 27)



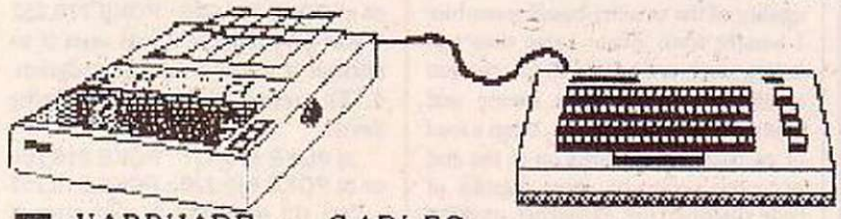
State of the Art Software

This whole page was printed in just one run using the special commands contained in the latest and most sophisticated printer utility ever written for the Commodore 64!

NOW, YOU CAN BE THE MASTER OF YOUR PRINTER WITH,

CENTIPEDE

The Advanced Commodore 64 – CENTRONICS Interface / Printer Utility



COMPATABLE HARDWARE – *CABLES*

The printer is connected to the 64 via the user port.. Pins A to N are used- (PA2 to strobe and FLG to Acknowledge. A proper shielded multi-core cable is supplied (if needed) rather than ribbon. It works fine with 'EASY SCRIPT'.

SOFTWARE – *This program is fitted a disposable Auto-Relocater which enables it to Co-exist with most other utilities. You can, if desired, specify an address on loadint. Another feature to put you in control!*

IF YOU ALREADY HAVE A CABLE - WE CAN ADVISE YOU ON ITS SUITABILITY - YOU NEED ONLY PURCHASE THE SOFTWARE.

THIS PROGRAM HAS BEEN TESTED WITH BOTH DOT MATRIX AND DAISY WHEEL TYPE PRINTERS WITH EXCELLENT RESULTS

VERSATILE *As stated at the top of the page, this whole page was printed out in just one run and not just 'stuck together' for the benefit of this advert!*
Proof of what is possible when using 'CENTIPEDE'. So far I have mixed Hires with the printers' own font. There's more:-

Above.. I have taken a piece of Hires screen, and by using a simple FOR-NEXT loop, have dumped it here using each of the modes available on my printer. I even have a choice of 4 ROTATIONS! (The 4th can be for shading). The rotation can be used in both low and hi-res and, can be either a whole screen or just one character square. There are over 20 commands, and 255 secondary addresses, giving the user plenty of freedom to make his printer perform whatever tricks it was designed to. (and perhaps a few the makers hadn't thought about !).
The writer has even made some amendments to the operating system of the 64, just to make life a little easier. You can print.. "CBM[clr][rvs][yel] Control codes" Or maybe... "CBM(clr)(rvs)(yel)>>> Control codes"
Or if you're just not in the mood for opening and closing files, then you can use the '**' command which does it all for you!! Generally, the use of ESC codes has been cut to the minimum so you may enjoy using your printer to the maximum. Of course, you can still use this utility as though the extra features didn't exist... We don't want to change tradition ...Too much. Whichever way you want to use your printer. You'll find the way with 'CENTIPEDE'.

USE THIS UTILITY TO DUMP PICTURES FROM 'DOODLE' & 'KOALA PAD', *for just:*

£11:50 **£9:50**

Multi-Core cable + £10 EXTRA **ALL INC!**

OR CHECK OUT ONE OF OUR PRINTER OFFERS +
AND GET CENTIPEDE FREE!

THE PRINTER USED FOR THIS PRINTOUT IS, WE THINK, THE ULTIMATE MACHINE. HIGH SPEED (120 cps), LTR QUALITY, OVER 70 ESC CODES.
ITS CALLED THE *Sakata SP-1200 PLUS* AND COST JUST £292 INC. CENTIPEDE & CABLE.

PHONE OR WRITE FOR PRICES OF, EPSON [*Full range available*]
Some other makes of printers we have to offer..(Prices inclusive – except delivery)

Voico LTR-1 PRINTER £160 INCLUSIVE LIMITED PERIOD LQ
MANNESMANN TALLY MT80/217 + Full range available
RITEMAN: Printers from £249

WE HAVE MANY MORE PRINTER OFFERS - WRITE OR PHONE , NOW! - *AND CHECK OUT OUR EXPANDING SOFTWARE RANGE*

MUSHROOM SOFTWARE

IN ★ TOUCH

How to write for *Your Computer*

We called this magazine *Your Computer* precisely because we welcome your views, tips and hints and even your criticisms of machines and software in general. Here's how you go about getting your name into print. Your article should be typed, double-spaced, on A4 paper. A name and address on each sheet would help. Don't forget to tell us which machine it runs on. With programs please incluce a cassette or disc and some indication of how long it is. Please put what machine it's for on the envelope. Don't forget full instructions to us how to load and list your program and how to enter it for the readers.

The article must be submitted exclusively to *Your Computer*. We pay £35 per published page that's as it appears in the magazine and includes illustrations.

Telsoft

Telsoft is *Your Computer's* software downloading service. Any program for the Spectrum or the BBC — and soon the Commodore — which has a telephone symbol next to it is available on the service. Both 1200 and 300 baud speeds are catered for. For more details call Colchester (0206) 8068. No more lonely nights typing in endless pages of hex digits.

Message service

You can get messages to us in two ways. Either use the Prestel Telex Link to 892084 BISPRES G or you can use our very own modem, day or night on 01-661 8978. The modem is V21, 300 baud, even parity, 10 bits per character. You simply transmit in upper case "YRC" — our address code, and wait for the acceptance code "+ + + STF GO". Then off you go. Don't forget to tell us who it's for. Sign off with "NNNN" — again in upper case.

(continued from page 25)

MONITOR BUGS

THANK YOU for publishing my Amstrad monitor program in the April issue of Software File. Since sending you the program I have identified a bug which occurs under certain conditions. The fix for this requires the lines listed below to be changed/added.

```
34  FOR pointer = &ABB3 TO
    &ABDE:FEAD a:POKE
    pointer,a:NEXT
35  DATA &ed, &73, &ee, &ab,
    &d5, &c9, &00, &33, &33, &ed,
    &73, &ec &ab
39  DATA &ea, &ab, &ed, &7b,
    &ee, &ab, &c9
330 POKE &30, &C3:POKE &31,
    &BA:POKE &32,&AE:REM set
    restart 6 ready to jump to
    breakpoint handler at &ABBA
420 CALL &ABB3, address
```

Denis F Riley,
Nuneaton,
Warwickshire.

SNAKES ALIVE

UNFORTUNATELY, THE listing and article published last month for my game, Snakes Alive contained a number of errors which would have prevented most people from correctly assembling the program.

To start from the text, the two big errors are, first, that in the load instruction, for relocating the program to lower memory, which should read:

LOAD ""CODE 24000

and not

CODE 2400

You may have realised this, as 2400 is an address in the Rom, but the second mistake straight afterward is not so obvious. I said after the load instruction, to then use that to load in code previously typed from listing 2.

Unfortunately, since the magazine used its own listing and checksum method, the two larger listings have been interchanged. This means that if you have not yet typed in any code, you should begin with listing 3 after listing 1, and later load in code from this listing. If you have already typed in all the code, however, it is necessary to swap around the two blocks of code. This is most easily done if you only have a 16K Spectrum, with:

LOAD ""CODE (load in your finalised code): SAVE "MOVE!" CODE 28384,4384 (save on a spare tape) : RANDOMIZE USR 0 ; and then: LOAD""CODE (the finalised code again) 28384. (this moves the first part up): LOAD""CODE 24000 (load in the previously saved "MOVE!" file)

And then, resave it all with the instruction given in the article. Alternatively, if you saved both code blocks after their completion, you could simply load them in the other way around.

Next, and perhaps most important, the USR statement in the loader program is wrong. This one's my fault, I'm afraid. It should read:

USR 30066

not

USR 30069

YOUR Letter

52F0F0000CFEF0F0000458F0F0000000CF0400
```

Now comes the nitty gritty; because of the denseness of the print of the main listings, there are several places where the hex code is unreadable, or has even vanished. These, if you have avoided typing them in, may be corrected by loading in the relevant listing code and the hex loader, and entering the following addresses, codes, and checksums.

Listing 2: The amazing disappearing checksums in the first two lines are 389 and 777.

```
29544: 02143E0A9107477EB = 552
29552: 7EB638F60232475B = 968
29560: 7EB6033630CDDB70 = 1121
```

Listing 3: The somewhat unreadable figures in the first 20 or so lines are mostly 4s, 1s, 7s & 0s. Only if these are correct will the checksums be correct also, so if you are unsure about a digit, use trial and error to determine the correct one.

```
29456: 93 1F 8F CF DF 8F 8F 91 = 1182
```

D R Aspinall,
Brentwood,
Essex.

CORRECTIONS

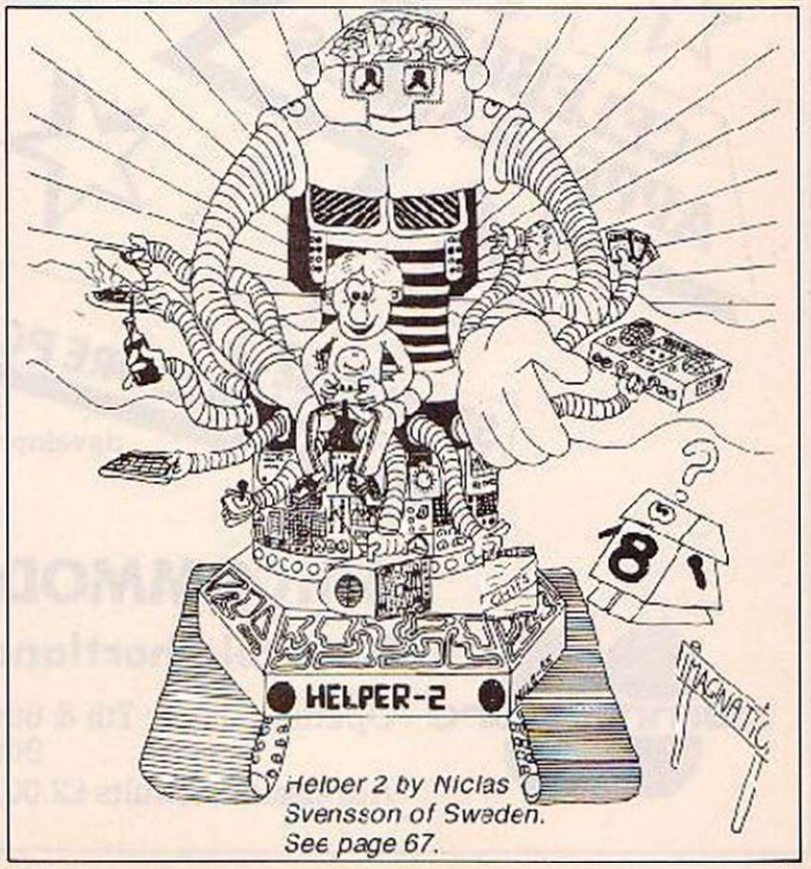
Mark Jones' Ploiline program in the May issue works perfectly as it stands but by changing just five lines of code it can be speeded up substantially. To do this replace the following lines:

```
BRA.S   LPA
LSLB    # 1,D3
LSLB    # 1,D6
ROL.B   # 1,D5
DBRA    DC,LPA1
```

with

```
LSLB    DO,D3
LSLB    DO,D6
ROL.B   DO,D5
```

Line: 340 to 380 is Listing 2 for May's Amstrad program Jumper are not clearly printed. An improved listing is given above.



Helper 2 by Niclas Svensson of Sweden.
See page 67.

commodore

6th COMMODORE COMPUTER SHOW
NOVOTEL · LONDON 7,8 & 9 JUNE 1985

COME & ENJOY the most EXCITING 'LONG WEEKEND' to hit computing

The greatest event in the Commodore Calender.

Official Launch

Brand New COMMODORE 128

Official launch of the brand new Commodore 128. Twice as powerful as the Commodore 64. See the 128's own whole new range of software including the standard CP/M business programme.

The Biggest Selection of COMMODORE

The biggest selection of Commodore hardware and software to be gathered in one place. Educational, Professional and games. Play the exciting new 'International Tennis' game.

COMPUTER GAMES ARCADE

Computer games arcade for younger computer enthusiasts. Pit your skills against some of the latest and most challenging games available.

COMPETITIONS

Competitions and treasure hunts. Fabulous prizes.

CELEBRITY APPEARANCES

fun for all the family

SEE THE NEW COMMODORE PC

See the New Commodore PC in the special business section, and all the most recent software developments. Music Maker Orchestra to ensure a lively atmosphere.

6th COMMODORE COMPUTER SHOW

Novotel, Shortlands, Hammersmith, London W6

commodore

Opening times: 7th & 8th June 1985 – 10am – 6pm
9th June 1985 – 10am – 5pm.

Admission: Adults £2.00, Children (under 14) £1.

BEGINNERS *first bytes*

Starting out in home computing? First Bytes is for you. Just write to *Your Computer* with any hardware or software problems, no matter how small or simple.

I could do that...

John Ransley's piece on Basic animation on page 31 should have given you a few ideas of your own. So for this month's £15 competition we would like you to write a short program — no more than 20 lines — to produce a simple animation sequence. The restrictions are that it must only use PRINT statements and alphanumeric characters — no POKES and no user-defined characters.

If you are short of inspiration just consider the ways in which films animate their title sequences. You could, for instance, have a jumble of letters troop onto the screen and then re-arrange themselves into a message or title.

April's competition was to simulate a kaleidoscope, to write a drawing program which would mirror a figure drawn in one quadrant in each of the other three quadrants. From a large number of entries we picked as the winner a Spectrum program from R. Doughty, 13 Hall Road, Stowmarket, Suffolk. As well as allowing you to draw diagonal lines and move the cursor without drawing it includes an option for erasing lines — a vital feature in any drawing program and one left out by many of the programs submitted.

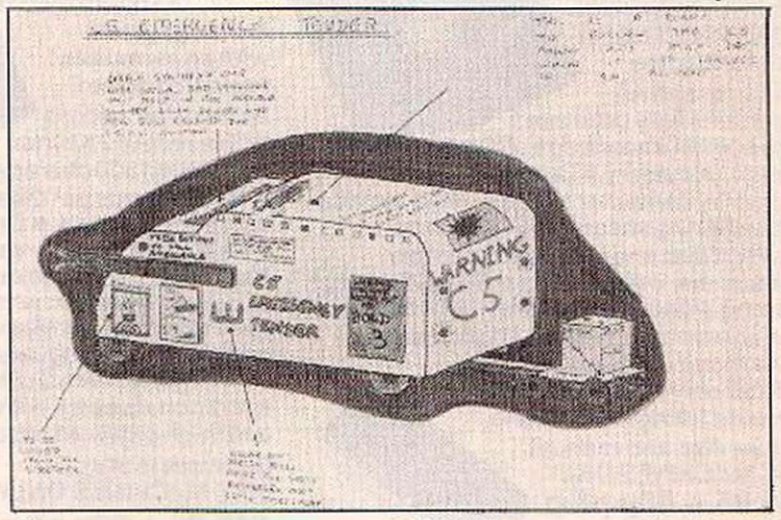
A bluffers' guide to micros

NAME DROPPING is a necessary activity in any social circle and the world of microcomputing is no exception. Film buffs will tell you that Douglas Trumbull did the special effects for 2001 a space odyssey and then went on to make his own movie Silent Running, throwing in the fact that he has developed a revolutionary new technical system for cinematic projection. A dedicated aficionado of popular music will know the names of at least two members of Frankie Goes To Hollywood apart from Holly Johnson.

So with the micro-buff. Any fool knows that Babbage's assistant, Lady Augusta Lovelace was the daughter of the poet Eyron. Most people who mention the Turing test of artificial intelligence have taken the trouble to find out that Turing was an English mathematician and not a town in northern Italy.

It is not just that microbuffs know a lot of technical jargon. Each specific type of computernik has his or her own touchstones, his or her own idols, according to how they employ their micro. The computernik who actually uses his home micro for word processing may be able to talk freely about WordStar or Tasword and Perfect Writer even though he only uses the Quicksilva Wordprocessor on an antiquated Spectrum. A database freak will be glad to swop terms like dBaseII, DMS, FMS-80 and, of course, Superfile. Company names like Caxton, Compsoft and — if they read *Practical Computing* — Southdata will trip off their tongues. But they are hardpressed to name names; there is a facelessly bureaucratic quality about their hobby, though an astute and envious few will point out that Ashton Tate made a million out of dBaseII.

But for the computer gamester, it's a different story. Whether he's into arcade action or intellectual adventure, whether he has bloodshot staring eyes or a tendency to introduce the fact that he had a big problem with a dragon last night into an otherwise sane conversation, there is a veritable galaxy of stars inhabiting his firmament. Tony Crowther, Jeff Minter, Matthew Smith, Derek Webster, Eugene Evans, Kevin Toms: these names trip off the tongue as easily as an Arsenal supporter names the team which won the 1971 League and FA Cup double.



CS Emergency tender by Steven Bryan of Derby. See page 67.

Matthew Smith got pioneer status for the late lamented Bug-Byte's Manic Miner — a game which was not only the first of its kind on the Spectrum, but which also had in-jokes about other programmers. Eugene's Lair — one of the screens in the game — was peopled by hostile toilet seats. There was even a pun on Manic Minter.

Eugene, you should know, wrote the seminal Arcadians — a straight shoot-'em-up that people with real street cred will still perversely quote as being their favourite game. The media seized on him as the ultimate whizzkid — enough money to buy a Porsche, not old enough to drive it.

Derek Webster wrote Codename MAT, the Star Raiders derivative for the Spectrum that is played practically non-stop in right-thinking computer clubs the length and breadth of this sceptred isle.

Kevin Toms created the excellent Football Manager — all the fun of failure, without the strain of being repeatedly fired.

Jeff Minter became justly famous for Gridrunner — which became top-selling game in the USA. A real achievement for a British programmer, it went to Jeff's head and he now writes games which are too fast for anyone to play, save the small faithfull colony of acolytes and llamas clustered in tents around his remote country cottage. Occasionally he emerges from retreat to say things about Tony Crowther (of Killer Watt, Blagger and Son of Blagger fame).

If you don't feel up to comparing programming techniques, the best ploy is erudite reference to historical figures. Scott Adams of Adventure International is the man who single handedly put CAGs (computer adventure games, to you) on home micros. If the relative merits of flight simulators are being discussed you should take the opportunity to reveal that you know Bruce Artwick wrote the IBM PC flight simulator, "which has to be the yardstick by which such programs are judged." This has the double impact of (a) airing your knowledge, (b) implying that you have regular access to a rather pricy personal computer. Likewise, if military strategy games become a burning issue, you should mention that Chris Crawford really wrote the definitive program with Eastern Front. This naturally brings up the subject of Atari, founded by Nolan Bushnell with $500 he got from selling his first arcade game to Bill Nutting Associates. They didn't buy his second game, Pong, which was released in 1972 and made Atari a household word, in the States at any rate.

Paul Bond

A GREAT PACKAGE DEAL!

For serious users of the BBC Computer.

A professional trio which can be integrated to produce an information management system of exceptional power.

1 SCRIBE

THE PROFESSIONAL WORD PROCESSOR designed for the serious user ■ All operations fully prompted ■ No special knowledge of the computer system necessary ■ Document size NOT limited by computer memory ■ Automatic disc buffering ensures text is moved between disc and computer memory without user intervention ■ Up to 255 pages in a single document ■ 80 column display ■ on screen underline and right justify ■ See it as it will be printed.

SCRIBE comes in a chip with 5 minute fitting instructions, utilities disc and manual. DISC MACHINES ONLY.

£59.95 + 60p p&p

2 DATABASE

A superb record keeping system with an incredible operating speed. 96 fields per record ■ One record 2 Kb max ■ One field 300 characters max ■ 4000 records per database ■ 16 level conditional search ■ Find any record in 2 secs ■ Wild card search ■ Record match ■ 8 automatic sub indexes ■ Total flexibility of output via report writer with auto write back to any field ■ Maths pack ■ Semi programming language.

Integrates with Scribe to give conditional search with MAIL MERGE and high powered report formatting.

Database is in a chip.

DISC MACHINES ONLY

£49.00 + 60p p&p.

Scribe & Database in one chip

£95.00 + 60p p&p.

3 DOUBLE-DOS

Double density disc interface for the BBC computer.

A high capacity database or word processor is enhanced even further with this state of the art disc interface.

The many features include ■ almost 800 Kb of CONTINUOUS file space on a standard 80 track disc drive ■ Automatically read standard Acorn files ■ Compensate for discs formatted in single density ■ Provide up to 159 files IN ONE DIRECTORY ■ Automatically read, write and format double sided drives to appear as one disc surface ■ Allow maximum use of **MERTEC** Scribe and Database.

Fitting to your computer is made exceptionally safe and reliable by providing connection via a flexible ribbon cable. Full instructions provided.

£109.25 + 90p p&p

NOW AVAILABLE IN ONE GREAT PACKAGE

(continued from page 29)

Doing a Disney

THE MARKETING men say that one of the most important selling features of a micro is its graphics capability. Presumably this is because buyers not only want to be sure that their choice of home computer can faithfully reproduce the pixellated nightmares of Cauldron or Combat Lynx but also want to try their hand at a few home-brewed attempts at the animator's art and games writing.

Sadly, many will quickly surrender their good intentions and return to the passive role of admiring the work of others; and this despite the comparative simplicity which user-friendly innovations such as the sprite — pioneered on the Texas TI and then refined by Commodore for the 64 and responsible for much of that machine's success.

Now First Bytes isn't the place to tell you how to create the next chart-topper but we can get you started. Spare a few moments thought on the computer games and you'll reach the conclusion that they're all based more or less on the same logic. In this, Graphic A (which could be a cute moving character, a sparkling laser beam, or whatever — perhaps controlled by a joystick) shares screen space with Graphic B (which could be a static element such as a building; or an animated static element, such as an escalator; or an animated or non-animated moving element, such as a space ship). And when they touch or collide, something happens.

So let's take that universal micro truth to develop a child's counting game that uses only Print statements — thus you should be able to Run it on your micro, whatever make it is.

To start, we want to position the cursor, and thus fix the initial Print position, at the beginning of a line about half way down the screen. If you have a Commodore 64, for example, you can achieve this with the line:

```
10 PRINT [CLEAR SCREEN] TAB(255) TAB(240)
```

or if you prefer,

```
10 FOR L=1 TO 10
20 PRINT
30 NEXT L
```

Since it's our aim first to make an astrostar move across the full width of the screen, it's necessary to signal how many moves this will take. So make M equal the number of characters your micro's display can accommodate on a line — it's probably 38 or 40:

```
40 M=40
```

Incidentally, it doesn't matter that your program lines will jump from 10 to 40 if you chose the one-line cursor routine given above. Now set the loop to print the astrostar that many times in total:

```
50 FOR A=1 TO M
```

Now we get to the interesting bit:

```
60 PRINT "*";
70 FOR D=1 TO 200
80 NEXT D
90 NEXT A
```

Be sure to include the semi-colon at the end of line 60. If you now Run this demo, you'll see that a line of stars is printed the full width of your screen, with a short breather between each. Not quite animation, though. But now List the program and retype line 90 onwards as follows:

```
90 PRINT CHR$(157) " ";
100 FOR D=1 TO 100
110 NEXT D
120 NEXT A
```

Run it to see what happens and now take another look at the listing. Every time that lines 60 to 80 are executed, they print a star and hold it on the screen for the brief period set by the delay loop. Then line 90 backspaces the cursor (I've used the all-micro standard code rather than a graphic symbol) and prints a space or blank (" ") over the star. Another brief pause, then line 120 calls for a new star to be printed at the next position along the line, when the whole process is repeated.

Experiment with different letters, figures and other keyboard characters between the quote marks in lines 60 and 90. Just for fun, delete lines 70 and 80 and 100 and 110 altogether.

This demo simply moves a single graphic — now let's try for both movement *and* animation. The following short program could be developed into something quite cute by adding a few extra lines to provide X number of turns, a final score, and maybe a snatch of music or sound effects. Its main purpose, though, is to demonstrate that simply alternating two images at the same spot on the screen — in this case, the letters O and C — is enough to create the illusion of animation:

```
10 PRINT [CLR SCREEN] TAB(255) TAB(240)
20 R=INT(RND(1)*(40-20))+20
30 LET M=40
40 FOR P=1 TO M
50 PRINT ".";
60 NEXT P
70 PRINT CHR$(145);
80 FOR A=1 TO M
90 PRINT "O";
100 FOR D=1 TO 100
110 NEXT D
120 PRINT CHR$(157)"C";
130 FOR D=1 TO 100
140 NEXT D
150 PRINT CHR$(157)" ";
160 IF A=R THEN 180
170 NEXT A
180 PRINT:PRINT "MUNCHMAN GCBBLED"A" POWER PODS."
190 INPUT "HOW MANY ARE LEFT OUT OF 40";P
200 IF P=M-A THEN PRINT "YOU RE RIGHT -"P"LEFT.":GOTO 220
210 PRINT "SORRY, YOU'RE WRONG -"M-A"LEFT."
220 END
```

You'll recognise much from the earlier demo — it's just worth mentioning that line 20 is used to generate a whole number between 20 and 40 — your micro may use a slightly different syntax. In line 70, CHR$(145) is the code for cursor up.

John Ransley

BEGINNERS first bytes

Choosing a printer

CHOOSING A printer can be almost as difficult as deciding which micro to buy. There are at least three different types of printer widely available and dozens of different makes. So here is a brief guide to some of the points that should be borne in mind by the first-time buyer:

INTERFACES: If your micro has a built-in printer port then you will have no problem connecting up to a printer. Most makes of printer come with either a serial RS-232 interface or a Centronics style parallel interface, and sometimes offer a choice of each.

If you own a machine like a CBM-64 or a Spectrum which does not have a standard printer port then you would be well advised to buy an additional interface — usually a cable together with interface software on tape or Rom. Generally speaking the dedicated printers produced by manufacturers to run on their own micros are not to be recommended. Their only advantage is that they plug straight in and handle graphics characters.

Commodore printers, for example, are less flexible than other dot matrix printers in the same price range and — at least in this writer's experience — are not always reliable; while Sinclair printers give a notoriously poor quality printout.

PRINTER TYPE: At the moment the three main types are dot matrix, daisy wheel, and thermal. Daisy wheel printers use the same mechanism as electric typewriters to give a very high quality — usually termed Letter Quality — printout. Their drawbacks are that they are slow, noisy, and expensive, and generally provide only one or two different typefaces.

Dot matrix printers, by contrast, form their letters as patterns of dots in the same way that letters on screen are built up from pixels. This means that although dot matrix printers do not offer the same print quality as daisy wheels, they can provide a far greater range of print modes.

The Epson FX-80, to take an example, has 64 different print modes, such as emphasised, bold, double width, as well as graphics and user-defined character options.

Epson printers dominate the dot matrix market and so software manufacturers are more likely to configure their programs to work with Epson printers than any other make. Many of the non-Epson makes — Epson clones — offer comparable performance and are often cheaper. But it is a good idea to look out for a printer which uses the same control codes as Epson.

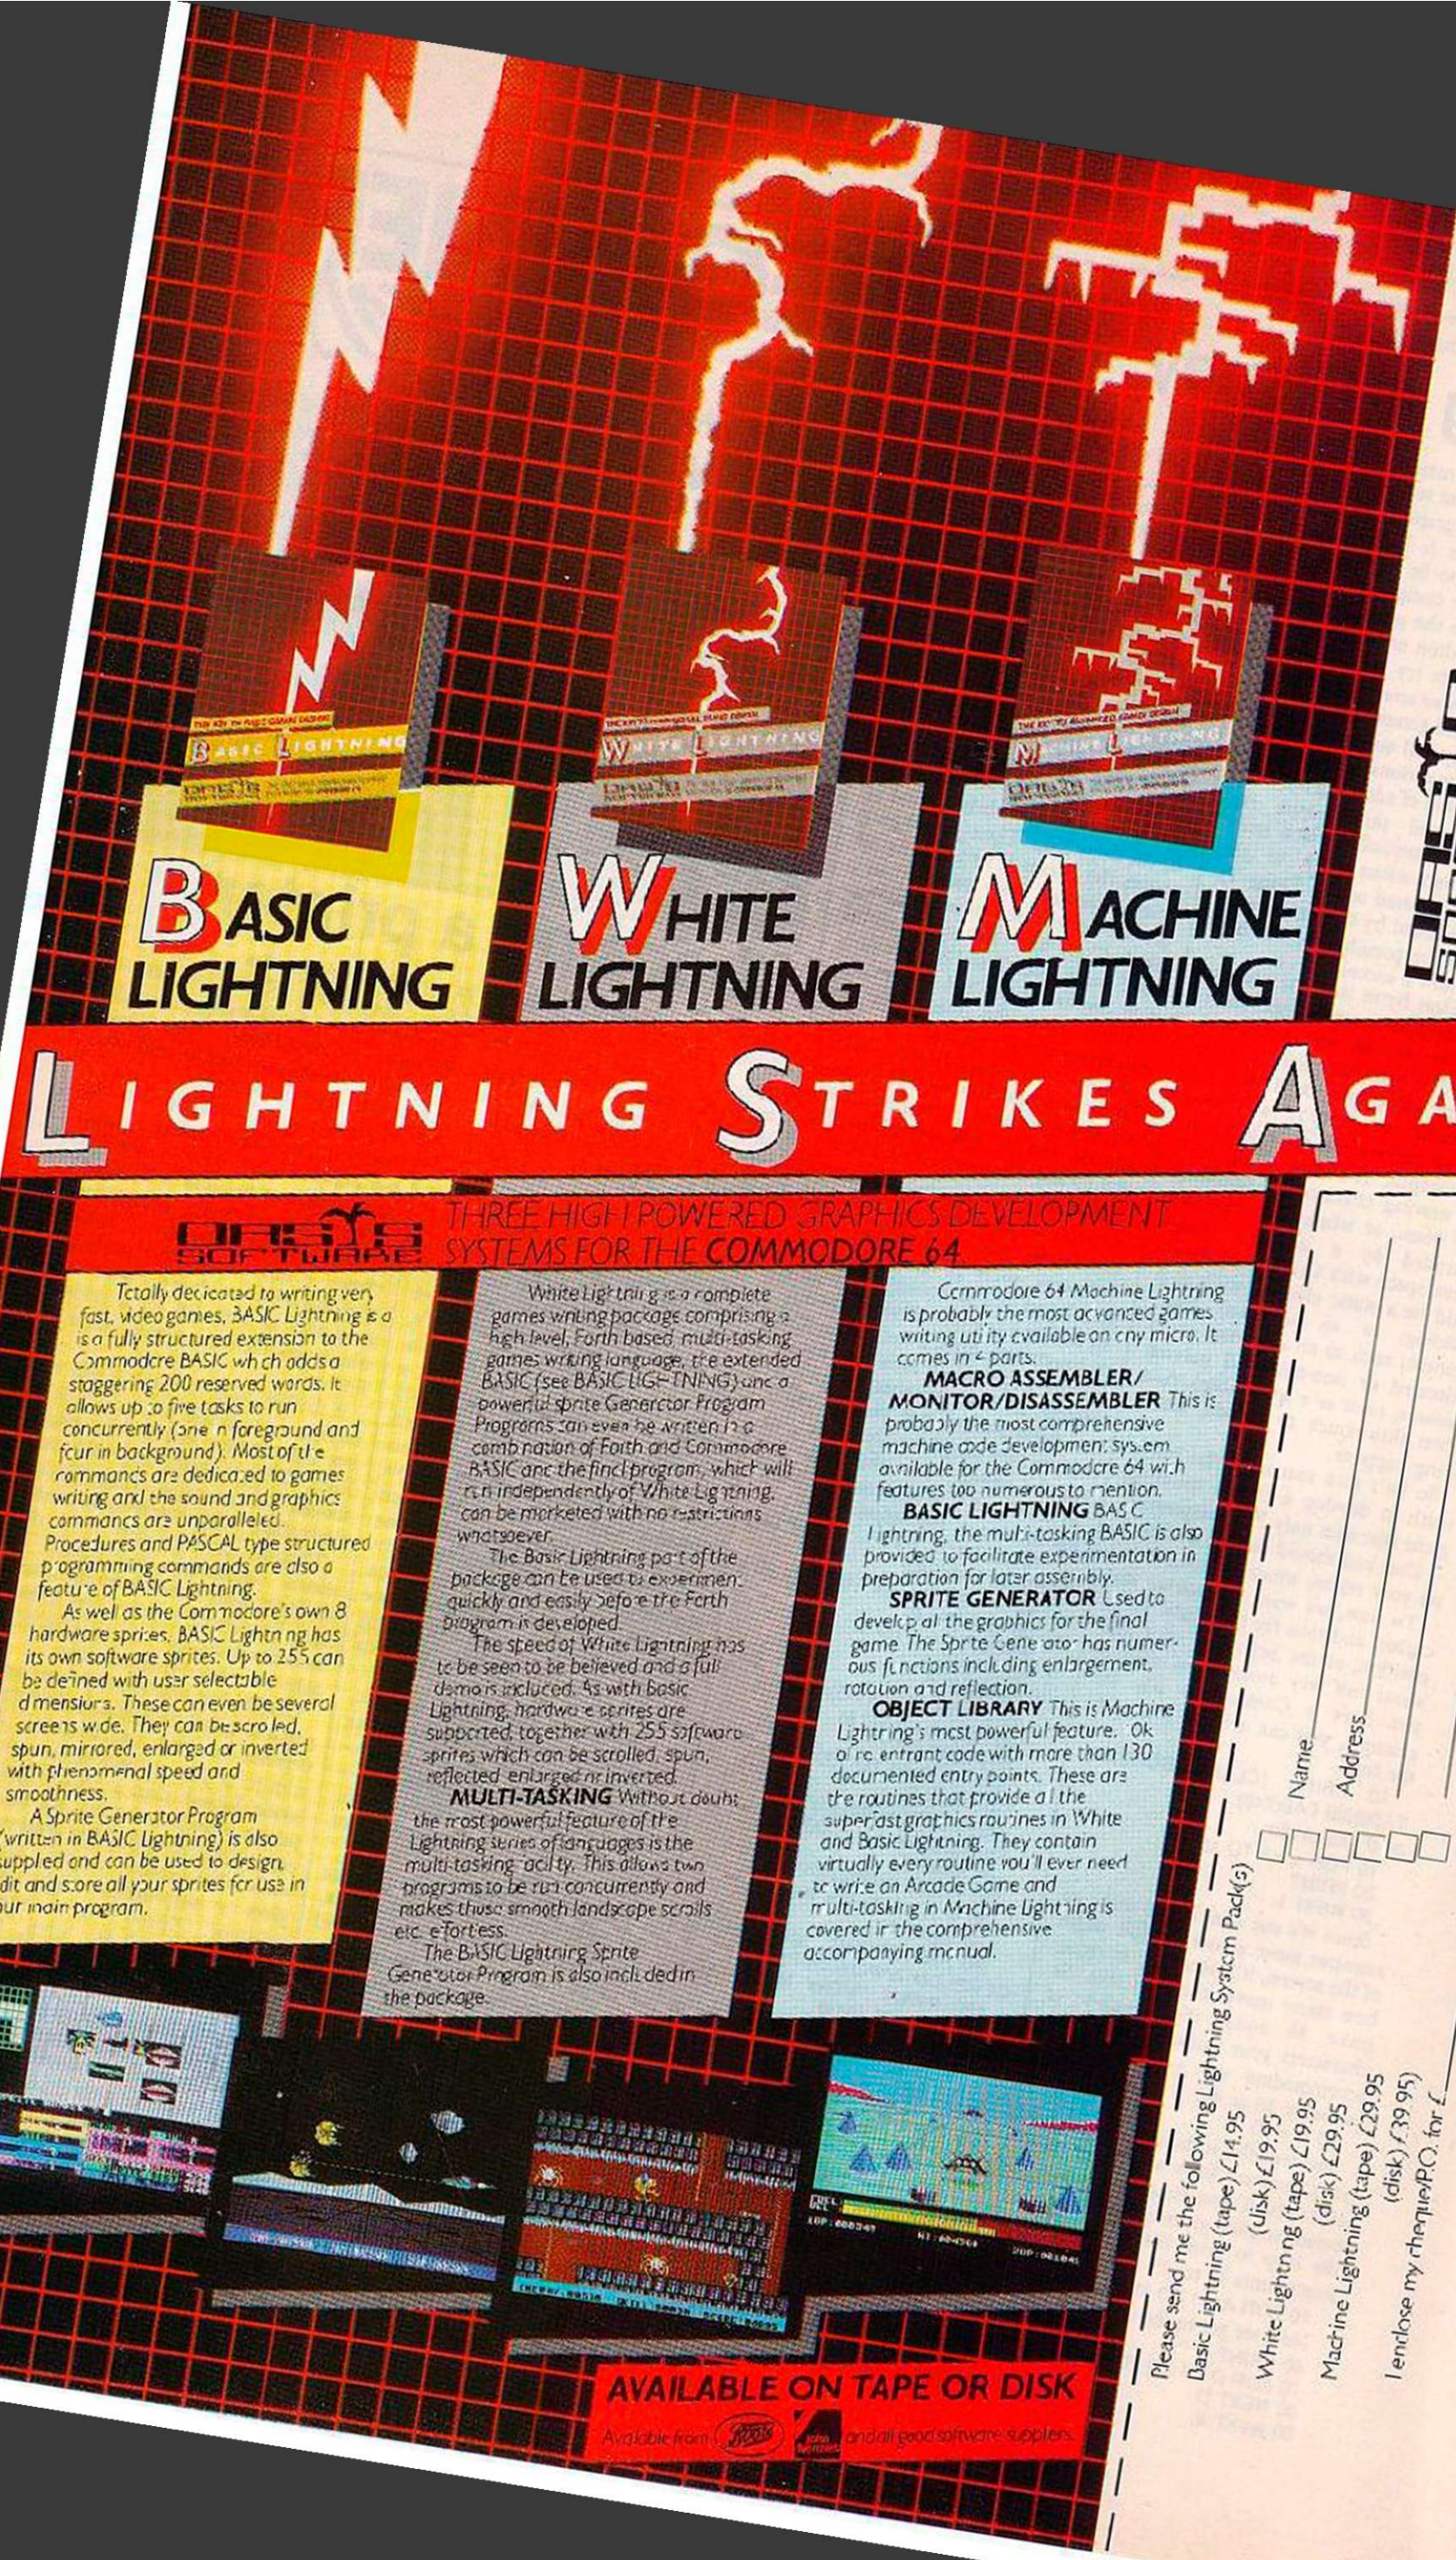
A further point to check if you are buying a dot matrix printer is that it has both tractor and friction paper feeds. Tractor feeds only take perforated printer paper while friction feeds allow single sheets to be used.

Thermal printers also have dot matrix mechanisms but instead of using an inked ribbon burn the letters onto heat-sensitive paper. This is their main disadvantage — the fact that they only take coated thermal paper.

COST: Just how much you are prepared to spend on a printer obviously depends on what you intend to do with it. If you are only interested in taking listings then a cheap thermal printer should fit the bill: the Alphacom printer is particularly good value while the Brother thermal printer gives a surprisingly high quality printout. Epson's new thermal printer, the P-40, also looks promising — see page 33.

If you are planning to use the printer for business purposes you will need a daisy wheel. Otherwise — for wordprocessing and suchlike — you should consider a medium-priced dot matrix printer, probably in the range £200-£300. Do not be daunted by the fact that it may cost twice the price of your micro: you can use it on a bigger machine.

Simon Beesley



LIGHTNING STRIKES AGAIN

ORIES SOFTWARE

THREE HIGH POWERED GRAPHICS DEVELOPMENT SYSTEMS FOR THE COMMODORE 64

Totally dedicated to writing very fast, video games, BASIC Lightning is a is a fully structured extension to the Commodore BASIC which adds a staggering 200 reserved words. It allows up to five tasks to run concurrently (one in foreground and four in background). Most of the commands are dedicated to games writing and the sound and graphics commands are unparalleled. Procedures and PASCAL type structured programming commands are also a feature of BASIC Lightning.

As well as the Commodore's own 8 hardware sprites, BASIC Lightning has its own software sprites. Up to 255 can be defined with user selectable dimensions. These can even be several screens wide. They can be scrolled, spun, mirrored, enlarged or inverted with phenomenal speed and smoothness.

A Sprite Generator Program (written in BASIC Lightning) is also supplied and can be used to design, edit and store all your sprites for use in your main program.

White Lightning is a complete games writing package comprising a high level, Forth based, multi-tasking games writing language, the extended BASIC (see BASIC LIGHTNING) and a powerful sprite Generator Program. Programs can even be written in a combination of Forth and Commodore BASIC and the final program, which will run independently of White Lightning, can be marketed with no restrictions whatsoever.

The Basic Lightning part of the package can be used to experiment quickly and easily before the Forth program is developed.

The speed of White Lightning has to be seen to be believed and a full demo is included. As with basic Lightning, hardware sprites are supported, together with 255 software sprites which can be scrolled, spun, reflected, enlarged or inverted.

MULTI-TASKING Without doubt the most powerful feature of the Lightning series of languages is the multi-tasking facility. This allows two programs to be run concurrently and makes those smooth landscape scrolls etc. e.g. Fortress.

The BASIC Lightning Sprite Generator Program is also included in the package.

Commodore 64 Machine Lightning is probably the most advanced games writing utility available on any micro. It comes in 2 parts.

MACRO ASSEMBLER/ MONITOR/DISASSEMBLER This is probably the most comprehensive machine code development system available for the Commodore 64 with features too numerous to mention.

BASIC LIGHTNING BASIC Lightning, the multi-tasking BASIC is also provided to facilitate experimentation in preparation for later assembly.

SPRITE GENERATOR Used to develop all the graphics for the final game. The Sprite Generator has numerous functions including enlargement, rotation and reflection.

OBJECT LIBRARY This is Machine Lightning's most powerful feature. Object re-entrant code with more than 130 documented entry points. These are the routines that provide all the super fast graphics routines in White and Basic Lightning. They contain virtually every routine you'll ever need to write an Arcade Game and multi-tasking in Machine Lightning is covered in the comprehensive accompanying manual.

ADD-ON EXTRA

DMP 105

Printer
Tandy
£170

The dot matrix printer has friction or tractor feed, Centronics and RS-232 interfaces. Two small DIP switches. The switches control which interface is currently active and the speed of the RS-232 interface — 2400 or 600 Baud only.

Characters are printed on a 9 by 7 matrix in expanded, normal, elite and condensed fonts, both bold (except expanded) and/or underlined. Graphics are 800 dots per line, or a coarse graphics mode.

The printer has a very good optimising function, there appears to be little wasted motion as the head takes the shortest route to print the next line.

The working print speed was better than competitive 80cps printers and as quick as some 100cps printers.

Formula 1

Joystick
Kempston
£16.95

Fashioned from rigid blue plastic, this looks like the sort of solid joystick you need if you are an arcade or decathalon fan. Four micro-switches, plus two for the fire buttons gives it a good positive feel.

P40

Printer
Epson
£95

A thermal dot matrix printer with RS-232 or Centronics interface, 80 characters per line at up to 45cps; mains or rechargeable battery powered with four character sets and graphics image mode under software control. It comes with an operations and interconnections guide as well as sample programs and should be suitable for most home computers.

Epson P40.

Quick Data Drive

- *CBM 64*
- *Dean Electronics*
- *£99.99*

YOU CAN always spot a Commodore owner. He's a patient sort of chap. Both disc drive and cassette have got a reputation for being on the lethargic side. From the same stable that brought Spectrum owners the Retronics Wafadrive, Dean has adapted the technology to the Commodore. It is a single drive unit which simply plugs into the cassette port.

The system is booted up by inserting the system wafer, pressing Shift/Run, and then pressing a red button on the drive. This loads in a short program at normal cassette speed which then auto runs, setting up the wafer system. It also loads a number of utilities into the Ram behind the Kernel, so all the C64's user Ram is available. After this initialisation, all the usual cassette commands control the drive.

The operating system is perhaps the drive's weak point. There are commands for transferring programs from wafer to cassette to disc or to a second wafer drive, but there are no commands, rename or backup files. Random access files are not supported. An advanced operating system correcting these shortcomings is said to be under development and should be available as a software upgrade in three to four months.

However, the data drive does score over the Commodore drive in a number of ways: it is cheaper, it is quicker, and for software houses, the wafers offer a greater degree of protection due to the two speed system.

Quick Data Drive.

Sound Sampler

- *Spectrum 48K*
- *Datel Electronics*
- *£49.95*

WHAT DO YOU do with your Spectrum when you've finally got fed up with the mindblowing tedium of blasting little green splodges into oblivion? Rather than consign the thing to the back of the wardrobe, you might like to turn it into a powerful musical effects machine.

Until now, digital sound samplers have been the province of rock millionaires with nothing better to do than sample the particularly satisfying crunch you get when smashing a TV tube. Well, now you too can join in this fun hobby.

What Datel's little gadget does is store sound input from a microphone or your hi-fi and allow you to mess around with it, the results are really quite amazing. You do also need an amplifier to output the sound from the unit.

With the hardware, which clips onto the expansion socket, you get a tape with four effects programs on it and three sheets of clear and concise instructions.

The first program goes through the first principles of sampling and playback. There are effects such as echo, chopping and reversing. You can vary the time of the echo up to over a second.

The second program turns the Spectrum into a keyboard, the note you play modulating the sound you have sampled. The method of changing octave is somewhat clumsy, but it is an effective sample. The real meat is in the third program which allows you to compose a tune of up to 1,000 notes and rests, each with selectable length and pitch over four octaves.

Assuming you've got a Stradavarius handy, all you have to do is play one note into the mike, write a little tune and Yehudi Menuhin wouldn't know the difference.

Sound Sampler.

Spitfire 40

CHOCKS AWAY!

THE BEST THING SINCE THE REAL THING

A Spitfire flight simulation set in 1940. Ground features and realistic air combat.

Spitfire 40 is available from W H Smith, Boots, Spectrum and good software stores everywhere.

MIRRORSOFT

Grandmaster

C-16
Chess
Audiogenic
£8.95
★ ★ ★
Give any grandmaster the brain of a C-16 and he'll soon find his game suffering. Audiogenic's Grandmaster program is no exception. The C-16 version plays a far weaker game than the CBM-64's but it's still good sound chess, with 10 levels, a crisp display and a limited take-back facility.

Pinball Wizard

Amstrad CPC-464
CP Software
Arcade
£8.95
★ ★ ★
From the people who brought you Superchess, Backgammon and Bridge Player. While this may not compare with David's Midnight Magic from Ariolasoft for the CBM-64, it is nevertheless an enjoyable game.

Choice of five speeds and the excellent ball movement make this a realistic and colourful simulation of the old arcade favourite.

Talisman

Spectrum
Games Workshop
Boardgame
£8.95
★ ★
An adaption of the hit boardgame of the same name, this computerised version suffers in comparison. In the course of this graphics adventure you confront various monsters, collect objects (inc fo lowers and face various tests, either on your own or in competition with other players, either human or computer-controlled. A little short on explanation as well.

Revs

■ *BBC*
■ *Race game*
■ *Acornsoft*
■ *£14.95 (£17.65 disc)*

★ ★ ★ ★ ★

OK, so Pole Position is a damn good game, but it's not really racing is it? Things improved a bit with Software Invasion's 3D Grand Prix, but Acornsoft has set itself the imposing task of simulating a formula three racing car.

There are seven controls, accelerator, brake, steering, and gear up and down. The space bar amplifies the action of the steering. It can also be controlled by joystick, which is probably much easier. First disappointment is that the brake is very hard to get at, and you can't redefine the keys. On screen you have a cockpit view of the road ahead. The screen display is good, the graphics smooth.

There are two main indicators in front of you, rev counter and gear indicator. There are also rear view mirrors. To start off with, you can do a practice, with no other cars around, just to get used to the feel of the controls. After you've got used to that you can go into competition.

Right, after practice the drivers are lined up in order of times obtained in practice. Several players can take part, practising in turn and then taking part in the race one after another. So how does she handle? Well, unless you've ever driven a Formula three car, realism is hard to assess, but the game is certainly a great test of skill.

If you are not to consign yourself to the back of the field or to the track side catch netting, then every corner must be right. Hours of practice pay off here, the approach speed, braking, gear changes, the exact time you turn into the corner. The difference between success and disaster is very small. The 20 other drivers vary from the amateur through to the excellent and passing most of them requires skill and patience.

This game deserves as big a following as Elite. Not for the faint hearted, it demands total concentration at all times. Real pit stops might have been nice, perhaps some better scenery — except you haven't got time to look at the scenery. If you ever make the winners' rostrum, you'll have earned the champers.

Spy Hunter

■ *Spectrum 48K*
■ *Shoot-em-up*
■ *US Gold*
■ *£7.95*

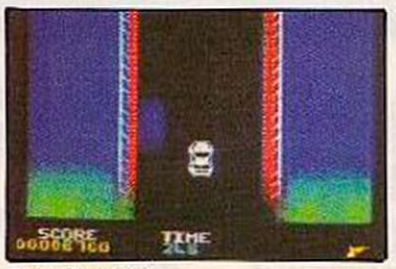
★ ★ ★ ★

IF YOU'VE seen this one in the arcades, you'll need no encouragement from me. A fast and furious race game, with the narrow road ahead teeming with enemy agents bent on your destruction. Only your agility, driving and good shooting will save you, your country and probably civilisation.

On the roads there are three types of enemy car which must be dealt with in different ways: shooting up innocent bystanders is frowned upon, but good fun. On the water, there are no daytrippers, but the rocks, torpedoes and barrels will keep you busy. There is even a helicopter to contend with. Tricky if you haven't got your missile loaded up yet. You start off with just a machine gun, but missiles, smoke canisters and oil pods can be acquired by entering the weapons truck.

The controls are easy to use, with steering, accelerator and brake. Weapons are fired by a combination of stick and fire button to control which weapon is fired.

Lee Paddon



Spy Hunter.

Blagger Goes to Hollywood

■ *CBM-64*
■ *Alligata*
■ *Arcade adventure*
■ *£9.95*

★ ★ ★ ★

THE POWER of bluff may have influenced Alligata in the naming of this program— there is a band and there will soon be a computer game with a similar name. But with its 3-D graphics, four-way scrolling and clever sound track, the new release in Alligata's Blagger series swiftly shrugs off any accusations of "passing off".

Blagger's plan is to steal a march on the competition by getting hold of the rushes of Steven Spielbum's next blockbuster. But first he has to get across 12 hostile film sets, each with the appropriate sound track.

Paul Bond

Drop Zone.

Drop Zone

■ *Atari*
■ *US Gold*
■ *Defenderesque*
■ *£14.95*

★ ★ ★ ★

DEFENDER-FREAKS will swoon when they see Drop Zone by Archer Maclean of Arena Graphics. It has even smoother scrolling, faster action, more vivid sound and the kind of pyrotechnics that get Guy Fawkes turning in his grave. It also has an amazing attract screen and a scintillating high score routine. Underneath it's the same old wonderful/boring (delete according to taste) Defender, but never mind the scenario, look at the scenery!

Instead of the quick scribble of landscape in Defender, Drop Zone takes place against a realistic, 3-D lunar landscape. And when you get killed, the explosions are like a

NEW

BETA BASIC 1.8

ENHANCED BASIC FOR SPECTRUM 48K

FOR GRAPHICS — STRUCTURED PROGRAMMING — DATA HANDLING

Release 1.8 is more powerful than ever! We don't have space to do this program justice — if you can't believe the ad, send us a large S.A.E. for further information.

Features: Commands are single-entry keywords in graphics mode. Syntax is checked on entry. Fully compatible with Spectrum Basic. Microdrive compatible. Comprehensive manual.

NOTE: Release 1.0 is still available for 16/48K Spectrum at £11.00.

ALTER screens colours (general or specific)
AUTO line numbering
BREAK out of code loops
CLOCK digital clock
CURSOR CONTROL, CODES allow strings to have complex shapes
DEF KEY user definable keys
DELETE a block of lines
DO-LOOP structure
DPOKE double poke
EDIT specified line
ELSE used with IF.. THEN
EXIT leave DO-LOOP
FILL enclosed area with specified ink or paper
GET wait for keypress
JOIN two program lines
KEY n$ string
KEYWORDS new keywords on/off
LIST..LIST like TO in
USED used with GOTO, GOSUB
ON ERROR trap errors (with LINE, STAT and ERROR)
PLOT a string (may contain cursor control codes)
POKE a string
POP Basic's stack
PROC, DEF PROC, END PROC (for named procedures)
RENUM versatile renumber
ROLL all or part of screen in any direction by specified number of pixels, with or without attributes
SCROLL like ROLL, but without wrap round
SORT arrays (very fast)
SPLIT program lines
TRACE program execution
UNTIL used with DO or LOOP
USING used with PRINT
WHILE used with DO or LOOP
XCO, YCO move PLOT origin
XPO, YPO change PLOT scale

FUNCTIONS

AND (bit-by-bit)
BIN$ decimal to binary
CHAR$ number to 2 characters
COSE fast cosine
DEC hexadecimal to decimal
DPEEK double PEEK
FILLED filled area
HEX$ decimal to hexadecimal
INSTRING string search
MEM free memory
MEMORY$ all of memory as a string
MOD modulus
NUMBER 2 characters to number
OR (bit-by-bit)
RADM fast RND
SCRN$ recognises user graphics
SINE fast sine
STRING$ repeats strings
TIME$ current time
USING$ formats numbers
XOR (bit-by-bit)

Only £11.00 inclusive! Upgrade price for Release 1.0 owners is £4.00. This includes a 12-page supplement to your manual. Please quote date of purchase. If you did not purchase from us, state supplier and return original cassette.

Please send me:
Beta Basic, Release 1.8. Payment of £11.00 is enclosed.
(or £11.50 for foreign orders). Cheques payable to BETASOFT.

I don't believe it. Please send me full details of Beta Basic 1.8. I enclose a stamped addressed envelope.

Sinclair QL Assembler

QL
Assembler
Sinclair
£39.95
★ ★ ★

The Sinclair QL Assembler comprises of an editor and assembler, a set of QDOS library files, pocket sized manual and a blank Microdrive cartridge — for a back up copy. The editor is the standard Metacompco editor, this runs as a separate job from the GST Assembler. The assembler shows all the standard directives and on completion of one assembly allows you to assemble another file.

Mighty Magus

Spectrum
Arcade adventure
Quicksilva
£6.95
★ ★ ★

Magus Delvin is too into matters cosmic to deal with Fraugy the Dragon, who is biting the knights, scrambling the damsels and pillaging the villages. So you, his humble acolyte must penetrate the fire-breather's lair and slay him in his place of power. And get out again.

Zapp

CPC-464
Z-80 assembler
Hewson Consultants
£14.95
★ ★ ★

Zapp is not an arcade game, despite the name, but a cassette-based Z-80 Assembly Programming Package dedicated to the Amstrad CPC-464.

Together with an assembler, the package contains an editor, a breakpoint monitor, a disassembler, a hex editor and a cassette file manager. The Zapp assembler recognises all the standard Z-80 instruction mnemonics — with one exception — and the monitor displays instructions in disassembled and hex form, together with the address and the register values before the instruction is performed.

(continued from page 35)

firework display. Judge by appearances and this is one of the very best games there is.

Of course, the action is not quite the same as Defender. Instead of piloting a space-ship, you are a Jet-pac type lunanaut. The Landers have turned into detailed satellites called Planters. They don't carry off your "men" — these are little blue balls instead of matchsticks — they drop pink Anti-men on them. It's fatal when they meet.

You don't just protect your men, you collect and roll them into a protective hangar.

One neat addition is that you can make yourself invisible, in which condition you become a black shape against the black sky — and if you fly low, you appear as a black cut-out.

There are some new enemies too, including storm clouds or Blunderstorms, which can destroy you with theatrical lighting bolts.

Jack Schofield

The Hitchhiker's Guide to the Galaxy

■ *Atari 800*
■ *Softsel*
■ *Adventure*
■ *£32.95*

★ ★ ★ ★ ★

WHO AM I: You are Arthur Dent, a character in The Hitchhiker's Guide to the Galaxy — you know, the adventure game of the TV series of the book of the radio series of the original idea by Douglas Adams. Of course, you won't always be Arthur Dent, but shouldn't you be worrying about something else? The world is going to end in 12 minutes.

INVENTORY: OK, keep your dressing gown on! You have a nice box with a colourful glossy manual attached, a double-side game disc (one only, so look after it), a reference card for the particular machine you're using — Hm, Atari, eh? Well, they're all the same in text mode — a destruction order for your house (in English), a destruction order for your planet (is that Vogon?), a small packet of fluff, an Official Microscopic Space Fleet, some peril-sensitive sunglasses — completely opaque black card.

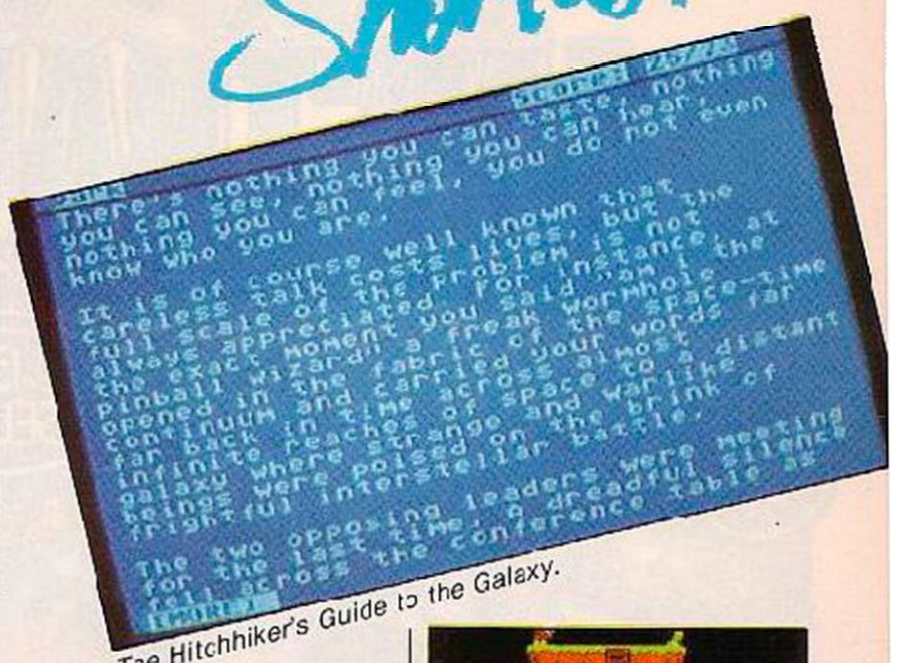
LOOK. Well, you've got an American micro and a disc drive and a screen. This is text only, so you've got to read, ok? No pretty pictures. In the top right-hand corner there's your score and the number of moves you've taken. A "move" means you've typed something in that I understand, and I've gone to the disc and fetched a reply.

Are you sure you want to play this game?

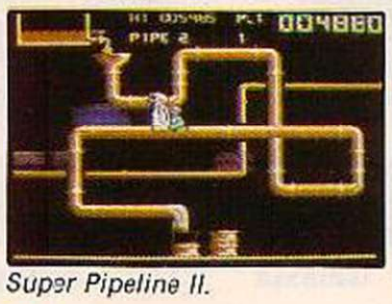
Of course you do. It's obscure, cranky, deliberately misleading, incredibly verbose and often genuinely funny.

Jack Schofield

SOFTWARE Shortlist



The Hitchhiker's Guide to the Galaxy.



Super Pipeline II.

Super Pipeline II

■ *CBM-64*
■ *Plumbing Game*
■ *Taskset*
■ *£8.90*

★ ★ ★

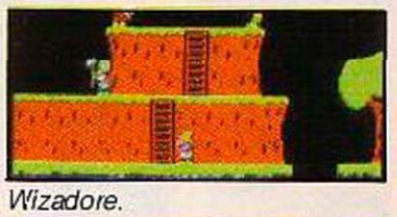
PATROLLING A pipeline fixing leaks may not sound like a promising basis for a game but Super Pipeline II turns out to be highly playable with a frantic and frenetic quality all of its own. You may recall from Super Pipeline I that the game casts you in the role of Foreman; while you cannot mend leaks yourself you can direct a workman to a trouble spot and shoot down the pests that harass him while he hammers the pipeline back into shape. Your aim is to keep the water flowing.

This sequel could be described as more of the same but also bigger and better than the original. There is an extra workman, more pests, 16 screens, and some entertaining cartoon sequences to round off each screen. When you complete Screen 1 a character in a Sinclair C5 drives along the bottom of the screen, jumps out, and then reduces the vehicle to a heap of plastic.

On top of this the game sports one of the best displays of animated machine parts.

It is coping with creatures at the same time as tending to yet another leak that makes the game so maddeningly frustrating.

Simon Beesley



Wizadore.

Grand National.

Wizadore

■ *BBC*
■ *Imagine*
■ *Arcade adventure*
■ *£7.95*

★ ★ ★

DESPITE THE the tawdry old scenario — red dragon Smaun, the Golden Sword was smote, dark evil spread its wings etc. etc. — this is a pretty, and pretty good, game.

As the last of the Arch Mages you have to enter the castle of Wizadore and reclaim your inheritance by finding the 'three spells of destruction'.

Peter Connor

Grand National

■ *ZX Spectrum*
■ *Simulation*
■ *Elite*
■ *£6.95*

★ ★ ★

THE OPENING screen gives you the runners — you can page through a field of 40 horses.

Then you can choose which horse you want to ride — and here comes the interactive bit, you control your mount by using the Z and X keys to move him left and right, whipping him on with the O key and jumping using the P key.

Star chart

Elite

C64
Shoot-em-up
Firebird
£14.95
★ ★ ★ ★ ★

A game that needs no introduction. Perhaps the most successful game ever for the BBC, with an estimated 25 per cent of Beeb owners buying a copy — the other 75 per cent copied it off their mates. If it gets that sort of take up from C-64 owners, which it richly deserves Firebird might be able to buy out B.T., and Acornsoft will be as sick as the proverbial parrot.

In case you've been on another planet, the game is all about flying around zapping aliens, doing a little haggling for commodities and new gismo's for your ship. Brilliant on the Beeb, it's even better on the Commodore with music — the Blue Danube á là 2001 when docking, Trumbles — which are cute little furry creatures — and the whole game is in memory at the same time. The controls also seem easier to handle.

Execution

Amstrad
Hangman
Datacom
£8.95
★ ★ ★

Hi-tech Hangman, but with words like capsicum, karabiner, yean and xenolith, this one had us scurrying for our dictionaries. Various levels of difficulty and help, but if you don't get it right, the gradually assembling squad of Imperial storm:roopers will vaporise you. Gnocchi, we of course guessed.

Gauntlet

Amstrad
Arcade
Micropower
£9.95
★ ★ ★

Gauntlet and Killer Gorilla — two for the price of one. A sensible approach to the Amstrad retread syndrome, this double-decker provides competent Defender and Kong-style games.

(continued from page 37)

Starion

■ *Spectrum 48K*
■ *Melbourne House*
■ *Shoot-em-up*
■ *£7.95*
■ ★ ★ ★ ★ ★

THIS GAME should have been subtitled "Crossword Solvers From Outer Space — They Came, They Saw, They Filled in Five Down!" The baddies invented time travel before you did, and have done their best to mess up space / time using anagrams (gasp)! But don't let this faintly absurd plot put you off, beneath all this lies a superb space shoot-em-up.

In a bid to forestall the conversion of Elite to the Spectrum, Melbourne House have come out of their well-worn adventure rut and shown us what vector graphics on the Spectrum are all about. What the aliens lack in tactical gumption, they make up for in firepower. Hurtling towards enemy ships, laser blazing, dodging the missiles whistling past your ship, and then pulverising them into oblivion. When you blow a ship away, it drops a letter, which you have to pick up by driving into it.

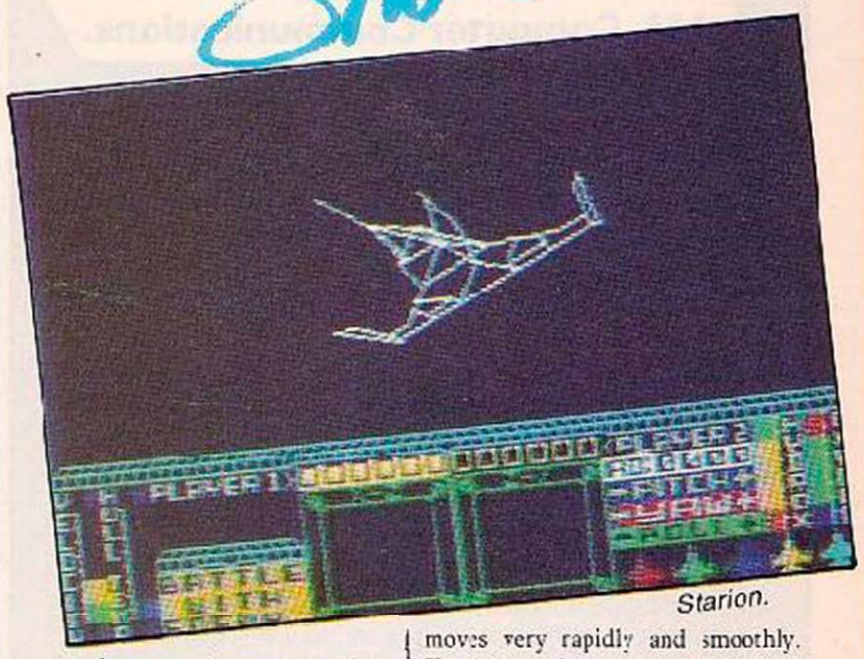
When you've destroyed all the ships in that zone, you get a break from the frantic action when you try to unscramble the letters to form a word hitting a clue from one of the time zones in the block. You then have to fly through a time gate, which looks suspiciously like an Elite spacestation, to the correct time zone. Do this 243 times (only) and you earn the ultimate acolade of becoming the Creator. It would take some game to make me do anything 243 times, but this just might be the one.

The various objects, ships, planets, missiles and letters all spin round, move toward, away and around your ship. The controls are comprehensive and responsive, the display moves very rapidly and smoothly. You have an instrument panel which shows the relationship to you of the various objects in the zone as well as speed, fuel, and "lives" left.

Although it might not have the depth that Elite promises, the graphics are going to be difficult to top. So if you really can't wait for vector graphics, or you like anagrams and crosswords then you could do far worse for the modest price.

Lee Paddon

SOFTWARE Shortlist



Starion.

Dambusters

■ *CBM-64*
■ *US Gold*
■ *Flight Simulator*
■ *£9.95/(£14.95 disc)*
★ ★ ★ ★

WITH THE silence of the still summer night broken only by the steady throbbing of the powerful avro engines, you steer your Lanc onto a steady course, destination, the Ruhr Valley. Not content with just flying the thing in this simulation, you have to drop the bomb, navigate, fire two guns and keep an eye on the engines

Instead of the familiar pattern of warfare, that of long hours of monotony followed by a few seconds of shear terror, what you get is continuous frantic action. The game is a superb simulation with nice graphics on seven screens, one for each crew member location. But is it actually playable? Is doing seven things at once just too much to ask of anyone?

There are three different games: a practice bomb run, the full game, and a short cut which has you already in the air. Opposition comes in the form of flak, night fighters, barrage balloons and searchlights. Basically the tip is fly high and dive late as you turn to make your approach over the lake towards the dam itself. Navigating is easy, your navigator makes the course which the pilot follows using a mark on his compass.

That's about all the advice I really have to offer and I'm probably unfit to even offer that. Having written off several squadrons of bombers, I have no more than glimpsed the dam, and by that time had a bomber that was held together with a wing and a prayer. Having made your bomb run, and dropped your "dustbin", a graphic of your bomb skipping along is shown and, with a bit of luck, a dam with a rather large hole in it. If unlucky, you will get a diagnosis of what was wrong.

Demanding, realistic, good graphics and sound, everything you could want from a simulator, except perhaps being able to finish it would be nice. Helps if you have at least six pairs of hands.

FREE SOFTWARE FOR LIFE!

New Gold Star life membership of The Software Library is your key to a vast treasure trove of tapes costing up to £18 each. They are yours whenever you want them, three at a time... and a full week's rental won't ever cost you a penny in hire fees!

Only the original Software Library has the resources to make such an amazing offer—free software for life! Our ten megabyte computer ensures fast service; our illustrated, descriptive catalogue makes it fun to choose from over 80 top arcade games, 124 Adventures, simulations and other games, and over 120 great utilities and serious applications; 65% are for the Spectrum, the rest divided between Commodore 64 and ZX81. New releases are constantly being added.

Joining this money-saving scheme **should** cost you £24; as an introductory offer, you can join this month at **half price**— £12. From then on, you can take away three tapes from our shop whenever you wish; or if you order by post, all we ask is 30p post/packing per tape. The rental is perfectly free in either case.

What's more, you can sell your surplus software to other members (we have over 5,000!) and recoup the cost of membership in no time at all. We offer huge discounts on peripherals and tapes... and so much more. Phone us now on 0730 892732, quoting your Access number, or return the coupon without delay!

GUARANTEED to save you more than any other software library scheme!

SOFTWARE LIBRARY FARNHAM ROAD, LISS, HANTS GU33 6JU

Please enrol me at the introductory offer, and send my membership pack by return.

OVERSEAS: join here for £18 or join one of our foreign branches: Postfach 7809, 4800 Bielefeld, W. **Germany**; Jacobsmitslaan 75, B-2400 Mol, **Belgium** (also covers **Holland**); 122 S Circular Road, **Dublin 8**; Peter Lykkesvej 33, 2300 **Copenhagen S**; Box 1769, Manzini **Swaziland**. **France** & **Italy** soon. Branch terms vary. All software hired with supplier's permission. YC

Star chart

Sheep Dog Trial

BBC Micro
Educational
Jacaranda Wiley
£14.95
★ ★
Two players have to get their sheepdogs to herd five sheep into a pen.

You can use your dog tactically to split up the other herd. Claims to develop logical thinking, use of grid references, forward planning.

Enjoyable, but an ordinary chess game would do the job as well and cheaper.

Nicotine Nightmare

ZX Spectrum
Anti-smoking
Atlantis
£2.99
★ ★ ★
Should deter dad from blowing smoke all over you when you're trying to use the Spectrum.

First you have to put out six cigarettes, then you have to find your way into the evil cigarette factory and stop them making the little gaspers.

Graphics are a little primitive, but not bad value for the price of two packets of fags.

Super Huey

Commodore 64
Flight simulator
Audiogenic
£8.95
★ ★ ★ ★
Yes, I know we reviewed this last month and we never review programs twice, but we felt you should know you can get the identical Cosmi game at three pounds less than the one in the US Gold cover.

Seems Cosmi gave US Gold and Audiogenic non-exclusive licences. Seems like Ocean Software and Centasoft distributors who own US Gold, not to mention All-American, UK Gold and Eurogold, plus the Imagine title, are trying to push prices rather higher than they need be.

(continued from page 39)

words of Eisenhower when General Montgomery revealed his audacious plan for a quick end to the war in 1944 by capturing three bridges over the last major river obstacles between his army and the heart of the German Reich.

Arnhem seeks to recreate this battle through five different scenarios. Some cover just a part of the battle, and once you've mastered these, you go on to the whole thing, fighting the whole battle. As this can take up to eight hours, you, and probably your Spectrum will be glad of the load/save option.

The level of simulation is brigade/battalion level and there are 13 different unit types, each with different strengths and weaknesses. The sideways scrolling map depicts the area from the XXX corps front line near Eindhoven to Arnhem.

The system used sets a new standard for realism in wargame simulations. Units can dig in, get in to column for road movement, they have morale as well as variable strength and effectiveness. It stimulates beautifully the difficulties both sides faced in trying to deploy their forces effectively in the difficult Dutch countryside.

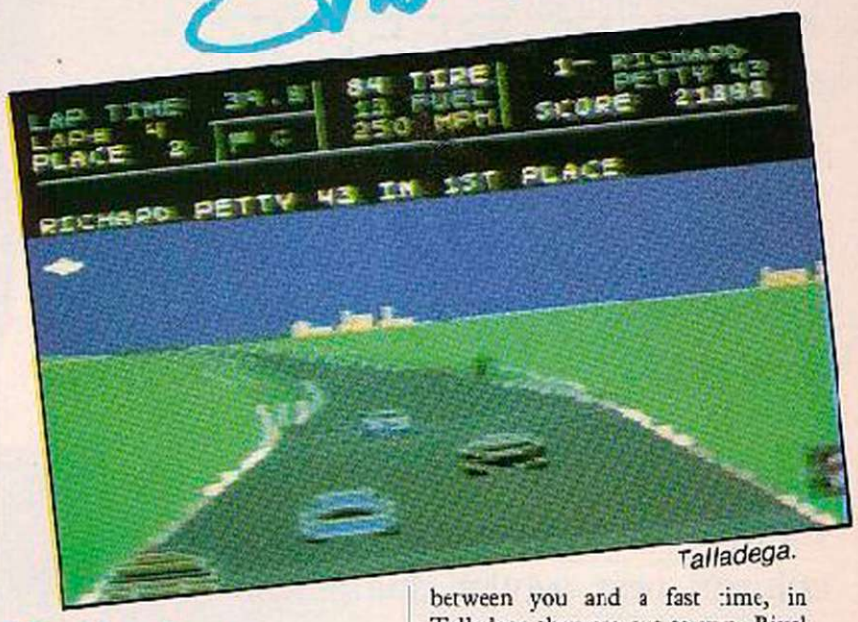
The XXX corps advance had to be made up a single road, where even light resistance caused delay. Meanwhile the Germans were attempting to recapture the bridges from the lightly armed paratroopers before XXX corp arrived.

There are a few minor quibbles — supply was very important in this battle, both for the airborne and ground troops; no attempt is made to simulate this. Also the system only allows you to attack once per turn, but in the other half of the turn you can move normally but not attack!

These minor points aside, this is probably the best wargame on the Spectrum to date.

Lee Paddon

SOFTWARE Shortlist



Talladega.

Talladega

- *CBM-64*
- *Audiogenic*
- *Car racing*
- *£8.95*

★ ★ ★ ★

THE SMELL of burnt rubber, the shriek of metal on metal. No, not an overheating Spectrum but Talladega, probably the best car-racing game on the market. As you hit the first bend of the race proper you realise that this program leaves Atarisoft's Pole Position standing on the grid.

Despite Talladega's scrolling landscape Pole Position may still have the better graphics but Audiogenic's race-track action is far more authentic, exciting and complex. Instead of the other cars in the race being no more than obstacles between you and a fast time, in Talladega they are out to win. Rival drivers will do anything to balk you.

Each car can be identified by its colour or race number and each seems to drive in its own particular way. Number 43 likes to race from the front, number 11 is fond of burning you off with turbo overdrive, while the white car spends most of its time slamming on its brakes just in front of you.

As you scream round the standard or random circuits of 30 laps vital information flashes up on the screen above your view of the track. You must pay close attention to the fuel and tyre-wear gauges, as well as speed, lap time, race position, lap number and the closest car in front if you are to time your pit stops correctly. Slipstreaming saves fuel, the turbo boost wastes it if mistimed.

Toby Wolpe

Chucky Egg 2

- *Spectrum*
- *A&F*
- *Arcade adventure*
- *£6.90*

★ ★ ★

IT WAS too much to expect really. How could anyone come with an idea as simple, as funny, as infuriatingly addictive as Chucky Egg? A&F have wisely chosen to depart from the formula of their classic game in its successor.

Chucky Egg 2 is more in the mould of the arcade adventure, even though it features the same hero — Hen House Harry — and another eggy plot. This time Harry's job is to help get chocolate eggs made.

He must collect the ingredients, put them in the vat and then find the components of the toys that go inside the eggs. Once an egg's finished he has to send it on to despatch.

Before he can enter the factory he has to get past a huge and slavering red dog. A bone comes in useful. Once inside, the first screen — of 120

Chucky Egg 2.

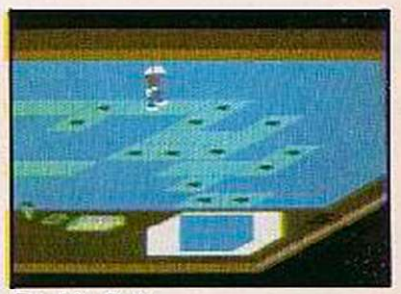
— presents the problem of getting through a room in which deadly spiders are bouncing up and down on their heads.

Then it's on to a maze full of birdies, a stomping boot that seems just a little too familiar from other games of this ilk, mixtures of ladders and platforms, and so on.

There isn't too much to surprise you in the way of gameplay, but it's all very well designed and it's certainly not an easy game to crack.

I don't think anybody's going to play this game for three weeks non-stop in order to get a high-score of 10 billion, but it's good fun and has lots of tricky puzzles to crack.

Peter Connor



Rock'n Bolt.

Rock'n Bolt

- *CBM-64*
- *Activision*
- *Chinese puzzle*
- *£10.99*

★ ★ ★

CONSTRUCTION TIME again. The game is a little reminiscent of CAD/CAM Warrior, but not so boring. Your little man appears on a lift at the base of the screen and has to hop across the slanted three-dimensional display bolting together horizontally sliding slabs of metal. A blueprint is displayed at the bottom right-hand side of the screen, and you have to match your work to this.

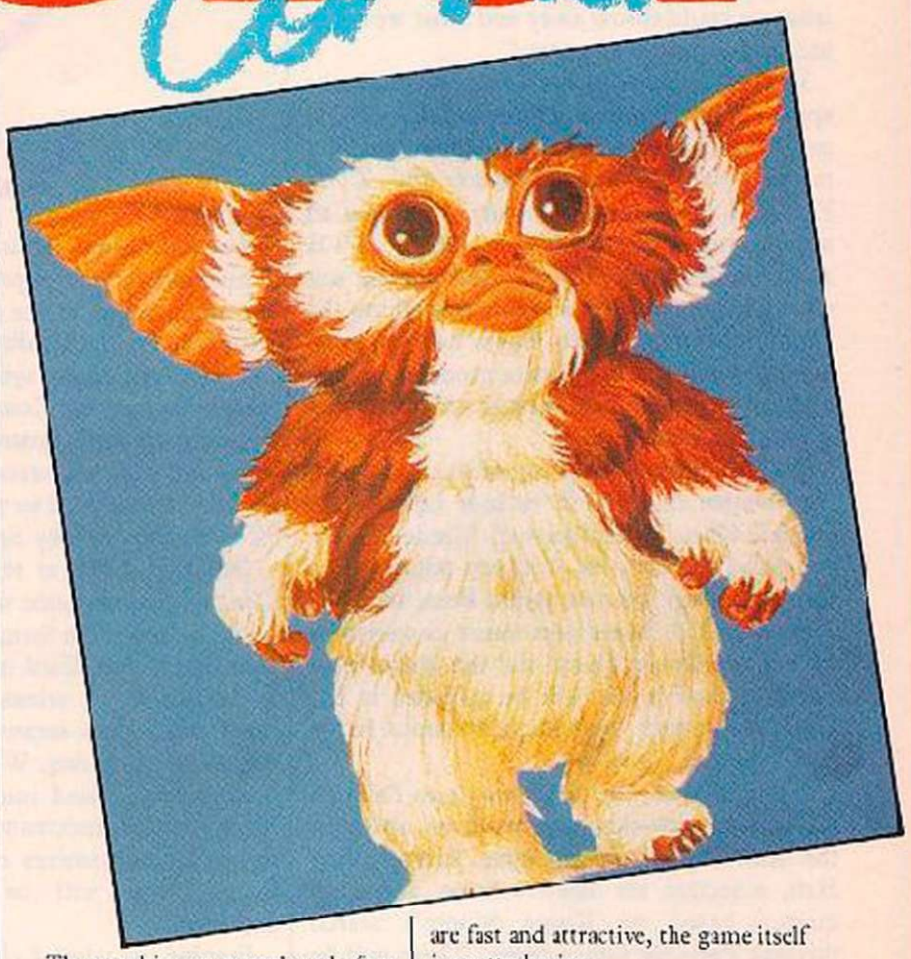
QUEST

Our man with the brass lamp and the key to a thousand mysteries sheds light on new adventure programs. Lost? Never fear, Hugo North is here.



Gremlins

- *Various*
- *£9.95-£7.95 text only versions*
- *Adventure International*

THERE WERE three warnings . . .

"Keep them out of light, especially sunlight.

"Don't ever get them wet. Keep them away from water.

"But the most important thing, the thing you must never forget . . . no matter how much they cry, no matter how much they beg, never, never feed them after midnight."

If you've seen the film or read the book, those wise words should be instantly recognised as referring to the dreaded Gremlins. Film and TV tie-ins are all the rage at the moment and Gremlins The Adventure is one of the best I've seen. It stays faithful to the original film while managing to stand as an excellent game in it's own right.

Like all A.I. adventures, this is a text adventure with added instantaneous hi-res graphics. The pictures are superb throughout. Be warned, though — not all versions contain the graphics. Those that do are the Commodore 64, Spectrum and Amstrad while the Commodore 16, BBC and Electron versions are text only, due to memory limitations.

As in the main part of the film, a town has been overrun by gremlins. It's your job to track down and get rid of every one of them. If you've seen the film, you should find many of the solutions to the puzzles coming easier to mind than those who haven't — remember the microwave oven and food blender? — Yuk!

Just getting going is not too easy since you begin the adventure in a room with a vicious, dart-throwing gremlin. How can you grab the flashlight while being peppered with lethal darts? And where has Gizmo got to?

The graphics are superb and often very funny — pay an early visit to Dorry's Tavern, go right up to the bar and you'll see what I mean. Gremlins should be a sure-fire winner for Adventure International and deservedly so.

Dead at the Controls

- *48K Spectrum*
- *Artic Computing*
- *£6.95*

DEAD AT THE controls is a new text and graphics adventure from a company whose earlier adventures have proved popular. Sad to have to report that although the graphics in this one are fast and attractive, the game itself is pretty boring.

The top half of the screen is used for an impressive graphic illustration of the current location. Beneath this is a one line description of the place together with a list of objects that can be seen — they don't appear in the picture — and the possible exits from the location. Your input and the program's responses appear below this. The character set has been redesigned and looks quite attractive.

When you enter the same location or subsequent locations, the picture is suppressed but can be recalled by typing "look". It has to be said that many of the graphic illustrations are similar.

Although the graphics are colourful and the program has a fast response, the rest of the game is dull.

Castle Dracula

- *Amstrad*
- *Duckworth*
- *£7.95*

ANY TEXT adventure for the Amstrad is worthy of attention since there are so few about. This one features good old Count Drac and has plenty of tongue-in-cheek — or should that be teeth-in-neck — humour.

The plot concerns your attempts to serve up the Count with a stake. There are plenty of puzzles and locations to get your teeth into. Good fun.

SEEN IT, READ IT, HI

SPIN-O

007

"WE SPENT ABOUT two or three weeks getting into Frankie Goes To Hollywood, trying to sort out what was hype and what was real, what we could throw away and what we could use in the computer game."

Denton Designs' Ally Noble describes the approach she and her colleagues John Gibson and Karen Davies adopted when they got together with Ocean Software and ZTT, Frankie's production company, to create an arcade strategy adventure based on the FGTH album *The Pleasure Dome*. And sorting out what's hype and what's real is something the home computer software buyer has had to do more and more as companies produce not just films of books, or soundtracks of movies but computer games as well.

Spin-off games assaulting, or due to assault, your senses this month include (apart from Frankie Goes To Hollywood) Minder featuring Arfur the loveable Cockney rogue, and a game based on the new James Bond movie *A View to a Kill*. More pop music connections here, since Duran Duran did the soundtrack. Some of their music will be included in the game, along with John Barry's famous James Bond theme.

A three-parter, the 007 game from Domark features arcade sequences based on action in the film. There is a maze-chase through City Hall, a section set down a mine, and a sequence based on Roger Moore's search through Paris for Grace Jones. There will be plenty of people to play the game of the film in this particular case since Domark will be producing versions not just for the Spectrum, CBM-64 and Amstrad CPC-464 but also MSX, IBM and Apple versions — together with an Enterprise version.

Implementation for a wide range of machines makes sense if a spin-off program is to be successful. You are not appealing to the closed orders of the computer gamer where games are famous in their own right, perhaps even dictating the purchase of a particular machine. The spin-off should reach a broad church, but without incurring the scorn of hard-core computer users.

Activision's Ghostbusters would seem to have succeeded admirably in this respect; even gamers who express doubt about what actually goes on in the game usually show admiration for the quality of the graphics and the excellent music synthesis. This game appeared first on the Commodore 64 in the UK — and generated slipstream sales on the Spectrum for which a version was released later. Would it have done so well if its premiere had been on the squeaky Spectrum?

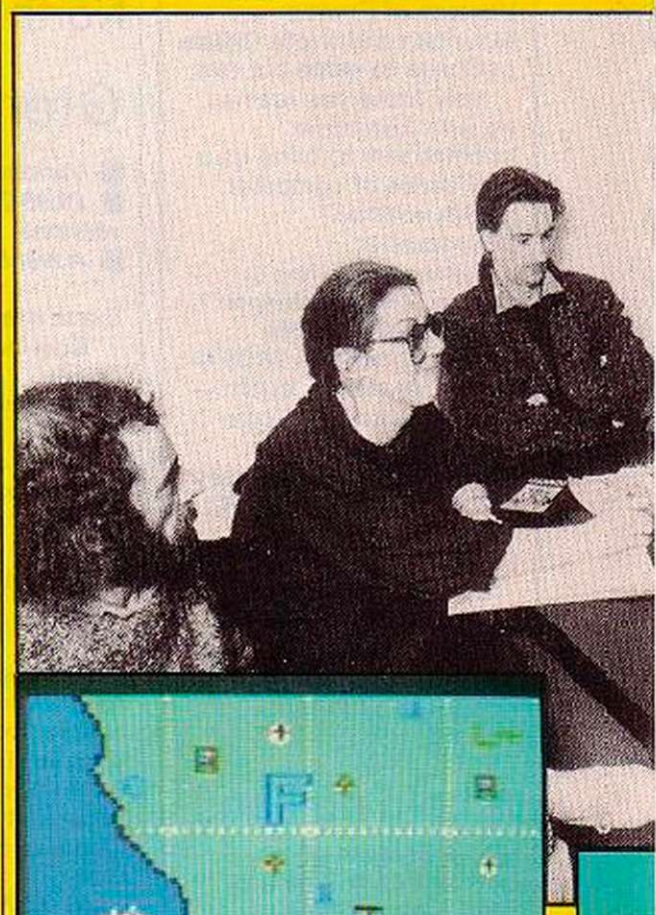
Opinions differ as to marketing strategies. Ocean's Frankie game will probably be released in its Spectrum form first, although Ocean supremo David Ward is of the opinion that it is preferable to release all versions simultaneously — this means you only have to do one lot of marketing. While both versions will feature synthesised music, the feeble sound facility of the Spectrum will be compensated for by audio remixes of Frankie songs that Ocean hope will be exclusive to their cassettes.

Frankie say when a character is born he acquires at once such an independence, even of his own author, that he can be imagined by everyone in many other situations where the author never dreamed of placing him. Huh? Well, once Paul Morley of ZTT realised what computers could do, he, Ocean and Denton Designs set out to create a game that was in harmony with Frankie's "creative concept".

"He wanted us to emphasise the essential mundaneness of life — but contrast that with the fact that there are many ways of escaping it," said John Gibson, one of the several ex-Imagine refugees that make up Denton Designs. Only as a completely fulfilled individual can you enter the Pleasure Dome. Until then, you're just a shadow.

The central character in the game is the

Duran Duran.



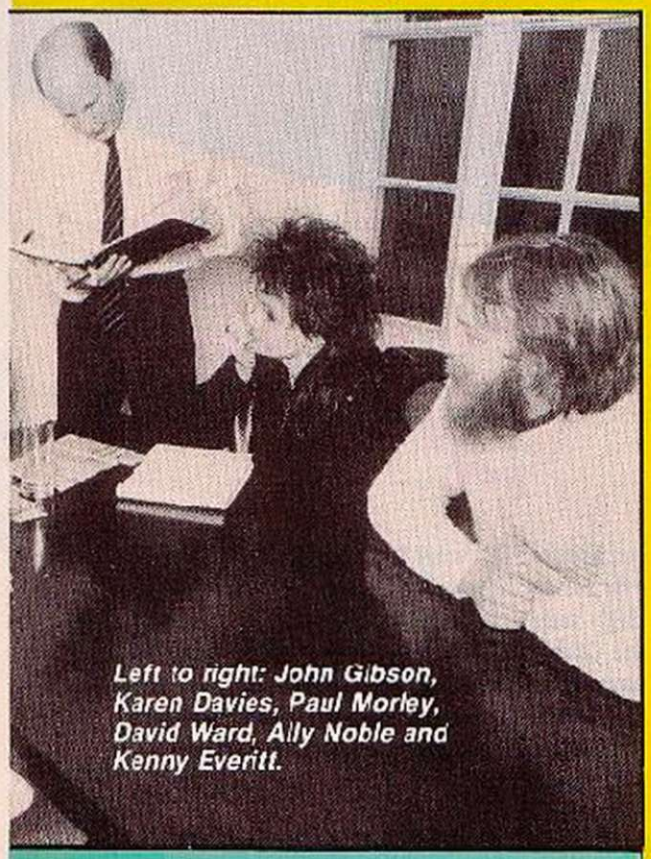
Frankie looks down on the Wirral peninsula.

Mundane . . . or is it?

EARD IT, PLAYED IT

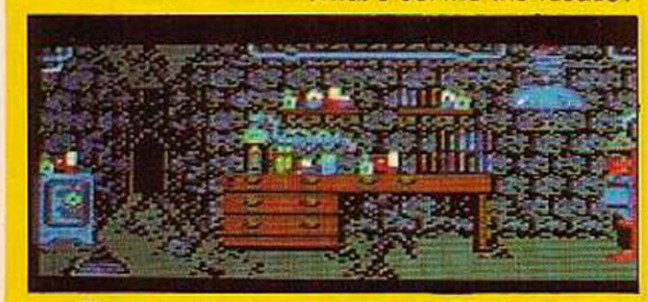
OFFS

Paul Bond meets the people behind the game of the band and gets a hard sell from Arthur Daley.

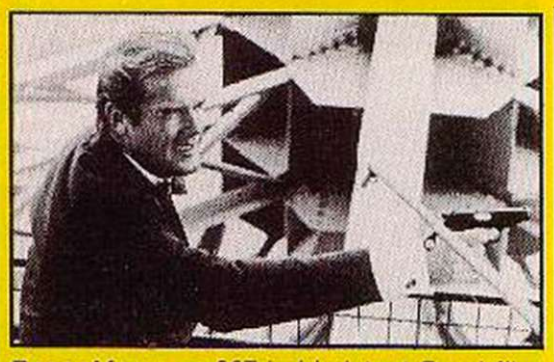


Left to right: John Gibson, Karen Davies, Paul Morley, David Ward, Ally Noble and Kenny Everitt.

What's behind the facade?



There are many ways into the Pleasure Dome



Roger Moore as 007 in his latest Bond film A View to a Kill — or should that be A View to a Quick Killing?

Frankie goes back to Liverpool in the latest spin-off computer game.

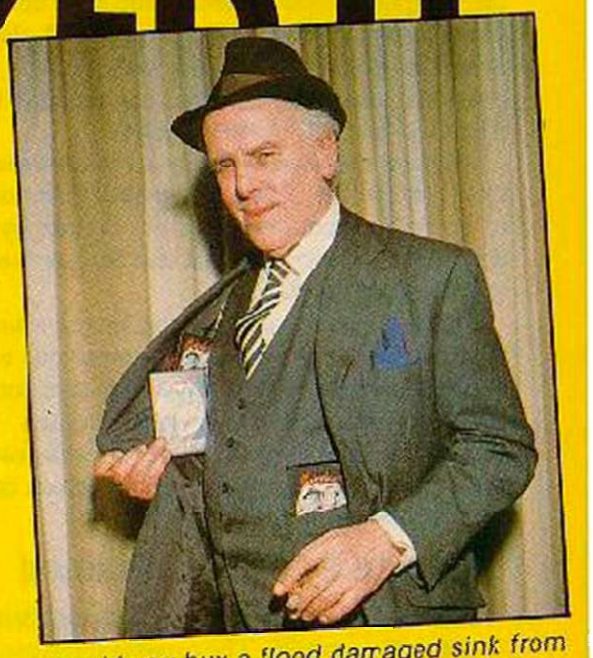
Frankie emblem, the figure clutching a star on the back of your Two Tribes twelve-incher. He enters an average street composed of four houses. Even the most ordinary facade can conceal strange goings on. Inside you will find a hall with three doors — you see, there are many routes by which one can enter the Pleasure Dome. The further you progress into the game the more connecting routes between screens are built up. Part of the game involves a murder mystery — you discover someone who is dead, but smiling. Maybe it's just a Duran Duran fan.

Whether you're in the mundane kitchen or mundane sitting room, you can change all this by following your pleasure motive. Touch the TV and the screen engulfs you. Great use is made of "windows" in this game — a touched object enlarges to allow you to examine it more closely, say, the title on a book.

Like Frankie the game tries hard to be all things to all people, so the complex web of the adventure is knitted together by arcade sequences like "The Power of Zap" in which hitting a bouncing diamond will pitch you into a variety of different scenarios.

All the sequences force you to use the joystick in different ways, at least on the 64 version. Wacky ideas include a sequence in which you have to defend Liverpool's art galleries from bombers and, another sequence, Karen Davies' pet project based on a classical painting. You mutate into a devil, enter the painting and steal all the cherubs' halos. Reagan and Thatcher make their appearances too — "We weren't consciously influenced by *Spitting Image*, but maybe subconsciously" — and the climax of the game is described as controversial but not offensive.

Denton Designs have worked hard to produce a game that stands in its own right, with



Would you buy a flood damaged sink from this man? Arthur Daley, alias George Cole, cleans up.

or without the Frankie sticker on it. "We think pop fans will buy this game and enjoy it, but we've aimed it at computer people," says programmer John Gibson. With its innovative mix of ideas and excellent graphics, this game should prove a nice little earner for Ocean.

Which brings us unsubtly to the case of Mr Arthur Daley and DK'tronics Minder computer game. As with Frankie Goes To Hollywood, there was a "creative concept" to be wrestled with. "There are two approaches to any program", says programmer Don Priestley, "IBWCBD or IBWMBD — it bloody well can't be done, or it bloody well must be done." But how to computerise slang, patter, bluffs, facial expression, plots on the border of credibility?

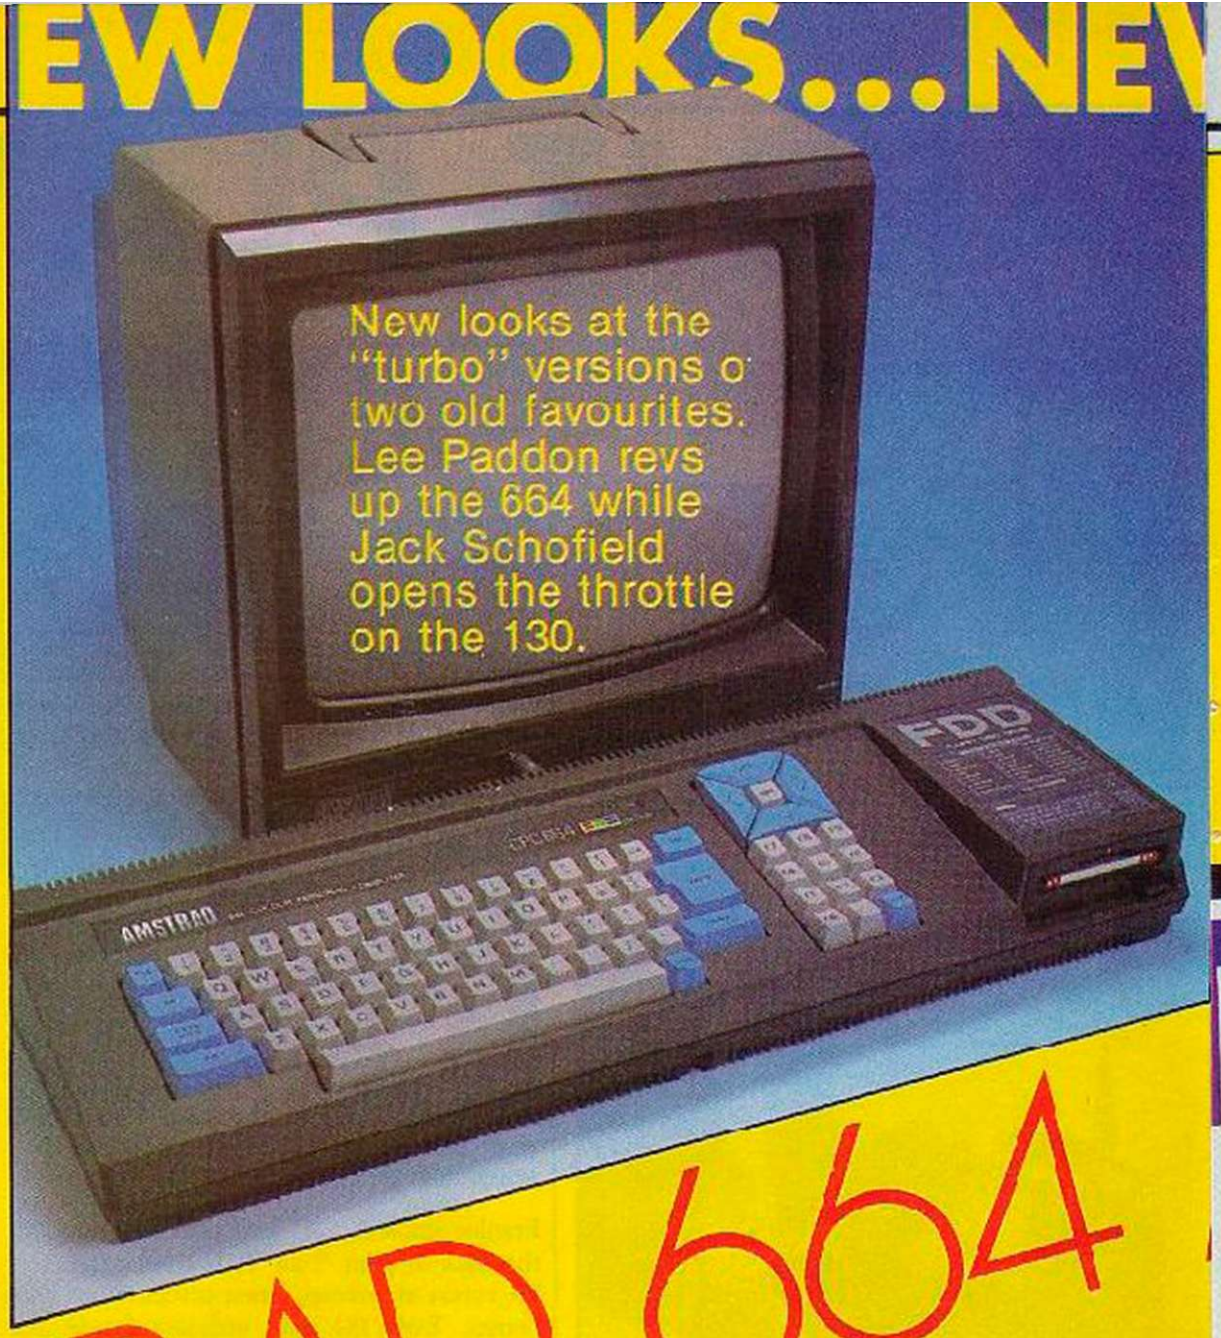
In the computer game Minder available initially on the Spectrum, you step into Arthur's shoes, with £2,000 in your mitts and two weeks to make as much cash as possible. You also have a small selection of goods to sell — so I suppose you could characterise this as a kind of strategic trading game. The four main scenarios are the Winchester Club where Arthur does all his trading and keeps his ear to the ground, Terry's flat, Arthur's lock-up and various dealer's premises.

Talking to characters in the Winchester Club is simulated by a rogues gallery of head and shoulders portraits hanging up around the bar. You press the number of the one you want to talk to or sometimes they make the first approach. What they say appears at the bottom of the screen and their lips move.

The programs parser — which interprets your commands — is very user-friendly and accepts pretty wide variations of entry, things like "I'm asking a pony!" when you are hinting how much you want to pay.

George Cole, who portrays Arthur in the TV series, was there to launch the game. He has something of a vested interest in micros or at least he's invested a lot in his son Toby's Commodore 64. "He uses it to look at the Ladbroke's Telebetting page on Prestel" grins George. And Toby's favourite game — bearing in mind he hasn't had a chance to play Minder yet? Well, it's another spin-off: Ghostbusters.

EW LOOKS...NE



AMSTRAD 664

AMSTRAD IS ONE of the few success stories in the computer scene at the moment. With no overstocking problems, it has remained aloof from the recent vicious price war. So it is in confident mood that Amstrad has revealed its follow-up to the CPC-464: the 664.

The new machine is hardly a radical departure from the 464. The most obvious difference is the replacement of the built-in cassette by a disc drive. The keyboard has also been revised, and the Rom upgraded.

The disc drive is a single-sided 3in.drive with 150K capacity per side. A few commands are available as Basic extensions, all the tape commands operate the drive, other utilities — backup, format and so on — are available from within the CP/M operating system, which can be used instead of AMSDOS.

Cassette interface retained

There is a slot in the back for a second drive — either 3in. or 5.25. The cassette interface is retained, which now uses an external domestic tape deck via a Dragon style lead.

The keyboard has a new grey and blue livery, but more importantly, it has been redesigned so that the keys are in steps, which will do much to endear it to typists. The cursor keys have also changed to an MSX style cluster, which helps when editing and playing games which often use these keys.

Some useful information on ink colours and key numbers has been printed on top of the drive housing. The new Rom, which proudly announces itself as version 1.1 of Locomotive Basic, has a few extra commands. Perhaps most significant of these is the Fill command. This simply fills the area around the graphics cursor bounded by any series of lines, with the current ink colour. The Frame command synchronises updating screen graphics with the sync pulse. This produces smoother graphics, and simply replaces the widely used system call which did the same job on the 464.

Further improvements in graphics come in the form of the Mask command. This allows the user to draw either the traditional solid line or a series of dots. From this idea stems the need for a graphics paper command to determine the colour of the dots missed out by the Mask command. A new optional parameter determines the way that lines drawn on the screen interact with lines already there.

The machine's error handling system is completed with the Derr statement. This is because, unlike tape errors, disc errors are not always fatal. This variable holds the number of the last disc error which occurred so the program can take appropriate action.

You can also now use the Auto function with Edit; this allows you to edit a whole block of code without having to call up each line individually. How useful this will prove in practice is open to doubt. How many of your programs have regular line numbers? It might have been handy had a renumber command been included.

All of these additional commands might leave the 464 owner asking where he stands. All programs that use legal system calls, and don't use up the Ram taken by AMSDOS will run on the new machine. However, software written for the 664 won't necessarily work with the 464, although it seems unlikely that anyone would go out of their way to use the extra commands for a commercial program. It is not planned to offer the new Rom as an upgrade to 464 owners.

All this information is a lot to cram into a manual. Not only do you need a Basic primer, but a guide to AMSDOS, CP/M, and Logo, the language supplied free with the system disc. Amstrad has proved equal to the task. The manual kicks off with a foundation course explaining some of the basics to the novice; after that is a detailed alphabetical list of the keywords, with details on syntax and program examples. Next come some notes on handling data on cassette and disc.

Although there are many good things in the 664, the new machine is perhaps chiefly remarkable for what it doesn't offer. It doesn't offer more Ram, despite the low cost of the chips today. It doesn't offer sideways Roms — the facility is there in the hardware, but extra circuitry is required, you don't just plug them in. There is still no warm reset, except in CP/M, so if you get yourself tied up in knots with ink colours, sounds and graphics, it's just too bad. ■

CONCLUSIONS

- The machine in many ways represents yesterday's technology. The hoary old Z-80, and CP/M. The choice of the 3in. disc format is rather suspect, it now looks as if the 3.5in. format, which offers nearly twice the capacity, will dominate the budget drive market with Apple and Hewlett-Packard adopting it.
- All that said, at £339 for black and white or £449 for the colour version, there is little doubt that the system offers unrivalled value for money.
- Unlike the much vaunted 16-bit invasion, this machine is here today, debugged, and with a rising tide of commercial software support. Many companies see the machine as the natural next conversion after Spectrum and Commodore releases.
- The clean Basic, simple DOS and clear manual offer computing without tears for the beginner while giving the expert plenty to play with.

W LOOKS... NEW

ATARI 130XE

WHATEVER ELSE you might say about the new Atari 130XE, it's great value. You get a 6502-based micro with 128K of Ram, 11 graphics modes, five text modes, four sound channels, a very good full-stroke keyboard and a penny change from £170. That's £60 less than the official price of a slow, less stylish Commodore 64, and half the going rate for a fast 32K BBC Model B.

Fortuitously, Atari has ended up with the best of both worlds. The customised chips, which provided sprites, a 256-colour video display and sound in the days when firmware had to compensate for the very high price of Ram allow good graphics in only 8K of screen Ram, but you also have more memory than you know what to do with.

The 130XE has two standard joystick ports, a cartridge slot, a reset key, an on/off switch with red indicator LED, a serial bus, an expansion port and a composite video monitor output as well as a TV connector.

On the serial I/O port, SIO, you can hang a daisy-chain of existing peripherals including the 1050 disc drive, various printers, touch tablets, track-balls, light pens, the dedicated Atari stereo cassette deck — ordinary recorders not allowed — and the Minor Miracles WS-2000 modem. Compared with the cost of expanding an Electron or Spectrum Plus to a similar level, the Atari 130XE is actually cheaper.

Furthermore, matching 3.5in. — not non-standard 3in. — floppies, cheap hard discs and printers are claimed to be on the way.

The 400/600XL/800 compatibility also allows the new Atari to run a vast range of existing software and peripherals. The machine comes with a brief list of about 800 programs already available.

I tried a number of games on the 130XE, from K-Razy Shoot-Out, a 1981 classic version of Berzerk, through Zaxxon and Pole Position to Drop Zone, a sparkling new rewrite of Defender. Everything ran correctly, though an XL Translator program is needed for some early software.

The most noticeable difference from the previous Ataris is that the video display signal is much stronger. It produces an image that is sharper and has much higher contrast. This is a particular benefit with the AtariWriter word processor and VisiCalc spreadsheet. However, it is less kind to the cruder graphics of some older games, including Defender.

All round, the 130XE is smart and well made, but there are a few points I don't like. For example, the function keys are not as handy on the top as they were, on the 800XL, down the side.

Also the top right f-key is a system reset or "warm start". This is unprotected, which is going to cause some people anguish with a few programs outside Basic.

The "enhanced" cartridge slot has unprotected plastic pins which are going to get broken off. As the slot is in the back, instead of on top, you may have to lift the machine to slot a cartridge in. The real reason it has been taken round the back is to save on the expansion port. This used to be a full pin-out from the mother board. Now the expansion port is just the cartridge slot plus the missing lines to a small extra port. These points may seem trivial, but the Atari 800 and 800XL were in these respects better designed.

The only other real limitation of the new machine is the Atari Basic. Although this is friendly, offers syntax checking on line entry, and was considered very good when it first came out, it was written in 1979. Atari has fitted the latest further-debugged Revision C Rom of the original, but people now deserve a faster language with better control structures, such as Optimized Systems Software's Basic XL. OSS wrote Atari Basic, and its compatible XL upgrade should have been built into the machine instead.

Optional programming languages include Microsoft Basic, an excellent Logo, Forth (various), Pilot, Tiny C, C-65 and the most brilliant language of all, Action! This is a highly-structured, compiled language which is somewhat like C crossed with Pascal, is almost as easy to write as Basic, but runs almost as fast as assembler.

When it comes to the Atari's extra memory, you have to appreciate that you can't simply bung a extra 64K of Ram chips into a 64K machine. The 6502C can only address 64K, so when you allow for the Basic, what you have is under 38K — roughly the same as the Commodore 64 and Spectrum.

To make the extra Ram accessible, Atari has added a new custom chip called Freddy, as memory manager. The extra Ram is available in 16K pages which are accessed according to the formula

```
POKE 54017,193 + 4*ADDRESS - 16
*MODE
```

That won't scare readers of this magazine, but it will bother Uncle Ernie who thinks Print Fre(0) should give 131,072 bytes free.

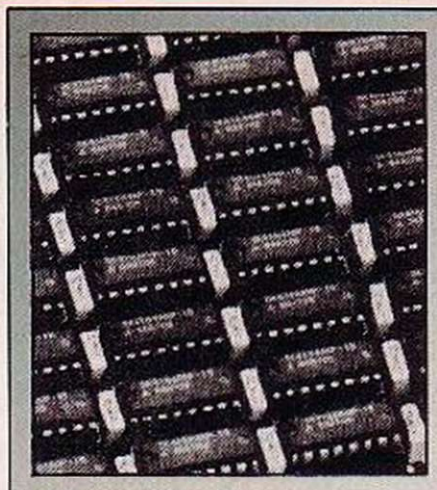
So far there is no commercial software that can use the extra Ram. Atari is planning to launch an enhanced version of its popular word processor, AtariWriter Plus, and more serious software to utilise it. Examples are a productivity range of iWord, iCalc, iBase, iPlot and iLan, a home finance program Silent Butler, and a do-everything wonder package modestly called Infinity. Networking is planned. I wouldn't expect any of these Real Soon.

However, these developments show that Atari is now heading in a different direction — towards the more serious, more experienced user, and away from its reliance on games. Of course this is also the direction of Commodore, which has built CP/M into its forthcoming C128 replacement for the antiquated C64, and Amstrad, with the repackaged 664.

Atari has also produced a new disc operating system, DOS 2.5. This has the power and ease of use of DOS 2 and none of the disadvantages of the enhanced-density DOS 3. It comes with a "silicon disc" program which allows spare Ram to be used as a virtual disc drive, greatly speeding up disc operations. ■

CONCLUSIONS

- The Atari 130XE is a well designed, well finished micro.
- Being 800XL compatible, the 130XE is well supported with existing software and peripherals.
- The Atari 130XE costs £169.99 inc VAT. On its price/performance ratio — bits per buck — and facilities this makes it, in theory, better value than any other machine on the market. In practice it will be a while before the extra Ram is exploited by any commercial software.
- In the long term, the Atari 130XE will appeal to those well heeled buffs who want to do word processing and other serious stuff.



What do you get if you cross a Commodore 64 with a CP/M business machine and a new 128K micro? Arthur Young finds out.

128K IS THE 1985 fashion adopted by manufacturers eager to stimulate a depressed home computer market. Within the constraints of current technology memory expansion is the obvious way to create a new product, as Atari and Enterprise have already shown. In reality just expanding Ram from 64K to 128K advances home computing only marginally.

The Commodore 128 follows in the wake of the unsuccessful C16 and Plus 4 — both victims of Commodore's incompatibility of models that alienates software houses who are not prepared to support an ever increasing variety of machines in smaller numbers. In upgrading their product range Commodore had to come up with a machine that met the fashion yet was compatible with other Commodore products, especially the CBM-64.

Commodore deserves applause from all quarters of the industry for at last establishing compatibility within their range, yet producing a really exciting new machine. The Commodore 128 is in fact three computers in one.

It is a 128K machine with a much improved Basic. It is to all intents and purposes a Commodore 64. It is also capable of running CP/M and well warrants the description of both home and small business computer.

The three computer identity is achieved by an architecture that combines the 6510, the 8502 and Z80A microprocessors, a combination that allows for three main operating modes. Five modes are available on the 128, Commodore 64K mode, Commodore 128K mode and CP/M mode and optional 80 column screen modes available in 128 and CP/M mode only.

On powering up the Commodore 128 defaults to the 128K mode with a 40 column screen. The 128K mode runs an extended version of Commodore Basic 4.0 known as Basic 7.0. An optional 40/80 column key located in the down position — like shift lock — activates 128K 80 column mode. The other modes are attained via Basic commands or by having a Commodore 64 cartridge plugged for CP/M mode, into the game port for 64K mode, or CP/M utility disc in the disc drive when the computer is turned on. The 80 column mode can also be activated from Basic using an Assign Command.

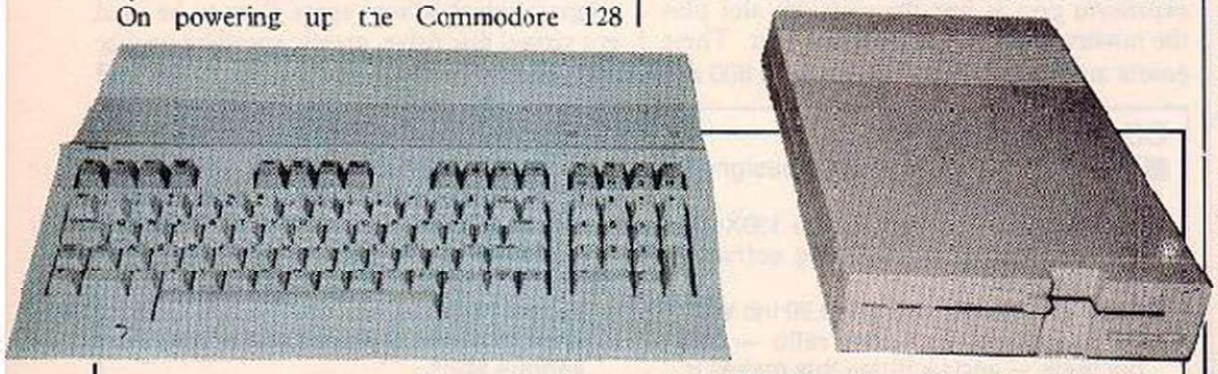
The 128K mode provides all the normal Commodore 64 facilities. However, on switching on an impressive "122365 bytes free" message is displayed on the screen. In 40 column mode a VIC 11 chip provides a composite video output, 80 column mode is produced by an RGB output from an 8563 video chip. The 128K Ram is divided into two banks; the lower bank for the text portion of Basic programs, the upper for variables strings and arrays. Sound is produced in all modes by a SID chip.

In 64K mode the 128 behaves exactly like a Commodore 64.

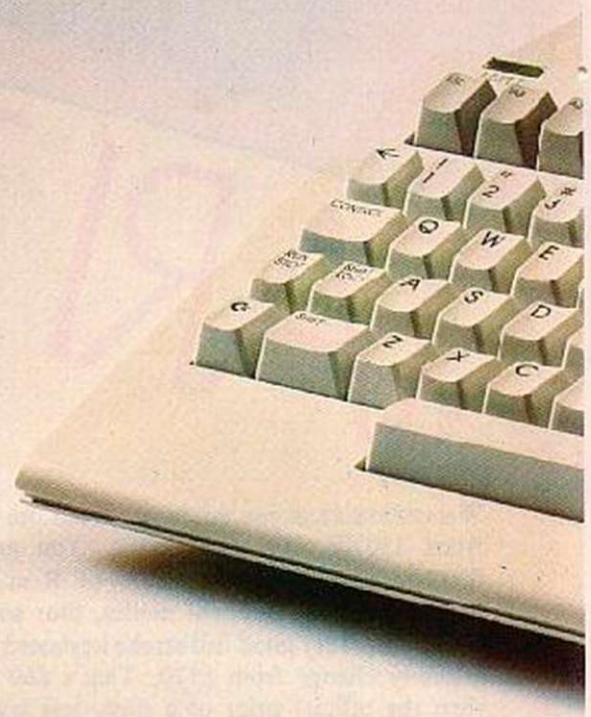
The screen displays the familiar "38911 bytes free" message and a 40 column screen only is available. Initialisation is achieved from Basic by the command "GO 64", alternatively the machine will default to the 64K mode driving power up when a Commodore cartridge is located in the expansion-game port.

CP/M mode is initialised by default in powering up if a CP/M utility disc is located in an attached drive, or from the 128K mode by using the basic command "BOOT". The C128 runs CP/M version 3 using the on board Z80A processor running at 4MHz.

Basic 7.0, which is available in the 128K mode, is the most extensive version of Basic yet to be released by Commodore. It is an enhancement of CBM Basic 4.0 with a total of more than 140 commands, functions and statements. Structured programming commands, similar to those used in Simon's Basic make Basic 7.0 also



Commodore's new quick 1571 disc drive will replace the 1541.



REVIEW

the easiest Basic yet released by Commodore, being literal without being wordy. Some commands give Basic the structured programming power of Pascal or Fortran, notable are a Do/Loop/While/ Until/Exit command and a Print Using command with an accompanying definition command Pudef. There is also an extension to the If . . . Then statement using Begin and Bend to define any number of lines to be executed as part of the then condition. Error trapping within programs is handled by a Trap and Resume combination.

In addition the Commodore 128 offers a number of commands to help enter and debug programs. There are the regular Auto and Delete and a Help key that homes in on syntax or division by zero errors highlighting them on screen in reverse video. Particularly useful are Tron and Troff, a function that traces each line of a program as it is being executed and prints the line number to the screen.

COMMODORE 128

Built into the C128 is a handy 14 command monitor.

The graphics facility of the CBM-64 was one of its more attractive features. This is retained on the C128 in the 64K mode. In 128K mode there are commands to draw, move fill and manipulate points, lines and shapes on a high resolution screen. A single command produces split screen for text and graphics. In all 128K mode allows for normal text screen, high-resolution screen, split screen text/high resolution, multicolour high resolution or split screen with multicolour and text. Screen type is chosen using a new command Graphic, other new commands are Circle, Box, Paint and Draw. 128K mode provides the same 16 colours that are available in 64K mode. However, because of the two screen mode, higher resolution is possible and the maximum is 640 by 200.

As in 64K mode 128K mode allows for up to eight sprites, these can be readily created using a sprite generator package resident in firmware. Three sound channels are available. The sound is controlled by five basic commands Vol, Envelope, Filter, Tempo and Sound.

The dowdy shoebox image of the Commodore 64 has been replaced by a slimline beige console that any style-conscious businessman should be pleased to have on his desk. A full size typewriter style keyboard has 92 keys, that travel and locate well.

The keyboard is in six parts: a standard wordprocessor type layout with symbols, numbers and letters; a 14-key numeric pad; four double function programmable function keys; six cursor control keys; and a further two rows with 40/80 column key, line feed, cap lock and so on. Interfacing with the C128 is achieved via a range of ports located to the side and back. These are a user port, a cassette port, two games ports, serial port — Commodore standard, RF/TV port, audio input and output ports, composite video/RGBI video.

Two new peripherals are already on the way to accompany the new machine. To many people's relief a new disc drive the 1571 will replace the old 1541. The 1571 will be a 5.25in. disc with a 350K capacity.

The other peripheral is a matter of necessity rather than choice, that is unless you want to have two monitors. 80 column mode produces an RGBI output. ■

CONCLUSIONS

- By the end of 1985 the Commodore 128 will be a strong contender for micro of the year. Already in excess of 6,000 software titles are in existence.
- In CP/M mode the C128 is a realistic small business computer, in 64K mode it is a home machine, in 128K mode I have no doubt it will prove its worth.
- The one doubt that exists about its future is the price, which is in the hands of the dollar/pound dealers.

LAST MONTH I described different types of database structure and related that to the four databases for the BBC microcomputer that I am examining. This month I'll go on to see how you can extract information from the database and how secure the data is from unauthorised prying eyes. Next month I'll deal with how easy or difficult it is to build the 'form' that you need to enter information into the database and sorting, searching and the general cost/benefit of each program.

It's worth spending some time thinking about the output that you want from the database you are going to create. It isn't all that easy to predict in advance what information you will need or what form you will want it in but planning will certainly pay off.

Suppose you had a program, at one mad extreme, that was quite complicated to set up, took up hours of your time typing information in front of the VDU and then committed all that tidy, structured information safely to disc — and then did Nothing else.

Pretty good, not a bad definition of a Write Only Memory (Wom — a sort of upper class Rom). The whole purpose of creating a database is to supply you with relevant, timely and accurate information when you want it. A database, after all, is nothing more than a program to organise and manipulate information for you.

Information can be extracted from your databases either by displaying it on the VDU or by printing a list of selected items. None of the programs, for example, will output information using the speech processor as they are supplied although the utility software supplied with Stardatabase could be extended to use this form of output.

At the most dramatic level, the type of information and the number of items you need to be able to handle in relation to a single record may determine your choice of program. Figure 1 sets out the basic statistics about each of the programs. The Acornsoft database is limited in some respects when compared to the Datagem and Stardatabase programs but it costs so much less that things like the seven character field title length may not matter to you.

The maximum record length for the Acornsoft program is not stated in the instruction manual but is calculated from the number of fields and the maximum field length. The Stardatabase program is curiously limited to a maximum search/sort depth of five characters. This is an important handicap as it is very convenient to store dates in the form YYMMDD — Year, Month, Day.

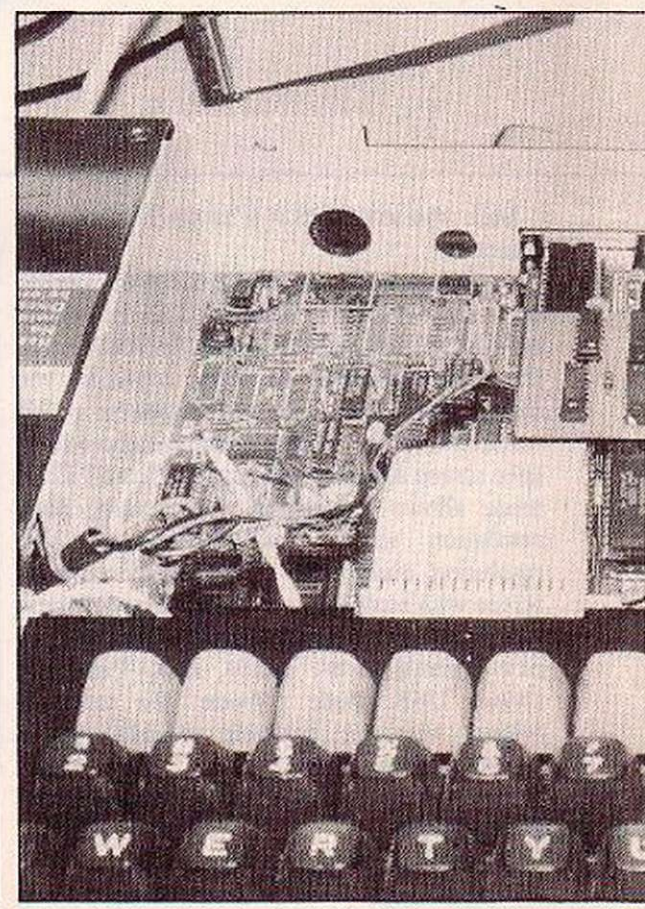
Scribe will handle text

If you want to print out a batch of invoices that have been entered since a particular date, make a list of who owes a subscription to the club, or find a particular birthday, you will have to do this as a sequential search on more than one field, that is year first and then the month and date.

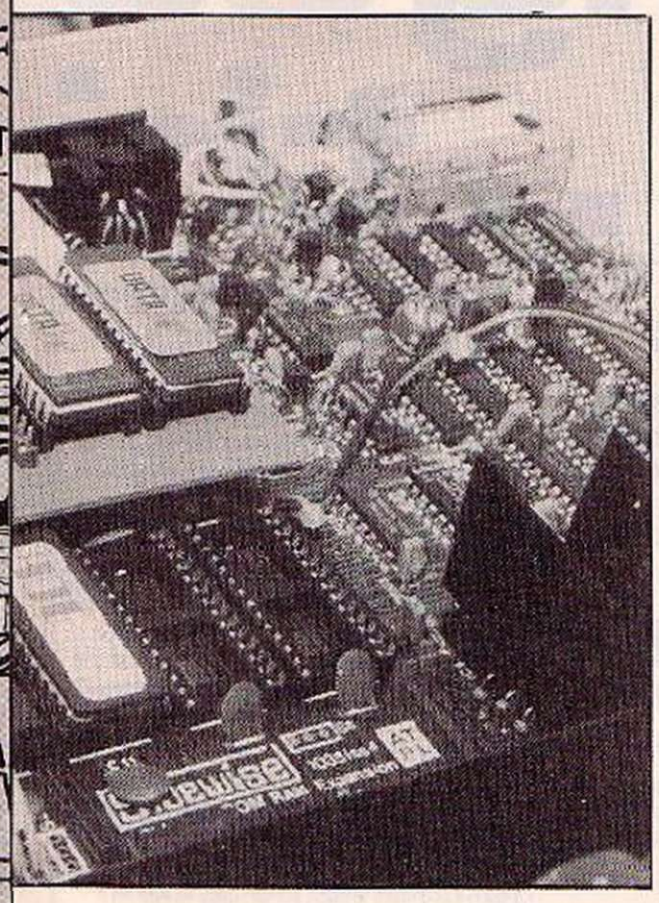
The Scribe database is the only program of the four that can claim to handle text. 918 characters — the maximum field length — is a responsible paragraph of about 150 words and this, combined with the facility to wordwrap text when it is printed makes the Merlin database very attractive for generating standard contracts, leases or letters, or for managing projects where extensive free text comments are necessary. The fuzzy search conditions of Instring and Not Instring will work on the whole of a 918 character field.

Stardatabase will also avoid broken words at the end of lines when a record is printed using one of the disc based utility programs. Note that Stardatabase has no output facilities to a printer in the Rom chip itself.

Datagem and the Acornsoft databases suffer from their association with the View word processor. Both programs will create macro



BASES



fields for View although this is much easier in the Acornsoft program. The problem is that a View macro field may not be more than 132 characters long and View will not wrap words that run beyond the right margin.

Consequently, the output capabilities of both programs are severely limited for anything more complicated than a name and address file or short items of information to drop into a View text file where variations in length will not upset the formatting of the output too greatly.

Both Stardatabase and the Acornsoft database are accessible from Basic programs. The Acornsoft instruction manual says:

"Each datafile starts with a large block of information which relates to the format of the file. The names and lengths of the fields are contained in this block which is called the control block . . . A record is stored as a series of fields one after another. These fields have the following format — The start byte 00 — A byte containing the length of the field — 2 to 240 bytes of data in reverse order . . . This is used because it is the same as is used by Basic's Print£F,A$ and Input£F,A$. Thus it is a simple matter to produce routines which can read and write the fields."

Stardatabase, on the other hand, provides both prewritten Basic utilities and a number of "spooled" procedures which can be incorporated into your own Basic programs. The procedures make use of special function calls in the form *SBnn.

These * commands are intercepted by the Stardatabase chip and, consequently, the Rom must be in place in any machine which is to run a utility program. The following procedures are supplied:

Load record
Save record
Open up side 0 or side 1 of the disc for access
Load file
Load the bit map of which records are current
Load information about the fields in the record
Load the input card to the screen
Save the bit map
Save the current screen as an input card
Check, Set and Clear positions in the bit map
Clear the input card ready for new data
Find the specification of a field
List the field types in a record
Load a subset of records from the database
Load a specific record from the subset to the data buffer
Save a record in the subset to the disc
Get a field from the record currently in the buffer
Save a field in the record buffer
and several more!

Stardatabase does offer a comprehensive system for creating and then manipulating data according to your own requirements. The Acornsoft program is less sophisticated in the form in which you purchase it but has the same scope for handling information.

The Scribe database relies on exporting information to the Scribe word processor for report writing and a compiled Report Writer programming language which will allow mathematical operations on fields within a record, placing the result into another field in the same record and many other functions.

Mail merge is excellent

Unfortunately, the Report Writer module for the Scribe database was not available when this article was written — early April — and it's difficult to judge from the provisional manual just how powerful or useful it will turn out to be. However, the mail merge and report formatting facility using the Scribe word processor is excellent. You can't perform calculations on the data but it is easy to layout a standard letter or invoice.

Datagem is self contained. Having bought this program first, I now use Stardatabase and the Acornsoft program because the Datagem database is time consuming and inflexible when you are trying to print out information. I gave the Datagem system four stars in figure 1 for a commercial data handling program because many operations are predetermined and simply have to be carried out at set times.

Once a Datagem database has been configured and the outputs have been established then it's a very good program for

Thinking so ...thi

THE TASWORD WORD PROCESSORS

The extensive features of the Tasword word processors are ideal for both the home and business user. Every Tasword comes complete with a comprehensive manual and a cassette or disc. The cassette or disc contains your TASWORD and TASWORD TUTOR. This teaches you word processing using TASWORD. Whether you have serious applications or simply want to learn about word processing, TASWORD and TASWORD TUTOR make it easy and enjoyable.

TASWORD TWO (Spectrum)

64 characters per line on the screen!

"Without doubt, the best utility I have reviewed for the Spectrum." -HOME COMPUTING WEEKLY APRIL 1984

"If you have been looking for a word processor, then look no further." CRASH JUNE 1984

The cassette program is supplied with instructions for microdrive conversion.

TASWORD TWO* ZX 48K Spectrum
cassette **£13.90**
microdrive cartridge **£15.40**

TASWORD 464

"There is no better justification for buying a 464 than this program."
POPULAR COMPUTING WEEKLY NOVEMBER 1984

A particularly sophisticated yet easy to use program. Now available on disc. The cassette version is supplied with instructions for transferring to disc.

TASWORD 464* Amstrad CPC 464
cassette **£19.95**
disc **£22.95**

TASWORD EINSTEIN

A sixty-four character per line display and the ability to hold over five hundred lines of text at any time are just some of the features of this, the most recent, of the Taswords. Full interaction with the disc system—e.g. Tasword detects the presence of added drives and allows their use.

TASWORD EINSTEIN Tatung Einstein
disc **£19.95**

TASWORD MSX

With all the features of the Spectrum Tasword Two including the amazing sixty four character per line display. The Tasword MSX machine code program utilises the 32K of memory not normally available to Basic allowing over five hundred lines of text to be held in memory.

TASWORD MSX* 64K MSX Computers
Fully inclusive mail order price **£13.90**

(cassette includes both disc and tape versions)

THE TASCOPY SCREEN COPIERS

The TASCOPY screen copiers print high resolution screen copies with different dot densities and patterns for the various screen colours. This gives the screen copies a shaded effect which presents on a monochrome scale the colours on the screen. With TASCOPY you can keep a permanent and impressive record of your screen pictures and diagrams. TASCOPY supports all the printers mentioned under TASPRINT

TASCOPY (Spectrum + Interface 1)

The Spectrum TASCOPY is for use with the RS232 output on ZX Interface 1. It produces monochrome copies (in a choice of two sizes) as well as copies with the shaded "grey scale" effect described above.

TASCOPY ZX Spectrum
cassette **£9.90**
microdrive cartridge **£11.40**

TASCOPY 464

Adds two new commands to the 464 Basic to give both a standard shaded screen copy as well as a "poster size" copy which is printed onto two or four sheets which can be cut and joined to make the poster.

TASCOPY 464 Amstrad CPC 464 cassette **£9.90**
disc **£12.90**

TASCOPY QL

TASCOPY QL adds new commands to QL Superbasic. Execute these commands to print a shaded copy of the screen contents. Print the entire screen or just a specified window. TASCOPY QL also produces large "poster size" screen copies on more than one sheet of paper which can then be cut and joined to make the poster, and high speed small copies.

TASCOPY QL Sinclair QL
microdrive cartridge **£12.90**

THE TASPRINT STYLE WRITERS

A must for dot-matrix printer owners! Print your program output and listings in a choice of five impressive print styles. The Tasprints utilise the graphics capabilities of dot matrix printers to form, with a double pass of the printhead, output in a range of five fonts varying from the futuristic data-run to the hand writing simulation of Palace Script. A TASPRINT gives your output originality and style! The TASPRINTS drive all Epson compatible eight pin dot-matrix printers, e.g.

AMSTRAD DMP 1
EPSON FX-80
EPSON RX-80
EPSON MX-80 TYPE II
NEC PC-8023B-N
MANNESMANN TALLY MT-80
STAR DMP 501/515
BROTHER HR5
SHINWA CP-80
COSMOS-80
DATAC PANTHER
DATAC PANTHER II

Five impressive print styles for your use:-

COMPACTA - bold and heavy, good for emphasis
DATA-RUN - A FUTURISTIC SCRIPT
LECTURA - clean and pleasing to read
MEDIAN - a serious business-like script
Palace Script - a distinctive flowing font

Typical Tasprint output. Please note that different makes of printer produce different sized output.

TASPRINT (Spectrum)

Drives all the printer interfaces compatible with TASWORD TWO and can be used to print TASWORD TWO text files as well as output from your own Basic programs.

TASPRINT 48K Spectrum
cassette **£9.90**
microdrive cartridge **£11.40**

TASPRINT 464

Can be used to print AMSWORD/TASWORD 464 text files in addition to output from your own Basic programs. Drives the Amstrad DMP 1 in addition to the printers listed to the left.

TASPRINT 464 Amstrad CPC 464 cassette **£9.90**
disc **£12.90**

TASPRINT QL

TASPRINT QL includes a screen editor used to modify files created by other commercial software, such as QUILL, or by the user from EASIC. These modified files include TASPRINT control characters and may be printed, using TASPRINT, in one or more of the unique TASPRINT fonts.

TASPRINT QL Sinclair QL
microdrive cartridge **£19.95**

OTHER TASMAN PRODUCTS FOR THE ZX SPECTRUM

TASMERGE

The Mail Merger

Transfer data from MASTERFILE to TASWORD TWO! Letters and forms typed on TASWORD TWO can be printed with addresses and data taken from MASTERFILE. The mail merge facility allows, for example, multiple copies of a letter to be printed, each containing a different name and address taken from your MASTERFILE data. To use TASMERGE you must have one or more microdrives as well as TASWORD TWO and MASTERFILE by Campbell Systems. (version 9 or later).

TASMERGE ZX 48K Spectrum **£10.90**

TASWIDE

The Screen Stretcher

With this machine code utility you can write your own Basic programs that will, with normal PRINT statements, print onto the screen in the compact lettering used by TASWORD TWO. With TASWIDE you can double the information shown on the screen!

TASWIDE ZX 16K + 48k Spectrum **£5.50**

TASMAN PRINTER INTERFACE

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable and driving software. The user changeable interface software makes it easy to send control codes to your printer using the method so successfully pioneered with TASWORD TWO. The cassette contains fast machine code high resolution full width SCREEN COPY SOFTWARE for Epson, Mannesmann Tally, Shinwa, Star, and Tandy Colour Graphic (in colour) printers.
TASCOPY, shaded screen copy software for this interface (value £9.90 – see description on left) is included in this package.

CENTRONICS INTERFACE ZX Spectrum **£35.90**

COMPUTER PRINTER CABLES

RS232 for ZX INTERFACE 1	**£14.50**
MSX CENTRONICS	**£16.00**
AMSTRAD CPC 464 CENTRONICS	**£9.90**

(continued from page 51)

many purposes. But try to set up a quick and nasty output form for a new purpose and it may take you some time to unravel the input form which is not kept separate from the print format card.

Printing address labels is one of the standard functions of most database systems. Stardatabase is very good at doing this and can cope with up to eight labels across a sheet of continuous stationery. Remember that the program has to fetch the name field from up to eight records for the first line of the label, then the first line of the address from the same records, and you will appreciate why most programs don't offer this facility.

Security of data

Single width address labels on backing paper are more widely available than they used to be but these tend to be more expensive than the label used in massive quantities by companies who do mail shots.

Datagem scores heavily on the mathematical functions that are contained in the Rom chips. It is possible to interrelate fields to calculate VAT, total costs across all the records in a database, discounts on varying sizes of order and so on.

Security of data may be important in a commercial environment and if you have a list of your boy/girl friends on a database it may be personally relevant as well. Despite the password facility that is provided on two of the programs, the data on the disc is wide open to inspection using the *Dump command.

Admittedly, the Acornsoft database stores the information in reverse order and the Stardatabase program puts records in a complicated hash sequence on the disc to speed up recovery times; but it is still possible to browse through a database file.

In an office or a factory where the BBC may be used by people who are comparatively unskilled in low level micro operation, the protection offered by a password may be useful. ■

CONNECT PROTECT

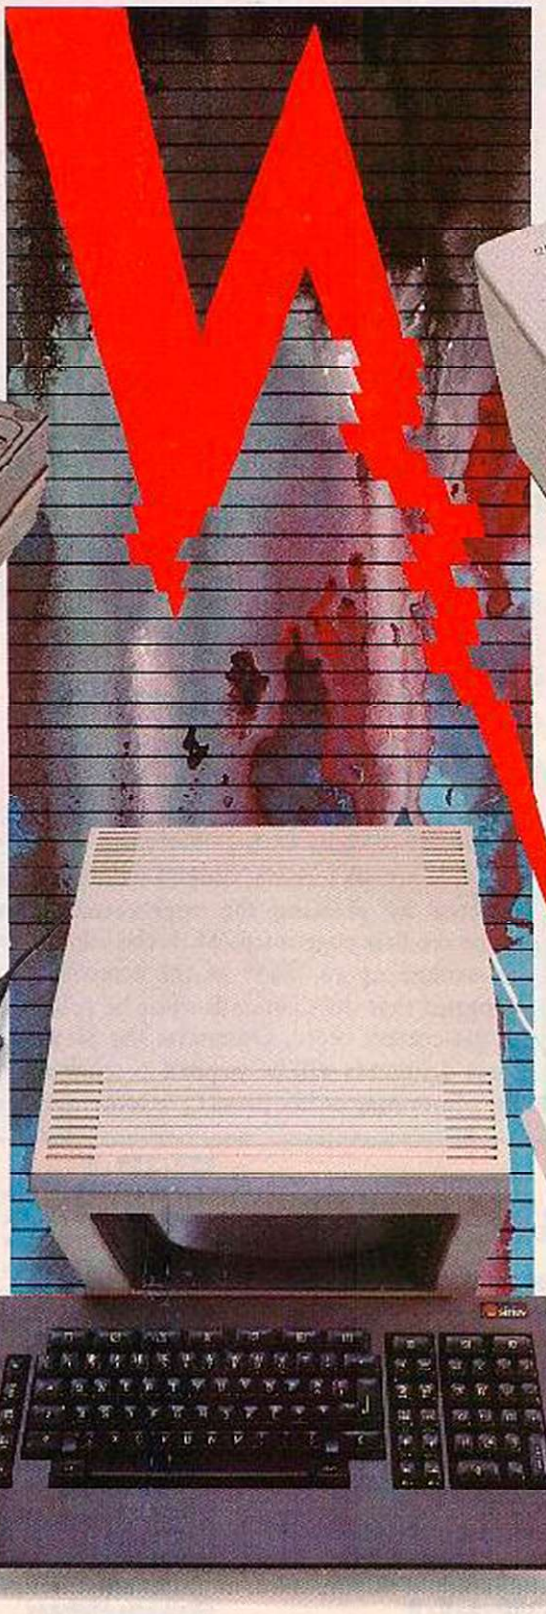
Peripherals make using your computer more interesting and easier. But you may have more items of equipment than power outlets. The best way of tidying up the trailing wires and obtaining a 'clean' power supply is to use STRIPBLOC. It has five CEE 22 outlets, probably more than enough for connecting your add-ons to your power source. It's rugged, made from

tough black plastic, and safe, meeting British and European safety requirements.

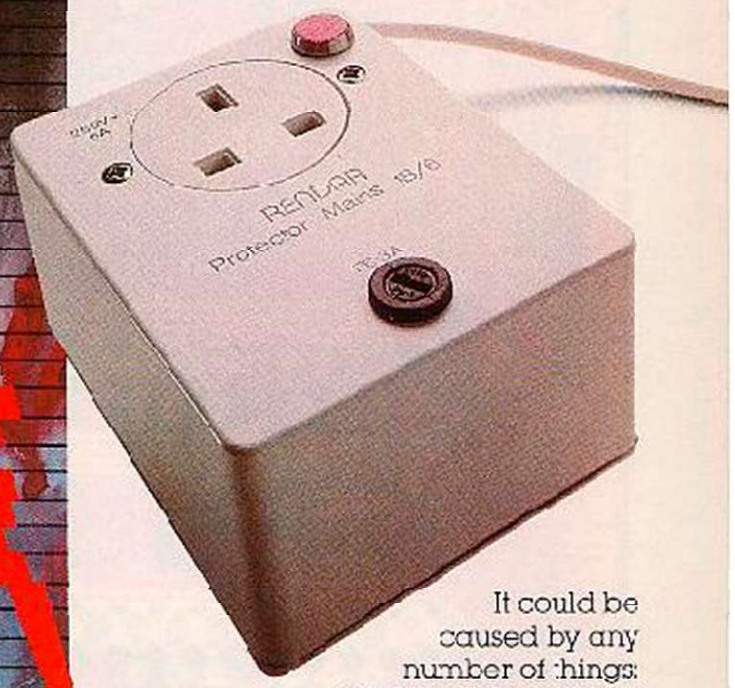
The Stripbloc is RFI filtered against spikes, 'dirty' mains and 'unclean' power.

Once you've bought it you don't need any extras, it's supplied with five standard right-angled rewireable plugs, a 2m fully-approved cable and moulded 13A plug. Forget about risky connections. Be safe with STRIPBLOC.

Stripbloc includes: ■ 1 five outlet mains unit with RFI filter ■ 2m cable with moulded 13A mains plug ■ 5 rewireable right-angled plugs **Spikebloc includes:** ■ 1 mains protection unit with integral 13A mains socket ■ 2m cable with moulded 13A plug



Have you ever noticed interference when you are using your computer?



It could be caused by any number of things: a light switch, a fridge, a central heating motor starting, or even a thunderstorm. The power lines of your computer can pick up many forms of natural and man-made interference, which can be damaging to computers and peripherals. Rendar's SPIKEBLOC has been developed to give protection against transient over voltages and continuous high frequency interference on the mains supply. The unit is housed in a rugged metal case and gives good electrical screening from high frequency sources. This high level of protection was only possible previously using elaborate and expensive filter units. Now it isn't too expensive for you to protect your equipment.

Send to (no stamp required):

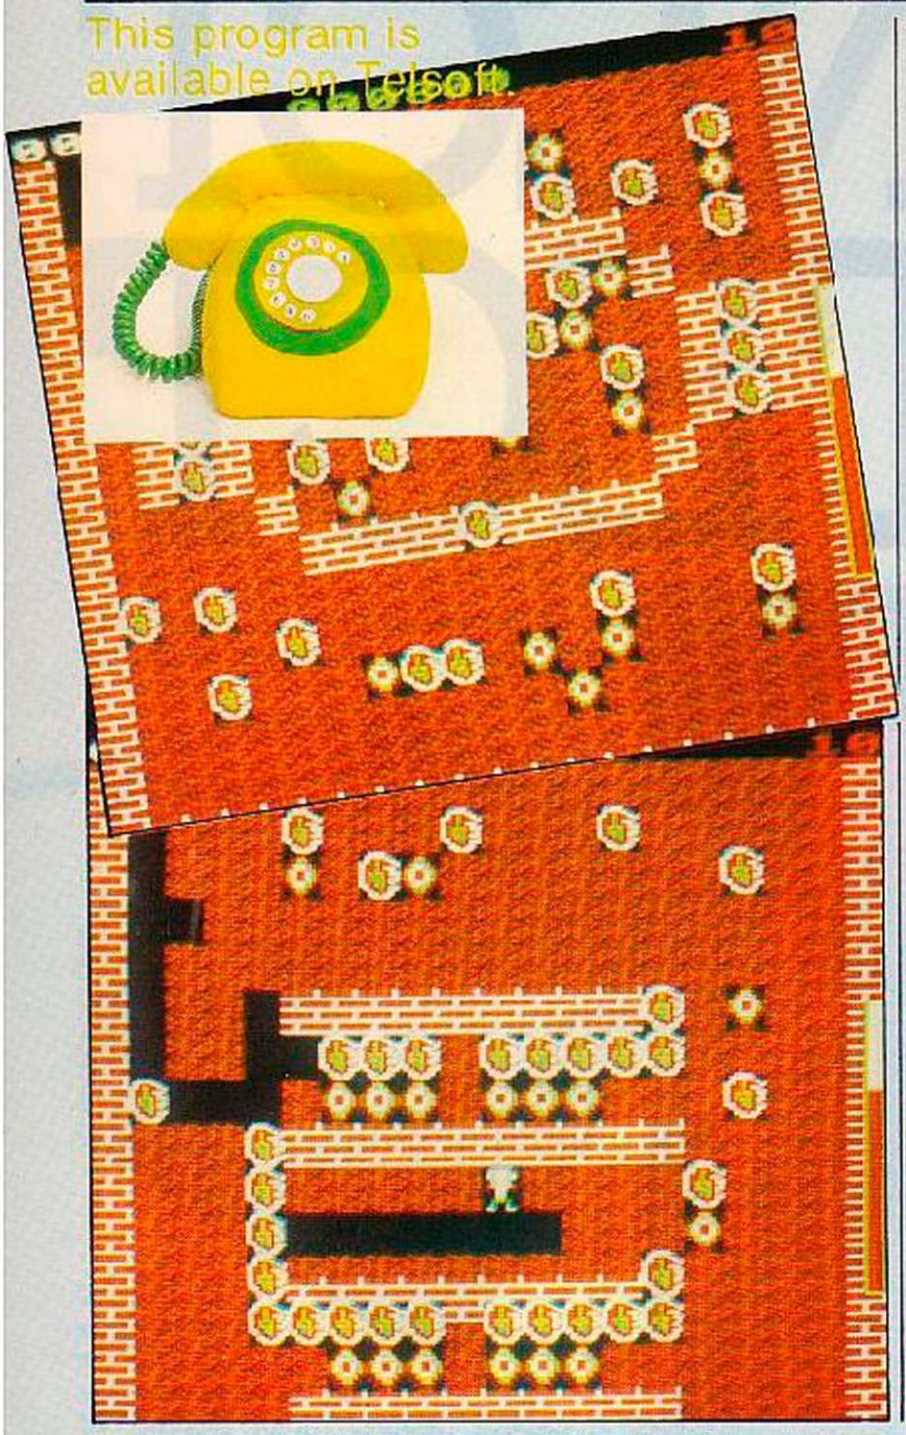
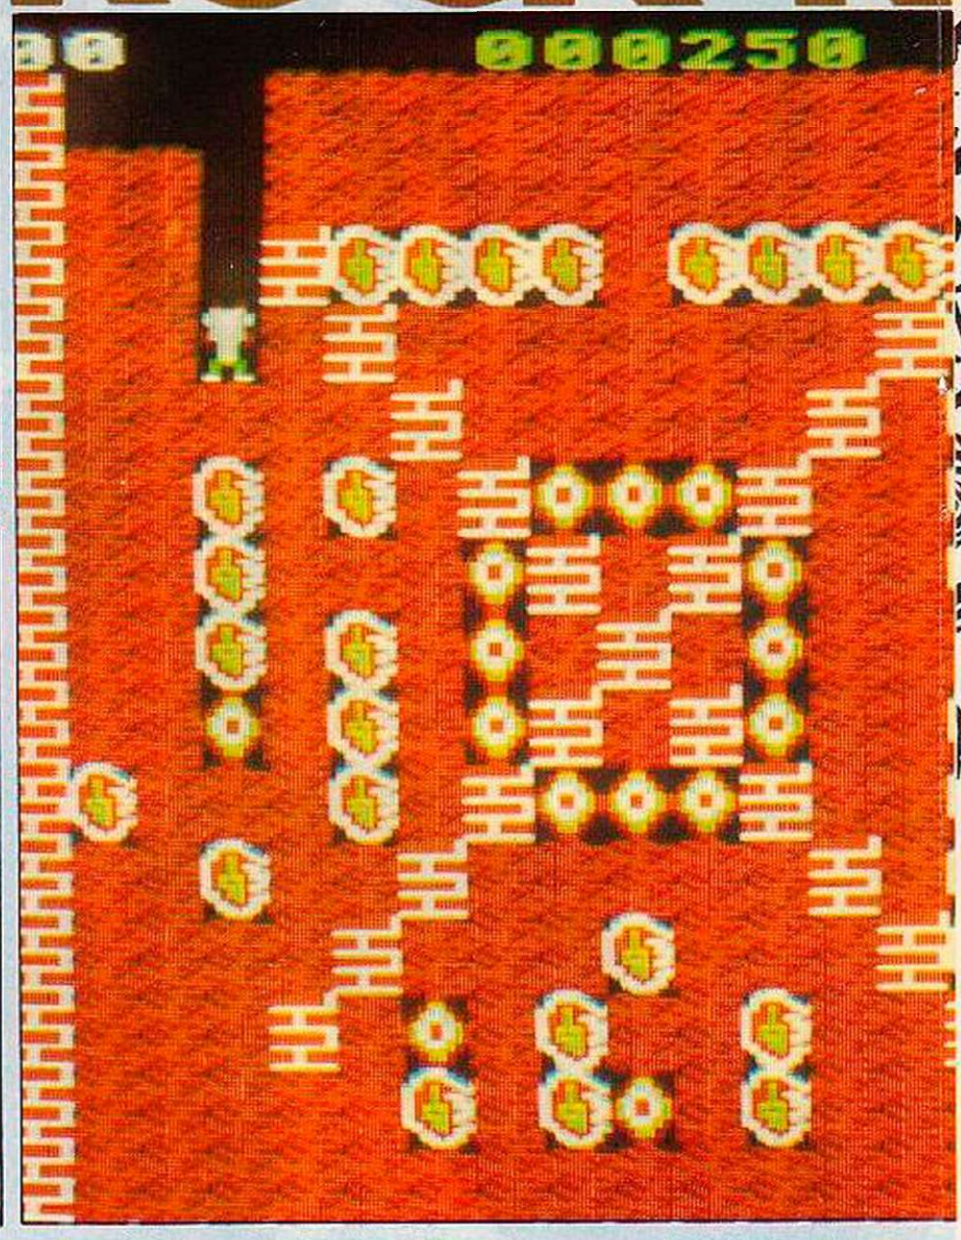
This program is available on Telsoft.

ROCK R





INSPIRED BY one of the best games of 1984 — Boulderdash — Rockrun sets you down in an underground cavern where your task is to collect 16 diamonds before time runs out. As you tunnel through the earth you inevitably dislodge boulders and rocks: if they are piled on top of each other you may trigger an avalanche.

There are 10 screens, nine of which can be selected by pressing the appropriate letter when the title page is up, while the 10th must be worked up to. Each of the screens is so designed that the diamonds must be collected in the correct order. Otherwise the player or some diamonds will be trapped — whereupon the player may either press Q to loose a life or wait until the time runs out. The time is represented by a column on the right hand of the screen.

The game runs on both the Electron and the BBC but BBC owners will need to slow it down by increasing the value of the X and Y registers in the delay routine at line 350. You can experiment with different values to find

Brian Lewis avoids an avalanche.

the speed that suits you but you could start by trying LDX # 150 and LDY # 150.

To enter the program simply type in and save listings 1 and 2 one after the other. It is a good idea to save each program as soon as you have typed it all in. You can then check it by running it and save it again once you have ironed out any errors. As the program runs at &1900 as well as &E00 disc owners can save it straight to disc without resetting Page. They will, however, need to change line 790 to read

CHAIN "Prog name"

You will find the game a real challenge to play. Do not get too frustrated if you can not clear too many sheets at first: there is a definite route to follow on each screen, and very little time to find out what it is. To help you I have given you no less than 10 lives.

The numbers displayed across the top line in each screen have the following meaning: the first two are the number of diamonds collected, the next six are your score, and the last two are the number of lives left.

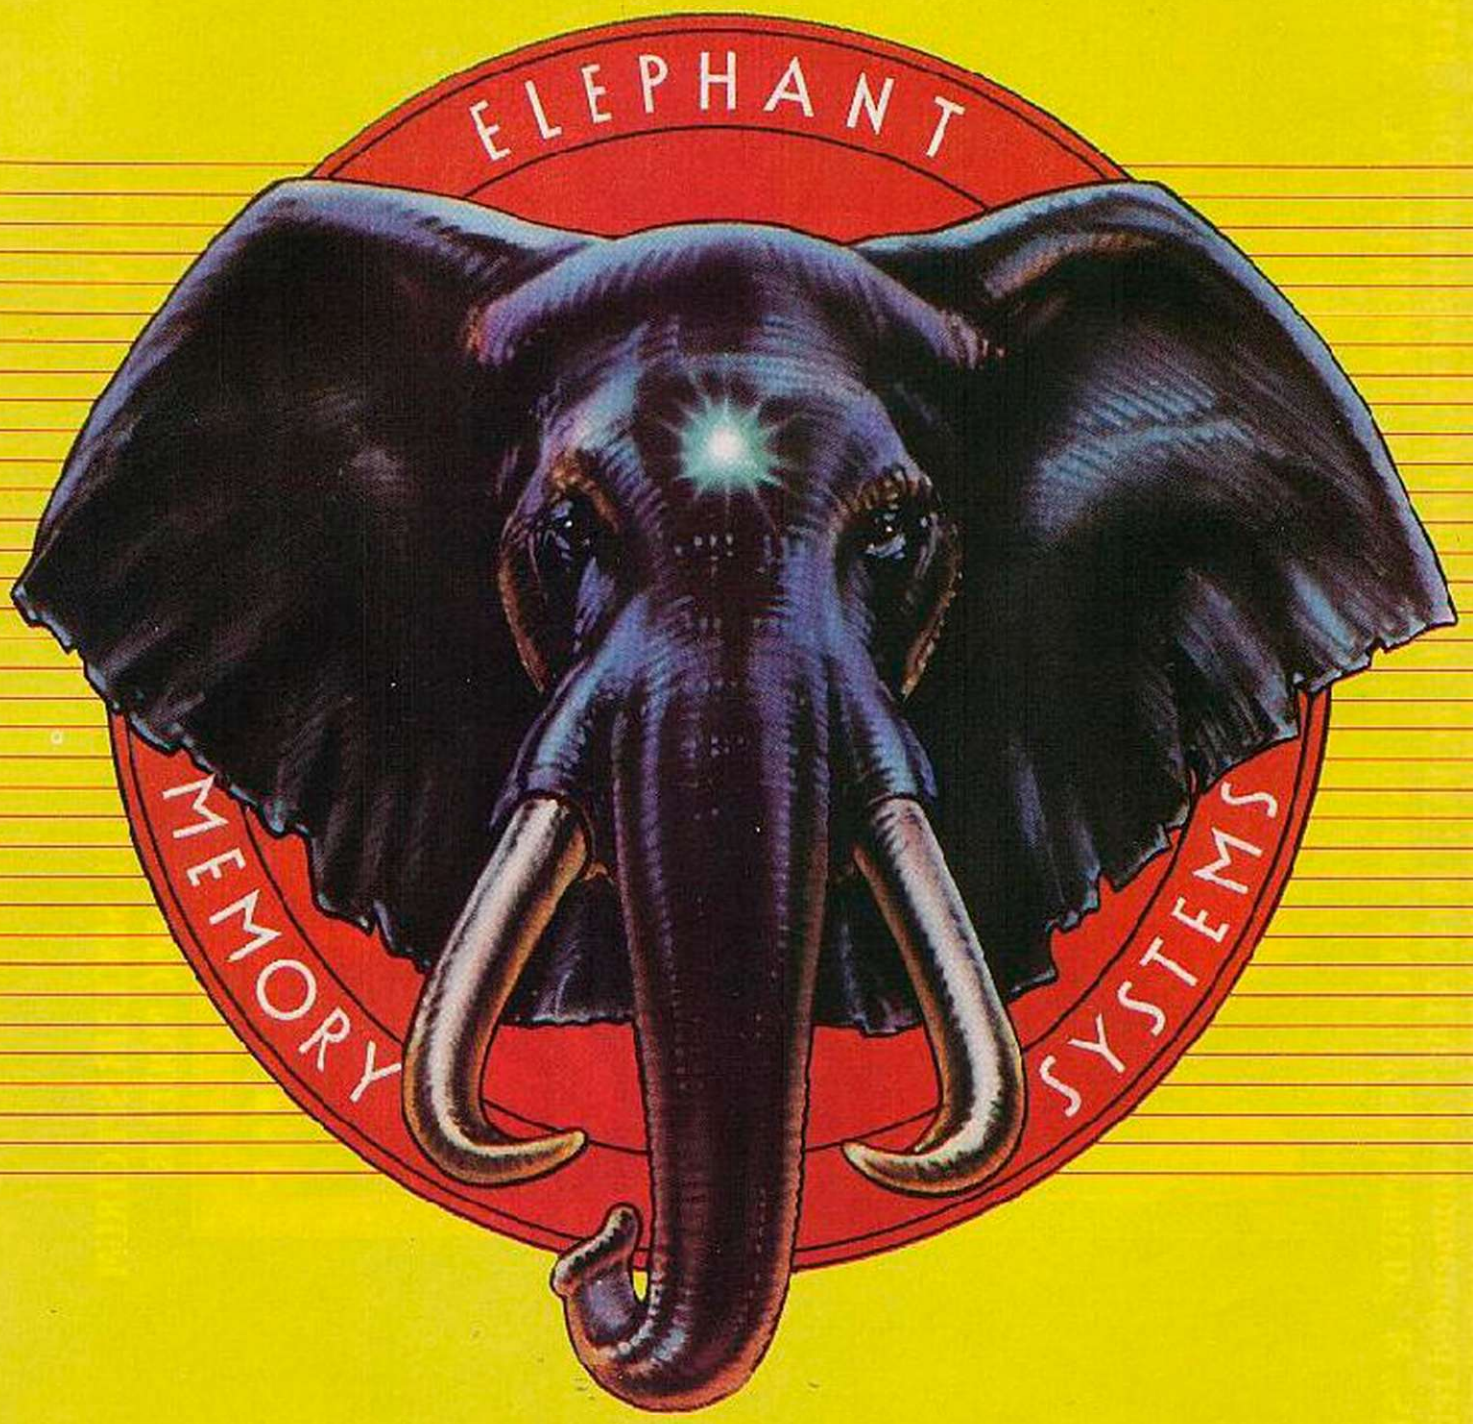
WIN A SAFARI TO KENYA



An opportunity to win a super ELEPHANT Safari for two persons – luxury accommodation, travel and all expenses paid – with every purchase of a 10-disk ELEPHANT pack made between 1st April and 30th June 1985!
Look for your participating ELEPHANT Dealer's special Competition Display and pick up a simple puzzle card with your purchase. Send it to us with an ELEPHANT 10-pack top to receive, completely free, an ELEPHANT 'T' shirt and an opportunity in this exciting competition. Each subsequent 10-pack purchase and completed puzzle card gives you another opportunity – there's no limit!
Should you have difficulty in obtaining ELEPHANT products, phone or write for details of your nearest Dealer.

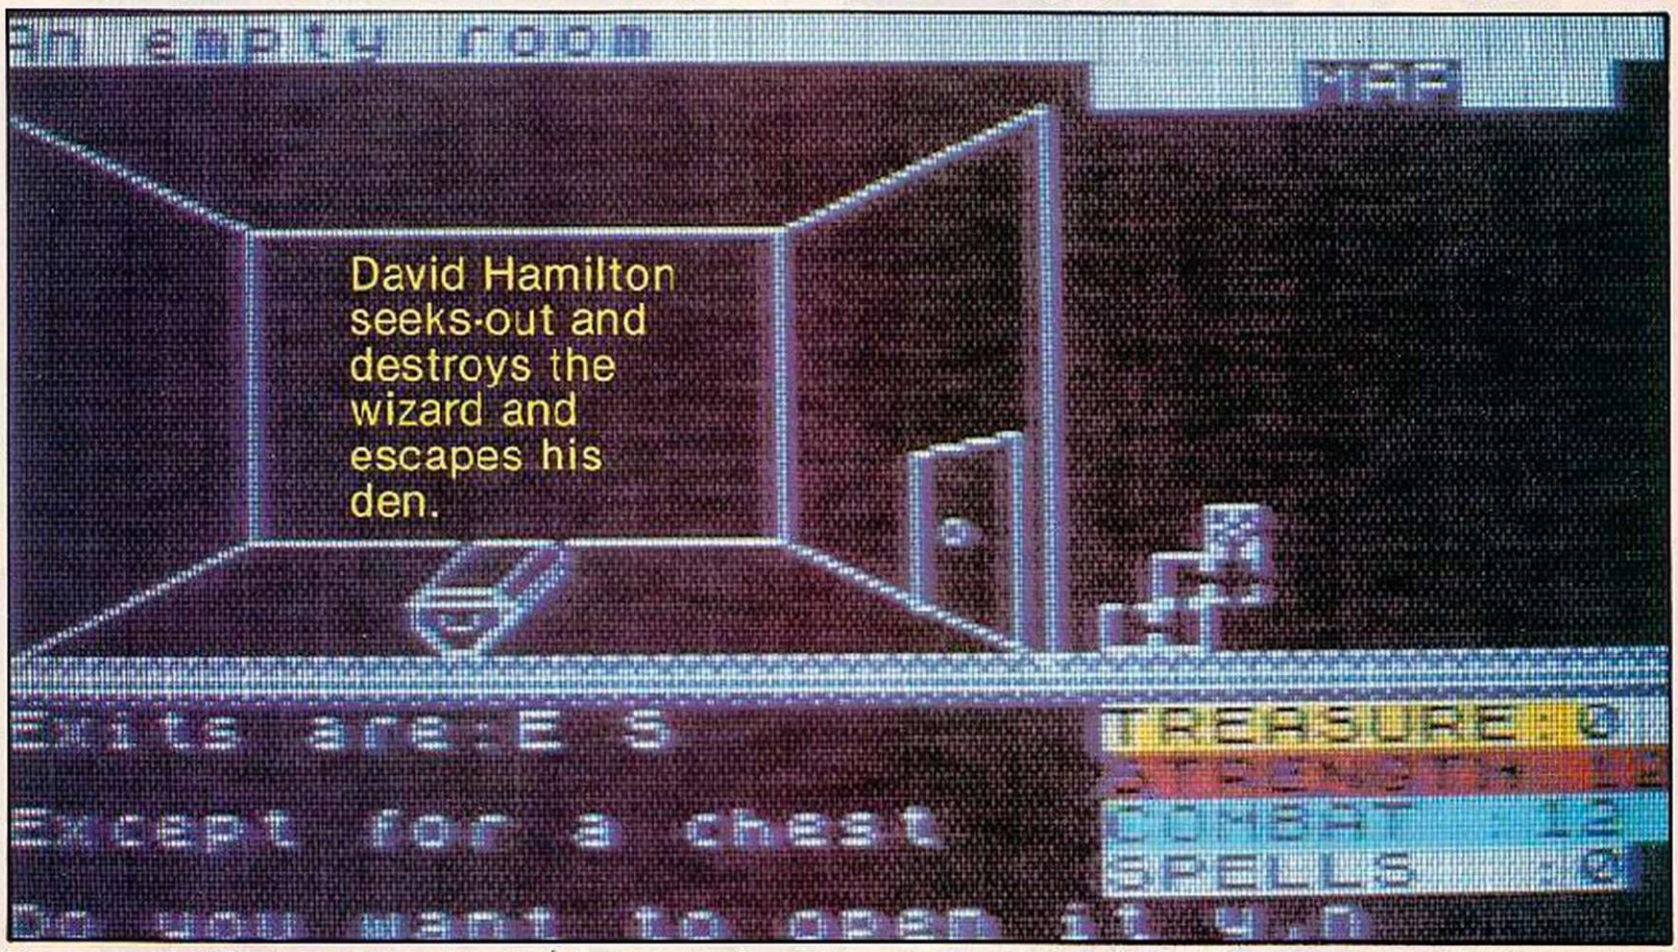
WIZARD'S DEN



David Hamilton seeks-out and destroys the wizard and escapes his den.

IN THIS graphics adventure game for the 48K Spectrum your aim is to locate the wizard in the maze. Once you have found him you must do combat; if you are victorious you can then take his key and seek an exit.

But, before reaching this exciting climax, you will need to spend some time traipsing from room to room and learning the lie of the land. Along the way you can pick up food and weapons, and there may be monsters to fight. The display shows the contents of each room and its exits, while a map at the right traces the route you have taken.

The controls are:

N — go north; S — go south; W — go west; E — go east; R — rest; F — fight; R — rest; F — fight; M — use a magic spell L — look or search a room.

Extensive use is made of user-defined graphics. These must be entered separately with the hex loader — listing 3. But first type in and save listing 1 with

SAVE "WIZARD" LINE 5

Note that characters between quotation marks should be entered in graphics mode in the following lines: 17, 18, 91, 1060, 1100, 2025, 2080, 2140 — r's only — 2150, 5000 to 5070, 9911 to 9955, 9960.

Now type in the hex loader and enter the graphics data given in listing 2. Save it after listing 1 on tape with

SAVE "WIZ" CODE 64568,799

Tape copies of the game are available for £3 — postage and packing inclusive — from D. Hamilton, 5 Murray Road, Newtonhill, Kincardineshire AB3 2PU.

BACK IN TOWN FOR A GREAT NEW SHOW!

MICROFAIR

If you have a Sinclair Computer this is the show you can't afford to miss!

The great day is June 22nd.

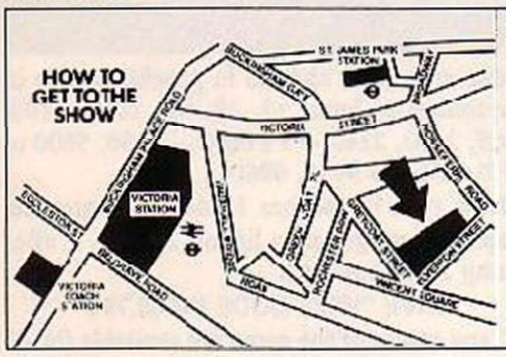
One day you won't forget if you own or use a Sinclair Computer.

The Microfair is back in town.

See everything that's new and original for The Spectrum, Spectrum+ and the fantastic QL.

If it's just launched you'll find it at the MICROFAIR. If you want advice you can talk face to face with the manufacturers. If you can't find it in the shops you'll probably find it at the MICROFAIR.

Why not send today for cut-price advanced tickets.



Underground: Nearest stations are Victoria, and St James's Park.

British Rail: Victoria Station.

Bus Routes: 11, 24, 29, 70, 76 and Red Arrow 507.

Road: Signposted (RAC AA) Horticultural Halls.

POST TODAY

Send to Mike Johnston (Organiser), Dept YC, ZX Microfairs, 71 Park Lane, London N17 0HG.

Please send me ..... Advance Tickets (Adult) @ £1.25

Please send me ..... Advance Tickets (Child under 14) @ 80p.

(Prices at the door are £1.50 and £1.00

16th ZX MICROFAIR

Name: _____

Address: _____

_____

Please include a stamped self-addressed envelope and make cheques/POs payable to ZX Microfair.

EXHIBITORS: CALL MIKE JOHNSTON ON 01-801 9172 FOR STAND AVAILABILITY.

PHILIPS & PHILIPS CO LTD Scriptomatic House, Torrington Park, Finchley, London N12 9QU

AN EXCLUSIVE OFFER TO BBC MICRO & CBM 64 OWNERS

APPROVED
for use with telecommunication systems run by British Telecommunications in accordance with the conditions in the instructions for use

FREE
SUBSCRIPTION TO PRESTEL & MICRONET

Purchase a Tandata complete communications package before 31st July, 1985,* and we'll give you a FREE subscription for 3 months to Prestel and Micronet.

You'll be able to enjoy up-to-the-minute news, comment, articles and reviews via Micronet 800 and Viewfax 258. Download computer programmes– many free of charge. Access all the other Prestel public databases. Communicate with other micros. And even carry out electronic messaging and mailing.

Tandata complete communication packages include a smart auto-dial modem and matching micropack with the appropriate software, cable and manual. In short, everything you need to convert your micro into a powerful Viewdata terminal.

TANDATA SMART AUTO-DIAL MODEMS

Features: Multi-baud rate (V21/V23); Auto-dial; Auto-recall; Auto log-on; Storage of up to 8 telephone numbers and IDs/passwords.

MICROPACKS

Contain software in ROM, disk or cassette for the BBC and in ROM cartridge for the CBM 64. Depending upon the micropack, features include: Full Prestel colour emulation; Prestel or message editor; Save to disk or cassette; File transmit; Telesoftware downloader; Print

To take advantage of this limited offer, complete and return the coupon. We'll send full information and an application form.

OTHER MICRO OWNERS

Tandata smart auto-dial modems and Prestel/Communications software are available for many other micros, including: IBM PC, Columbia, Olivetti M24, Apricot, Superbrain II, Philips P2000c, Research Machines 380Z, Apple IIe & IIc, VIC 20 etc. All offer many advanced features and represent superb value for money. For further details complete the coupon.

* Subject to availability.

Prestel is a registered trade mark of British Telecommunications plc. Micronet 800 is the trading style of Telemap Ltd. and British Telecommunications plc.

ROBOT *Competition* RESULT

At last we can reveal the winners of our competition for a £1,100 Maplin Hero Jnr robot.

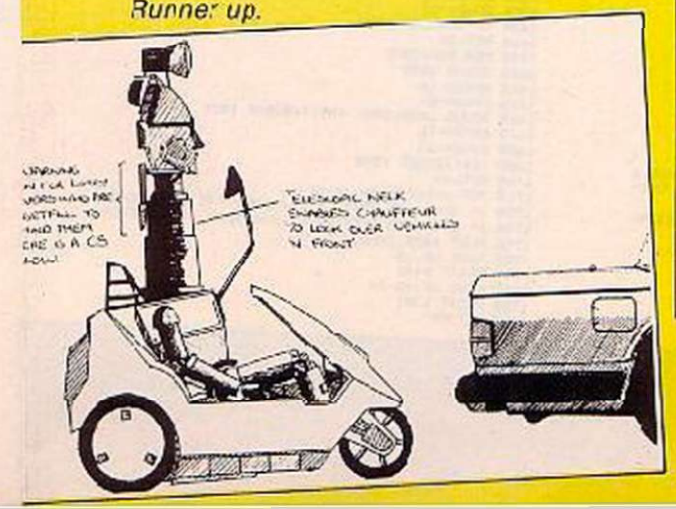
EITHER THE EXCITEMENT of winning a real live robot has gone to your heads or you know something which would turn Fleet Street gossip columnists green with envy.

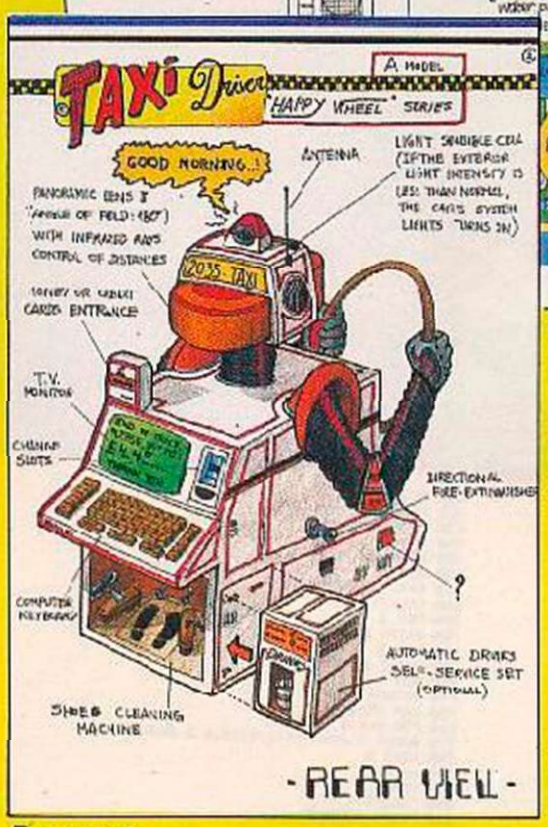
A surprisingly large number of entries — including an iron lady from Graham Swankie — looked like a cross between Margaret Thatcher and a Dalek. No wonder they're giving Dr Who a break. Industrial action in the schools is also having an affect. The Education Secretary appears in the shape of a mechanical hedgehog sent in by Fergus Henderson of Edinburgh — Keith Joseph's Mechanical Replacement for Striking Teachers.

Sir Clive's name was also taken in vain with numerous designs for Sinclairdroids. One from Graham Inglis featured "lifelike skin and hair — perfected after years of making keyboards" and an unusual delivery system "if you live within 15 miles the droid will send himself". But the most lifelike android featured in a photograph sent in by R Bosman of Enschede in the Netherlands. The Bosmanoid has specially designed big ears for picking up data.

Some entrants tried to apply robots to make their lives easier rather than inventing a universal problem solver. Paul Ashcroft from Warrington, who is working with fork lift trucks on a Youth Training Scheme designed an automated fork lift. Innes Reid from St Asaph, North Wales, may well be a paper boy because the NERD which he sent in — NEwsagent's Robotic Delight since you ask — sorts out the correct newspapers for the right addresses and works out the bills. No longer need Innes fear being pursued through the streets of St Asaph by *Daily Telegraph* reading bishops who have had copies of *The Beano* delivered by mistake.

Runner up.





Runner up.

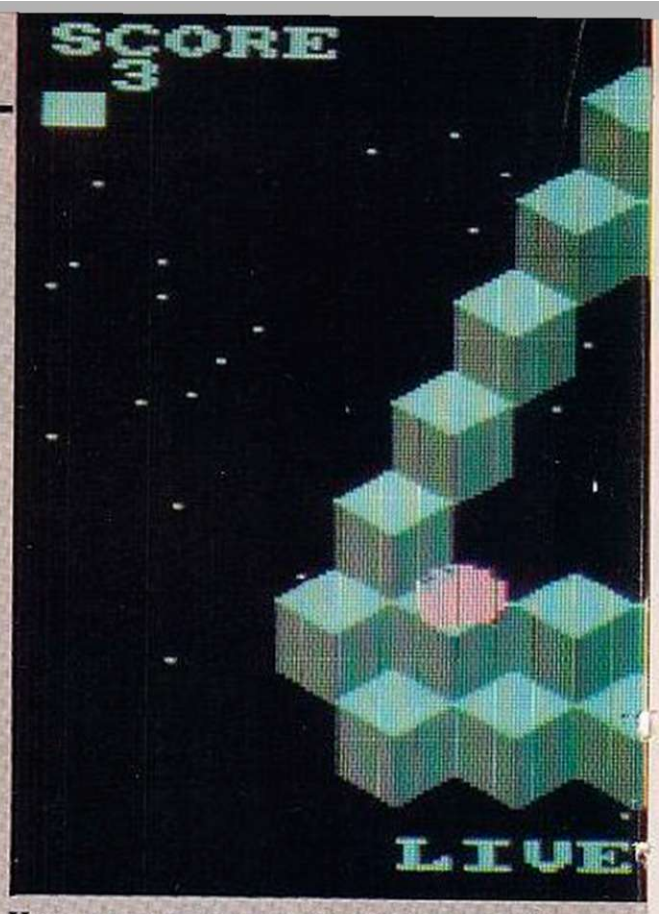
Other practical robot ideas included Guy Culverwell's tour guide, which could perhaps take him from his native Kent to Switzerland where Andreas Weder is working on an automatic film director — based on a BBC of course. The Lally brothers from Bromsgrove sent in a sketch of IGOR, a solar-powered unmanned glider which could be used by the police to monitor traffic or with a laser to guide in bombs — that should put a stop to illegal parking. Even more terrifying was the mobile dentist which Michael Dobson plans to unleash on Loughborough. Derek Baigent of Guildford thought up a robot guide dog for the blind which could have safe routes to useful destinations in its memory.

If we were awarding the prizes for effort it would be a close race between the 40-page essay submitted by CW Judge of Ashford, Kent and the 12 feet of circuit diagrams and specifications sent in by two Yugoslav 17-year olds Maksim Rudolf and Radovan Serviec of Ljubljana.

But after much consultation the runners-up who each win a Maplin Zero II mini turtle are Juan Jose Casenave Clemente of Madrid in Spain for his Electronic Taxi Driver and the anonymous individual who sent in a C5 Chauffeur. The Taxi Driver which has a coin slot and a credit card slot finds its own way around the streets while the C5 Chauffeur needs a telescopic neck to keep a look out for homicidal truck drivers — and presumably malfunctioning robot taxis. Now all you need to do is get in touch with us to claim your prize — we know your handwriting.

The winner of the £1,000 Hero robot is Guy Taylor of Bristol for his very topical idea for an automatic crowd controller and entertainer at football matches called Rainbow. Unlike Chelsea's Ken Bates Rainbow doesn't believe that ritual electrocution will bring the fans flocking back to football stadiums — Rainbow has lasers but strictly for entertainment rather than zapping hooligans. A suction arm of this big-budget vacuum cleaner clears rubbish from the stands. In extremes it can call on water cannon which can be reversed to help dry off waterlogged pitches.

Winner.



HERE IS a rare creature to find in the pages of *Your Computer* — a main game written in Basic. No multiple listings, no complicated saving instructions, no hex loader, and not an ounce of machine code — Englebert is 100 per cent pure Basic. Key it in, save it and Run.

You will be rewarded with a fast moving, high-quality arcade game, which gives a good

John Kennedy with a fast and colourful Basic game for the Amstrad.

demonstration of the speed of Amstrad's Locomotive Basic — it is fast enough to achieve effects that are only possible in machine code on other machines.

Englebert is a variation on the Q-bert theme. The object is to jump around a pyramid of blocks leaving footprints as you go. If you clear the sheet, by covering the pyramid completely, a new pattern of blocks will appear. If you jump off the pyramid, or if you are hit by the squashy ball thing, you loose a life. At higher levels there are two squashy balls to cope with.

EBERT

· THE NEW AMSTRAD CPC 664 WITH BUILT-IN DISC DRIVE

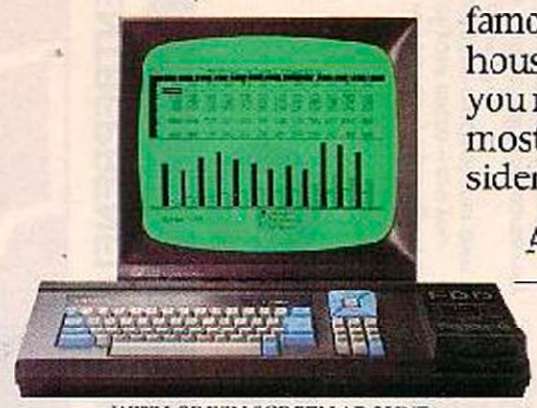
· THE NEW AMSTRAD CPC 664 ·

· AVAILABLE AT BOOTS · COMET · CURRYS · DIXONS · GREENS · JOHN MENZIES · RUMBELOWS

THE LOW COST COMPUTER FOR HOME AND BUSINESS ·

WITH COLOUR MONITOR AROUND

· £449 ·



WITH GREEN SCREEN AROUND

· £339 ·

THE HOME COMPUTER THAT MEANS BUSINESS.

If you know anything about computers you'll know that disc drives are up to fifty times faster than cassette when you're loading and saving programs. In fact, a disc drive makes computing faster, more reliable, more efficient and more fun. But up till now the only way to gain these advantages for a home computer was to buy a separate disc drive attachment. Now Amstrad are pleased to announce the first complete home computer with built-in disc drive: The Amstrad CPC 664.

And when you buy a CPC 664 you'll find it's not just the disc drive that's built-in.

You'll get everything you need, including a monitor (green screen or full colour). We'll even give you a free CPM and Logo disc, so all you do is plug in and you're in business.

BUSINESS OR · PLEASURE ·

Although a disc drive will make games more fun (and there are loads of them to choose from) it also makes the CPC 664 a serious proposition for the business user.

There are accounting, word-processing, spread-sheet and data-base programs (to name but a few).

Amsoft Business Control, is a complete suite of programs for integrated sales invoicing, stock control and sales ledger for around £99. (Requires an additional FD-1 disc drive around £159 and DL-2 cable around £7).

The CPC 664 is also supplied with CP/M* to help make your business more efficient and effective by providing access to the famous range of CP/M* software.

Wordprocessing with Amsword can improve the productivity of everyone from unskilled typist to trained secretary. Around £23.95.

HIGH PERFORMANCE · LOW COST ·

The one thing you won't need a computer to work out is that the Amstrad CPC 664 represents outstanding value for money.

You only have to check the cost of buying all the elements separately (64K computer, disc-drive, monitor) to realise that the Amstrad package is very hard to beat.

With a green screen monitor the cost is just £339. With a full colour screen it costs £449. And after you've saved money on the price of the computer itself, you go on saving on the price of software.

There are hundreds of programs for business or pleasure available on disc (and cassette) to CPC 664 users. Many from Amsoft, others from other famous-name software houses. Few will cost you more than £49 and most will cost you considerably less.

AN EXPANDING · SYSTEM ·

There is a complete range of peripherals available to CPC 664 users which plug directly into the built-in interfaces.

These include a joystick, additional disc drive (to double your on-line storage) and the Amstrad DMP-1 dot-matrix printer. (There's also a cassette interface so that you can use CPC 464 programs on tape). And there are many more peripherals from Amstrad and other manufacturers which can be used to enhance the CPC 664.

· AMSTRAD USER CLUB ·

Join the optional Amstrad User Club and we'll keep you informed with our monthly user magazine, and information on all software as it is introduced. Your membership details will be recorded on your personal club card, which entitles members to various privileges and offers.

Figure analysis made easy with Microspread. An easy to use spreadsheet with pull-down menus and a wide range of mathematical options. Around £49.

Get soft with your micro...

and make the best of it with Brainpower

SEND FOR MORE BRAINPOWER TODAY.

Are you really making the best of your micro – are you still using too much of your own brainpower?
We at Collins Soft have some very good news, six simple to use software packages called Brainpower that put you firmly in control and help you realise your own full potential:
Skills that will help you make decisions.
Skills that help you plan ahead.
Skills which can help your business.
Skills to discover the universe and skills which will organise your work.
With Collins range of Brainpower software you get a Teaching Program and Book which show you how easy Brainpower is to use on your BBC, Commodore 64 or Spectrum, plus the main Application Program itself.
Discover Brainpower at WH Smith, Boots, Menzies and all good Computer Shops or simply post the coupon for information – today.

NOMINATED FOR BRITISH MICRO COMPUTING AWARDS 1985

Read what they have said about Brainpower.

ENTREPRENEUR
If you intend to go into business, Entrepreneur is an essential investment – Practical Computing.

PROJECT PLANNER
The manual has a simplicity that is endearing – Commodore Horizons.

STAR WATCHER
The best star-gazing program so far available on microcomputer – John Walker – leading software writer.

FORECASTER
I found the theories of prediction fascinating – Commodore Horizons.

DECISION MAKER
In many ways it has succeeded in an area that few other programs have even attempted – using the computer to educate adults – Popular Computing Weekly.

Collins Soft is a division of William Collins Sons & Co Limited
Brainpower is a trade mark of Triptych Publishing Limited.

AUTO 64

Auto 64 by David Swinnerton makes use of multicoloured sprites and interrupt driven music on the CBM-64. The Basic also sets up the title screen which you will see as soon as the game loads. That is all the instruction you need to get the game going and you can use keyboard or joyslick to play. Instructions are given in the game.

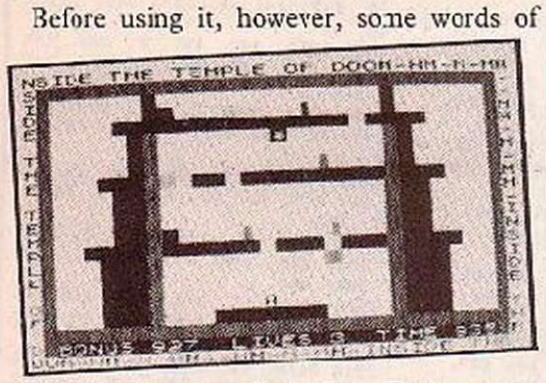
BY COMBINING the program given here with the game Survivor published in the May edition of *Your Computer*, you can amend or completely rewrite any or all of the levels to your own personal requirements.

If you have not already done so, enter the game from last month's article retaining the machine-code loader. Although it is necessary to enter only the operating system if you intend to construct all your own levels, I strongly advise you to enter the data as well and overwrite it later. A prior knowledge of how the game performs is invaluable when writing new screens.

Use the original loader to enter the extra code from hex dump 2 giving 21320 as the start address. There is no need to add another Rem. Save to tape using a direct command without deleting the loader. Although it will be overwritten by the new Basic program, you will have to come back to this copy to use the checker if the new code does not work. Now delete listing 1 and enter the Basic graphics loader from listing 3. Save this by typing Run 15.

Before using it, however, some words of



explanation are called for. Each screen consists of a playing area 28 by 17 surrounded by a grey border with Bonus, Lives and Time displayed below. Around this the Title is scrolled. Data is needed for each level to store the title and playing area. As long as you stay within the constraints of the system, what is put into this playing area is limited only by your own imagination.

The display consists of black blocks on a white background; two grey lines of any length and direction; five aliens moving in any direction either reversing or one way only;

```
21320: 3E170CD2E47000000C  = 407     21448: C25A5319035A537E  = 986
21328: 0C00002A0C4011483   = 204     21456: 0680E8220470C35A  = 759

```

Hex dump 2.

five aliens which are stationary but flash on and off. Almost any character may be used for an alien — only four will not kill you. Bridges and elevators are made from a moving alien of CHR 128.

You must use all ten aliens and both grey lines in each level. Unwanted grey lines can be hidden in the border and excess aliens can be "lost" by making them white spaces in a white area. Aliens always unprint leaving a white trail. Remember this if you are moving them through black or grey blocks. Forty-three characters must be used for the title. Letters and graphics may be mixed, padded out with spaces to the correct length. You are allowed only one Exit although several Keys are possible by using CHR 151 for aliens.

I consider it absolutely essential to work out ideas on squared paper first. A pad of Quadrille from W H Smith's is invaluable here. Copy the grid from diagram 1 and plan your strategy carefully. Ensure that all intended jumps are possible. Remember you can only jump up four squares vertically or diagonally.

When you are satisfied that the drawing has been perfected it must be converted into data. This is done by the graphics loader in two parts. Firstly the black blocks for the screen are drawn directly and then compressed by the machine-code section. The second stage is concerned with the grey lines and aliens etc., and uses the Basic program. Everything must be worked out using grid references and character codes before any attempt is made to input a level.

Reload the program from tape. It should autorun and ask for a level number between one and 10. You may enter levels in any sequence. You are then given the option of drawing a new level or amending an existing one. If you answer "yes" to the prompt the drawing section will be bypassed allowing new data for aliens etc., to be entered.

Answering "no" will put the computer into "wait mode". If you proceed beyond this point, all existing screen data for the level chosen will be wiped out. You may abort at this point by using the Break key. Assuming you wish to proceed, pressing N/L will produce the Drawing Board.

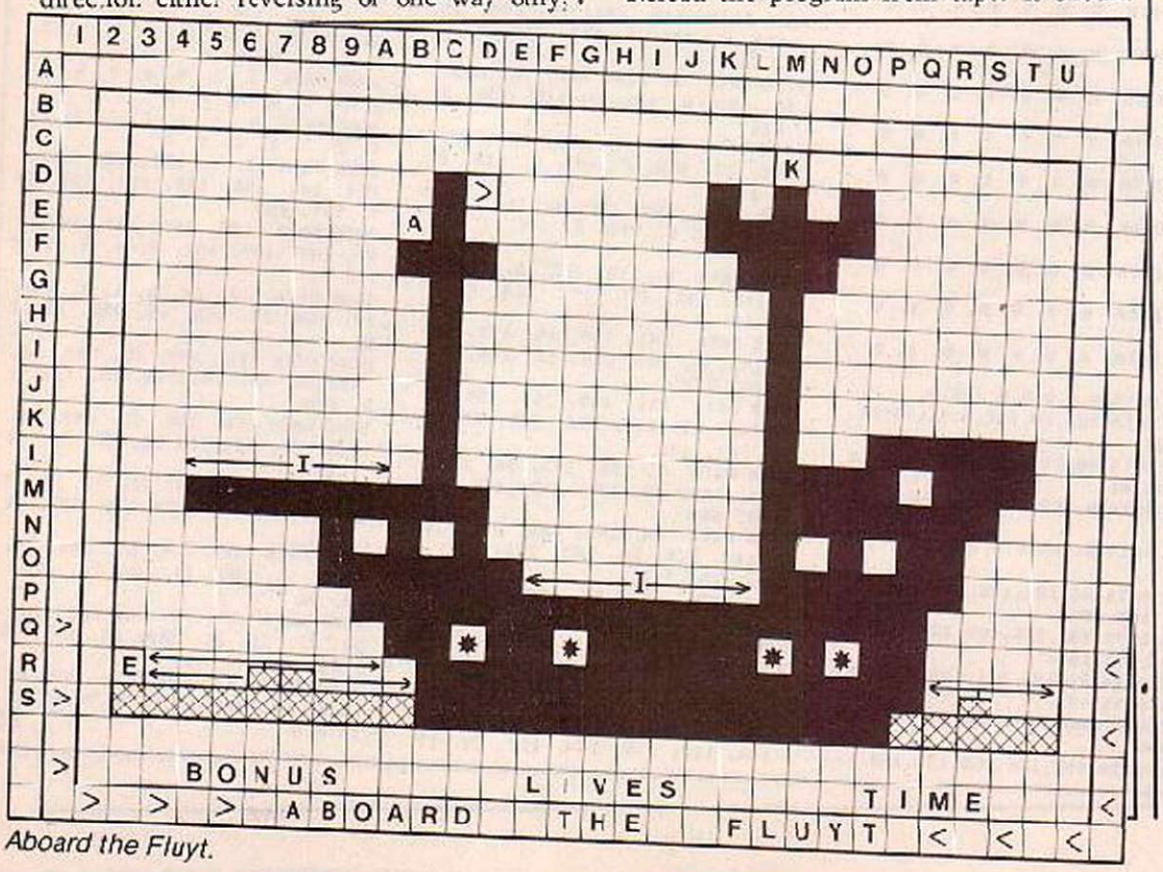
The cursor is moved horizontally by keys I and P; vertically by keys Q and Z. Pressing O

will deposit or erase a block. After completing the drawing, check it carefully as mistakes cannot be rectified without redrawing the whole picture. When you are satisifed that it is accurate press N/L and the screen will be converted into data. The program will now return to Basic and request information regarding the grey lines.

This second paret of the loader will accept grid references and graphic characters in the form of strings, or numbers as variables.

Using "Aboard the Fluyt" as shown in diagram 1 it can be seen that the grey lines run from S3 nine spaces to the right and from SQ five spaces to the right. Data for these is made up from the grid reference for the starting square followed by the number to be added or subtracted in order to reach the next square — for a vertical line 33, a diagonal line 32 or 34 and a horizontal line, as we have here, 1. Lastly we need the length of the line. So, data for the first line is S3 1 9 and for the second SQ 1 5. A grid reference must always be given vertical axis first. To input this, enter S3 and press N/L. Press N/L again to change to a numeral input. Enter I N/L, N/L a second time to recover the input and 9 N/L. Enter data for the second line in the same way.

You should now be asked for Key, Position and Exit locations. The key is a grid reference — CM. Enter and press N/L. Your starting position is EB. Enter and press N/L. The exit is R3. Once again enter and press N/L. Now comes the title. Enter this as a string of 43 characters and press N/L. If the length was correct it will be printed on screen. If this



Aboard the Fluyt.

Darren Spridell with a diy game of survivor for the ZX-81.

RVIVOR

does not happen, you will have to re-enter it correctly.

The next prompt is for the five moving aliens. Three grid references are needed to define each aliens position. The first is the starting square. For the Guard on the upper deck this is L7. The next two are the extremes of movement with — most important — the highest given first. That is, the position nearest to the bottom right of the screen must be entered before the position nearest to the top left.

This guard moves from L5 to LA so data will be L7 LA L5 pressing N/L between each. The next four characters are entered as a block and are arrived at as follows:

- Character of alien when moving from a high position to a lower position on screen.
- Character of alien when moving in the reverse direction.
- In the case of the guard, both are the letter I.

Next the direction in which the alien first moves; this is entered as a graphic and is either a space or CHR 1 dependent on whether it moves from a high to low position (CHR 1) or vice versa (CHR 0). Lastly the number of squares which need to be added or subtracted to reach the next position as it was with the grey lines, only this time entered as a graphic — CHR 1, 4, 5 or 6. — see your ZX-81 manual.

So we have the four characters. Enter 11 ■ ■ together and press N/L. Repeat for the other four moving aliens.

The five flashing aliens are defined by one grid reference followed by a block of three graphics each.

The first is the character initially, the second the character it turns into. For the Fluyt, all turn into white spaces although any of them could equally turn into black blocks or another character entirely. The last graphic is concerned with the time each character is flashed on and off, and could be one of four symbols. If you mentally divide the flashing cycle into four periods:

CHR 0 will print the first character for two periods

CHR 1 will print the second character for two periods

CHR 2 will print the first character for one period

CHR 3 will print the second character for one period

To correct:	Byte no.
GREY LINES	68
KEY	76
POSITION	78
EXIT	80
TITLE	82
MOVING ALIENS	125
FLASHING ALIENS	175

Table 3.

When you have finished with the loader, save the game by typing Run.

Do not test a new level with endless lives. If you have created a loop, you will be stuck in it for ever. Make sure that the Break key is operational — see parameters table in part 1. If you want to limit the game to fewer than 10 levels, Poke 19198, followed by the number of levels required.

The best thing to do with errors is to avoid them and get your data accurate. Remember, this is being used by a machine-code program. If your data does not make sense to the computer, it will crash.

In spite of all your efforts, mistakes will probably occur. In any case you may wish to alter something to make the game harder or easier. This can be done. Run 18 will restart the loader to enable corrections to be made. If you make an error whilst inputting data, enter "Restart" in answer to any prompt. This will take you to the same correction routine as would answering "Yes" to the option for amending data given at the outset. You will then be asked for the byte number of the section to be corrected — see table 3.

High quality tape copies of the original Survivor containing a full 50 levels to test your powers — no one has yet reached the 51st screen — or the 10-level version with graphics loader for use in conjunction with this article are available from the author D Spridell, Cherry Tree Cottage, Common Road, Hopton, Diss, Norfolk IP22 2QU, price £3.50 each including postage. Please state which you require. ■

COMCON

Simple and fast programming. Plug the six function connectors into the required Spectrum key positions – Ready!

Supports joysticks with two independent fire actions: Photon Blasters and Neutron Bombs at the touch of your fingertips.

Extension port for combined use of peripherals.

£19.95 incl. VAT and P & P

Compatible with all Atari-type joysticks including Quickshot I (without rapid fire action).

Interface operates joystick parallel to keyboard. Joystick action compatible with any add-ons including microdrives.

Select key functions anytime - even when the game is already loaded.

NEW

COMCON TWIN JOYSTICK INTERFACE — **£22.95** incl. VAT and P&P

Two port version allows connection of two joysticks for sequential two player games using same key positions (non- independent!)

QUICKSHOT 2+2 JOYSTICK — **£13.95** incl. VAT and P&P

modified to incorporate 2 independent fire actions and no rapid fire option

FLIGHTLINK HOTSHOT JOYSTICK — **£10.50** incl. VAT and P&P

with two independant fire actions

CURRAH USPEECH UNIT — **£21.95** incl. VAT and P&P

fits into COMCON extension slot

LANDSCAPES

THIS MONTH we look further into the nature of probability which is the key concept in these programs for the Spectrum and Amstrad computers which generate landscape scenes spontaneously. Such a program first needs some basic knowledge about the subject to be portrayed. This knowledge is described by mathematical relationships. Some of these relationships are rigid ones — for example, solid features will hide the view behind them. Other relationships are not precisely defined; for example the slope of a mountainside may have almost any gradient, though very steep slopes occur only occasionally.

The program must be allowed freedom of choice wherever possible, but must not be allowed to do unusual things too often. That is — suitable probability functions must be used.

Listing 1 is a simple Basic program to demonstrate some probability distributions. The function RND returns a value between 0 and 1, with no bias. Therefore the combination

x = a + RND * b

gives a "flat" distribution — that is, equal probability of any value between the lower limit (a) and the upper limit (a+b). Now we can combine the RND functions in different ways to produce more subtle distributions. Suppose we put

x = a + (RND + RND + RND + RND)/4 * b

This gives a hump-shaped distribution — a crude approximation to the famous "Normal" distribution. The values of x will tend to cluster around the middle with smaller probability of extreme values. Now consider

x = a * RND ↑ 2

This will cause a skewed distribution, with small values of x having much greater probability than large values. A greater skew will be obtained from the function

x = a * RND ↑ 4

and so on. It is important to realise that RND is different every time it is used — therefore

RND + RND is NOT equal to 2 * RND

Listing 2 is a very entertaining program using two-dimensional distributions to produce a multicoloured pulsating galaxy. The same distribution can be used for a cluster of leaves, daisies etc.

These programs are in Basic, which is very easy to enter and very easy to experiment with. The Landscape Creator itself has been written in pure machine code, because of the sheer number of calculations which have to be done. Each new landscape is created in about 8-20 seconds.

Suitable probability distributions can create surprisingly realistic mountain skylines. The slope must take values which are not too steep too often, not too straight, and not showing a regular pattern. There are big bumps and small bumps and even smaller bumps . . . The mathematical functions called fractals have this property of having an endless succession of smaller and smaller wiggles, in fact going on and on, to the infinitely small.

They have been used to create mountain scenery with remarkable realism by Lucasfilm, using very expensive high-resolution equipment. However, true fractals are purely mathematical abstractions . . . they have an infinite length, because of the infinite number of wiggles on an ever-decreasing scale of size, and therefore cannot actually be shown on any video screen! However my own functions are not unrelated to fractals, since they use two different magnitudes of wiggliness.

There is a problem with the random number generators in the home computer. They are not truly random; they are "pseudo-random". This means each number is not actually independent. You will eventually come back to the same sequence and go round in a big cycle. Also patterns can sometimes be found if you plot a random scatter of points.

What should we call this kind of art? I suggest the terms "artistic algorithms" or "computer creativity". The simplest kind of program, which draws diagonal lines at random polygons, could be said to be "random art". ■

Instead of computers catc technology now has to ca

The way we see it, technology has suddenly got quite a race on its hands.

There's no other home computer in the world that's so expandable or so updatable as the new Enterprise 64.

And if you're wondering quite how we've managed that, kindly take a closer look at the outputs on our remarkable new machine.

You'll notice that amongst all the usual sockets and terminals, we've gone and incorporated a special 66-way expansion port.

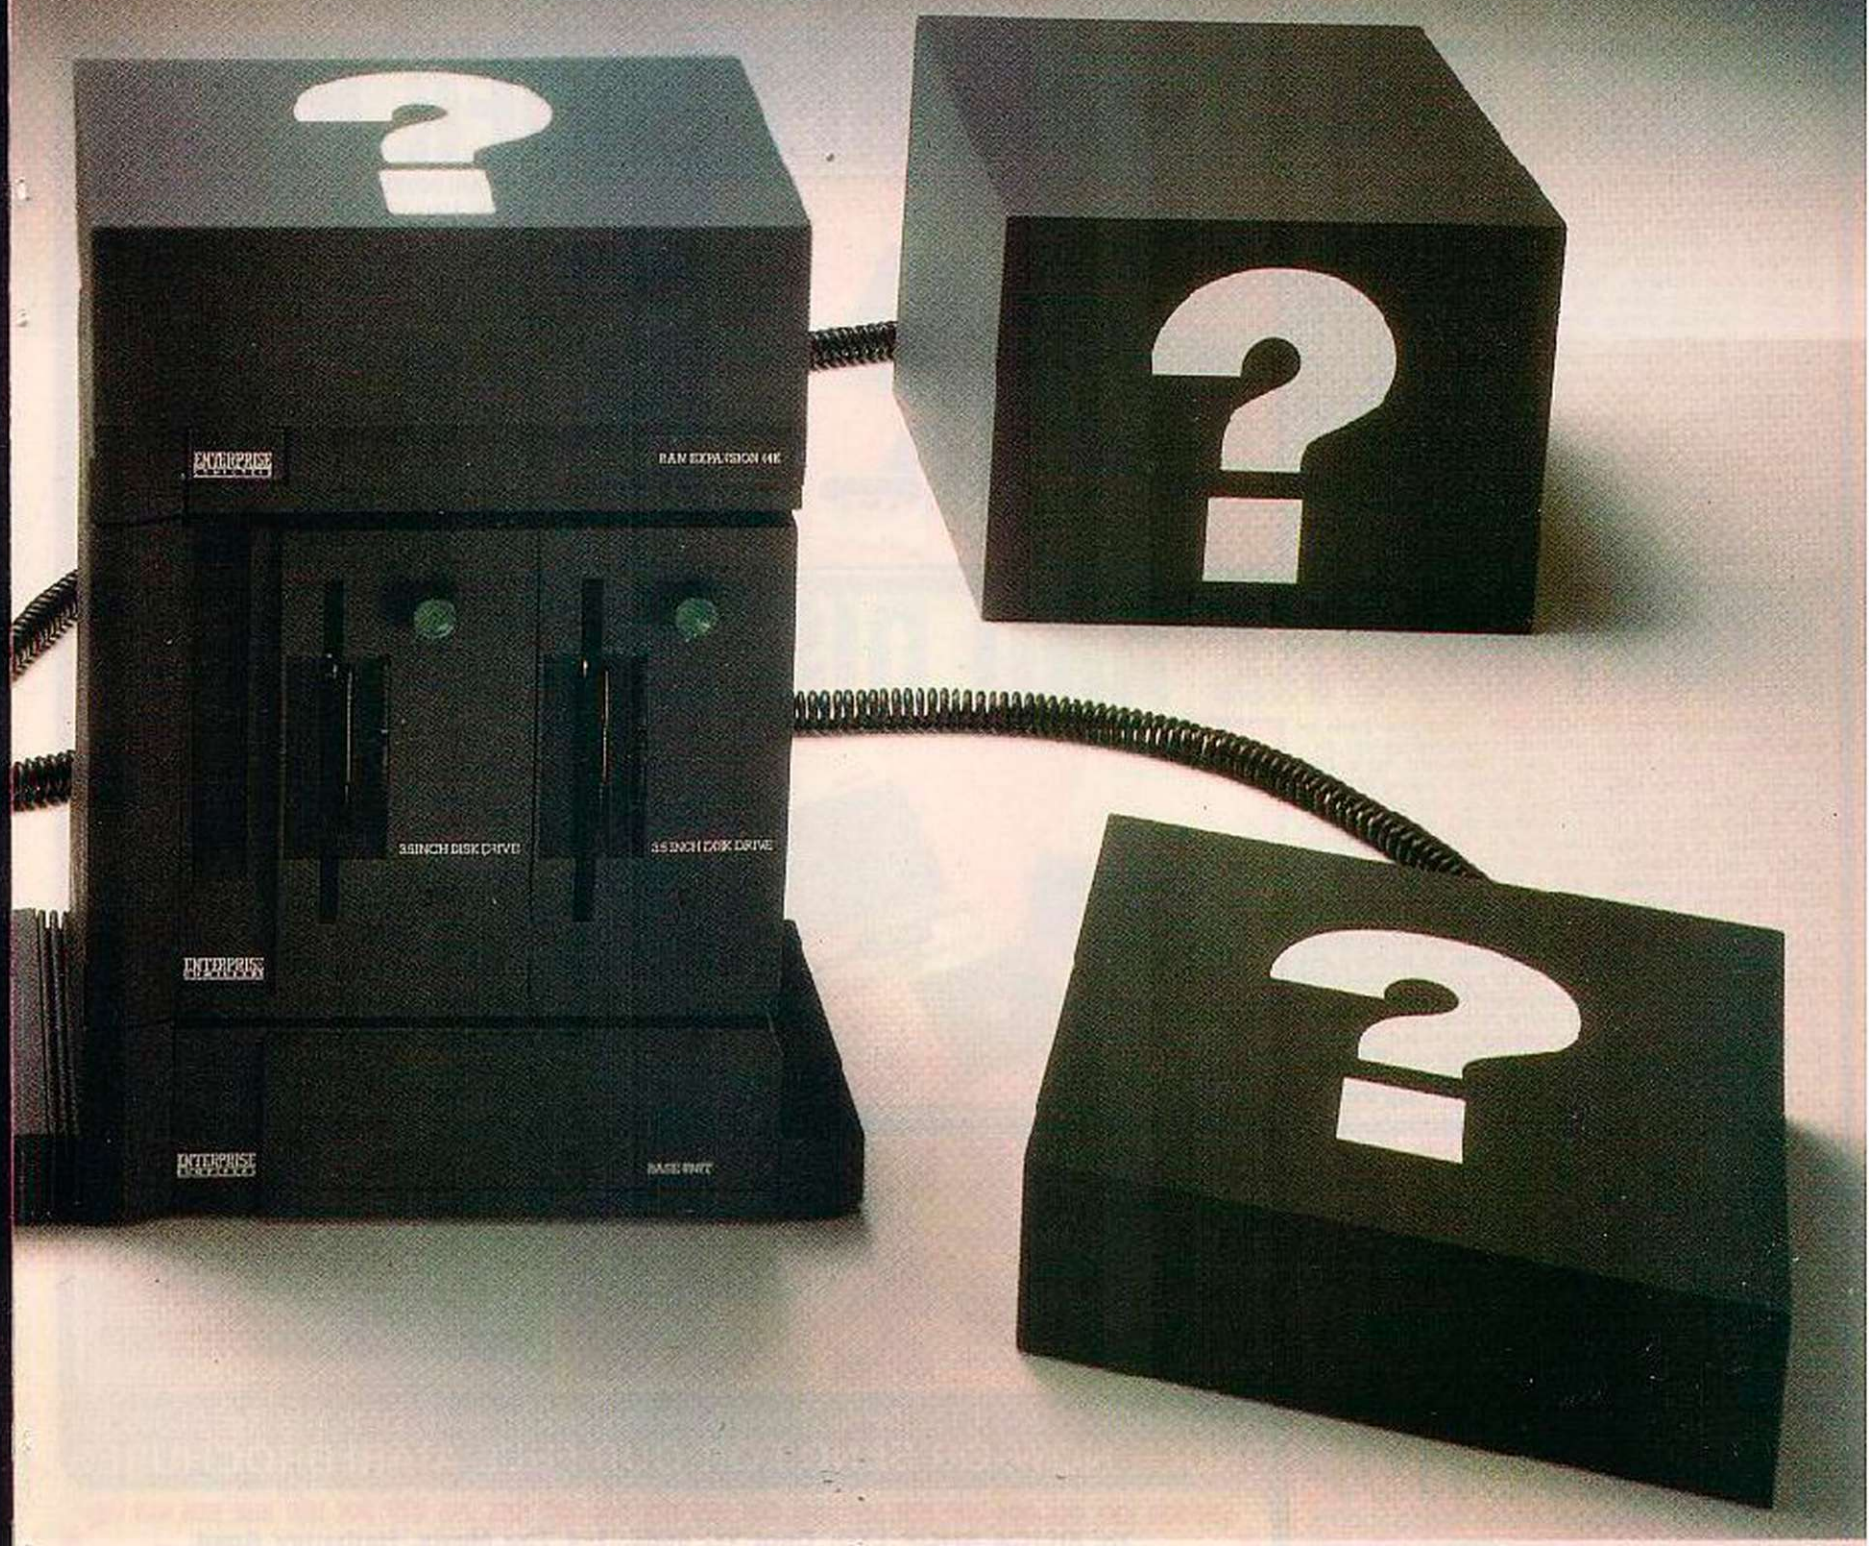
This will accept a whole range of new peripherals that are in the pipeline. Including those that are a mere twinkle in the eyes of our hardware designers.

We thought this expandability principle was such a good idea, we applied it to the Enterprise's memory, too.

Even in its most basic 64K form, this puts more user RAM at your disposal than almost any other competitor.

But plug in our special Rampacks to the base unit, and you can progressively increase that figure to a truly extraordinary 3,900K.

hing up with technology, tch up with a computer.



Not that that's the only challenge we present to today's ambitious programmers.

With a screen resolution of up to 672 x 512 pixels, 256 colours and a high speed video processor, the Enterprise will outgun all but the highest quality TV monitors.

And the sophisticated sound chip generates no fewer than 4 voices across 8 octaves in full stereo.

Combine the two and you can create effects that leave today's games looking like pub video tennis of the mid-seventies.

For anyone with literary aspirations, the Enterprise also comes complete with an integrated word processor.

Whilst the really serious user will be delighted to discover analogue RGB and TV outputs, as well as parallel, RS423 serial and network ports.

Both Cobol and 'C' will be available with CP/M running, and you can even use Lisp, Forth and Z80 assembly language on cartridge without encroaching on user RAM.

The new Enterprise 64.

It hasn't just overtaken technology. It's left every other home computer straggling in the distance.

WITH OBSOLESCENCE BUILT-OUT

ATARI 600XL ENTERTAINMENT PACK

Great news for games addicts who appreciate high quality graphics and sensational arcade action gameplay. For Only £69, you can buy a 16K Atari 600XL Computer with two top arcade ROM cartridge titles and a joystick. These two ROM titles are the famous arcade hit Donkey Kong and another favourite Qix (We only have a limited number of packs with Qix. When these run out, Qix may be substituted for an arcade entertainment cartridge of the same value). The 600XL Entertainment Pack offers real value for money and enables you to save £63.96, nearly half of the normal RRP's of the pack items when purchased individually. Silica Shop have a wide range of ROM cartridges available including arcade favourites such as Asteroids, Centipede, Missile Command, Popeye, Q*Bert, Star Raiders, Super Cobra for only £9.95 each! The 600XL is a programmable home computer with the Basic Programming Language built in and if you later add a 1010 Program Recorder (XLP 1010 - £34), a range of hundreds of cassette programs will become available to you. The Atari 600XL is recommended as a first class games machine.

ATARI PACKS - POWER WITHOUT THE PRICE!

ATARI 600XL ENTERTAINMENT PACK

16K Atari 600XL	£99.99
Donkey Kong (R)	£11.99
Qix (R)	£9.99
Single CX40 Joystick	£7.99
Total (if purchased separately)	£132.96
Less Discount (approx 48.1%)	£63.96
PACKAGE PRICE (XLC 1600)	**£69.00**

£69

ATARI 800XL AND RECORDER PACK

The 64K 800XL is packaged here with the 1010 recorder, an economical storage and retrieval unit, a smash hit arcade game and programming aid, all for a package price of only £129 (ref: XLC 1010), a saving of £65.96 off the RRP's of the individual items which total £194.95. The game included in this pack is Pole Position. Now on cassette from Atari, Pole Position is an accurate reproduction of Atari's own highly successful arcade driving game which has all the thrills and spills of the grand-prix racetrack. On the reverse of this cassette is a demonstration program of Atari's amazing sound and graphics capabilities giving an example of the high quality performance of the Atari 800XL. Also included is an Invitation to Programming 1 cassette which takes you step by step through the first stages of programming in Atari Basic using Atari's unique soundthrough facility which allows pre-recorded human speech to be played through your T.V speaker. All you need is a joystick (ATJ 0400 - £7.90 for Pole Position), to be up and running with this package. The Atari 800XL in this pack comes with a Silica two year guarantee.

ATARI PACKS - POWER WITHOUT THE PRICE!

ATARI 800XL - PROG. RECORDER PACK

64K Atari 800XL	£129.99
1010 Program Recorder	£34.99
Pole Position + Demo Prog (C)	£9.99
Invitation to Programming 1	£19.99
Total (if purchased separately)	£194.95
Less Discount (approx 33.8%)	£65.95
PACKAGE PRICE (XLC 1010)	**£129.00**

£129

ATARI 800XL AND DISK DRIVE PACK

This pack includes the 64K 800XL with a 1050 Disk Drive for mass storage and speedy information retrieval as well as a brand new adventure game and a powerful home help program, all for only £269 (ref: XLC 1050), a saving of £95.96 off the RRP's of the individual items which total £364.96. The first of these programs is The Payoff on disk, a new adventure game which is a fantasy simulation in which you play the leading role. An exciting introduction to adventure programs which are always popular (with a demonstration program of Atari's amazing sound and graphics on the reverse). Also included in this pack is Home Filing Manager to help you organise your files. It allows you to catalogue and file details of birthdays, books, your stamp collection or anything else which would normally require you to use filing cards. The instructions for Home Filing Manager are on the reverse of the disk and all the disks which come in this package are in protective paper wallets. You get an extended two year guarantee on the 800XL and 100 free programs with the disk drive when you buy this package from Silica.

£269

NEW ATARI 130XE NOW IN STOCK £169

Atari's new 128K computer the Atari 130XE offers an enormous 131,072 bytes of RAM for only £169. The 130XE comes with built in Basic and full operating instructions and is now in a newly designed case with a modern full stroke keyboard. The XE is fully compatible with both the 400/800 and the XL ranges of machines, this means that it can run approximately 90% of all Atari Computer software on the market. This provides a range of over 1,000 software titles as well as a large selection of accessory and peripheral items. Initial stock of the 130XE will be limited, so it's first come first served.

SILICA SHOP

WE ARE THE UK'S No1 ATARI SPECIALISTS

Since the introduction of Atari Video Games into the UK six years ago, Silica Shop has been selling Atari products and supporting Atari owners with a specialist mailing service which we believe is unbeatable. We stock over 1,000 Atari related product lines and have a mailing list including over 300,000 Atari 2600 VCS owners and over 50,000 Atari Home Computer Owners. Because we specialise in Atari, we aim to keep stocks of all the available Atari hardware, software, peripherals and accessories. We also stock a wide range of Atari dedicated books and through us, the owners on our list can subscribe to several American Atari dedicated magazines. We can provide a full service to all Atari owners and are now firmly established as the UK's NUMBER ONE Atari specialists. Here are just some of the things we can offer you:

FREE POST & PACKING ON MAIL ORDERS
FREE CLUBS & INFORMATION SERVICE
HIGHLY COMPETITIVE PRICES
AFTER SALES SUPPORT SERVICE
REPAIR SERVICE ON ATARI PRODUCTS

If you would like to register on our mailing list as an Atari computer owner, or just because you are interested in buying an Atari machine, let us know. We will be pleased to keep you up to date with all new developments on the Atari scene free of charge. So, post off the coupon with your order or enquiry and begin experiencing an Atari service that is second to none.

WIN AN ATARI 130XE competition

1985 is the year of the mega-memory micros and here is your chance to win a 128K Atari 130XE with all the traditional Atari graphics capability yet with twice the memory of an 800 XL.

PLUS

Ten of the worst runners-up prizes we have ever given — copies of Firebird's Don't buy This compilation tape of the five worst ever programs sent in to them for evaluation.

RULES

- The winner of the competition will be the person who, in the view of the editor, comes up with the most amusing or clever idea for a computer cheat or scam.
- The name of the winner will be printed in the August issue of *Your Computer*.
- All entries must arrive at the *Your Computer* offices by the last working day in May 1985.
- Each person may enter the competition only once.
- Entries to the competition cannot be acknowledged.
- No employees of Business Press International or their relatives may enter the competition.
- The decision of the editor is final.
- No correspondence on the result of the competition will be entered into.
- Business Press International assumes no responsibility or liability for any complaints arising from this competition.

WITH 128K of memory to play with what sort of games would you like to see developed? Write down a short plot for a game and if you feel like it you could even draw a picture of the leading characters — if your wax crayons run to it even a potential screen shot.

Then we want you to think of the five worst computer games you have ever paid money for. If Firebird can produce a compilation tape of the worst they have ever had sent to them we're sure you can do better given the hundreds of other software houses which have produced rubbish only to sink without trace or who have survived one or two poor quality games yet have gone on to produce all-time classics.

Criticism in itself is not enough — we want you to name the guilty games that have sent you to sleep at the screen and show your own creativity with an idea to run on the Atari 130XE.

YOUR COMPUTER COMPETITION

Don't forget to enclose this coupon, or a photocopy of it, when you send your idea, which can be written or drawn or both, for a great new game plus your list of five bad programs, to *Your Computer*, Room L221, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.

THIS ARTICLE describes a machine-code routine which adds a number of new commands to Spectrum Basic including several which permit the design and control of sprite graphics.

A previous article of mine on the subject of sprite graphics appeared in the January 1984 issue of *Your Computer*. This new routine has a number of new improvements over the earlier version. Because the sprites can now be controlled with Basic commands, instead of using Pokes, programming is simpler and the program itself is easier to read. Sprites can now be animated.

Up to four frames can now be defined for each sprite and the routine automatically switches from one frame to the next at a chosen speed. The method used for printing sprites has also been made faster, and sprites can move over other subjects on the screen without erasing them.

The routine can control up to eight sprites on the screen at a time. An interrupt routine which is called every 1/50 second while your program is running handles all the work needed to move the sprites, animate them, and detect collisions.

A hex dump of the routine is given in listing 2. The loader program — listing 1 — allows you to enter the machine code one line at a time. After each line you must input a checksum. If the checksum is incorrect the line must be retyped. When you have finished typing in the machine code, it should be saved to tape or microdrive before you run it.

The extended Basic is switched on with:

RAND USR 6000

SPECTRUM SPRITES

Robert Newman controls sprites in Basic.

This command must be given before you can use any of the new commands, and it should be the first line of any program which uses the extended Basic. The new commands are all preceded by an exclamation mark and can be typed in capital or lower case letters. Most of the commands must be followed by several numeric expressions — a number or a variable.

The !Doke and !Data commands will also accept hex numbers as a dollar sign followed by up to four hex digits — e.g., $FE59. If a command cannot be executed for any reason, the program stops with an error report as normal. Some of the commands have new error messages, for example an !Until which was not precedented by !Repeat gives the error "Mismatched Until".

!GRAPHIC character number: Character number must be in the range 1 to 32. This command tells the routine where to store the character pattern in the !Data command.

!DATA line1, line 2 . . .: This command can be followed by up to 16 numeric expressions, one for each line of the character being defined. Each numeric expressions can be a decimal number — maximum 65535 — a hex number, or a Bin number.

!CHAR sprite number, character 1 (, character 2 . .): This command shows what graphic character to use when printing the sprite. If you want the sprite to be animated, you can give a list of up to four character

(continued on next page)

(listing 3 continued on next page)

(continued from previous page)

numbers, and the routine will automatically switch from one frame to the next at a speed set by the !Frames command.

!FRAMES sprite number, delay: Delay can take values from 1 to 255, and controls the speed that the routine switches frames for an animated sprite.

!ON EDGE sprite number, edge action: This command controls what happens if a sprite reaches the edge of the screen. If edge action = 0, the sprite continues moving with wrap-around. A value of 1 causes the sprite to stop. A value of 2 makes it bounce.

!ON HIT sprite number, hit action: If hit action = 0, the sprite continues moving if it hits another object on the screen. A value of 1 makes it stop. !SPRITE sprite number, x, y: The sprite is printed on the screen, where x and y are the pixel co-ordinates of the top left-hand corner of the sprite's position.

!SPRITE sprite number, x, y, xmove, ymove, steps: The sprite is printed at position (x,y), and it then moves away for a specified number of steps — 1 to 254. It moves by xmove and ymove pixels at each step — possible values are from −8 to +8. If steps = 255, the sprite moves continuously.

!ERASE sprite number: The specified sprite is erased. !ERASE 0 will erase all active sprites.

!DI and !EI The interrupt routine which moves the sprites is switched on automatically by the Rand USR 60000 command, and normally continues running while the Basic program runs. It can be switched off by !DI and re-enabled by !EI.

To find out the position of a sprite at any time, or to examine its collision flag, the following user-defined functions can be used — where S = sprite number from 1 to 8:

```
DEF FN X(S) = PEEK (63727 + 32 * S) :
  REM X CO-ORDINATE
DEF FN Y(S) = PEEK (63728 + 32 * S) :
  REM Y CO-ORDINATE
DEF FN C(S) = PEEK (63722 + 32 * S) :
  REM COLLISION FLAG
```

The collision value is zero for no collision, 1 at the edge of the screen, and 128 when colliding with background or another sprite.

!PUT character number, x, y: The specified graphic character is printed on the screen at position (x,y).

!REPEAT: UNTIL condition: These two commands are found in Pascal and structured Basics. Any commands between the Repeat and the Until will be repeatedly executed until the finishing condition becomes true.

!DOKE address, value: This command does a double Poke of a 16-bit value to two consecutive addresses. Hex numbers can be used for the address and for the value to be poked.

!SET INK old colour, new colour: This command changes one ink colour on the screen to another colour. This can be used to make a picture appear instantly on the screen by first drawing it "invisibly" with its ink colour the same as the background paper colour and then changing the ink colour to make the picture appear.

!SET PAPER old colour, new colour: This command changes paper colours.

!SCREEN paper colour, ink colour: This command changes the colour of the screen without erasing its contents.

!BREAK OFF !BREAK ON: These commands disable or enable the break key.

!ZAP: This command makes a short zapping sound like a laser.

!NOISE length: This makes white noise for a time depending upon length, which can take values from 1 to 255.

You can test the routine by typing in the short demo program in listing 3. This program shows how to set up sprites and get them moving, either under computer control, or in response to the keyboard. Before you can type in any of the new commands, you must type Rand USR 60000.

This command switches on the extended Basic and lets the new commands be recognised and interpreted, and so it must also appear as the first line of any program.

Listing 4 is a graphic character editor program which you can use to design graphics instead of using the !Graphic and !Data commands. The 32 graphics characters are stored in memory between addresses 64280 and 65367. The editor program lets you design graphics on a large 16 by 16 grid and store them in the memory. The character set can be saved and loaded into another program to be used by the sprites routine.

If you would like a copy of the programs on cassette, together with information on using the routine, please send £3 to R. Newman, 65 West St., Dundle, Peterborough PE8 4EJ. ■

QL SPRITES

Mark Jones and machine code sprites.

AS THE STARVATION of QL games software continues you may be thinking it is about time you wrote some of your own. The following procedures are designed to allow you maximum flexibility at machine code speeds with operations for controlling a variable size spare screen and up to 65,535 sprites of variable dimensions.

To create the machine code, first of all copy program 1, line for line and save it to Microdrive cartridge. Now try running it. If you have an error, correct it, resave the Basic program and rerun the program with Run 20. It is important that line 10 is not executed again as this is the instruction which reserves procedure space, hence Run 20. Once the Basic program has run error-free you will be told to press any key to save the data. Put a cartridge in Microdrive 1 and the code will be automatically saved to this cartridge.

Machine-code procedures work in exactly the same way as Basic procedures except that memory must be reserved for them before any Basic procedures are present in memory. The normal practice is to set up these procedures in a boot program — see program 3 — and initialise them as soon as the computer is powered up.

You may then load up with a Basic program which contains Basic procedures. Do not define Basic procedures in the boot program. To check that your procedures are in place, once the computer has been booted with program 3, type SCR_FETCH. If the computer gives no error then your procedures are all ready to be used. At this point SCR_FETCH has no effect as no spare screen has been defined.

Until the screen procedures have been

Procedure definitions.

All parameters in brackets are optional.
SCR.ON (Y,DP):Turn spare screen area on defau t Y=C, depth=256
SCR.OFF:Turn spare screen area off
SCR.STORE (Y):Copy screen area from line Y depth DP to spare screen
SCR.FETCH (Y):Move spare screen down to line Y
SCR.SWOP (Y):Swop screen from line Y with spare screen area
Default value of y is that used for SCR.ON
**Depfth of area moved is always that specified in SCR.ON
All sprite procedures default to sprite 0 if no sprite number is included
CREATE.SP (#N),WD,DP,X,Y, (COL1), (COL2)..., (COL8)
Creates sprite N, of width 4*WD pixels, depth of lines, from the screen at X,Y. Up to 8 transparent colours allowed (COL1) to (COL8)
PRINT.SP (#N), (X,Y):Print sprite N AT X,Y
MOVE.SP (#N), X,Y:Move sprite N TO X,Y
SAVE.SP "FILE", A,B:saves sprites numbered from A to B to given file
LOAD.SP "FILE":Loads sprites from given file
TRANSP (#N), 1 OR 0:1 turns sprite N's transparency mode on, 0=off
FLIP (#N), 1 CR 0:1 turns sprite N upside down, 0=right way up
MIRROR (#N), 1 OR 0=1 turns sprite N's mirror image mode on, 0=off

(continued from previous page)

turned on with the SCR.ON command they have no effect. Typing SCR.ON 'y', 'n' will create a spare screen in the common heap which corresponds to an area n lines deep y lines down the screen. SCR.ON will default to a full-size screen if no parameters are specified. If there is not enough room for the spare screen an out of memory error will occur. Using SCR.STORE 'y' will copy that area of screen 'y' lines down the screen into the spare screen buffer.

If no parameter is specified here, as with all the other screen movement commands, the default value of y will be that first specified in SCR.ON. SCR.FETCH 'y' brings down the current spare screen to a point y lines down the screen. SCR.SWOP 'y' swops the area of screen y lines down the screen with the spare screen buffer.

The co-ordinate system used throughout is one where the top-left corner is 0,0 and the bottom-right is 255,255. This co-ordinate system is used for Mode 4 sprites as well.

To redefine the size and default position of the spare screen it must be first turned off with the SCR.OFF command. Use this command also if you have run out of memory, as it releases memory for other jobs. If you are very low in memory, Microdrive operations become very slow. Since one of the main uses of the spare screen is to allow Mode 8 sprites to be transparent I will explain this aspect in more detail.

When a Mode 8 sprite is first created you are given the choice of defining certain colours within the sprite as being transparent. This has no effect on the sprite when its transparency flag is off but when the flag is on those transparent colours are replaced by dots from the equivalent position in the spare screen.

If the spare screen buffer was, for example, only 50 lines deep and positioned at the top of the page then the sprite might not be over any of the spare screen, in this case the transparent dots will be their normal colour.

Thus by having a spare screen which is a duplicate of the real screen and by giving the sprite a border of transparent dots the sprite could move around the screen not disturbing anything on the screen. If this has all seemed a little complicated, you may find it easier to understand if you type in the demonstration program, program 2, and run this.

The reason why Mode 4 sprites do not work in transparent mode is that in Mode 4 each dot is only defined by two bits, allowing four colours: black, red, white, and green. In Mode 8 each dot is defined by four bits, of which one bit corresponds to Flash, the other three bits combine to give eight possible colours. I use this bit instead to correspond to a transparent dot.

This allows high-resolution transparency e.g., a sprite of a circle could be easily defined which when passing over anything on the screen would allow one to see through the hole in the middle of the circle to what was on the screen.

When a sprite is created it is saved on the QDOS common heap, if there is no room for it an Out of Memory message will be given. This means you do not have to allocate large areas of memory even though you are using say, three sprites. At the end of the sprite code, loaded into the RESPR area, there is a table with a pointer to each sprite.

If there is no sprite for a given number then the entry in the table is zero. This means that

```

you may have as many sprite pointers as you have memory between the end of the machine code and the top of physical Ram. The sprite system automatically detects this and will limit you to however many sprite pointers it can fit in. Thus to allow yourself more sprite pointers use a larger number in your RESPR command.

Since the machine code takes up 2,360 bytes plus another buffer on top of this, a calculation for 'x' number of sprite pointers is as follows:

```
respr (2360 + 300 + x*4)
```

Obviously by giving yourself a lot of room e.g., RESPR (4000) you should never run out of sprite pointers, unless for instance you had a memory expansion board and were using the routine to create cartoons with hundreds of frames, feasible if you have half a megabyte extra!

To save and load sprites I have created two procedures SAVE_SP and LOAD_SP. Both procedures require a string parameter first e.g., "mdv1-sprite-data" which is the device to or from which you are moving the sprites. SAVE_SP also requires two more numbers which are the top and bottom number of the sprites you are saving. For example, to save sprite #20, sprite #21....to sprite #30, to the network you would type SAVE_SP 'neto-1' ,20,30.

Those sprites that had not been defined, between these two limits, would not be saved. Thus to save all the sprites in memory you might specify the range 1 to 1000 as only the sprites that actually existed would be saved.

Only on the SAVE_SP command are you allowed to use a sprite number that is out of range for the sprite pointers. This is because the save routine scans up the pointers saving all the sprites and automatically stops when it reaches the top of Ram. The LOAD_SP routine automatically loads sprites back to the Sprite numbers from which they were saved. N.B. if a sprite number being loaded is too large for the pointer table, the load routine will stop.

If you had two lots of sprite data you wished to combine both of which, for, example, held sprites 1 to 10, you would have to load up with one block of data and then print each sprite on screen and pick it up again from screen using CREATE_SP to move it to another sprite number.

For example, to move sprite #4 to sprite #24

```
PRINT_SP #4,0,0 :
CREATE_SP #24,4,16,0,0
```

You could then load up with the other set of sprites and save the combined set. It would be very easy to write a machine-code routine to duplicate sprites and I am sure the more adventurous of you could have a go at this.

To create a new sprite is very simple, it is in fact very similar to defining a window. CREATE_SP must be followed by the width of the sprite — number of pixels/4, the depth — number of rows, the screen x,y co-ordinates at which the graphics which will become the sprite are located.

If it is a Mode 8 sprite you may then follow this with up to eight colours which are the colours of the pixels on the sprite which will be transparent in transparent mode. These colours are the normal basic ink colours i.e. black=0, blue=1, red=2 etc.

The position of a sprite can be altered two ways, first using MOVE_SP x,y which will not print the sprite or using PRINT_SP x,y which will print the sprite. PRINT_SP does not actually require co-ordinates and defaults to the last position it was printed at or moved to.

The sprite flags are independent for each

sprite and are preserved when the sprite is saved, as is the sprite position. Transp puts the sprite into transparent mode. Flip turns the sprite upside down and Mirror reflects the sprite about its centre. The sprite routine is slightly slower in transparent mode and much slower in mirror mode, flipping has no effect on speed.

NORMAL SPRITE = 29 prints per sec
TRANSPARENT SPRITE = 18 prints per sec
This figure will vary with the number of transparent dots and whether the sprite is completely over spare screen.
FLIPPED SPRITE = 29 prints per sec
MODE 8 MIRRORED SPRITE = 13 prints per sec
MODE 4 MIRRORED SPRITE = 11 prints per sec
TRANSPARENT MIRRORED SPRITE = 5 prints per sec

Obviously mirrored sprites are a luxury and if you require speed you should define a separate sprite as being the mirrored version of your sprite. A large amount of processing has to take place mirroring the normal sprite data when the mirror flag is on.

Combining the spare screen and sprite procedures can produce some interesting effects. ■

PROCEDU

MY PROGRAM gives the Spectrum all the advantages of procedures and local variables — a BBC Basic nicety. To make the five new commands offered by the program easy to use you simply put them in inconspicuous Rem statements, without having to bother with the hassle of machine code calls. As you would expect, the program is written in machine code; about 1.5K of it. Listing 1 shows the machine code. The program Pokes the machine code into a graphics area. The machine code is stored in 26 Data lines, each one — save the last — holding 64 bytes of code. Each code block has its own checksum to ensure its integrity.

Once you've got an error free version in memory, you can save the code using:

```
SAVE "PROC CODE" CODE 63765, 1603
```

You can reload at any time using:

```
CLEAR 63764: LOAD ""CODE
```

As I said earlier, the new commands are put in Basic Rem statements, with a limit of one command per Rem. For a program to use the new commands its first line must be Randomize USR 63765

Procedure commands

For the moment I'll concentrate on the commands directly connected with procedures: Defproc, Proc and Endproc. A procedure is a block of Basic code preceeded by a Defproc and terminated with an Endproc. To save the impersonal approach of calling blocks of code using line numbers, procedures use the more flexible and friendlier system of calling blocks of code by a name. Usually the name of a procedure would be short and give some indication of the procedure's function.

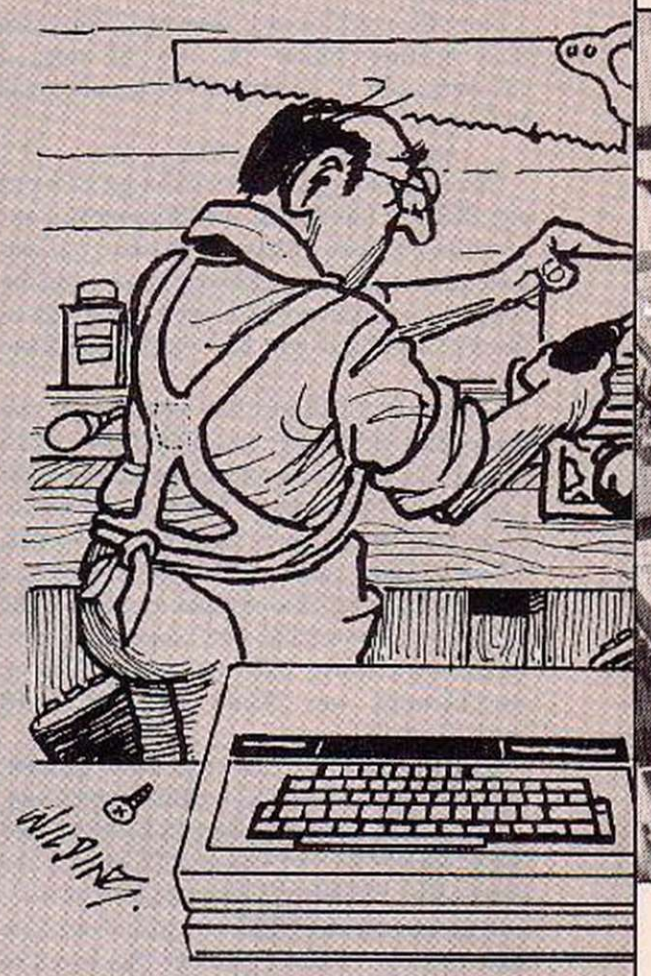
You can put spaces in but the computer ignores them. You can also put the names in either upper or lower case, or even a mixture of the two, but it doesn't make any difference. The same is true of the commands themselves, although its wise to put them in upper case to make the program more readable. Sometimes it's a good idea to highlight the start and end of procedures in inverse video or in different colours to make it less difficult to locate when debugging. The general format of a procedure would be as follows:

```
8000 REM DEFPROC thing
8010 . . . . . .
8020 . . . . . BASIC code
8030 . . . . . .
. . . . . .
8200 REM ENDPROC
```

That's all very well but you need some way of actually calling the procedures, so along comes Proc, the "hi-tech" equivalent of Gosub just as Endproc is the equivalent of Return. Again, the Proc can be put in a Rem statement anywhere in the program. It is followed by the name of the procedure you want to call, so "Proc thing" calls the procedure at line 8000. The space in between Proc and the name is optional. You might wonder how the program knows that there is a procedure called "thing" if the computer has never previously executed line 8000. When the Rand USR is used the machine code looks through every line in the program.

If any line has a Defproc in it then it looks up the procedure's name and what line it's on and stores that information in a special area of memory. In fact, this special area of memory is at the start of the variables area. The machine code sets up a string variable called @$ and puts any data about procedures and other info in that string. Since you can't change a @$ variable from Basic you can't corrupt it — unless you use some vicious Pokes! However, you can use Clear and scrub out all the variables. The program won't do anything drastic like crash but just gives an error report. As with Gosubs you can nest procedures, but with a limited depth of 255 levels.

There is one more twist to the story of procedures, the concept of parameters. When you write a normal Basic subroutine it usually has to rely on variables defined somewhere else in the program to perform its function. Although passing numbers to a subroutine in this way is quite workable its certainly not the most elegant of methods.



Fortunately, there is a neat way of passing values to a procedure that works in a similar sort of fashion to the Def FN and FN commands of normal Sinclair Basic. Say you want a procedure called 'print' that puts an X at a certain line and column on the screen. You would write it like this:

```
8000 REM DEFPROCprintx,y
8010 PRINT AT y,x;"X"
8020 REM ENDPROC
```

The contents of the brackets at the end of the Defproc statement define what variables

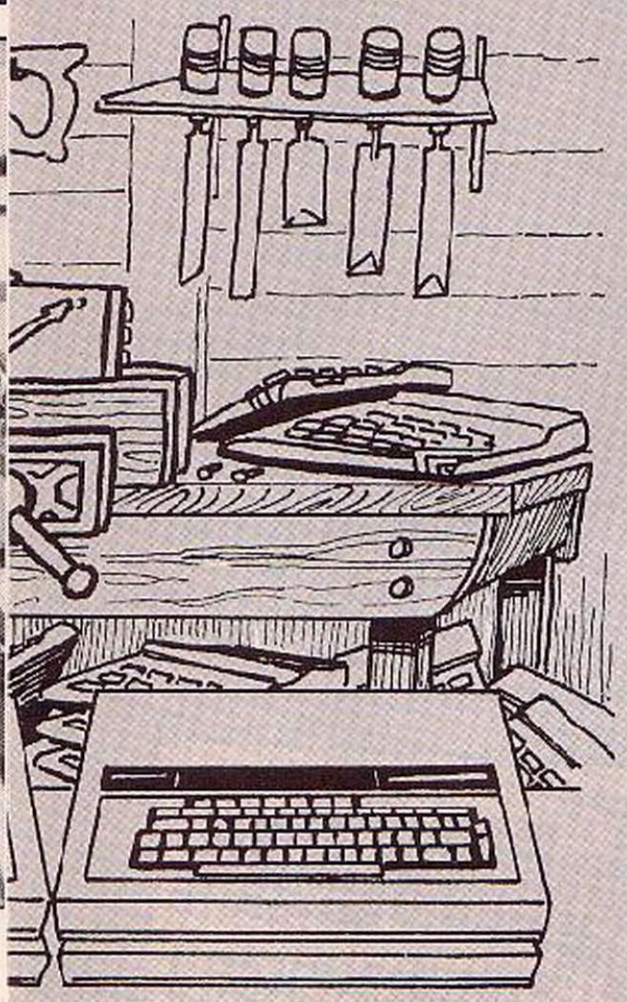
URES



Richard Taylor with a program to allow your Spectrum to simulate the BBC's Proc commands.

are used by the procedure. The associated Proc might look something like this:

```
20 Proc print(10, 12)
```

When the print procedure is called, the number 10 is placed in x, and 12 in y. The x and y at line 8000 are called the formal parameters, the variables that will hold the values given by the Proc. A procedure can have as many formal parameters as you like, including none at all — in which case there's no need for the brackets. The variables themselves can be of any type normally found in Sinclair Basic, except for array variables of any sort but its unlikely that you would want to use these for passing values anyway. Therefore a, ab, a$ and a long named variable are all valid but a(1,z) and A$(3) are not.

In the Proc statement you can either use numbers, strings — enclosed in the usual quotes — or variables — don't mix these up with the formal variables — but there must be the same amount of them as in the corresponding Defproc and they must be of the right types. If the first Defproc formal variable is a string then the first Proc expressions must also be a string. You're not allowed to do any mathematics in a Proc statement, so −1, 0.1 and "a" are valid but 1*2, SIN(0.1) and STR$(1) are not. The following procedure draws a rectangle of a specified size and position:

```
8000 REM DEFPROCrectangle (x,y,a,b)
8010 PLOT x,y
8020 DRAW a,0: DRAW 0,b
8030 DRAW −a,0; DRAW 0,−b
8040 REM ENDPROC
```

Four numeric parameters

The procedure has four numeric parameters. The first two give the position of the rectangle's bottom left corner, the penultimate one gives the width and the last one the height. Procrectangle (88, 68, 80, 40) draws a rectangle of height 40 and length 80 slap bang in the middle of the screen.

The last two commands offered by the program, Local and Recall are concerned with local variables. The concept of local variables can be difficult and confusing for one to grasp but, basically, it allows you to have two variables with the same name but with different values in the computer simultaneously.

A lot of programming errors are caused by using the same variable twice for conflicting purposes. These sort of bugs are often particularly difficult to track down. Such a problem shouldn't really occur because there are 26 string variables to choose from, 26 loop control variables and an infinite number of numeric variables. However, some variables tend to get used a lot more than others. For instance a,b,c,d for numerics, a$,b$,c$ for strings and i and n for loop controls.

Programmers seem to have an unexplainable aversion to using k,w, and the like. What the Local command does is make a second copy of certain variables and store them in its safe cubby hole at the start of the variables area. Then with another command the second copy can be miraculously recalled. The point of the whole exercise is that if you use a new variable in a procedure then you can localise it before you actually get down to using it so that when you unlocalise when you're finished you can be sure that its got its original value back again. Another part of the program won't even know that you've been secretly tampering with some of its variables. The Local command is followed by one or more variable names separated by commas.

These are the names of the variables that you want localised. The command that does all the unlocalising business in a procedure is our previously introduced friend, Endproc. As well as returning control to theline after calling Proc, Endproc also unlocalised all variables that were localised in that particular procedure. For instance

```
8000 REM DEFPROC useless
8010 REM LOCAL a,a$
8020 LET a = 1
8030 LET A$ = "This procedure doesn't
do anthing"
8040 REM ENDPROC
```

does nothing because the two variables a and a$ changed by the proceudre are localised so that when the procedure is terminated they changed back to their original values. Mind you, that's only true if a and a$ were defined when the procedure was called. If they weren't then the Local command would have great difficulty in localising them — it wouldn't stop with an error though — and Endproc would have as much difficulty delocalising them; with the result that Endproc allows the variables to retain their values as defined in the procedure.

(continued on next page)

(continued on next page)

(continued from previous page)

There is one loop-hole to all this, you might want to localise the formal parameters of the procedure. The problem is that you can't because by the time the computer reaches the first line of your procedure the formal variables have already been changed. To save such hassles, before the values of formal variables are changed the computer automatically localises them. Therefore don't try and return values in one of the formal parameters of a procedure, it will only end in disaster.

The last command to be discussed is Recall. Recall is a lonely command, it doesn't have any arguments after it. Recall is much like an Endproc except that it doesn't do 'the return from procedure' bit. What it does do is unlocalise all previously localised variables in a procedure. If you have a great desire to do so, for some obscure reason, you can localise variables outside of a procedure using a combination of Local and Recall commands.

The program adds a number of new error reports to Sinclair Basic. They are produced in much the same way as normal errors, with the exception that they are not preceded by an alphanumeric code. The line where the computer stops because of an error is not always where the error actually is. For instance, if the computer stops with 'Syntax error' or a Proc line then the error might lie with the associated Defproc. Below is a full list of all the new reports and their possible reasons for being produced.

'Invalid procedure name'	— You've tried to give a procedure name that doesn't consist of just letters.
'Data area cleared'	— You've used a clear statement and erased the program's safe cubby hole at the start of the variables area.
'DEFPROC not found'	— You've used Proc with the name of a procedure that doesn't exist.
'Return stack full'	— You can 'only' nest procedures up to a limits of 255 levels. This is the error you'll get if you exceed that limit. This will only normally happen if you manage to write a procedure that calls itself, either directly or indirectly.
'ENDPROC without DEFPROC'	The computer's come across an Endproc and it wasn't executing a procedure at the time.
'PROC parameter error'	— There's either a different number of parameters between the associated Proc and Defproc or some of them aren't of the right type.
'RECALL without LOCAL'	— You've tried to use Recall outside of a procedure without previously using Local.
'Syntax error'	— This can be caused because of a variety of reasons, such as missing out a comma or bracket.

The program can also produce normal Basic errors, most noticeably error C — "Nonsense in Basic" and 2 — "Variable not found".

Listing 2 gives a simple demonstration of procedures as applied to a real, if very simple, application. The application I'm talking about is a program that allows you to draw lines around the screen using the cursor keys. ■

MULTI

THIS PROGRAM can mix characters from four character sets on one screen or even on one word. Furthermore it features a page editor with a cursor moving in the four usual directions. Also it is possible to access an instruction page at any time.

Output to the printer doesn't use the Copy command and you can print individual lines.

Enter listing 1 which is the main program.

```

TIFONT

Save and verify it with any file-name.

Enter listing 2 which creates a machine code file. When you have run it, save the machine code with:

SAVE "M.F.T.Code" CODE 30464,2355

Now load the main program and run it and it will ask for the machine code. Once you have them together save and verify them by entering Goto 660.

Multi-Font Typewriter

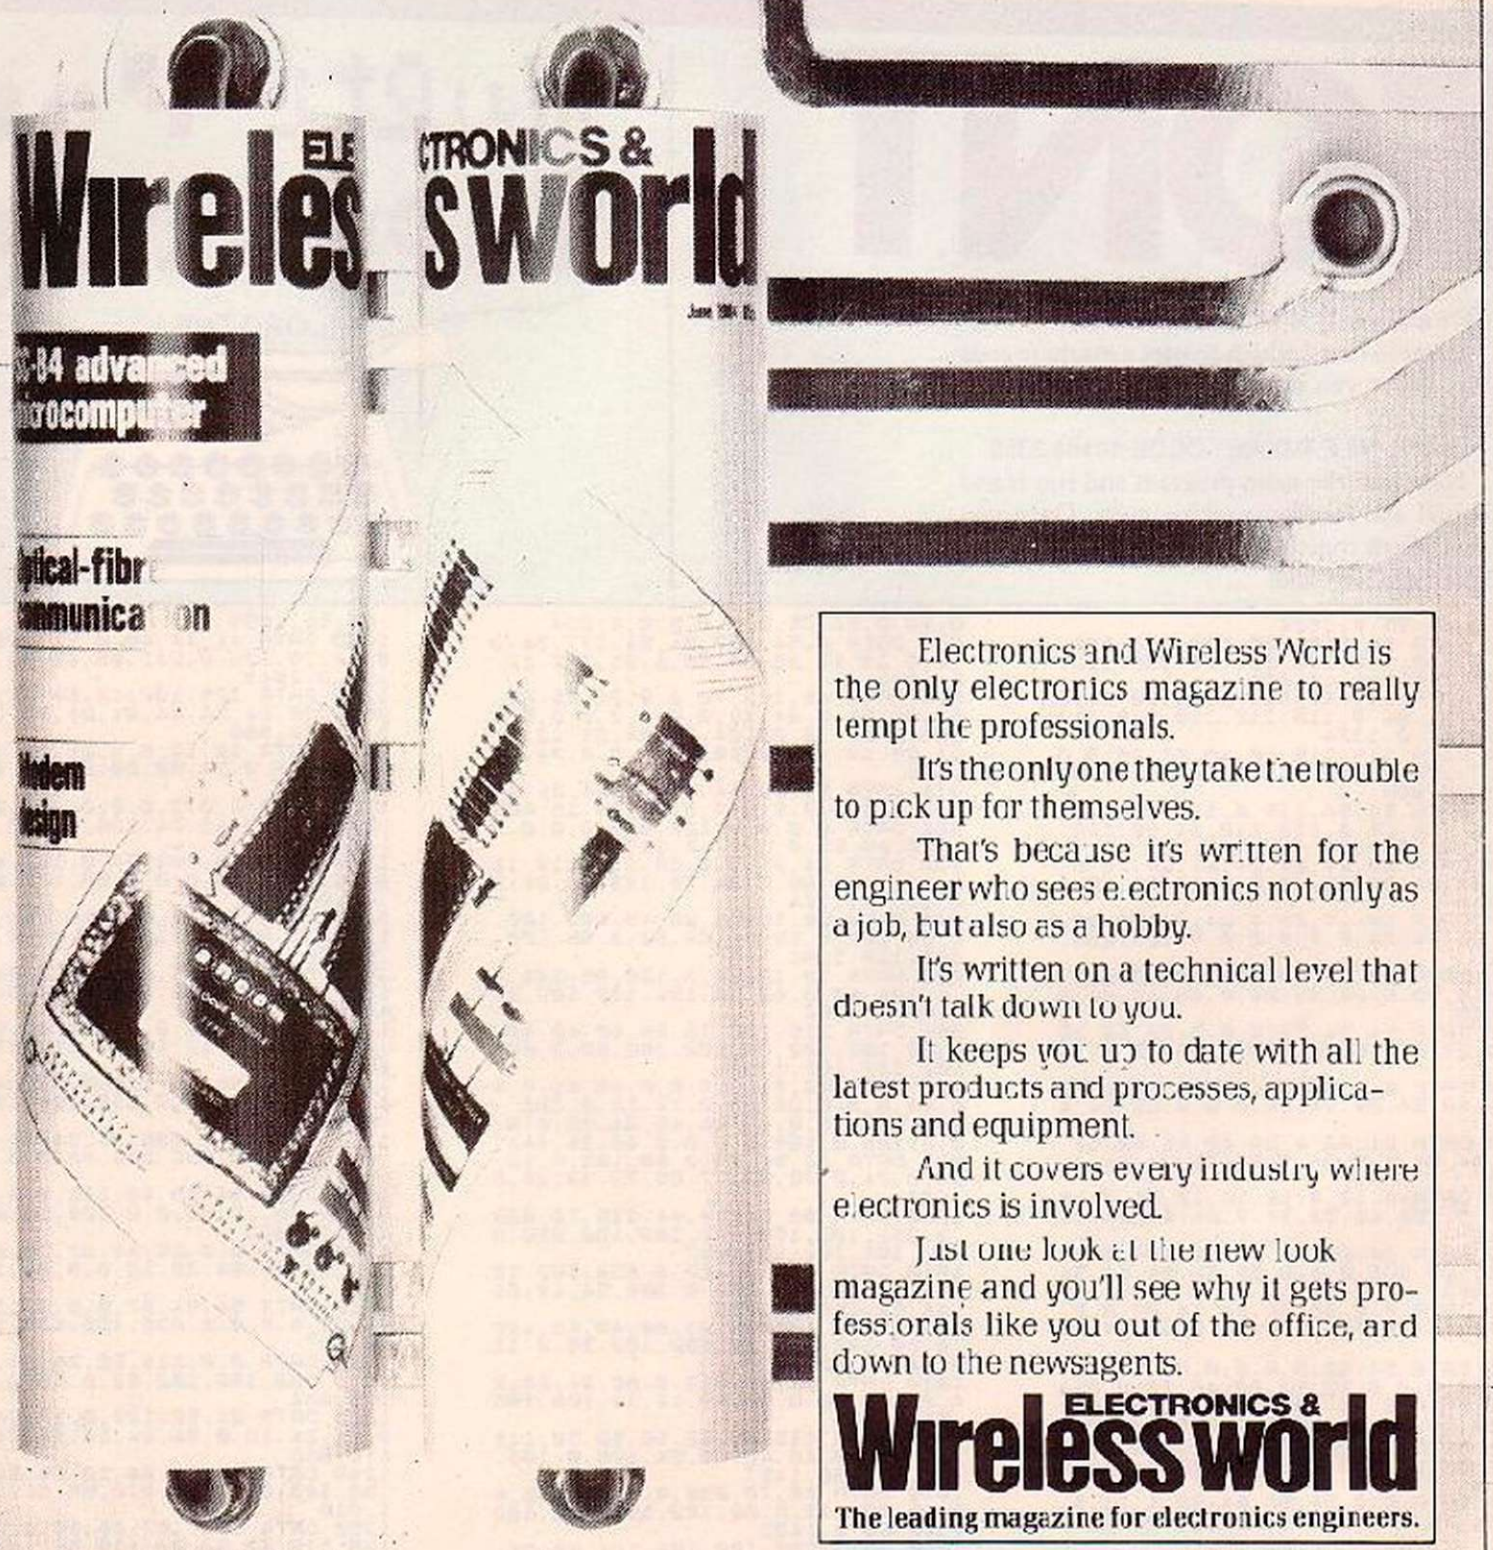
THE ELECTRONICS MAGAZINE PROFESSIONALS CAN'T RESIST.



Electronics and Wireless World is the only electronics magazine to really tempt the professionals.

It's the only one they take the trouble to pick up for themselves.

That's because it's written for the engineer who sees electronics not only as a job, but also as a hobby.

It's written on a technical level that doesn't talk down to you.

It keeps you up to date with all the latest products and processes, applications and equipment.

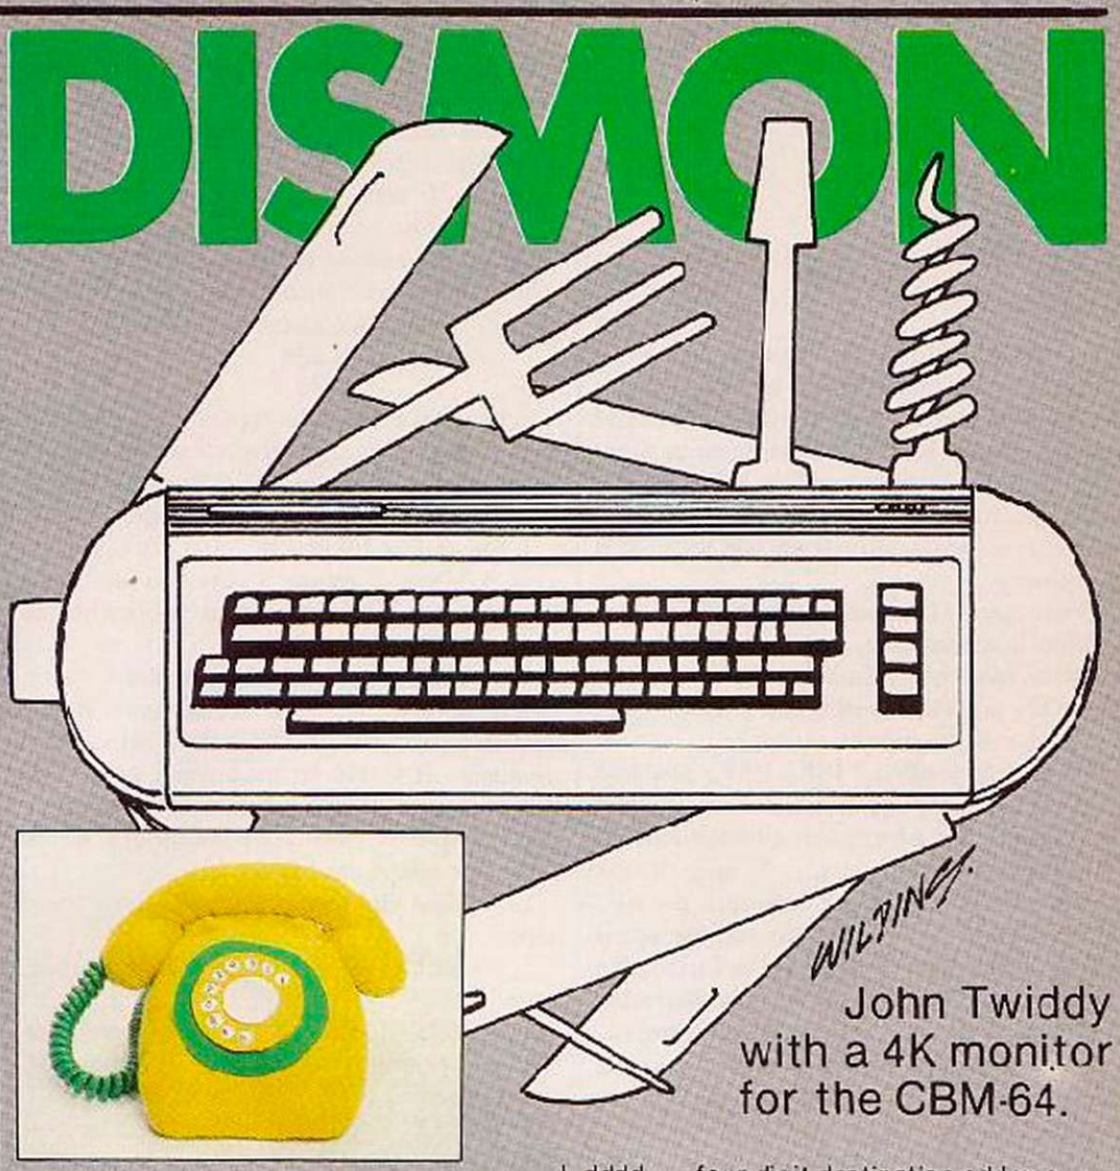
And it covers every industry where electronics is involved.

Just one look at the new look magazine and you'll see why it gets professionals like you out of the office, and down to the newsagents.

ELECTRONICS & Wireless world

The leading magazine for electronics engineers.

DISMON



John Twiddy with a 4K monitor for the CBM-64.

THE FOLLOWING monitor which is easily as good as any you would buy in a shop, is 4K long and resides in memory at 49152-53247 ($C000-$CFFF hex). The reason for its position at the top of memory is in order to keep it out of the way of any Basic or machine code program you are working on at the time. Although, as explained later, it can easily be moved elsewhere if desired. Due to the fact that the program is placed at $C000, it is not necessary to move any of Basic's pointers to protect it from being corrupted and even if you relocate it into the Basic memory area, it will automatically check if it is below the top of memory pointer and move the pointer down to protect itself if necessary.

Before I go into all the advanced features of the Dismon program, I will first explain how to enter the program. You should type in the Basic Hex loader program — listing 1 — along with all the data statements containing the hex dump — listing 2. Once this is complete, you should save the Basic program in the normal way and then Run it. The hex loader has many integral checks so that it should be able to trap out any typing errors you've made, giving the type of error and where it occurred. In the unlikely situation of Basic giving an error — such as type mismatch error — then typing Goto 300 should yield whereabouts the error occurred.

Assuming the program has run successfully, you should now enter Dismon by typing the command:

```
SYS 49152
```

All going well, it will display a copyright message and several lines showing the present state of the microprocessor's registers. I will explain the meaning of these later but for now you should make use of the save command within Dismon to save the machine-code program itself by entering the line:

```
S "DISMON 64",01,C000,D000,01
```

If you wish to save it to disc, replace the first 01 by a 08. The other parameters of the above command are explained fully later. In order to load the saved Dismon program back later, you would type

```
LOAD"D SMON 64",1,1
```

or

```
LOAD"D SMON 64",8,1
```

depending on whether you use cassette or disc, followed by typing New in order to set the end of program pointers back.

This program is available on the Telsoft service

Once Dismon is entered by the command SYS49152, there are, in addition to the normal screen editing facilities, two special functions:

F1: Clears screen from the cursor position to the end of the line.

F3: Clears screen from the cursor position to the bottom of the screen.

Commands are entered by typing a single alphabetic command character followed by the appropriate parameters.

The various forms of each command are detailed below. The abbreviations are:

ssss	four digit start address
eeee	four digit end address
dddd	four digit destination address
dd	two digit device number
bb	two digit byte value

Any of the above numbers used in any command are assumed to be in hexadecimal so no dollar sign is necessary but decimal can be implied instead by enclosing the number within two decimal points. (E.g. D 2000 is exactly the same ass D .8192.) The format of all commands is critical including all spaces.

I will deal with each command in alphabetic order showing the different options available within each command:

A ssss — Start assembly mode. The program than automatically displays .> ssss and positions the cursor ready to allow you to continue typing the opcode and operand of each line in turn, a null line terminating assembly. In addition to being able to specify the operand in hex or decimal, it may also be input as the Ascii value of a character by preceding it with an apostrophe or as the screen value of a character by preceding it with an exclamation mark.

The operand of a branch instruction may also be specified in one of two ways. It may be input as a single byte branch factor or as a two byte absolute destination address. One very useful feature is that you are able to input large quantities of NOP or BRK instructions in one go by placing the quantity required, up to 255, after the instruction itself. For example NOP 07 would place 7 NOPs. The above is best clarified by an example:

```
.A 1800
.> 1800 LDX #03
.> 1802 LDA #!M
.> 1804 STA 1024,X
.> 1807 LDA #'N
```

(continued on next page)

```

C ssss eeee dddd — This compares the block of memory ssss-eeee with the block starting at dddd onwards and prints out the addresses of any differences. It may be terminated by Stop.

D — Continue disassembling from the last place referenced.

D ssss — Disassemble from ssss to the end of memory.

D ssss eeee — Disassemble from ssss to eeee.

When disassembling, each line is shown one at a time followed by the monitor waiting for a single key press or the shift key. Pressing Stop terminates disassembly.

While disassembling JSR, JMP, Absolute and Zero page references and branch instructions, the operand destination may be 'followed' by pressing the F key. If the instruction is a memory reference — e.g., LDA 3D78,X — then it shows you the actual values of the bytes whereas if the instruction is a JSR, JMP or Branch then disassembly continues at the operand destination. Pressing R returns to the point of the previous follow command. Follows may be nested up to 16 times.

If the monitor comes across large blocks of NOP or BRK instructions (more than three), it accumulates them into one line. For example:

```
.> 201D — 203F NOP
```

E ssss — Allows you to Enter Ascii text into memory from ssss onwards. Ascii text and control characters are entered from the keyboard — delete removes the last character, replacing it with a zero byte. This mode is terminated by pressing stop in which case it displays the address of the next character that

H n . . . . — Prints out the hexadecimal of the n . . . . decimal number. For example:

```
.H 326
.014E
```

I bb ssss eeee — increment the block of memory ssss-eeee by the value bb. Incrementing by the hex value FF would of course have the effect of decreasing by one.

J ssss or J or JN ssss or JN — As G except that it places a return address on the stack allowing an RTS terminated subroutine to return to Dismon.

K — This is a very useful command which resets the VIC chip back to its original values and also switches off all the SID chip sound channels. It would be used when you break out of a program using a BRK instruction or Restore and the definable characters, hi-res screen or sound are left on.

L — Load any program into memory from tape.

L "TEST" — Load named program from tape.

L "TEST 2" dd — Load named program from either disc or tape — dd = 01 = tape, dd = 08 = disc.

L "TEST 3" dd ssss — Relocated load — Load named program and place it in memory from ssss onwards instead of where it was saved from.

M ssss — Display eight bytes of memory from ssss onwards.

M ssss eeee — Display memory bytes from ssss to eeee. The printing can be temporarily frozen by pressing a key or stopped by pressing Stop. The Ascii representation of the bytes are also displayed on the right of the screen with a dot representing an unprintable character. Any byte can be altered by changing the displayed value using normal screen editing.

N ssss eeee ssss eeee dddd — New locate. Despite the apparent complexity of this command, it is a very useful function and not too hard to use. It enables you to relocate a program so that it can be executed at another position in memory by changing any references to within one area of memory to point to another area. The program will relocate all JSR, JMP, Absolute, Zero page and Branch references and will indicate an error if a branch reference goes out of range or a zero page reference becomes absolute. Each reference that is changed is first displayed on screen and then it waits for you to press a key or press Shift before the next is done.

If, while searching through the program to be relocated, the routine comes across any invalid opcodes, then it displays the position of the byte and its value and then continues after waiting for a key. The reason for this information being displayed is that it might inadvertently change some data table which it thought was a proper reference.

The parameters of the command have the following purpose. The first ssss-eeee range specifies the area of memory through which Dismon will search, looking for any references to within the second ssss-eeee block and changing them to point to the block of

```

memory starting at dddd.

To demonstrate the use of this command, I will use it to move Dismon to some other area of memory. Dismon normally resides at $C000 to $CFFF. If we wish to place it at $6000, we would first copy the program down into the correct area using the Transfer command which is described later.

```
T C000 CFFF 6000
```

The last three pages — 3 x 256 bytes — of Dismon consists solely of data tables therefore you only need to relocate the first 13 pages of the memory into which it was translated.

```
N 6000 6D00 C000 CFFF 6C00
```

The above command searches through the first 13 pages of the new program looking for any references to the old program and changing them appropriately.

Another example will help clarify the normal use of this command. Assuming you have a program in memory $1000 to $13FF and you wish to insert an extra 16 bytes at $1300. This would require the last 255 bytes to be moved up in memory by 16 bytes. This could be accomplished by:

```
N 1000 13LFF 1300 13FF 1310
T 1300 13FF 1310
```

The fact that it displays every reference that it intends to change means that you can use it to look for references to certain areas of memory. For example, to find any references to locations 0 and 1 would require the following; N ssss eeee 0000 0001 C000.

O — For safety reasons, whenever control is returned to Dismon or whenever a command is executed within it, Dismon automatically switches in the Kernal Rom and resets the Interrupt Vector to the normal interrupt routine. However, for some purposes, such as having interrupt driven music continuing while within Dismon, this might not be desirable so the command O allows you to switch the protection On and Off.

P — Process a program starting at address specified by program counter.

P ssss — Process a program at ssss. This command allows slow monitored running of a machine-code program. As each instruction is executed, the instruction is first shown on the screen along with the current state of all the various registers. It then waits for a key to be pressed or the shift key allowing fairly fast running.

This command as well as being a fairly good way to debug your routines is an ideal way for a beginner to examine what effect all the instructions have on the various registers, particularly the status register. You are also able to affect the operation of the program depending upon what keys you press. If it is displaying a branch instruction then by pressing R, you are able to reverse whether or not the branch is taken. This is useful for existing long delay loops etc.

When the process routines comes to a JSR instruction, there are several options. If the address of the subroutine is within the Kernal Rom ($E000-$FFFF) then the routine is executed immediately without processing unless you press the key to examine it in detail. If the address of the subroutine is not in the Kernal, then it assumes you wish to process each instruction of the routine unless you press D to do it immediately.

Since the constant displaying of the registers and disassembly slow the process command down as well as interfering with anything that the other program might be printing, it is possible to suppress the printing of them by pressing S. In this case it still waits for a keypress or the Shift key between each instruction but by a combination of suppressed output and Shift pressed very fast processing can be obtained although still 500 times slower than normal machine code speed. Pressing S again restarts displaying of the instructions etc.

Q ssss eeee ssss eeee dddd — This command is almost exactly the same as the N command with one difference. Normally the relocate routine displays all the invalid opcodes it finds. However, if you are using the routine purely to find references to some area of memory, then if there are large data tables scattered throughout your program it would take too long to display all the invalid bytes found so this routine only prints out the references found. Don't ask why Q!

R — This displays the current state of the Accumulator, X register, Y register, Stack Pointer, Program Counter, Status register, IRQ Vector and NMI Vector. The status register is also expanded out for easy reference of which flags are set. Any of the values can be altered using screen editing and the new values would be used next time a G, J or P command is used.

S "FILENAME" dd ssss eeee or S "FILENAME" dd ssss eeee bb — This command allows you to save a block of memory to either disc or tape. The end address of the block to be saved (eeee) must be specified as one byte past the last byte to be saved. The second variety of save command allows you to specify a different secondary

(continued on next page)

(continued from previous pege,

address other than the default of zero. The secondary address has the same meaning as in Basic.

T ssss eeee dddd — Transfer a block of memory ssss-eeee to the memory at dddd onwards.

U b . . . — Unhex the one to four digit hex number into decimal.

V or V "NAME" or V "NAME" dd or V "NAME" dd ssss — Verify a program. Same options as Load.

W bb ssss eeee — Write a certain byte to the specified block of memory (Fill memory).

X — Exit back to Basic.

Up Arrow — This alternately switches a printer on and off line to allow you to output disassemblies and memory dumps to the printer instead of the screen. The routine assumes that the printer is device four and that the secondary address required is one.

However, if your printer does not conform to this, they can easily be changed by altering the LDX #04 instruction at $CCE6 to load the X register with the device number of your printer and altering the LDY #01 instruction at $CCF7 to load the secondary address required. For instance, if you use the 1520 printer/plotter then you would use LDX #06 and LDY #00.

As if the above commands are not enough, it is possible to add your own very simply. This is because, whenever Dismon does not recognise a particular command character, it searches through memory from $0800 to $CF00 looking for a sequence of four machine code instructions at the start of every page. If it finds them it then JSR's to that page with the accumulator containing the Ascii of the command character.

Therefore all that is required within your subroutine is to check if it is the correct command and if not, to Return at which point Dismon continues looking through memory for any other routines and if none are found, gives an error. For instance, if you wish to add the '+' command to give the function of clearing the screen it would be done as follows:

```
.A 1C00                 :Start at some
                         page boundary
.> 1C00 SED             :This is the
                         sequence of
                         four
                         instructions
                         that
.> 1C01 CLD             :Dismon uses to
                         recognise an
                         added command
.> 1C02 SEC
.> 1C03 CLC
.> 1C04 CMP#'+          :Was the correct
                         character used
.> 1C06 BEQ 01          :Branch if correct
.> 1C08 RTS             :Not this
                         subroutine so try
                         another
.> 1C09 PLA             :Remove the Error
                         return address
                         from the stack
.> 1C0A PLA             :And the hi byte
.> 1C0B LDA #93         :Now your CLS
                         routine
.> 1C0D JSR FFD2        :Print clear screen
                         char
.> 1C10 RTS             :Return to Dismon
                         to execute next
                         command
```

If, within your extra command, you require to read in any parameters from the remainder of the line, then this would be done by repeated JSR's to a subroutine at $FFCF. Each JSR would return, in the accumulator, the ASCII value of the next character on the line, with a $0D indicating the fianl carriage return.

A couple of final points of interest to the experienced programmer are that Dismon is totally independent of the Basic Rom therefore the Rom can happily be switched out while within Dismon although don't try exiting from Dismon while it is out. Dismon makes quite extensive use of zero page locations for all its commands so the following locations should not be used by your programs; $19-$20, $26-$2A, $45-$4A, $8B-$8F, $A8-$AA, $B0-$B1 and $0240-$0256.

If you don't relish the task of typing in the 4K hexdump then I will supply a cassette copy of the program along with an example of the extra commands in the form of a disc command routine giving you all the normal disc commands including cataloguing for just £3. Write to John Twiddy, 65 Holly Avenue, Wallsend, Tyne & Wear. NE28 6PB. ■

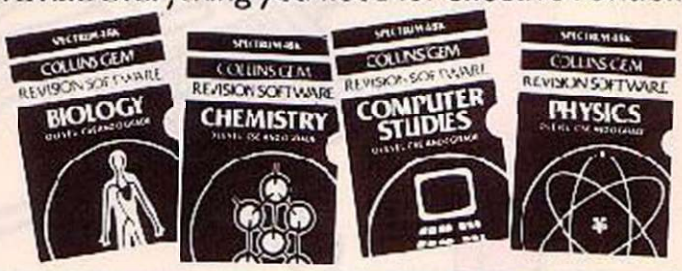
COLLINS GEM
REVISION SOFTWARE
programmed for results!

Collins make revision for CSE, 'O' level and 16+ exciting, fun and more efficient with Gem Revision Software for the Spectrum 48K.

Each tape has eight or nine programs which will thoroughly test your knowledge of each subject – Biology, Chemistry, Computer Studies and Physics. Used in conjunction with the Gem Basic Facts Dictionary included in every pack, the programs provide everything you need for effective revision.



Available now at only £8.95 each (inc. VAT)
Also available for the Commodore 64 at £9.95 each (inc. VAT), publication 27 June.

AMSTRAD ADVENTURE CREATOR

For just £2.99 you can buy THE AMSTRAD PENTACLE, a program which takes all the hard work out of writing adventures on the Amstrad. Just type in the program provided in our £2.99 book, THE AMSTRAD PENTACLE, and follow the instructions, and you'll be creating your own, original adventures. It comes complete with a full set of data for the medieval adventure *Castle of Doom*. So, for just £2.99, you get the book THE AMSTRAD PENTACLE which contains the full listing of the adventure-creating program, full instructions, and a complete set of data for the *Castle of Doom* adventure. You can even market the adventures you write with this package – without paying a penny in royalty!

DYNAMIC GAMES FOR THE AMSTRAD contains 50 exciting games for your computer, including arcade programs, a complete Chess, adventures, and much more. Complete with detailed instructions. Just £5.95.

Both THE AMSTRAD PENTACLE (ISBN 0 907563 70 8) and DYNAMIC GAMES FOR THE AMSTRAD (ISBN 0 947695 16 8) are available from your computer or book store, or by mail (post free) from:

Interface Publications Ltd., Dept. QTYC,

COM

IN THIS ARTICLE, the TC Basic run time system generator — RTSG — will be described. This program generates the TC Basic run time system — RTS; the purpose of this, is to provide the facilities and functions required by TC Basic programs. In addition, the RTS must also interpret the p-code programs.

The RTS consists of a small Basic program followed by a substantial amount of machine code. To construct it, type in the listing of the RTSG in figure 1. Before doing this, type in

D J Piling continues his compiler for the BBC. If you're speed crazy this program is for you.

PILER

PAGE = PAGE + &120

This is necessary because the RTS is constructed at the usual value of PAGE for your system. In fact, the value of PAGE used by your computer, must be entered in line 110. For a Tape based system, this will be &E00 and for a disc system &1900. The RTS is therefore constructed underneath the RTSG in memory.

When you have typed in all of the program, Save it and then go through the usual debugging process. When Run, the RTSG will produce an assembly language listing, this will be followed by a statement of the value of the address of the top of the RTS. Note this number down. Next reset Page to its usual value and type End followed by Run. If everything is OK you will be greeted by the RTS menu.

Three functions are performed by the RTS and can be selected by pressing the number keys 1, 2 or 3. These are to load a code file produced by the compiler into the RTS and form, a free standing module. Second, execute any such module and, thirdly, Save any such module. Initially, you must select option 3. This will allow you to Save your copy of the RTS.

Now reload the compiler into your computer and enter in line 120 the value for the top of the RTS which the RTSG provided you wish. The compiler is now complete and can be Saved.

In the last article, it was described how to compile a program. After following this prescription, you will be left with a file whose name starts with C. and which contains the p code version of your program. The next thing to do, is to Load the RTS and Run it. Now select option 1 and type in the name of the code file when prompted.

This will be Loaded and a module formed which can be Saved with option 3. In the future whenever you want to execute the compiled version of your program, the module can be Loaded and Run and option 2 — execute code — selected. The module will be saved with a file name prefixed by M.

The RTS can be Escaped from and reRun. In addition, if your p-code program gets into an endless loop; Break plus Old will also work.

The TC Basic system, is thus now complete. Some points about its use should be noted. First, there is a limitation on the use of delimiters like Next and Endproc not present in BBC Basic; this is that for each Defproc there can be only one Endproc and for each FOR there can be only one Next. Thus statements like: IF A = 2 Endproc; will not compile.

This is done to protect the programmer; returning from a non-existent subroutine, would have disastrous results. Similar restrictions apply to functions and Repeat Until loops. Secondly, if a Def statement is encountered in the path of execution, it will be treated as an End statement.

The RTS implements code to deal with run time errors: attempts to divide by zero, to take square roots of negative numbers or dimension arrays twice will gracefully terminate execution with an error message and return control to the Basic section of the RTS.

As you can see from the listing of the RTSG the final few lines — lines 6970 to 7270 — are in fact the Basic section of the RTS; procedure Proccopy — lines 6750 to 6830 — is used to copy this Basic down to the usual value of Page. The two Stops in line 6960 are used as a tag for this copying process and must be typed exactly as shown. This piece of the program is just used to handle the RTS menu and the three functions that can be selected: i.e. loading, saving and executing the mc.

Interpret p-code

The machine code part of the RTS has to be able to interpret p-code; it does this by using the opcode number — you may have noticed from the code generation procedures in the compiler that all opcodes are multiples of two — as an index to select the start address of a routine from a jump table. An indirect jump to this address then results in the required function being performed.

Thus most of the assembly language consists of a large number of routines — each represents one opcode. In the listing they can be clearly seen by being split up by blank lines; in addition, each one starts with a label in lower case letters which corresponds to the names of the code generating procedure in the compiler.

Finally, the value of the top of the RTS is printed out so that it can be inserted in the compiler. For a system with a Page value of &E00 this number will be 7040 while, for a system with a Page value of &1900, it will be 9856.

A C30 containing the listings from both articles, TC Basic systems set up for both tape and disc based computers and example programs and code files is available from D J Pilling, 12 Cherrywood Avenue, Anchorsholme, Blackpool FY5 1SU in return for £2.99.

COMMODORE 64, BBC AND SPECTRUM

THE PROGRAMS given here will enable Spectrum, BBC, and CBM-64 owners to download via *Your Computer's* Telsoft service. Each month for each machine we transmit at least one — and usually two — of the main programs appearing in the current issue. Also available is the full user to user communications program, Dialsoft.

So far OE LTD's Telemcd 2 and the VTX 5000 modems have been tested with the BBC and Spectrum but the service also works with

TELSOFT

A reminder of how to use the Telsoft service.

a number of other makes. For the CBM-64 it will initially only be available with the OEL Comms pack together with the Telemond 2 or similar modem; later we hope to adapt the service to work with Commodore's modem.

To enter the download program first type in the hexloader for your machine — figure 1 — and then enter the machine code — figure 2. Once the program has been saved you can run it by entering CALL &6000 on the BBC, SYS 51000 on the CBM 64, RANDOMIZE USR 60000 on the Spectrum.

To find out what is available and how to receive software dial up Colchester (0206) 8068. This audio recorded information line will also advise you which telephone numbers to ring for the 300 and 1200 bit/s services.

When a program you want to download is on line, make sure your modem is set up and dial the number appropriate to its speed. As soon as you hear the modem tones switch the modem to line and replace the receiver. Select Option 1 from the menu — Receive. After a block of data is received you will see "OK" printed if there are no errors, otherwise the program will wait for the blocks to come round again. When the "Program loaded OK" message appears return to the Telsoft menu and select Option 5. You can now save and run the program.

Note that CBM-64 owners will need to use Option 6 if machine code is to be saved.

SPACE JUNK

Nalin Sharma continues his epic for the CBM-64.

HERE IS a reminder of the loading and game instructions for Space Junk.

Insert cassette, press Shift and Run/Stop and start your cassette recorder. Loading time is about two minutes. Put your joystick into Port 2.

Can you retrieve all 32 satellites by mastering control of your ship, which can move up, down, left and right and can also fire bullets?

However, beware of the four yellow junkies which patrol the skies. Unless you can work out how to destroy them you're in trouble! To help you there's a radar at the top of the screen which will pinpoint the junkies and any miscellaneous junk which appears from time to time and can be retrieved for bonus points.

After every two sheets you'll get an extra life and an attempt at the challenge stage. Here you have 99 units of time to turn the four junkies into stormer — if you succeed you'll get 8000 points! Below your score is shown the number of satellites left to collect, together with the number of lives left.

Pressing F7 will freeze the game and pressing the Space-Bar will restart it. Tape copies of the program are available for £3.25 from Nalin Sharma, 35 Kitchener Road, Walthamstow, London E17 4LJ.

TOP★TIPS

VDU 19 FOR CBM-64

This routine for the CBM-64 simulates the BBC's VDU 19 function. It changes all the text and graphics characters in a given colour to another colour specified by the user. Although the Basic loader program Pokes the routine into memory from address 49152 onwards it is relocatable.

To call the routine use SYS (address) x,y where the address is the start address — in this case 49152 — x is the colour to be searched for, and y is the colour to replace it. x and y are the colour numbers as given in the User Guide.

David Rocke.

ROMAN TO ITALIC

The short machine code program listed below is for a 48K Spectrum. When run it allows an alternative character set to be called from within a Basic program. Printing can be switched at any time from normal to Italic and back.

The Basic program can be saved in the normal way or alternatively once run the basic program can be deleted and the code saved as follows:

SAVE "ITALICS" CODE 64768,768

remembering to

CLEAR 64767

before re-loading.

T Walmsley.

RESPONSE Frame

Do you have a problem related to your micro? Tim Hartnell will do his best to help. Please include only one question per letter and mark it "Response Frame". Alternatively, perhaps you have an idea you'd like to pass on to others. Why not write to us with your top tips?

BBC ORGAN?

I have little knowledge of electronics, but I would like to be able to connect my organ up to a BBC Micro Model B to achieve computer-controlled music using a combination of hardware and software. The organ is about 10 years old, and was made at a time when home computers had barely been thought of. It has no ports of any kind. Can you help?

Jason Philips,
Halfway,
Sheerness.

UNFORTUNATELY, I can't. The age of the organ suggests it is almost certainly an analogue device, so interfacing it with a digital device is not possible. It is likely that inside the organ is a vast set of switches, one per key, which trigger particular little circuits for each note. The organ is therefore totally hardware dependent.

SPECTRUM BLUES

About 10 months ago I got a 48K Spectrum. Ever since I got it, I have been having problems with its memory. When I turn it off, after putting in a large program, I have to leave it for about 10 minutes before loading in another program. If I don't, the computer simply says "out of memory" half way through loading another program. My friend's 48K Spectrum works perfectly. What should I do about it?

Jason Wallace,
Marondera,
Zimbabwe.

SEND IT back to Clive quickly, or his representative in your country, before the warranty runs out.

CBM-64 GRAPHICS

I am the owner of a Commodore 64, and would be grateful for information concerning graphic programs for my computer. All the programs and utilities that I have seen, or typed in myself, have been very slow and lacking in sophistication. They seem mostly to be a single colour background and pen, and without many of the professional computer art necessities. Are there any drawing utilities available for the 64 that incorporate some of the features mentioned?

David Warren,
Hazlemere,
High Wycombe.

THERE ARE a number of such products available. From those available on disc, Quicksilva's Doodle seems to be the strongest, while the cassette Pix-Stix comes complete with a light pen. You might also wish to investigate the Koala Touchpad.

VERIFY BUG

I own a 48K Spectrum which has worked (almost) perfectly for over a year. Recently, however, when saving programs on tape, I have been unable to get them to verify, as the message "Tape loading error" appears. It is the same with any tape. Is there something wrong with the computer or the tape recorder, which is only three months old?

James Hickling,
Canterbury.

YOU DO NOT say if despite the inability to verify your programs, they will load back in. You also do not say whether or not the problem began when you first hooked in your new cassette recorder.

I would suggest that, if you've followed all the ordinary precautions of clean heads, proper computer tapes, and making sure the load/save leads do not twist around things like the power supply lead, you should find the computer loads and saves quite happily, despite your inability to verify.

If it does not, and it does not work with *another* cassette recorder, the problem is almost certainly the computer.

STOP THE FLICKER

I have a BBC model B. I find that the best I can do to get smooth action graphics is illustrated in this cut-down program:

```
10 MODE 2
20 X=640:Y=512: VDU 5:GCOL
3,3
30 REPEAT
40 MOVE X,Y
50 *FX 19
60 VDU 65
70 X=X+2:Y=Y+2
80 UNTIL Y>1000
```

It is not the speed of the character which concerns me, but the flashing of it. I have found that line 50 helps to an extent, but I find I cannot improve on this. I have also written the program in machine code and see no difference. Is it the slow VDU drivers? Or have I gone as far as I can?

Stephen Blears,
Bowdon,
Cheshire.

I CANNOT SEE how this program will, in fact, produce 'moving graphics'. All you get with the listing you've given me is an 'A' plotted over and over again in slightly different positions, leaving the "old" A still on the screen.

There is nothing in this program to "flash" which suggests to me that you have a CLS in your original program, probably as line 55, before the "new" A is printed. The *FX 19 causes the display to wait until the next frame which would tend to stabilise your picture slightly.

A far better way to get "moving graphics" of this type would be to set up two additional variables — such as X1 and Y1 — which hold the position of the A *before* it is updated. Then, in line 55, do a VDU 32 after moving to X1, Y1. Follow a Move X,Y with your VDU 65, then — before you increment the values of X and Y, set X1 equal to X and Y1 equal to Y. This will produce an 'A' which moves very smoothly, without flicker.

COMPILER

It is possible to buy a compiler that is able to translate *all* Basic into machine code? If so, which one is suitable? This is to use with Spectrum programs.

R Bruce,
Aberdeen.

THERE ARE no Spectrum compilers on the market, that I know of, which can cope with all of Spectrum Basic. For example, Softek's FP-Compiler, which is one of the best ones I've ever used, does not cater for string arrays, which makes it almost impossible to use for adventure programs. However, apart from that, it appears able to handle all of Spectrum Basic.

Nuclear Tomatoes

David Green,
Ashford,
Kent.

Spectrum

THIS IS A fast machine code game for the Spectrum with weird sound effects but, most importantly, it is not very long. You should be able to type in the 1K of machine code within an hour without suffering any ill effects on your eyesight. The game itself is based around the utterly ludicrous premise that by the end of the 20th century, the main source of atomic power will be the heavy element Spectrum 428, found in very small quantities in tomatoes.

Unfortunately, by this time a few small genetic engineering errors have made all vegetables considerably more intelligent than they were before, and the following speech, made by the leading vegetable rights campaigner Heinz Tomato, shows some of the problems caused by this:

"Friends, tomatoes and other vegetables, lend me your ears, for I have come to bury these humans, not to praise them. After all, some men are born tomatoes, some achieve tomatoes, and some have tomatoes thrust upon them. Whether 'tis nobler in the mind to suffer the slings and arrows of outrageous fortune, or 'tis better to stay at home and watch the television? If you prick us, do we not bleed? If you poison us, do we not die? And if you put us in the fuel cores of nuclear reactors, shall we not jump up and down a lot and make them explode?

"We will fight them on the beaches, we will fight them in the frozen food department of Marks and Spencers, we will fight them in large square buildings belonging to the CEGB, we will fight them in the cracks in the pavement, and future generations will remember us, and say: 'Never in the field of vegetable conflict was so much owed by so many to a bunch of tomatoes'. Or something like that, anyway."

Your job is therefore to move the boron blocks in the nuclear reactor up and down to absorb the fanatical tomatoes, since if too many of them hit the unshielded walls on the left and right, the reactor's temperature will get so high that it will melt down, and you should obviously try to prevent this sort of thing.

The game is in three sections, a short Basic loader which prints up the title screen and defines the graphics, the machine code which controls the actual game, and a longer Basic program which does everything else. If anyone out there has still got a 16K Spectrum, then this program should work on it, but I'm not sure since I haven't been able to test it. All you have to do, therefore, is type in listing 1 and save it, enter the machine code in listing 2 using the hexloader in listing 3 and save that, and then type in the last section shown in listing 4, saving it right after the other two bits. Then rewind the tape, load the whole thing again, and, in the words of a certain well-known software company, play the game.

CBM-64

THIS USEFUL utility program written for the Commodore 64 allows the user to plot characters or sprites on an on-screen grid, and, at the touch of the button have the necessary data statements inserted into the program.

When the program has loaded, it will ask you for the starting address — enter the number of the line you want the first statement to appear in. The next thing the program does is enter the options page. You can do one of three things:

Pressing 1 will put you into sprite mode — there is a 24 by 21 grid for you to fill in, and the sprite is shown in the bottom right-hand corner. W moves you up — you can just see a square flicker as you pass it — A moves you left, D moves you right, X moves you down, and S fills in the square you are occupying. O returns you to the options page, destroying your sprite, N inserts the necessary data statements into the program, and M enters multi-colour mode.

In multi-colour mode, you can use three different colours, as described in the user's manual. The normal colour, white, cannot be changed, but the first and second multi-colours can, by pressing 1 or 2, depending on which you want to change. It is advisable to read about this in the manual first, and about the different bit patterns necessary to produce each colour, as it is rather complicated.

If you press 2 on the options page, you will enter the 8 by 8 character designer. This is much the same as the sprite editor, except that you are now working with normal 8 by 8 characters, and there is no multi-colour option here. Also, since it is necessary to switch over cases to view any user-defined characters, you must press P before you can see your character. Pressing any other key lets you use the designer again.

If you press 3 on the options page, the designer will erase itself, leaving only the data statements for your graphics. Before you can use them, you must, as always, poke them into memory. The designer is a great help since there will be no missed-out bits of data, resulting in Out of Data errors.

If you would like a copy of this program on tape, send a check/PO for £1.50 made out to R Hamer, to 26 St Barnabas Road, Emmer Green, Reading, Berkshire.

Bomb Squad

Keith Miles,
Ely,
Cambridgeshire.

BBC

THE AIM OF the game is to defuse the activated bombs whilst avoiding the pursuing boots. Unactivated bombs will explode if touched. Points are scored for defusing bombs, securing the yellow flags and luring the pursuing boots onto defused bombs — which will destroy them. Penalty points are deducted for going onto the blue squares.

The game consists of successive sets of four levels. During each of these phases the number of bombs, flags and boots doubles. At the start of the next phase the speed of the boots and the countdown of the bombs increases, as do the penalties.

The game consists of a series of linked named procedures — subroutines — whose function is self-explanatory: Characters, Init, Titles, Board, Bomb, boot, Flag, Trigger, Man, Boot, bomb, Defuse, Dead, Explode and Hiscore. The program is controlled by the loop at line 230 to 250 i.e.

```
230 REPEAT:PROCTRIGGER:PROCMAN:
    PROCBOOT.250 UNTIL ———
```

Movement is achieved by use of Print Tab as a VDU command (VDU31) and contact by the Point command to detect colour.

The game runs in Mode 2 to take advantage of the greater number of colours but, for the minority of BBC Micro owners with a Model A, could easily be converted to run in Mode 5.

Juggler

Jason Charlesworth,
Kings Lynn,
Norfolk.

Amstrad

JUGGLER is a very simple but enjoyable game for the Amstrad CPC-464.

Written in machine code, the game features hires multicolour sprites, continuous music, joystick or keyboard option and a high score table. In the game you must keep the balls in the air by bouncing them off a bat which you control at the bottom of the screen. At first there is only one ball but every 30 seconds a new one is added to a maximum of five. You get points for however many seconds you keep the balls flying and the amount of points you get per second increases with every extra ball.

To set the program up, type in listing 1 and save it with

SAVE "JUGGLER"

Next type in listing 2 and run it. This program pokes in machine code and checks it at the same time for errors. If it finds an error, correct it then rerun the program until you get a "Finished, no errors" message. Then save the code directly after "Juggler" with

SAVE "CODE",b,37000,3000

The game may then be played by rewinding the cassette and typing RUN"".

In you wish to see all the levels, when it asks you to press s to start, leave the keys for a while and the program will give a demo — you can get out of the demo by pressing 0.

Finally, thank you to Robert Rhodes who translated the music for me.

Error Simulation

Joe Pritchard,
Gelding,
Nottingham.

BBC

ONE PROBLEM that I keep coming up against when finishing off my Basic program is testing the error trapping routines. Most of my programs are used by other people than myself, and so it's important that the programs respond to errors in a reasonably graceful fashion! For example, I often want to reprompt the user to try again if an error such as "No Such File" has been generated.

The usual method I use to test such routines is to deliberately cause the error, by typing in a non existent file name, for example. However, this technique is not always useful; it's hard to simulate a "Disc Full" error with two short files on a disc!

Machines like the MSX computers have a command called ERROR which allows the programmer to simulate an error condition. This program adds a similar command, called *ERR, to the BBC Micro. The syntax is

*ERR n or *ERR variable name

where the value of n or the variable is the number of the error you wish to simulate. Thus *ERR 4 will simulate the Mistake error. The message Simulated Error will be printed to the screen as the Report, but ERR will be set to the value of n and ERL will be set accordingly.

The simulated error can be trapped by the Basic On Error trap, in which case the Report will not be printed but ERR and ERL will be set up properly, as mentioned above. The code is less than 256 bytes long, and so I keep it safely in page &A.

You might like to set up function keys to change the CLI vector to point to the new machine code and reset the CLI vector when the new command is no longer required. As an example, if the below line is part of your error trap;

1000 IF ERR = 4 THEN PRINT"Ooops!!"

then executing a *ERR 4 somewhere in the program, with the On Error active, will result in "Ooops!!" being printed to the screen.

Connect Four

M J Lake,
Bitterne,
Southampton.

Spectrum

CONNECT FOUR is a game for one player on either the 16 or 48K Sinclair Spectrum. It is based on the popular board game of the same name, with the Spectrum playing as your opponent.

The program is written in a fairly structured way, and, with the exception of the graphics and sound, should be fairly easy to convert to other machines.

For those of you who have never played the game before, here is a brief outline of the rules. The object of the game is to get a line of four counters on the board, either horizontally, vertically, or diagonally.

While trying to get your own line, you must also attempt to prevent your Spectrum from getting a line of its own, by blocking its counters with yours. The winner is the first to get a line of four counters.

Keys: Left – 5; Drop – 0; Right – 8. The letters in Italics on the listing refer to the Spectrum's UDG characters.

Hi-res Skyscraper

Alan Lee,
Tring,
Hertfordshire.

ZX-81

THIS is a version of the popular game in which a spaceship continually passing over a city has to flatten the buildings in order to clear a landing strip. The spaceship gets lower on each pass and vaporises if it hits a building. If the ship lands successfully you move on to another screen of buildings, but the ship moves faster, and starts off one line lower than before.

A point is scored for each building block knocked out, the score is shown in the top-left corner. A bomb is released by pressing any key, though only one bomb can be in the air at any time. To restart the game after the ship crashes, press any key.

The program is 818 bytes long. To create a Rem statement large enough type in:

```
1 REM ** 160 characters **
```

Edit this line four times to create lines 2-5. Then enter:

```
POKE 16511,58
POKE 16512,3
POKE 16514,118
POKE 16515,118
```

Then enter a line 6 Rem newline, followed by

```
POKE 16419,6
```

This line is needed to prevent the ZX-81 going into an infinite scrolling loop when the hex loader is deleted — do not remove it at any time. Now enter the standard YC hex loader and enter the machine code in the usual way. Then save the program a couple of times, and run it using Rand USR 16993. If it works correctly enter the following lines:

```
10 SAVE "SKY"
20 RAND USR 16993
```

and run it to create a final copy which runs automatically on loading. You will have to switch off the machine and reload to do this, as the program is a continuous machine-code loop. If the program does not work correctly, again switch off the machine, reload, and enter a standard hex-checker to find the errors in the machine code.

The program will not work if a peripheral is attached which lies in the 8K-16K area of Rom.

The loader.

```
  10 DEF FN h(h$)=16*(CODE h$(1)
-48-(7 AND h$(1)>"9"))+CODE h$(2
)-48-(7 AND h$(2)>"9")
  20 INPUT "Start ";s
  30 INPUT "Finish ";f
  40 FOR n=s TO f STEP 8
  50 LET tot=0: PRINT n;"  ";
  60 INPUT h$: PRINT h$;
  70 LET x=0
  80 FOR k=1 TO LEN h$ STEP 2
  90 LET z=FN h(h$): LET tot=tot
+z
 100 POKE n+x,z
 110 LET h$=h$(3 TO ): LET x=x+1
 120 NEXT k
 130 PRINT " = "; INPUT t: PRIN
T t
 140 IF tot<>t THEN PRINT "input
 error - try again": GO TO 50
 150 NEXT n
 160 REM enter STOP to stop
```

The hex dump.

Shape transformation

Igor Pandzic,
Zagreb,
Yugoslavia.

Oric

SHAPE TRANSFORMATION is a version of Pikchachanja — *Your Computer* April 1985 — that works on the Oric-1 48K. You have to enter two shapes, each consisting of the same number of lines, and then you can watch the smooth 16-frame transformation of one shape into another.

When you start the program it first loads the machine code into memory. Then you are asked about the number of lines per shape — maximum is 43. The program moves to Hires mode and draws a square in the middle of the screen and a cursor in it. You can draw your pictures only in that square. Move the cursor using the arrow keys and change the cursor jump by "," and "." keys.

To enter the beginning of the line press B. You can change the beginning as many times as you wish. To finish the line press Return. Don't try to press it when the cursor is on the beginning of the line. You can delete the last line using Del. Unless you define it differently, the beginning of the next line is on the end of the last line. When you have entered the first shape you have the option of leaving it on the screen while you are drawing the second one or you can clear the screen.

While you are drawing, the display shows the cursor position, the cursor jump, the number of the line and the position of the beginning of the line, which is also shown by a dot.

When you have finished entering shapes you will have to wait for a while, while the computer is calculating and storing the intermediate frames.

And now the most exciting moment. The screen clears and the menu appears. You can choose one of these options: F to see the transformation of the first shape into another, B for the inverse, M for the continuous forwards-backwards moving, N to enter the new shapes, C to continue and Q to quit. To continue means that the last shape now becomes the first shape and you have to enter only one shape. This facility is especially useful for the owners of video recorders, because they can make longer animation sequences and record them to the tape.

The program consists of the basic and two short machine-code routines. The first machine-code routine — at address &400 — transfers data from the screen to memory, and the second one (&460) does the inverse thing. There are 16 frames and they are stored above the Himem address 6499. Each frame takes 2000 bytes.

Graphics designer

David Hodgetts,
Tipton,
West Midlands.

C-16

GRAPHICS DESIGNER is a very useful utility program for the Commodore 16 and, though written for the 16, it will work on the Commodore +4. The program is an aid to designing user definable graphics; there are many useful functions of which a few need to be explained.

Create allows you to define up to 255 characters, 0-127 upper case and 128-255 lower case, reverse characters are created automatically by the computer.

The rest of the commands from the main menu are self explanatory, but when using the create command there is a help mode which offers a range of commands to make the creation of characters a lot faster.

1. Display the data for the character being created.
2. Invert the character (turn it upside down).
3. Mirror image the character (laterally invert it).
4. Reverse character.
5. Rotate character (this may not seem a true rotate, but it is, as every 90° the character returns to its original shape).
6. Clear character.
7. Reset character (set character back to its original form).
8. Return to editor.

It should be noted that a character cannot be stored while in the help mode, to do this you must return to the editor.

The save option saves the character set to tape as a program file, so to load back the character set from tape type:

LOAD"file name",1,1

It is vital that there should be a ,1,1 at the end of the load statement as it makes sure that the program file is loaded back into the same memory as it came from.

To access the graphics from either in a program, or in direct mode type:

POKE65298,PEEK(65298)AND251:POKE
65299,(PEEK(65299)AND3)OR48

To return to normal type:

POKE65298,196:POKE65299,209

Be sure when using UDGs in a program that any errors are trapped to a line switching back into normal mode, as if there is not an error will cause anything on the screen to become unreadable. If this happens then hold down the run-stop key and press reset. This will then enter you into the monitor, type X then return to get out of it, and you will still have your program in memory, which you would not have if you had used reset on its own.

Vic 20

THIS PROGRAM is a machine-code utility for any Commodore Vic-20. It supplies a number of useful functions by simple keystrokes.

The functions supplied are on the following keys and are all accessed by holding down Ctrl and tapping the required key:

B : Gives bleep when a key is pressed.
V : Stops bleep function.
K : Gives key repeat.
J : Stops key repeat.
T : Switches quotes mode off.
Y : Switches quotes mode on.
I : Switches off Inst mode.
P : Pauses a listing at any point.
@ : Continues the listing after Ctrl P.
S : Switches all sound off excluding bleep.
X : Run/Stop-Restore.

Most of the functions are self explanatory. However some will be obscure to some users and I will attempt to explain them.

First, quote mode off and on: I am sure that sometime during the time that a Vic user has had his machine, he'll have been entering a message inside quotes and have wanted to move around using the cursor keys. You'll have noticed that this is not easy because control characters appear. However using these functions this problem can be overcome.

Secondly, Inst mode off: This is rather similar to quotes mode off; however it is used when a large number of Insts have been entered that are not required.

Finally, Run/Stop-Restore using Ctrl X had to be included for emergencies. Usually, whenever a user wishes to stop a program, they will press Run/Stop-Restore automatically and would thus immediately disable Vic Utilities. For this reason, Run/Stop-Restore is deliberately disabled and Ctrl X is used instead to give the user a chance to "look before he leaps". If Ctrl X is used, then Vic Utilities may still be used by using Sys 695.

The machine code takes up only 256 bytes and is located at the top of memory. The loader calculates all relevant jumps and protects the program so that the program will run on all Vic-20s.

Unfortunately, the program cannot be used with the Programmers Aid or Super Expander cartridges.

Spectrum

THIS PASSWORD program for the Spectrum 48K will cause the listing to be jumbled. Only the correct password will restore the program and the program cannot be run without it.

The program should be typed in as listed and SAVEd on tape.

After writing your message or short program the Password program should be loaded with Merge " ". Your program should not have any line numbered any higher than 9983. Then type

GOTO 9985

The program will ask for a password which, when Entered, will cause the screen to go blank and then show a Stop Statement.

Your listing is now coded according to the password and can be saved as before with

SAVE "name" LINE 9985

When the program is reloaded the correct password must be entered to run the program.

It works by XORing the byte in the Basic program listing with the ASCII code of the password which is sliced in a loop.

Line 9991 looks for line 9984 to prevent poking the password program itself. Lines 9991 and 9992 prevent Poking into undesirable places. The short machine code routine does the XORing.

If you take two numbers and XOR them, then take this result and XOR it with one of the original numbers you will get the second original number.

FREE SOFTWARE FOR LIFE!

New Gold Star life membership of The Software Library is your key to a vast treasure trove of tapes costing up to £18 each. They are yours whenever you want them, three at a time... and a full week's rental won't ever cost you a penny in hire fees!

Only the original Software Library has the resources to make such an amazing offer—free software for life! Our ten megabyte computer ensures fast service; our illustrated, descriptive catalogue makes it fun to choose from over 80 top arcade games, 124 Adventures, simulations and other games, and over 120 great utilities and serious applications; 65% are for the Spectrum, the rest divided between Commodore 64 and ZX81. New releases are constantly being added.

Joining this money-saving scheme **should** cost you £24; as an introductory offer, you can join this month at **half price**— £12. From then on, you can take away three tapes from our shop whenever you wish; or if you order by post, all we ask is 30p post/packing per tape. The rental is perfectly free in either case.

What's more, you can sell your surplus software to other members (we have over 5,000!) and recoup the cost of membership in no time at all. We offer huge discounts on peripherals and tapes... and so much more. Phone us now on 0730 892732, quoting your Access number, or return the coupon without delay!

GUARANTEED to save you more than any other software library scheme!

SOFTWARE LIBRARY FARNHAM ROAD, LISS, HANTS GU33 6JU

Please enrol me at the introductory offer, and send my membership pack by return.

NAME..... I enclose cheque/P.O. for £

ADDRESS.....

THE ORIGINAL SOFTWARE LIBRARY!

OVERSEAS: join here for £18, or join one of our foreign branches: Postfach 7809, 4800 Bielefeld, W. Germany, Jacobsmühlaan 75, B-2400 Mol, Belgium (also covers Holland); 122 S Circular Road, Dublin 8. Pedar Lykkesvej 37, 2300 Copenhagen S, Box 1759, Malzini, Swaziland. France & Italy soon. Branch terms vary. All software hired with supplier's permission. YC

SPECTRUM+ MAGIC

Tim Hartnell, the world's best selling author of books on the Sinclair computers, has turned his attention to the Spectrum+ to produce three major works.

SPECTRUM – LOGO. Just type this program in, and you'll have LOGO graphics running instantly on your Spectrum+ or Spectrum. No need to buy the language. Comes with complete tutorial on LOGO graphics. Book contains full program and tutorial, £2.99 (ISBN 0 907563 65 2).

EXPLORING ARTIFICIAL INTELLIGENCE ON YOUR SPECTRUM –. Study the fascinating world of Artificial Intelligence, as you demonstrate many of its exciting discoveries with the eight programs in this book. The *Computer Bookshelf* section of *The Bookseller* called this work "the best book on AI I have ever seen". £6.95 (ISBN 0 947695 05 2)

ASTOUNDING ARCADE GAMES ON YOUR SPECTRUM+. Four great arcade games in this special 32-page edition of Kwik-Bytes. Just £1.25 (ISBN 0 907563 70 8)

Available from good book and computer shops, or (post free) from:
Interface Publications Ltd., Dept. QTYC,
9/11 Kensington High Street,
London W8 5NP

(UK Trade: WHS Distributors)

Could YOU be a Software Star?

In **SOFTWARE STAR** you take control of a software company and aim to take it along the precarious path to success. On the way you meet with staff problems, decisions regarding advertising, expenditure, finance and game launches, but your business awareness together with a few gambles paying off will make you a SOFTWARE STAR.

"It carries the Kevin Toms hallmarks of attention to detail and carefully tuned difficulty' *Popular Computing Weekly, February 1985*

"The game can be incredibly subtle" *Pick of the Week, Popular Computing Weekly, February 1985*

Available... Spectrum 48K £6.95... Commodore 64 £7.95... Amstrad CPC 64 £7.95.

Software Star is a strategy game not a graphics game.

ALSO AVAILABLE

STRINGER
Stringer is an arcade adventure game in which you are a press photographer set the task of snatching a shot of a Film Star in an hotel. The game is tantalisingly playable, graphically excellent and, of course – Addictive!
Available... Commodore 64 £6.95

FOOTBALL MANAGER - The All Time Classic
Available... Spectrum 48K £6.95... Commodore 64 £7.95... Amstrad CPC 64 £7.95... BBC 'B' £7.95... Electron £7.95... Oric-1/Atmos £7.95... Dragon £5.95... Vic 20 £5.95... ZX 81 £5.95

When you open an Addictive Game, there's a new world of discovery waiting for you.

TIPSTER
SPECTRUM +/48
AMSTRAD CPC464/COMMODORE 64

The most accurate horse race predictor on the market

- ★ Tipster V2 took 18 months of trial and error before we arrived at the system that makes it the most accurate race predictor on the market.
- ★ Fully tested against other computer race predictors.
- ★ Tipster even performs better than the human tipsters from the top nine newspapers.
- ★ Many winners found at high prices.
- ★ For both flat and national racing.
- ★ The system will never go out of date.
- ★ We reveal the secrets of profitable betting.
- ★ Special tutor for the absolute beginner to racing.
- ★ Tipster also includes a program to calculate your returns for you.

If you can buy a more accurate race predictor we'll refund your money

Don't be tempted to buy cheap or inferior products.

'THE NATURE OF THE BEAST!

Opus. DISCOVERY 1

The Dawn of a new beginning for your Spectrum

Introducing Discovery 1 – quite simply the most advanced and comprehensive disc drive unit yet developed for the Spectrum and Spectrum + computers.

Discovery is the breakthrough in design, performance and price which promises to make other Spectrum solutions obsolete. Just look at its advanced features:

- The very latest 3½ inch disc drive unit
- Peripheral through connector
- Parallel printer port
- Joystick interface
- Video monitor port
- On-board power supply

But the biggest discovery of all is the price – just £199.95

Upgrading to a dual-drive system is simple with the 'Discovery +' upgrade package – £139.95, or choose a purpose-built twin-drive unit, 'Discovery 2' – £329.95.

THE DISCOVERY RANGE

- Available through the Opus dealer network nationwide – ring for your nearest stockist – or direct from Opus Supplies. For further details ring us on: 0737 65080 or post the coupon.

Please rush me the following (ALL PRICES INCLUDE VAT & CARRIAGE)
– Discovery 1 unit(s) at £199.95 each
– Discovery 2 unit(s) at £329.95 each

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

Boxed, with detailed instruction booklet

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner perforns significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape, with simple instructions for conversion to disc/microdrive operation.

(This seasons results are supplied with the package so that predictions can start immediately.)

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+ 16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, IBM pc, ELECTRON

PRICE £15.00 (all inclusive)

NEW

FIXGEN 84/5

AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

Fixgen alone £5.50 (yearly updates available)

COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

Coursewinner is designed to allow you to develop and test your own unique winning system. Using information from daily newspapers or 'Sporting Life', the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD CPC 464, Atari (48K), Apple II

KEYS TO THE QL

Tim Hartnell, the world's best-selling author of books on the Sinclair computers, has turned his attention to the QL to produce three major works.

TIM HARTNELL'S QL HANDBOOK takes you, element by element, through SuperBASIC, with each command illustrated with a demonstration program so you'll build up a worthwhile library of games and utility programs as you go. Includes a machine-code multi-tasking clock, a small-scale FORTH interpreter (so you can learn FORTH on your QL without buying the language), and a routine to define your own characters. £7.95 (ISBN 0 947695 19 2)

TIM HARTNELL'S QL GAMES COMPENDIUM gives you a generous selection of arcade, simulation and adventure games. Comes complete with a chapter which shows you how to create moving graphics on the QL. £5.95 (ISBN 0 947695 04 4)

EXPLORING ARTIFICIAL INTELLIGENCE ON YOUR SINCLAIR QL. Study the fascinating world of Artificial Intelligence, as you demonstrate many of its important principles with the SuperBASIC programs in this book. *The Bookseller* called this work "the best book on AI I have ever seen". £6.95 (ISBN 0 947695 18 4)

Available from good book and computer shops, or (post free) from:

Interface Publications Ltd., Dept. QTYC,
9/11 Kensington High Street, London W8 5NP

(UK Trade: WHS Distributors)

Interface

ORIC/ATMOS TAPE COPIER

Copies any standard format software package. Copies Basic, M/C even protected autorun. Easy to use. Instructions included £5.55 to A. Johnson, 11 Bedburn Ave., Wear View Estate, Sunderland, Tyne & Wear.

NEW **TAPE COPIER 7.**

Yes it can be done! Make security BACK-UP copies of the MAJORITY of your SPECTRUM programs including HIGH SPEED loaders, and JERKY loaders with TC7. A good "clean" copy which will hopefully suit your system. Other methods have proved limited.
★ includes BAUD RATE (speed) measurer.
★ can save high speed/jerky carts in "normal" form for DRIVE transfer.
★ so many extra features we can't possibly list them here. Just try it and see. As the market leader we can't afford to let you down.
COST ONLY £6.50 (or £7.50 with MT6 — see below)

NEW **MD1b/WD1b for TAPE TO DRIVE TRANSFER**

You now have a CHEAP but FLEXIBLE means of transfering your programs with our information sheets and software (not limited to a small list). Get much satisfaction and learn at the same time.
To transfer most programs to MICRO/WAFADISC drive you MUST have this program. It gives you the tools to convert programs so that they will run on your drive. Includes ability to cope with v. long programs, can split/chop bytes in one go, "VAL" creator, REMkill, make Visible, etc, etc. Full manual with example transfers. (also need TC7 for latest programs).
MD1b (WD1B for disc or Wafadrive owners) costs a mere £6.99.
EXTRA program to CONVENIENTLY transfer converted bytes directly to m/drive with many other features (e.g. alter program names, stop programs, etc) buy MT6 at £3. (Wafadrive version is called WAFATAPE at £4).

NEW **LERM INFORMATION SHEETS**

Gives you DETAILS required to transfer a selected number of the more difficult POPULAR programs. Sheet 1 now available at £2 plus SAE (mark letter 1).
UPDATE SERVICE: for latest version on your LERM product send old tape + large SAE to get a £2 REDUCTION. **OVERSEAS:** add £1 Europe, £2 others for each product. **SAE for enquiries.**
ALL PROGRAMS CARRY OUR MONEY BACK GUARANTEE (not updates)
LERM, DEPT YC, 10 BRUNSWICK GDNS, CORBY, NORTHANTS

COMMODORE 64 backup interface. Copies turbo loaders, machine code etc. From Datasette to any Hi-Fi cassette. (Specify Phono or DIN plugs) only £7.95. McQuade, 55 Shaftesbury Drive, Heywood, OL10 2PH Lancs. 694

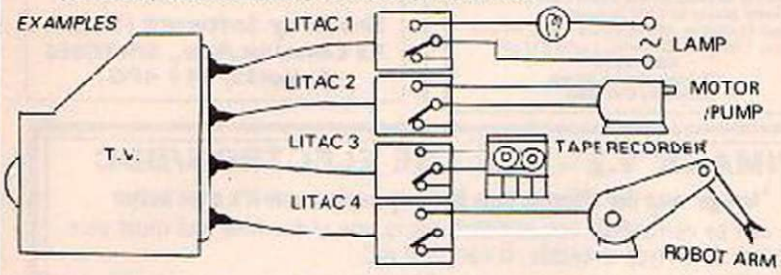
BORED WITH JUST PLAYING COMPUTER GAMES?

Wish you could do something more useful with your computer? Well now you can! And it's so simple!

No need to understand machine code or purchase expensive interface equipment. With the new 'LITAC' light-activated controller you can control mains or battery operated equipment directly. The 'LITAC' controller, which is suitable for use with any home computer, uses a light activated transducer mounted within a special suction cup which can be positioned anywhere on your TV screen. The detector is activated simply by programming a white spot to appear in front of it. The 'LITAC' detector controls a high speed changeover hinged armature relay, the contacts of which are fully isolated and can be used to turn electrical equipment on or off.

Typical applications include control of lights, motors, pumps, tape recorders, robot arms, etc.

Up to four 'LITAC' controllers can be powered from a separate mains operated power supply, or alternatively a 6V battery may be used.



'LITAC' controllers £6.99 each. Power supply units £4.50 each. F&P £1.00. Cheque/PO to:

PHOTON ELECTRONICS, 90 Lower Road, Hednesford, Cannock, Staffs WS12 5NB.

or S.A.E. for further information

* BACK-UP-SYSTEMS FOR CBM-64 & VIC-20 *

By Turbotronic (Formally Trigsoft (Halifax))
The BACK-UP-BOARD Mk. 1 is the fastest, and easiest way to back up your tape programs. With this board you can connect a second CBM cassette deck to your computer. You can copy a program on the second deck while it loads from the first. You can back up all fast loaders, data files etc. BACK-UP-BOARD Mk. 1 £10.00 incl p&p.

NEW! BACK-UP-BOARD Mk 2 NEW!

This new version of our famous BACK-UP-BOARD now works two ways. Switched to 'NORMAL' it operates as the Mk. 1. Switched to 'GENERATE', 64 owners can use our special transfer software to regenerate a copy of a program on the second deck as it loads from the first. This method can produce a better quality copy than the original. BACK-UP-BOARD Mk. 2 & software £14.50 inc p&p. Conversion service. Return your Back up Board, if purchased from us, to be modified to Mk. 2 for £4.50 including software and p&p.

AZIMUTH HEAD ALIGNMENT TAPE BY INTERCEPTOR
Use this test tape with your '61' to adjust the heads of your decks to make a perfectly matched pair. Full instructions and screwdriver supplied. £9.50 inc. p&p.

ROM SWITCH/RESET BOARD
Fit this board in the expansion port of your '64' and you can reset ALL programs. Resets programs that a standard reset switch can't. A socket for a 2764 8K eprom is also fitted. Full instructions supplied. £10.00 inc. p&p.

Send your cheque/PO to:
TURBOTRONIC
46 Ripon Street, Parkinson Lane, HALIFAX, West Yorkshire HX1 3UG.

'O' LEVEL REVISION

Our FREE INFORMATION PACK contains QUALITY TUTORIAL REVISION software for the Spectrum, BBC, Electron & CBM 64. Also educational PROGRAMS for all ages and learning abilities — with SPECIAL OFFERS for the VIC-20, ZX81, BBC & Spectrum — and VIDEO CASSETTES and BOOKS.
Send 24p SAE to: **INFO-STREAM (Dept YC08), 36A Chase Green Avenue, Enfield, Middlesex, England, EN2 8EB.**

'IMAGE' V.2 – FOR THE ELECTRON/BBC

'Image' was the ultimate tape back-up copier, now it's even better

You can be completely assured that this is one of the best and most able program of its type available. It can deal with:

* Locked programs
* Programs of any length
* 300 and 1200 BAUD
* Files
* ?'s (Ctrl codes) in filename
* Multiple copies
* False or trick block info.
* Changing Filename
* Continuous data streams
* Locking and unlocking programs

It is VERY IMPORTANT INDEED purchasers take note that **'IMAGE'** is for sale strictly for making **BACK-UPS** of your own software for your own use, for protecting your own programs, or as an aid to putting software on disk. Any person found using the program for illegal purposes runs the risk of being prosecuted

To receive your copy of 'Image', send a cheque or P.O. to the sum of **An Astounding £4.80** to:

PETER DONN, Dept. (YC), 33 Little Gaynes Lane, Upminster, Essex RM14 2JR.

Please state BBC or Electron version.
V.1 owners can obtain V.2 by sending £1.50 + V.1 without case.

POWERFUL UTILITIES

AMSTRAD SPEEDMASTER FAST LOAD UTILITY
SPEEDMASTER is a tape copier with a **difference.** It allows you to save the copy at **a choice of three speeds**, normal fast or very fast. Also incorporates a **header reader** and **deprotect** back option. Continuous load and save. Tests have proved **100% successful**. An **invaluable** piece of software.
ONLY £7.95
Tape to disc utility due shortly

TAPE COPIERS
Unique machine code programs to allow security back-up copies of the majority of protected software.
Available for

Commodore 64 normal speed load only	£5.95
VIC 20 (All memory sizes)	£5.95
Spectrum	£5.95
Electron	£5.95
Atari (All models)	£5.95
BBC (Handles locked files	£5.95

All with full instructions

TAPE TO DISC UTILITIES
BBC
A **very useful** utility to help shift those stubborn tape programs onto **your own discs** **ONLY £9.95**
ATARI
A dual purpose program that allows single stage boot programs to be shifted onto disc, includes output to tape. Works on **all models**.
ONLY £9.95

COMMODORE 64

THE BEST RANGE OF UTILITIES FOR THE 64. WRITTEN BY PROFESSIONALS SOLD BY PROFESSIONALS

DISC DISECTOR V2.0
At last a really powerful disc copier and utility program. Incorporates a range of powerful programs: Includes **"Fastcopy"** takes just **4 minutes** to read and write a **whole disc**. **"Error Copy"** automatically reads and writes **all** error types, now you can make a security back up of those expensive business programs. **"Quickdisc"** more than **halves** disc loading time, **very** useful. **"File Copier"** allows **selective** copying from directory. **"Track and Sector"** a slower but very thorough program. Also includes the following useful utilities: **Viewbum, Fast Format, Unscratch, Disc Monitor, Menu Maker, Index, Petitle, Rename, Scratcher, Disc to Tape** and **Tidy**. If you have a 1541 you **must** have "Disc Disector Supplied monitor with full instructions
ONLY £29.95

QUICKDISC
Incorporating Menu Maker
NOW EVEN FASTER
Speed up your 1541 disc drive with this **new** program. Loads most programs at **4 times** normal speed. A utilities package that allows you to incorporate a **menu and fast loading** on **your own discs**. Also includes a file exchanger for programs put on disc with "Disco" (THE tape to disc utility), another way of making fast load disc programs. A **must** for all disc drive users.
ONLY £11.95

FASTBACK FAST LOAD UTILITY
Convert your slow loading software to **high speed load** with Fastback. The **most sophisticated** program of its type allows you to produce **"turbo"** loading versions of most single and **multipart** software that load **independantly** of Fastback. **Simple** to use **no programming skill needed**. Example: Load "The Hobbit" or "Manic Miner" in **150 secs**. Tried and tested (over 2000 sold).
A very professional program.
ONLY £9.95

DISCO THE TAPE TO DISC UTILITY
We **guarantee** that this is the **best** tape to disc utility on the market.
Very easy to use no programming knowledge needed. Automatically handles device numbers and multi part programs. Programs **auto load** and **run** once transfered and can also be made to **fastload** with **Quickdisc**. Handy for making your own disc programs auto run.
ONLY £9.95

INDUBLER

Tape Back Up Device
Includes **hardware and software**. This **amazing** new cassette port adaptor allows you to make back up copies of **"turbo" software**. Tests have proved **100% successful**. Requires access to two cassette decks. The special software generates a **brand new machine copy** onto one deck while loading from the other. **Pass and reliable**, they said it couldn't be done.
ONLY £12.95

SPECTRUM
Yes, after spectacular success on the '64 Doubler is now available for the **Spectrum**. Tests have proved **100% successful**.
ONLY £12.95
PHONE FOR DETAILS

ROCKET
Fed up waiting for programs to load and save? Rocket is a utility for the programmer, speeds up loading and saving by about **8 times** while still allowing for normal speed operations. **Does not** affect the speed of BASIC as no wedge is used. Programs can also be saved with high speed system to **reload independantly**. A must for serious programmers who have no disc drive.
ONLY £7.95

BIGMOUTH
The **superb** new **speech synthesis** program for the '64. Uses "speak" as a basic command. **Very easy to use**. Can be incorporated into your basic programs. Words are entered in phonetic English, ie. spelt as they sound. Therefore vocabulary is **unlimited**. **Great fun** and good for educational purposes.
ONLY £7.95

COMMODORE CONNEXION
Connect **any** "Centronics" type printer to your '64. Now enables most software to operate **with** special disc conversion program.
Simple to use and very reasonably priced
ONLY £14.95

3M SCOTCH DISCS
Lifetime guarantee Box of Ten
5¼in **£14.00** 3½in **£23.00**

DATA RECORDER
A **dedicated** data recorder designed for use on the CBM 64/VIC 20. Specifications: CONTROL **with pause button.** Many features for the PLUS/4 at no extra cost. SATISFACTION GUARANTEED.
ONLY £29.95

All prices include P&P and V.A.T. Send cheque, Postal Order or Credit Card No. Credit Card orders accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. Euro-cheques, postal giros or otherwise: Outside Europe £2.00 for airmail. Mail orders to Evesham Shop please.

WDSoftware
Utilities for the QL (£10 on Microdrive)
This package offers single-key loading, running or deletion of files, multiple formatting of cartridges, and auto backup of files from one or more cartridges to another with optional over-writing of namesakes. In addition, a directory of 60+ files can be viewed without screen overflow. NB a VERIFY program is unnecessary — QDOS does this automatically. Now includes directory print out and 'qprint' to print any or all files on a cartridge with optional dated titles. Owners of the earlier package can update by sending OUR cartridge and 25p.
Morse Tutor for QL £8.50
As for 48K Spectrum without speech
Current Spectrum Software
Tradewind (£5 Cassette)
Buy a ship, provisions and cargoes to trade between the harbours of the Coral Islands. Make a fortune if the weather and pirates let you live long enough to master seamanship and economics. A strategy-adventure game with graphics for 48K.
Jersey Quest £5 Cassette)
Following an accident, you are stranded in the labyrinth of time and must: find your own way back to the present with the aid of persons and objects from Jersey Folklore. Meet the Black Horse of St Quen, the Dragon and Knight of La Hougue Bie, the Black Cat of Carrefour a Cendre, the Witches of Rocqueburg and many others. A text-only adventure for 48K in machine code (Quill).
Morse Tutor (£4 Cassette)
The one has it all! 4-19 words/minute, variable spacing, variable number of groups of random letters numbers or mixed, random sentences, own message, single characters (including punctuation, variable pitch, FEEDBACK via screen, printer or SPEECH (phonetic alphabet via Currah u/Speech on 48K version only, and repeat facility. Takes you to and beyond RYA and Amateur Radio receiving standards. 16K and 48K versions on one cassette. 48K only on Microdrive cartridge.
Spectrum Programs on Microdrive
All the above are available on Microdrive cartridges at a price of £4.50 for one cartridge + the price of each program as shown above. E.G., a cartridge with Tradewind and Morse Tutor would be £13.50. As a bonus, Gavin Monk's Indexed Loader is included free with each cartridge.

STOP – REVEAL

A unique cassette for the 48K Spectrum. Genuinely lets you:
1. STOP virtually all programs, BASIC, MACHINE CODE and even HEADERLESS FILES, protected or not.
2. REVEALs the hidden Basic in Machine-Code programs. (Could be clues in adventure games).
3. LISTS actual Machine-Code on your video.
Now you can STOP, LIST, MODIFY, STUDY most Spectrum programs at your leisure. (And cassette to Microdrive compatible).
Includes a DISSASSEMBLER so can even study Sinclair ROM, etc, plus the most Advanced HEADER-READER ever written, plus pages of SECRETS OF THE TRADE explaining professional methods used to hide lines/programs, etc.
YOU CANNOT GET A MORE POWERFUL CASSETTE
(Even STOPS/REVEALS programs which are a genuine 48K long.)
